GENERAL REGULATIONS,

DISCUSSED ON 7TH JULY, 1865, AND APPROVED BY IMPERIAL DECREE OF THE 12TH JULY, 1865.

SECTION I.

General Arrangements and System of Classification.

ARTICLE 1.—The Universal Exhibition to be held at Paris in 1867 will be open for the reception of works of art, and of the products of agriculture and industry of all nations.

It will be held in a temporary building on the Champ de Mars. Around the Exhibition building a Park will be formed for the reception of cattle and other live animals, and plants, as well as for those constructions and objects which cannot be exhibited in the main buildings.

The Exhibition will open on the 1st of April, 1867, and will close on the 31st October following.

ART. 2.—The Universal Exhibition of 1867 is placed under the direction of the Imperial Commission nominated by the decree of the 1st February, 1865.

The General Commission appointed by the same decree is charged with carrying out the decisions of the Imperial Commission.

ART. 3.—In every department of the French empire the Imperial Commission will establish, before the 25th August, 1865, a local committee, whose duty it will be:—

1. To make known throughout the whole extent of the department the measures relative to the organisation of the Exhibition, and to distribute the forms of *demands for space* and other documents issued by the Imperial Commission;

2. To point out, before the 31st October, 1865, the principal artists, agriculturists, and manufacturers, whose productions would seem specially calculated to contribute to the success of the Exhibition;

3. To promote, in the manner stated in Article 29, the exhibition of the agricultural products of the department;

4. To appoint a Commission of learned men, agriculturists, manufacturers, overseers, and other persons with special knowledge, to make a careful study of the Exhibition, and to publish a report upon the means of applying in the department the lessons which the Exhibition may have taught;

RÈGLEMENT GÉNÉRAL,

DÉLIBÉRÉ LE 7 JUILLET 1865, APPROUVÉ PAR DÉCRET IMPÉRIAL 12 JUILLET 1865.

PREMIÈRE SECTION.

Dispositions générales et Système de Classification.

ARTICLE 1^{er}.—L'Exposition universelle, instituée à Paris pour l'année 1867, recevra les œuvres d'art et les produits de l'agriculture et de l'industrie de toutes les nations.

Elle aura lieu au Champ de Mars, dans un édifice temporaire. Autour du Palais de l'Exposition sera disposé un Parc destiné à recevoir les animaux et les plantes à l'état vivant ainsi que les établissements et les objets qu'il n'est pas possible d'installer dans l'édifice principal.

L'Exposition ouvrira le 1^{er} avril 1867, et fermera le 31 octobre de la même année.

ART. 2.—L'Exposition universelle de 1867 est placée sous la direction de la Commission impériale, instituée par le décret du 1^{er} février 1865.

Le Commissaire général, nommé par le même décret, est chargé de procéder à l'exécution des mesures adoptées par la Commission impériale.

ART. 3.—Dans chaque département de l'Empire français, la Commission impériale constituera, avant le 25 août 1865, un Comité départemental, qui aura pour mission:

- 1^o De faire connaître dans toute l'étendue du département les mesures concernant l'organisation de l'Exposition, et de distribuer les formules de *demande d'admission* ainsi que les autres documents émanant de la Commission impériale;

- 2^o De signaler, avant le 31 octobre 1865, les principaux artistes, agriculteurs et manufacturiers, dont l'admission à l'Exposition universelle semblerait particulièrement utile à l'éclat de cette solennité;

- 3^o De provoquer, comme il est dit à l'article 29, les expositions de produits agricoles du département;

- 4^o D'instituer une commission de savants, d'agriculteurs, de manufacturiers, de contre-maîtres et autres hommes spéciaux, pour faire une étude particulière de l'Exposition universelle et pour publier un rapport sur les applications qui pourraient être faites, dans le département, des enseignements qu'elle aura fournis;

5. To create, by collecting subscriptions, by association, or by any other means, a fund for the purpose of enabling the overseers, husbandmen, and mechanics of the department to visit and study the Exhibition, and to pay the expenses of publishing the above-mentioned report.

ART. 4.—The Imperial Commission will make the necessary arrangements with the Ministers of War and of Marine, for obtaining a proper representation of the products of Algeria and of the French colonies in the Universal Exhibition.

ART. 5.—The Commissions appointed by the various foreign governments to direct the part which their respective countrymen will take in the Universal Exhibition are in direct communication with the Imperial Commission relative to the exhibition of the works of art and other productions of their country. Consequently, the Imperial Commission will not correspond with foreign exhibitors.

Products sent by a foreign exhibitor can only be admitted through the medium of the foreign Commission which represents him.

The foreign Commissioners will also provide as they may see fit for the carriage, the reception, the arrangement, and the return of the productions of their countrymen. They must, however, conform to the regulations laid down by the Imperial Commission.

ART. 6.—Foreign Commissioners are requested to place themselves as soon as possible in relation with the Imperial Commission, and to depute some person to represent them.

The duty of this representative will be to arrange the questions which refer to foreign exhibitors, and particularly those relative to the allotment of the whole space among the various countries, and to the manner in which each foreign section shall be arranged in the Exhibition building and in the Park.

ART. 7.—In order to facilitate the division of the space allotted to each country between the various classes of objects enumerated in Article 11, the Imperial Commission will place at the disposal of the representatives, for their guidance, the plan of the arrangement of the French section of the Exhibition building, drawn on a scale of two millimetres to a metre (1 in. to 41·6 ft. or $\frac{1}{50}$). This plan shows the arrangement, of the glass cases and counters suitable for each class of objects, as well as the shape, height, and other dimensions of the courts intended for each class. An analogous plan of arrangement, showing the manner in which the portions of the Exhibition building allotted to each foreign country will be subdivided, is to be transmitted to the Imperial Commission before the 31st October, 1865.

Plans in detail, on a scale of two centimetres to the metre (1 in. to 4·16 ft. or $\frac{1}{50}$), showing the place allotted to each exhibitor and to each separate stall, are also to be forwarded with

5° De préparer, par voie de souscription, de cotisation et par toutes autres mesures, la création d'un fonds, destiné à faciliter la visite et l'étude de l'Exposition universelle aux contre-maitres, cultivateurs et ouvrier du département, et à subvenir aux frais de publication du rapport mentionné ci-dessus.

ART. 4.—La Commission impériale s'entendra avec les ministères de la Guerre et de la Marine, pour l'organisation du concours et des Colonies françaises à l'Exposition universelle.

ART. 5.—Les Commissions constituées par les divers Gouvernements étrangers pour diriger la participation de leurs nationaux à l'Exposition universelle correspondent directement avec la Commission impériale pour tout ce qui concerne l'exposition des œuvres d'art et des autres produits de leurs pays. En conséquence, la Commission impériale ne correspond pas avec les exposants étrangers.

Tout produit présenté par un producteur étranger n'est admis que par l'intervention de la Commission étrangère, dont celui-ci relève comme exposant.

Les Commissaires étrangers pourvoient d'ailleurs, selon leurs convenances, au transport, à la réception, à l'installation et à la réexpédition des produits de leurs nationaux, en se conformant toutefois aux mesures d'ordre prescrites par la Commission impériale.

ART. 6.—Les Commissaires étrangers sont invités à se mettre le plus tôt possible en relation avec la Commission impériale et à se faire représenter auprès d'elle par un délégué. Ce délégué sera chargé de traiter les questions qui intéressent les exposants étrangers, et notamment celles qui sont relatives à la répartition de l'espace total entre les diverses nations et au mode d'installation de chaque section nationale dans le Palais et dans le Parc.

ART. 7.—Pour faciliter la répartition de l'espace attribué à chaque nation entre les diverses classes de produits indiquées à l'article 11, la Commission impériale tient à la disposition des délégués, à titre de renseignement, le plan d'installation, à l'échelle de 0^m,002 par mètre, adopté pour la section française du Palais. Ce plan indique la disposition des vitrines ou tables affectées à chaque classe de produits, ainsi que la forme, la hauteur et les autres dimensions des salles réservées à chaque classe.

Un plan analogue d'installation, déterminant les subdivisions de la partie du Palais destinée à chaque nation, devra être remis à la Commission impériale, par chaque Commission étrangère, avant le 31 octobre 1865.

Des plans de détail, à l'échelle de 0^m,020 par mètre, indiquant la place attribuée à chaque exposant et chaque installation individuelle, devront également être remis, avec la

the list of exhibitors, by each Foreign Commission, before the 31st January, 1866, in order that in arranging the interior of the Exhibition building the Imperial Commission may be able to take into consideration the wants of each country.

ART. 8.—Each foreign country may claim, for the formation of a special park, the portion of the Champ de Mars adjoining the space allotted to it in the Exhibition building. The representative of each foreign Commission will settle with the General Commissioner the plan of the paths for the circulation of the public, and of the earthworks, which will be executed at the cost and under the direction of the Imperial Commission.

Each representative will also arrange with the General Commissioner so as to leave at the disposal of the Imperial Commission the portions of the ground which may be in excess of the wants of his countrymen, or to obtain an additional piece of ground from the portions to which other representatives may have given up their claim.

In order to facilitate as much as possible the arrangements of the foreign exhibitors in the portions of the Park allotted to them, the Imperial Commission will place at the disposal of the representatives for their guidance the plans adopted by the French exhibitors for arranging the animals, plants, model cottages, &c. (Appendix A.)

ART. 9.—An official catalogue of the products of all the foreign countries will be drawn up, showing the place which they occupy either in the Exhibition building or in the Park. This catalogue will contain two alphabetical lists, one of the exhibitors, the other of the products exhibited. Foreign Commissioners are requested to send the information necessary for the preparation of the catalogue before the 31st January 1866.

ART. 10.—Those States which can only be represented in Paris in 1867 by a small number of exhibitors, and which are besides in a similar geographical position, are requested to concert together so as to ensure a methodical grouping of the products of an analogous nature.

The Imperial Commission will place at the disposal of the representatives of the Commissions of those States the plans which have been prepared, with a view to harmonise the advantages of such a grouping with the fundamental rule of national representation. In the event of these plans being approved, the Imperial Commission requests the Commissioners of those same States to appoint in Paris for each group an agent, whose duty it will be to carry them out. The architects and officers of the Imperial Commission will afford assistance gratuitously to these agents.

ART. 11.—In each section assigned to the exhibitors of the same country, the objects will be divided into 10 groups and 95 classes; viz.:—

liste des exposants, par chaque Commission étrangère, avant le 31 janvier 1866, pour que, dans les aménagements intérieurs du Palais, la Commission impériale puisse tenir compte des besoins de chaque nation.

ART. 8.—Chaque nation peut réclamer, pour en faire son parc spécial, la portion du Champ de Mars attenante à l'emplacement qui lui est attribué dans le Palais.

Le délégué de chaque Commission étrangère se concertera avec le Commissaire général pour arrêter le plan des voies publiques de circulation et des terrassements, qui doivent être exécutés aux frais et par les soins de la Commission impériale.

Chaque délégué se concertera également avec le Commissaire général pour laisser à la disposition de la Commission impériale les portions de terrain qui excéderaient les besoins de ses nationaux, ou pour obtenir un supplément de terrain dans les surfaces auxquelles d'autres délégués auraient renoncé.

Pour faciliter autant que possible l'installation des exposants étrangers dans les portions du Parc qui leur sont attribuées, la Commission impériale tiendra à la disposition des délégués, à titre de renseignement, les plans adoptés par les exposants français pour l'installation des animaux, des plantes, des spécimens d'habitation, etc. (Pièce A.)

ART. 9.—Il sera dressé un Catalogue officiel des produits de toutes les nations, indiquant la place qu'ils occupent dans le Palais ou dans le Parc. Ce catalogue contiendra deux répertoires alphabétiques, l'un des exposants, l'autre des produits. Les Commissaires étrangers sont invités à envoyer les renseignements nécessaires à la rédaction du catalogue avant le 31 janvier 1866.

ART. 10.—Les États qui ne peuvent se faire représenter, en 1867, à Paris, que par un petit nombre d'exposants, et qui sont d'ailleurs dans une même situation géographique, sont invités à se concerter pour assurer le groupement méthodique des produits de même nature.

La Commission impériale tient à la disposition des délégués des Commissions de ces États les plans qu'elle a préparés en vue de concilier les avantages d'un pareil groupement avec la règle fondamentale de la représentation par nationalité.

La Commission impériale invite les Commissaires de ces mêmes États, dans le cas où ils approuveraient ces plans, à constituer à Paris, pour chaque groupe, un syndicat chargé de procéder à leur exécution. Elle mettra gratuitement à la disposition de ces syndicats ses architectes et ses employés.

ART. 11.—Dans chaque section consacrée aux exposants d'une même nation, les objets seront répartis en 10 groupes et en 95 classes; savoir:

1st Group.—Works of art (Classes 1 to 5).

2nd Group.—Apparatus and applications of the liberal arts (Classes 6 to 13).

3rd Group.—Furniture and other articles intended for dwelling-houses (Classes 14 to 26).

4th Group.—Clothing (including fabrics), and other articles worn on the person (Classes 27 to 39).

5th Group.—Products (raw and manufactured) of mining (Classes 40 to 46).

6th Group.—Instruments, and processes of the common arts (Classes 47 to 66).

7th Group.—Food (fresh and preserved) in various states of preparation (Classes 67 to 73).

8th Group.—Live products and examples of agricultural establishments (Classes 74 to 82).

9th Group.—Live products and examples of horticultural establishments (Classes 83 to 88).

10th Group.—Objects exhibited with the special purpose of improving the physical and moral condition of the people (Classes 89 to 95).

The objects which are included in these groups are given in detail in the System of Classification (Appendix A) annexed to these Regulations.

In order to avail itself of any suggestions that may be made by the French exhibitors and the Foreign Commissioners, the Imperial Commission reserves to itself the right to resolve, in the successive editions of this document, all doubtful questions to which this first publication may give rise.

ART. 12.—No work of art, or object exhibited in the Exhibition building or in the Park may be drawn, copied, or reproduced in any manner whatever, without the authority of the exhibitor who is the author of it. The Imperial Commission reserves to itself the right to authorise the taking of general views of the Exhibition.

ART. 13.—No work of art or object exhibited may be removed before the close of the Exhibition without the special authority of the Imperial Commission.

ART. 14.—Neither French nor foreign exhibitors will have to pay any rent for the space occupied by them in the Exhibition; but all costs incurred for fittings and decoration in the Exhibition building and in the Park must be borne by them.

ART. 15.—Frenchmen and foreigners, by the act of becoming exhibitors, thereby bind themselves to adhere to these Regulations.

ART. 16.—The Imperial Commission will correspond with the Prefets and other authorities of the French Empire through the President or the General Commissioner.

ART. 17.—All communications relative to the Exhibition are to be addressed to *M. le Conseiller d'État, Commissaire général de l'Exposition Universelle de 1867, à Paris.*

Letters need not be prepaid within the jurisdiction of the French Post Office.

1^{er} Groupe.—Œuvres d'art (Classes 1 à 5).

2^e Groupe.—Matériel et applications des arts libéraux (Classes 6 à 13).

3^e Groupe.—Meubles et autres objets destinés à l'habitation (Classes 14 à 26).

4^e Groupe.—Vêtements (tissus compris) et autres objets portés par la personne (Classes 27 à 39).

5^e Groupe.—Produits (bruts et ouvrés) des industries extractives (Classes 40 à 46).

6^e Groupe.—Instruments et procédés des arts usuels (Classes 47 à 66).

7^e Groupe.—Aliments (frais ou conservés), à divers degrés de préparation (Classes 67 à 73).

8^e Groupe.—Produits vivants et spécimens d'établissements de l'agriculture (Classes 74 à 82).

9^e Groupe.—Produits vivants et spécimens d'établissements de l'horticulture (Classes 83 à 88).

10^e Groupe.—Objets spécialement exposés en vue d'améliorer la condition physique et morale des populations (Classes 89 à 95).

Les objets qui se rapportent à ces groupes sont indiqués en détail dans le Système de classification (Pièce A) annexé au présent Règlement.

La Commission impériale, afin de tenir compte des observations qui lui seraient adressées par les exposants français et les Commissaires étrangers, se réserve d'éclaircir, dans des éditions successives de ce document, les doutes que la première rédaction pourrait soulever.

ART. 12.—Aucune œuvre d'art, aucun produit exposé dans le Palais ou dans le Parc, ne peut être dessiné, copié ni reproduit sous une forme quelconque, sans une autorisation de l'exposant qui en est l'auteur. La Commission impériale se réserve d'autoriser la reproduction des vues d'ensemble.

ART. 13.—Aucune œuvre d'art, aucun produit exposé ne peut être retiré avant la clôture de l'Exposition sans une autorisation spéciale de la Commission impériale.

ART. 14.—Les exposants français ou étrangers n'ont à payer aucun loyer pour la place qu'ils occupent à l'Exposition; mais tous les frais d'installation et de décoration, dans le Palais ou dans le Parc, sont à leur charge.

ART. 15.—Les Français et les étrangers, en acceptant la qualité d'exposant, déclarent, par cela même, adhérer aux dispositions du présent Règlement.

ART. 16.—La Commission impériale correspond avec les Préfets et autres autorités de l'Empire français par l'intermédiaire du Président ou du Commissaire général.

ART. 17.—Toute communication relative à l'Exposition doit être adressée à *M. le Conseiller d'État, Commissaire général de l'Exposition Universelle de 1867, à Paris.*

L'affranchissement n'est pas nécessaire dans la juridiction du service postal français.

SECTION II.

Special Arrangements relative to Works of Art.

ART. 18.—Works by French and foreign artists, executed since the 1st January, 1855, will be received for exhibition.

ART. 19.—The following will not be received:
1. Copies, including those which reproduce a work in a manner different to that of the original;

2. Oil paintings, miniatures, water-colour paintings, pastels, designs, and cartoons for stained glass and frescoes, without frames;

3. Sculpture in unbaked clay.

ART. 20.—The Imperial Commission will decide, with the assistance of a special jury, respecting the admission of works by French artists.

The composition and nomination of this jury, and the formalities with which Frenchmen will have to comply in requesting permission to send a work of art to the Exhibition, will be explained by regulations to be published hereafter; these regulations will make known how works of art are to be transmitted and received.

ART. 21.—The Imperial Commission will make known to the persons concerned, before the 1st January, 1867, its decisions respecting the admission of works of art.

ART. 22.—The number and nature of the rewards that may be given in respect of works of art, as well as the constitution of the international jury who will be called upon to act as judges, will be decided hereafter.

SECTION III.

Special Arrangements respecting the Products of Agriculture and Industry.

CHAPTER I.

ADMISSION AND CLASSIFICATION OF PRODUCTS.

ART. 23.—All the products of agriculture and industry will be admitted into the Exhibition with the exception and limitations mentioned in the following article.

ART. 24.—Detonating, explosive, and other substances of a dangerous nature will not be admitted.

DEUXIÈME SECTION.

Dispositions spéciales aux Œuvres d'Art.

ART. 18.—Sont admissibles à l'Exposition les œuvres des artistes français et étrangers exécutées depuis le 1^{er} janvier 1855.

ART. 19.—Sont exclus :

1^o Les copies, même celles qui reproduisent un ouvrage dans un genre différent de celui de l'original;

2^o Les tableaux à l'huile, miniatures, aqua-relles, pastels, dessins et cartons de vitraux et de fresques, lorsqu'ils ne sont pas encadrés;

3^o Les sculptures en terre non cuite.

ART. 20.—La Commission impériale statue, avec le concours d'un Jury spécial, sur l'admission des œuvres des artistes français.

La composition et la nomination de ce Jury, ainsi que les formalités qu'auront à remplir les Français pour demander l'admission d'une œuvre d'art à l'Exposition, seront fixées par un règlement ultérieur; ce règlement fera connaître le mode d'expédition et de réception des œuvres d'art.

ART. 21.—La Commission impériale notifiera aux intéressés, avant le 1^{er} janvier 1867, les décisions qu'elle aura prises sur les demandes d'admission concernant les œuvres d'art.

ART. 22.—Il sera statué ultérieurement sur le nombre et la nature des récompenses qui pourront être décernées au sujet des œuvres d'art, ainsi que sur la constitution du Jury international qui sera appelé à les juger.

TROISIÈME SECTION.

Dispositions spéciales aux Produits de l'Agriculture et de l'Industrie.

TITRE PREMIER.

ADMISSION ET CLASSEMENT DES PRODUITS.

ART. 23.—Sont admissibles à l'Exposition tous les produits de l'agriculture et de l'industrie, sauf les exception et les réserves mentionnées à l'article suivant.

ART. 24.—Sont exclues les matières detonantes, fulminantes et toute autre matière jugée dangereuse.

Spirits and alcohols, oils and essences, corrosive substances, and generally substances which may affect injuriously other products exhibited, or incommode the public, will only be received in strong vessels, specially adapted for the purpose, and of small dimensions.

Percussion caps, fireworks, lucifer matches, and other similar articles can only be received when made in imitation and deprived of all inflammable ingredients.

ART. 25.—Exhibitors of products of an unwholesome and disagreeable nature will be bound to conform at all times to such measures of safety as may be prescribed to them.

The Imperial Commission reserves to itself the right to cause the removal of any products, whether French or foreign, which by their nature or their bulk might appear injurious, unsuitable, or incompatible with the objects of the Exhibition.

ART. 26.—Before the 15th August, 1865, the Imperial Commission will notify to the Foreign Commission the amount of space allotted to each of them for the display of the productions of their respective exhibitors.

Before the 25th August, 1865, the Imperial Commission will publish, in a tabulated form, the amounts of space allotted in the French portion of the Exhibition building to each of the first 73 classes enumerated in Article 11.

ART. 27.—After the publication of this document, French exhibitors carrying on the trades comprised in the same class are requested to come to an understanding among themselves relative to a common plan of arrangement of the space which will have been allotted to their class. If they should agree upon the selection of the exhibitors which this allotment can accommodate, and upon the amount of space which shall be assigned to each, they will nominate one or more representatives who will place themselves into communication with the Imperial Commission, submit their plan and list of exhibitors for its approval, and generally act as the representatives of the common interests of these exhibitors.

ART. 28.—In default of such spontaneous action provided for in the preceding article, the municipal authorities of centres of manufactures, the chambers of commerce, the consultative chambers of arts and manufacture, artistic and industrial societies, agricultural societies and meetings, are requested to urge the producers in their districts to act in concert.

ART. 29.—The department committees (Art. 3) will receive from the Imperial Commission and will communicate to the consultative chambers of agriculture and to the agricultural societies and meetings of the department, the plans adopted for the representation of the agriculture of the various districts of France, in order that they may co-operate in carrying out these plans. They will especially request

Ne sont reçus que dans des vases solides, appropriés et de dimensions restreintes, les esprits ou alcools, les huiles et les essences, les matières corrosives et généralement les corps qui peuvent altérer les autres produits exposés ou incommode le public.

Les capsules, les pièces d'artifice, les allumettes chimiques et autres objets analogues, ne peuvent être reçus qu'à l'état d'imitation et sans aucune addition de matière inflammable.

ART. 25.—Les exposants de produits incommodes ou insalubres doivent se conformer en tout temps aux mesures de sûreté que leur sont prescrites.

La Commission impériale se réserve le droit de faire retirer les produits de toute provenance qui, par leur nature ou leur masse, lui paraîtraient nuisibles ou incompatibles avec le but et les convenances de l'Exposition.

ART. 26.—Avant le 15 août 1865, la Commission impériale notifiera aux Commissions étrangères l'espace accordé à chacune d'elles pour exposer les produits de ses nationaux.

Avant le 25 août 1865, la Commission impériale publiera un tableau des espaces attribués, dans l'emplacement de la section française, à chacune des 73 premières classes indiquées à l'article 11.

ART. 27.—Après cette publication, les producteurs français exerçant les industries comprises dans une même classe sont invités à s'entendre entre eux pour faire un projet d'installation dans l'emplacement qui aura été affecté à leur classe. S'ils se sont mis d'accord sur le choix des exposants que cet emplacement permet d'admettre, et sur l'espace qui devra être alloué à chacun d'eux, ils désigneront un ou plusieurs délégués pour prendre les informations nécessaires auprès de la Commission impériale, lui soumettre leur plan et leur liste d'exposants, et, en général, représenter auprès d'elle les intérêts communs de ces derniers.

ART. 28.—A défaut des réunions spontanées prévues à l'article précédent, les autorités municipales des centres manufacturiers, les chambres de commerce, les chambres consultatives des arts et manufactures, les sociétés artistiques ou industrielles, les sociétés et comices agricoles, sont invités à provoquer le concert des producteurs de leur circonscription.

ART. 29.—Les comités départementaux (art. 3) recevront de la Commission impériale et communiqueront aux chambres consultatives d'agriculture, aux sociétés et aux comices agricoles du département, les plans adoptés pour représenter l'agriculture des diverses régions de la France afin qu'ils concourent à la réalisation de ces plans. Ils inviteront surtout ces sociétés et ces comices à préparer

these societies and meetings to prepare collective exhibitions of types of animals and plants, and models of farm buildings and agricultural works.

The local committees of a large agricultural district will as far as possible act in concert, so as to display, without useless repetitions, the characteristic features of the agriculture of the district.

ART. 30.—The applications for space having reference to the arrangements described in Articles 27, 28, 29, will be made by the representatives of the exhibitors who have been acting in concert, or by those of the societies and bodies who have taken the initiative in the matter. For this purpose, the representatives will cause each exhibitor to fill up and sign, in duplicate, an application for space. These applications are to be addressed to the General Commissioner at Paris (Art. 17).

ART. 31.—Every plan of arrangement prepared either by the exhibitors of the same class acting spontaneously together, or at the instigation of local committees, municipal authorities, chambers of commerce, consultative chambers, agricultural societies or bodies, artistic or industrial societies, will be approved by the Imperial Commission, provided that no objections are raised, and that the general rules and requirements of the Exhibition have been observed.

ART. 32.—The displays thus originating from a common agreement will consist of separate and distinct exhibitions, unless it suit all those joining in the plan to make a collective display, in which, without naming the exhibitors, all the products of a locality or district will be exhibited together.

ART. 33.—In the event of exhibitions carried out in accordance with Articles 27, 28, and 29, producers having any reclamations to make are to address them direct to the General Commissioner, who will submit them to the Imperial Commission.

ART. 34.—In those cases in which the combination suggested in Articles 27, 28, and 29 have not been carried out, each of the exhibitors will fill up and sign two forms of application for space (Art. 30). Both these applications are to be forwarded to the General Commissioner at Paris (Art. 17).

ART. 35.—Applications for space, objections, and all documents relating thereto are to be transmitted to Paris before the 31st October, 1865.

After that date, no application or objection can be entertained except by a special resolution of the Imperial Commission.

ART. 36.—Exhibitors of apparatus requiring the use of water, gas, or steam, are to state, when sending in their application for space, what amount of water, gas, or steam, will be necessary. Those who wish to exhibit machines in motion are to state at what speed each of

des expositions collectives des types d'animaux et de plantes, d'établissements ruraux et d'usines agricoles.

Les comités départementaux d'une grande région agricole se concerteront, autant que possible, pour représenter, sans double emploi, les traits caractéristiques de l'agriculture de cette région.

ART. 30.—Les demandes d'admission se rapportant aux installations mentionnées aux articles 27, 28, 29, sont faites par les délégués des intéressés qui se sont entendus, ou par ceux des corps ou sociétés qui en ont pris l'initiative. A cet effet, les délégués feront remplir et signer par chaque exposant, en double expédition, la demande d'admission. Ils adresseront ces demandes au Commissaire général, à Paris (art. 17).

ART. 31.—Toute installation préparée soit par une entente spontanée des producteurs d'une même classe, soit sous l'influence des comités départementaux, des autorités municipales, des chambres de commerce, des chambres consultatives, des sociétés ou comices agricoles, des sociétés artistiques ou industrielles, sera acceptée par la Commission impériale, si aucune réclamation ne se produit, et si, d'ailleurs, les convenances générales de l'Exposition sont observées.

ART. 32.—Les expositions ainsi conçues en commun se composent d'installations individuelles et distinctes, à moins qu'il ne convienne à tous les intéressés de faire une exposition réunissante, sans désignation de personnes, les produits d'une localité ou d'une région.

ART. 33.—Dans le cas des expositions faites conformément aux articles 27, 28 et 29, les producteurs qui auraient à présenter une réclamation l'adresseront directement au Commissaire général, qui la soumettra à la Commission impériale.

ART. 34.—Dans le cas où le concert prévu par les articles 27, 28 et 29 n'aurait pas eu lieu, les producteurs rempliront et signeront individuellement deux expéditions de la demande d'admission (art. 30); ces deux expéditions seront adressées au Commissaire général, à Paris (art. 17).

ART. 35.—Les demandes d'admission, les réclamations et toutes les pièces qui s'y rapportent, doivent être adressées à Paris, avant le 31 octobre 1865.

Passé cette date, toute demande ou réclamation ne pourra être accueillie que par décision spéciale de la Commission impériale.

ART. 36.—Les constructeurs d'appareils exigeant l'emploi de l'eau, du gaz ou de la vapeur, doivent déclarer, en faisant leur demande d'admission, la quantité d'eau, de gaz ou de vapeur, qui leur est nécessaire. Ceux qui veulent mettre des machines en mouvement

these machines is to be driven and the motive power which it will require.

ART. 37.—Committees will be appointed by the Imperial Commission for the nine groups of agriculture and industry (Art. 11), to advise respecting each application for space, and the objections mentioned in Article 33.

The Imperial Commission alone can decide the admission of exhibitors.

ART. 38.—Each French exhibitor will receive before the 31st December, 1865, an *exhibitor's bulletin* (or ticket), showing his rotation number, the dimensions of the space granted to him, and the address which is to be affixed to the packages he may send.

CHAPTER II.

DESPATCH, RECEPTION, AND PLACING OF GOODS IN THE EXHIBITION BUILDING AND IN THE PARK.

ART. 39.—The cost of packing and carriage of the goods sent to the Exhibition and of the goods which have been exhibited there is to be borne by the exhibitors, both to and fro.

ART. 40.—French packages containing goods intended for the Exhibition are to be marked with the letters E.U. surrounded by a circle

 ; they are to bear in addition the

rotation number of the exhibitor and the direction specified in the exhibitor's bulletin (Art. 38).

The way-bill which accompanies the package is also to contain the name of the exhibitor, the rotation number, and the direction.

The sender will affix on two sides of the package the labels which the Imperial Commission will take care to transmit to him for this purpose in duplicate.

ART. 41.—The Imperial Commission will not interfere in any way between the contractors for the carriage of packages and the exhibitors in respect of the despatch and the reception of the goods.

The exhibitors must therefore, either personally or by their agents, see to the transmission and reception of the packages, and verify their contents.

If neither the exhibitor nor his agent be present to receive the packages on their arrival at the Exhibition, the carrier is bound to remove them immediately.

ART. 42.—Packages from foreign countries must be marked in such a way as to show distinctly from whence they come. The Imperial Commission will make arrangements with the Foreign Commissioners in order that these packages may be transmitted in accordance

indiqueront quelle sera la vitesse propre de chacune de ces machines et la force motrice dont elle aura besoin.

ART. 37.—Des Comités d'admission, institués par la Commission impériale, pour les neuf groupes de l'agriculture et de l'industrie (art. 11), donnent leur avis sur les demandes individuelles d'admission et sur les réclamations mentionnées à l'article 33.

La Commission impériale prononce seule l'admission des exposants.

ART. 38.—Chaque exposant français recevra, avant le 31 décembre 1865, un *bulletin d'exposant* portant son numéro d'ordre, les dimensions de l'espace mis à sa disposition et l'adresse qui devra être placée sur les colis à expédier.

TITRE II.

ENVOI, RÉCEPTION ET INSTALLATION DES PRODUITS AU PALAIS ET DANS LE PARC.

ART. 39.—L'emballage et le transport des produits envoyés à l'Exposition et des produits qui y ont figuré, sont à la charge des exposants, tant pour l'aller que pour le retour.

ART. 40.—Les colis d'origine française renfermant des produits destinés à l'Exposition, doivent porter, comme marques, les lettres E.U.

entourées d'un cercle  ; ils portent, en

outre, le numéro d'ordre de l'exposant et l'adresse à l'Exposition, telle qu'elle est indiquée sur le bulletin d'exposant (art. 38).

La lettre de voiture accompagnant le colis répètera avec le nom de l'exposant ce numéro d'ordre et cette adresse.

L'expéditeur devra fixer sur deux des faces du colis l'étiquette qui lui aura été envoyée en double, à cet effet, par les soins de la Commission impériale.

ART. 41.—Pour ce qui concerne l'expédition et la réception des produits, la Commission impériale s'abstient de toute immixtion entre les entrepreneurs de transport et les exposants.

Les exposants doivent en conséquence pourvoir, soit par eux-mêmes, soit par leurs agents, à l'expédition et à la réception des colis et à la reconnaissance de leur contenu.

Si le destinataire ou son agent n'est pas présent pour recevoir les colis à leur arrivée dans l'enceinte de l'Exposition, l'entrepreneur de transport est tenu de les remporter immédiatement.

ART. 42.—Les colis d'origine étrangère devront tous porter l'indication bien visible de leur provenance. La Commission impériale se concertera avec les Commissaires étrangers pour que l'expédition de ces colis se fasse conformément aux règles indiquées à l'article 40

with the regulations specified in Article 40 for French packages; on this point, however, the Foreign Commissioners will adopt the course which they may consider most advisable.

ART. 43.—French and foreign goods will be received into the Exhibition from the 15th January, 1867, up to the 10th March following inclusive.

These dates may, by special arrangement, be anticipated for objects difficult to place, or deferred for objects of great value.

ART. 44.—The Exhibition is constituted a bonded warehouse.

Foreign goods intended for the Exhibition will be admitted into France, under bond, up to the 5th March, 1867, by the following ports and frontier towns:

Dunkirk, — Lille, — Valenciennes, — Feignies, — Jeumont, — Vireux, — Givet, — Longwy, — Thionville, — Forbach, — Wissembourg, — Strasbourg, — Saint Louis, — Pontarlier, — Bellegarde, — Saint Michel, — Nice, — Marseilles, — Cette, — Le Perthus, — Hendaye,* — Bayonne, — Bordeaux, — Nantes, — Saint Nazaire, — Granville, — Havre, — Dieppe, — Rouen, — Boulogne, — Calais.

ART. 45.—The Imperial Commission will issue special instructions relative to the period when the materials for the buildings, as objects for exhibition, the separate parts of machines and apparatus, heavy and cumbersome articles, and those which require masonry or special foundations, are to be brought into the precincts of the Exhibition.

Such works are to be performed by the exhibitors and at their own cost, in accordance with the plans submitted by them for the approval of the Imperial Commission.

ART. 46.—The Imperial Commission will supply gratuitously the water, gas, steam, and motive power for the machines admitted under the Regulation contained in Article 36. This motive power will, except in special cases, be transmitted by a horizontal main shaft, the diameter and the number of revolutions per minute of which will be made known by the Imperial Commission before the 31st December, 1865.

The exhibitors will have to furnish driving pulleys on the main shaft, connecting pulleys, and intermediate shafting for the purpose of regulating the proper speed of the apparatus, as well as the belts necessary for each of these motions.

Steam-engines which require to be supplied with steam from their own boilers cannot be shown in the Exhibition building, and special directions will therefore be issued respecting them.

ART. 47.—All other expenses, such as the employment of workmen in the building, the

pour les colis d'origine française; toutefois, sur ce point, les Commissaires étrangers adopteront le régime qu'ils jugeront le plus convenable.

ART. 43.—Les produits tant français qu'étrangers seront admis dans l'enceinte de l'Exposition, à partir du 15 janvier 1867, jusques et y compris le 10 mars suivant.

Ces dates pourront être, par des dispositions spéciales, devancées pour les objets dont l'installation est difficile, ou différées pour les objets de grande valeur.

ART. 44.—L'enceinte de l'Exposition est constituée en entrepôt réel de douane.

Les produits étrangers destinés à l'Exposition seront admis, à ce titre, jusqu'au 5 mars 1867, par les ports et villes frontières désignés ci-après:

Dunkerque, — Lille, — Valenciennes, — Feignies, — Jeumont, — Vireux, — Givet, — Longwy, — Thionville, — Forbach, — Wissembourg, — Strasbourg, — Saint Louis, — Pontarlier, — Bellegarde, — Saint Michel, — Nice, — Marseille, — Cette, — Le Perthus, — Hendaye,* — Bayonne, — Bordeaux, — Nantes, — Saint-Nazaire, — Granville, — Le Havre, — Dieppe, — Rouen, — Boulogne, — Calais.

ART. 45.—La Commission impériale déterminera par des instructions spéciales, l'époque à laquelle les matériaux destinés aux constructions formant objet d'exposition, les machines et appareils démontés, les objets lourds ou encombrants, ceux qui exigent des massifs ou des fondations particulières devront être amenés dans l'enceinte de l'Exposition.

Ces travaux de construction et d'installation seront exécutés par les exposants et à leurs frais, conformément aux plans présentés par eux à l'approbation de la Commission impériale.

ART. 46.—La Commission impériale fournit gratuitement l'eau, le gaz, la vapeur et la force motrice pour les machines qui ont donné lieu à la déclaration mentionnée à l'art. 36. Cette force est, en général, transmise par un arbre de couche dont la Commission impériale fera connaître, avant le 31 décembre 1865, le diamètre et le nombre de tours par minute.

Les exposants ont à fournir la poulie sur l'arbre de couche, les poulies conductrices, l'arbre de transmission intermédiaire destiné à régler la vitesse propre de l'appareil ainsi que les courroies nécessaires à chacune de ces transmissions.

Les machines à vapeur qui devraient être alimentées par leurs propres chaudières, ne pouvant être exposées dans le Palais, seront l'objet d'instructions spéciales.

ART. 47.—Tous les autres frais tels que: manutention dans l'exposition; réception et

* A custom-house, to be established on the railway now being made between Barcelona and Perpignan, will be hereafter specified.

* Un bureau de douane, à établir sur le chemin de fer, en construction de Barcelone à Perpignan, sera ultérieurement désigné.

reception and opening of packages, the removal and charge of packing-cases, the construction of counters, stages, glass and other cases, &c., the placing of goods in the Exhibition building and in the Park, the decoration of the stalls, and the return of the goods, are to be borne by the exhibitors, French as well as foreign.

ART. 48.—The arrangement and decoration of the stalls in the French section of the Exhibition building and of the Park can only be executed in conformity with the general plan, and under the superintendence of the officers of the Imperial Commission.

The Imperial Commission will point out to exhibitors who may apply contractors for the execution of their work and for the removal and custody of their cases; but they are at liberty to employ any contractors or workmen they may think fit.

ART. 49.—The various stalls and fittings may be erected in the Exhibition as fast as the buildings are completed; they must be commenced at latest on the 1st December, 1866, and must be ready for the reception of goods before the 15th January, 1867.

ART. 50.—The passages reserved outside the exhibiting space being strictly calculated for the purpose of circulation, packages and empty cases are not allowed to remain therein.

Cases must, therefore, be unpacked as fast as they are received. The Imperial Commission will direct its own officers to unpack for the exhibitors, and at their risk and peril, the cases left in the passages intended for circulation.

From the 11th to the 28th March, 1867, the goods already unpacked and placed in the stalls, are to be arranged and displayed for exhibition. The 29th and 30th March are reserved for the purpose of a general cleaning. A review of the whole Exhibition will take place on the 31st March.

The Imperial Commission will take all measures necessary to have the Exhibition complete in all its parts by the 28th March. It will, therefore, dispose of all those portions of space which, on the 14th January, 1867, are not occupied by stalls ready for the reception of goods, and of all those stalls which, on the 10th March, do not contain goods enough to fill them.

ART. 51.—Immediately after they have been unpacked, the cases that have been used for the carriage of the goods either in France or from abroad are to be removed by the exhibitors or their agents. If they should fail to do this without delay, the Imperial Commission will remove the cases and packing, and will not be in any way responsible for their preservation.

ART. 52.—Special instructions will be published hereafter for the organisation and arrangement of the products and objects for exhibition which are to be placed in the Park.

ouverture des colis; enlèvement et conservation des caisses et emballages; construction des tables, estrades, vitrines ou casiers; installation des produits dans le Palais et dans le Parc; décoration des emplacements; réexpédition des produits, sont à la charge des exposants, tant français qu'étrangers.

ART. 48.—Les arrangements et l'ornementation des installations de la section française, dans le Palais et dans le Parc, ne peuvent être exécutés que conformément au plan général et sous la surveillance des agents de la Commission impériale.

La Commission impériale indiquera aux exposants qui en feront la demande, des entrepreneurs pour l'exécution de leurs travaux et pour la manutention de leurs colis; mais les exposants resteront libres d'employer des entrepreneurs ou des ouvriers de leur choix.

ART. 49.—Les installations diverses pourront être mises en place dans le Palais au fur et à mesure de l'achèvement des constructions; elles devront être commencées au plus tard le 1^{er} décembre, 1866, et être prêtes à recevoir les produits avant le 15 janvier 1867.

ART. 50.—Les espaces réservés en dehors des installations de produits étant strictement calculés pour les besoins de la circulation, il est interdit d'y laisser stationner les colis ou les caisses vides.

En conséquence, les colis devront être déballés au fur et à mesure de leur réception. La Commission impériale procédera d'office, pour le compte des exposants et à leurs risques et périls, au déballage des colis abandonnés par eux sur les voies de circulation.

Du 11 au 28 mars 1867, les produits déjà déballés et placés dans les installations devront y être arrangés et étalés pour l'Exposition. Le 29 et le 30 mars sont réservés pour un nettoyage général. La révision de toute l'Exposition aura lieu le 31 mars.

La Commission impériale prendra toutes les mesures nécessaires pour que l'Exposition soit complète au 28 mars, dans toutes ses parties. En conséquence, elle disposera de tout emplacement qui, au 14 janvier 1867, ne serait pas occupé par une installation toute prête, ou de toute installation qui, au 10 mars, n'aurait pas reçu des produits en quantité suffisante.

ART. 51.—Aussitôt après le déballage, les caisses ayant servi au transport des produits de toute provenance doivent être emportées par les exposants ou leurs agents. Faute par eux d'y pourvoir immédiatement, la Commission impériale fait enlever les caisses et emballages, sans prendre aucune responsabilité pour leur conservation.

ART. 52.—Des instructions spéciales seront publiées ultérieurement pour l'organisation et l'installation des produits et des objets d'exposition qui doivent prendre place dans le Parc.

CHAPTER III.

GENERAL ADMINISTRATION AND POLICE
ARRANGEMENTS.

ART. 53.—The name of the producer will be affixed to the goods exhibited. The name of the retailer who usually acts as his agent may be added with the producer's consent.

The Imperial Commission will, when required, make arrangements for the exhibition of goods under the name of the retailer, when they are not sent for exhibition by the producer.

ART. 54.—Exhibitors are requested to insert after their own names or the names of their firms, the names of those persons who have contributed in a special manner to the merit of the products exhibited, either as inventors or designers, or by some process of manufacture, or by some remarkable skill in the workmanship.

ART. 55.—The cash price of the objects exhibited and the place where they may be purchased may be stated. This information must be given upon all objects included in Class 91. In all the classes, the prices, if stated, must be adhered to by the exhibitor as respects the buyer, under penalty of exclusion from competition.

Objects sold may not be removed before the close of the Exhibition without the special permission of the Imperial Commission.

ART. 56.—The Imperial Commission will take every means to preserve from damage the articles exhibited, but it will not hold itself in any way responsible for any loss by fire, or for any accident, damage, or injury, great or small, which may happen to them, from whatever cause it may arise. Exhibitors must take upon themselves the expense of insurance if they should see fit to avail themselves of that precaution.

The goods exhibited will be watched by the necessary staff, but the Commission will not be responsible for any thefts or embezzlements which may be committed.

ART. 57.—A special notice posted in the Exhibition building and in the Park will make known the staff appointed to organise the interior of the building. It will also contain the names of the officers whose duty it will be to give assistance to the exhibitors, and to watch over the security of the Exhibition.

ART. 58.—A ticket will be delivered to each exhibitor, which will give him free admission to the Exhibition. This ticket will not be transferable. If it should be proved that the exhibitor has lent or given his ticket to some other person, it will be forfeited without prejudice to further proceedings at law.

To secure the carrying out of this regulation, the ticket of admission must be signed by the holder, who will have to enter the Exhibition by certain prescribed doors only, and he may

TITRE III.

ADMINISTRATION ET POLICE.

ART. 53.—Les produits sont exposés sous le nom du producteur. Ils peuvent, avec l'agrément de ce dernier, porter, en outre, le nom du négociant qui en est le dépositaire habituel.

La Commission impériale se concerte au besoin avec des négociants pour faire figurer sous leur nom, à l'Exposition, des produits qui ne seraient pas présentés par les producteurs.

ART. 54.—Les exposants sont invités à inscrire à la suite de leur nom ou de leur raison sociale, les noms des personnes qui ont contribué d'une manière spéciale au mérite des produits exposés, soit à titre d'inventeur, soit par le dessin des modèles, soit par les procédés d'exécution, soit par l'habileté exceptionnelle du travail manuel.

ART. 55.—Le prix de vente au comptant et le lieu de vente peuvent être indiqués sur les objets exposés. Cette indication est exigée pour tous les objets compris dans la classe 91. Dans toutes les classes, les prix, s'ils sont indiqués, sont obligatoires pour l'exposant, vis-à-vis de l'acheteur, sous peine d'exclusion du concours.

Les objets vendus ne peuvent être enlevés avant la fin de l'Exposition, à moins d'une autorisation spéciale de la Commission impériale.

ART. 56.—La Commission impériale prendra les mesures nécessaires pour garantir de toute avarie les produits exposés; mais elle ne sera, en aucune façon, responsable des incendies, accidents, dégâts ou dommages dont ils auraient à souffrir, quelle qu'en soit la cause ou l'importance. Elle laisse aux exposants le soin d'assurer leurs produits, directement et à leurs frais, s'ils jugent à propos de recourir à cette garantie.

Elle fera surveiller, par le personnel nécessaire, les produits exposés, mais elle ne sera pas responsable des vols et détournements qui pourraient être commis.

ART. 57.—Un Règlement spécial, affiché dans le Palais et dans le Parc, déterminera l'ordre du service intérieur. Il fera connaître les agents chargés de venir en aide aux exposants et de veiller à la sécurité de l'Exposition.

ART. 58.—Une carte d'entrée gratuite à l'Exposition est délivrée à chaque exposant. Cette carte est personnelle. Elle est retirée, s'il est constaté qu'elle a été prêtée ou cédée à une autre personne, le tout sans préjudice des poursuites de droit.

Pour assurer cette partie du service, la carte d'entrée est signée par le titulaire. Celui-ci est tenu d'entrer par des portes déterminées, et il peut être requis d'établir son identité en

be required to establish his identity by signing his name in a book to be kept for that purpose.

ART. 59.—Exhibitors will be allowed to have their goods taken care of by the agents they may select, but they must be approved by the Imperial Commission.

Personal tickets of free admission will be given to these agents under the conditions laid down in the foregoing article.

An exhibitor's agent can only receive one ticket of admission, whatever number of exhibitors he may represent.

ART. 60.—Exhibitors or their agents must not solicit visitors to make purchases; they will confine themselves to answering enquiries, to handing the address cards, prospectuses, and lists of prices which they may be asked for.

ART. 61.—The Imperial Commission will fix hereafter the prices of admission to be paid by visitors in order to be admitted into the Exhibition.

ART. 62.—An International Jury for making the awards will be formed, divided into nine groups, corresponding with the nine groups of the products of agriculture and industry enumerated in the system of classification (Art. 11, and Appendix A).

The number, the nature, and the various grades of the awards, as well as the constitution and functions of the jury, whose duty it will be to apportion them, will be published hereafter.

ART. 63.—The objects will be studied and experiments conducted under the direction of the members of the jury, and of a scientific, agricultural, and industrial commission, appointed by the Imperial Commission. A report of the facts of general interest brought under notice by their labours will be published.

ART. 64.—Conferences may be held and demonstrations given in the various parts of the Exhibition. Courses of lectures and readings may, in addition, be delivered in a room built for that purpose. These various means of imparting information can only be used by those who have personally obtained the authority of the Imperial Commission.

CHAPTER IV.

CLOSING OF THE EXHIBITION AND REMOVAL OF THE GOODS.

ART. 65.—Immediately after the close of the Exhibition, the exhibitors must begin to pack and remove their goods and fittings.

This operation must be completed before the 30th November, 1867.

apposant sa signature sur une feuille de contrôle.

ART. 59.—Les exposants ont la faculté de faire garder leurs produits par des agents de leur choix, qui devront être agréés par la Commission impériale.

Des cartes d'entrée gratuites et personnelles sont délivrées à ces agents, sous les conditions énoncées dans l'article précédent.

Un agent d'exposants ne peut avoir plus d'une carte d'entrée, quel que soit le nombre des exposants qu'il représente.

ART. 60.—Les exposants ou leurs agents s'abstiendront de provoquer les visiteurs à faire des achats; ils se borneront à répondre aux questions, à délivrer les adresses, prospectus et prix courants, qui leur seront demandés.

ART. 61.—La Commission impériale fixera ultérieurement le tarif des prix d'entrée que les visiteurs auront à payer pour être admis dans l'enceinte de l'Exposition.

ART. 62.—Il sera institué un Jury international des récompenses, partagé en neuf groupes correspondant aux neuf groupes des produits de l'agriculture et de l'industrie dénommés dans le Système de classification (art. 11 et Pièce A).

Un Règlement ultérieur déterminera le nombre, la nature et les divers degrés de récompenses, ainsi que la constitution et les attributions du Jury chargé de les répartir.

ART. 63.—Il sera procédé à des études et à des expériences, sous la direction des membres du Jury des récompenses et d'une commission scientifique, agricole et industrielle, nommée par la Commission impériale. Des publications feront connaître les résultats d'intérêt général signalés par ces travaux.

ART. 64.—Des conférences et des démonstrations pourront être faites dans les diverses parties de l'Exposition. Des cours et des lectures pourront être, en outre, organisés dans une salle construite à cet effet. Ces divers enseignements ne pourront être donnés qu'en vertu d'autorisations personnelles délivrées par la Commission impériale.

TITRE IV.

CLÔTURE DE L'EXPOSITION ET ENLÈVEMENT DES PRODUITS.

ART. 65.—Aussitôt après la clôture de l'Exposition, les exposants doivent procéder à l'emballage et à l'enlèvement de leurs produits et de leurs installations.

Cette opération devra être terminée avant le 30 novembre 1867.

After that date, the goods, cases, and fittings which may not have been taken away by the exhibitors or their agents, will be removed and deposited in a public warehouse at the cost and risk of the exhibitors. The objects which, by the 30th June, 1868, may not have been removed from that warehouse, will be publicly sold, and the net proceeds of the sale will be applied to some work of charity.

Done and discussed by the Imperial Commission, the 7th July, 1865.

(Signed) ROUHER,
Minister of State, Vice President.

Considered and annexed to the decree of the 12th July, 1865.

(Signed) ROUHER,
Minister of State, charged ad interim with the Ministry of Agriculture, Commerce, and Public Works.

(Signed) DE CHANCOURTOIS,
Secretary of the Imperial Commission.

A true copy :

(Signed) F. LE PLAY,
Councillor of State, General Commissioner.

Passé ce terme, les produits, les colis et les installations qui n'auraient pas été retirés par les exposants ou leurs agents, seront enlevés d'office et consignés dans un magasin public, aux frais et risques des exposants. Les objets qui, au 30 juin 1868, n'auraient pas été retirés de ce magasin, seront vendus publiquement ; le produit net de la vente sera appliqué à une œuvre de bienfaisance.

Fait et délibéré par la Commission impériale, le 7 juillet 1865.

Le Ministre d'État, Vice-Président,
Signé : ROUHER.

Vu et annexé au décret du 12 juillet 1865.

Le Ministre d'État, chargé par interim du Ministère de l'Agriculture, du Commerce et des Travaux publics.

Signé : ROUHER.

Le Secrétaire de la Commission impériale,
Signé : DE CHANCOURTOIS.

Pour ampliation :

Le Conseiller d'État, Commissaire général,
Signé : F. LE PLAY.

SYSTEM OF CLASSIFICATION

ADOPTED BY THE IMPERIAL COMMISSION.

GROUP I.

Works of Art.

CLASS 1—PAINTINGS IN OIL.

(Exhibition Building, Gallery I.)

Paintings on canvas, panels, and on other grounds.

CLASS 2—OTHER PAINTINGS AND DRAWINGS

(Exhibition Building, Gallery I.)

Miniatures, water colour paintings; pastels and drawings of all kinds; paintings on enamel, earthenware and china; cartoons for stained glass and frescoes.

CLASS 3—SCULPTURE AND DIE-SINKING.

(Exhibition Building, Gallery I.)

Sculpture in high-relief. Bas-reliefs. Repoussé work and chasing.

Medals, cameos, engraved stones. Niello work.

CLASS 4—ARCHITECTURAL DESIGNS AND MODELS.

(Exhibition Building, Gallery I.)

Studies and details. Elevations and plans of buildings. Restorations based upon existing ruins or documents.

CLASS 5—ENGRAVING AND LITHOGRAPHY.

(Exhibition Building, Gallery I.)

Mezzo-tints. Coloured engravings.

Lithographs executed with pencil and with brush. Chromolithographs.

GROUP II.

Apparatus and Applications of the Liberal Arts.

CLASS 6—PRINTING AND BOOKS.

(Exhibition Building, Gallery II.)

Specimens of typography; autographic proofs; lithographic proofs, black or coloured; proofs of engravings.

New books, and new editions of books already known; collections of works forming special libraries; periodical publications. Drawings, atlases, and albums of a technical or instructive kind.

CLASS 7—PAPER, STATIONERY; BINDING; PAINTING AND DRAWING MATERIALS.

(Exhibition Building, Gallery II.)

Paper; card and paste board; ink; chalks, pencils, pastels; writing materials; articles for the writing table; inkstands, letter weights, &c. Copying presses.

SYSTEME DE CLASSIFICATION

ADOPTÉ PAR LA COMMISSION.

GROUPE I.

Œuvres d'Art.

CLASSE 1—PEINTURES À L'HUILE.

(Palais, Galerie I.)

Peintures sur toiles, sur panneaux, sur enduits divers.

CLASSE 2—PEINTURES DIVERSES ET DESSINS.

(Palais, Galerie I.)

Miniatures, aquarelles; pastels et dessins de tous genres; peintures sur émail, sur faïence et sur porcelaine; cartons de vitraux et de fresques.

CLASSE 3—SCULPTURES ET GRAVURES SUR MÉDAILLES.

(Palais, Galerie I.)

Sculptures en ronde-bosse. Bas-reliefs. Sculptures repoussées et ciselées.

Médailles, camées, pierres gravées. Nielles.

CLASSE 4—DESSINS ET MODÈLES D'ARCHITECTURE.

(Palais, Galerie I.)

Études et fragments. Représentations et projets d'édifices. Restorations d'après des ruines ou des documents.

CLASSE 5—GRAVURES ET LITHOGRAPHIES.

(Palais, Galerie I.)

Gravures en noir. Gravures polychromes.

Lithographies en noir, au crayon et au pinceau. Chromolithographies.

GROUPE II.

Matériel et Applications des Arts Libéraux.

CLASSE 6—PRODUITS D'IMPRIMERIE ET DE LIBRAIRIE.

(Palais, Galerie II.)

Spécimens de typographie; épreuves autographiques; épreuves de lithographies, en noir ou en couleur; épreuves de gravures.

Livres nouveaux et éditions nouvelles de livres déjà connus; collections d'ouvrages formant des bibliothèques spéciales; publications, périodiques. Dessins, atlas et albums publiés dans un but technique ou pédagogique.

CLASSE 7—OBJETS DE PAPETERIE; RE-LIURES, MATÉRIEL DES ARTS DE LA PEINTURE ET DU DESSIN.

(Palais, Galerie II.)

Papiers; cartes et cartons; encres; craies, crayons, pastels; fournitures de bureau; articles de bureau; encriers, pèse-lettres, etc. Presses à copier.

Articles made of paper; lamp-shades, lanterns, flower-pot covers, &c.

Registers, copy-books, albums and note-books. Bindings, loose covers for books, cases.

Various products used in water-colour painting and tinting; colours in cakes, pastels, bladders, tubes, and shells. Instruments and apparatus for the use of painters, designers, engravers, and modellers.

CLASS 8—APPLICATIONS OF DRAWING AND MODELLING TO THE COMMON ARTS.

(Exhibition Building, Gallery II.)

Designs for industrial purposes, designs made, reproduced, or reduced by some mechanical process. Decorative painting, lithographs or engravings for industrial purposes. Models and small articulated wooden figures, mouldings of figures, ornaments, &c.

Carvings. Cameos, seals and various engraved articles. Objects modelled for industrial purposes, produced by mechanical means; reductions, photo-sculpture, &c. Mouldings.

CLASS 9—PHOTOGRAPHIC PROOFS AND APPARATUS.

(Exhibition Building, Gallery II.)

Photographs on paper, glass, wood, stuffs, and enamel. Heliographic engravings. Proofs of photographs on stone. Photographic stereotypes. Stereoscopic proofs and stereoscopes. Enlarged photographs.

Instruments, apparatus and chemicals used in photography. Materials used in photographic studios.

CLASS 10—MUSICAL INSTRUMENTS.

(Exhibition Building, Gallery II.)

Non-metallic wind instruments; with common mouthpiece, with reeds with or without air reservoirs. Metallic wind instruments, simple, with lengthening pieces, with slides, with pistons, with keys, with reeds. Wind instruments with keyboards, organs, accordions, &c. Stringed instruments played with the fingers or the bow, without keyboards. Stringed instruments with keyboards, pianos, &c. Instruments played by percussion or friction. Automaton instruments, barrel organs, bird organs, &c. Separate parts of musical instruments, and articles used in orchestras.

CLASS 11—MEDICAL AND SURGICAL INSTRUMENTS AND APPARATUS.

(Exhibition Building, Gallery II.)

Instruments and apparatus for dressing wounds and for simple surgery. Instruments for medical research. Surgical instruments and apparatus.

Collections and cases of instruments and drugs specially intended for army and navy surgeons, for veterinary surgeons, for dentists, for oculists, &c. Apparatus for the treatment of suspended animation, drowning persons, &c. Electro-therapeutic apparatus. Local and general anæsthetic apparatus. Apparatus for prosthesis (plastic and mechanical). Orthopædic apparatus, trusses, &c. Various apparatus for sick, infirm, and insane persons. Accessory objects for medical, surgical, and pharmaceutical purposes in hospitals and infirmaries.

Apparatus for the study of anatomy. Apparatus for the study of forensic medicine.

Special apparatus for veterinary purposes.

Baths, hydrotherapeutic apparatus, &c.

Apparatus and instruments for the physical training of children: gymnastics for medical and hygienic purposes.

Apparatus for the succour of the wounded on the field of battle. Civil and military ambulances, for the use of the army and navy.

CLASS 12—MATHEMATICAL INSTRUMENTS AND APPARATUS FOR TEACHING SCIENCE.

(Exhibition Building, Gallery II.)

Instruments for practical geometry; compasses, verniers, micrometers, planimeters, calculating machines, &c. Apparatus and instruments for surveying, topography, geodesy, and astronomy. Apparatus used in different observatories.

Objets confectionnés en papier; abat-jour, lanternes, cache-pots, &c.

Registers, cahiers, albums et carnets. Reliures mobiles, étnis.

Produits divers pour lavis et aquarelles; couleurs en pains, en pastilles, en vessies, en tubes, en écailles. Instruments et appareils à l'usage des peintres, dessinateurs, graveurs, et modelleurs.

CLASSE 8—APPLICATIONS DU DESSIN ET DE LA PLASTIQUE AUX ARTS USUELS.

(Palais, Galerie II.)

Dessins industriels. Dessins obtenus, reproduits ou réduits par procédés mécaniques. Peintures de décors. Lithographies ou gravures industrielles. Modèles et maquettes pour figures, ornements, &c.

Objets sculptés. Camées, cachets et objets divers décorés par la gravure. Objets de plastique industrielle obtenus par des procédés mécaniques; réductions, photo-sculptures, etc. Objets moulés.

CLASSE 9—ÉPREUVES ET APPAREILS DE PHOTOGRAPHIE.

(Palais, Galerie II.)

Photographies sur papier, sur verre, sur bois, sur étoffe, sur émail. Gravures héliographiques. Épreuves lithographiques. Clichés photographiques. Épreuves stéréoscopiques et stéréoscopes. Épreuves obtenues par amplification.

Instruments, appareils et matières premières de la photographie. Matériel des ateliers de photographes.

CLASSE 10—INSTRUMENTS DE MUSIQUE.

(Palais, Galerie II.)

Instruments à vent non métalliques: à embouchure simple, à bec de sifflet, à anches avec ou sans réservoir d'air. Instruments à vent métalliques: simples, à rallonges, à coulisses, à pistons, à clefs, à anches. Instruments à vent à clavier: orgues, accordéons, etc. Instruments à cordes, pincées ou à archet, sans clavier. Instruments à cordes, à clavier: pianos, etc. Instruments à percussion ou à frottement. Instruments automatiques: orgues de barbarie, serinettes, etc. Pièces détachées et objets du matériel des orchestres.

CLASSE 11—APPAREILS ET INSTRUMENTS DE L'ART MÉDICAL.

(Palais, Galerie II.)

Appareils et instruments de pansement et de petite chirurgie. Instruments d'exploration médicale. Appareils et instruments de chirurgie.

Trousses et caisses d'instruments et de médicaments spécialement destinées aux chirurgiens de l'armée et de la marine, aux vétérinaires, aux dentistes, aux oculistes, etc. Appareils de secours aux noyés et aux asphyxiés, etc. Appareils d'électrothérapie. Appareils d'anesthésie locale et générale. Appareils de prothèse plastique et mécanique. Appareils d'orthopédie, bandages herniaires, etc. Appareils divers destinés aux malades, aux infirmes, aux aliénés. Objets accessoires du service médical, chirurgical et pharmaceutique des hôpitaux et infirmeries.

Matériel des recherches anatomiques. Appareils destinés aux recherches de médecine légale.

Matériel spécial de la médecine vétérinaire.

Appareils bainéatoires, hydrothérapiques, etc.

Appareils et instruments destinés à l'éducation physique des enfants; gymnastique médicale et hygiénique.

Matériel des secours à donner aux blessés sur le champ de bataille. Ambulances civiles et militaires, destinées au service des armées de terre et de mer.

CLASSE 12—INSTRUMENTS DE PRÉCISION ET MATÉRIEL DE L'ENSEIGNEMENT DES SCIENCES.

(Palais, Galerie II.)

Instruments de géométrie pratique: compas, verniers, vis micrométriques, planimètres, machines à calculer, etc. Appareils et instruments d'arpentage, de topographie, de géodésie et d'astronomie. Matériel des divers observatoires.

Mathematical apparatus and instruments. Measures and weights of the various countries. Coins and medals.

Scales for scientific purposes. Physical and meteorological apparatus and instruments. Common optical instruments.

Apparatus used in teaching physics, elementary and descriptive geometry, stereotomy, and mechanics.

Models and instruments for technological instruction in general.

Collections for illustrating the teaching of the natural sciences. Figures and models for teaching the medical sciences; anatomical preparations, &c.

CLASS 13—MAPS AND GEOGRAPHICAL AND COSMOGRAPHICAL APPARATUS.

(Exhibition Building, Gallery II.)

Topographical, geographical, geological, hydrographical, and astronomical maps and atlases. Charts. Physical maps of all kinds. Plans in relief.

Terrestrial and celestial globes and spheres. Apparatus for the study of cosmography.

Statistical works and tables. Tables and ephemerides for the use of astronomers and mariners.

GROUP III.

Furniture and other objects for the use of dwellings.*

CLASS 14—FANCY FURNITURE.

(Exhibition Building, Gallery III.)

Sideboards, bookcases, tables, toilet-tables, bedsteads, sofas, couches, billiard-tables, &c.

CLASS 15—UPHOLSTERY AND DECORATIVE WORK.

(Exhibition Building, Gallery III.)

Bed furniture. Stuffed chairs, canopies, curtains, tapestry and other hangings.

Objects of decorative furniture in precious stones and materials. Moulded objects, and ornaments in plaster, statuary pasteboard, &c. Frames. Decorative painting.

Ecclesiastical furniture, naments, and decorations.

CLASS 16—CRYSTAL, FANCY GLASS AND STAINED GLASS.

(Exhibition Building, Gallery III.)

Drinking glasses of crystal, cut glass, plated, mounted, &c.

Window glass, plate glass, and mirrors. Engraved, enamelled, cracked, frosted, &c.

Glass and pebbles for optical purposes, ornaments, &c.

Stained glass windows.

CLASS 17—PORCELAIN, EARTHENWARE AND OTHER FANCY POTTERY.

(Exhibition Building, Gallery III.)

Biscuit. Hard and soft porcelain.

Fine earthenware with coloured glazing, &c. Biscuit of earthenware. Terra cotta. Enamelled lava. Ceramic stoneware.

CLASS 18—CARPETS, TAPESTRY AND OTHER STUFFS FOR FURNITURE.

(Exhibition Building, Gallery III.)

Carpets, moquettes, tapestry, velvet pile, &c. Carpets of felt, cloth, cloth-shearings, silk or floss silk. Straw matting and mats. India-rubber matting.

Appareils et instruments des arts de précision. Mesures et poids des divers pays. Monnaies et médailles.

Balances de précision. Appareils et instruments de physique et de météorologie. Instruments d'optique usuels.

Matériel de l'enseignement des sciences physiques, de la géométrie élémentaire, de la géométrie descriptive, de la stéréotomie, de la mécanique.

Modèles et instruments destinés à l'enseignement technologique en général.

Collections pour l'enseignement des sciences naturelles. Figures et modèles pour l'enseignement des sciences médicales : pièces d'anatomie plastique, etc.

CLASSE 13—CARTES ET APPAREILS DE GÉOGRAPHIE ET DE COSMOGRAPHIE.

(Palais, Galerie II.)

Cartes et atlas topographiques, géographiques, géologiques, hydrographiques, astronomiques, etc. Cartes marines. Cartes physiques de toutes sortes. Plans en relief.

Globes et sphères terrestres et célestes. Appareils pour l'étude de la cosmographie.

Ouvrages et tableaux de statistique. Tables et éphémérides à l'usage des astronomes et des marins.

GROUPE III.

Meubles et autres objets destinés à l'habitation.*

CLASSE 14—MEUBLES DE LUXE.

(Palais, Galerie III.)

Buffets, bibliothèques, tables, toilettes; lits; canapés; sièges; billards, etc.

CLASSE 15—OUVRAGES DE TAPISSIER ET DE DÉCORATEUR.

(Palais, Galerie III.)

Objets de literie. Sièges garnis, baldaquins, rideaux, tentures d'étoffes et de tapisseries.

Objets de décoration et d'ameublement en pierres et en matières précieuses. Pâtes moulées, et objets de décoration en plâtre, carton-pierre, etc. Cadres. Peintures en décors.

Meubles, ornements et décors pour les services religieux.

CLASSE 16—CRISTAUX, VERRERIE DE LUXE ET VITRAUX.

(Palais, Galerie III.)

Gobletterie de cristal, cristaux taillés, cristaux doublés, cristaux montés, etc.

Verres à vitres et à glaces. Verres façonnés, émaillés, craquelés, filigranés, etc.

Verres, cristaux d'optique, objets d'ornement, etc.

Vitraux peints.

CLASSE 17—PORCELAINES, FAÏENCES ET AUTRES POTERIES DE LUXE.

(Palais, Galerie III.)

Biscuits. Porcelaines dures et porcelaines tendres. Faïences fines à couverte colorée, etc. Biscuits de faïence. Terres cuites. Laves émaillées.

Grès cérames.

CLASSE 18—TAPIS, TAPISSERIES ET AUTRES TISSUS D'AMEUBLEMENT.

(Palais, Galerie III.)

Tapis, moquettes, tapisseries, épinglés ou veloutés. Tapis de feutre, de drap, de tontisse, de soie ou de bourre de soie. Tapis de sparterie, nattes. Tapis de caoutchouc.

* Ordinary objects for the use of dwellings, the merit of which lies in their useful qualities combined with cheapness, are methodically exhibited in Class 91 (Group X.).

* Les objets d'usage courant destinés à l'habitation, et qui se recommandent par les qualités utiles unies au bon marché, sont méthodiquement exposés dans la Classe 91 (Groupe X.).

Furniture stuffs of cotton, wool or silk, plain or figured. Horsehair tissues.
Leather cloth, moleskins, &c. Leather hangings, and for covering furniture. Oil-cloth.

CLASS 19—PAPER HANGINGS.

(Exhibition Building, Gallery III.)

Paper hangings, block printed and machine printed. Flock paper, and paper marbled, veined, &c. Paper for making mill-board, for binding, &c.
Paper with artistic designs.
Blinds, painted or printed.

CLASS 20—CUTLERY.

(Exhibition Building, Gallery III.)

Knives, penknives, scissors, razors, &c. Cutlery of every description.

CLASS 21—GOLD AND SILVER PLATE.

(Exhibition Building, Gallery III.)

Church plate, ornamental plate, and plate for the dining table, gold and silver toilet articles and writing materials, &c.

CLASS 22—BRONZES AND OTHER ART CASTINGS, AND REPOUSSÉ WORK.

(Exhibition Building, Gallery III.)

Statues and bas-reliefs in bronze, cast iron, zinc, &c. Bronzes for ornamental and decorative purposes. Imitation bronzes in cast iron, zinc, &c. Castings coated with metal by the galvanic process.

Repoussé work in copper, lead, zinc, &c.

CLASS 23—CLOCKS AND WATCHES.

(Exhibition Building, Gallery III.)

Separate parts of clocks. Clocks, time-pieces, watches, chronometers, regulators, seconds-indicators, stop-watches, &c. Apparatus for measuring time: hour-glasses, water-clocks. Electric-clocks.

CLASS 24—APPARATUS AND PROCESSES FOR HEATING AND LIGHTING.

(Exhibition Building, Gallery III.)

Fenders, fire-places, grates, stoves, and hot-air stoves. Accessory objects for heating. Kitchen stoves. Apparatus for heating by gas.

Apparatus for heating by the circulation of hot water or hot air. Ventilating apparatus. Drying apparatus; drying stoves.

Enamellers' lamps, blow-pipes, portable forges. Lamps for illuminating purposes, fed with animal, vegetable, or mineral oils. Accessory objects for lighting. Matches.

Apparatus and accessory objects for lighting by gas. Lamps for the electric light. Apparatus for the use of the magnesium light, &c.

CLASS 25—PERFUMERY.

(Exhibition Building, Gallery III.)

Cosmetics and pomatums. Perfumed oils; essences, extracts and scents, aromatic vinegar; almond paste, perfumed powders, pastilles, and scent bags; perfumes for burning. Toilet soap.

CLASS 26—LEATHER WORK, FANCY ARTICLES AND BASKET WORK.

(Exhibition Building, Gallery III.)

Cabinets, liqueur cases, glove boxes, caskets, &c. Lacquered articles.

Boxes, jewel boxes, dressing cases, purses, pocket-books, note books, cigar cases.

Turned, engine-turned, carved, engraved articles in wood, ivory, tortoise-shell, &c. Snuff-boxes, pipes. Combs and brushes generally.

Fancy basket-work, wicker-work for bottles, and articles in fine straw.

Tissus d'ameublement, de coton, de laine ou de soie, unis ou façonnés. Tissus de crin.
Cuiris végétaux, moleskines, etc. Cuiris de tenture et d'ameublement. Toiles cirées.

CLASSE 19—PAPIERS PEINTS.

(Palais, Galerie III.)

Papiers imprimés à la planche, au rouleau, à la machine. Papiers veloutés, marbrés, veinés, etc. Papiers pour cartonnages, reliures, etc.
Papiers à sujets artistiques.
Stores peints ou imprimés.

CLASSE 20—COUTELLERIE.

(Palais, Galerie III.)

Couteaux, canifs, ciseaux, rasoirs, etc. Produits divers de la coutellerie.

CLASSE 21—ORFÈVRERIE.

(Palais, Galerie III.)

Orfèvrerie religieuse, orfèvrerie de décoration et de table, orfèvrerie pour ustensiles de toilette, de bureau, etc.

CLASSE 22—BRONZES D'ART, FONTES D'ART DIVERSES ET OUVRAGES EN MÉTAUX REPOUSSÉS.

(Palais, Galerie III.)

Statues et bas-reliefs de bronze, de fonte de fer, de zinc, etc. Bronzes de décoration ou d'ornement. Imitations de bronzes en fonte, en zinc, etc. Fontes revêtues d'enduits métalliques par galvanoplastie.

Repoussés en cuivre, en plomb, en zinc, etc.

CLASSE 23—HORLOGERIE.

(Palais, Galerie III.)

Pièces détachées d'horlogerie. Horloges, pendules, montres, chronomètres, régulateurs. Compteurs à secondes, à pointage, etc. Appareils pour la mesure du temps: sabliers, clepsydres. Horloges électriques.

CLASSE 24—APPAREILS ET PROCÉDÉS DE CHAUFFAGE ET D'ÉCLAIRAGE.

(Palais, Galerie III.)

Foyers, cheminées, poêles et calorifères. Objets accessoires du chauffage. Fourneaux. Appareils pour le chauffage au gaz.

Appareils de chauffage par circulation d'eau chaude ou d'air chaud. Appareils de ventilation. Appareils de dessiccation; étuves.

Lampes d'émailleur, chalumeaux, forges portatives. Lampes servant à l'éclairage au moyen des huiles animales, végétales ou minérales. Accessoires de l'éclairage. Allumettes.

Appareils et objets accessoires de l'éclairage au gaz. Lampes photo-électriques. Appareils pour l'éclairage au moyen du magnésium, etc.

CLASSE 25—PARFUMERIE.

(Palais, Galerie III.)

Cosmétiques et pommades. Huiles parfumées; essences parfumées, extraits et eaux de senteur, vinaigres aromatisés; pâtes d'amandes, poudres, pastilles et sachets parfumés; parfums à brûler. Savons de toilette.

CLASSE 26—OBJETS DE MAROQUINERIE, DE TABLETTERIE ET DE VANNERIE.

(Palais, Galerie III.)

Petits meubles de fantaisie, caves à liqueurs, boîtes à gants, coffrets, etc. Objets de laque.

Boîtes, écrins, nécessaires. Porte-monnaies, portefeuilles, carnets, porte-cigares.

Objets tournés, guillochés, sculptés, gravés, en bois, en ivoire, en écaïlle, etc. Tabatières, pipes.

Peignes; objets de broserie.
Corbeilles et paniers de fantaisie, clissages et objets de sparterie fine.

GROUP IV.

Clothing (including fabrics)* and other objects worn on the person.**CLASS 27—COTTON THREAD AND FABRICS.**

(Exhibition Building, Gallery IV.)

Cotton, dressed and spun.
Pure cotton fabrics, plain or figured. Mixed cotton fabrics.
Cotton velvet.
Cotton ribands and tapes.

CLASS 28—THREAD AND FABRICS OF FLAX, HEMP, &c.

(Exhibition Building, Gallery IV.)

Flax, hemp, and other vegetable fibres, spun.
Linen and drills. Cambric. Linen fabrics, mixed with cotton or silk.
Fabrics made from vegetable fibres as substitutes for flax and hemp.

CLASS 29—COMBED WOOL AND WORSTED FABRICS.

(Exhibition Building, Gallery IV.)

Combed wool; worsted yarn.
Muslin de laine, Scotch cashmere, merinos, serge, &c.
Worsted ribands and laces, mixed with cotton or thread, silk or floss-silk. Hair-tissues pure or mixed.

CLASS 30—CARDED WOOL AND WOOLLEN FABRICS.

(Exhibition Building, Gallery IV.)

Carded wool; woollen yarn.
Cloth and other milled woollen fabrics.
Blankets. Felt of wool or hair for carpets, hats, shaws.
Woollen fabrics unmilled, or slightly milled; flannel, tartans, swansdown.

CLASS 31—SILK AND SILK MANUFACTURES.

(Exhibition Building, Gallery IV.)

Raw and thrown silk. Floss silk, silk yarns.
Silk fabrics, pure, plain, figured, brocaded. Silk fabrics mixed with gold, silver, cotton, wool, thread.
Manufactures of floss-silk, pure or mixed.
Velvet and plush.
Silk ribands, pure or mixed.

CLASS 32—SHAWLS.

(Exhibition Building, Gallery IV.)

Woollen shawls, pure or mixed. Cashmere shawls.
Silk shawls, &c.

CLASS 33—LACE, NET, EMBROIDERY, AND SMALL WARE MANUFACTURES.

(Exhibition Building, Gallery IV.)

Thread or cotton lace made with the distaff, the needle or the loom. Lace made of silk, worsted, or mohair. Gold and silver lace.

Silk or cotton net, plain or figured.

Embroidery, crochet work, &c. Gold, silver, and silk embroidery. Tapestry work and other work done by the hand.

Lace work of silk, floss-silk, worsted, mohair, horse-hair, thread and cotton; laces. Lace-work, real or imitation. Lace-work for military uniforms.

GROUPE IV.

Vêtements (tissus compris)* et autres objets portés par la personne.**CLASSE 27—FILS ET TISSUS DE COTON.**

(Palais, Galerie IV.)

Cotons préparés et filés.
Tissus de coton pur, unis ou façonnés. Tissus de coton mélangé.
Velours de coton.
Rubannerie de coton.

CLASSE 28—FILS ET TISSUS DE LIN, DE CHANVRE, ETC.

(Palais, Galerie IV.)

Lins, chanvres et autres fibres végétales filées.
Toiles et coutils. Batistés. Tissus de fil avec mélange de coton ou de soie.
Tissus de fibres végétales, équivalents du lin et du chanvre.

CLASSE 29 — FILS ET TISSUS DE LAINE PEIGNÉE.

(Palais, Galerie IV.)

Laines peignées; fils de laine peignée.
Mousselines, cachemires d'Écosse, mérinos, serges, etc.
Rubans et galons de laine mélangée de coton ou de fil, de soie, ou de bourre de soie. Tissus de poils purs ou mélangés.

CLASSE 30—FILS ET TISSUS DE LAINE CARDÉE.

(Palais, Galerie IV.)

Laines cardées; fils de laine cardée.
Draps et autres tissus foulés de laine cardée.
Couvertures. Feutres de laine ou poil pour tapis, chapeaux, chaussons.
Tissus de laine cardée non foulés ou légèrement foulés: flanelles, tartans, molletons.

CLASSE 31—SOIES ET TISSUS DE SOIE.

(Palais, Galerie IV.)

Soies grèges et moulinés. Fils de bourre de soie.
Tissus de soie pure, unis, façonnés, brochés. Étoffes de soie mélangée d'or, d'argent, de coton, de laine, de fil. Tissus de bourre de soie, pure ou mélangée.
Velours et peluches.
Rubans de soie pure ou mélangée.

CLASSE 32—CHÂLES.

(Palais, Galerie IV.)

Châles de laine pure ou mélangée. Châles de cachemire.
Châles de soie, etc.

CLASSE 33—DENTELLES, TULLES, BRODERIES ET PASSEMENTERIES.

(Palais, Galerie IV.)

Dentelles de fil ou de coton faites au fuseau à l'aiguille ou à la mécanique. Dentelles de soie, de laine ou de poil de chèvre. Dentelles d'or ou d'argent.

Tulles de soie ou de coton, unis ou brochés.
Broderies au plumetis, au crochet, etc. Broderies d'or, d'argent, de soie. Broderies-tapisseries et autres ouvrages à la main.

Passementeries de soie, bourre de soie, laine, poil de chèvre, crin, fil et coton; lacets. Passementeries en fin et en faux. Passementeries spéciales pour équipement militaire.

* Articles of clothing as ordinarily worn, the merit of which lies in their useful qualities combined with cheapness, are methodically exhibited in Class 91 (Group X.)

* Les objets d'usage courant destinés au vêtement, et qui se recommandent par les qualités utiles unies au bon marché, sont méthodiquement exposés dans la Classe 91 (Groupe X.).

CLASS 34—HOSIERY AND UNDER-CLOTHING AND ARTICLES APPERTAINING THERETO.

(Exhibition Building, Gallery IV.)

Hosiery of cotton, thread, wool, cashmere, silk or floss-silk, pure or mixed.

Under-clothing for men, women, and children. Baby linen.

Flannel and other woollen garments.

Stays. Scarves. Gloves. Gaiters.

Fans, screens. Umbrellas, parasols, walking-sticks, &c.

CLASS 35—CLOTHING FOR BOTH SEXES.

(Exhibition Building, Gallery IV.)

Men's clothes; women's clothes.

Men's hats and caps; women's bonnets and head-dresses.

Wigs and works in hair.

Boots and shoes.

Children's clothes.

Clothing peculiar to various professions and trades.

CLASS 36—JEWELLERY AND PRECIOUS STONES.

(Exhibition Building, Gallery IV.)

Jewellery in precious metals (gold, platinum, silver, aluminium), chased, filigreed, set with precious stones, &c. Plated and imitation jewellery. Ornaments in jet, amber, coral, mother-of-pearl, steel, &c.

Diamonds, precious stones, pearls, and imitation pearls.

CLASS 37—PORTABLE WEAPONS.

(Exhibition Building, Gallery IV.)

Defensive armour: shields, cuirasses, helmets.

Offensive weapons: maces, life-preservers.

Side arms: foils, swords, sabres, bayonets, lances,

axes. Hunting knives (couteaux de chasse).

Missile weapons: bows, cross-bows, slings.

Fire-arms: guns, rifles, pistols, revolvers.

Accessory objects appertaining to every kind of small arms: powder flasks, bullet moulds. Round, oblong, hollow, and explosive projectiles. Copper-caps, priming, cartridges.

CLASS 38.—TRAVELLING APPARATUS AND CAMP EQUIPAGE.

(Exhibition Building, Gallery IV.)

Trunks, valises, saddle bags, &c. Dressing cases and fittings. Travelling bags; travelling rugs; cushions; caps, travelling costumes, and boots; sticks shod with iron, and with hooks; parasols, &c.

Portable apparatus specially intended for scientific voyages and expeditions: photographic apparatus, instruments for astronomical and meteorological observations; equipment and implements for geologists, mineralogists, naturalists, pioneer colonists, &c.

Tents and camp equipage. Furniture of military tents; beds, hammocks, folding chairs. Canteens: hand mills, military cooking stoves, &c.

CLASS 39—TOYS.

(Exhibition Building, Gallery IV.)

Dolls and playthings. Dolls and images in wax. Games for the amusement of children and adults.

Instructive games.

GROUP V.

Products (raw and manufactured) of mining industry, forestry, &c.

CLASS 40—MINING AND METALLURGY.

(Exhibition Building, Gallery V.)

Collections and specimens of rocks, minerals, and ores. Ornamental stones; marble, serpentine, onyx. Hard rocks. Refractory substances. Earths and clays.

Various mineral products. Sulphur. Rock-salt. Salt from salt springs. Bitumen and petroleum.

CLASSE 34—ARTICLES DE BONNETERIE ET DE LINGERIE; OBJETS ACCESSOIRES DU VÊTEMENT.

(Palais, Galerie IV.)

Bonneterie de coton, de fil, de laine ou de cachemire, de soie ou de bourre de soie, purs ou mélangés.

Lingerie confectionnée pour hommes, pour femmes et pour enfants. Layettes.

Confections de flanelles et autres tissus de laine.

Corsets. Cravates. Gants. Guêtres.

Éventails; écrans. Parapluies, ombrelles, cannes, etc.

CLASSE 35—HABILLEMENTS DES DEUX SEXES.

(Palais, Galerie IV.)

Habits d'hommes; habits de femmes.

Coiffures d'hommes; coiffures de femmes.

Perruques et ouvrages en cheveux.

Chaussures.

Confections pour enfants.

Vêtements spéciaux aux diverses professions.

CLASSE 36—JOAILLERIE ET BIJOUTERIE.

(Palais, Galerie IV.)

Bijoux en métaux précieux (or, platine, argent, aluminium), ciselés, filigranés, ornés de pierres fines, etc. Bijoux en doublé et en faux. Bijoux en jayet, ambre, corail, nacre, acier, etc.

Diamants, pierres fines, perles et imitations.

CLASSE 37—ARMES PORTATIVES.

(Palais, Galerie IV.)

Armes défensives; boucliers, cuirasses, casques.

Armes contondantes; massues, casse-tête.

Armes blanches; fleurets, épées, sabres, baïonnettes, lances, haches. Couteaux de chasse.

Armes de jet; arcs, arbalètes, frondes.

Armes à feu; fusils, carabines, pistolets, revolvers.

Objets accessoires d'arquebuserie; poudrières moulées à balles. Projectiles sphériques, oblongs creux, explosibles. Capsules, amorces, cartouches.

CLASSE 38—OBJETS DE VOYAGE ET DE CAMPEMENT.

(Palais, Galerie IV.)

Malles, valises, sacoches, etc. Nécessaires et troussees de voyage. Objets divers; couvertures de voyage; coussins; coiffures, costumes et chaussures de voyage; bâtons ferrés et à grappin, parasols, etc.

Matériel portatif spécialement destiné aux voyages et expéditions scientifiques: appareils de photographie, instruments pour les observations astronomiques et météorologiques; nécessaires et bagages du géologue, du minéralogiste, du naturaliste, du colon pionnier, etc.

Tentes et objets de campement. Mobilier des tentes militaires; lits, hamacs, sièges pliants. Cantines: moulins, fours de campagne, etc.

CLASSE 39—BIMBELOTERIE.

(Palais, Galerie IV.)

Poupées et jouets. Figures de cire et figurines. Jeux destinés aux récréations des enfants ou des adultes.

Jouets instructifs.

GROUPE V.

Produits (bruts et ouvrés) des industries extractives.

CLASSE 40—PRODUITS DE L'EXPLOITATION DES MINES ET DE LA MÉTALLURGIE.

(Palais, Galerie V.)

Collections et échantillons de roches, minéraux et minerais. Roches d'ornement; marbres, serpentines, onyx. Roches dures. Matériaux réfractaires. Terres et argiles.

Produits minéraux divers. Soufre brut. Sel gemme, sel des sources salées. Bitumes et pétroles.

Specimens of fuel in its natural state and carbonized. Compressed coal.

Metals in a crude state: pig-iron, iron, steel, cast steel, copper, lead, silver, zinc, &c. Alloys.

Products of washing and refining precious metals, of gold beating, &c.

Electro-metallurgy: objects gilt, silvered, or coated with copper or steel by galvanic process.

Products of the working of metals: rough castings; bells: wrought-iron; iron for special purposes; sheet-iron and tin plates; iron plates for casing ships and constructions; copper, lead, and zinc sheets.

Manufactured metals; blacksmith's work; wheels and tires; unwelded pipes; chains, &c.

Wire drawing: needles, pins; wire work and wire gauze. Perforated sheet-iron.

Hardware, ironmongery, edge-tools, copper and tin-ware, &c. Other metal manufactures.

CLASS 41—PRODUCTS OF THE CULTIVATION OF FORESTS, AND OF THE TRADES APPERTAINING THERETO.

(Exhibition Building, Gallery V.)

Specimens of different kinds of trees. Wood for cabinet-work, for building purposes. Fire-wood. Timber for shipbuilding; staves; cleft timber shingles. Cork; bark for textile purposes. Tanning, colouring, odoriferous, resinous substances.

Products obtained from forests: charcoal and dried wood; raw potash; turnery; basket-work; straw work; wooden shoes, &c.

CLASS 42—PRODUCTS OF SHOOTING, FISHING, AND OF THE EARTH OBTAINED WITHOUT CULTIVATION.

(Exhibition Building, Gallery V.)

Collections and drawings of terrestrial and amphibious animals, of birds, eggs, fish, of cetacea, of mollusca, and of crustacea.

Products of shooting; furs and skins, hair, bristles, feathers, down; horn, teeth, ivory, bone; tortoise-shell, musk, castoreum, and analogous products.

Products of fishing: train oil, spermaceti, &c.; whalebone; ambergris; shells of mollusca, pearls, mother of pearl, sepia, purple; coral, sponge.

Vegetable products of the earth obtained without culture: mushrooms, truffles, wild fruit, lichens used as dyes, food and fodder; fermented sap; Peruvian bark; useful barks and filaments; wax, resinous gums; india-rubber, gutta-percha, &c.

CLASS 43—AGRICULTURAL PRODUCTS (NOT USED AS FOOD) EASILY PRESERVED.

(Exhibition Building, Gallery V.)

Textile materials; raw cotton, flax and hemp scutched and unscutched, textile vegetable fibres of all kinds; wool in its grease; cocoons of the silk worm.

Various agricultural products used in manufactures, in pharmacy, and for household purposes; oleaginous plants; oils, wax, resin.

Tobacco. German tinder. Tanning substances. Dyeing substances. Preserved fodder.

CLASS 44—CHEMICAL AND PHARMACEUTICAL PRODUCTS.

(Exhibition Building, Gallery V.)

Acids, alkalis. Salts of all kinds. Sea salt, and products extracted from mother water.

Various products of chemistry; wax and fatty substances; soaps and candles; raw materials used in perfumery; resins, tar, and the products derived therefrom; essences and varnishes; various coating substances, blacking. India-rubber and gutta-percha and their products; dyes and colours.

Mineral and sparkling waters, natural or artificial. Raw materials used in pharmacy. Simple and compound drugs.

Échantillons de combustibles crus et carbonisés. Agglomérés de houille.

Métaux bruts: fontes, fers, aciers, fers aciéreux, cuivre, plomb, argent, zinc, etc. Alliages métalliques.

Produits de l'art du laveur de cendres et de l'affineur de métaux précieux, du batteur d'or, etc.

Produits de l'électro-metallurgie: objets dorés, argentés, cuivrés, acierés, etc., par la galvanoplastie.

Produits de l'élaboration des métaux bruts: fontes moulées; cloches; fers marchands; fers spéciaux; tôles et fers-blancs; tôles extra pour blindages et constructions. Tôles de cuivre, de plomb, de zinc.

Métaux ouvrés: pièces de forge et de grosse serrurerie; roues et bandages; tubes sans soudure; chaînes, etc.

Produits de la tréfilerie. Aiguilles, épingles, treillages, tissus métalliques. Tôles perforées.

Produits de la quincaillerie, de la taillanderie, de la feronnerie, de la chaudronnerie, de la tôlerie et de la ferblanterie. Métaux ouvrés divers.

CLASSE 41—PRODUITS DES EXPLOITATIONS ET DES INDUSTRIES FORESTIÈRES.

(Palais, Galerie V.)

Échantillons d'essences forestières. Bois d'œuvre, de chauffage et de construction. Bois ouvrés pour la marine; merrains, bois de fente. Lièges; écorces textiles. Matières tannantes, colorantes, odorantes, résineuses, etc.

Produits des industries forestières: bois torréfiés et charbons; potasses brutes; objets de boissellerie, de vannerie, de sparterie; sabots, etc.

CLASSE 42—PRODUITS DE LA CHASSE, DE LA PÊCHE ET DES CUEILLETES.

(Palais, Galerie V.)

Collections et dessins d'animaux terrestres et amphibies, d'oiseaux, d'œufs, de poissons, de cétacés, de mollusques et de crustacés.

Produits de la chasse: fourrures et pelleteries, poils, crins, plumes, duvets; cornes, dents, ivoire, os; écaille, musc, castoreum et produits analogues.

Produits de la pêche: huile de baleine, spermacéti, etc.; fanons de baleine; ambre gris; coquilles de mollusques, perles, nacrés, sépia, pourpre; coraux, éponges.

Produits des cueillettes ou récoltes obtenues sans culture: champignons, truffes, fruits sauvages, lichens employés pour teintures, aliments et fourrages; sèves fermentées; quinquinas; écorces et filaments utiles; cires, gommés-résines; caoutchouc brut, gutta-percha, etc.

CLASSE 43—PRODUITS AGRICOLES (NON ALIMENTAIRES) DE FACILE CONSERVATION.

(Palais, Galerie V.)

Matières textiles: cotons bruts, lins et chanvres teillés et non teillés, fibres végétales métalliques de toute nature; laines en suint; cocoons de vers à soie.

Produits agricoles divers, employés dans l'industrie, dans la pharmacie et dans l'économie domestique: plantes oléagineuses, huiles, cires, résines.

Tabacs. Amadou. Matières tannantes. Substances tinctoriales. Fourrages conservés.

CLASSE 44—PRODUITS CHIMIQUES ET PHARMACEUTIQUES.

(Palais, Galerie V.)

Acides, alcalis. Sels de toutes sortes. Sel marin et produits de l'exploitation des eaux-mères.

Produits divers des industries chimiques: cires et corps gras; savons et bougies; matières premières de la parfumerie; résines, goudrons et corps dérivés; essences et vernis; enduits divers, cirages. Produits de l'industrie du caoutchouc et de la gutta-percha; matières tinctoriales et colorants.

Eaux minérales et eaux gazeuses, naturelles ou artificielles. Matières premières de la pharmacie. Médicaments simples et composés.

CLASS 45—SPECIMENS OF THE CHEMICAL PROCESSES FOR BLEACHING, DYEING, PRINTING, AND DRESSING.

(Exhibition Building, Gallery V.)

Specimens of dyed thread and fabrics. Specimens of fabrics prepared for dyeing. Printed or dyed linen. Printed cotton fabrics, pure or mixed.

Printed woollen and worsted fabrics, pure or mixed. Printed silk fabrics, pure or mixed.

Printed felt or cloth carpets. Oil cloth.

N.B.—In this class will be exhibited only such specimens as are essential for the proper appreciation of the value of the processes.

CLASS 46—LEATHER AND SKINS.

(Exhibition Building, Gallery V.)

Raw materials used in the dressing of skins and leather.

Raw hides, salted hides. Leather tanned, curried dressed, or dyed. Varnished leather. Morocco and sheepskin. Skins grained, shamoyed, tawed, dressed, or dyed. Prepared skins for glove making. Skins and furs dressed and dyed. Parchment.

Gutwork: strings for musical instruments, gold beater's skin, sinews, &c.

GROUP VI.

Apparatus and processes used in the common arts.

CLASS 47—APPARATUS AND PROCESSES OF THE ART OF MINING AND METALLURGY.

(Exhibition Building, Gallery V.)

Boring apparatus for artesian wells and wells of large diameters. Boring machines and apparatus for breaking down coal, and cutting rocks. Apparatus for blasting by electricity.

Models, plans, and views of the mode of working in mines and quarries. Works for obtaining mineral waters. Mining ladders moved by machinery. Extracting apparatus. Machines for draining; pumps. Ventilating apparatus; ventilators. Safety lamps, lamps for electric light. Apparatus for saving life, parachutes, signals.

Apparatus for the mechanical dressing of ores and mineral fuel. Apparatus for compressing fuel into cakes.

Apparatus for the carbonisation of fuel. Smelting furnaces; smoke consuming apparatus. Apparatus used in metal works. Special apparatus used in forges and foundries.

Electro-metallurgical apparatus.

Apparatus used in metal manufactures of all kinds.

CLASS 48—AGRICULTURAL APPARATUS AND PROCESSES USED IN THE CULTIVATION OF FIELDS AND FORESTS.

(Exhibition Building, Gallery VI.)

Plans of culture, distribution of crops and management. Apparatus for agricultural works; drainage, irrigation. Plans and models of farm buildings.

Tools, implements, machines and apparatus used in husbandry, sowing and planting, harvesting, preparation and preservation of crops. Carts and other rural means of transport. Locomotives and horse-gins.

Manures, organic or mineral.

Apparatus for the physical and chemical study of soils.

CLASSE 45—SPÉCIMENS DES PROCÉDÉS CHIMIQUES DE BLANCHIMENT, DE TEINTURE, D'IMPRESSION ET D'APPRÊTS.

(Palais, Gallery V.)

Échantillons de fils et tissus teints. Échantillons de préparations pour la teinture. Toiles imprimées ou teintes. Tissus de coton, pur ou mélangé, imprimés. Tissus de laine, pure ou mélangée, peignée ou cardée, imprimés. Tissus de soie, pure ou mélangée, imprimés. Tapis de feutre ou de drap imprimés. Toiles cirées.

NOTA.—On n'exposera dans cette classe que les spécimens strictement nécessaires pour faire apprécier la valeur des procédés.

CLASSE 46—CUIRS ET PEAUX.

(Palais, Galerie V.)

Matières premières employées dans la préparation des peaux et des cuirs.

Peaux vertes, peaux salées. Cuirs tannés, corroyés, apprêtés ou teints. Cuirs vernis. Maroquins et basanes. Peaux hongroyées, chamoisées, mégissées, apprêtées ou teintes. Peaux préparées pour la ganterie. Pelleteries et fourrures apprêtées et teintes. Parchemins.

Articles de boyauderie: cordes pour instruments de musique, baudruches, nerfs de bœuf, etc.

GROUPE VI.

Instruments et procédés des arts usuels.

CLASSE 47—MATÉRIEL ET PROCÉDÉS DE L'EXPLOITATION DES MINES ET DE LA MÉTALLURGIE.

(Palais, Galerie VI; Parc.)

Matériel des sondages pour recherches, pour puits artésiens et pour puits à grande section. Machines à forer les trous de mine, à abatre la houille et à débiter les roches. Appareils pour le tirage électrique des mines.

Modèles, plans et vues de travaux d'exploitation de mines et carrières. Travaux de captage des eaux minérales. Échelles de mines mues par des machines. Matériel de l'extraction. Machines d'épuisement, pompes. Appareils d'aérage; ventilateurs. Lampes de sûreté, lampes photo-électriques. Appareils de sauvetage, parachutes, signaux.

Appareils de préparation mécanique des minerais et des combustibles minéraux. Appareils à agglomérer les combustibles.

Appareils pour la carbonisation des combustibles. Foyers et fourneaux métallurgiques; appareils fumivores. Matériel des usines métallurgiques. Matériel spécial des forges et fonderies.

Appareils d'électro-metallurgie.

Matériel des ateliers d'élaboration des métaux sous toutes les formes.

CLASSE 48—MATÉRIEL ET PROCÉDÉS DES EXPLOITATIONS RURALES ET FORESTIÈRES.

(Palais, Galerie VI.)

Plans de culture, assolements et aménagements agricoles. Matériel et travaux du génie agricole: dessèchements, drainage, irrigations. Plans et modèles de bâtiments ruraux.

Outils, instruments, machines et appareils servant au labourage et autres façons données à la terre, à l'ensemencement et aux plantations, à la récolte, à la préparation et à la conservation des produits de la culture. Matériel des charrois et des transports ruraux. Machines locomobiles et manèges.

Matières fertilisantes d'origine organique ou minérale.

Appareils pour l'étude physique et chimique des sols.

Plans of different systems of re-planting, managing, and cultivating forests.

Apparatus used in the cultivation of forests, and in the trades appertaining thereto.

CLASS 49—APPARATUS USED IN SHOOTING, FISHING TACKLE, AND IMPLEMENTS USED IN GATHERING FRUITS OBTAINED WITHOUT CULTURE.

(Exhibition Building, Gallery VI.)

Guns, traps, and shooting apparatus and equipment. Fishing lines and hooks. Harpoons. Nets. Fishing tackle and bait.

Apparatus and implements used in gathering products obtained without cultivation.

CLASS 50—APPARATUS AND PROCESSES USED IN AGRICULTURAL WORKS, AND IN WORKS FOR THE PREPARATION OF FOOD.

(Exhibition Building, Gallery VI.)

Apparatus used in agricultural works: manufacture of artificial manures, of drain-pipes; dairies; apparatus used in making flour, fecula, starches, oils; apparatus used in breweries; distilleries; sugar manufactories, and refineries; workshops for the dressing of textile materials; silk worm nurseries, &c.

Apparatus used in the preparation of alimentary products, bread making machinery and mechanical ovens for bakers, instruments used in making pastry and confectionary. Apparatus for the manufacture of vermicelli, macaroni, &c. Machines for making ship-biscuits. Chocolate machines. Apparatus for roasting coffee. Apparatus for making ices and cool drinks; ice making.

CLASS 51—APPARATUS USED IN CHEMISTRY, PHARMACY, AND IN TAN YARDS.

(Exhibition Building, Gallery VI.; Park.)

Laboratory utensils and apparatus. Apparatus and instruments used in assays for industrial and commercial purposes.

Processes and apparatus used in the manufacture of chemicals, soaps, candles.

Processes and apparatus used in the manufacture of essences, varnishes, and articles in india-rubber and gutta-percha.

Processes and apparatus used in gas-works.

Processes and apparatus used in bleaching.

Processes used in the preparation of pharmaceutical products.

Processes used in tan-yards, and leather dressing.

Processes and apparatus used in glass works and in ceramic manufactures.

CLASS 52 — PRIME-MOVERS, BOILERS, AND ENGINES SPECIALLY ADAPTED TO THE REQUIREMENTS OF THE EXHIBITION.

(Exhibition Building, Gallery VI.; Park.)

Boilers and steam generators with their safety valves. Steam pipes and apparatus connected with them.

Shafts. Pulleys and belts. Appliances for starting and stopping engines, and for throwing in and out of gear.

Engines used for supplying the water and steam necessary in the different sections of the Exhibition building and Park.

Cranes and apparatus of all kinds intended to be used for moving the packages.

Rails and turntables intended to be used for moving the packages, fodder and manure, and for other purposes that may be required in the Exhibition building and Park.

CLASS 53 — MACHINES AND APPARATUS IN GENERAL.

(Exhibition Building, Gallery VI.)

Separate parts of machinery: bearings, rollers, slide-bars, eccentric wheels, toothed wheels, connecting rods,

Plans de systèmes de reboisement, d'aménagement, de culture des forêts.

Matériel des exploitations et des industries forestières.

CLASSE 49—ENGINS ET INSTRUMENTS DE LA CHASSE, DE LA PÊCHE ET DES CUEILLETES.

(Palais, Galerie VI.; Parc.)

Armes, pièges, engins et équipements de chasse. Lignes et hameçons. Harpons. Filets. Appareils et appâts de pêche.

Appareils et instruments pour la récolte des produits obtenus sans culture.

CLASSE 50 — MATÉRIEL ET PROCÉDÉS DES USINES AGRICOLES ET DES INDUSTRIES ALIMENTAIRES.

(Palais, Galerie VI.)

Matériel des usines agricoles: fabriques d'engrais artificiels, de tuyaux de drainage; fromageries et laiteries; minoteries, féculeries, amidonneries; huileries, brasseries, distilleries, sucreries, raffineries; ateliers pour la préparation des matières textiles; magnaneries, etc.

Matériel de la fabrication des produits alimentaires; pétrisseurs et fours mécaniques pour boulangers, ustensiles de pâtisserie et de confiserie. Appareils pour la fabrication des pâtes alimentaires. Machines à faire le biscuit de mer. Machines à préparer le chocolat. Appareils pour la torréfaction du café. Préparation des glaces et des sorbets; fabrication de la glace.

CLASSE 51—MATÉRIEL DES ARTS CHIMIQUES, DE LA PHARMACIE, DE LA TANNERIE.

(Palais, Galerie VI.; Parc.)

Ustensiles et appareils de laboratoire. Appareils et instruments destinés aux essais industriels et commerciaux.

Matériel et appareils des fabriques de produits chimiques, de savons, de bougies.

Matériel et procédés de la fabrication des essences, des vernis, des objets en caoutchouc et en gutta-percha.

Matériel et appareils des usines à gaz.

Matériel et procédés des b'anchisseries.

Matériel de la préparation des produits pharmaceutiques.

Matériel des ateliers de tannerie et de mégisserie.

Matériel et procédés des verreries et des fabriques de produits céramiques.

CLASSE 52—MOTEURS, GÉNÉRATEURS ET APPAREILS MÉCANIQUES SPÉCIALEMENT ADAPTÉS AUX BESOINS DE L'EXPOSITION.

(Palais, Galerie VI.; Parc.)

Chaudières et générateurs de vapeur avec leurs appareils de sûreté. Conduites de vapeur et appareils accessoires.

Arbres de couche. Poulies de renvoi, courroies. Organes de mise en marche, d'arrêt, d'embrayage et de débrayage.

Moteurs employés pour fournir l'eau et la force motrice nécessaires dans les diverses parties du Palais et du Parc.

Grues et appareils de toutes sortes proposés pour la manutention des colis.

Rails et plaques tournantes proposés pour la manutention des colis, des fourrages, des fumiers et pour les autres services du Palais et du Parc.

CLASSE 53—MACHINES ET APPAREILS DE LA MÉCANIQUE GÉNÉRALE.

(Palais, Galerie VI.)

Pièces de mécanismes détachées: supports, galets, glissières, excentriques, engrenages, bielles, parallé-

cranks, parallel-joints, belts, funicular apparatus, &c. Gearing, spring, and catch work, &c. Regulators and governors. Greasing apparatus.

Machines for measuring and registering. Dynamometers, steam-gauges, weighing machines. Gauges for liquids and gas.

Machines used for moving heavy weights.

Hydraulic machines for raising water, &c.; norias (chain-pumps), scoop-wheels, hydraulic rams, &c. Hydraulic engines, water-wheels, turbines, &c.

Steam engines. Boilers, steam generators and apparatus appertaining thereto. Apparatus for condensing steam. Machines set in motion by the evaporation of ether, chloroform, ammonia; of a combination of gases.

Machines set in motion by gas, hot air, compressed air, electro-magnetic machines. Windmills and panemones. Air-balloons.

CLASS 54—MACHINE TOOLS.

(Exhibition Building, Gallery VI.)

Engines and tools for preparing wood for the workshop. Lathes, boring machines, and planing machines. Slotting machines, drilling machines, shaping machines, &c. Screw cutting engines, and riveting machines. Various kinds of tools used in machine workshops.

Tools, engines and apparatus for pressing, crushing, working up, sawing, polishing, &c.

Special tools and engines used in various trades.

CLASS 55—APPARATUS AND PROCESSES USED IN SPINNING AND ROPE MAKING.

(Exhibition Building, Gallery VI.)

Hand spinning apparatus. Separate parts of spinning apparatus. Machines and apparatus used in the dressing and spinning of textile materials. Apparatus and processes for the subsidiary operations appertaining thereto; for drawing, winding, twisting, throwing. Dressing machines. Apparatus for separating the qualities and numbering the thread.

Materials used in rope manufacture. Round, flat, tapering cables, cord and twine; wire rope, cables with wire core, rope-matches, quick-matches, &c.

CLASS 56—APPARATUS AND PROCESSES USED IN WEAVING.

(Exhibition Building, Gallery VI.)

Apparatus used in the preparation of materials for weaving; warping mills, spooling (winding) machines. Card making for the jacquard looms.

Hand looms and mechanical looms for the manufacture of plain fabrics. Looms for the manufacture of figured and brocaded stuffs; damask looms, electric looms. Looms for the manufacture of carpets and tapestry.

Mesh weaving looms for the manufacture of hosiery and net. Apparatus for making lace. Apparatus used in the manufacture of lace-work.

High warp looms, and different modes of preparing the bobbins for weaving.

Accessory apparatus: machines for fulling, callendering, figuring, watering, measuring, folding, &c.

CLASS 57—APPARATUS AND PROCESSES FOR SEWING, AND FOR MAKING UP CLOTHING.

(Exhibition Building, Gallery VI.)

Ordinary implements used by tailors and seamstresses. Sewing, quilting, hemming, and embroidering machines.

Knives for cutting out cloth and leather for making garments and shoes. Machines for making boots and shoes, for nailing and screwing soles.

CLASS 58—APPARATUS AND PROCESSES USED IN THE MANUFACTURE OF FURNITURE AND OBJECTS FOR DWELLINGS.

(Exhibition Building, Gallery VI.)

Machines for cutting veneers. Turning webs, saw frames, &c. Machines for cutting the mouldings and

grammes et joints, courroies, systèmes funiculaires, etc. Embrayages, déclies, etc. Régulateurs et modérateurs de mouvement. Appareils de graissage.

Compteurs et enregistreurs. Dynamomètres, manomètres, appareils de pesage. Appareils de jaugeage des liquides et des gaz.

Machines servant à la manœuvre des fardeaux.

Machines hydrauliques élévatoires: norias, pompes, tympans, béliers hydrauliques, etc. Récepteurs hydrauliques: roues, turbines, machines à colonne d'eau.

Machines motrices à vapeur. Chaudières, générateurs de vapeur et appareils accessoires. Appareils de condensation des vapeurs. Machines à vapeur d'éther, de chloroforme, d'ammoniaque; à vapeurs combinées.

Machines à gaz, à air chaud, à air comprimé. Moteurs électro-magnétiques. Moulins à vent et panemones. Aérostats.

CLASSE 54—MACHINES-OUTILS.

(Palais, Galerie VI.)

Machines-outils servant au travail préparatoire des bois. Tours et machines à aléser et à raboter. Machines à mortaiser, à percer, à découper. Machines à tarauder, à fileter, à river. Outils divers des ateliers de constructions mécaniques.

Outils, machines et appareils servant à presser, à broyer, à malaxer, à scier, à polir, etc.

Machines-outils spéciales à diverses industries.

CLASSE 55 — MATÉRIEL ET PROCÉDÉS DU FILAGE ET DE LA CORDERIE.

(Palais, Galerie VI.)

Matériel du filage à la main. Pièces détachées appartenant au matériel des filatures. Machines et appareils servant à la préparation et à la filature des matières textiles. Appareils et procédés destinés aux opérations complémentaires: étirage, dévidage, retordage, moulinage, apprêts mécaniques. Appareils pour le conditionnement et le tirage des fils.

Matériel des ateliers de corderie. Câbles ronds, plats, diminués, cordes et ficelles, câbles en fils métalliques, câbles à âme métallique, mèches à feu, étoupilles, etc.

CLASSE 56—MATÉRIEL ET PROCÉDÉS DU TISSAGE.

(Palais, Galerie VI.)

Appareils destinés aux opérations préparatoires du tissage: machines à ourdir, à bobiner. Lisages.

Métiers ordinaires et mécaniques pour la fabrication des tissus unis. Métiers pour la fabrication des étoffes façonnées et brochées, battants-brocheurs, métiers électriques. Métiers à fabriquer les tapis et tapisseries.

Métiers à mailles pour la fabrication de la bonneterie et des tulle. Matériel de la fabrication de la dentelle. Matériel des fabriques de passementerie.

Métiers de haute lisse et procédés d'espouillage.

Appareils accessoires: machines à fouler, calandrer, gauffer, moirer, métrer, plier, etc.

CLASSE 57—MATÉRIEL ET PROCÉDÉS DE LA COUTURE ET DE LA CONFECTION DES VÊTEMENTS.

(Palais, Galerie VI.)

Outils ordinaires des ateliers de couture et de confection. Machines à coudre, à piquer, à ourler, à border.

Scies à découper les étoffes et les cuirs pour la confection des vêtements et chaussures. Machines à faire, à clouer et à visser les chaussures.

CLASSE 58—MATÉRIEL ET PROCÉDÉS DE LA CONFECTION DES OBJETS DE MOBILIER ET D'HABITATION.

(Palais, Galerie VI.)

Machines à débiter les bois de placage. Scies à découper, à chantourner, etc. Machines à faire les

beadings of frames, the squares of inlaid floors, furniture, &c. Lathes and other apparatus used in carpentering and cabinet making.

Machines for stamping and burnishing. Machines and apparatus for working stucco, papier-maché, ivory, bone and horn.

Machines for pointing, carving, and reducing statues; for engraving, engine turning, &c.

Machines for sawing and polishing hard substances, marbles, &c.

CLASS 59—APPARATUS AND PROCESSES USED IN PAPER MAKING, DYEING, AND PRINTING.

(Exhibition Building, Gallery VI.)

Apparatus for printing paper hangings and tissues. Machines for engraving cylinders for printing.

Apparatus for bleaching and dyeing, and for the preparation of paper and tissues.

Apparatus for making paper by hand and by machinery. Apparatus for embossing, ruling, glazing, and watering paper. Machines for cutting out, paring, stamping paper, &c.

Materials, apparatus, and products of type-founding; stereotypes, &c. Machines and apparatus used in typography, stereotyping, copper-plate printing, lithography, autography, chalcography, paniconography, chromolithography, &c. Printing of postage stamps. Machines for setting up and sorting types.

CLASS 60—MACHINES, INSTRUMENTS, AND PROCESSES USED IN VARIOUS WORKS.

(Exhibition Building, Gallery VI.)

Coining presses.

Machines for making buttons, pins, pens, envelopes, packing machines, brush-making machines, machines for making cards, capsules, for affixing lead seals to merchandise, for corking bottles, &c.

Tools for, and processes of, making clock-work, toys, marqueterie, baskets, &c.

CLASS 61—CARRIAGES AND WHEELWRIGHTS' WORK.

(Exhibition Building, Gallery VI.)

Separate parts of wheels and carriages; wheels, tires, axles, axle-boxes, iron work, &c., springs and various methods of hanging carriages. Different systems of harnessing. Breaks.

Wheelwrights' work: waggons, tumblers, drays, and other vehicles for special purposes.

Carriages: public, state, and private carriages; sedan chairs, litters, sledges, &c., velocipedes.

CLASS 62—HARNESS AND SADDLERY.

(Exhibition Building, Gallery VI.)

Various articles used for carriage horses and saddle horses; pack saddles, saddles, bridles, and harness for saddle horses, beasts of burden, and draught horses; spurs, whips.

CLASS 63—RAILWAY APPARATUS.

(Exhibition Building, Gallery VI.)

Separate parts: springs, buffers, breaks, &c.

Permanent way: rails, chairs, crossings, switches, fish plates, turntables; buffers; feeding cranes and tanks; optical and acoustic signals.

Rolling stock: waggons for carrying earth, goods, cattle; passenger carriages; locomotives, tenders.

Special machines and tools for the maintenance, repair, and construction of railways.

Apparatus for inclined planes, and self-acting planes; apparatus and engines for atmospheric railways; models of engines, of systems of traction, of apparatus appertaining to railways.

Models, plans, and drawings of platforms, stations, engine houses, and other buildings necessary for the working of railways.

mon lures, les baguettes de cadre, les feuilles de parquet, les meubles, etc. Tours et appareils divers des ateliers de menuiserie et d'ébénisterie.

Machines à estamper et à emboutir. Machines et appareils pour le travail du stuc, du carton-pâte, de l'ivoire, de l'os, de la corne.

Machines à mettre au point, à sculpter, à réduire les statues, à graver, à guillocher, etc.

Machines à scier et polir les pierres dures, les marbres, etc.

CLASSE 59—MATÉRIEL ET PROCÉDÉS DE LA PAPERETERIE, DES TEINTURES ET DES IMPRESSIONS.

(Palais, Galerie VI.)

Matériel de l'impression des papiers peints et des tissus. Machines à graver les rouleaux d'impression.

Matériel du blanchiment, de la teinture et de l'apprêt des papiers et des tissus.

Matériel de la fabrication du papier à la cuve et à la machine. Appareils pour gaufrir, régler, glacer, moirer le papier. Machines à découper, rogner, timbrer les papiers, etc.

Matériel, appareils et produits des fonderies en caractères; clichés, etc. Machines et appareils employés dans la typographie, la stéréotypie, l'impression en taille douce, l'autographie, la chalcographie, la paniconographie, la chromolithographie, etc. Impression des timbres-poste. Machines à composer et à trier les caractères.

CLASSE 60—MACHINES, INSTRUMENTS ET PROCÉDÉS UTILISÉS DANS DIVERS TRAVAUX.

(Palais, Galerie VI.)

Presses monétaires.

Machines servant à la fabrication des boutons, des plumes, des épingles, des enveloppes de lettres, à emballer, à confectionner les brosses, les cartes, à fabriquer les capsules, à plomber les marchandises, à boucher les bouteilles, etc.

Outils et procédés de la fabrication des objets d'horlogerie, de bimbeloterie, de marqueterie, de vanerie, etc.

CLASSE 61—CARROSSERIE ET CHARRONNAGE.

(Palais, Galerie VI.)

Pièces détachées de charonnage et de carrosserie: roues, bandages, essieux, boîtes de roues, ferrures, etc. Ressorts et systèmes divers de suspension. Systèmes d'attelage. Freins.

Produits du charonnage: chariots, tombereaux, camions, véhicules à destination spéciale.

Produits de la carrosserie: voitures publiques, voitures d'apparat, voitures particulières; chaises à porteurs, litères, traîneaux, etc.; vélocipèdes.

CLASSE 62—BOURRELLERIE ET SELLERIE.

(Palais, Galerie VI.)

Articles de harnachement et d'éperonnerie: bâts, selles, caolets; brides et harnais pour montures, pour bêtes de somme et de trait; éperons; fouets et cravaches.

CLASSE 63—MATÉRIEL DES CHEMINS DE FER.

(Palais, Galerie VI.)

Pièces détachées: ressorts, tampons, freins, etc.

Matériel fixe: rails, coussinets, éclisses, changements de voie, aiguilles, plaques tournantes; tampons de choc; grues d'alimentation et réservoirs; signaux optiques et acoustiques.

Matériel roulant: wagons à terrassement, à marchandises, à bestiaux, à voyageurs; locomotives, tenders.

Machines spéciales et outillage des ateliers d'entretien, de réparation et de construction du matériel.

Matériel et machines pour plans inclinés et plans automoteurs; matériel et machines pour chemins de fer atmosphériques; modèles de machines, de systèmes de traction, d'appareils relatifs aux voies ferrées.

Modèles, plans et dessins, de gares, de stations, de remises et de dépendances de l'exploitation des chemins de fer.

CLASS 64—TELEGRAPHIC APPARATUS AND PROCESSES.

(Exhibition Building, Gallery VI.)

Telegraphs based on the transmission of light, sound, &c.

Apparatus for the electric telegraph: posts, wires, stretchers, &c.; batteries, apparatus for sending and receiving messages. Bells and electric signals. Objects appertaining to telegraphy; lightning conductors, commutators, prepared paper for printing messages and for sending autographic messages. Special apparatus for submarine telegraphy.

CLASS 65—CIVIL ENGINEERING, PUBLIC WORKS, AND ARCHITECTURE.

(Exhibition Building, Gallery VI.)

Building materials: stone, wood, metals; ornamental stone; lime, mortar, cements, artificial stone and concrete; roofing tiles, bricks, paving tiles; slates, paste-board, and felt for roofing. Materials used in the preservation of wood, and specimens of preserved wood. Apparatus and instruments for testing building materials.

Apparatus for earthworks; excavators. Apparatus used in timber yards. Tools and processes used by stone-dressers and cutters, masons, carpenters, blacksmiths, joiners, glaziers, plumbers, house painters, &c.

Locksmiths' work; locks, padlocks; railings, balconies, bannisters, &c.

Apparatus and engines used in making foundations: pile-drivers, and pile work, screw piles; pumps, pneumatic apparatus; dredging machines, &c. Apparatus used in hydraulic works connected with harbours, canals, rivers.

Apparatus used in the supply of water and gas. Apparatus used in the maintenance of roads, plantations, and public walks.

Models, plans, and drawings of public works: bridges, viaducts, aqueducts, drains, canal bridges. Lighthouses; public buildings for special purposes; buildings for civil purposes; mansions and houses for letting; lodging houses for the working classes, &c.

CLASS 66—NAVIGATION AND LIFE BOATS.

(Exhibition Building, Gallery VI.; Park.)

Drawings and models of slips, graving docks, floating docks, &c.

Drawings and models of ships of all kinds, sea-going and for rivers. Models of the systems of ship-building adopted in the navy. Apparatus used in navigation.

Boats and barges.

Rigging. Flags and signals.

Buoys, beacons, &c.

Apparatus for swimming, diving, exhibited in action; life belts, life buoys, floats, swimming belts, &c. Diving bells; cork-corsets, nautilus life belts, &c. Submarine boats. Apparatus for saving life at sea, rocket apparatus, life boats, &c.

GROUP VII.

Food (fresh or preserved) in various states of preparation.

CLASS 67—CEREALS AND OTHER EATABLE FARINACEOUS PRODUCTS; AND THE PRODUCTS DERIVED FROM THEM.

(Exhibition Building, Gallery VII.)

Wheat, rye, barley, rice, maize, millet, and other cereals in grain and in flour.

Grain without husk and groats.

Fecula from potatoes, rice, lentils, &c. Gluten.

CLASSE 64—MATÉRIEL ET PROCÉDÉS DE LA TÉLÉGRAPHIE.

(Palais, Galerie VI.)

Appareils de télégraphie fondés sur la transmission de la lumière, du son, etc.

Matériel de la télégraphie électrique: supports, conducteurs, tendeurs, etc.; piles électriques pour la télégraphie; appareils manipulateurs. Sonneries et signaux électriques. Objets accessoires des services télégraphiques: parafoudres, commutateurs, papiers préparés pour télégraphes imprimants et transmissions autographiques. Matériel spécial de la télégraphie sous-marine.

CLASSE 65—MATÉRIEL ET PROCÉDÉS DU GÉNIE CIVIL, DES TRAVAUX PUBLICS ET DE L'ARCHITECTURE.

(Palais, Galerie VI.)

Matériaux de construction: roches, bois, métaux; pierres d'ornement; chaux, mortiers, ciments, pierres artificielles et bétons; tuiles, briques, carreaux; ardoises, cartons et feutres, pour couvertures. Matériel et produits des procédés employés pour la conservation des bois. Appareils et instruments pour l'essai des matériaux de construction.

Matériel des travaux de terrassement; excavateurs. Appareils des chantiers de construction. Outillages et procédés de l'appareilleur, du tailleur de pierres, du maçon, du charpentier, du serrurier, du menuisier, du vitrier, du plombier, du peintre en bâtiments, etc.

Serrurerie fine; serrures, cadenas; grilles, balcons, rampes d'escalier, etc.

Matériel et engins des travaux de fondations: sonnettes, pilotis, pieux à vis; pompes, appareils pneumatiques; dragues, etc. Matériel des travaux hydrauliques, des ports de mer, des canaux, des rivières.

Matériel et appareils servant aux distributions d'eau et de gaz. Matériel de l'entretien des routes, des plantations et des promenades.

Modèles, plans et dessins de travaux publics: ponts, viaducs, aqueducs, égouts, ponts-canaux, etc.; phares; monuments publics de destination spéciale; constructions civiles; hôtels et maisons à louer; cités ouvrières, etc.

CLASSE 66—MATÉRIEL DE LA NAVIGATION ET DU SAUVETAGE.

(Palais, Galerie VI.; Parc.)

Dessins et modèles de cales, bassins de radoub, docks flottants, etc.

Dessins et modèles des bâtiments de tous genres usités pour la navigation fluviale et maritime. Types et modèles des systèmes de construction adoptés dans la marine. Appareils employés dans la navigation.

Canots et embarcations.

Matériel du grément des navires. Pavillons et signaux.

Bouées, balises, etc.

Matériel et exercices de natation, de plongée et de sauvetage; flotteurs, ceintures de natation, etc. Cloches à plongeur; nautilus, scaphandres, etc. Bateaux sous-marins. Matériel du sauvetage maritime, porte-amares, bateaux dits life-boats, etc.

GROUPE VII.

Aliments (frais ou conservés) à divers degrés de préparation.

CLASSE 67—CÉRÉALES ET AUTRES PRODUITS FARINEUX COMESTIBLES, AVEC LEURS DÉRIVÉS.

(Palais, Galerie VII.)

Froments, seigle, orge, riz, maïs, millet et autres céréales en grains et en farines.

Grains mondés et gruaux.

Fécules de pommes de terre, de riz, de lentilles, etc.

Tapioca, sago, arrow-root, cassava, and other fecula. Compound farinaceous products, &c.

Italian pastes, semolina, vermicelli, macaroni.

Alimentary preparations as substitutes for bread, home-made paste, &c.

CLASS 68—BREAD AND PASTRY.

(Exhibition Building, Gallery VII.)

Various kinds of bread with or without yeast. Fancy bread and bread in shapes. Compressed bread for travelling, military campaigns, &c. Navy biscuits.

Pastry of various kinds peculiar to each country. Gingerbread and dry cakes capable of being preserved.

CLASS 69—FATTY SUBSTANCES USED AS FOOD ; MILK AND EGGS.

(Exhibition Building, Gallery VII.)

Fatty substances and oils good for food.

Fresh and preserved milk. Fresh and salt butter. Cheese.

Eggs of all kinds.

CLASS 70—MEAT AND FISH.

(Exhibition Building, Gallery VII.)

Fresh and salt meat of all kinds. Meats preserved by various processes. Meat and soup cakes. Hams and prepared meats.

Poultry and game.

Fresh fish. Salt fish, fish in barrels : cod, herrings, &c. Fish preserved in oil : sardines, tunny, &c.

Crustacea and shell-fish : lobsters, shrimps, oysters ; potted oysters, anchovies, &c.

CLASS 71—VEGETABLES AND FRUIT.

(Exhibition Building, Gallery VII.)

Tubers : potatoes, &c. Dry farinaceous vegetables : beans, lentils, &c. Green vegetables for cooking : cabbages, &c. Vegetable roots : carrots, turnips, &c. Vegetables used for flavouring : Onions, garlic, &c. Salads. Cucumbers. Gourds : pumpkins, melons, &c. Vegetables preserved in salt, vinegar, or by acetic fermentation : sour-kront, &c. Vegetables preserved by various methods.

Fresh fruit. Dried and prepared fruits : prunes, figs, raisins, &c. Fruits preserved without sugar.

CLASS 72—CONDIMENTS AND STIMULANTS : SUGAR AND CONFECTIONERY.

(Exhibition Building, Gallery VII.)

Spices : Pepper, cinnamon, allspice, &c. Table salt. Vinegar. Compound condiments and stimulants : mustard, kari, English sauces, &c.

Tea, coffee, and other aromatic beverages. Chicory and sweet acorn coffee.

Chocolate.

Sugar for household purposes : grape sugar, sugar of milk, &c.

Confectionery : sugar plums, bonbons, nougats, angelica, aniseed, &c. Jellies and preserves. Dried and preserved fruits, cedrats, citrons, oranges, pineapples. Fruits preserved in brandy. Syrups and liqueurs.

CLASS 73—FERMENTED DRINKS.

(Exhibition Building, Gallery VII.)

Vin ordinaire, white and red. Sweet wines and still wines. Sparkling wines. Cider, perry, and other beverages made from fruits.

Beer and other beverages made from cereals. Fermented drinks made from vegetable sap, from milk and sweet substances of all kinds.

Brandies and alcohols. Spirits : gin, rum, tafia, kirsch, &c.

Gluten. Tapioca, sago, arrow-root, cassave et autres féculs. Produits farineux mixtes, etc.

Pâtes dites d'Italie, semoules, vermicelles, macaronis.

Préparations alimentaires propres à remplacer le pain : nouilles, bouillies, pâtes de fabrication domestique, etc.

CLASSE 68—PRODUITS DE LA BOULANGERIE ET DE LA PÂTISSERIE.

(Palais, Galerie VII.)

Pains divers, avec ou sans levain. Pains de fantaisie et pains façonnés. Pains comprimés pour voyages, campagnes militaires, etc. Biscuits de mer.

Produits divers de pâtisserie propres à chaque nation. Pains d'épice et gâteaux secs susceptibles de se conserver.

CLASSE 69—CORPS GRAS ALIMENTAIRES ; LAITAGES ET ŒUFS.

(Palais, Galerie VII.)

Graisses et huiles comestibles.

Laits frais et conservés. Beurres frais et salés. Fromages.

Œufs de toutes sortes.

CLASSE 70—VIANDES ET POISSONS.

(Palais, Galerie VII.)

Vianades fraîches et salées de toute nature. Viandes conservées par divers procédés. Tablettes de viande et de bouillon. Jambons et préparations de viandes.

Volailles et gibiers.

Poissons frais. Poissons salés, encaqués : morues, harengs, etc. Poissons conservés dans l'huile : sardines, thon mariné, etc.

Crustacés et coquillages : homards, crevettes, huîtres ; conserves d'huîtres, d'anchois, etc.

CLASSE 71—LÉGUMES ET FRUITS.

(Palais, Galerie VII.)

Tubercules : pommes de terre, etc. Légumes farineux secs : haricots, lentilles, etc. Légumes verts à cuire : choux, etc. Légumes racines : carottes, navets, etc. Légumes épicés : oignons, ail, etc. Salades. Cucurbitacées : citrouilles, melons, etc. Légumes conservés par le sel, par le vinaigre ou par la fermentation acétique : choucroute, etc. Légumes conservés par divers procédés.

Fruits à l'état frais. Fruits secs et préparés : prunes, figues, raisins, etc. Fruits conservés sans le secours du sucre.

CLASSE 72—CONDIMENTS ET STIMULANTS ; SUCRES ET PRODUITS DE LA CONFISERIE.

(Palais, Galerie VII.)

Épices : poivres, cannelle, piments, etc. Sel de table. Vinaigres. Condiments et stimulants composés : moutardes, kari, sauces anglaises, etc.

Thés, cafés et boissons aromatiques. Cafés de chicorée et de glands doux.

Chocolata.

Sucres destinés aux usages domestiques. Sucres de raisin, de lait, etc.

Produits divers de la confiserie : dragées, bonbons de sucre, fondants, nougats, angélique, anis, etc. Confitures et gelées. Fruits confits : cedrats, citrons, oranges, ananas. Fruits à l'eau-de-vie. Sirops et liqueurs sucrées.

CLASSE 73—BOISSONS FERMENTÉES.

(Palais, Galerie VII.)

Vins ordinaires, rouges et blancs. Vins de liqueur et vins cuits. Vins mousseux. Cidres, poirés et autres boissons tirées des fruits.

Bières et autres boissons tirés des céréales. Boissons fermentées tirées des sèves végétales, du lait et des matières sucrées de toute nature.

Eaux-de-vie et alcools. Boissons spiritueuses, genièvre, rhum, tafia, kirsch, etc.

GROUP VIII.

Live stock and specimens of agricultural buildings.

CLASS 74—FARM BUILDINGS AND AGRICULTURAL WORKS.

(Park.)

Examp'es of the farm buildings of various countries. Utensils used in the stable, cattle shed, kennel, &c. Apparatus for preparing the food of domestic animals.

Agricultural machinery in motion: steam ploughs, reaping and mowing machines, haymaking machines, threshing machines, &c.

Distilleries, sugar mills, sugar refineries, breweries, works for the preparation of flour, fecula, starch; silkworm nurseries, &c.

Presses for wine, cider, oil, &c.

CLASS 75—HORSES, ASSES, MULES.

(Park.)

Animals exhibited as characteristic specimens of the breeds of each country.

Specimens of stabling.

CLASS 76—BULLS, BUFFALOES, &c.

(Park.)

Animals exhibited as characteristic specimens of the breeds of each country.

Specimens of cattle sheds.

CLASS 77—SHEEP, GOATS.

(Park.)

Animals exhibited as characteristic specimens of the breeds of each country.

Examples of sheep folds, sheep walks, &c.

CLASS 78—PIGS, RABBITS.

(Park.)

Animals exhibited as characteristic specimens of the breeds of each country.

Examples of pig styes, and of premises suitable to the rearing of animals of this class.

CLASS 79—POULTRY.

(Park.)

Animals exhibited as characteristic specimens of the breeds of each country.

Examples of poultry houses, pigeon houses, pheasantries, &c. Apparatus for artificial hatching.

CLASS 80—SPORTING DOGS AND WATCH DOGS.

(Park.)

Shepherds' dogs, watch dogs.

Sporting dogs.

Examples of kennels, and apparatus used in training.

CLASS 81—USEFUL INSECTS.

(Park.)

Bees, silkworms, and other kinds of bombyx. Cochineals, insects producing shell lac, &c.

Apparatus used in the culture of bees and silkworms.

CLASS 82—FISH, CRUSTACEA AND MOLLUSCA.

(Park.)

Aquatic animals of a useful kind, exhibited alive.

Aquariums. Apparatus used in pisciculture, in the culture of shell-fish and in the rearing of leeches.

GROUPE VIII.

Produits vivants et spécimens d'établissements de l'agriculture.

CLASSE 74—SPÉCIMENS D'EXPLOITATIONS RURALES ET D'USINES AGRICOLES.

(Parc.)

Types des bâtiments ruraux des diverses contrées. Matériel des écuries, étables, chenils, etc. Appareils pour préparer la nourriture des animaux.

Machines agricoles en mouvement: charrues à vapeur, moissonneuses, faucheuses, faneuses, batteuses, etc.

Types d'usines agricoles: distilleries, sucreries, raffineries; brasseries; minoteries, féculeries, amidonneries; magnaneries, etc.

Pressoirs pour le vin, le cidre, l'huile, etc.

CLASSE 75—CHEVAUX, ÂNES, MULETS, ETC.

(Parc.)

Animaux présentés comme spécimens caractéristiques de l'art de l'éleveur dans chaque contrée. Types d'écuries.

CLASSE 76—BŒUFS, BUFFLES, ETC.

(Parc.)

Animaux présentés comme spécimens caractéristiques de l'art de l'éleveur dans chaque contrée. Types d'étables.

CLASSE 77—MOUTONS, CHÈVRES.

(Parc.)

Animaux présentés comme spécimens caractéristiques de l'art de l'éleveur dans chaque contrée.

Types de bergeries, de parcs à moutons et d'établissements analogues.

CLASSE 78—PORCS, LAPINS, ETC.

(Parc.)

Animaux présentés comme spécimens caractéristiques de l'art de l'éleveur dans chaque contrée.

Types de porcheries et des établissements propres à l'élevage des animaux de cette classe.

CLASSE 79—OISEAUX DE BASSE-COUR.

(Parc.)

Animaux présentés comme spécimens caractéristiques de l'art de l'éleveur dans chaque contrée.

Types des poulaillers, des pigeonniers, des faisanderies, etc. Appareils d'éclosion artificielle.

CLASSE 80—CHIENS DE CHASSE ET DE GARDE.

(Parc.)

Chiens de berger, chiens de garde.

Chiens de chasse.

Types de chenils et engins de dressage.

CLASSE 81—INSECTES UTILES.

(Parc.)

Abeilles. Vers à soie et bombyx divers. Cochenilles, insectes producteurs de laque, etc.

Matériel de l'élevage des abeilles et des vers à soie.

CLASSE 82—POISSONS, CRUSTACÉS ET MOLLUSQUES.

(Parc.)

Animaux aquatiques utiles, à l'état vivant.

Aquariums. Matériel de l'élevage des poissons, des mollusques et des sangsues.

GROUP IX.**Live produce and specimens of horticultural works.****CLASS 83—HOT-HOUSES AND HORTICULTURAL APPARATUS.**

(Park.)

Gardeners', nurserymen's, and horticulturists' tools. Apparatus for watering, for keeping turf in order, &c.

Large conservatories and apparatus appertaining thereto. Window conservatories. Aquariums for aquatic plants.

Fountains and other means employed for ornamenting gardens.

CLASS 84—FLOWERS AND ORNAMENTAL PLANTS.

(Park.)

Species of plants, and examples of culture exhibiting the characteristic types of the gardens and dwellings of each country.

CLASS 85—VEGETABLES.

(Park.)

Species of vegetables, and examples of culture exhibiting the characteristic types of the kitchen gardens of each country.

CLASS 86—FRUIT TREES.

(Park.)

Species of trees, and examples of culture exhibiting the characteristic types of the orchards of each country.

CLASS 87—SEEDS AND SAPLINGS OF FOREST TREES.

(Park.)

Species of trees and examples of culture, illustrating the processes followed in each country for replanting forests.

CLASS 88—HOT-HOUSE PLANTS.

(Park.)

Illustrations of the mode of culture adopted in various countries, with a view either to pleasure or utility.

GROUP X.**Articles exhibited with the special object of improving the physical and moral condition of the people.****CLASS 89—APPARATUS AND METHODS USED IN THE INSTRUCTION OF CHILDREN.**

(Exhibition Building, Gallery II.; Park.)

Plans and models of school buildings. School fittings and furniture.

Apparatus, instruments, models, wall-maps with the object of facilitating the instruction of children. Elementary collections for imparting ordinary scientific information. Drawing examples. Framed examples and apparatus for teaching singing and music.

Apparatus and pictures for teaching the blind, the deaf and dumb.

School books, atlases, maps, and school pictures.

Periodical publications and journals of education.

Works by students of both sexes.

CLASS 90—LIBRARIES AND APPARATUS USED IN THE INSTRUCTION OF ADULTS, AT HOME, IN THE WORKSHOP, OR IN SCHOOLS AND COLLEGES.

(Exhibition Building, Gallery II.)

Books suitable to form a library for the daily use of

GROUPE IX.**Produits vivants et spécimens d'établissements de l'horticulture.****CLASSE 83—SERRES ET MATÉRIEL DE L'HORTICULTURE.**

(Parc.)

Outils du jardinier, du pépiniériste et de l'horticulteur. Appareils d'arrosement, d'entretien des gazons, etc.

Grandes serres et leurs accessoires. Petites serres d'appartement et de fenêtre. Aquariums pour plantes aquatiques.

Jeux d'eau et autres appareils pour l'ornementation des jardins.

CLASSE 84—FLEURS ET PLANTES D'ORNEMENT.

(Parc.)

Espèces de plantes et spécimens de cultures rappelant les types caractéristiques des jardins et des habitations de chaque contrée.

CLASSE 85—PLANTES POTAGÈRES.

(Parc.)

Espèces de plantes et spécimens de cultures rappelant les types caractéristiques des jardins potagers de chaque contrée.

CLASSE 86—ARBRES FRUITIERS.

(Parc.)

Espèces de plantes et spécimens de cultures rappelant les types caractéristiques des vergers de chaque contrée.

CLASSE 87—GRAINS ET PLANTS D'ESSENCES FORESTIÈRES.

(Parc.)

Espèces de plantes et spécimens de cultures rappelant les procédés de repeuplement des forêts, usités dans chaque pays.

CLASSE 88—PLANTES DE SERRES.

(Parc.)

Spécimens des cultures usités dans divers pays, en vue de l'agrément ou de l'utilité.

GROUPE X.**Objets spécialement exposés en vue d'améliorer la condition physique et morale de la population.****CLASSE 89—MATÉRIEL ET MÉTHODES DE L'ENSEIGNEMENT DES ENFANTS.**

(Palais, Galerie II.; Parc.)

Plans et modèles de bâtiments scolaires. Mobiliers d'école.

Appareils, instruments, modèles, cartes murales conçus en vue de faciliter l'enseignement des enfants. Collections élémentaires propres à l'enseignement des notions scientifiques usuelles. Modèles de dessin. Tableaux et appareils propres à l'enseignement du chant et de la musique.

Appareils et tableaux propres à l'enseignement des aveugles et des sourds-muets.

Livres d'école, atlas, cartes et tableaux.

Publications périodiques et journaux d'éducation.

Travaux d'élèves des deux sexes.

CLASSE 90—BIBLIOTHÈQUES ET MATÉRIEL DE L'ENSEIGNEMENT DONNÉ AUX ADULTES DANS LA FAMILLE, L'ATELIER, LA COMMUNE OU LA CORPORATION.

(Palais, Galerie II.)

Ouvrages propres à former la bibliothèque usuelle

heads of families, foremen, labourers, national school-masters, sailors, naturalists when travelling, &c.

Almanacs, aids to memory, and other useful publications sold by hawkers.

School libraries, village libraries, &c.

Apparatus for illustrating technical lectures, necessary for the exercise of certain handicrafts.

CLASS 91—FURNITURE, CLOTHING AND FOOD FROM ALL SOURCES, REMARKABLE FOR USEFUL QUALITIES COMBINED WITH CHEAPNESS.

(Exhibition Building, Galleries III. IV. VII.)

Methodical collection of objects (enumerated in the 3rd, 4th, and 7th Groups) produced for sale by manufacturers on a large scale, or by skilled workmen, and specially recommended as good and economical purchases for domestic use.

N.B.—The price of each object and the place where it can be purchased are to be specified.

CLASS 92—SPECIMENS OF THE CLOTHING WORN BY THE PEOPLE OF DIFFERENT COUNTRIES.

(Exhibition Building, Gallery IV.)

Methodical collection of the garments of both sexes, suitable to all ages, and to the most characteristic occupations of each country.

N.B.—The clothing to be selected is that which best meets the requirements of the climate, or of the calling; which best exhibits the taste peculiar to each people, and which, under these heads, is most in harmony with the natural usages of each country. These clothes are as far as possible to be exhibited upon lay figures.

CLASS 93—EXAMPLES OF DWELLINGS CHARACTERISED BY CHEAPNESS COMBINED WITH THE CONDITIONS NECESSARY FOR HEALTH AND COMFORT.

(Park.)

Examples of dwellings for families, suitable to the different classes of workmen in each country.

Examples of dwellings suggested for factory hands in cities or in the country.

CLASS 94—ARTICLES OF ALL KINDS MANUFACTURED BY SKILLED WORKMEN.

(Exhibition Building and Park.)

Methodical collection of articles (enumerated in the preceding groups) manufactured for sale or for home use by workmen, working on their own account, either alone, or with the aid of the members of their families, or of an apprentice.

N.B.—Those articles only are to be exhibited in this class which deserve praise for their peculiar quality, for the novelty or perfection of the process of manufacture, or for the useful influence which the manufacture exercises upon the physical and moral condition of the people.

CLASS 95—INSTRUMENTS AND MODES OF WORK, PECULIAR TO SKILLED WORKMEN.

(Exhibition Building, Gallery VI.; Park.)

Instruments and processes (enumerated in the 6th Group) usually employed by the labouring classes working on their own account, or specially adapted to the requirements of the work executed at their own homes, with the aid of the members of their families.

Works executed by hand labour, which exhibit, in addition to peculiar excellence of workmanship, the skill, intelligence, or taste of the workmen.

Works executed by hand labour, which, for various reasons, have best held their ground, up to the present time, against the competition of machinery.

du chef de famille, du chef d'atelier, du cultivateur, de l'instituteur communal, du marin, du naturaliste voyageur, etc.

Almanachs, aide-mémoire et autres publications utiles destinées au colportage.

Matériel des bibliothèques scolaires, communales, etc.

Matériel des cours techniques nécessaires à l'exercice de certaines professions manuelles.

CLASSE 91—MEUBLES, VÊTEMENTS ET ALIMENTS DE TOUTE ORIGINE DISTINGUÉS PAR LES QUALITÉS UTILES, UNIES AU BON MARCHÉ.

(Palais, Galeries III. IV. et VII.)

Collection méthodique d'objets (énumérés au 3^e, 4^e et 7^e Groupe) livrés au commerce par de grandes fabriques ou par des ouvriers chefs de métier et spécialement recommandés au point de vue d'une bonne économie domestique.

NOTA.—Les prix et le lieu de vente doivent être indiqués pour chaque objet.

CLASSE 92—SPÉCIMENS DES COSTUMES POPULAIRES DES DIVERSES CONTRÉES.

(Palais, Galerie IV.)

Collection méthodique de costumes des deux sexes, pour tous les âges et pour les professions les plus caractéristiques de chaque contrée.

NOTA.—On choisira les costumes qui satisfont le mieux aux convenances du climat ou de la profession, aux exigences du goût particulier de chaque peuple, et qui, à ces divers titres, sont le plus en harmonie, dans chaque contrée, avec la tradition nationale. On exposera autant que possible ces costumes sur des mannequins.

CLASSE 93—SPÉCIMENS D'HABITATIONS CARACTÉRISÉES PAR LE BON MARCHÉ UNI AUX CONDITIONS D'HYGIÈNE ET DE BIEN-ÊTRE.

(Parc.)

Types d'habitations de famille, propres aux diverses classes de travailleurs de chaque contrée.

Types d'habitations proposés pour les ouvriers des manufactures urbaines ou rurales.

CLASSE 94—PRODUITS DE TOUTE SORTE FABRIQUÉS PAR DES OUVRIERS CHEFS DE MÉTIER.

(Palais, et Parc.)

Collection méthodique de produits (énumérés aux groupes précédents), fabriqués par des ouvriers travaillant à leur propre compte, soit seuls, soit avec le concours de leur famille ou d'un apprenti, pour le commerce ou pour la consommation domestique.

NOTA.—On admettra seulement dans cette classe les produits qui se recommandent par leur qualité propre, par la nouveauté ou la perfection des procédés de travail, ou par l'influence utile que ce travail exerce sur la condition physique et morale de la population.

CLASSE 95—INSTRUMENTS ET PROCÉDÉS DE TRAVAIL, SPÉCIAUX AUX OUVRIERS CHEFS DE MÉTIER.

(Palais, Galerie VI.; Parc.)

Instruments et procédés (énumérés au 6^e Groupe) employés habituellement par des ouvriers travaillant à leur propre compte, ou spécialement adaptés aux convenances du travail exécuté, en famille, au foyer domestique.

Travaux manuels, où se manifestent, avec un caractère particulier d'excellence, la dextérité, l'intelligence ou le goût de l'ouvrier.

Travaux manuels qui, par diverses causes, ont le mieux résisté, jusqu'à l'époque actuelle, à la concurrence des machines.

REGULATIONS

RESPECTING THE NATURE OF THE REWARDS AND THE COMPOSITION OF THE JURIES APPOINTED TO AWARD THEM.

[APPROVED BY IMPERIAL DECREE, JUNE 9, 1866.]

I.—General Arrangements.

ART. 1.—A sum of eight hundred thousand francs (32,000*l.*) will be given in prizes to be awarded at the Universal Exhibition of 1867.

ART. 2.—An International Jury will be appointed to adjudge the awards.

The International Jury will consist of six hundred members, divided amongst the different nations in accordance with the proportion of space which the products of each occupy in the Exhibition.

ART. 3.—The French members of the International Jury will be appointed by the Imperial Commission.

The foreign members will be named by the respective National Commissions of each country.

All the appointments should be made before December 1, 1866.

The Imperial Commission, after consultation with the various foreign commissions, will distribute the members of the jury among the classes.

ART. 4.—The International Jury should accomplish their work from April 1 to May 14, 1867.

With respect, however, to Classes 52, 67 to 88, and 95,* the labours of the jury will be carried on during the whole time the Exhibition remains open.

* NOTE.—Class 52—Prime movers, boilers, and engines specially adapted to the requirements of the Exhibition; Classes 67 to 73, 7th Group—Food in various states of preparation; Classes 74 to 82, 8th Group—Live stock, and specimens of agricultural buildings; Classes 83 to 88, 9th Group—Live produce and specimens of horticultural works; Class 95—Instruments and modes of work peculiar to skilled workmen.

ART. 5.—The grand distribution of the awards will take place on July 1, 1867.

II.—Special Arrangements relative to the Fine Arts Group.

ART. 6.—The rewards at the disposal of the International Jury for works of art are regulated as follows:—

17 grand prizes, each of the value of	2,000 <i>l.</i> = 80 <i>l.</i>
32 first prizes, each of the value of	800 <i>l.</i> = 32 <i>l.</i>
44 second prizes, each of the value of	500 <i>l.</i> = 20 <i>l.</i>
46 third prizes, each of the value of	400 <i>l.</i> = 16 <i>l.</i>

ART. 7.—The rewards specified in Article 6 are divided as follows amongst the four sections of the fine arts, which correspond with the classes of the first group:—

- 1st Section, Classes 1 and 2 combined:—
8 grand prizes, 15 first prizes, 20 second prizes, 24 third prizes.
2nd Section, Class 3:—4 grand prizes, 8 first prizes, 12 second prizes, 12 third prizes.
3rd Section, Class 4:—3 grand prizes, 6 first prizes, 8 second prizes, 6 third prizes.
4th Section, Class 5:—2 grand prizes, 3 first prizes, 4 second prizes, 4 third prizes.

ART. 8.—The jury for the fine arts group consists of 63 members.

The numerical proportion of the French and foreign members is shewn in the accompanying Table.

The French members of the four sections will be nominated by the Imperial Commission from among the members of the jury of selection. An equal number will be taken from each of the three lists of members of whom

that jury was composed, in accordance with the decision of May 12, 1866.

Exhibitors who undertake the functions of international jurors for works of art will be eligible to compete for the awards.

Each of the four sections will be presided over by one of its members, to be selected by the Imperial Commission. Two of the Presidents will be Frenchmen.

ART. 9.—The four sections may combine to suggest, if necessary, modifications in the appointment of the awards as laid down in Art. 7.

The Imperial Commission will nominate one of its members to act as President of the four sections combined.

III.—*Special Arrangements relative to the Nine Groups of the Products of Agriculture and Industry.*

ART. 10.—The rewards at the disposal of the International Jury for the products of agriculture and industry are regulated as follows:—

Grand prizes and money awards of the total value of 250,000 francs (10,000*l.*);

100 Gold Medals, each of the value of 1,000 francs (40*l.*);

1,000 Silver Medals;

3,000 Bronze Medals;

5,000 Honourable Mentions, at the utmost.

All the medals will be of the same pattern.

ART. 11.—The grand prizes are intended to reward the merit of inventions, or of improvements which have brought about a great amelioration in the quality of the products, or in the processes of manufacture.

ART. 12.—The award of the prizes enumerated in Art. 10 for the nine groups of agriculture and industry will be the result of the successive labours of the juries of classes, the juries of groups, and of a superior council.

ART. 13.—The numerical proportion of the French and foreign members in each of the juries of classes is shown in the annexed Table.

ART. 14.—The meetings of all the juries of classes will commence on April 1. At its first meeting the jury will appoint a President, Vice-President, and Secretary; a Reporter must subsequently be elected before April 10, 1867.

ART. 15.—The juries of classes may appoint associates, or experts, to assist them, selected either from members of the other classes of the International Jury, or from persons who are not jurors: in the latter case the selection of the associate or expert must be approved by the Imperial Commission.

ART. 16.—Exhibitors who undertake the functions of jurors, are thereby rendered ineligible to compete for the rewards.

Exhibitors appointed by the jury of a class as associates or experts are also excluded from the competition, as regards the products of the class on which they are asked to advise.

The Imperial Commission, however, reserves the right to authorise certain exceptions to the rules laid down in the preceding paragraphs.

ART. 17.—The Foreign Commissions are requested to appoint to each jury of a class delegates, whose duty it will be to furnish all necessary information to the jury respecting the exhibitors from their respective countries. The place of residence of these delegates must be communicated to the Imperial Commission before March 20, 1867.

The same functions as respects the French section, will be performed for each jury of a class by the corresponding Committee of Selection.

ART. 18.—From April 1 to 14, each jury of a class of Groups 2, 3, 4, 5, 6, and 10, will examine the products, and without making any distinction of nationality will classify the exhibitors who appear deserving of reward.

The jury of a class will then draw up a list of the exhibitors who, under the rule in Art. 16, are excluded from competition, and will suggest such exceptions as may seem desirable.

Finally, the jury will classify, without distinguishing their nationality, the co-operators, foremen, and workmen, whom it considers worthy of notice, either for services rendered to agriculture or industry, or for having taken a part in the production of remarkable objects in the Exhibition.

The classified lists, signed by the members who have taken a part in this work, are to be delivered by the Reporter at the office of the General Commissioner, on April 14, 1867, at latest.

The class juries for Classes 52 and 95, will only be required to furnish the information necessary to determine the number of awards which it may be proper to adjudge to these classes; and to nominate the associates, who will assist them in the unremitting examination which the nature of the objects exhibited requires.

Should the above-mentioned lists not have been furnished by a jury of a class by April 14, the Imperial Commission will direct its own officers to prepare them.

ART. 19.—From April 1 to 14, the juries of classes for Groups 7, 8, and 9, are to draw up the list of associates whose assistance they desire in the examination of the products during the time the Exhibition will remain open, and will furnish the information required, in order to fix the number of rewards.

ART. 20.—The Presidents and Reporters of the juries of classes will be the members of the juries of groups; in the event of the absence of the Presidents, the Vice-Presidents will take their place.

In addition to these members, a President and two Vice-Presidents will be appointed for each jury of a group.

The distribution of Presidents and Vice-Presidents for the juries of groups amongst the

various countries is shown in the accompanying Table.

In accordance with Art. 3, the French Presidents and Vice-Presidents will be appointed by the Imperial Commission; the foreign Presidents and Vice-Presidents will be nominated by the respective foreign Commissions. The Secretary of, each jury of a group will be appointed by the Imperial Commission.

ART. 21.—From April 15 to 28, the juries of groups for Groups 2, 3, 4, 5, 6, and 10, will examine all claims that come within their province, settle the classified lists drawn up by the juries of classes, and mark opposite to each name the award which they propose to make.

With respect to Classes 52 and 95, the jury of the group will only fix the number of rewards.

In the deliberations which concern each successive class the class jury will be associated with the jury of the group. The members thus associated are entitled to give their votes.

The preliminary labours of the juries of groups should be completed, and the result sent in to the office of the General Commissioner, on April 28, at latest. If the work be not finished by that day, the Imperial Commission will be compelled to take the matter into their own hands.

ART. 22.—From April 15 to 28, the juries of groups for Groups 7, 8, and 9, will settle the lists of associates drawn up by the juries of classes, and send in to the office of the General Commissioner suggestions relative to the number of rewards which it may be desirable to assign to each class.

ART. 23.—The Superior Council of the jury will be composed of the Presidents and Vice-Presidents of the juries of groups.

This council will be presided over by one of the Vice-Presidents of the Imperial Commission.

The Secretary and Assistant Secretary of the Imperial Commission will act as secretaries.

ART. 24.—From April 29 to May 5 the Superior Council will apportion the whole number of rewards amongst the various groups.

If it should appear desirable to increase the number of medals, the council may request the Imperial Commission to deduct for that purpose 50,000 frs. (2,000*l.*), at the most, from the sum set apart for grand prizes and money awards.

The labours of the Superior Council must be completed on May 5, at latest.

ART. 25.—A report upon the exhibition of the products of agriculture and industry will be published under the direction and superintendence of a committee, the members of which will be appointed by the Imperial Commission upon the nomination of the Superior Council.

ART. 26.—From May 6 to 12 the juries of groups specified in Art. 21 will apportion the rewards determined by the Superior Council amongst the classes of their respective groups.

The results of this work are to be sent in to the office of the General Commissioner, on May 14, at latest.

ART. 27.—During the whole time that the Exhibition remains open, the Imperial Commission will appoint fortnightly temporary associates, whose duty it will be to assist the juries of classes in the examination of the products, processes, or implements in Classes 67 to 88, sent to the Exhibition for competition during the corresponding fortnight.

These associates will be selected from the lists settled, as stated in Art. 22.

On the second day of each fortnight, the temporary committee, composed of jurors and associates, will classify the exhibitors, co-operators, and workmen whom it may consider deserving of reward, into four categories, under the heads of first prizes, second prizes, third prizes, honourable mentions, of partial competition. This list may be made public at once.

ART. 28.—From October 15 to 20, the juries of groups for Groups 7, 8, and 9, taking as a basis the return of the prizes and honourable mentions awarded by the temporary committees, in accordance with the preceding Article, will draw up for each class a complete list of exhibitors, co-operators, and workmen, and will adjudge the rewards which have been placed at their disposal by the Superior Council.

The certificate will contain a statement of the prizes and honourable mentions which the various temporary committees may have awarded during the Exhibition to the prize holders.

ART. 29.—The juries of classes for Classes 52 and 95 will submit to the Imperial Commission, on October 20, at latest, proposals relative to the rewards reserved for them by the jury of the group.

The Imperial Commission will come to an immediate decision relative to the rewards proposed.

IV.—*Special Arrangements respecting a New Order of Reward.*

ART. 30.—A distinct order of reward is instituted in favour of the persons, establishments, or localities which, by a special organisation, or special institutions, have developed a spirit of harmony among all those co-operating in the same work, and have provided for the material, moral, and intellectual well-being of the workmen.

These rewards consist of ten prizes, of the total value of 100,000 francs (4,000*l.*), and twenty Honourable Mentions:

One grand prize of 100,000 francs may, in addition, be awarded to the person, establishment, or locality, distinguished under this head by a very exceptional superiority.

ART. 31.—A special jury will judge of the merit specified for this order of reward, and will determine the amount of the prizes and the form in which they will be awarded.

One of the Vice-Presidents of the Imperial Commission will act as President of this jury.

The total number of members, including the President, is fixed at twenty-five.

The number of members which the different countries will contribute to this jury is shewn in the accompanying Table.

The Secretary of the Imperial Commission will act as its Secretary.

ART. 32.—In the event of members not being nominated before December 1, 1866, in conformity with Art. 3, the Imperial Commission will select the foreign jurors from amongst the persons accredited to them by the various governments.

ART. 33.—The number of members of the jury who must be present to form a quorum, is fixed at eighteen. The prizes and honourable mentions will be awarded according to the majority of votes. The grand prize can only be awarded by a majority of two-thirds.

ART. 34.—Applications and documents describing and pointing out for the new order of reward, a person, an establishment, or a locality, must be transmitted before December 1, 1866, to the Councillor of State, General Commissioner.

ART. 35.—The first session of the jury will be held on December 1, 1866, in order that they may lay down the regulations for the guidance of applicants, and commence their investigations.

ART. 36.—In a second and last session, from April 15 to May 14, 1867, the jury will come to a final decision on the apportionment of the prizes, and on the persons, establishments, or localities to which they are to be awarded. These prizes will be distributed at the same time as the other rewards, namely, July 1, 1867.

Done and discussed by the Imperial Commission, June 7, 1866.

E. ROUHER,
Minister of State, Vice-President.

E. B. DE CHANCOURTOIS,
Secretary.

True copy.
F. LE PLAY,
Councillor of State, General Commissioner.

The Great Exhibition of 1851—The Transept.—South View.

STATISTICS OF THE GREAT EXHIBITION OF ALL NATIONS IN 1851, THE PARIS UNIVERSAL EXHIBITION OF 1855, AND THE INTERNATIONAL EXHIBITION OF 1862.

BY WILLIAM MATCHWICK, F.L.S.

THE GREAT EXHIBITION OF ALL NATIONS IN 1851.

THE Exhibition Building, constructed chiefly of glass and iron, was erected in Hyde Park, London, on a spot not much frequented by the public, but exceedingly well-adapted for the required purpose. On the south side of the park, is an open space of considerable dimensions, parallel with and contiguous to the high road which runs to Kensington and Hammer-

smith, and is the great western highway to the metropolis. It is situated about midway between the cavalry barracks at Knightsbridge, and the new entrance to the park, called Queen's Gate, which is some two or three hundred yards east of the old Kensington turnpike. About twenty acres of this spot (originally suggested for such a purpose by the

late Prince Consort) was selected for the proposed building by the Exhibition Royal Commissioners.

Before anything, however, could be done, it was necessary to obtain the consent of the Crown to such an appropriation of a portion of the most important of the London parks. This consent was graciously accorded; but it was accompanied with the condition that when the Exhibition was over, the ground should be restored to its original state, and be rendered again fit for public recreation and enjoyment. And although very strenuous efforts were made to retain the Building, this condition was faithfully observed, and every trace of the Exhibition completely effaced by June 1, 1852; or little more than twenty months from the fixing of the first column on Sept. 25, 1850. Upon the site itself nothing now remains to mark its whereabouts, unless it be two elm trees, carefully protected from injury by iron railings. Both of these trees stood (with others) within the transept, one at the south end, the other at the north. They serve to mark the centre of the building, and (although much injured in after growth by their long and unnatural confinement) afford a tolerable notion of the height and length of the central transept, being trees of mature age, and fair forest specimens of their kind.

Westward of the site, and in a line with it, there is now in course of erection the National Memorial Monument in honour of the late Prince Consort, who was so completely identified with the Great Exhibition of 1851. This monument, when completed, will certainly serve to mark the site of the Great Exhibition, although it is situated some 500 yards

from the eastern extremity of where the building stood. The Crystal Palace, at Sydenham, is mainly built of the actual materials which composed the Great Exhibition building of 1851.

The architect of the Building was the late Sir Joseph Paxton, and the contractors for erecting it Messrs. Fox (now Sir Charles) and Henderson.

Very considerable changes were, however, made in the original design of Sir Joseph Paxton (which in principle was that adopted by him in the erection of the great conservatory at Chatsworth, the seat of the Duke of Devonshire), and it is to Sir Charles Barry, Sir William Cubitt, Mr. Robert Stephenson, and Mr. Brunel, that much of the merit due to the building must be accorded.

DIMENSIONS OF SPACE.

The entire covered space, or total superficial area of the Building, was originally fixed at 800,000 square feet, but was afterwards increased to upwards of a million square feet, or more than twenty acres of ground. Of this space it was estimated that half (500,000 square feet) would be required for the display of the goods, the remaining half being necessary for passages, &c. In allotting this space, the Royal Commissioners laid it down as a principle, that half should be given to Great Britain and her colonies, and half to foreign countries. The following table will, however, show the space originally allotted and that actually occupied:—

	Gross Horizontal Space originally allotted	Space allotted deducting half for Passages	Space actually occupied		
			Net Horizontal Space occupied by Goods	Space occupied by Passages	Total
	Square feet	Square feet	Square feet	Square feet	Square feet
Foreign States	397,800	198,900	131,655	272,121	403,776
Great Britain and Colonies	400,000	200,000	207,059	337,261	544,320
Eastern Refreshment Court	—	—	—	—	12,096
Open Courts and Retiring Rooms	—	—	—	—	6,912
Centre Refreshment Court	—	—	—	—	10,944
Dining and Retiring Rooms	—	—	—	—	6,912
Western Refreshment Court	—	—	—	—	4,032

Fixed Seats	—	—	—	—	3,456
Unoccupied	—	—	—	—	3,456
Totals	797,800	398,900	338,714	609,382	1,033,344

At the east and west ends of the building a space of 30,712 square feet was enclosed, and applied to the purposes of the exhibition, which is not included in the above.

NUMBER OF EXHIBITORS.

The total number of Exhibitors was 13,937, of whom 7,381 belonged to Great Britain and her colonies, and 6,556 to foreign countries. Some countries, however, as India, Turkey, Egypt, and Tunis, and individuals who joined together to send contributions, are enumerated as one exhibitor; so that including these, the total number of exhibitors may be estimated at between 15,000 and 16,000.

The following return gives the number of Exhibitors in each country, and the space occupied:—

	Number of Exhibitors	Space Occupied
		Square feet
Great Britain	6,861	503,424
British Colonies	520	40,896
Total	7,381	544,320
America (United States)	499	44,352
Austria	731	48,384
Belgium	506	37,440
China	30	5,184
Denmark	39	1,152

Greece	36	576
Germany (North)	134	2,880
Netherlands	113	4,608
Persia	12	576
Portugal	157	3,456
Rome	52	3,456
Russia	263	13,824
Sardinia	95	4,032
Spain	286	4,032
Sweden and Norway	117	1,728
Switzerland	263	12,096
Tunis	—	4,608
Turkey	—	6,912
Tuscany	99	4,608
South American States	12	576
Total of Foreign States	6,556	403,776
Total	13,937	1,033,344

COST OF THE EXHIBITION.

From the analysis of expenditure published by the Royal Commissioners, it appears that the payments on account of the building and fittings were 170,000*l*. Taking the net superficial area of covered space at a million square feet, this would give a cost of about 3*s*. 5*d*. the square foot.

The following were the principal heads of expenditure:—

Personal services, including the staff of the royal commission, executive committee, professional assistance, and jurors, amounted to	£ 71,975
Police	19,648

General office expenses, such as rent, furniture, stationery, printing, postage, advertising, &c.	£ 8,869
General maintenance of Exhibition, including coals for boilers, lighting, water, watering roads, implements and tools, repairs, accidents, &c. . . .	4,878
Jury Department—Cost of medals, medal cases, certificates, photographs, presentation reports, trials of agricultural and other machinery	6,917
Law expenses, interest on advances, and contingencies	10,508

Total £122,795

making the total cost of the Exhibition, including the building, about 292,795*l*.

It should, however, be remembered that the contract with Messrs. Fox and Henderson did not include the absolute sale of the building to the Royal Commissioners, being for *use and waste only*, the building itself remaining the property of the contractors. Had it been otherwise, the total actual cost of the Exhibition must have been increased by at least 100,000*l*.

ADMISSION OF VISITORS.

The Exhibition was opened to the public on Thursday, May 1, and finally closed on Saturday, October 11, having thus remained open 141 days. On the following Monday and Tuesday, however, the exhibitors and their friends were admitted free, and on Wednesday, October 15, the final ceremony of closing took place in the presence of the exhibitors, jurors, foreign and local commissioners, representatives of committees and others.

The public were admitted to the Exhibition by season tickets, and money payments at the doors. Gentlemen's season tickets were three guineas, those for a lady two guineas each. After July 31 these rates were reduced to 1*l*. 10*s*. and 1*l*. respectively. On the day of the opening no money was taken, season tickets only being admitted. For the first two days after the opening, the price of admission was 1*l*. From the 5th to the 24th of May (inclusive) the admission was 5*s*. From the 26th of May to the 2nd of August (inclusive), the admission was as follows:—On Mondays, Tuesdays, Wednesdays, and Thursdays, 1*s*.; Fridays, 2*s*. 6*d*., Saturdays, 5*s*.; and from the last-mentioned date to the close of the Exhibition no other change was made, with the exception of reducing the Saturday fee to 2*s*. 6*d*.

At first, the doors were opened for admission at ten in the morning, and closed at six in the evening, with the exception of Saturdays, when the doors were not opened till twelve o'clock. On Monday, August 18, the doors were opened at nine o'clock, instead of ten, and this continued to the end of the Exhibition. Some modifications were subsequently made in the hour of closing, according to the

season. In the height of the summer, the Exhibition was kept open till seven o'clock; and as the season advanced, the bells were rung at six o'clock, and later, ten minutes before sunset.

RECEIPTS.

The gross or net receipts from all sources were as follows:—

	£
Subscriptions	67,897
Catalogue contract	3,200
Refreshment contract	5,500
Season tickets	67,514
Taken at the doors	356,278
Retiring rooms, umbrellas, medals struck in the building, and weather charts	4,580
Interest and premium on Exchequer Bills	898
Sundries	233
Total	£506,100

The number of season tickets sold was 25,605, of which 13,494 were for gentlemen, and 12,111 for ladies. Of this number 135 gentlemen's tickets and 184 ladies' tickets were sold after July 31, at the reduced rate of 30s. and 20s. respectively.

The average daily receipts at the doors (exclusive of the opening day, when no money was taken) amounted to 2,548*l.* for the whole period of the Exhibition. During the first three weeks, when the admission fee was 5*s.*, the daily average was 2,546*l.*, a very close approximation to that just stated. The largest amount taken in one day was on Wednesday, October 8 (a shilling day), when 5,283*l.* was received at the doors; and the smallest, on Monday, May 26, amounting to 920*l.* This was the first day on which the admission was reduced to 1*s.*; and the comparatively small amount taken is due to apprehension on the part of the public, that so low a fee would bring such an enormous crowd, as to render a visit to the Exhibition not only full of discomfort, but fraught with danger.

Great Exhibition of 1851.

The following table shows the total receipts at the doors at different rates of payment:—

Number of Days	Entrance Fee		Amount taken		Daily Average	
	£	s. d.	£	s. d.	£	s. d.
2	1	0 0	1,042	0 0	521	0 0
28		5 0	61,347	7 0	2,191	0 0
30		2 6	72,447	11 0	2,414	17 0
80		1 0	221,971	3 0	2,774	12 0
140			356,808	1 0		

The loss on light gold, defaced, spurious, and foreign coin was considerable, amounting to upwards of 530*l.*, which, deducted from the above total, explains an apparent discrepancy between the amount previously given, and that in the above table.

NUMBER OF VISITORS.

The total number of visitors for the whole period of the Exhibition was 6,039,195. During 141 days, 773,766 entered with season tickets.

On two days when the entrance was 1*l*., 1,042 persons paid. On 28 days, when the entrance fee was 5*s*., 245,389 paid. On 30 days, when the entrance fee was 2*s*. 6*d*., 579,579 paid; and on 80 days, when the admission was 1*s*., 4,439,419 paid. Striking a daily average on these numbers, the results are as follows:—

Season tickets . . . 5,473 daily

	£	s.	d.		
Paying	1	0	0	entrance	521
"	0	5	0	"	8,763
"	0	2	6	"	19,319
"	0	1	0	"	55,493

Every facility was given by the Royal Commissioners and Executive Committee for the free admission of all persons whose attendance in the building was absolutely necessary, but no free list was ever actually in operation. All in the employment of the royal commission, police, military, foreign commissioners, certain exhibitors, exhibitors' agents and attendants, members of the metropolitan and provincial press, the jurors, and many others not specified, were admitted gratuitously throughout the whole period of the exhibition, adding considerably to the number always present in the building. The greater number of these came in before the doors were opened, and were not counted by the police; and, as a rule, if known to have business in the building, they were not reckoned at whatever hour they came in.

The greatest number of persons actually within the building at any one time, occurred on Tuesday, October 7 (four days before the closing). The total number of visitors on that day was 109,915, the greatest number on any one day throughout the Exhibition; and at two o'clock on the day mentioned, it was computed that nearly a hundred thousand people were in the building. On Monday, October 6, the total number was 107,815; on Wednesday, October 8, it was 109,760; and on Thursday, October 9, 90,813. The four days named were the last shilling days of the Exhibition, the total being 418,303, or an average of 104,576 for each of those days.

JURIES.

The actual number of jurors for the Exhibition was 318—161 British and 157 Foreign; and the numbers appointed for each country were as follows:—

Austria	17
Belgium	14
Denmark	1
Egypt	2
France	38
Great Britain . .	161
Greece	1
Germany (North) .	2
Holland	2
Italy	6
Portugal	2
Russia	7
Sicily	1
Spain	4
Switzerland . . .	7
Sweden	1
Turkey	5
United States . .	24
Zollverein	23

Total 318

Attached to the juries were associate jurors to the number of 100, specially appointed by the juries to assist them in their decisions, but without the power of voting. Seventy of the jurors and associate jurors were also exhibitors. The following table shows the number of jurors and associate jurors in each class.

The thirty classes here enumerated were afterwards practically increased to thirty-four,

by the addition of one sub-class to Class 5, and three sub-classes to Class 10, thus making the number of acting juries thirty-four also.

Class		No. of Jurors	No. of Associate Jurors

Total		318	100

AWARDS.

Two medals in bronze were awarded by the juries, the council medal, and the prize medal. A certificate of honourable mention was also

given as a third award. The council medal was almost exclusively reserved for remarkable inventions, and was not considered applicable to those instances where excellence of execution was the only merit to be rewarded.

In a few instances pecuniary gifts were added to the honorary distinction of a medal or honourable mention, that is, where artisans had incurred considerable expense in producing an article of interest, without the possibility of being remunerated for the outlay.

The total number of awards made by the juries were:—

Council Medals	171
Prize Medals	2,954
Honourable Mentions	2,123

Total 5,248

Principal Entrance to the Palais de l'Industrie.

THE PARIS UNIVERSAL EXHIBITION OF 1855.

It is somewhat difficult to designate the exact localities and relative positions of the various Buildings which were erected for the Paris Universal Exhibition of 1855. The main or principal edifice was an extensive rectangular building, nearly square in shape, situated in the main avenue of the Champs Elysées, and well known as the Palais de l'Industrie. This building was solidly constructed, and intended to be permanent. In it were exhibited the products of the twenty-seven industrial classes chiefly. South of this principal building, and connected with it by covered galleries and passages, was a long and narrow edifice called the Annexe or Galerie du Quai, which extended along and was in close proximity to the north bank of the river Seine. This Annexe, 4,000 feet long, was mainly devoted to the exhibition of machinery. The third building, intended for the three classes forming the division of Fine Arts (Palais des Beaux Arts), was situated at some considerable distance from the two others, be-

ing at the south-west or river end of the Avenue Montaigne. It was entirely separated from the two edifices mentioned; connecting passages even being impracticable by reason of distance and locality.

Between the Palais de l'Industrie and the Annexe, was a circular building, known as the Panorama, or Panorama Rotunda, in which were displayed the crown jewels of France, and a great variety of tapestries, carpets, &c. Outside, and surrounding this Rotunda, was a considerable space partly covered and partly open, in which carriages and vehicles of all kinds, and agricultural machinery and implements were exhibited. Ample space was also provided here for refreshments. The only structure remaining to be named, was the Chinese Exhibition, attached to the Fine Arts Palace, but in no other way connected with it. Indeed, this Chinese Exhibition was never considered a portion of the international display, and is only named here for the sake of completeness, and

because the space it occupied was really a part (though separate) of the Fine Arts building.

Thus there were three separate and distinct buildings, exclusive of the Panorama Rotunda, which served for the French International Exhibition of 1855—the Palace of Industry, or main central building, the Machinery Annexe, and the Fine Arts Palace. As regards the last named building, the French Government had contemplated the possibility of devoting a portion of the new palace of the Louvre to the exhibition of the Works of Art contributed to the Exhibition; and there is no doubt such an intention would have been carried out, but for the impossibility of doing so without great hindrance to the urgent and important works, both of interior and exterior, then going on there.

Although the preparation and erection of these buildings for the Paris Universal Exhibition of 1855 was set on foot and mainly carried out with the capital of a commercial company organised in Paris, yet it was the French Government who really had the whole and sole management of the Exhibition, taking all risk in the enterprise, and guaranteeing to the company a certain per centage of profit on their outlay. The Emperor accordingly appointed Imperial Commissioners, with Prince Napoleon at their head, for the management of the Exhibition; and although the company had certain privileges and the power of making some regulations, it was virtually superseded, and the entire control undertaken by the Government.

Messieurs Viel and Desjardins were the architectural authors of the main building; and Messrs. York and Company were the Contractors for carrying out the works.

All the buildings were of a temporary character, except the main central one; and all, with that exception, were consequently cleared away within a short time after the close of the Exhibition. The main structure (Palais de l'Industrie) in the Champs Elysées was retained, and still exists. It is the property of the Government, and is used for exhibiting works of art, and for other kindred purposes.

DIMENSIONS OF SPACE.

The total horizontal space occupied by all the countries exhibiting in the Industrial divisions, including passages and all entrances, as well as offices and reception rooms, was 152,052 square mètres, or about 1,770,000 English superficial feet. In the Fine Arts building the total space occupied by the works of art in the classes of painting, engraving, lithography, sculpture; and architecture, was 17,639 square mètres, or 15,603 square mètres superficial vertical space for paintings, engravings, &c., and 2,036 horizontal square mètres for works in sculpture, making altogether a total of 169,691 square mètres (about 1,866,000 square feet), as the space actually occupied by exhibitors in the

various classes throughout the Exhibition, and by passages, offices, and all else that was provided for the general accommodation of the public. In this estimation, the entrances, offices, and floor space unoccupied by works of art, in the Fine Arts building, are not included; nor are the dimensions of such space given in the report of the Imperial Commission.

The division of the exhibiting space in the main building, or Palais de l'Industrie, Panorama Rotunda, and Machinery Annexe, was as follows:—

	Sq. Metres
France	55,669
Foreign Countries	46,097
Passages, &c.	17,021
Total	118,786

In the division of Fine Arts, France is stated to have occupied 2,400 square mètres of wall space for paintings, &c.; Great Britain, 938 square mètres; the remainder of the space being divided among ten other countries. In reality, the space occupied by the United Kingdom, for Works of Art, was somewhere about 14,184 square feet.

The following table shows the amount of space occupied by each country in the Industrial classes, exclusive of passages, &c:—

SUMMARY.

	Sq. Metres
France and Colonies . . .	55,669
Gt. Britain and Colonies . . .	17,372
Other Countries . . .	28 725
Passages . . .	17,020

Total . 118,786

As near as can be ascertained, the total horizontal space occupied by Great Britain and her Colonies at the Paris Universal Exhibition of 1855, inside the various buildings, was 183,000 square feet, of which 14,184 square feet were devoted to works in the three classes of Fine Arts.

Although the actual space occupied by each country in the division of Fine Arts is not given in the report of the Imperial Commission, the number of exhibitors in each of the three classes is recorded.

The following tabular statement gives this information:—

Country	Number of Exhibitors			Total
	Painting, Engraving, Litho- graphy	Sculpture	Architec- ture	
France . . .	804	177	91	1072
America (U. S.) . .	11	2	—	13
America (South) . .	2	—	—	2
Austria . . .	66	38	4	108
Baden & Nassau . .	11	1	—	12
Bavaria . . .	35	3	1	39
Belgium . . .	124	17	1	142
Denmark . . .	30	2	—	32
Two Sicilies . . .	3	1	—	4
Spain . . .	27	5	16	58
Papal States . . .	10	6	—	16
Great Britain . . .	212	35	50	297
Greece . . .	3	9	—	12
Hanover . . .	2	—	—	2

Other Countries . .	2	1	1	4
TOTALS . .	1671	332	172	2175

In the report presented to Parliament on the British division of the Exhibition, the number of English artists exhibiting in the Fine Arts section, and the number of their works, is thus given:—

Works in oil . . .	234	contributed by 99 artists
Water-colours . . .	145	" 52 "
Engravings and Lithographs } . . .	197	" 62 "
Architectural works . . . }	127	" 51 "

Statues . . .	51	} contributed by 35 artists
Busts and Bas-reliefs . . .	24	
Total . . .	778 works	299 artists

And the estimated value of the British works sent was as follows:—

	£
Oil Paintings . . .	96,130
Water-Colours . . .	15,653
Engravings and Lithographs . . .	1,676
Architectural works . . .	5,765
Sculpture . . .	18,336

Total . £137,560

Showing an average value of 411*l.* for each of the works in oil; about 108*l.* for each of those in water-colours; and about 244*l.* for each work in sculpture. Engravings, lithographs, and architectural drawings are not included in this calculation, for obvious reasons.

In addition to the above statistical facts relative to the horizontal or superficial space of the Paris Exhibition, it may, perhaps, be interesting to state the amount of vertical surface occupied by exhibits, and the linear or running measurement of the whole twenty-seven Industrial classes. These calculations are extracted from the report of the Imperial Commission.

	Linear Measure- ment Metres	Vertical or Wall Surface Sq. metres
France, Algeria, and Colonies . . . }	18,949	33,421
Austria . . .	2,335	3,512
Belgium . . .	1,509	2,350
Great Britain and Colonies . . . }	4,404	6,373
Prussia . . .	1,828	2,796
Sweden . . .	464	442
Switzerland . . .	409	584
Remaining countries . . .	3,871	4,131
Total . . .	33,769	53,609

NUMBER OF EXHIBITORS.

The total number of Exhibitors at the Paris Universal Exhibition of 1855, was 23,954. Of this number 21,779 were exhibitors in the twenty-seven Industrial classes, and 2,175 were exhibitors in the three classes belonging to the Fine Arts.

The number of Exhibitors belonging to each country in the Industrial classes was as follows:—

	Exhibitors
France . . .	10,003
Algeria . . .	728
French colonies . . .	183
	10,914
America (United States) . . .	131
America (South) . . .	38
Austria . . .	1,298

	Exhibitors
Baden	88
Bavaria	172
Belgium	687
Denmark	90
Spain	569
Papal States	72
Great Britain	1,589
Canada	348
Australia and Van Die- men's Land	405
India	599
British Guiana	95
Smaller colonies	233
	<hr/> 3,269
Greece	131
Hesse	88
Mexico	107
Nassau	59
Norway	121
Netherlands	411
Portugal	443
Prussia	1,319
Sardinia	204
Saxony	96
Sweden	418
Switzerland	408
Tuscany	197
Hanse Towns	89
Wurtemberg	207
Other countries, viz.:—Anhalt- Dessau and Coethen, 15; Bruns- wick, 16; German Confedera- tion, 20; Egypt, 6; Frankfort- on-the-Maine, 24; Hanover, 18; Hawaii, 5; Luxemburg, 23; Saxony (5 duchies), 23; Tunis, 1; Turkey, 2	<hr/> 153
Total	<hr/> 21,779

The number of Exhibitors from each country in the division of Fine Arts has been already stated.

Fifty-three foreign states and twenty-two foreign colonies were represented in the Exhibition, without including France, the three provinces of Algeria, and eight French colonies.

Dividing the total number of Exhibitors, including those in the Fine Arts classes, into French and foreign, the numbers will be thus:—

French Empire	11,986
Foreign States	11,968
Total	<hr/> 23,954

The extreme nearness of the two numbers making this total cannot fail to be remarked as a very extraordinary fact.

COST OF THE EXHIBITION.

According to the report of the Imperial Commission on the Paris Universal Exhibition of 1855, the cost of the Exhibition was as follows:—

	Francs	Sterling
Industrial Division	8,961,620 =	£358,464. 16s.
Fine Arts Division	2,302,900 =	£92,116. 0s.
Total	11,264,520 =	£450,580. 16s.

This sum does not include the cost of the main edifice, or Palais de l'Industrie, afterwards purchased by the French government; consequently, the total expenditure on account of the Exhibition must be taken at nearly as much again, or even more, and in all probability amounted to upwards of a million sterling.

Taking, therefore, the cost of the Palais de l'Industrie at 500,000*l.*, and of the various other buildings, as given in the report of the Imperial Commission, viz.—

	£
The Annexe	104,080
Junction Gallery of Panorama Rotunda	24,280
Fine Arts Building	42,068
Supplementary Constructions	4,232

it will approach correctness to state that the Buildings alone cost 674,660*l.*

Reckoning the total amount of horizontal space to have been 169,691 square mètres, or about 1,866,000 square feet, and the total cost of the buildings, irrespective of the purchase of the Palais de l'Industrie, to have been as above stated, it follows that the cost per square foot was nearly 7*s.* 3*d.*

In order that Great Britain should be properly and adequately represented at the Paris Universal Exhibition of 1855, it was necessary that the British government should afford the requisite assistance. Estimates were accordingly prepared and submitted to Parliament, and the result was that a sum of £50,000 was voted to be administered under the responsibility of the Board of Trade.

The net expenditure under this grant was 39,259*l.*, being upwards of 10,000*l.* less than the Parliamentary vote; exemplifying the rigid economy that was exercised in the disbursement of the money.

The total payments of the British Division under the various heads of service were as follows:

	£
Preliminary arrangements	3,171
Freight, carriage of goods, Customs charges, &c.	7,588
Office management in Paris	3,282
Completion and decoration of British Division	3,985
Maintenance, Cleaning, and Watching	3,446
Removing and Warehousing Packing Cases	943
Printing, Advertising, Postage, Stationery, &c.	1,383
Securing proper representation of Raw Products and Scientific Apparatus	2,067

Division of Fine Arts . . .	£6,477
Jurors and their Reports . .	4,165
Contingencies	2,752
Total	£39,259

A chief item in the expenses connected with the British division of Fine Arts, was that of insuring the various works contributed against all accidents by rail and sea, both going and returning, and also against damage by fire while in the building and during transit. The rates varied from 2*l.* 10*s.* to 3*l.* per cent, and the amount paid to the underwriters at Lloyd's and elsewhere, reached the sum of 2,715*l.*

ADMISSION OF VISITORS.

The Paris Universal Exhibition of 1855 was opened to the public by the Emperor in person on Tuesday, the 15th of May; but at that date the general arrangements were so incomplete and backward, that only the Fine Arts building and a part of the Industrial divisions were sufficiently forward to be fit for inspection. The Machinery Annexe, the Panorama Rotunda, and the outside buildings were not opened till a much later period.* It was originally intended to have opened the Exhibition on May 1, and an Imperial Decree was published announcing that day; but the postponement was inevitable by reason of so much incompleteness in nearly all the divisions. On Thursday, November 15, the closing ceremony took place in the presence of the Emperor, with great success and punctuality. On Friday, November 30, the Exhibition was finally closed, though the business of clearance really began the day after the closing ceremony, and continued daily without interruption.

The total number of days that the Exhibition remained open, that is, from the 15th of May, to the 30th of November (inclusive), was exactly 200, Sundays included.

The admission was by season tickets, and payments at the doors. On one day, Sunday, the 27th of May, the whole Exhibition was thrown open gratuitously to the public.

Season tickets were 50 francs (2*l.*) for the Industrial division, and the same price for that of Fine Arts; so that a season ticket for the entire Exhibition cost 100 francs, or 4*l.* Season tickets, with limited privileges, were also issued at 25 francs each (1*l.*). The rates of admission at the doors were 5 francs (4*s.*); 2 francs (1*s.* 8*d.*); 1 franc (10*d.*); and 20 centimes (2*d.*). On Mondays, Tuesdays, Wednesdays, Thursdays, and Saturdays the price of admission was 1 franc; on Fridays, 5 francs, and on Sundays, 20 centimes (2*d.*). The same rates of admission applied also to the Fine Arts Building. After the 1st of August, the Friday admission was reduced to 2 francs; and after

the 11th of the same month, Railway Companies and others, were allowed to organise exhibition trains, the passengers by which (on Sunday and Monday in each week) not only travelled at a reduction of 40 per cent. on the ordinary fares, but had a free admission to the Industrial and Fine Arts Divisions, or might make two visits to either. And during the month of August large numbers of working classes, from all parts of France, were admitted by paying 20 centimes only. All soldiers and military pensioners were privileged to daily free admission, in certain numbers, between the hours of nine and eleven o'clock. Pupils from the military schools were also allowed free entry under easy regulations; and the members of the press, both French and foreign, enjoyed the same privilege. On the day of the opening ceremony, season tickets only were admitted; as was also the case when Queen Victoria visited the Exhibition on the 24th of August.

RECEIPTS.

The total receipts reached the sum of 3,202,485 francs, or 128,099*l.* 8*s.* sterling.

The number of season tickets sold was 4,843, of which 4,663 were for the Industrial portions of the Exhibition, and 180 for the Fine Arts; producing together the sum of 200,450 francs, or 8,018*l.* sterling. Deducting the day of the opening, when season ticket holders only were admitted, and the day on which the Exhibition was thrown freely open, the average daily receipts amounted to 16,174 francs, or 646*l.* 19*s.* 2*d.* sterling. The receipts for the Industrial division were 2,566,195 francs (102,647*l.* 16*s.*) and for the Fine Arts; 636,290 francs (25,451*l.* 12*s.*)—averaging daily, for the Industrial division, 12,960 francs (518*l.* 8*s.*); and for the Fine Arts, 3,213 francs and a half (128*l.* 10*s.* 5*d.*).

NUMBER OF VISITORS.

The total number of visitors to the Paris Universal Exhibition of 1855, was 5,162,330. Of this total, 4,180,117 entered the various Industrial divisions, and 982,213 visited the Fine Arts. In the total number, however, of those who passed into the Fine Arts, 46,612 persons are included who went into the Chinese Exhibition before alluded to. The estimated number of visits made by holders of season tickets to the Industrial division, was 94,000, and to the Fine Arts, 3,800. On 5-franc days the total of those who entered the Industrial divisions, was 22,747, and Fine Arts 11,179—together, 33,926. On 2-franc days, the total numbers were: to the Industrial division, 73,816; and Fine Arts, 21,872—together 95,688. The total number of visitors on 1-franc days was 2,103,535, of which 1,683,798 entered

* Agricultural machines, June 5; Annexe, June 10
Panorama and Junction Gallery, June 30.

the Industrial, and 419,737 the Fine Arts division. The total number of visitors for the days when the entrance was only 20 centimes (*2d.*) amounted to 2,196,795; of which 1,752,518 visited the Industrial, and 444,277 the Fine Arts divisions. To these numbers should be added 26,322 persons who visited the Chinese collection on the days when the admission to see it was half-a-franc.

The approximate or estimated number of those who entered with Exhibitors' cards was 445,000, of whom 420,000 passed into the Industrial, and 25,000 in the Fine Arts division. Of soldiers and pensioners who availed themselves of the privilege of visiting the Industrial sections of the Exhibition without payment, between the hours of 9 and 11, the total number was 80,118. And the number of students from the military schools, who exercised the privilege of free admission to the whole Exhibition, was 797. The total number of visits paid by those who came by the privileged excursion trains on Sundays and Mondays, was 24,455. It must be borne in mind, that these numbers are approximate of the number of visits paid to the Exhibition by the persons in the various categories, and that they do not represent separate individuals. For instance, if a pensioner went to the Exhibition ten times, he was of course counted as ten persons, and so on.

On Sunday, May 27, when the entire Exhibition was thrown open to the public without payment, the total number of visitors was 105,022, of whom 80,118 passed into the Industrial, and 24,904 into the Fine Arts division.

The greatest number of visitors in any one day throughout the period of the Exhibition, occurred on Sunday, the 9th of September, when 123,017 persons are recorded to have entered. Very large numbers occurred on each of the 24 Sundays from the 3rd of June to the 11th of November, the average being 89,223 for each Sunday; and on each of eight of those days, the number considerably exceeded 100,000.

It is stated that nearly 160,000 foreigners visited Paris during the Exhibition; upwards of 40,000 being British subjects; or more than two-thirds of the number of all foreigners that visited London in the Exhibition year of 1851. And according to the French Police returns, the various departments of France sent more than 350,000 visitors to Paris during the Exhibition of 1855.

JURORS.

The classification of the Paris Exhibition of 1855 was as follows:—

Class

1. Mining and Metallurgical Products.
2. Forestry, Hunting, Shooting, and Fishing, and Products obtained without cultivation.

Class

3. Agriculture.
4. Machinery in general, as applied to Industry.
5. Special Machinery and Apparatus for Railways and other modes of transport.
6. Special Machinery and Apparatus for Workshops.
7. Special Machinery and Apparatus for the manufacture of Woven Fabrics.
8. Arts relating to exact Sciences, and to Instruction.
9. Manufactures relating to the economical production and employment of Heat, Light, and Electricity.
10. Chemical Manufactures, Dyeing and Printing, Paper, Leather, Skins, India-rubber, &c.
11. Preparation and Preservation of Alimentary Substances.
12. Hygiene, Pharmacy, Surgery, and Medicine.
13. Naval and Military Arts.
14. Civil Engineering and Building.
15. Steel, and its products.
16. General Metalwork.
17. Goldsmiths' Work, Jewellery, and Bronzes.
18. Glass and Pottery.
19. Cotton Manufactures.
20. Woollen and Worsted Manufactures.
21. Silk Manufactures.
22. Flax and Hemp Manufactures.
23. Hosiery, Carpets, Embroidery, Lace of every kind, Gold and Silver Fringe, &c.
24. Furniture and Decoration.
25. Articles of Clothing; Objects of Fashion and Fancy.
26. Drawing and Modelling applied to Industry, Letter-press and Copper-plate Printing, Photography.
27. Manufacture of Musical Instruments.
28. Painting, Engraving, and Lithography.
29. Sculpture and Die-sinking.
30. Architecture.

The three last Classes constituted the Division of Fine Arts.

One other Class was added after the opening of the Exhibition, namely, Class 31, Products of Domestic Economy, consisting of articles of remarkable utility and cheapness, and mostly selected from the goods exhibited in the other classes.

The total number of jurors was 398—208 being assigned to France, and 190 to foreign countries, in the following proportions:—

Class		Total Number of Jurors
1	Austria, 2; Belgium, 2; British Colonies, 1; Great Britain, 2; France, 5; Prussia, 1	13
2	Great Britain, 1; France, 8; Portugal, 1; Tuscany, 1; United States, 1	12
3	Austria, 2; Baden, 1; Belgium, 2; Denmark, 1; France, 9; Great Britain, 3; Spain, 1; Sweden and Norway, 1	20

Class		Total Number of Jurors
4	France, 6; Great Britain, 1; Portugal, 1; Spain, 1	9
5	Belgium, 2; France, 5; Great Britain, 2; Prussia, 1	10
6	Austria, 1; France, 7; Great Britain, 1; Prussia, 1; Sardinia, 1; Sweden and Norway, 1; Tuscany, 1	13
7	Austria, 1; France, 5; Great Britain, 1; Spain, 1; United States, 1	9
8	Bavaria, 1; France, 6; Great Britain, 3; Prussia, 1; Switzerland, 2	13
9	Austria, 1; France, 5; Great Britain, 2; Prussia, 1	9
10	Austria, 1; Belgium, 1; France, 9; Great Britain, 2; Hesse, 1; Portugal, 1; Prussia, 2; Switzerland, 1	18
11	Austria, 2; France, 4; Great Britain, 1; Prussia, 1; Wurtemberg, 1	9
12	France, 7; Great Britain, 3; Netherlands, 1	11
13	Belgium, 2; France, 7; Great Britain, 2; Greece, 1; Prussia, 1	13
14	France, 2; Great Britain, 2; Turkey and Egypt, 1	12
15	Austria, 1; France, 6; Great Britain, 2; Prussia, 2; Sardinia, 1; Sweden and Norway, 1	13
16	Austria, 1; Belgium, 1; France, 7; Great Britain, 2; Hanover, 1; Wurtemberg, 1	13
17	France, 5; Great Britain, 1; Netherlands, 1; Prussia, 2; Turkey and Egypt, 1	10
18	Austria, 1; Belgium, 1; France, 7; Great Britain, 3; Netherlands, 1; Prussia, 2	15
19	Austria, 2; Belgium, 1; France, 6; Great Britain, 2; Prussia, 1; Switzerland, 2	14
20	Austria, 3; Belgium, 1; France, 9; Great Britain, 2; Prussia, 3; Saxony, 1; Wurtemberg, 1	20
21	Austria, 3; France, 7; Great Britain, 2; Prussia, 1; Switzerland, 1	14
22	Austria, 1; Belgium, 1; France, 5; Great Britain, 2; Prussia, 1; Wurtemberg, 1	11
23	Austria, 1; Belgium, 2; France, 9; Frankfort-on-the-Maine, 1; Great Britain, 2; Prussia, 1; Spain, 1; Switzerland, 1	18
24	Austria, 1; Bavaria, 1; France, 6; Great Britain, 2; Hanse Towns, 1; Mexico, 1	12
25	Austria, 2; France, 6; Great Britain, 1; Switzerland, 1	10
26	Austria, 1; France, 5; Great Britain, 2; Prussia, 1	9
27	Austria, 1; Belgium, 1; France, 4; Great Britain, 1	7
28	Austria, 1; Baden, 1; Bavaria, 1; Belgium, 3; France, 16; Great Britain, 4; Netherlands, 1; Prussia, 2; Spain, 1; Sweden and Norway, 1; Switzerland, 1	32
29	Austria, 2; Belgium, 1; France, 11; Great Britain, 3; Papal States, 1; Prussia, 1	19
30	France, 7; Great Britain, 2; Prussia, 1	10
	Total	398

In Class 31, the members, 19 in number, were mostly selected from the other Jurors.

AWARDS.

By an Imperial Decree, dated the 10th of

May, 1855, the recompenses to be awarded by the International Juries were as follows:—

For the twenty-seven Industrial classes—1st, a Gold Medal (Médaille d'Honneur); 2nd, a Silver Medal; 3rd, a Bronze Medal; and 4th, a Certificate of Honourable Mention.

For the Division of Fine Arts—1st, a First Class Gold Medal; 2nd, a Second Class Gold Medal; 3rd, a Third Class Gold Medal; and 4th, a Certificate of Honourable Mention.

And, in addition to the above, the special award of the Great Medal of Honour.

Money awards were also made in particular instances. The Decoration of the Legion of Honour was largely distributed by the Emperor to those who took part in the Exhibition, and may almost be considered an additional award to those already mentioned.

According to the Report of the Imperial Commission the value of each of the gold medals was as follows:—The Great Gold Medal of Honour, 5,000 francs (200*l.*); First-class Gold Medal, 750 francs (30*l.*); Second-class Gold Medal, 650 francs (26*l.*); Third-class Gold Medal, 550 francs (22*l.*).

By a later Decree than that before alluded to, the denomination of the medals awarded to the Industrial divisions was changed thus: the Gold Medal was called the Great Medal of Honour; the Silver Medal, the First-class Medal; and the Medal in Bronze, the Second-class Medal.

No tabulated statement appears in the Report of the Imperial Commission, showing the number of awards in each class, and to each country. Such information is, however, given in the Reports of the Juries; but in a way that is not available for the purposes of this paper. This is to be regretted. The statistical information conveyed by such a table would, doubtless, be valuable and interesting.

In the British Division, the Jury awards for the Industrial Classes were as follows:—

Class	Number of Exhibitors	Awards					Total
		Great Medal of Honour	Medal of Honour	First-class Medal	Second-class Medal	Honourable Mention	
1	97	—	1	19	19	16	55
2	7	—	—	1	—	—	1
3	32	—	5	10	13	8	36
4	40	—	1	4	11	8	24

26	86	—	1	33	23	15	72
27	18	—	—	3	—	1	4
31 {	Included in the above	—	1	5	5	—	11
Totals	1,549	15	32	301	353	230	931

The above does not include the awards to the British Colonies, which were as stated hereafter.

Awards were also made to those British co-operators and workmen (colonies included) who, although not Exhibitors, had been connected with the invention, production, and arrangement of the articles and substances sent for Exhibition. One Great Medal of Honour, one Medal of Honour, 27 First-class Medals, 56 Second-class Medals, and 42 Honourable Mention were thus given—making a total ad-

dition of 130 Jury Awards to those enumerated above.

Awards to British Colonies.

	Great Medal of Honour	Medal of Honour	First-class Medal	Second-class Medal	Honourable Mention	Total
India	—	—	12	37	42	91
Canada	1	—	12	31	48	92

Cape of Good Hope	—	—	2	3	—	5
Total Awards	1	1	51	109	154	316

In the three Fine Arts' Classes, the total number of awards made to British Exhibitors was 64, namely: 2 Great Medals of Honour; 9 First-class Medals; 8 Second-class Medals, 11 Third-class Medals; and 34 Certificates of Honourable Mention.

View of Building from the Horticultural Gardens.

THE INTERNATIONAL EXHIBITION OF 1862.

THE various Buildings which constituted the International Exhibition of 1862, were erected on a piece of ground immediately adjoining the south end of the Royal Horticultural Gardens at South Kensington, obtained for that purpose from the Royal Commissioners of the Great Exhibition of 1851. This land was a portion of the estates which the Royal Commissioners had acquired by purchase, out of the surplus funds of the Exhibition, and a parliamentary grant.

The total quantity of land so purchased in the immediate neighbourhood of this site (indeed, adjoining to it) was 86 acres, and the cost, 280,000*l.*, or an average of 3,250*l.* an acre. It was originally thought that 300,000*l.* would be sufficient to purchase all the land desired. The Royal Commissioners agreed to devote 150,000*l.* of their surplus (about 170,000*l.*), and Parliament supplied the same amount, to secure a block of cheap land in the immediate neighbourhood of the metropolis, and for erecting upon it educational institutions for the furtherance of science, art, and manufactures.

The estates purchased were the following:—the Gore House Estate, situated at Kensington Gore, nearly opposite the site of the Great Exhibition of 1851, comprising 21 acres, and costing 60,000*l.*; the De Villars' Estate, purchased from the trustees of the Baron de Villars, amounting to 48 acres, and costing 153,500*l.* Adjoining these two estates were

17 acres, the property of the Earl of Harrington, which were bought for about 66,500*l.*

In 1858, Parliament dissolved the partnership which existed between itself and the Royal Commissioners; and consequently the whole of the purchased land became vested in the Commissioners solely, with the exception of 12 acres, on which the buildings of the Department of Science and Art, better known as the South Kensington Museum, now stand, the price of which (60,000*l.*) the Government agreed to deduct from the vote of 150,000*l.* which the Commissioners had thus to repay.

The main buildings of the International Exhibition of 1862 covered about 17 acres of ground, exclusive of the two annexes on the east and west of the Horticultural Gardens, which may be estimated at 7 acres more; so that the whole range of buildings covered an area of upwards of 24 acres. In shape the ground was nearly rectangular, measuring about 1,200 feet from east to west, and 560 feet from north to south. The principal frontage was in the Cromwell-road; whilst the western entrance was in Prince Albert's-road, and the eastern in the Exhibition-road.

Although the greater part of the structure of 1862 was solid and of a substantial character, and built with an evident intention of permanence, yet it was doomed to a destructive removal, and the site on which it stood to be again restored to its previous condition. Very

great efforts were made to save the building, especially the long range of picture galleries. Parliament, however, purchased the ground from the Royal Commissioners for national purposes (the vote of 120,000*l.* for 17½ acres, was passed June 13, 1863), but refused to secure the buildings, which were accordingly removed, and the ground entirely cleared. The site is still unoccupied, and nothing remains of the Exhibition except the refreshment-rooms and galleries over the southern arcade of the Horticultural Gardens. These galleries are at present occupied by the Department of Science and Art, by an arrangement with the Board of Works.

The Building, or rather Buildings, were designed by the late Captain Fowke, R.E., architect and engineer to the Government Department of Science and Art. The contractors for erecting it were Mr. Kelk and Messrs. Lucas Brothers.

DIMENSIONS OF SPACE.

The total area of covered space amounted to 1,291,800 square feet, of which 147,700 square feet were taken up by refreshment-rooms, offices, entrances, and staircases, leaving 1,144,100 square feet available for exhibition purposes. This space was obtained in the different buildings of the Exhibition in the following proportions:—

MAIN BUILDING.

Ground Floor.

	Square Feet
Nave and transept	178,450
Glass courts	178,880
Under galleries	203,160
South Horticultural arcade	32,700
Under south picture galleries	49,300
Offices, lobbies, &c.	27,600
Cromwell-road entrance and stair-case	17,300

Gallery Floor.

Galleries	208,360
Refreshment rooms	27,800

Picture Galleries.

South gallery and staircase	63,900
East and west galleries	27,000

Annexes.

Western, or Machinery	182,500
Eastern (covered space)	94,850

Total . 1,291,800

The total area roofed in was 988,000 square feet.

In dividing this space the Royal Commissioners observed the rule now generally recognised, of giving half to the country holding the exhibition, and the other half to foreign states.

The following table shows the amount of horizontal space originally allotted, and that actually occupied by each country, for the thirty-six industrial classes.

Country	Originally Allotted	Actually occupied by Goods
	Square Feet	Square Feet
United Kingdom and colonies	592,152	229,759
Africa	1,000	158
America (United States)	30,000	3,242
America (South)	5,000	1,468
Austria	33,000	15,494
Belgium	44,000	12,473
China	5,000	534
Denmark	5,650	2,163
Egypt	2,500	746
France and colonies	147,300	54,481
Germany (Northern)	4,950	2,069
Hanse Towns	4,000	532
Zollverein States	76,500	33,802
Mecklenburg	2,500	2,288
Greece	800	242
Holland	6,950	2,912
Hayti	—	146
Italy	15,400	7,905
Japan	2,000	300
Liberia	—	95
Madagascar	—	34
Portugal	4,500	1,772
Rome	3,000	1,334
Russia	14,300	4,648
Spain	5,400	2,563
Sweden and Norway	8,250	4,556
Switzerland	13,200	4,029
Turkey	5,000	1,374
Total	1,032,352	391,146

To this total must be added 662,061 square feet devoted to passages; 406,576 of which were occupied by Great Britain and her colonies, and 255,485 by foreign countries.

The amount of vertical or wall space occupied is thus given:—

	Superficial Feet
United Kingdom and colonies	146,229
France and colonies	9,222
Belgium	13,176
Austria	13,195
Zollverein States	22,559
Turkey and Egypt	6,568
Denmark	5,059
Mecklenburg	2,866
Holland and colonies	4,281
Norway and Sweden	3,061
Portugal	1,955
Russia	5,871
Spain	2,726
Switzerland	3,085
Remaining countries	44,707

Total vertical space . 284,670

Of this total, 146,229 superficial feet of vertical space were occupied by Great Britain and her colonies, and 138,441 superficial feet by the foreign countries exhibiting.

To the above allotments of horizontal space must be added the amount occupied by each country in the four classes of the Fine Art department. This will be best seen in the following table:—

	Superficial Feet occupied							
	Architecture		Paintings in Oil and Water- Colours		Sculpture		Etchings and Engravings	
	Horiz- ontal	Vertical	Horiz- ontal	Vertical	Horiz- ontal	Vertical	Horiz- ontal	Vertical
Great Britain and colonies	165	3,531	—	29,208	3,563	—	—	2,034
Austria	—	—	—	5,064	210	—	—	115
Belgium	—	—	—	4,189	776	—	—	376
Brazil	—	—	—	53	—	—	—	7
Denmark	—	—	—	1,887	15	—	—	—
France	—	—	—	11,246	1,761	—	—	—
Germany	—	40	—	7,961	751	—	—	76
Greece	—	—	—	209	142	—	—	—
Holland	—	—	—	2,848	—	—	—	—
Italy	—	591	—	4,151	859	—	—	18
Norway and Sweden	—	—	—	2,873	54	—	—	—
Rome	—	—	—	1,031	1,267	—	—	101
Russia	—	—	—	1,145	434	—	—	188
Spain	—	—	—	1,643	30	—	—	10
Switzerland	—	—	—	1,972	151	—	—	—
Turkey	—	—	—	83	—	—	—	—
United States of America	—	—	—	348	8	—	—	56
Totals	165	4,162	—	75,891	10,021	—	—	2,981

The total amount of space thus occupied by the Fine Arts classes was 34,773 vertical superficial feet, and 3,728 horizontal superficial feet for Great Britain and colonies, and 48,323 vertical superficial feet, and 6,458 horizontal superficial feet for foreign countries; making altogether 93,220 superficial feet actually occupied by Works of Art in the four classes specified. So that the total amount of space actually occupied by Goods and Works of Art at the International Exhibition of 1862 was as under :

	Feet
Horizontal space	401,332
Vertical space	367,766
Total	769,098
Add for passages in the thirty-six } industrial classes	662,061
Total	1,431,159

In this calculation the floor space of the picture galleries is not taken into account, ex-

cept such parts of it as were occupied by Works of Art.

NUMBER OF EXHIBITORS.

The total number of Exhibitors at the International Exhibition of 1862, was 28,653, including 2,305 artists whose works were exhibited in the four classes of the Fine Arts department. In the thirty-six Industrial classes the total number of exhibitors was 26,348 :—of this number 8,487 were British exhibitors (including colonies), and 17,861 were exhibitors from foreign countries. In the Fine Arts division the number of British artists represented was 990, and foreign, 1315; and the total number of their works shown was 6,529; of which 3,651 were British, and 2,878 foreign. The following return shows the number of works exhibited, and the number of artists represented in each of the four Fine Arts classes :—

	Architecture		Paintings in Oil and Water- Colours		Sculpture		Etchings and Engravings	
	Works exhibited	Artists represented	Works exhibited	Artists represented	Works exhibited	Artists represented	Works exhibited	Artists represented
Great Britain and colonies	633	197	1,874	545	321	96	823	152

International Exhibition of 1862.—Picture Galleries.

EXPENDITURE.

The entire cost of the undertaking may be stated in round numbers at 460,000*l*.

Before giving the various items which make up the total expenditure, it should be stated that the contract for the main building, including the centre acre of the picture galleries

and the western annexe, was *for use and waste*, with the right of purchase, on terms specified, at the close of the Exhibition. By the conditions of the contract it was agreed that the contractors should receive 200,000*l*. absolutely, and an additional 100,000*l*. if the receipts reached half-a-million. If, however, they received the 300,000*l*. the centre acre of the

picture gallery was to become the property of the Exhibition Commissioners.

It should also be mentioned that in order to meet a possible pecuniary loss from so vast an undertaking, the Society of Arts had recommended to the Royal Commissioners for the Exhibition of 1851, the establishment of a guarantee fund of not less than 250,000*l*. An appeal was accordingly made to the public, and succeeded beyond expectation, the amount subscribed reaching upwards of 450,000*l*. By the terms of the Guarantee Deed, the liability of each guarantor was confined to his rateable proportion of the entire sum to be raised. The number of guarantors who signed the deed was 1,152, and the limit of liability was fixed at 250,000*l*.

The principal items of expenditure were as follows:—

Contractors for the building, including 86,833 <i>l</i> . for eastern annexe	£ 320,680
Designs, drawings, and professional superintendence	8,323
Roads and approaches	13,359
Police	19,436
Insurance and fire brigade	4,088
Salaries and wages	45,778
Rent, taxes, repairs, furniture, printing, stationery, advertising, and incidental expenses	11,749
Maintenance, including opening ceremony, declaration of awards, gas, fuel, water, &c.	9,690
Carriage of pictures, &c.	4,202
Medals	6,410
Preliminary expenses and law charges	3,668
Computation of space and general arrangement	3,676
Interest on loan from Bank of England, less interest on investments	7,331
Other charges not enumerated	1,247
Total	£459,637

Taking, therefore, the total cost of the Exhibition Buildings to have been 321,000*l*., and the total amount of covered space 1,292,000 square feet, the cost per square foot was nearly five shillings.

ADMISSION OF VISITORS.

The International Exhibition of 1862 was opened to the public on Thursday, May 1, and was closed on Saturday, November 15, making a total of 171 days on which the public were admitted.

The arrangements which regulated the admission of the public were as follows:—

- 1st, by season tickets;
- 2nd, by payment at the doors.

On the day of the opening, season ticket holders only were admitted. On the two next days the admission fee was 1*l*.; from May 5 to May

17 (inclusive), 5*s*. each person; from May 19 to May 31 (inclusive), 2*s*. 6*d*., except on the Saturday in each week, when it was 5*s*.; from June 2 to June 14 (inclusive), the admission was 1*s*. for the first four days in each week, on Fridays 2*s*. 6*d*., and on Saturdays 5*s*.; from June 16 to November 1 (inclusive), the admission was 1*s*. for the first four days in each week, and on Friday and Saturday 2*s*. 6*d*., with the exception of Friday, July 11 (the day of the declaration of the jury awards), when it was 10*s*. each person; and from November 3 to November 15 (inclusive), the admission each day was half-a-crown.

The season tickets were of two kinds—ordinary season tickets for three guineas, and special season tickets at five guineas each. These special season tickets entitled the owners to free admission to the flower shows, fêtes, and promenades held in the gardens of the Royal Horticultural Society during the time the Exhibition was open, a portion of the charge being payable to the Society in consideration of the privileges granted to the holders of such tickets. In the month of July the price of season tickets was reduced one-half, and season tickets were issued for the shilling days only, at 10*s*. each. Day tickets, in packets of twenty-one for 20*s*. were also allowed to be purchased soon after the Exhibition opened.

RECEIPTS.

The gross or net receipts from all sources were as follows:—

	£	s.	d.
Season tickets	79,672	1	3
Payments at doors	328,858	0	5
Refreshment contracts	29,285	4	11
Official catalogues	3,919	1	10
Licences to photograph	1,925	0	0
Licence for lending opera glasses	250	0	0
Rent for Telegraph office	100	0	0
Umbrella stalls	2,118	12	10
Retiring rooms	1,000	0	0
Commission for photographs, medals, &c., sold in the building	1,241	9	6
Miscellaneous	262	1	5
Contribution from contractors of the building, under agreement	11,000	0	0

Total £459,631 12 2

The following is a statement of the number of season tickets sold and the amount realized:—

	£	s.	d.
At 5 guineas	5,773 = 30,308	5	0
At 3 guineas	17,719 = 55,814	17	0
At 50 <i>s</i>	26 = 65	0	0
At 30 <i>s</i>	919 = 1,378	10	0
At 10 <i>s</i> . (for shilling days)	3,363 = 1,681	10	0
Total	£89,248	2	0

International Exhibition of 1862.—Interior.

	£	s.	d.
Brought forward .	89,248	2	0
Less 8,672 <i>l.</i> 5 <i>s.</i> paid to the Royal Horticultural Society under arrange- ment referred to, and 903 <i>l.</i> 15 <i>s.</i> 9 <i>d.</i> commis- sion to agents .	9,576	0	9
Total .	£79,672	1	3

The greatest amount of money taken at the doors on any one day, was 2,935*l.* 12*s.* 4*d.*, on Monday, October 30, being the last shilling day; and the smallest amount taken in any one day, was 241*l.*, on Saturday, May 3, when the admission fee was 1*l.* each person. The average daily receipts at the doors for the whole period of the Exhibition, except the first day, when season tickets only were admitted, amounts to 1934*l.* odd.

The following are the various totals taken at the doors according to each rate of admission:—

	£	s.	d.
Total receipts of 2 days at 20 <i>s.</i>	506	0	0
" " 1 " 10 <i>s.</i>	1,052	8	4
" " 16 " 5 <i>s.</i>	17,823	8	5
" " 63 " 2 <i>s.</i> 6 <i>d.</i>	96,066	14	3
" " 88 " 1 <i>s.</i>	213,409	9	5
170 days .	£328,858	0	5

So that the daily receipts at the doors on the 5*s.* days averaged 1,114*l.*; on the halfcrown days 1,525*l.*; and on the shilling days 2,425*l.*

NUMBER OF VISITORS.

The total number of visitors to the International Exhibition of 1862 amounted to nearly six millions and a quarter; the exact number as given in the official returns, being 6,211,103. The daily average was 36,328, and the greatest number entering on any one day, viz. Thursday, October 30th, (a shilling day) was 67,891. The smallest number admitted was on Wednesday, November 5th, (admission 2*s.* 6*d.*) namely, 5,615; but as the Exhibition was then virtually over, it can scarcely be just to take that number as the minimum attendance on any one day. It would consequently be fairer to take the smallest number on any one day between May 1st and November 1st, namely, 7,367, on Thursday, May 15th, a five shilling day.

Although exhibitors were not entitled to free admission after the Exhibition was opened, yet every facility of entrance was given to all those persons whose presence was actually necessary.

The following return shows the total numbers admitted by season tickets, free passes, and payments at the doors:—

	Nos.
Ordinary season tickets .	770,704
Season tickets for 1 <i>s.</i> days .	58,536
Free passes to exhibitors, attendants, and staff :	257,246
Payments at doors, day tickets, and return tickets from Horticultural gardens .	5,124,617
	6,211,103

The daily average number admitted by season tickets, and at the doors by different rates of payment, was as under:—

	Average number admitted daily
Season tickets .	4,507
Season tickets for 1 <i>s.</i> days .	829
Paying 5 <i>s.</i> entrance .	12,352
Paying 2 <i>s.</i> 6 <i>d.</i> .	19,610
Paying 1 <i>s.</i> .	44,904

By an official return, showing the number of visitors on the same days of each successive week, it appears that on

<i>Mondays</i> , the gross total was	1,240,615
<i>Tuesdays</i> , " "	1,286,213
<i>Wednesdays</i> , " "	1,203,658
<i>Thursdays</i> , " "	1,270,388
<i>Fridays</i> , " "	641,996
<i>Saturdays</i> , " "	568,233

The average daily attendance on Mondays, was 44,307: on Tuesdays, 45,936: on Wednesdays, 43,988: on Thursdays, 44,806: on Fridays, 22,138: and on Saturdays, 19,594. The closeness of the average on the first four days in the week is very remarkable.

The following Table shows the total number of visitors daily, during the whole period of the Exhibition.

Date	Day of Week	Entrance Fee	Number of Visitors
May 1	Thursday .	(Day of Opening)	32,596
" 2	Friday . .	£1 0 0	8,727

Total .			6,211,103

All those who came in daily with passes of any description, are included in the above table, as well as in the preceding statistical facts relating to the number of visitors. The total number of persons so privileged has already been given.

JURIES.

The total number of Jurors and Associate Jurors appointed by the exhibiting countries was 620 (331 British and colonial, and 289 foreign). This number was divided as follows:—

Great Britain and colonies	331
Austria	33
Belgium	23
Brazil	1
Denmark	3
Egypt	3
France	82
Greece	6
Hanse Towns	3
Italy	34
Netherlands	4
Norway	1
Portugal	5
Rome	1
Russia	12
South American Republics	2
Spain	4

Sweden	7
Switzerland	9
Turkey	6
United States	5
Zollverein	45
Total .	620

The following table gives the number of Jurors and Associate Jurors serving on each of the 36 Industrial classes.

Class		Jurors	Associate Jurors
1	Mining, quarrying, metallurgy, and mineral products	16	3
2	Chemical substances and products, and pharmaceutical processes	24	3
3	Substances used as food.	45	3
4	Animal and vegetable substances used in manufactures	45	6
5	Railway plant: including locomotive engines and carriages	11	—
6	Carriages not connected with rail or tramroads	6	1
7	Manufacturing machines and tools	15	3
8	Machinery in general	30	2
9	Agricultural and horticultural machines and implements	18	1
10	Civil engineering, architectural, and building contrivances.	23	2
11	Military engineering, armour and accoutrements, ordnance and small arms	23	1
12	Naval architecture, and ship's tackle	14	3
13	Philosophical instruments, and processes depending on their use	13	4
14	Photographic apparatus and photography	5	2
15	Horological instruments . . .	9	—
16	Musical instruments	11	—
17	Surgical instruments and appliances	7	4
18	Cotton	12	2
19	Flax and hemp	9	—
20	Silk and velvet	11	1
21	Woollen and worsted, including mixed fabrics	16	8
22	Carpets	6	—
23	Woven, spun, felted, and laid fabrics, shown as specimens of printing and dyeing	10	1
24	Tapestry, lace, and embroidery .	11	1
25	Skins, furs, feathers, and hair .	11	2
26	Leather, including saddlery and harness	15	1
27	Articles of clothing	24	1
28	Paper, stationery, printing, and bookbinding	24	1
29	Educational works and appliances	21	5
30	Furniture and upholstery, including paper-hangings and papier-mâché	19	—
31	Iron and general hardware . .	24	3
32	Steel, cutlery, and edge tools .	13	—
33	Works in precious metals, and their imitations, and jewellery	12	1
34	Glass	13	2
35	Pottery	9	—
36	Dressing cases, despatch boxes, and travelling cases	7	1
Total .		582	68

Included in the above return are 15 Jurors specially appointed for fire engines in Class 8.

AWARDS.

There were no gradations of medals at the International Exhibition of 1862; one medal only being awarded by the juries. Certificates of honourable mention were also awarded. The total number of medals awarded was 8,141, and honourable mentions, 5,282; of these awards, 2,382 medals, and 1,697 certificates of mention, were given to Great Britain and her colonies; and 5,759 medals, and 3,585 certificates, to the foreign countries exhibiting.

No awards were made in the four Fine Arts classes.

The number of awards made by the International Juries in every class, and to each country, is given in the appendix to the Report of the Royal Commissioners, but it would occupy a great deal too much space to produce it here.

The total number of Jury awards was 13,423, or nearly one award for every two exhibitors.

The following return shows the number of awards gained by each country, and the number of exhibitors in the 36 industrial classes.

Country	Medals	Honourable Mentions	Number of Exhibitors
Great Britain and Channel Islands	1,639	1,268	5,415
British Colonies	743	429	3,072
Africa (Western and Central) and Madagascar	5	—	17
Austria	504	377	1,413

Totals	8,141	5,282	26,348

* Borneo, Siam, Hayti, Friendly and Sandwich Islands.

GENERAL INTRODUCTION.

PART I.—UNITED KINGDOM.

THE present Statistical Summary for the United Kingdom has been prepared in accordance with a wish conveyed to Her Majesty's Commissioners, by the Imperial French Commission for the Universal Exhibition of 1867, in a letter dated September 15, 1866, asking for very detailed information under the several heads of Territory, Population, Production, Foreign and Inland Trade, Mercantile Marine, Army, Navy, Finance, &c. &c.

TERRITORY.—Geographical Position—Seas—Mountains—Rivers—Face of Country—Climate.

(a.) *Geographical Position.*—The United Kingdom, which is composed of England and Wales, Scotland, Ireland, the Isle of Man, and the Channel Islands, is situated on the north-west of the European continent, and lies between 50° and $58^{\circ} 41'$ north latitude, and $1^{\circ} 46'$ east, and $10^{\circ} 26'$ west longitude.

(b.) *Seas.*—The kingdom is bounded on the north and west by the Atlantic Ocean, on the south by the English Channel, and on the east by the North Sea. Ireland is separated from Great Britain by the Irish Sea. The sea-coast of the country, in proportion to its size, is therefore very considerable.

(c.) *Mountains.*—Although when compared with those of the continental states of Europe, the mountains in the kingdom are of very inferior elevation, there are several mountain chains in the country. In England the four principal chains are : 1. The Pennine, extending southwards from the Cheviots, on the borders of Scotland, to near Derby, the principal summits of which range are under 3,000 feet. 2. The Cumbrian range, situated for the most part in Cumberland and Westmoreland, containing some of the highest elevations in England, viz., Helvellyn 3,055 feet; Scafell 3,166, and Skiddaw, 3,022 feet. 3. The Cambrian range, occupying nearly the whole of Wales, the highest point of which is Snowdon, viz. 3,571 feet; and 4. The Devonian range, extending through the counties of Somerset, Devon, and Cornwall, the highest summits of which do not exceed 1,800 feet.

In Scotland the principal mountain range is that of the Grampians. The highest mountain in Scotland, and also in Great Britain, is Ben

Nevis, which rises 4,406 feet above the sea level. The Cheviot Hills, situated partly in Scotland and partly in England, extend through a large tract of country.

In Ireland the principal mountains are the Mourne, and the Wicklow ranges. The highest point in the country is Carran Tual, in the county of Kerry, which has an elevation of 3,414 feet.

(d.) *Rivers.*—The most important river in England, although not the longest, is the Thames, on which the Metropolis is situated. It takes its rise in the hills of Gloucestershire, and flows under the name of the Isis until it joins the Thame, when it assumes its ordinary name of Thames, and flows generally in an easterly direction and falls into the German Ocean after having pursued a course of nearly 215 miles.

The other important rivers of England are the Severn, 240 miles in length, which falls into the Bristol Channel, the Trent, Tyne, Wear, Tees, Ouse, Humber, Mersey, Dee, Wye, Medway and Avon. Many of the principal ports of the country are situated on the shores of these rivers—as Newcastle and Shields are upon the Tyne; Hartlepool, Stockton, and Middlesborough upon the Tees; Hull upon the Humber; Bristol upon the Avon, and Liverpool upon the Mersey.

The principal Scotch rivers are the Tweed, Forth, Tay, Spey, and Clyde. Leith is situated upon the Forth, Dundee upon the Tay, and Greenock and Port Glasgow upon the Clyde.

The chief rivers of Ireland are the Shannon, 159 miles in length, the Suir, Barrow, Slaney, Boyne, Bandon, Bann, and Liffey.

(e.) *Surface of the Country.*—Few countries present a greater variety of surface than England, and owing to the mildness of the climate and to a sufficient supply of rain, the soil is exceedingly fertile, and admirably adapted for the cultivation of corn and root crops as well as for pasture. Exclusive of moorlands and hill-pastures, two-thirds of the whole area of the country were returned as under cultivation in the year 1866. Wales and Scotland are more mountainous than England, and, excluding hill pastures, only about one-half the total area of Wales and one-fifth of Scotland was returned as under cultivation in the above-mentioned year. Ireland is a comparatively

flat country possessing a great extent of bog-land; and, although not so well suited as the other parts of the kingdom, for the production of corn crops, owing to the moisture of the climate, has very extensive grass lands and hill pasturages. About one-half of the total area of the country was returned as under permanent pasture, including hill-pastures, in the year 1866.

(*f.*) *Climate.*—The climate of England is more equable and milder, although, within certain limits, it is more humid and changeable, than that of any other country placed at the same distance from the equator. Owing to the position of England, its climate is influenced by warm currents of the Atlantic on the south-west and west, by the cold proceeding from the immense fields of ice in the north: by the vapour exhaled from the Atlantic on the one side and

by the comparatively dry air of the continent on the other. These and other causes are sufficient to account for the changes that take place in the temperature.

In Scotland, the temperature is colder than in England; but owing to the numerous bays and friths which penetrate the coast, the extremes are not so great as might be expected from the northerly position of the country.

The climate of Ireland is milder and moister than that of England and Scotland, and more suited for pasture than for grain crops. Plants that require artificial heat in England will thrive in the open air in Ireland.

The following table, compiled from returns furnished by Professor Airy, the Astronomer Royal, shows the *extremes* of temperature and of rainfall in the three divisions of the kingdom, in the past five-and-twenty years.

Range of Annual Temperature and Amount of Rainfall (so far as obtained) during the Twenty-five Years from 1841 to 1865.

Stations	Latitude (North)	Longitude (West).	Height of Station above Sea Level	Mean Annual Temperature		Mean Annual Rainfall

* Height of rain-gauge.

† The range of temperature for 1853–65, and of rainfall for 1853–60, are taken from returns furnished by Capt. Wilkinson, R.E., Dublin.

ADMINISTRATION.—General—Local Government—Religious Establishments—Chief Towns.

(*a.*) *General.*—In England the Government is usually styled a ‘mixed form,’ the legis-

lative power being kept distinct from the executive, the latter being vested in the King or Queen alone, who also represents the community in all international transactions and treaties; while the legislative is vested in

the great national council, termed the Parliament, composed of the three Estates of the Realm, that is, of the Queen, of the Lords spiritual and temporal, and the Commons. The Queen is supreme; by her all new laws purport to be enacted, with the consent of the two Houses, and her office is hereditary. The Lords spiritual and temporal are the Prelates and Peers of the Realm. The Commons consist of representatives chosen by the people, partly for counties and partly for cities and boroughs, who are elected at the commencement of every Parliament, and retain their seats for that Parliament only.

The Lords form one House, and sit by themselves; the Commons form another, in which they also sit by themselves. The Queen sits with the Lords, but she occupies her seat only on formal occasions, as when she opens the session, or gives her assent to bills which have passed the two Houses. According to the present practice of the Constitution she cannot be present at any deliberation; nor is she supposed even to be acquainted with what passes, either there or in the Commons, until officially communicated to her. No law can be made, and no tax imposed, without the assent of Parliament, that is, of the Queen and the two Houses of Lords and Commons; and this assent must be given by each separately. The Queen, however, possesses a negative voice only; and no measure can originate with her, unless it be on the occasion of an act of grace. The two Houses possess the power of originating all measures indiscriminately, with the exception of bills affecting the rights of the peerage or containing any grant of money, which must be always introduced in the House of Lords or Commons respectively; and in neither case can the bill so introduced in one House undergo any alteration in the other. Parliament is called together by the Queen, and is prorogued or dissolved by her whenever she thinks fit. She is bound, however, to call it together 'once at least in every year, and oftener if need be.'

A prorogation is the continuation of the Parliament from one session to another; a dissolution is its civil death, which happens by law at the end of every seven years from its commencement, unless it be previously dissolved by Royal proclamation. The whole of the administrative and executive duties of Government are performed in the Queen's name. Through the medium of machinery adapted to that end, she superintends the administration of justice, and causes the laws to be duly carried into effect. All courts of justice, and their attendant functionaries and officers, as judges, sheriffs, justices of the peace, constables, &c., derive their authority immediately from her. It is the duty and office of the Queen to suppress disturbances, and preserve peace throughout the kingdom; any violation of which is called, therefore, a breach of the Queen's peace. In foreign relations, she makes war and

peace, negotiates treaties, sends ambassadors abroad, and receives them at home. As incidental to the discharge of these onerous duties, the Queen has the entire disposal of the national force, military as well as civil, the officers in each being appointed by her, though their pay is provided for by authority of the whole Parliament. In the exercise of her prerogatives within the limits sanctioned by law, she is responsible to none; and even if any act done by her direction be not within the recognised power of the Crown, she is exempted from *personal* responsibility. Hence it is, that the Queen, in all her acts, employs the agency of officers or persons not protected by any such legal exemption, and uniformly leaves the conduct of state affairs to her ministers, a certain number of whom form what is termed the Cabinet Council. The acts of the executive are also necessarily subject to another very effective check. As the ordinary revenues of the Crown are no longer adequate to the exigencies of the state, a frequent resort to the Commons for pecuniary supplies has become necessary. On such an occasion the measures of the ministers are often the subject of discussion, and the means of carrying them into effect may be either withheld, or granted upon equitable conditions. It is, however, obvious, that the power of absolutely withholding them can be beneficially exercised only where they are not essentially necessary to the common welfare: thus, it would be absurd for the Commons to attempt to restrain the ministers of the Crown, by refusing to pay the public creditor, or to maintain the civil and military establishments of the Empire.

(b.) *Local Government.*—As regards Local Government, the country is divided, for civil purposes, into counties, cities, boroughs, and parishes. The ministerial and judicial business of the county is transacted by the High Sheriff, the Coroner, and the Justices of the Peace. The military government is confided to the Lord Lieutenant, who is assisted by Deputy Lieutenants. The Lord Lieutenant has the command of the Militia, and is frequently the *custos rotulorum* or keeper of the records of the county. The principal objects of local government are the preservation of peace and order; the maintenance of the poor and police; the making and keeping in repair of roads, streets, and bridges, &c. &c. The money required for effecting these objects is obtained from a rate levied on the property (land, houses, &c.) in the county.

The government of Municipal cities and boroughs is performed by the Mayor and Corporation, and that of the parishes by various parochial officers. In many populous towns not incorporated, Commissioners and Boards, such as local Boards of Health, Improvement commissioners, &c. &c. are elected by the ratepayers, under the authority of Parliament, to conduct useful works and manage local business.

(c.) *Religious Establishments.*—The Established Church of England is Protestant Episcopal, but all religions are tolerated. The administration of the State religion is entrusted to the clergy; a class set apart for this purpose, and who constitute what is meant by the Church of England. They are supported by revenues derived from lands, tithes, church-rates, pew-rents, Easter offerings, and fees for baptisms, burials, &c. The ecclesiastical divisions of England and Wales are provinces or archbishoprics, dioceses or bishoprics, arch-deaconries, deaneries, and parishes; each of which has its functionaries, who preside over the functionaries of the inferior divisions; the Queen, as Head of the Church presiding over all. There are two archbishops, viz. of Canterbury and of York, and twenty-five bishops under them. For the management of ecclesiastical affairs, the provinces have each a council or Convocation, as it is termed, consisting of the bishops, archdeacons, and deans in person, and of a certain number of proctors, as the representatives of the inferior clergy. These councils are summoned by the respective archbishops, in pursuance of the Queen's mandate. The management of the affairs of the Dissenting bodies, rests in their own hands. The Church of Scotland is governed by a General Assembly, which meets annually. A representative of the Sovereign, styled the Lord High Commissioner, attends the meeting. The Church of Ireland, like that of England, is Protestant Episcopal, and is governed in a similar manner. The bulk of the population (about four-fifths) of Ireland, however, profess the Roman Catholic faith.

(d.) *Chief Towns.*—The most important cities and towns in England are London, Liverpool, Manchester and Salford, Birmingham, Leeds, Sheffield, Bristol, Wolverhampton, Newcastle-upon-Tyne, Stoke-upon-Trent, and Hull. The population of each of the above mentioned places exceeds 100,000 souls. Seventy-two other towns in England and Wales had a population exceeding 20,000 persons at the taking of the census in the year 1861. The chief towns in Scotland are Edinburgh, Glasgow, Dundee, Aberdeen, Paisley, Greenock, Leith, and Perth; and in Ireland, Dublin, Belfast, Cork, Limerick, Waterford, and Londonderry. The population of the three Capitals in the year 1861 was: in London, 2,803,989 persons, in Edinburgh, 170,444, and in Dublin, 314,409.

AREA.—Total—Coast Line—Harbours.

(a.) *Total.*—The total area of the United Kingdom is 121,115 square miles, or 77,513,000 statute acres, which is distributed as shown in the following table. It must, however, be borne in mind, as regards the area under cultivation, that the returns for Ireland are inclusive of hill-pastures, which makes the cultivated area in that division appear relatively greater than in the other divisions in which hill-pastures are not included.

Divisions, &c.	Area		Extent returned in 1866 as under Crops, Bare, Fallow, and Grass
	In Square Miles	In Statute Acres	
England . . .	50,923	32,590,000	22,262,000
Wales . . .	7,398	4,735,000	2,284,000
England and Wales }	58,321	37,325,000	24,546,000
Scotland . . .	30,685	19,639,000	4,158,000
Ireland . . .	31,755	20,322,000	15,550,000
Islands in the British seas }	354	227,000	115,000
Total, United Kingdom }	121,115	77,513,000	44,369,000

(b.) *Coast Line.*—The extent of the coast line of England and Wales is estimated at about 2,000 miles, and that of Scotland at 2,500 miles. Ireland has a circuit of about 750 miles of coast, great part of which, and particularly on the west and south-west, is deeply indented by arms of the ocean.

(c.) *Harbours.*—The best harbours, both in Great Britain and in Ireland, are situated on the south and south-west coasts, those on the east affording but inferior accommodation to shipping.

The largest harbours in the United Kingdom are those of Portsmouth, Plymouth, Milford Haven, and Cork, and they are surpassed by very few, if by any, in the world. They possess great depth of water, and are capable of affording an asylum to the largest fleet in existence. Holyhead and Dover harbours, in course of completion, will also afford considerable shelter for shipping. Large sums of money have been spent upon several ports in the kingdom. London stands at the head of river ports in Great Britain. The Mersey is the second commercial river in the country. Newcastle, Hull, Bristol, Greenock, Sunderland, Leith, Dundee, Aberdeen, Port Patrick, Kingstown, and numerous other ports admit shipping of very considerable burden; and many smaller ports in all parts of the kingdom admit coasting vessels, and thus greatly facilitate the internal trade of the kingdom.

MEANS OF COMMUNICATION.—Rivers—Canals—Roads—Lakes—Railways—Electric Telegraphs.

(a.) *Rivers, Canals, Roads, and Lakes.*—Independently of navigable rivers, of which there are about 2,500 miles, there are in England and Wales about 2,800 miles of canals, 24,000 miles of turnpike roads, and 100,000 miles of cross-roads. Almost the whole of the great cities and seaport and manufacturing towns are united by water as well as by land communication. In Scotland, the chief canals are, the great canal uniting the friths of Forth and Clyde, and the Union, Crinan, and Caledonian canals. The latter, by uniting a number of lakes, forms a complete system of water communication through the centre of the country.

The turnpike and other roads are estimated at 3,700 miles in length. The length of navigable rivers in Ireland is about 210 miles, and of canals 300 miles. There is no return of the mileage of roads in Ireland.

England possesses very few lakes, and none of any extent. The English lakes are chiefly situated in Westmoreland and Cumberland: the largest (Windermere) is about twelve miles in length and one in breadth. The chief Scotch lakes are Loch Lomond, situated between Dumbarton and Stirling shires; Loch Ness, in Invernessshire; Loch Awe, in Argyshire; and Lochs Tay, Rannock, and Erich, in Perthshire. The largest lake in Ireland is Lough Neagh, in Ulster, which has an area of about 98,000 acres of water. Loughs Erne, Corrib, Mask, Conn, and Killarney are also deserving of notice.

(b.) *Railways*.—The development of the railway system in the United Kingdom during the past fifteen years has been very rapid; and in addition to the extensive means of commu-

nication by rivers, canals, and ordinary roads, there are now 13,289 miles of railway, which may be said to form a connecting link between every town and district in the country.

The mileage of railways open for traffic in each division of the kingdom on December 31, 1865, was:—

	Double Lines	Single Lines	Total
	Miles	Miles	Miles
In England and Wales	6,081	3,170	9,251
Scotland	946	1,254	2,200
Ireland	476	1,362	1,838
United Kingdom	7,503	5,786	13,289

The total amount of capital paid up on shares, loans, &c., for railways in the United Kingdom to December 31, 1865, was 455,478,000*l*.

The amount of passenger traffic during the years 1864 and 1865, in each division of the kingdom, was as follows:—

	Years	In England and Wales	In Scotland	In Ireland	In United Kingdom
		No.	No.	No.	No.
Passengers conveyed:					
1st class	{ 1864	23,467,020	2,691,301	1,543,094	27,701,415

* Including parliamentary passengers.

(c.) *Electric Telegraphs*.—The statistics of the Electric Telegraphs for the use of the public, so far as returned to the Board of

Trade by the respective Telegraph Companies in the year 1865, are given below:—

Name of Company	Length of Telegraph Lines	Length of Wires used	Number of Stations open to the Public	Number of Instruments	Number of Public Messages
	Miles	Miles			
Electric and International	9,306	45,044	1,022	5,778	not ascertained 1,251,265 88,711 66,523 316,272 743,870
British and Irish Magnetic *.	4,401	18,668	491	no return	
South Eastern Railway†	323½	3,064½	104	159	
London, Brighton and South Coast Railway	240¾	688	57	92	
London District‡	123	470	83	195	
The United Kingdom	1,672	9,506	125	358	
Total	16,066½	77,440½	1,882	—	—
Submarine §	887 (in 1863)	—	—	—	—

* The number of messages to and from the Continent transmitted jointly by this company and the Submarine Telegraph Company, and the number of messages for railway companies, newspapers, and news-rooms, are not included with the messages for the public, but are estimated at about 250,000 messages per annum.

† The South-Eastern Railway Company has no working arrangements with any of the Electric Telegraph Companies.

‡ Exclusive of private telegraphs, provided by this company for firms and persons having two places of business, and of the London Fire Brigade system of telegraphs.

§ Telegraph to Calais, 24 miles; to Boulogne, 25 miles; to Dieppe, 78 miles; to Jersey, 80 miles; to Ostend, 70 miles; to Hanover, 280 miles; and to Denmark, 380 miles.

In addition to the above, there are the two cables of the Atlantic Telegraph Company between Ireland and Newfoundland. The length of cable shipped for the 1865 line was 2,300 nautical miles, and in 1866 for laying a new cable and repairing that damaged in the previous year no less than 2,730 nautical miles of cable were employed.

POPULATION.—Total—Nationalities—Religious Denominations—Occupations—Of

Chief Towns—Increase since 1855—Emigration—Blind—Deaf—Dumb—Births—Deaths—Marriages—Paupers—Criminal Offenders.

(a.) *Population*.—The total population of the United Kingdom at the last census, in 1861, was, in round numbers, 29,070,000 persons, and the population of each division of the kingdom:—

Divisions	Population (exclusive of Army and Navy abroad)			Army, Navy, and Merchant Seamen abroad
	Males	Females	Total	
In England	9,224,000	9,730,000	18,954,000	162,273
Wales	552,000	560,000	1,112,000	
Scotland	1,450,000	1,612,000	3,062,000	
Ireland	2,837,000	2,962,000	5,799,000	
Islands in the British Seas	66,000	77,000	143,000	
United Kingdom	14,129,000	14,941,000	29,070,000	250,356

The per centage proportion of the population in the four divisions of the kingdom was, therefore:—In England and Wales 69·1, in Scotland 10·5, in Ireland 19·9, and in the Islands ·5; or out of *ten* parts of the population of the country, about *seven* belonged to England and Wales, *two* to Ireland, *one* to Scotland, and $\frac{1}{20}$ to Islands in the British Seas.

Including males abroad, in the army, navy, &c., there were 14,379,000 males against 14,941,000 females belonging to the kingdom in the year 1861. The estimated population of the United Kingdom (including the army and navy abroad) at the middle of the year 1866 was 30,329,207.

The density of the population per square mile, in 1861, was:—

In England	372·2
„ Wales	150·3
„ Scotland	99·7
„ Ireland	182·6
„ Islands	403·9
United Kingdom	240·0

(b.) *Nationalities*.—The nationality of the population in the several divisions of the kingdom at the same date was:—

Nationalities	In England and Wales	In Scotland	In Ireland	In Islands in the British Seas
English	17,985,617	54,920	50,936	{ 19,525 290
Welsh	1,134,435	1,112		
Scotch	169,202	2,785,804	16,925	1,235
Irish	601,634	204,083	5,720,686	5,534
Born in Islands in the British Seas	18,423	628	10,420	{ 111,354 1,262 4,184+ 63
„ „ the Colonies and the East Indies	51,572	7,559		
„ „ Foreign States	101,832*	8,188†		
„ „ at Sea	3,509			
Total	20,066,224	3,062,294	5,798,967	143,447

* Including 84,090
† " 3,969 } persons who were the subjects of Foreign States.
‡ " 3,923 }

(c.) *Religious Denominations.*—There are no returns of the number of persons of each religious denomination in Great Britain. The number of the various sects in Ireland in 1861 was returned as:—

	Persons
Belonging to the Established Church	693,357
Presbyterians	523,291
Methodists	45,399
Independents	4,532
Baptists	4,237
Quakers	3,395
All other persuasions	14,695
Total Protestants	1,289,206
Roman Catholics	4,505,265
Jews	393
Unspecified	4,103
Total	5,798,967

(d.) *Occupations.*—On comparing the occupations of the people in Great Britain in 1851, the first date at which any reliable returns of occupations were obtained, with similar returns in 1861, the following changes in the three great divisions of employment are noticeable:—

1. The percentage proportion of the population engaged in agriculture had decreased from 12 to 10.

2. The percentage engaged in commerce had increased from 21 to 27.

3. The percentage of all other occupations had decreased from 67 to 63.

These facts will, perhaps, be more readily perceived from the following statement:—

	Engaged in Agriculture	Engaged in Commerce	All other Occupations
In 1851	12	21	67
In 1861	10	27	63

Great difficulty is experienced in procuring correct returns of the occupations of the people; and although many of the difficulties were partially overcome in taking the census in 1861, the information obtained was considered to be still imperfect in many respects. For general purposes, however, the six grand divisions of occupations into which the census returns were arranged afford a tolerably fair approximation of the truth. In England and Wales, out of a

population of 20,066,224, returns of occupations were collected for 19,915,334. In Scotland the returns were complete, and in Ireland 5,416,806 returns of occupations were made out of a total of 5,798,967.

The following were the percentage proportions of the population in the six classes of occupations, in each division of the kingdom, in 1861:—

Classes of Occupations	Percentage Proportions		
	In England and Wales	In Scotland	In Ireland
(1) Professional	2·4	1·7	1·8
(2) Domestic	57·4	57·0	56·8
(3) Commercial	3·1	2·8	2·2
(4) Agricultural	10·1	12·5	18·3
(5) Industrial	24·3	22·8	12·3
(6) Indefinite and non-productive }	2·7	3·2	8·6
	100·0	100·0	100·0

- (1) Including persons engaged in the government or defence of the country, and in the learned professions, arts, sciences, &c.
- (2) Including persons engaged in the domestic offices of wives, mothers, and widows, children and relatives, not otherwise described; scholars, persons engaged in boarding and lodging, and domestic servants, &c.
- (3) Including persons engaged in mercantile pursuits, and other general dealers, carriers on railroads, roads, canals, rivers, and seas, persons engaged in storage, and messengers and porters.
- (4) Including persons engaged in agriculture, arboriculture, horticulture, and about animals.
- (5) Including persons engaged in manufactures of all kinds, not otherwise enumerated.
- (6) Including persons engaged as general labourers, persons of rank and property not returned under any office or occupation. Persons of no specified occupation supported by the community, as pensioners, alms-persons, paupers, lunatics, prisoners, vagrants, &c., and all others of no stated occupation.

The following table shows the total number of persons of each sex engaged as domestic servants, and in agricultural and industrial occupations in each division of the kingdom in the year 1861. The numbers for agricultural and industrial occupations include *all* persons connected with agriculture or with each branch of trade, as farmers, manufacturers, merchants, labourers, operatives, &c. &c.

Number of Persons of each Sex engaged in Domestic Service and in Agricultural and principal Industrial Occupations in each Division of the United Kingdom, according to the Census of 1861.

Branches of Trade, Manufacture, &c., in which employed	In England and Wales			In Scotland			In Ireland		
	Males	Females	Total	Males	Females	Total	Males	Females	Total

Dundee	80,027	91,664	—
Aberdeen	71,973	73,900	—
Paisley	48,071	47,427	—
Greenock	37,436	43,894	—
Leith	32,219	36,029	—
Perth	24,670	26,094	—
In Ireland :			
Dublin (city) . . .	258,369	314,409	318,437
Belfast	100,301	123,479	—
Cork	85,732	93,389	—
Limerick	53,448	50,068	—
Waterford	25,297	30,570	—
Londonderry . . .	20,187	20,366	—

Note.—In the year 1861 there were seventy-two towns in England and Wales which had each a population of more than 20,000 inhabitants.

The increase in some of the chief cities and towns in England between the years 1855 and 1865 is shown in the next table:—

	Total Estimated Population	
	In 1855	In 1865
London (metropolis)	2,548,382	2,993,513
Liverpool	403,547	476,368
Manchester	317,966	354,930
Salford	92,106	110,833
Birmingham	257,941	327,842
Leeds	186,356	224,025
Sheffield	154,662	211,529
Bristol	144,236	161,809
Newcastle-upon-Tyne	96,307	119,651

(f.) *Increase of Total Population since 1855.*

—The increase of the total population in Great Britain between the years 1855 and 1866 (exclusive of army, navy, &c. abroad) may be taken at about 12 per cent.; the estimated population having increased from 21,807,000 in 1855 to 24,363,000 in 1866. In Ireland, in the same period, the population diminished by about 7 per cent., owing chiefly to emigration.

(g.) *Emigration.*—During the ten years ending in 1865, 1,607,745 persons emigrated from the United Kingdom. Of this number

139,802 went to the North American colonies, 1,005,844 to the United States, 397,302 to the Australian colonies, and 64,797 to other parts. There are no records of the number of immigrants arriving from foreign countries into the United Kingdom.

(h.) *Blind Population.*—The total number of blind persons enumerated at the taking of the last census in the United Kingdom (1861) was 29,248, of which number there were—

In England and Wales.	19,352 or 1 in 1,037	} of the population
Scotland	2,820 „ 1 „ 1,086	
Ireland	6,879 „ 1 „ 843	
Islands in British seas	197 „ 1 „ 728	
United Kingdom	29,248 or 1 in 994	

There are several institutions for the care of the blind in London and in many other towns throughout the country.

(i.) *Deaf and Dumb.*—The total number of deaf and dumb at the same date was 20,311, distributed as follows:—

In England and Wales.	12,236 or 1 in 1,640	} of the population
Scotland	2,335 „ 1 „ 1,311	
Ireland	5,653 „ 1 „ 1,026	
United Kingdom (including islands).	20,311 or 1 in 1,432	

The northern counties of Scotland contain a larger proportion of deaf and dumb than any other part of Great Britain.

(j.) *Births, Deaths, Marriages.*

Years	Estimated Population	Births	Deaths	Marriages
England and Wales				
1863	20,554,137	727,417	473,837	173,510
1864	20,772,308	740,275	495,531	180,387
1865	20,990,946	747,870	491,360	182,470
Scotland				
1863	3,101,345	109,325	71,421	22,087
1864	3,118,701	112,445	74,303	22,675
1865	3,136,057	113,126	70,821	23,577
Ireland				
1864 } 1865 }	*5,798,967	{ 136,640 145,200	{ 94,000 93,700	{ 27,370 20,680

* Population in 1861.

(k.) *Paupers.*—Total number of paupers in receipt of in and out-door relief in each division of the kingdom, on January 1, 1866:—

In England and Wales	920,344
Scotland	121,394
Ireland	65,057

(l.) *Criminal Offenders in 1865.*

	In England and Wales	In Scotland	In Ireland
Number committed for trial	19,614	2,567	4,657
„ convicted	14,740	2,360	2,663
„ acquitted (exclusive of persons found and detained as insane)	4,842	207	1,966

PRODUCTION.—Agriculture—Crops—Wool—Flax—Live Stock—Size of Farms—Forests—Fisheries—Coal—Metals—Petroleum—Clay—China Stone—Salt—Textile Manufactures—Other Manufactures.

(a.) *Agriculture.*—As regards the productions of the soil, there are unfortunately no official returns of the quantities of corn, meat, wool, or of butter, cheese, or other dairy produce annually produced. In this respect England is

far behind most continental nations, where, for some years past, a complete system of agricultural statistics has been in operation. Until the year 1866 no complete returns for the whole kingdom, of even the acreage under crops, and number of live stock, were obtained

The next table shows the extent of land under cultivation, in each division of the kingdom, as returned in 1866:—

Divisions	Total Area	Total Acreage under all kinds of Crops, Bare Fallow, and Grass	Acreage under Corn Crops	Acreage under Green Crops
	Acres	Acres		
England	32,590,397	22,261,833	7,400,170	2,750,008
Wales	4,734,486	2,284,674	521,074	139,265
Scotland	19,639,377	4,158,360	1,366,540	663,257
Great Britain	56,964,260	28,704,867	9,287,784	3,552,530
Ireland	20,322,641	*15,549,796	2,173,433	1,482,091
Isle of Man	180,000	82,902	27,266	12,208
Channel Islands—Jersey	28,717	20,357	3,142	5,253
Guernsey	17,967	11,999	2,041	2,938
United Kingdom	77,513,585	—	11,493,666	5,055,020

* These figures include hill-pastures, which are excluded in the returns for the other divisions of the kingdom.

(b.) *Crops.*—The total acreage under each of the principal grain crops was as follows:—

	Acres
Under Wheat	3,697,635
Barley	2,398,485
Oats	4,469,297
Rye	67,879
Beans	537,210
Peas	323,160
	11,493,666

Taking the average production of wheat at twenty-seven bushels per acre in Great Britain, and at twenty-five bushels in Ireland, the annual production of wheat in the United Kingdom may be estimated at about 12,364,000 quarters. The home production of wheat is, however, far short of the quantity required for consumption, and very large importations of wheat and of other kinds of grain are made, as will be seen by a reference to the remarks on the general import trade of the country. Mr. Caird, a well-known authority on agricultural matters, estimates the average produce of the other descriptions of corn crops in England as follows: barley, 38 bushels per acre; oats and rye, 44 bushels; and beans and peas, 30 bushels.

Of late years much greater attention has been paid to the rearing of live stock in Great Britain, and consequently a large area of the country has been devoted to the culture of root-crops. The total acreage under green crops in the United Kingdom in 1866 was 5,055,020, of which 1,555,609 acres were under potatoes; 2,468,564 under turnips and swedes; 279,987 under mangold; 22,061 under carrots; 216,610 under cabbage, kohlrabi, and rape, and 512,189 under vetches, lucerne, and other green crops, except clover or grass.

(c.) *Wool and Flax.*—Of the raw materials employed in textile manufactures, only two are produced in the United Kingdom, viz. wool and flax. Mr. Behrens, basing his estimate upon the stock of sheep in the country, takes the annual production of raw wool at 152,000,000 lbs. Flax is grown chiefly in Ireland, although small quantities are raised in England and Scotland. The total acreage of flax in Ireland in 1866 was 263,659 acres, and the estimated produce of flax, 1,054,000 cwts.

(d.) *Live Stock.*—The total number of each description of live stock in the several divisions of the United Kingdom in 1866 was:—

Divisions	Cattle			Sheep	Pigs
	Cows	Other Cattle	Total		
	No.	No.	No.	No.	No.
England	1,290,529	2,016,505	3,307,034	15,124,541	2,066,299
Wales	222,546	318,855	541,401	1,668,663	191,604
Scotland	370,447	566,954	937,401	5,255,077	219,716
Ireland	1,481,446	2,261,486	3,742,932	4,270,027	1,493,000
Isle of Man	7,755	10,932	18,687	55,954	10,956
Channel Islands—Jersey	5,815	6,232	12,037	517	6,332
Guernsey	3,030	3,946	6,976	1,214	5,599
Total, United Kingdom	3,381,568	5,184,900	8,566,468	26,375,993	3,993,506

In consequence of the losses by plague, the above return of cattle is short of the ordinary stock kept in the country. Adding the losses by plague to the number of cattle existing at the taking of the above return, the estimated stock of cattle would be 8,716,279. The number of sheep, so far as relates to the northern counties of England and to Scotland, is probably short of a large number of lambs of the year (1866), in consequence of the date at which the returns were made. Pigs kept by cottagers and in towns are not included in the above returns for the several divisions of Great Britain.

In collecting the above returns for Great Britain, no provision was made for ascertaining the number of horses. The number of horses and mules in Great Britain in 1864, according to the tax return, was 1,071,095. The number returned in Ireland in 1866 was 535,000, which would give a total of about one million and a half for the whole kingdom.

(c.) *Size of Farms.*—1. *Great Britain.*—The last return of the size of farms in Great Britain was taken in the year 1851, at which date the total number of farms in each division of the country was as follows:—

	No. of Farms
In England and Wales	225,318
Scotland	56,650
Islands in the British seas	3,968
Total	285,936

The average size of each farm was 102 acres in Great Britain; 111 acres in England and Wales; 74 acres in Scotland, and less than 100 acres in the islands. The proportions in a thousand farms in Great Britain were:—

Under 100 acres	672 farms
100 and under 200 acres	187 "
200 and under 1,000 acres	137 "
1,000 and upwards	4 "
	1,000

The acreage of land in the hands of 2,038 farmers, holding farms of 700 acres and upwards, in England and Wales, at the same

date, exceeded that held by 97,800 small farmers by 10,060 acres, as shown below:—

	No. of Farms	Acres of Land
Farmers holding farms of 700 acres and upwards	2,038	2,152,050
Small farmers	97,800	2,141,990

2. *Ireland.*—The size of farm holdings in Ireland in the year 1864 was—

Size of Holdings	No. of Farms
Under 5 acres	130,690
5 to 15 "	176,368
15 to 30 "	136,578
30 to 50 "	71,961
50 to 100 "	54,247

Total under 100 acres 569,844

100 to 200 acres	22,065
200 to 500 "	8,303
Above 500 "	1,559

Total 601,771

(f.) *Forests.*—There are no returns of the quantity of timber produced in the United Kingdom, but its annual value is estimated at about two millions sterling.

(g.) *Fisheries.*—The British fisheries are of very considerable importance, and a general account of them will be found in the statistical notes to Class 70.

(h.) *Coal and Metals.*—The mineral resources of the United Kingdom are very extensive, and form one of the largest branches of the national wealth. Since the year 1854, very complete returns of the mineral productions of the country have been obtained under the superintendence of Mr. Robert Hunt, the keeper of Mining Records, attached to the Government Museum of Geology. The total value of coal and metals produced in the United Kingdom in the year 1865 amounted to 41,745,429*l.* sterling. The subjoined table represents the quantities and value of the mineral productions in 1865:—

	Quantities		Estimated Value at place of Production	
	Of Minerals raised	Of Metals produced	Of Minerals raised	Of Metals produced
			£	£
Coal Tons	98,150,587	—	24,537,646	—
Iron "	9,910,045	4,819,254	3,324,804	11,774,220
Lead "	90,451	67,181	1,153,134	1,433,161
Copper "	198,298	11,888	927,938	1,134,664
Tin "	15,686	10,039	867,435	971,273
Zinc "	17,842	4,040	52,478	104,810
Pyrites "	114,195	—	71,174	—
Gold (Quartz) "	4,280	oz. 1,664	—	5,824
Silver Oz.	—	724,856	—	199,335
Earthy Minerals (returned)	—	—	774,496	—
" (estimated)	—	—	650,000	—
Metalliferous Ores and Metals other than above (estimated)	—	—	—	150,000
Total	—	—	32,359,105	15,773,287

The total value of coal and metals was therefore—

Coal	£ 24,537,646
Metals	15,773,287
Earthy Minerals exclusive of clay and building stones	1,434,496
Total	41,745,429

A detailed account of the production of the several minerals and metals will be found in the statistical notes to Class 40.

(i.) *Petroleum*.—No returns of the extent of the production of petroleum have as yet been obtained; but the extraction of this mineral oil from the various bituminous shales in several parts of the country, now forms a trade of some importance.

(j.) *Clays and China Stone*.—The total production of porcelain and fire clays and of China

stone in the year 1865 is returned as 1,125,924 tons, valued at 373,916*l*.

(k.) *Salt*.—Salt is produced in Cheshire, in Worcestershire, and in Ireland. The Cheshire salt-works are capable of producing one million tons of salt per annum; the production of the Worcestershire works is about 200,000 tons per annum. The production of salt in Ireland is on a comparatively small scale.

(l.) *Textile Manufactures*.—The manufacture of textiles is very extensively carried on in the United Kingdom, and some idea of its magnitude may be gathered from the fact that in the year 1865, in addition to those made for home consumption, about *ninety-seven* millions pounds worth of textile manufactures were exported from the kingdom.

The number of factories in the United Kingdom, according to the last return (1861), was as stated below:—

Description of Factories	Number of Factories	Number of Spindles	Number of Power Looms	Number of Operatives		Motive Horse-power	
				Males	Females	Steam	Water
Cotton	2,887	30,387,467	399,992	182,556	269,013	281,663	12,467
Flax	899	1,216,674	14,792	24,616	62,813	31,727	4,354
Silk	771	1,338,544	10,709	15,530	36,899	6,186	864
Woollen	1,679	2,182,609	21,770	49,754	37,229	26,879	9,598
Worsted	532	1,289,172	43,048	31,501	54,562	26,234	1,970
Hemp	5	2,580	1	105	502	127	—
Jute	36	32,982	554	2,049	3,918	2,048	60
Hosiery	69	—	—	2,162	2,325	447	46
Total	5,373	36,450,028	490,866	308,273	467,261	375,311	29,359

An account of the production of the various textile industries of the country will be found in the statistical notes to Classes 27 to 31.

(m.) *Other Manufactures*.—A description of the several trades and manufactures of the kingdom is given in the statistical notes to the respective Classes in which the articles are exhibited.

TRADE.—General—Chambers of Commerce—Foreign Trade—Imports—Import Duties—Exports—Export Duties—Merchandise—Bullion—Transshipments—Articles Imported—Retained for Consumption and Exported—Port Trade.

(a.) *Trade*.—With the exception of the manufacture of a few articles which are subject to a certain supervision on the part of the government, in connection with the levying of duties and allowances of drawbacks, &c., trade, in all its branches, is perfectly unfettered and free; and anyone may carry on whatever business he chooses and in whatever place, provided he do not infringe the common laws of the country. Makers and vendors of some articles require an excise licence to carry on their trade, but no difficulty is experienced in obtaining such licence.

The three great classes connected with trade are the producers and manufacturers, the merchants and agents, and the tradesmen or the wholesale and retail purveyors to the consumers. As a rule, the great bulk of the foreign trade of the country is in the hands of

the merchants, who either sell the manufacturers' goods at their own risk, or else purchase the goods of the manufacturers, and sell on their own account. In the first instance, the merchant is allowed a commission on the sales, and in the second, a considerable discount on the price of the goods.

(b.) *Chambers of Commerce*.—Chambers of Commerce exist in most of the principal towns and manufacturing centres in Great Britain. They are composed of the leading manufacturers and merchants of the locality in which they are established; and, in addition to watching over the interests of the trades and manufactures with which they are more intimately connected, they take a general interest in all matters affecting the trade of the country. An annual meeting of the Associated Chambers of Commerce is held in London in the spring of each year.

(c.) *Foreign Trade*.—The foreign trade of the United Kingdom, which is carried on with all parts of the world, has made great progress during the past ten years, the value of imports having risen from one hundred and seventy-two millions sterling, to two hundred and seventy-one millions; the total exports in the same period having advanced from one hundred and thirty-nine millions to two hundred and eighteen millions. It does not fall within the object of these remarks to point out the various details of each particular trade; but it

may be interesting to allude generally to the amount of the trade carried on between the United Kingdom and the most important states of the world.

(d.) *Imports*.—As regards imports, the following countries furnished the chief supplies in 1861 and 1865:—

Countries	In 1861	In 1865
	£	£
Russia	12,822,000	17,363,000
Prussia	6,440,000	6,126,000
Hanse Towns	6,058,000	8,837,000
Holland	7,692,000	12,413,000
Belgium	3,817,000	7,354,000
France	17,826,000	31,625,000
Spain	4,458,000	4,769,000
Italy	2,478,000	2,486,000
Turkey	3,632,000	5,405,000
Egypt	8,398,000	21,773,000
China	8,608,000	10,499,000
United States	49,389,000	21,624,000
Pern	3,169,000	4,002,000
Chili	2,416,000	3,798,000
Brazil	2,631,000	6,797,000
British Possessions	52,676,000	72,840,000

The decline apparent in the figures for the United States needs no comment. The increase in the imports from Turkey, Egypt, China, Brazil and British Possessions, is due, in great part, to the increased importation of raw cotton from those countries during the absence of the American supply.

The remarkable increase in the imports from France is owing to the increased trade which has sprung up between the two countries since the conclusion of the Commercial Treaty of 1860.

(c.) *Import Duties*.—The subjoined table shows the import duties now levied in the United Kingdom upon foreign produce of all descriptions:—

List of Articles subject to Import Duty in the United Kingdom.

Articles		Rates of Duty
		£ s. d.
Beer and ale, mum and spruce beer	barrel	1 0 0
Cards, playing	doz. pks.	0 3 9

And an additional duty of 3d. per gallon for every degree of strength beyond 41 degrees.	

(f.) *Exports.*—The chief countries to which exports were made in 1861 and 1865 were:—

Countries	In 1861	In 1865
	£	£
Russia	5,765,000	6,180,000
Prussia	4,057,000	4,010,000
Hanse Towns	13,046,000	22,984,000
Holland	10,989,000	14,960,000
Belgium	4,914,000	6,896,000
France	17,427,000	25,355,000
Spain	3,386,000	3,015,000
Turkey	3,104,000	5,847,000
Egypt	2,398,000	6,168,000
China	3,161,000	3,688,000
United States	11,025,000	25,170,000
" " in 1865	22,907,000	
Brazil	4,690,000	5,771,000
British Colonies . . .	45,139,000	51,546,000

(g.) *Export Duties.*—All articles are free from duty upon exportation from the United Kingdom.

(h.) *General Trade.*—The general progress in the trade of the country is exhibited by the following tables:—

1. *Merchandise.*—The total value of imports for consumption, and of domestic produce exported during the past ten years was as shown below:—

Years	Imports			Exports of British and Irish Produce
	Total	Re-exported	Left for Consumption	
	£	£	£	£
1856	172,544,000	23,393,000	149,151,000	115,827,000
1857	187,844,000	24,108,000	163,736,000	122,066,000
1858	164,584,000	23,174,000	141,410,000	116,608,000
1859	179,182,000	25,281,000	153,901,000	130,411,000
1860	210,531,000	28,630,000	181,901,000	135,891,000
1861	217,485,000	34,529,000	182,956,000	125,103,000
1862	225,717,000	42,176,000	183,541,000	123,992,000
1863	248,919,000	50,300,000	198,619,000	146,602,000
1864	274,952,000	52,139,000	222,813,000	160,449,000
1865	271,072,000	52,996,000	218,076,000	165,836,000

The decline in the general trade in 1858 was caused by the commercial panic of 1857, and in the export trade in 1861-2 by the American war and cotton famine.

2. *Bullion.*—The total value of gold and silver bullion imported into and exported from the United Kingdom since 1858 (the first year for which imports were registered) was—

	Imports £	Exports £
1858	29,493,000	19,628,000
1859	37,070,000	35,688,000
1860	22,978,000	25,534,000
1861	18,747,000	20,811,000
1862	31,656,000	29,326,000
1863	30,030,000	26,544,000
1864	27,728,000	23,132,000
1865	21,462,000	15,092,000

3. *Transshipments.*—This branch of trade which is not included in the above returns has made great progress during the past ten years. The total value of foreign merchandise transhipped at ports in the United Kingdom in 1856 was 4,579,000*l.* and in 1865 6,469,000*l.*

The amount of the general and special trade of the country can be readily ascertained from the above tables.

(i.) *Articles Imported.*—The chief imports consist of articles of food, &c. and of raw materials for manufactures. The only manufactured goods that are imported on a large scale are silks and leather and woollen manufactures. There are no returns of the value of the several articles taken for home consumption, but an approximation to their value may be arrived at by deducting the value of the re-exports of foreign goods from the total importations. The following table shows the value of imports, of re-exports, and of the principal articles remaining for home consumption in the year 1865:—

Principal Articles	Total Imports	Re-exported	Left for Consumption
	£	£	£
1. <i>Articles of Food, Drinks, &c.</i>			
Animals, living:			
Oxen, bulls, &c.	4,401,482	70	4,401,412
Sheep and lambs	1,787,866	272	1,787,594
Bacon and hams	2,133,705	12,756	2,120,949
Beef	421,461	16,872	404,589
Butter	5,945,884	75,393	5,870,491
Cheese	2,463,299	30,992	2,432,307
Cocoa	234,655	101,315	133,340
Coffee	4,600,887	3,249,534	1,351,353
Corn and flour	20,724,115	32,576	20,691,539
Eggs	928,247	—	928,247
Fish	514,712	51,703	463,009
Fruit	2,848,830	232,228	2,616,602

Woollen manufactures			

(j.) *Articles Exported.*—The export trade of the kingdom consists of the foreign articles shown in the preceding table, and of articles of domestic produce. The exports of British produce are chiefly manufactured articles, minerals, and metals. The value of textile manufactures alone formed about sixty per cent. of the total exportations in the year 1865. The subjoined table shows the value of the principal kinds of articles exported in that year:—

Principal articles	Value £
Agricultural implements	210,300
Alkali, soda	1,123,946
Apparel and slops	2,639,012
Arms and ammunition	1,134,256
Bacon and hams	118,159
Bags, empty	696,291
Beef and pork	39,774
Beer and ale	2,060,976
Books, printed	511,388
Brass of all sorts	232,309
Butter	333,228
Candles, stearine	110,575
Carriages	352,787
Cement	285,898
Cheese	111,102
Coal, coke and cinders	4,427,177
Copper, unwrought	496,148
„ wrought	2,434,062
Cordage and twine	414,213
Corn and flour	274,636
Cotton yarn	10,342,737
Cotton manufactures:	
Piece goods, white or plain	27,791,035

Principal articles	Value £
Cotton manufactures :	
Piece goods, printed, dyed, or coloured	17,085,328
Lace and net	465,611
Stockings	240,534
Thread for sewing	753,326
Hosiery and small wares	587,550
Drugs and chemical products, un- enumerated	919,256
Earthenware and porcelain	1,442,197
Fish, herrings	500,233
" other sorts	189,005
Furniture, cabinet and upholstery wares	289,887
Glass, plate	71,387
" flint	302,105
" window	60,857
" common bottles	310,245
Haberdashery and millinery	5,030,740
Hardwares and cutlery of all sorts	4,326,741
Hats of all sorts	483,594
Horses	185,367
Iron, old	12,587
" pig and puddled	1,599,491
" bar (except railroad), angle, bolt and rod	2,199,837
" railroad of all sorts	3,550,563
" castings and articles of cast iron	792,581
" wire and manufactures of wire	474,005
" hoops, sheets, and boiler plates	1,603,964
" wrought of other kinds	2,456,202
" steel, ingots, bars, and sheets	782,129
Jewellery	164,231
Jute yarn	82,141
" manufactures	311,540
Lead, pig, pipe, sheet and shot	581,634
" ore, red and white lead and litharge	186,123
Leather, tanned unwrought	409,249
" wrought, boots and shoes	1,462,105
" " of other sorts	240,299
" saddlery and harness	350,531
Linen yarn	2,535,321
Linen manufactures :	
White or plain	7,126,330
Printed, checked or dyed	606,040
Cambrics or lawns	300,201
Damask and diapers	111,040
Sailcloth	382,713
Thread for sewing	558,444
Of other sorts	72,222
Machinery, steam engines	1,958,533
" of other sorts	3,264,100
Oil, seed	1,547,683
Painters' colours	473,051
Paper hangings	109,320
" other sorts	447,741
Pickles and sauces	328,381
Plate, gold and silver	62,532
Plated wares	112,452

Woollen and worsted yarn	5,429,504
Woollen manufactures :	
Cloths, coatings, &c.	4,023,954
Flannels, blankets, blanketing and baizes	1,203,127
Worsted stuffs	13,360,527
Carpets and druggets	861,453
Of other sorts	655,669
Zinc, wrought and unwrought	94,659
All other articles	6,700,238
Total	165,835,725

(*k.*) *Port Trade.*—There are no returns of the value of Imports at the principal ports in the kingdom. The chief ports at which British goods are shipped for exportation are Liverpool, London, Hull, Grimsby, Southampton, Newcastle, Hartlepool, Folkestone and Cardiff in England in Wales; and Glasgow and Leith in Scotland. Irish manufactures are mostly exported from Liverpool, &c. Of the total exports of the kingdom in 1865, 66 per cent. went from the ports of Liverpool and London.

INLAND TRADE.—The only returns that exist which show the amount of inland trade are those relating to the coasting trade and to railway traffic.

The total tonnage employed in the United Kingdom in conveying merchandise, &c. *coast-wise* during the five years from 1861 to 1865 was:—

	British Vessels	Foreign Vessels	Total
	Tons	Tons	Tons
1861	17,261,779	93,456	17,355,235
1862	17,397,687	72,673	17,470,360
1863	17,465,635	81,897	17,547,532
1864	17,350,579	66,107	17,416,686
1865	18,150,649	77,705	18,228,354

The following table shows the amount of goods' traffic on railways in the three divisions of the kingdom during the years 1864 and 1865:—

Goods Traffic on Railways.		In England and Wales	In Scotland	In Ireland	United Kingdom
		Tons	Tons	Tons	Tons
General merchandise	{ 1864 28,802,262	4,577,483	1,535,168	34,914,913	
	{ 1865 30,640,967	4,487,135	1,659,536	36,787,638	
Coals, coke, and other minerals	{ 1864 61,890,054	13,245,363	310,364	75,445,781	
	{ 1865 63,892,007	13,556,710	357,069	77,805,786	
Live stock :	No.	No.	No.	No.	
Cattle	{ 1864 2,083,254	482,656	427,447	2,993,357	
	{ 1865 1,874,020	488,762	407,048	2,769,830	
Sheep	{ 1864 6,786,127	1,241,279	428,275	8,455,681	
	{ 1865 7,001,654	1,819,125	515,632	9,336,411	
Pigs	{ 1864 1,426,264	65,329	733,155	2,224,748	
	{ 1865 1,448,731	88,388	887,577	2,424,696	

SHIPPING.—(a.) *Foreign Trade*.—The total tonnage entered and cleared (with cargoes and in ballast) in the foreign trade of the United

Kingdom in each of the years 1856, 1860 and 1865 amounted to—

Years	Entered			Cleared			Total		
	British	Foreign	Total	British	Foreign	Total	British	Foreign	Total
	Tons	Tons	Tons	Tons	Tons	Tons	Tons	Tons	Tons
1856	6,390,715	4,162,419	10,553,134	6,555,056	4,480,859	11,035,915	12,945,771	8,643,278	21,589,049
1860	6,889,009	5,283,776	12,172,785	7,025,914	5,490,593	12,516,507	13,914,923	10,774,369	24,689,292
1865	9,623,432	4,694,454	14,317,886	9,735,523	4,843,683	14,579,206	19,358,955	9,538,137	28,897,092

(b.) *Coasting Trade*.—A very large amount of shipping is engaged in the coasting trade of the country. Foreign vessels have been admitted to the coasting trade since the year 1854, the annexed table shows the progress of the trade since 1856.

Tonnage employed (with Cargoes) in the Coasting Trade.

	British	Foreign	Total
In 1856	15,164,000	53,000	15,217,009
1865	18,150,000	78,000	18,228,000

(c.) *Tonnage belonging to the United Kingdom*.—The total registered tonnage belonging to the kingdom on Dec. 31, 1865, was 4,936,776 tons of sailing vessels, and 823,533 tons of steam vessels. The total number of the crews was 255,654.

POST OFFICE.—In the last Report of the Postmaster-General it is stated that 'the steady growth of the Post Office business during a long series of years gives us every reason to expect that, if the prosperity of the country be not diminished, the Post Office may, without sparing any effort to satisfy the just wants of the public, or to keep pace with the growing desire for improvement, produce in a few years a net revenue nearly equal in amount to the present produce of the income tax.'

The increase in the revenue in the ten years from 1856 to 1865 was—

	Total Postal Revenue	Total Post Office Expenses	Net Revenue
1856	£ 3,035,954	£ 2,438,732	£ 597,222
1865	4,423,608	2,941,086	1,482,522
Increase in 1865 over 1856	1,387,654	502,354	885,300

This increase was owing to the greater facilities afforded to the public for employing the post, by lowering the rates of postage, by extending the number of post offices and boxes for the reception of letters, and by the more rapid delivery of letters, &c.

The present rates of inland postage are as follows:—

On letters weighing less than	
$\frac{1}{2}$ an oz.	1d.
Above $\frac{1}{2}$ oz. to 1 oz.	2d.
„ 1 oz. to $1\frac{1}{2}$ oz.	3d.
„ $1\frac{1}{2}$ oz. to 2 oz.	4d.

And so on, an additional penny for every additional $\frac{1}{2}$ oz., or fraction of the same.

Great facilities are also afforded for transmitting books, printed papers, and MSS. through the post, at the following rates:—

Under 4 oz.	1d.
„ 8 oz.	2d.

And 2d. for every additional 8 oz. No parcel to exceed 24 inches in length.

Patterns or samples under 24 oz. may also be

sent by post, prepaid:—Under 4 oz., 2d.; under 8 oz., 4d.; under 1 lb., 8d.; and under 24 oz., 1s.

The following table shows the number of letters, newspapers, book packets, and patterns sent by the post, in each division of the kingdom, in the year 1865:—

Divisions	Letters	Newspapers, Books, &c.	Patterns
	No.	No.	No.
England and Wales . . .	597,277,616	73,192,132	940,771
Scotland . .	67,048,891	11,324,040	175,474
Ireland . . .	56,140,500	12,736,594	169,871
United King- dom . . .	720,467,007	97,252,766	1,286,116

An important branch of the Post Office is that of the Money Order Department. By payment of a small commission money can be sent from one post office to another in all parts of the kingdom without risk to the sender. The Money Order system is also in operation between the United Kingdom and several of the Colonies, and negotiations are being made to extend it to various foreign countries. The total amount of Money Orders issued in the

United Kingdom in 1865 was 17,829,290/, and of money orders paid 18,144,550/.

TELEGRAPHIC MESSAGES.—There are no complete returns of the number of telegraphic messages annually sent in various parts of the country. The statistics of electric telegraphs, so far as they can be given, are stated under the head of 'Electric Telegraphs.'

ARMY.—Regular and Auxiliary Forces.

(a.) *Regular Forces.*—The total strength of the British army, according to the Estimates of 1866-7, was 137,195, of all ranks, on the British Establishment, and 65,287, of all ranks, serving in India, and paid by the Indian Government. The cost of maintaining 178 native Indian troops serving in Labuan is also defrayed by the British Government. The subjoined table shows the number of officers, men, and horses belonging to the several branches of the service. It must be borne in mind that these troops are not all located in the United Kingdom; a considerable number are serving in the numerous colonies and dependencies of the state.

<i>British Establishments.</i>				
Officers	Non-com- missioned Officers	Rank and File	Total	Number of Horses
Regiments:—				
Royal Horse Artillery	86	132	1,720	1,356
Riding Establishment	7	13	205	122
Life and Horse Guards	99	192	1,029	825
Cavalry of the Line	578	1,035	8,415	5,889
Royal Artillery	799	1,712	14,250	16,761
Royal Engineers	398	374	3,918	4,690

	6,412	11,961	109,839	128,212
Depôts in the United Kingdom of regiments in India .	437	974	7,572	8,983
Total force on British establishment	6,849	12,935	117,411	137,195
General Staff	93	—	—	93
Establishments (exclusive of certain officers included under regiments): recruiting, instruction in gun- nery, &c.	178	278	92	548
Educational establishments	30	241	10	281
Total Force, the cost of which is defrayed from Army funds	7,150	13,454	117,513	138,117
<i>British Forces in India (Paid out of Indian Revenue).</i>				
Royal Horse Artillery	200	249	2,680	3,129
Cavalry of the Line	352	603	4,466	5,421
Royal Artillery	699	790	8,140	9,629
Royal Engineers	336	—	—	336
Infantry of the Line	2,028	3,664	41,080	46,772
Total	3,615	5,306	56,366	65,287

(b.) *Auxiliary Forces.*—The auxiliary forces belonging to the kingdom are the militia, the yeomanry, the volunteers, and the enrolled pensioners, and army reserve force.

The Militia consists of a permanent staff of 5,070 officers and non-commissioned officers. The force is annually called out for twenty-seven days' training, and the estimated numbers for

MERCANTILE MARINE. (a.) *Seamen*.—The total number of the crews of registered vessels belonging to the British Mercantile Marine on December 31, 1865, was 255,654.

(b.) *Merchant Ships*.—Number and tonnage of registered vessels belonging to the Mercantile Navy of the United Kingdom on December 31, 1865:—

	Number	Tonnage
Sailing vessels	26,069	4,936,776
Steam	2,718	823,533
Total	28,787	5,760,309

FINANCE.—Total Revenue and Expenditure
—Branches of Revenue—Taxes repealed,
&c.—Branches of Expenditure—Budget,
1867—National Debt.

The revenue of the United Kingdom is obtained partly by means of direct, and partly by means of indirect, taxation. The chief branches of the former are the assessed taxes, and the income and property tax; and of the latter, the customs, excise, and stamp duties.

The total gross Revenue and Expenditure during the last three years amounted to:—

Years ended	Revenue	Expenditure
March 31	£	£
1864	70,208,964	67,056,286
1865	70,313,437	66,462,207
1866	67,812,292	65,914,357

Showing a considerable surplus of income in each year. The above return of expenditure is exclusive of that for Fortifications, which amounted to 800,000*l.*, 620,000*l.* and 560,000*l.*, in the respective years, and which was provided for by the creation of terminable annuities.

(a.) *Branches of Revenue*.—It will be sufficient for the purpose of indicating the chief sources of the revenue of the country, to quote the figures for the year ending March 31, 1866, in which period the amounts received were:—

Branches	Gross Revenue, Charges of Collection not deducted
	£
From Customs duties	21,276,000
„ Excise „	19,788,000
„ Stamp „	9,560,000
„ Assessed taxes	3,350,000
„ Income and property tax*	6,390,000
„ Post office	4,250,000
„ Crown lands	320,000
„ Miscellaneous	2,878,292
Total	67,812,292

* The amount raised from income tax was considerably less than the amount collected from the same source for some years previous, in consequence of the tax having been reduced to 4*d.* in the pound.

It may be interesting to show the classes of taxed articles belonging to the Customs and

Excise branches which produced the revenue in the above-named year.

The Customs revenue is almost entirely collected from seven articles, viz.:—

	In 1866
	£
From Sugar and molasses	5,228,460
„ Tea	2,599,817
„ Coffee	371,495
„ Corn and flour	743,145
„ Spirits	3,505,176
„ Wine	1,407,021
„ Tobacco and snuff	6,274,298

The receipts from tea were much below the amounts of previous years, in consequence of the duty having been reduced to 6*d.* per pound.

The chief branches of Excise revenue were, in 1865:—

	£
From Spirits	10,176,731
„ Malt	6,394,553
„ Licenses	2,144,402

Taxes repealed, &c.—The following table shows the amount of taxes repealed or reduced, and imposed during the fifteen years, 1851–1865:—

Branches	Repealed or Reduced	Imposed	Actual Diminution(–) or Addition (+)
	£	£	£
Customs	14,089,384	3,293,396	–10,795,988
Excise	5,161,000	6,380,000	+ 1,219,000
Property and income tax }	18,865,000	14,764,000	– 4,101,000
Other taxes	2,608,000	600,000	– 2,008,000
Stamps (in- cluding suc- cession duty) }	1,428,000	2,411,200	+ 983,200
Total	42,151,384	27,448,596	–14,702,788

(b.) *Branches of Expenditure*.—The chief branches of expenditure for the year ended March 31, 1866, were:—

Interest and management
of the National Debt:—

	£
Funded debt	25,904,488
Unfunded debt	328,800
Total debt	26,233,288
Civil List and civil charges of all kinds	10,250,065
Forces: Army, including Ordnance	14,569,279
Navy	10,259,788
Total Forces	24,829,067
Charges of collection of the revenue	4,601,937
Total gross Expenditure	65,914,357

(c.) *Budget, 1866–1867*.—The estimated revenue for the year ending March 31, 1867, is taken at 67,013,000*l.*, and the expenditure at 66,662,000*l.*

(d.) *National Debt*.—The total amount of the National Debt on March 31, 1866, was:—

Funded Debt:	
Capital of unredeemed funded debt	£ 773,313,229
Estimated capital of terminable annuities	21,342,020
Unfunded debt	8,187,700

LOCAL TAXATION.—The amount of local taxation has only been ascertained for England and Wales since the year 1862, and no such returns exist for the other divisions of the kingdom. The various branches of local taxation in England and Wales in 1864 (exclusive of Burial Boards) were:—

Description of rates, &c.	Amount received £
Church rates	241,960
Sewers rates	44,009
City of London Commission of Sewers	17,242
Drainage and embankment	147,145
Lighting, &c.	42,194
Improvement Commissioners	332,983
Metropolis: Local management	850,504
Main drainage	150,881
Markets and fairs	44,547
Bridges and ferries	108,773
Harbours	1,107,751
Local Boards (including district fund account and private improvement and water supply rate)	352,016
Poor rate (including county and police rate)	9,448,319
Metropolitan Police rate	354,627
City of London (including coal and wine duties, police, ward and sewers rates)	421,625
Borough rates	311,953
Highway rates	1,416,629
Turnpike tolls	1,066,156
Trinity House (pilotage and light dues)	374,115
Total	16,833,429

BANKS.—The total number of separate banking establishments in each division of the United Kingdom in the year 1864, was:—

	In England and Wales	In Scotland	In Ireland	In United Kingdom
Banks of England and Ireland and their branches	12	—	30	42
Private banks and their branches	553	—	4	557
Joint Stock banks and their branches	857	614	181	1,652
Total	1,422	614	215	2,251

The average amount of promissory notes issued by private banks of issue in 1864, was

3,112,725*l.*; and by Joint Stock banks, 33,286,921*l.*

Statement of the average aggregate amount of promissory notes, payable to bearer on demand, in circulation in England and Wales, Scotland and Ireland, in the last month of each of the years 1863, 1864, 1865:—

	1863	1864	1865
In England and Wales:	£	£	£
Bank of England	21,355,000	20,330,000	21,294,000
Private banks	3,220,036	3,058,931	2,977,264
Joint Stock banks	2,899,560	2,754,068	2,789,654
In Scotland:			
Chartered, private, and Joint Stock banks	4,639,664	4,626,796	4,903,980
Ireland:			
Bank of Ireland	2,528,500	2,491,000	2,744,950
Private and Joint Stock banks	3,411,753	3,381,706	3,946,290
Total	38,054,513	36,642,501	38,656,138

LIMITED LIABILITY.—The recent change in the liabilities of partnership in banking, credit, and all large commercial undertakings, may be briefly noticed in this place. A paper on this subject was lately read before the Society of Arts by Mr. W. Hawes, and from which the following extracts are made:—

‘Until within the last few years, but two forms of partnership were in use in this country for commercial purposes. *One*—associations or companies consisting of numerous partners bound together for a common purpose, and trading under the protection of royal charters, or, more recently, under the provisions of special Acts of Parliament, each of which strictly limited the liability of the partners to the amount of their subscriptions; and *the other*—the association of individuals as partners trading in their own or joint names, with rules and regulations arranged among themselves for their guidance, but which did not release them, individually or collectively, from responsibility to the full extent of their fortunes for the debts incurred by partnership.

‘The second class, or the association of two or more individuals for a common purpose, and with *unlimited* liability, has, however, always formed the ordinary type of partnerships under which the great bulk of the business of the country has been conducted.

‘The repeal of the usury laws, the increasing number of charters granted, and of Acts of Parliament passed, in both of which the limitation of liability was the main feature, and the increase of our foreign trade with countries where the principle of limited liability was commonly applied to trading partnerships, all helped to remove a restriction upon the introduction of capital to trade, and an interference with the liberty of individuals to make such

contracts for the conduct of their business as they deemed most advantageous, and led at last to the passing of the Acts of 1856, 1857, and 1862, and then to that of 1865, which, though in a very clumsy manner, have enabled men of business, whether associated in large or small numbers, to borrow capital and to appropriate profits in any manner they may think most conducive to their prosperity.

The introduction of the principle of limited liability has led to the formation of a vast number of new companies; and, during the past two years, many large private manufacturing firms throughout the country have been converted into limited liability companies, with every prospect of obtaining far greater results than could be secured under the older methods of trading.

EDUCATION.—General—Elementary in Great Britain and Ireland—Weekday and Sunday Schools—Science and Art—Middle Class Examinations.

The educational system (if it may be so termed) of the United Kingdom is exceedingly complicated. Education is entirely free, and all persons are at liberty to establish schools, to assemble children together, and to teach them their doctrines. Until the year 1833 the State took no part in the education of the people, but from that date it commenced affording aid, under certain conditions, to elementary schools, which has been continued to the present time. The department of Science and Art (established in the year 1853) is also supported by Government, and grants are made to other institutions for the promotion of scientific objects.

A list of the several classes of schools, colleges, and other institutions, &c., connected with the education of the people, will, perhaps, afford the best means of illustrating the educational machinery of the country:—

1. Public elementary schools, day and Sunday.
2. Public normal schools for training teachers for elementary schools.
3. Private schools.
4. Public grammar and foundation schools.
5. Public schools, such as the military, naval, woods and forests, corporation, workhouse, prisons, &c.; also, Ragged, orphan, blind, deaf and dumb, idiot, factory, colliery and chemical work's schools, &c.
6. Universities and colleges.
7. Home instruction and private classes.
8. Middle class, or local examinations, organised by the College of Preceptors in the year 1854, by the Society of Arts in 1856, and by the Universities of Oxford and Cambridge in 1858.
9. Mechanics' institutes, working men's colleges, and evening classes.

The above may be considered as belonging to ordinary education. The following are some of the more important means for imparting special instruction in Art and Science:—

Department of Science and Art, with branch schools throughout the country.

The Royal School of Naval Architecture and Marine Engineering.

The Royal School of Mines.

Edinburgh Museum of Science and Art.

Museum of Irish Industry.

Royal Dublin Society. And numerous others.

The Royal Academies of Painting and Music may also be specially noticed, as contributing in no small degree to the elevation of the national taste.

Attorneys, Surgeons, and Apothecaries, have to pass prescribed examinations before admission to their professions, and candidates for the Army, Navy, and Civil services have likewise to pass examinations before admission into the respective services.

It is impossible in a few lines to give a description of each of the above classes of schools, &c., &c. The schools, however, may be divided, generally, into two classes. 1. *Private*, and 2. *Public*. The first class of schools is supported entirely by the payments of the scholars, and contains the bulk of the children of the middle and upper classes of society. The second class includes all those schools which obtain a portion of their income from any source besides the scholars. The education of the labouring classes of the population belongs to this class, and it may be interesting to give a few observations on the means employed for their instruction.

Elementary Education.—1. *Great Britain.*—It has already been observed that the State commenced aiding the *Elementary* schools of the Kingdom in the year 1833. Up to that time the popular education of the country was carried on by private liberality, incited mainly by religious zeal, and acting, in the matter of daily education, principally through the medium of the two great societies—the *British* and the *National*.

Between the years 1839 and 1866, 8,724,000*l.* have been expended by Government in the cause of popular education in Great Britain. The sums voted annually by Parliament for the purposes of education are administered by the Education Department. The object of the grants made is to promote the education of children belonging to the classes who support themselves by manual labour. The conditions under which the grants are made are too lengthy to be inserted in this place, but will be found in the Report of the Committee of Council on Education.

According to the last return, for the year 1865, the Education Inspectors visited 12,950 schools or departments of such schools under separate teachers. The number of children present at the inspections, was 1,246,055; of certificated teachers 11,266; of assistant teachers 933; and of apprentices 11,383. Of the total number of schools, 2,282 were for boys only; 1,888 for girls only; in 5,858, boys and

girls were instructed together; 1,707 were confined to infants (children under seven years of age); and 1,215 to night scholars. Of the total number of children present, 698,221 were males, and 547,834 were females.

It must be borne in mind, however, that there are many elementary schools in the country which are not under the supervision of the Education Department.

The following table shows the branches of receipts and expenditure of 7,770 of the schools inspected during the year 1865:—

Branches of Receipt	Amount	Branches of Expenditure	Amount
	£		£
Endowments	56,424	Teachers' salaries	980,056
Voluntary contributions	356,810	Books and apparatus	53,389
School pence	424,547	Miscellaneous	256,956
Government grants	322,846		
Other Receipts	98,299		
Total	1,258,926	Total	1,290,401

The total average income and expenditure per child in attendance was:—

	In England and Wales			In Scotland		
	£	s.	d.	£	s.	d.
Including Government grants:						
Income	1	5	8 $\frac{3}{4}$	—	*	
Expenditure	1	6	5 $\frac{1}{2}$	—		
Not including Government grants:						
Income	0	18	2 $\frac{3}{4}$	0	13	1 $\frac{1}{2}$
Expenditure	0	18	11 $\frac{1}{2}$	0	18	0 $\frac{3}{4}$

* The Government grants are paid direct to the teachers and pupil-teachers of schools in Scotland, and do not form any part of the funds disposable at the discretion of the managers.

Age of Scholars.—In 1865, 71 per cent. of the total number were under 10 years of age; 27 per cent. between the ages of 10 and 14, and 2 per cent. above 14 years of age.

Salaries of Teachers.—The average annual salaries of teachers in schools in receipt of grants from Government in Great Britain in 1865 were:—

	Certificated			Un-certificated		
	£	s.	d.	£	s.	d.
Masters	86	10	9	58	16	4
Mistresses	55	2	1	38	8	5
Infants' mistresses	52	3	3	30	1	1

2. *National Schools, Ireland.*—Elementary education in Ireland is under the management of the Board of National Education. In the Irish schools religious instruction is given apart from the ordinary instruction. The number of National Schools in Ireland at the end of the year 1864 was 6,263, with an average daily attendance of 315,108 children. The total

receipts were 340,758*l.*, of which sum 251,016*l.* was from Government aid. There were also 36 model and 55 ordinary agricultural schools, and 3 school gardens in existence at the same date. The teachers' salaries ranged—for masters, first class, from 38*l.* to 52*l.* per annum; and for mistresses, from 30*l.* to 42*l.*; with various grades of inferior amounts for less qualified teachers.

General Statistics.—The following are the latest statistical returns of the total number of persons receiving instruction in schools of all classes in England and Wales:—

	Schools	Scholars		
		Males	Females	Total
Week Day schools:				
Public	24,563	911,152	764,006	1,675,158
Private	34,412	389,607	470,697	860,304
Total	58,975	1,300,759	1,234,703	2,535,462
Sunday schools	33,872	1,189,725	1,221,829	2,411,554

The above return was made in 1858, and relates to schools of all religious denominations.

According to the census of 1861, the total number of scholars (so described) of each sex, in each division of the kingdom, was:—

Divisions	Scholars		
	Males	Females	Total
England and Wales	1,552,738	1,597,310	3,150,048
Scotland	241,803	225,253	467,056
Ireland	342,997	305,380	648,377
Total United Kingdom	2,137,538	2,127,943	4,265,481

Science and Art Education.—According to the last report of the Department of Science and Art for the year 1865, there were 158 Science Schools and institutions (exclusive of six navigation schools) in which science instruction was given under certificated teachers. Of these 158 schools, 121 were in England, 8 in Scotland, and 29 in Ireland. The number of classes amounted to 484, and the students to 6,835.

The number of Schools of Art at the same date was 92, attended by 16,621 students, and extending their instruction to 89,967 children in elementary schools.

In addition to aiding the industrial classes in obtaining instruction in the branches of science and of art which have a direct bearing on their occupations, the Department of Science and Art is charged with the administration of the South Kensington Museum, the central repository for examples of science and art, which, as far as practicable, are made available throughout the kingdom.

Middle Class Examinations.—A great impetus was given to the promotion of sound education amongst the middle classes in the

year 1854, by the institution of the College of Preceptors' examinations of pupils in schools. In the year 1856 the Society of Arts commenced its plan of examination of persons attending classes at Mechanics' Institutions. The Universities of Oxford and Cambridge, in the year 1858, established what are now known as the 'University Local Examinations.' The number of candidates annually examined by these bodies, in various parts of the country, has risen from 587 in 1854, to 5,438 at the close of the year 1866. The examinations by the University of Cambridge, the College of Preceptors, and the Society of Arts, are open to both sexes; those of the University of Oxford are at present limited to the male sex.

The number of candidates presenting themselves for examination in 1866 was as follows:

At the University of Oxford Examinations	1228
At the University of Cambridge Examinations	1538
At the College of Preceptors Examinations	1575
At the Society of Arts Examinations	1097

It is almost impossible to overrate the importance of this movement, which has already effected a very great improvement in the education of the middle classes, and more especially in private schools.

INSURANCE.—Life—Marine—Fire.

(a.) *Life and Marine.*—There are no returns of the amount of Life and Marine Insurances, the companies not being required to make returns of their business. Life Insurance has, however, very greatly increased during the past fifteen years.

(b.) *Fire.*—As regards the Insurance of Property and Farming Stock, the duty on the policies of which is levied annually, the stamp returns afford the means of furnishing the value insured. In the year 1864, the following amounts were insured in each division of the Kingdom:—

Divisions	Estimated Value of Property Insured	Estimated Value of Farming Stock Insured
England and Wales	£ 1,101,444,000	£ 69,455,000
Scotland	92,234,000	6,564,000
Ireland	58,202,000	1,151,000
Total	1,251,880,000	77,170,000

Farming stock is exempted from stamp duty. The fire insurance duty is 1s. 6d. on every 100*l.* insured.

INSTITUTIONS CONNECTED WITH THE WELFARE OF THE INDUSTRIOUS AND WORKING CLASSES.
—Savings Banks—Post Office Savings Banks—Annuities and Insurances—Friendly, Co-operative, Loan, Building, and Land Societies—Working Men's Clubs.

(a.) *Savings Banks.*—There are two classes of Savings Banks in existence at the present

time. 1. Those which have been in operation since the year 1817; and 2. The Post Office Savings Banks, established in 1861.

An experimental Deposit Bank for seamen has lately been established at Liverpool under the supervision of the Board of Trade. No interest is allowed on deposits, but a seaman can at any time deposit sums of money and withdraw them at a moment's notice. Seamen going on a voyage can have their money transferred to a savings bank, and then interest is allowed at the rate of three per cent. per annum.

The following table shows the number of individual depositors, and of charitable institutions and friendly societies depositing their funds in the old Savings Banks, and of the sums deposited, divided into classes, as rendered by the Banks to the National Debt Commissioners, on the November 20, 1865:—

	Number of Depositors	Amount of Deposits, including Interest	Average Amount of each Account
On November 20, 1865			
		£	£ s. d.
Not exceeding £1	251,820	69,058	0 5 5
" " 5	275,785	702,116	2 10 11
" " 10	177,384	1,250,381	7 0 1
" " 15	125,516	1,510,850	12 0 8
" " 20	79,577	1,369,962	17 4 4
" " 30	134,817	3,247,909	24 1 10
" " 40	103,926	3,491,997	33 12 0
" " 50	56,991	2,529,887	44 7 10
" " 75	94,197	5,732,215	60 17 0
" " 100	46,454	4,022,759	86 12 0
" " 125	32,413	3,589,615	110 14 10
" " 150	18,692	2,545,825	136 4 0
" " 200	30,887	5,298,967	171 10 11
Exceeding 200	2,152	450,302	209 4 3
Individual depositors	1,430,611	35,811,843	25 0 10
Penny-banks	891	65,426	73 7 3
Charitable institutions	14,446	696,768	48 4 0
*Friendly societies	11,619	1,869,970	161 0 0
Total	1,457,567	38,444,007	26 7 8

* The number and amount of deposits of friendly societies above shown, relate only to those societies having funds deposited in Savings Banks, and are exclusive of those societies whose funds are deposited direct with the Commissioners.

The number of friendly societies in direct account with the commissioners on November 20, 1865, was 545; amount deposited, 1,915,703*l.*; average amount of each account, 3,496*l.*

(b.) *Post Office Savings Banks.*—The position of the Post Office Savings Banks on the 31st of December, 1865, was as shown below:—

Number of Post Office Savings Banks	3,321
Number of deposits received since 16th of September, 1861	3,895,135
Total amount of deposits	£ 11,834,979
Average amount of each deposit	3 <i>l.</i> 0 <i>s.</i> 9 <i>d.</i>

Total amount of withdrawals since 16th of September, 1861	£ 5,619,250
Average amount of each withdrawal	5 <i>l.</i> 11 <i>s.</i> 1 <i>d.</i>
Charges of management	141,375
Average cost of each deposit or withdrawal	6 ⁹ / ₁₆ <i>d.</i>
Total amount standing to credit of all open accounts, inclusive of interest, on 31st December, 1865	£ 6,526,400
Average amount standing to credit of each open account on 31st of December, 1865	10 <i>l.</i> 13 <i>s.</i> 4 <i>d.</i>

Post Office Savings Banks are established at all Money Order Offices in the United Kingdom, which are open for the receipt and payment of money daily during the hours appointed for Money Order business.

At these Banks deposits of one shilling, or any number of shillings, will be received; but no one may deposit more than 30*l.* in one year, or more than 150*l.* in the whole, exclusive of interest.

Interest at the rate of 2*l.* 10*s.* per cent. per annum (which is at the rate of sixpence in the pound for each year, or at the rate of one halfpenny on each complete pound for each month, reckoning from the first day of the calendar month next following the day on which a complete pound has been deposited, up to the last day of the calendar month preceding the day on which the money is withdrawn) is allowed until the sum due to a depositor amounts to 200*l.*, when interest ceases to be allowed. The interest due to each depositor is added to the principal due to him on the 31st of December in each year.

(c.) *Annuities and Insurances.*—Another feature connected with the Savings Banks is that of granting annuities. The old Savings Banks grant annuities, not exceeding 30*l.* each, to the industrious classes; but under the more recent arrangement in connection with the Post Office Savings Banks both annuities and insurances may be effected. The following are some of the principal rules of the Government Insurance and Annuity Office:—

The Postmaster-General is empowered, under the Act 27 & 28 Victoria, cap. 43, to insure the lives of persons of either sex, between the ages of 16 and 60, for not less than 20*l.* or more than 100*l.* He is also empowered under the same Act to grant immediate or deferred annuities of not more than 50*l.* on the lives of persons of either sex, and of the age of 10 years and upwards. The persons whose lives are insured, or to whom annuities are granted, by the Postmaster-General, have direct Government security for the payment of the money at the proper time.

Certain Post Offices (the names of which

may be obtained at any Post Office) have been opened for the receipt of proposals for the insurance of lives and the purchase of annuities, and forms of proposal, with full instructions for filling up and delivering these forms, may be obtained at these Post Offices.

Tables of the premiums to be charged for the insurance of lives; for the grant of immediate annuities; for the grant of deferred annuities or deferred monthly allowances, without return of purchase-money, and for the grant of deferred annuities or deferred monthly allowances, with return of purchase-money, have been printed and may be seen at the Post offices which have been opened for the receipt of proposals. The price of the tables for the insurance of lives and the grant of annuities without return of purchase-money is 3½*d.* The price of the tables for the grant of annuities with return of purchase-money is 2*d.* If sent by post, 5*d.* is charged in the one case, and 3*d.* in the other.

The premiums to be charged for the Insurance of lives vary with the ages of the persons whose lives are to be insured, and with the mode in which they are to be paid.

The annuity or monthly allowance granted on any one life must not exceed 50*l.* per annum, or 4*l.* 3*s.* 4*d.* per month; but purchasers need not purchase the whole amount of such annuity or allowance at one time. They may begin by purchasing such part as they can afford to purchase, and go on increasing their purchases from time to time as their circumstances will permit.

Husband and wife may each be insured to the full amount of 100*l.*, and may each purchase an annuity of 50*l.*, or a monthly allowance of 4*l.* 3*s.* 4*d.* Any two persons may purchase an annuity on their joint lives, with or without continuance of the annuity to the survivor.

Persons contracting for the insurance of their lives, or for the purchase of annuities or monthly allowances, will be allowed to pay their periodical premiums or instalments of purchase-money at such of the Post Offices which have been or may hereafter be opened for the purpose, as will suit them best.

Persons proposing to effect insurances on their lives, or to purchase deferred monthly allowances, must provide at their own cost such certificates of birth or baptism, or other evidence of age, as shall be required from them, but will not be required to pay any fee for medical examination, or to pay the cost of any inquiry which the Postmaster-General may think fit to make with regard to their health, habits, age, and occupation, or to pay any fee for the issue of any contracts which may be made in accordance with their proposals, or to pay any postage for the transmission of their proposals, or for the transmission of any correspondence arising out of such proposals between them and the Postmaster-General,

inasmuch as a provision for all such costs and charges is included in the premiums which they will be required to pay, in accordance with the tables framed for the purpose, for the insurance of their lives or the purchase of deferred monthly allowances.

Persons proposing to purchase immediate or deferred annuities, payable half-yearly, must provide at their own cost such certificates of birth or baptism, or other evidence of age as shall be required of them; and, inasmuch as the premiums fixed by the tables framed for the grant of such annuities do not include any provision for costs and charges, must pay, at the time of purchase, a fee of 1s. for every 1l. of annuity purchased.

The number of insurances in force at the end of 1865 was 560, and the total amount insured 41,734l.; 94 immediate and 54 deferred annuities were purchased, or in course of purchase, at the same date. The existence of the Post Office Annuity and Insurance offices is not yet generally known by the working classes of the country; but there is little doubt that in the course of a few years the industrious classes will largely avail themselves of the advantages offered in the two branches of insurance and annuities.

(d.) *Friendly Societies.*—In his last report, the Registrar of Friendly Societies states that, 'the objects for which Friendly Societies might have been established under the statutes applicable to such societies were limited, in the first instance, to the insuring a sum of money to be paid on the birth of a member's child, or on the death of a member, or for the funeral expenses of the wife or child of a member; for the relief or maintenance of the members, their husbands, wives, children, brothers or sisters, nephews or nieces, in old age, sickness, or widowhood, or the endowment of members or nominees of members at any age; and for any purpose which should be authorised by one of Her Majesty's principal Secretaries of State, as a purpose to which the powers and facilities of the Act ought to be extended. Under this provision, the purposes to which the statutes were originally applicable have been very considerably enlarged; the Secretary of State has authorised their extension to assisting members when they are compelled to travel in search of employment; to granting temporary relief to members in distressed circumstances; to granting relief and maintenance to members in case of lameness, blindness, or bodily hurt through accident; to the purchase of coals and other necessities to be supplied to members; to accumulating at interest for the use of any member the surplus fund remaining after providing for his assurance; to provide relief in case of shipwreck, or loss or damage to boats or nets, and to assuring the members against loss by disease or death of cattle employed in trade or agriculture, and for the establishment of working men's clubs.' All these purposes have been adopted, and societies for carrying

out one or more of them are in existence in different parts of the country. In December 1865, the Registrar of these societies sent out 22,834 forms of Annual Returns of the general statement of the funds and effects of friendly societies, and the same number of forms of return of sickness and mortality required from friendly societies pursuant to 18 and 19 Vict. c. 63 s. 45. Of the Annual Returns, only 10,345, and of the Quinquennial Returns, only 7,706, were returned to him previous to July 1, 1866; 170 of which omitted to give the name of the society and place where held. In the case of the non-return of the general statements, the officers are liable to a fine not exceeding 20s.; but there is no fine or penalty for the omission to send the Quinquennial Return of sickness and mortality. The 10,345 returns show the number of members to be 1,374,425, and the amount of funds 5,362,028l.

(e.) *Co-operative Societies.*—From the returns made by 417 of these societies to the Registrar, under 25 & 26 Vict. c. 87, for the year ending December 31, 1865, it appears that the—

Number of members was	148,586
Number of members admitted during the year	29,182
Number of members withdrawn during the year	11,815
Total amount received for or credited to shares, from commencement of society	£ 1,017,106
Amount received on shares during the year	307,356
Amount withdrawn by members during the year	180,812
Amount of share capital on December 31, 1865	761,313
Amount of loan capital on December 31, 1865	112,733
Amount received on loans during the year	34,631
Loans repaid during the year	19,101
Amount paid for interest during the year	33,686
Cash paid for goods bought in the year	3,063,088
Cash received for goods sold in the year	3,337,837
Profit realised in the year	279,226
Total amount of expenses during the year including wages, rents, rates, taxes, and all incidentals of work and repairs, &c.	190,538
Amount of cash in hands of bankers, treasurers, and officers on December 31, 1865	136,923
Total amount or value of assets and property of societies on December 31, 1865	1,105,685
Total amount of liabilities of societies on December 31, 1865	273,480

A very small number, however, of the above societies come within the meaning of the word

'co-operative,' as applied to handicrafts—the majority of them being co-operative stores for supplying groceries, &c. &c. at wholesale prices. They nevertheless offer very considerable advantages to the working-classes, by enabling them to supply their wants at the stores at a much cheaper rate than they could do at the shops of retail tradesmen; whilst the payment of ready-money (generally required at the stores) conduces to habits of frugality on the part of the purchasers.

(f.) *Loan Societies*.—From the returns made by 856 of these societies to the Registrar, under 3 & 4 Vict. c. 110, for the year ending December 31, 1865, it appears that the—

	£
Amount actually advanced and paid by depositors or shareholders was	253,523
Sums in borrowers' hands on December 31, 1865	518,866
Amount circulated in the year	857,844
Number of applications for loans in the year	184,171
Number of borrowers to whom loans were granted in the year	170,318
Amount paid for forms of application and inquiry in the year	10,435
Amount paid for interest by borrowers or sureties in the year	42,140
Gross profits, being amount received from borrowers, and money paid for forms of application and inquiry, in the year	58,509
Expense of management in the year	21,345
Interest paid to depositors or shareholders, in the year	32,859
Net profits, after deducting interest paid to depositors or shareholders, and expense of management, in the year	6,391
Number of summonses issued in the year	13,208
Number of distress warrants issued in the year	2,101
Amount for recovery of which summonses were issued in the year	31,586
Amount recovered in the year	23,991
Amount of costs incurred by societies in the year	2,940
Amount of costs paid by borrowers or sureties in the year	2,390

(g.) *Benefit Building Societies*.—These societies exist in many parts of the kingdom, but there are no returns of the actual number of their members, nor accounts of their management; it is nevertheless well known that these societies possess many thousands of members, and that their operations are also very extensive.

(h.) *Land Societies*.—Land societies were originally established chiefly for a political purpose, namely, that of enabling members of all classes,

and especially of the humbler classes, to obtain cheaply the freehold franchise in counties. The principal object of these societies at the present date, however, is that of affording to the same classes the means of becoming possessors of freehold estates, and of building houses upon them. The societies, in the first instance, purchase large estates, which they sell again to members, to whom they also make advances of money for building purposes. Both the purchase money of the land and the amount of the advances may be repaid to the societies by the members in instalments, extending over a period of generally about ten years.

In some of the societies, in which members must become shareholders, in addition to the other advantages afforded, they participate in the ordinary profits of the company. There are no complete returns of the transactions of the land societies, but some idea of their importance may be gathered from the following figures extracted from the last report of one of the largest of the societies, viz. the 'Conservative Land Society':—

Total number of shares issued from September 1852 to Michaelmas 1866	No. 25,674
Value of land sold from formation of society to Michaelmas 1866	£ 493,091

The operations of the 'National Freehold Land Society' and of the 'British Land Company' are even more extensive than those of the 'Conservative Society.'

The main point to be noticed is, that by the aid of these societies industrious artisans can become, in the course of a few years, possessors of small plots of freehold ground with houses upon them rent-free.

(i.) *Working Men's Clubs*.—By the exertions of the 'Working Men's Club and Institute Union' about 300 clubs, containing 60,000 members, have been established within the past five years. Forty-one of these clubs are situated in the metropolitan districts. The Union states that this is only the first-fruit of what it hopes to accomplish, in elevating the working man, and in drying up the sources of many of those evils which various other benevolent undertakings aim only to palliate. The object of the Union is to help working men to establish clubs and institutes, where they can meet for conversation, business, and mental improvement, with the means of recreation and refreshment, without being dependent for these purposes upon the public-house.

Considering the vast improvement that has taken place in the habits of the upper and middle classes of society during the past half century, it does not seem unreasonable to hope that a corresponding improvement may manifest itself in the lower classes of society, and that these clubs may become the means, to a great extent, of effecting this desirable object.

PART II.—BRITISH COLONIES AND DEPENDENCIES.

Statistical Returns exhibiting the Condition of the British Colonies and Dependencies, in the year 1864.

Colonies and Dependencies	Area	Total Population	Finances		Public Debt	Trade

* In the above table the population of Malta and Gibraltar is exclusive of military. The figures for finances, debt, imports and exports are stated in *thousands* of pounds sterling, and for shipping in *thousands* of tons. The shipping refers only to the foreign trade.

† To United States only.

The present sketch of the condition of the United Kingdom would be incomplete without a reference to the numerous Dependencies of the British crown. The advantages which the parent State derives from her vast colonial possessions are many. On the one hand they afford an outlet for the surplus population of the mother country, and also furnish large supplies of raw materials, which are greatly needed by home manufacturers; while, on the other hand, they are large consumers of British produce and manufactures.

Again, it is no small advantage to a great commercial nation, like England, to possess in all parts of the world, ports where her merchantmen may ride in safety through the passing storm, or obtain shelter from an enemy's cruiser in time of war.

Another, though not by any means the least important advantage Great Britain derives from her colonial possessions is, the world-wide diffusion of the English language, religion and form of government. From north to south and from east to west, the British sceptre sways over an empire on which it may be truly affirmed the sun never sets, and which numbers for its subjects upwards of one hundred

and fifty million souls, who are all more or less subject to British laws, customs, and influence.

The principal trade products of the more important colonies are given below:—

India. Coffee, raw cotton, dyes, hides, jute, oils, opium, rice, saltpetre, seeds, Cashmere shawls, raw silk, spices, timber, and woods — *Ceylon.* Cinnamon, coffee, cocoa-nut oil. — *Mauritius.* Rum, sugar.

Natal. Hides, ivory, and wool. — *Cape of Good Hope.* Copper ore, skins, wine and wool. — *Canada.* Animals, animal produce, agricultural produce, fish, pearl and pot ashes, and timber. — *Prince Edward Island.* Fish, grain, and cattle. — *Newfoundland.* Codfish, oils, and seal-skins. — *Jamaica.* Coffee, ginger, pimento, rum, sugar, and logwood. — *Barbadoes.* Fish, molasses, rice, rum, and sugar. — *Trinidad.* Cocoa, molasses, rum, and sugar. — *British Guiana.* Molasses, rum and sugar.

New South Wales. Gold, hides, tallow, and wool. — *Victoria.* Gold, tallow, and wool. — *South Australia.* Copper, corn, gold, and wool. — *New Zealand.* Gold and wool. — *Queensland.* Gold, hides, tallow, and wool.

STATISTICAL NOTES ON THE INDUSTRIES AND COMMERCE OF THE UNITED KINGDOM,

ARRANGED ACCORDING TO THE GROUPS AND CLASSES ADOPTED FOR THE
PARIS UNIVERSAL EXHIBITION OF 1867.

GROUP II.

(CLASSES VI.-XIII.)

APPARATUS AND APPLICATIONS OF THE LIBERAL ARTS.

Class VI.

PRINTING AND BOOKS.

THE art of printing has been brought to great perfection in the United Kingdom; and perhaps one of the best proofs of its development is exhibited in the daily production of journals like the 'Times,' and other leading newspapers. The mere fact of possessing the power to compile and print many thousands of copies of such papers in a few hours is sufficient to mark the advanced position of the printing trade in England.

Among the causes which have recently led to the perfection of printing in this country, the abolition of the stamp duty on newspapers and of the excise duty on paper are the most conspicuous. The removal of these duties enabled newspapers, equal in size to the old ones, to be produced and sold for a penny; and the result has been that, whilst newspapers have been placed within the reach of the bulk of the population, great improvements have been introduced in the various processes connected with their production. The increased education of the various classes of the people has also led to a great demand for printed books; and without depreciating the works of a superior class, the vast production in recent years of cheap printed books for purposes of instruction and amusement cannot be overvalued. The arts of engraving and of chromolithography have at the same time reached a high degree of perfection, as will be seen by inspecting the specimens exhibited.

The number of persons engaged in the several branches of the printing trade, according to the census of 1861 was:—

In England and Wales	30,590
Scotland	4,470
Ireland	2,845
Total	37,905

Of this number, 13,937 persons were engaged in the printing trade of London.

In London, the established scale of printers wages is fixed as follows:—

Compositors	} 36s. per week of 60 hours;
Pressmen	
Machinemen	

with an allowance of 3*d.* extra per hour for overtime between the hours of 9 p.m. and 8 a.m. on week days: no charge to be made of less than 1*s.* extra between the hours of 10 p.m. and 6 a.m. on week days. Sunday work is paid at the rate of 6*d.* extra per hour, but in no case is the workman to receive less than 2*s.* 6*d.* extra.

In many large printing-offices book work is paid for by the piece, and is not generally conducted on the establishment wages. Compositors so employed may earn from 20*s.* to 50*s.* per week, according to the nature of the work and the skill and industry of the workman.

Newspaper work is carried on by piece-work at irregular hours.

The average rates of wages paid in Edinburgh in the year 1866 were:—

Compositors	20 <i>s.</i> to 40 <i>s.</i> }	Per week of 57 hours.
Pressmen	26 „ 28 }	
Apprentices	3 „ 20 }	

The value of books and prints &c. imported into and exported from the United Kingdom in the year 1865 was—

	Imported	Exported
Books	£119,486	£511,388
Prints, Engravings, &c.	36,525	30,936

There are no returns of the number of printed books annually produced. The number of registered newspapers and periodicals in each division of the United Kingdom in the year ended 30th June 1864, was:—

In England	1,307
Wales	60
Scotland	133
Ireland	157
Total	1,657

The principal improvements since the year 1851 noticed by the jury on Class 38 of the London Exhibition of 1862, were the introduction of machinery for casting type, in place of casting by hand, effecting a great saving of labour; and of type-composing and distributing apparatus; the introduction of horizontal printing presses; and the application of stereotyping to the rapid, safe, and economical production of newspapers having a large circulation. The general excellence of typography, even among the cheap works, was also commended, the distinctness of the types and cleanness of the working being very noticeable. In colour-printing much improvement was observable, and in lithography, and especially chromolithography, the advance was still more marked.

Some idea of the progress that has been made in the issue of 'new editions of books already known' may be gathered from the fact of a recent issue of Shakspeare's complete works for one shilling, and of the Waverley Novels at sixpence per volume.

Class VII.

PAPER, STATIONERY, AND BINDING MATERIALS.

1. The principal industry to which this class relates is that of paper, and it is one of great importance. Paper is made in several parts of England; the paper mills in the county of Kent having been long celebrated for the production of fine writing and drawing papers. There is also a large manufacture of the coarser descriptions of paper at Newcastle. Paper is also made, though to a less extent, in Scotland and Ireland. The number of licensed paper-makers in each division of the United Kingdom in the year 1865 was:—

In England and Wales	316
Scotland	56
Ireland	20
Total	392

Of the other articles comprised in this class, ink for writing and printing, sealing-wax, pens and other articles for the writing table, registers and water colours, each constitute a special and important trade, though with the exception of the steel pen trade no exact information exists as to the total number of persons who are employed in the manufacture of the several articles above alluded to. The number of persons engaged in the production of some of these articles in London (exclusive of workmen) is as follows:—

Ink makers—Of printing ink	21
writing ink	43
Sealing-wax makers	24
Quillpen makers, &c..	9

There are no returns of the number of operatives employed by the above manufacturers.

As a natural consequence upon the vast annual production of books in the country, the trade of bookbinding, also included in this class, is very extensive, and is carried on in connection with the publishing trade at the chief towns of the kingdom.

The centre of the British steel pen trade is at Birmingham, and according to a report made by Mr. Timmins to the British Association held at that town in 1865, the actual number of steel pen manufactories was 12; the number of men employed 360; of women and girls 2,050; horse-power, about 330. The weekly make of pens 98,000 gross. The quantity of steel used per week, from 9½ to 10 tons. The value of the ordinary pens ranges from 1½d. to 1s. per gross; of barrel pens from 7d. to 12s. per gross, and other kinds of higher price according to size and finish.

Most of the processes of pen-making are performed by hand-presses to cut out the blanks, to pierce the holes, to form the nib, to emboss the pattern and to mark the name. Self-acting machinery being only used for the commonest descriptions of pens.

The condition of the workpeople is satisfactory, the factories being very healthy. The wages of girls range from 5s. to 12s., some from 2s. 6d. to 3s. 6d.; while skilful and older workwomen earn from 15s. to 20s. per week. Men earn from 18s. to 25s.; boys, 4s. 6d. to 8s., if skilful, 8s. to 16s. Skilled males, adult, earn 30s. to 80s. and even 90s. to 100s. per week. The hours of labour vary from 52½ to 57 per week.

2. The greater proportion of the raw material employed in the manufacture of paper is obtained in the country, although a considerable quantity of rags and other paper-making materials is annually received from abroad. During the past ten years numerous substances have been proposed as a substitute for rags in paper-making, but of the whole number only esparto and straw have hitherto been thus used in large quantities.

The following table shows the quantity of rags and other descriptions of paper-making stuffs imported into the United Kingdom during the last four years:—

	1862	1863	1864	1865
	Tons	Tons	Tons	Tons
Rags, linen, and cotton	21,966	25,287	23,732	18,273
Esparto and other vegetable fibre.	878	19,326	43,403	52,324
Old ropes, &c.	932	736	528	463
Pulp.	166	233	156	94
Total imports	23,942	45,582	67,819	71,154
Re-exports	3,513	1,510	243	1,505
Left for consumption	20,429	44,072	67,576	69,649

It will be observed that the large increase in the above table is due to the increased importation of esparto, which is received from Spain. It is used for making common and printing papers, for which there has lately been so great a demand.

3. There are no returns of the number of persons employed in the paper trade at the present time. According to the census returns of the year 1861 the number of persons so engaged was:—

	Males	Females	Total
In England and Wales	7,746	5,611	13,357
Scotland	1,648	2,773	4,421
Ireland	289	113	402
	9,683	8,497	18,180

4. The number of bookbinders and book-folders at the same date was:—

	Males	Females	Total
In England and Wales	6,556	5,364	11,920
Scotland	1,176	1,194	2,370
Ireland	448	686	1,134
	8,180	7,244	15,424

A large proportion of the bookbinding trade is carried on in the Metropolis. In 1861, 3,691 males, and 4,063 females, were thus employed in London.

It must be borne in mind that both these trades have increased since 1861.

According to a return furnished to the Board of Trade in 1866, by the Edinburgh Chamber of Commerce, the average rates of wages paid to operatives in the paper-making industry in that district were:—

	Per week
To Machinemens	20s. to 22s.
Enginemens	17s. „ 20s.
Finishers	12s. „ 18s.
Bleachers	16s. „ 20s.
Rag cutters	13s. „ 16s.
Sizers	17s. „ 18s. 6d.
Dryers	15s. „ 16s. 6d.
Paper cutters	15s. „ 18s.
Millwrights	22s. „ 28s.
Firemen	15s. „ 18s.
Labourers	11s. „ 17s.

Hours of labour, ten to twelve per day.

There are no returns of the rates of wages paid at the paper mills in the neighbourhood of London; the rates vary considerably, but, as a rule, they are believed to be higher than those above quoted.

5. A considerable increase in the quantity of paper imported has taken place since 1860, which is owing in a great measure to the abolition of the duty on paper.

		Foreign Paper (except Hangings)		
		Imported	Exported	Left for Consumption
		Cwts.	Cwts.	Cwts.
Quantities	In 1860	42,446	9,217	33,229
	1865	239,707	24,537	215,170
Value	£ 1860	125,383	25,995	102,388
	1865	494,222	57,477	436,745

6. The quantities and value of British paper (except hangings) exported in the same period was:—

Quantities	In 1860	cwts.	112,514
	1865	„	141,075
Value	£ 1860	£	450,589
	1865	„	447,741

On comparing the above tables it will be noticed that the descriptions of paper imported are considerably cheaper than those exported.

The quantity of British rags and paper-making stuffs exported in the year 1865 amounted to 6,704 tons.

The value of British stationery (other than paper) exported from the United Kingdom during the five years 1861–65 was:—

1861	£	287,000
1862	„	285,000
1863	„	342,000
1864	„	360,000
1865	„	405,000

7. The use of steam as a motive power has become almost universal in England; and although the price of labour is higher in England than on the Continent, yet owing to the care and skill of the English workmen, and to the great superiority of the machinery employed, it is doubtful whether the cost of the manufacture of paper in England be not as low as in other countries.

8. Mr. Richardson, of Newcastle, states that the principal improvements that have been made in the manufacture of paper of late years, are in the details and general efficiency of the machinery, whereby a much larger quantity of paper is made with the same apparatus than formerly, and in the superior management of the chemical processes, whereby a material that formerly was entirely useless, is now worked up into common shop papers, and inferior rags are cleaned and bleached into a good white paper, which formerly were made into coarse paper. Nearly all paper for newspapers contains a portion of esparto, some having only one-fourth rag material.

On the abolition of the stamp duty on newspapers a large class of cheap journals came into existence, and a great demand for cheap paper was created. This demand has been met partly by the manufacture of paper with esparto, &c. as above stated, and partly by importing cheap paper from abroad. The jury at the London Exhibition of 1862 observing the

growing tendency to manufacture inferior qualities of paper, wisely lifted their voice against its use for works that were intended to endure any length of years, but for purposes of the day the supply of cheap paper is an inestimable boon to the masses of the community.

Great improvement has taken place in all descriptions of bookbinding within the past few years, more especially in the application of colour and ornament to the cheaper kinds. So great has been the extension of this trade, that the introduction of machinery for performing the operations of embossing and blind-tooling became necessary in order that the bookbinder might keep pace with the demands on his trade.

Class VIII.

APPLICATIONS OF DRAWING AND MODEL-
LING TO THE COMMON ARTS.

Although there are no records of the actual progress made of late years in the several branches of trade falling within the limits of this class, it may be generally stated that considerable improvement has been shown in the style of designs applied to manufactures, as well as a greater amount of taste displayed in the arts of modelling, die-sinking, and seal-engraving.

As the designs for manufactures are, for the most part, privately executed, the only means of testing the actual advance made is that of public exhibitions; and it rests, therefore, with the jurors on the several classes of manufactures at the present Exhibition to decide what amount of progress has been made by English designers since the last Paris Exhibition of 1855. It is to be hoped that in those decisions the Department of Science and Art may find handsome reward for the labours in which, for many years, it has been engaged, namely, in the extended application of art to all branches of national manufacture.

Class IX.

PHOTOGRAPHIC PROOFS AND APPARATUS.

Regarded in the light of a productive industry and apart from its importance as an art, photography in its various branches affords employment to some thousands of the population.

It does not fall within the limits of these remarks to trace the history of its invention and rapid development, but, as was stated by the reporter on photography, &c., at the London Exhibition in 1862, 'it will suffice to say that there is hardly a branch of art, of science, of economics, or indeed of human interest in its widest amplification, in which the applications of this art have not been made useful.'

There are no statistics of the number of

persons at present employed in the several branches of the trade of photography, but, according to the census of 1861, 2,957 persons were engaged as photographic artists at that period.

The number of persons engaged in the several branches of the trade in London (exclusive of workmen) is as follows:—

Photographic artists	284
Apparatus makers	38
Album makers	14
Photographic chemical makers	17
" drawing, mounting, &c.	6
" paper makers, &c.	15
" printers	7
" publishers	16
Dealers in photographic mate- rials	} 28

Although the jury on photography at the London Exhibition considered that great progress had been made since the preceding Exhibition in 1851, they yet regarded the art as capable of far greater attainments, and believed that the next International Exhibition would show results, to which those they then recorded would 'bear but a small proportion in beauty, vastness, and importance.'

Class X.

MUSICAL INSTRUMENTS.

The manufacture of musical instruments forms an extensive trade in the United Kingdom. The chief descriptions of instruments made are organs, pianofortes, harps, and band instruments, of which pianofortes may be considered as holding the most important position. The pianofortes of London makers have long been noted for the excellence of their tone and the superiority of their workmanship. The improved methods of construction adopted of late years by English organ-builders have tended to secure for these instruments a high reputation both at home and abroad.

There are no accurate statistics of the total number of persons engaged in the manufacture of the several descriptions of musical instruments in the United Kingdom, but the following table of the value of the imports of these articles during the five years 1861–65 shows that the home production is not equal to the home demand:—

Value of the several Descriptions of Musical Instruments imported into the United Kingdom.

Years	Pianofortes	Harmoniums and Scrapphines	Musical Boxes	Other kinds	Total
	£	£	£	£	£
1861	24,542	33,971	13,774	91,271	163,558
1862	43,343	53,681	13,494	80,388	190,906
1863	97,378	18,372	12,495	80,943	209,188
1864	111,234	15,548	17,015	80,452	224,249
1865	66,702	68,313	30,384	78,414	243,813

The imports of pianofortes and harmoniums are chiefly from France.

The number of manufacturers of musical instruments in London (exclusive of workmen) is as follows :—

Description of Instruments	No. of Persons
Concertina	11
Drum	9
Flute and Flageolet	14
Guitar	4
Harmonicum	1
Harmonium	28
Harp	4
Horn, trumpet, and bugle	7
Military	10
Seraphine	3
Violin	8
„ bow	8
Violoncello	2
Musical boxes	5
Pianofortes, &c.	286
Organ	43
String makers	17
Various	47

The value of musical instruments of British manufacture exported during the five years 1861–65 was—

Years	Pianofortes	Other Kinds	Total
	£	£	£
1861	not stated	not stated	147,144
1862	82,615	69,155	151,770
1863	112,821	53,972	166,793
1864	107,871	59,980	167,851
1865	93,071	59,757	152,828

Class XI.

MEDICAL AND SURGICAL INSTRUMENTS AND APPARATUS.

Although the articles included in this class cannot be said to represent an extensive industry of the country, they yet possess a value which can hardly be tested by a money standard. Among the arts there is none more noble than that of the surgeon, and consequently the instruments he uses in his occupation necessarily partake of the honour which attaches to his profession.

Almost the whole of the surgical instruments used in England are of home manufacture; and owing to the different modes of treatment adopted in different countries but a small interchange in this class of articles takes place between the United Kingdom and other countries. The bulk of the English surgical instruments are made in Sheffield, but the productions of the London houses are considered to be unrivalled by those of any other makers in the world. The number of surgical instrument manufacturers in London is 95; of surgical instrument case makers, 5; and of surgical bandage makers, 25. The value of surgical and anatomical instruments imported in the year 1865 was 566*l.*, and exported, 12,752*l.*

Class XII.

MATHEMATICAL INSTRUMENTS AND APPARATUS FOR TEACHING SCIENCE.

The manufacture of the articles comprised in this class is considerable, but in the absence of any industrial statistics no means exist of arriving at the exact position of the several branches of the trade in the United Kingdom.

The number of persons engaged in connection with this branch of trade in London (exclusive of workmen) is as follows :—

Mathematical instrument makers	72
„ „ case makers	7
Nautical instrument makers	32
Philosophical „ „	78
Opticians	204

In addition to the home production, there is a foreign trade in scientific instruments. The value of such instruments and apparatus imported into the United Kingdom, and of British articles of the same description exported during the year 1865 was—

	Imports	Exports
	£	£
1865	14,224	71,058

Class XIII.

MAPS AND GEOGRAPHICAL AND COSMOGRAPHICAL APPARATUS.

The most important works deserving of notice in this class are the maps produced by the Ordnance and Geological surveys. The former are produced on three scales, that on the scale of one inch to each mile being an excellent map of the country. The geological map of the United Kingdom, part of which was exhibited at the Paris Exhibition in 1855, is pronounced by all competent judges to be unrivalled. Since 1855 some of the most important mineral districts have been surveyed, and the maps relating to them completed. The maps for the northern counties of England and for Ireland are being conducted on the scale of six inches to the mile, more than one-half the area of England and Ireland has already been surveyed; and considering the nature of the work, great progress is annually made.

There are no means of ascertaining the value or extent of the general map trade of the country, but it is of considerable importance, and the works produced are of a very high character.

The number of persons (exclusive of workmen) connected with this branch of trade in London at the present date amounts to—

Map sellers and publishers	24
„ makers, colourers, and mounters	44
„ engravers	18

The value of maps and charts exported in the year 1865 amounted to 6,571*l.*

GROUP III.

(CLASSES XIV.-XXVI.)

FURNITURE AND OTHER OBJECTS FOR THE USE OF DWELLINGS.

Class XIV.

FANCY FURNITURE.

No branch of native industry has profited more by International Exhibitions than that of the fancy furniture trade. From the beginning of the present century until the year 1851, comparatively little progress was made in the manufacture of household furniture in the United Kingdom; but since that date a decided improvement has manifested itself, not only in regard to economy of production, but also in respect to design and ornamentation, and the better adaptation of the various articles to the uses for which they are intended. It requires but a slight insight into modern domestic life in England to perceive how great a change has taken place within the last ten or fifteen years in the internal embellishment of the dwelling-houses of the upper and middle classes of society; and there can be little doubt that the extension of art education will lead still further to the production and appreciation of articles which combine the three requisites of fitness of purpose, beauty of design and ornament, and excellence of workmanship.

The number of manufacturers engaged in London in the several branches of the fancy furniture trade (exclusive of workmen) is as follows:—

Cabinetmakers	812
Upholsterers	486
Carvers and gilders	342
French polishers	142
Looking-glass makers	61
„ „ silverers	24
Cabinet carvers, in-layers, and liners	108
Bedstead makers	43
„ „ iron	44
Chair, sofa, and stool makers . .	252

The value of furniture of wood and cabinet wares imported into the United Kingdom in the year 1865 amounted to 128,925*l.*: and of British furniture and cabinet wares exported, to 289,887*l.*

Class XV.

UPHOLSTERY AND DECORATIVE WORK.

The progress alluded to in the manufacture of the articles in the previous class has necessarily extended to the objects comprised in this class. The increased wealth of the middle classes of the community has especially led to a greater demand for decorative work in the fittings of their dwellings. As regards church furniture, a notable improvement has taken place; the revival, in recent years, of the early styles of architecture almost necessitating a greater amount of ornamentation in the interior decoration of the edifices. The principal manufacture of moulded objects is that of papier-mâché, carried on chiefly at Birmingham, producing numerous articles of decorative furniture, and affording employment to some hundreds of workpeople. The average rates of wages earned are, for ordinary hands, from 10*s.* to 16*s.* per week; and for decorative artists, from 30*s.* to 50*s.* This latter class are stated to have derived considerable advantage from the instruction afforded at the Birmingham Local School of Art.

Class XVI.

CRYSTAL, FANCY GLASS, AND STAINED GLASS.

1. The chief descriptions of glass manufactured in the United Kingdom are plate, crown and sheet glass and flint glass wares. The principal glass manufactories are at St. Helen's in Lancashire; but there are very large works in other districts, especially those of Messrs. Chance, of Birmingham, and Messrs. Hartley, of Sunderland. Flint glass is also made in London. The glass bottle trade, principally carried on in the neighbourhood of Newcastle, is very extensive. Stained or painted glass is also manufactured in London, and at Sunderland and Birmingham. Glass for optical

purposes, though necessarily not forming a large branch of the trade, is made in the United Kingdom; and the productions of Messrs. Chance, of Birmingham, of glass for lighthouse purposes are well known throughout the scientific world.

Although the manufacture of this beautiful material now constitutes one of the staple industries of the country, it is only within the last twenty years that it has made any rapid development. Up to the year 1845 the excessive excise duties levied upon its manufacture, and the troublesome regulations necessary for collecting those duties, entirely retarded its progress; in fact between the years 1789 and 1844 the quantities of glass made and retained for consumption, instead of keeping pace with the increased population, rather declined than otherwise. Since the abolition of the duty on glass, however, the expansion of the trade has been very great, and the removal of the window tax in 1851 still further conduced to the welfare of the glass industry of the country.

2. The raw materials used in the glass trade are almost entirely obtained in the country, though in some branches Fontainebleau sand is employed.

3. There are no official statistics of the number of persons engaged in the British glass manufacture for a later date than 1861, in which year the following number of persons were thus occupied:—

	Males	Females	Total
In England and Wales . . .	13,809	1,237	15,046
Scotland	1,189	23	1,217
Ireland	231	31	262
Total	15,229	1,296	16,525

The following extracts from a report by Mr. H. Chance to the British Association at Birmingham in 1865, will show the importance of some branches of this industry at the present time. The weekly produce of plate glass is about 100,000 feet. There are seven manufacturers of crown and sheet glass, three of whom make seventy-five per cent. of the whole quantity produced. The number of workmen employed in these three works is stated to be 2,500, and the quantity of glass produced 17,000 tons. There are no complete statistics of the production of flint glass, the annual produce of this description of glass in the Tyne and Wear district only, is estimated at 10,000,000 pounds. Birmingham produces about 5 million, and Stourbridge 3½ million pounds annually. The make of glass bottles in the Tyne and Wear district in the year 1862 is stated by Mr. Swinburne to have been about 4,230,000 dozens.

4. The average rates of wages paid at Birmingham in 1866 in the manufacture of flint glass and articles for domestic purposes were:—

To Males.

In some branches of the glass trade the relations between employers and workmen, and the habits of the workmen themselves are open to great improvement. Mr. Swinburne states that the relation between master and man in the blown flint and bottle trades amounts to a chronic strike. Owing, besides, to an allowance, in addition to wages, termed 'drink money,' and which is daily spent in the purchase of intoxicating liquors, a general unsteadiness is induced in the habits of the workman, which, in the majority of cases, results in habitual inebriety. In other branches it is stated that the workmen possess considerable intelligence and education, and freely avail themselves of the various institutions established for the intellectual improvement of the working classes.

5. The subjoined table gives a complete account of the several descriptions of glass imported into the United Kingdom in the year 1865 :—

	Quantities Cwts.	Value £
Window glass (except plate)	264,956	211,246
Flint glass, cut, coloured, or ornamented	32,961	172,405
Flint glass, plain, including bottles	23,039	32,254
Plate glass	28,631	133,613
Silvered glass or mirrors	1,639	10,700
Bottles of green or common glass	17,113	8,984
Manufactures unenumerated	12,650	60,773
	389,149	629,975
	Lbs	
Beads and bugles of glass	3,365,221	178,310

The imports of window and flint-glass are principally from Belgium and Hamburg, and of plate and silvered glass from France and Belgium.

The re-exports of window glass and of beads in the same year were considerable, being 37,842 cwts. and 2,057,000 lbs. respectively.

6. Only a small proportion of the British export trade of glass, excepting bottles, is carried on with European States, the bulk of

the exports going to the United States and the British Colonies. Owing to the expensive nature of the packing cases required for its safe transmission, and the loss by breakage on unpacking, added to the freight and other costs of transport, any addition to its selling price in the shape of an import duty acts as a virtual prohibition to trade in this article, and as the rates of import duty at present levied in Europe are generally considerable, the absence of trade with that part of the world is easily accounted for, more especially in those states which are large producers and where cheap labour enables the native manufacturer to supply the home markets with cheap goods.

Although many markets have been and are thus closed to the British producers of glass, it will be seen from the following figures that the British export trade has made great progress during the last fifteen years:—

Years	Flint Glass	Window Glass	Common Bottles	Plate Glass
	Quantities			
	Cwt.	Cwt.	Cwt.	Cwt.
1851	25,900	16,459	329,025	See Value
1855	39,295	21,537	513,140	
1860	79,544	33,408	629,511	
1865	99,314	50,955	622,496	
Value				
	£	£	£	£
1851	110,666	22,223	174,318	20,743
1855	141,890	33,659	279,471	52,312
1860	222,380	44,063	324,189	62,566
1865	302,105	60,857	310,245	71,387

7. The greater proportion of glass is made by hand labour assisted by mechanical contrivances, the pressed glass manufacture is, however, chiefly carried on by machinery. Steam is also very generally employed in the processes of cutting, grinding, &c. in the flint glass trade.

8. Mr. Swinburne states that 'as regards glass processes generally, it cannot be denied that they present a great field for improvement.' Much progress has, however, been made in many branches of the trade, amongst which may be specially noted the increase in the size of plates, sheets, &c.; the improvement in the colour of glass, and the advance of the 'pressed' glass manufacture. The introduction of goods of this latter class has cheapened flint glass to such an extent, that almost the poorest of the population may be supplied with elegant articles of domestic use, which a few years ago were far beyond their reach.

The progress of the glass trade is mainly due, as has been before stated, to the repeal of the duties which formerly hampered its transactions. On the removal of those duties a great fall in the price of glass took place and a vastly increased consumption was the result. The following prices of the leading descriptions of glass before the repeal of the duty and at the

present time, as stated by Mr. H. Chance, afford an interesting proof of the benefits that have been derived from the abolition of the duty, and of the advancement of the glass industry generally. A mirror of plate glass 50 + 40 inches in 1844 cost about 10*l.*, in 1865 less than half the amount. Good crown glass, per crate, in 1844 cost about 12*l.*, in 1865 2*l.* 8*s.* Ordinary sheet glass, per foot, in 1844 1*s.* 2*d.* in 1865 2*d.* Had the glass duties existed in 1851 a Crystal Palace would have been almost an impossibility; on the other hand, the repeal of the window tax has led to an extended use of glass in buildings of every description and has materially added to the comfort and health of the population.

As regards the application of art to the glass manufactures of the country, the jury at the International Exhibition of 1862 stated that the greatest advance was shown in engraved glass. They also particularly noticed the progress made in the forms of articles in general use, which they attributed in a great measure to the taste nurtured by the Schools of Design throughout the country, to the endeavours of many manufacturers to encourage a better appreciation of form on the part of the purchasers, and to the general advance of the public in art knowledge, much of which they ascribed as being due to National and International Exhibitions, and especially to the latter, in which exhibitors learn from each other by competitions in the arts of peace.

Class XVII.

PORCELAIN, EARTHENWARE, AND OTHER FANCY POTTERY.

1. The manufacture of earthenware, which now forms one of the staple industries of the country, has been carried on in Staffordshire for more than two centuries. England, unlike most continental nations, does not possess any state manufactories for the production and development of the ceramic arts, and the trade is consequently left to the exertions of private enterprise. The chief centre of the earthenware manufacture is in Staffordshire, with branch trades at Glasgow, Worcester, Newcastle, and Lambeth. Almost every description of earthenware is made at the Staffordshire Potteries; Worcester produces chiefly a fine class of goods; Newcastle, second-class articles; and Lambeth principally stone-ware, such as bottles, jars, pans, pipes, &c. &c. There is also a large manufacture of fire-clay goods in the kingdom, which are made in considerable quantities at Newcastle and Stourbridge.

2. The raw materials used in the manufacture are chiefly produced in the country—in the counties of Dorset, Devon, and Cornwall. According to the official returns, the produc-

tion of clays and china stone in the year 1865 amounted to 374,358 tons. 751,566 tons of fire-clay were also raised in the counties of Stafford, York, Derby, &c. &c. The quantity of prepared clay annually consumed in the Staffordshire Potteries, is stated to be about 160,000 tons.

In addition to the clay, Mr. Coghill gives the following return of the other raw materials used in the Staffordshire district. 'The annual consumption of coals in the trade may be stated at 450,000 tons. To stain the clay and print the ware, about 67,000 lbs. oxide cobalt is used, and about 1,100 tons of borax and boracic acid to glaze it, and 12,000 ounces of gold are required to gild and embellish the same. The amount of calcined bone used in the manufacture of china is about 4,500 tons per annum, obtained principally from South America.'

3. The number of persons, as stated in the census, engaged in the earthenware and porcelain manufacture in the United Kingdom in the year 1861 was—

	Males	Females	Total
In England and Wales . . .	26,138	11,934	38,072
Scotland	1,922	595	2,517
Ireland	101	7	108
Total	28,161	12,536	40,697

There were also 3,471 males and 1,115 females engaged in the manufacture of tobacco pipes in the same year.

The number of operatives employed in the Staffordshire Potteries, as given by Mr. Coghill, was, in 1864, 27,878, of which number 10,598 were females.

4. The average rates of wages paid to operatives in the Staffordshire district in 1866 ranged:—

	Per day
For males	1s. 6d. to 7s.
„ females	1s. 6d. „ 1s. 8d.
At Worcester:	Per week
For males	16s. to 50s.
„ females	10s. 6d. to 14s.
At Newcastle:	
For males	10s. to 30s.
„ females	10s.

5. The importations of earthenware into the United Kingdom are very small, and the quantities of china and porcelain ware are not large, amounting only to 18,705 cwts., valued at 166,098*l.* in the year 1865. The greater part of these importations came from France.

6. The value of British earthenware and porcelain exported from the United Kingdom during the five years 1861–65 was—

	£
1861	1,070,000
1862	1,220,000
1863	1,341,000
1864	1,422,000
1865	1,442,000

Machinery is employed in some branches

of the trade, but not so generally as might be desired.

8. Considerable progress has been made, in recent years, in the manufacture of earthenware and porcelain; and the ordinary articles of domestic use now manufactured are celebrated for their cheapness, lightness of make, and excellence of finish. Much attention has also been given to the substitution of harmless for poisonous ingredients in glazes used in the manufacture, and very satisfactory results have been obtained.

The improvements in the design and execution of the superior kinds of articles now produced are due to the mutual efforts of some of the leading manufacturers, and to the instruction that has been afforded by the Schools of Art to the operatives in the manufacturing districts. A more general introduction of machinery would prove of great service in developing the earthenware industry of the country. The advance of the fire-clay branch of the earthenware trade has also been very considerable; 80 millions of fire-bricks alone are now produced annually in the Newcastle district, and about 30 millions at Stourbridge, in addition to retorts and pipes, &c., which are also made in large quantities.

Class XVIII.

CARPETS, TAPESTRY, AND OTHER STUFFS FOR FURNITURE.

1. The principal articles included in this class which are made to any extent in the United Kingdom, are carpets, furniture stuffs, oil-cloth, india-rubber matting and horse-hair tissues. The leading carpet fabrics of English make are the Jacquard 'Brussels' and the 'Tapestry' or printed carpets, the former being made chiefly at Kidderminster, and also at Halifax and Durham, and the latter at Halifax. Of the other descriptions of carpets, the 'Axminster' are made at Wilton; the 'Kidderminster' and patent 'Axminster' at Glasgow and other parts of Scotland; 'figure twills' at Durham; and the cheaper kinds of 'super' carpet and Dutch and felt goods in the West Riding of Yorkshire, &c. The manufacture of jute carpets at Dundee is now a trade of some importance. Cotton furniture stuffs are made at Manchester and woollen and worsted damasks at Halifax.

Oil or floor-cloth and oiled cloth for table covers, &c. are extensively used in the United Kingdom for domestic purposes as well as exported in large quantities. A considerable proportion of the trade is carried on in the neighbourhood of London, but the manufacture is also located in other parts of the kingdom.

Horse-hair tissues for seatings are made to some extent, although this article is not so generally used for furniture purposes as formerly. The manufacture of india-rubber

matting, &c. has considerably increased of late years.

2. The sources of supply of the raw material used in the carpet manufacture will be found noticed in the remarks to Classes 27, 28, and 30. Horsehair is imported in considerable quantities, chiefly from Russia and America. The importations of this article in the year 1865 amounted to 21,078 cwt., of the value of 106,938*l*. The principal raw materials employed in the manufacture of india-rubber matting, &c. are caoutchouc and gutta-percha. The former is imported largely from South America and the latter from Singapore and the Eastern Archipelago. The total quantities and value of these articles imported into the United Kingdom in the year 1865 were—

	Cwts.	£
Caoutchouc, raw	71,392	530,538
Gutta-percha	29,077	160,565

A large quantity of caoutchouc is re-exported, and the remainder, as well as the gutta-percha, in addition to forming the raw material of the matting trade, is used for an infinite variety of purposes.

3. With the exception of the carpet industry, no returns of the number of operatives engaged in the other branches of trade included in this class can be given. The jury on Class 22 at the London Exhibition in 1862 estimated the number of persons employed in the carpet trade in the United Kingdom at about 40,000.

4. The average earnings of the operatives employed was stated to have been in 1851 from 16*s*. to 28*s*. per week, but these are probably much below present rates. The total estimated value of carpets annually produced in the country will give some idea of the importance of the trade, as affording a means of employment to the working classes. The following figures were given by the jury at the London Exhibition in 1862 as an estimate of the carpet production in that year:—

	£
In Yorkshire	980,000
Kidderminster and neighbourhood	630,000
Durham, Kendal and locality	120,000
Somersetshire and Wiltshire	40,000
Scotland	340,000
Total	2,110,000

5. The following table shows the quantities and value of woollen carpets and rugs imported into the United Kingdom during the five years 1861-65:—

	Square yards	£
1861	61,869	27,538
1862	111,896	33,165
1863	83,696	30,743
1864	78,311	32,392
1865	98,936	39,247

6. The exportations of British carpets and

druggets are very large, the quantities and value during the four years 1862-65 amounted to—

Years	Carpets	Carpet Rugs	Druggets, or Felted Carpeting
Quantities			
	Yards	No.	Yards
1862	4,799,000	36,640	579,000
1863	5,582,000	45,907	676,000
1864	5,620,000	40,257	372,000
1865	5,284,000	60,991	459,000
Value			
	£	£	£
1862	620,700	14,737	50,515
1863	747,521	17,578	63,262
1864	825,038	14,782	36,400
1865	818,847	17,904	42,600

The United States is the chief consumer of British carpets—in 1865, 2,164,000 yards were sent to that country.

The exportations of British oil and floor-cloth in the year 1865 were:—

	Square yards	£
Oil-cloth, japanned &c.	2,094,000	138,459
Floor-cloth, including india-rubber floor-cloth	320,000	40,448

7. The manufacture of carpets is now principally effected by means of machinery, handloom Jacquard weaving having been almost entirely superseded by steam-power weaving.

8. That the carpet industry of the United Kingdom has made great progress since the year 1851 was clearly manifested by the improved taste, colour, and design of the articles exhibited in 1862 as compared with those displayed in the previous London Exhibition, whilst the extended use of steam-power has tended materially to increase the production of this class of goods. The rapid development of the manufacture of tapestry carpets by Messrs. Crossley, of Halifax, is, perhaps, one of the most important recent improvements in the carpet trade of the country. Durham, Glasgow, Halifax and Kidderminster each possess Schools of Art, and it cannot be doubted that the instruction afforded to the working classes in these schools must have a most beneficial effect upon the particular manufactures of the respective districts.

A considerable improvement in the patterns of floor-cloth has also been made since the year 1855.

Class XIX.

PAPER-HANGINGS.

1. The manufacture of paper-hangings has been established in the United Kingdom for considerably more than a century, and is carried on in the neighbourhood of London, at

Manchester, Edinburgh, and other parts of the country. The class of paper-hangings in which English manufacturers mostly excel are those made by machinery, which are so low in price as to be within the reach of the humblest of the community, and thus enable them to give a cheerful aspect to the walls of their dwellings.

2. A large quantity of paper, colours, wool, and metal are annually consumed in the manufacture of paper-hangings, but no records exist of the actual quantity so employed.

3. According to the census of 1861 the number of operatives engaged in the paper-hangings' trade in each division of the kingdom was:—

	Males	Females	Total
In England and Wales . . .	1,556	399	1,955
Scotland . . .	77	38	115
Ireland . . .	96	9	105
Total . . .	1,729	446	2,175

4. There are no general returns of the rates of wages paid in the paper-hangings' trade. A return by the Edinburgh Chamber of Commerce to the Board of Trade gives the rates of wages paid in that neighbourhood in 1866 as follows:—

	Per Week of 57 Hours
To colour mixers	s. 12
„ glaziers, &c.	15
„ block-printers and marblers	20 to 40

5. The quantities and value of paper-hangings imported into the United Kingdom in the five years 1861-65 were:—

Years	Paper-Hangings	
	Quantities	Value
	Cwts.	£
1861	2,975	15,395
1862	4,210	17,680
1863	5,177	21,740
1864	5,979	25,110
1865	5,684	23,873

France supplies the greater part of the paper-hangings imported into the country.

6. The quantities and value of British paper-hangings exported during the same period were:—

Years	British Paper-Hangings	
	Quantities	Value
	Cwts.	£
1861	13,415	105,984
1862	19,874	64,505
1863	25,874	84,403
1864	25,163	82,819
1865	32,893	109,320

7. The chief part of the cheaper descriptions of paper-hangings is produced by ma-

chinery, which has been very greatly improved of late years. The machines employed are capable of printing from 1,000 to 1,500 pieces each per day.

8. Up to the year 1846 the high import duty levied upon foreign paper-hangings had the effect of almost entirely excluding them from the English market, and the absence of competition was too surely followed by an absence of improvement on the part of the English makers. Since, however, the foreign competitor has been admitted on equal terms to the English market, a marked progress has been visible in the style and workmanship of English papers, whilst, on the other hand, an improved application of machinery to the manufacture has led to the production of beautiful paper-hangings at a very cheap rate.

Class XX.

CUTLERY.

1. England has long been famed for all descriptions of cutlery, the principal seat of the manufacture being at Sheffield. Cutlery is also made to a small extent in London and in other parts of the kingdom.

2. The steel used in the manufacture of cutlery is produced at Sheffield, principally from foreign iron. In 1862 the number of converting furnaces in that town was 205, producing annually about 79,000 tons of blistered steel; and the number of melting furnaces 2,437, producing about 52,000 tons of cast steel annually. Only a part of this production is used in the cutlery trade.

3. The jury on cutlery at the London Exhibition in 1862 stated that the increase in the number of workmen in the table-cutlery, razor, pen and pocket-knife, and scissor branches of the Sheffield trade, had not been so great between that date and the previous Exhibition in 1851 as formerly; but that owing to the more extended use of machinery, a larger quantity of table-knives was manufactured than in previous years.

The number of persons employed in the borough of Sheffield in the principal branches of the cutlery trade in 1864 was as follows:—

Branches of Trade	Males	Females	Total
Scissor makers . . .	1,089	331	1,420
File makers . . .	4,345	589	4,934
Sawsmiths . . .	1,232	—	1,232
Cutlers . . .	3,294	184	3,478
Blade makers, forgers . . .	1,797	—	1,797
Knife makers . . .	4,944	—	4,944
Razor makers . . .	817	—	817
Total . . .	17,518	1,104	18,622

4. The average rates of weekly wages paid in the principal branches of the trade at Sheffield in 1866 were:—

Table-knife Manufacture

Occupations	Wages	Hours of Labour
	<i>s.</i>	
Forgers	28	60
Strikers	24	60
Hafters	21	60
Grinders	30	60

Spring-knife Manufacture

Occupations	Wages	Hours of Labour
	<i>s.</i>	
Best Work		
Grinders	30	60
Forgers	30	60
Cutlers	25	60
Scale and spring makers	25	60

Scissor Manufacture

Occupations	Wages	Hours of Labour
	<i>s. s.</i>	
Forgers	20 to 30	60
Filers	20 „ 30	60
Grinders	27 „ 35	54
Finishers	22 „ 32	54

5. The value of British cutlery exported from the United Kingdom during the four years 1862–65 was:—

	£
1862	291,244
1863	304,119
1864	386,859
1865	402,294

6. Machinery is employed in some branches of the cutlery trade, but many of the most important operations are performed by hand labour.

7. Although no recent improvements of note have been made in the cutlery trade, the productions of Sheffield still maintain their renown for excellence of quality and workmanship, and for beauty of finish and design. A School of Art has been established in Sheffield since the year 1843, and the number of students receiving instruction in that school in the year 1865 was 1,763.

Class XXI.

GOLD AND SILVER PLATE.

The manufacture of articles in the precious metals is carried on in the chief towns of the kingdom, the large firms of the metropolis producing annually vast quantities of silver plate. The extensive use of late years of plated goods has tended to limit the operations of the trade in precious metals; the value of British-made plate, however, annually used in the country is estimated to exceed the sum of one million pounds sterling. There is also an export trade in this article, the value of which amounted in the year 1865 to 62,532*l*.

There are no statistics of the total number of operatives engaged in the production of the articles included in this class at the present time. The number of goldsmiths and jewellers in London is 159; and of chasers, 41.

Considerable progress in the application of art to the manufacture of works in precious metals has been made within the past ten years; but as regards outline and ornamentation, the further cultivation of purity in style is greatly needed by English designers of plate.

Class XXII.

BRONZES AND OTHER ART CASTINGS AND REPOUSSÉ WORK.

The manufacture of bronzes in the United Kingdom is of very limited extent. The scarcity of good English chasers has been attributed to the method of training adopted in the Schools of Design, which is calculated rather for the production of artists and sculptors than for that of good workmen in metal.

France supplies the greater part of the bronzes imported into the country, having furnished 55,168*l*. worth out of a total importation of 61,307*l*. in the year 1865.

Class XXIII.

CLOCKS AND WATCHES.

The manufacture of clocks and watches is chiefly carried on in London, and at Coventry, Liverpool and Manchester. The watches for which the English manufacturers are principally renowned are chronometers and other superior descriptions of watches, although vast numbers of cheap watches are made in the country. The best works are made in Lancashire, and a considerable exportation of watch-works is annually made to the United States, where they are cased and finished. According to the census of 1861 the following number of persons were engaged in the clock and watch trades in each division of the country:—

	Males	Females	Total
In England and Wales	20,221	536	20,757
Scotland	1,699	8	1,707
Ireland	951	12	963
	22,871	556	23,427

The number of persons engaged in the various branches of the trade in London at the present time (exclusive of workmen) is as follows:—

Watchmakers	412
Watch case makers	55
„ jewellers	31
„ makers (parts of)	277
Clockmakers	162
„ case makers	14

The value of clocks and watches imported has remained almost stationary for the last five years; in 1865, 216,677*l.* worth of clocks, and 257,076*l.* worth of watches were imported into the United Kingdom. The value of British goods exported in the same year amounted to, —clocks, 24,695*l.*, and watches, 69,179*l.*

Class XXIV.

APPARATUS AND PROCESSES FOR HEATING AND LIGHTING.

The manufacture of the best kinds of iron and steel grates, fenders and fire-irons is carried on at Sheffield, where the industry has been established for the last 60 or 70 years; previously to that date the best grates were made in London and Edinburgh. The commoner descriptions of stoves are made principally at the Carron and other works in Scotland; at the Coalbrookdale Works, and at the foundries in London, Northampton, Dudley, Rotherham, Birmingham, Mansfield, Nottingham, and Derby. The art of working, grinding, and burnishing steel is almost peculiar to Sheffield and its neighbourhood. Districts where iron is smelted offer the great advantage to the iron-founder of cheap iron and coal, and in these the bulk of the stove trade is carried on. It can scarcely be admitted that the apparatus for heating by the circulation of hot air, and the apparatus for ventilation have, as yet, been brought to a great state of perfection—the want of success is, perhaps, attributable in some degree to the methods of construction of the buildings to which such apparatus have been applied.

With regard to lamps, the increased use of gas of late years has, in a great measure, superseded the use of oil for illuminating purposes, and a large portion of the manufacture of the older description of lamps has given way to the manufacture of gas fittings. Although the consumption of fish and vegetable oils has declined, the use of the recently discovered paraffine oil has vastly increased, and given rise to the manufacture of a new class of lamps, which are now largely made in Birmingham at prices ranging from 4*d.* to 5*s.* each. The rapid development of steam communication by land and water has also led to a great demand for signal and other lamps, and has afforded employment to manufacturers who formerly were engaged in the old oil-lamp trade.

Class XXV.

PERFUMERY.

The chief centre of the perfumery trade is in London, although the manufacture of scents, pomatums, cosmetics, &c., is carried on to a less extent at most large towns throughout the

country. Few of the raw materials employed in the manufacture of perfumery are produced in the country, but are principally imported from the Southern States of Europe and from Asia. The manufacture of toilet soap in the United Kingdom is very considerable, the most celebrated, perhaps, being that known as 'Windsor soap,' which is not only largely used at home, but also exported to all parts of the world. English lavender-water has also for many years enjoyed a great renown.

There are no official statistics of the total number of persons engaged in the production of perfumery and soap. Owing, however, to the general increase of these trades, they have afforded employment to a large number of hands, and the introduction of female labour in the lighter branches of the business has created another opening for the employment of that sex of the community.

The number of manufacturers, &c. engaged in London in connection with the perfumery trade, exclusive of workmen, at the present time amounts to—

Perfumers—Wholesale . . .	151
Retail . . .	849
Hair-dye makers . . .	16

The value of British perfumery (except toilet soap) exported during the year 1865 amounted to 94,351*l.* The exports of toilet soap in the same year were 7,623 cwts., valued at 32,361*l.*

During the past ten years great advance has been made in the various branches of the perfumery trade, and the removal of the excise duty on soap in the year 1853 has had a most beneficial effect upon the manufacture of this most important article of prime necessity.

Class XXVI.

LEATHER WORK; FANCY ARTICLES; AND BASKET-WORK.

There are no means of ascertaining the amount of the production of the various articles included in this class. Perhaps the most important industry which falls within its limits is that of brush-making. Owing to the general use of brushes for domestic and trade purposes the manufacture is necessarily very large, although no records exist of its extent. According to the census of 1861 the following number of brush and broom-makers were returned for each division of the kingdom:—

In England and Wales . . .	11,178
Scotland . . .	535
Ireland . . .	617
	12,330

The importation of brushes and brooms is of small value, and the exportation of British-

made brushes and brooms in the year 1865 only amounted to 52,000*l.*, the greater part of which was sent to Australia. On the other hand, a large importation of bristles is annually made; in the year 1865, 2,563,000*lbs.* were imported, chiefly from Russia. Large quantities of brushes are also made from cocoa-nut fibre.

The basket-work trade of the United Kingdom is principally confined to the manufacture

of articles of the coarser description, such as baskets, hampers, crates, &c., although various fancy articles for domestic use are also made.

English dressing-cases hold a high repute for the excellence of their manufacture and the completeness of their arrangements; they may be bought at all prices, varying from a few shillings to a thousand guineas each. Great improvements in the manufacture of these articles have been made since 1851.

GROUP IV.

(CLASSES XXVII.-XXXIX.)

CLOTHING (INCLUDING FABRICS) AND OTHER OBJECTS WORN ON THE PERSON.

Class XXVII.

COTTON YARNS AND FABRICS.

THE manufacture of cotton still forms the largest branch of the native industry of the United Kingdom, notwithstanding the severe crisis through which the cotton trade of the country, in common with that of the whole of Europe, has lately passed.

1. The chief seats of this industry are in Lancashire in England, and in Lanarkshire in Scotland. The Counties of York, Chester, Derby and Nottingham, also contain a large number of cotton factories.

According to the latest return (1861), the total number of cotton factories in the United Kingdom was 2,887, of which number 2,715 were in England and Wales, 163 in Scotland, and 9 in Ireland. A short table will, perhaps, afford a better idea of the distribution of this industry in the three divisions of the kingdom.

Divisions and Counties	Number of Factories	Number of Spindles	Number of Power Looms
England and Wales :			
Lancashire . . .	1,979	21,530,532	306,423
Yorkshire . . .	369	2,414,898	17,393
Cheshire . . .	212	3,373,113	32,926
Derby . . .	79	682,008	7,581
Nottingham . . .	26	36,000	—
Other Counties . .	50	315,574	3,802
Total . . .	2,715	28,352,125	368,125
Scotland :			
Lanarkshire . . .	96	1,138,602	24,149
Renfrew . . .	44	408,742	2,968
Other Counties . .	23	368,054	2,993
Total . . .	163	1,915,398	30,110
Ireland . . .	9	119,944	1,757
United Kingdom . .	2,887	30,387,467	399,992

The above figures may be taken as a fair representation of the cotton industry in a time of ordinary activity. A great deal of new machinery has been added since 1861, but several mills are still out of work.

In the Lancashire and Cheshire districts, of which Manchester may be considered as the centre, every description of yarns and light and heavy piece goods, prints, velvets, &c. &c., are produced : whereas at Glasgow, which is the centre of the Scotch cotton industry, chiefly the lighter descriptions of fabric, such as cambrics, jaconets, &c., are made.

As respects mixed fabrics, which are included in this class, it is hardly possible to describe the almost countless articles in which cotton forms a constituent part. The most important, however, is that carried on at Bradford and other parts of Yorkshire—viz. that of stuffs made of cotton and wool which have all the appearance of pure worsteds, though necessarily much cheaper in price. A further notice of these goods will appear under Class 29.

2. Prior to the civil war in the United States, England derived the greater portion of the raw material employed in the cotton manufacture from that country. The average total importation of raw cotton in the five years 1856-1860, amounted to 1,129 million pounds per annum, of which 869 million pounds were obtained annually from the United States.

During the same period an average of 171 million pounds were annually exported, leaving 958 million pounds for the yearly average consumption.

On the outbreak of the American war, the Manchester Chamber of Commerce took active measures to stimulate the cultivation of cotton in various parts of the globe, and many countries, notably British India, Egypt, Brazil, and other South American States, and even China and Japan, largely increased their cultivation of cotton, and contributed to supply the English markets during the years from 1861 to 1865. In the latter year, however, the supply from some of these countries fell off, and there is little doubt of their being unable to compete with the American producer in times of peace and tranquillity.

The three countries that afforded the largest supply of cotton during the American war were British India, Egypt, and Brazil. The

importations of raw cotton during the year 1865 were:—

	lbs.
From British India	446,000,000
United States, including Bahamas and Mexico	190,000,000
„ Egypt	177,000,000
„ Brazil	55,000,000
„ China	36,000,000
„ Mediterranean (exclusive of Egypt)	27,000,000
„ Other Countries	47,000,000
Total	978,000,000

Of this quantity 303 million pounds were re-exported, leaving 675 million pounds for consumption.

The imports of raw cotton in the first eleven months of 1866 amounted to 1,260 million pounds, or 482 million pounds in excess of the corresponding importations in the previous year. Of the total amount, 474 million pounds were supplied by the United States, and 586 million pounds by British India. 361 million pounds were re-exported during the eleven months, leaving 899 million pounds for consumption.

The ranges in the price of cotton from 1860 to the present time were as follows:—

In December	American Fair Upland, per lb. d.
1860	7 $\frac{1}{4}$
1861	11
1862	23 $\frac{5}{8}$
1863	27 $\frac{1}{2}$
1864	27 $\frac{1}{2}$
1865	22

In July and August 1864 the quotations were as high as 31 $\frac{1}{2}$ d. per lb. Indian cotton also obtained high prices from 1862 to 1865. The present prices (December '66) are 16d. for fair American, and 12 $\frac{1}{2}$ d. for fair Dhollerah (Indian).

It must be borne in mind that, during the crisis, the price of cotton goods did not rise in the same proportion as the price of the raw material; the cost of manufacture having remained the same for some years past, if not slightly declined, owing to the use of better machinery, and in order to further keep down the price of manufactured goods, they were made lighter in quality, and consequently contained less of the dear raw material. The decline in the price of cotton, and the return of a steady demand for goods, has now happily enabled manufacturers to return to former qualities, and to re-establish the credit of their goods.

3. Of 451,000 persons employed in cotton factories in the United Kingdom in 1861, 315,000, or 70 per cent., were thus occupied in the Lancashire district. The following statement shows the sex and ages of the total number of operatives:—

	In England and Wales	In Scotland	In Ireland	In United Kingdom
Males:	Number	Number	Number	Number
Under 13	21,774	307	—	22,081
13 to 18	38,210	2,661	336	41,207
Above 18	113,720	5,060	488	119,268
Total	173,704	8,028	824	182,556
Females:				
Under 13	17,382	325	—	17,707
Above 13	216,512	32,584	1,910	251,306
Total	233,894	33,209	1,910	269,013
Total	407,598	41,237	2,734	451,569

The story of the cotton famine and its consequences upon the cotton operatives need not be here repeated. The result of that event was, for a considerable time, to induce all who could obtain employment to seek for it in other branches of industry, and consequently on the re-opening of the cotton mills, some difficulty was experienced in obtaining good operatives. Judging from the present amount of production and the probable continued demand, both at home and abroad, there is every hope of the cotton manufacture affording the means of livelihood to as many persons now as it did in 1861. According to good authority, the quantity of cotton now (December) being consumed is nearly equal to the consumption of 1860.

4. The average rates of wages earned in the chief divisions of the cotton industry in the Lancashire district in 1860 were:—

	Per Week of 60 Hours s. s. d.
Spinning:	
Spinners upon self-acting mules	20 to 22 0
Weaving:	
Power-loom weavers (chiefly women) on 2 looms	10 „ 10 9
3 „	15 „ 16 0
4 „	16 „ 20 0

The rates of wages at the present time are about 10 per cent. above those paid in 1860, in consequence of the scarcity of workpeople.

Considering the severe trial through which the manufacturing population in the cotton districts have lately passed, the general condition of the operatives is very satisfactory. Employment at good wages is now afforded, and as many members of the same family find occupation in the factories, their aggregate earnings suffice to keep them in easy circumstances.

Mr. H. Ashworth stated, in a paper read before the Social Science Association in Manchester, October 1866, that the 'increase in recent years of day, Sunday, and factory schools has tended greatly to increase the intelligence and to ameliorate the character and manners of the working-classes.'

'A large number of Mechanics' Institutes, Working Men's Clubs and Colleges, free libraries and similar institutions, which afford the means of mental culture, have been established,

and are much resorted to and appreciated by the operative class. Added to this, a cheap free press has placed in the hands of the English operative a means of education which is enjoyed as yet in scarcely any other country in the world.

'Frugality and prudence are apparent in the desire of many to attain the possession of such resources as would place them beyond the fear of actual want or lead to superior wealth.' 'The establishment among them of Co-operative Societies and Manufacturing and Commercial Companies, raised out of the reserved funds of the people, and conducted exclusively by the ablest and most trusty of their members, is a sign of their prudence and economical habits.' On the 31st December, 1855, there were 139 of these societies in operation in Lancashire alone.

5. The value of cotton manufactures imported into the United Kingdom, when compared with that of the exports, is of small amount, being under one million pounds sterling per annum. The articles imported consist chiefly of French muslins; Indian and other piece goods (of which a large proportion is re-exported); and hosiery, chiefly from Germany.

6. On the other hand, cotton yarn and manufactures exported from the United Kingdom form the largest class of the exports of the country, as will be seen by the following statement:—

Years	In Millions of £ sterling				
	Yarn	Piece Goods		Other kinds	Total of Yarn and Manufactures
		White or Plain	Printed, Checked, or Dyed		Value of Total British Exports
1860	10	23	17	2	52
1861	9	22	14	1	46
1862	6	16	12	2	36
1863	8	23	14	2	47
1864	9	27	17	2	55
1865	10	28	17	2	57

The next statement of the quantities and value of goods and yarn exported in 1860 and 1865 will afford a general indication of the increased value of cotton products:—

Cotton Yarn:	Quantities lbs.	Value £
1860	197,343,000	9,870,000
1865	103,533,000	10,343,000

Thread for sewing:	Quantities lbs.	Value £
1860	6,297,000	741,000
1865	4,626,000	753,000

Piece Goods of all kinds:

	Yards.	Value £
1860	2,776,000,000	40,346,000
1865	2,015,000,000	44,860,000

7. The cotton manufacture is carried on almost entirely by means of machinery. The amount of motive power in 1861 was 281,663 horse power steam, and 12,467 horse power water. A great addition of machinery has, however, taken place since 1861.

8. The high state of development to which the cotton manufacture has been brought for some years past in the United Kingdom, renders it difficult to point out the numerous improvements that have taken place in the machinery and processes employed in the manufacture of cotton. The progress made has been rather in the direction of simplifying and perfecting the existing machinery than in the introduction of new methods of manufacture.

The jury appointed to report on machinery at the London Exhibition of 1862 stated 'that the English machinery for cotton spinning could not be too highly commended, whether as regards the general construction of the machines, the judicious arrangement and adaptation to each other of the various parts, the perfection attained by the introduction of novel improvements, or the excellence of the workmanship and finish.

'By the improvements introduced, the exhibitors had endeavoured to render their machines as positive in their various changes and movements, as automatic, and as perfect as possible. These endeavours had been in a high degree successful, and had resulted in the accomplishment of machines of greater capability, both as regards the production and quality of work, than had hitherto been attained.'

As respects machinery for weaving, it was also stated 'that, as regards arrangement and workmanship, the praise given to machinery for spinning was equally due to machinery for weaving.'

Great progress was also exhibited in the winding, sizing and warping machines, as compared with those shown in 1851.

The most important change since 1862 has been that of adapting a great part of the existing machinery to work short staple, East Indian, and other cotton, which was not used to any great extent before the American war. Acceleration of speed of machines is always going on whenever practicable, but the inferior descriptions of cotton cannot be worked at a high speed, and need a greater amount of machinery than the better qualities require.

9. In addition to the progress that has taken place in the mechanical branches of the cotton industry, the means adopted by the Government for improving the education and taste of artisans must not be overlooked. Schools of Science and Art are now established, in connection with the Department of Science and Art, in the centres of the manufacturing districts, as well as in other parts of the country, and many thousand students are annually instructed in the elements of science and in sound principles of art. In addition to these schools, 'traveling collections' of objects of art have been organised, which are sent round the provinces; and thus many a working man, who could not afford a journey to inspect the art collections of the Metropolis, has good models brought to his very door.

The instruction thus imparted has produced the most beneficial effects upon the manufactures of the country. A great step in this respect was manifest to all who beheld the two Exhibitions of 1851 and 1862; and it is believed that the objects exhibited in this Class in the British section at the present Exhibition will show considerable advancement in the appreciation of fine art, both as regards colour and design, when compared with those exhibited at the last Paris Exhibition in 1855.

[For *Hosiery* and *Underclothing* see CLASS 34.]

Class XXVIII.

YARNS AND FABRICS OF FLAX, HEMP, &c.

1. In this class are comprised yarns and manufactures made of vegetable fibres other than cotton.

The linen industry, or manufacture of flax and hemp, is widely spread throughout the kingdom, although it is carried on to the greatest extent in Ireland, in the counties of Antrim and Down. The largest branches of the trade in England are situated in the counties of York and Lancaster, and in Scotland in the counties of Forfar and Fife.

The manufacture of jute (which may be said to be scarcely known in any foreign country except France and Holland) has now assumed an important position in Scotland that it deserves to be separately noticed. The seat of its manufacture is at Dundee. Jute is a fibrous material very much resembling hemp, and is used principally for making heavy linens, sack-ing, packing cloth, and carpeting.

The number of flax, hemp, and jute factories in the three divisions of the United Kingdom in 1861 was:—

Divisions and Counties	Factories	Spindles	Power- looms
FLAX FACTORIES			
England and Wales:			
Lancashire	13	117,412	489
Yorkshire	70	172,272	1,403
Other Counties	53	54,624	268
Total	136	344,308	2,160
Scotland:			
Forfar	85	160,090	5,108
Fife	46	54,383	1,823
Other Counties	32	64,912	1,035
Total	163	279,385	7,966
Ireland:			
Antrim	47	360,592	2,854
Down	15	103,630	128
Other Counties	38	128,759	1,684
Total	100	592,981	4,666
Total, United Kingdom	399	1,216,674	14,792

Divisions and Counties	Factories	Spindles	Power- looms
HEMP FACTORIES			
England and Wales	3	264	1
Scotland	2	2,316	—
Ireland	—	—	—
Total	5	2,580	1
JUTE FACTORIES			
England and Wales	4	620	—
Scotland	27	30,538	554
Ireland	5	1,824	—
Total	36	32,982	554

Since the year 1861, however, the linen and jute trades have made great progress, as will be seen by the annexed statistics.

The following is a statement of the position of the Irish linen industry on the 1st January, 1866, as published by Mr. McIlwrath, Secretary to the Belfast Linen Committee:—

Flax Spinning Mills.

Number of mills, 86; spindles employed, 759,452; ditto unemployed, 11,362: total, 770,814, and a proposed addition of 103,792 spindles.

Power-Loom Factories.

Number of factories, 44; looms employed, 10,538; ditto unemployed, 266: total, 10,804, and a proposed addition of 6,484 looms.

There were also 17,786 spindles, and a proposed addition of 4,656 spindles, employed in twisting thread. New mills and factories were also in course of erection capable of containing a further proposed addition of 62,000 spindles, and 1,400 looms.

Plain linens, damasks, cambrics, handkerchiefs, and other light linens are produced in the localities of Belfast, Forfar, Brechin, Dunfermline, Barnsley, and Manchester, while the heavy descriptions of goods, including sail-canvas, sacking, &c., are made in the Dundee, Hull, Greenock, and Arbroath districts. Linen yarns are also largely manufactured at Leeds.

Mr. R. Sturrock, the Secretary to the Dundee Chamber of Commerce, states that the manufacture of jute was first known in Dundee about the year 1830, and that in 1865 nearly seventy-two thousand tons of raw jute were imported into that town.

He estimates the present number of jute factories for spinning and weaving at about 60, containing 100,000 spindles and 5,000 power-looms.

2. A large proportion of the raw material used in the linen industry of the United Kingdom is produced in the country. The following table shows the respective amounts of the estimated home production in 1866 and the

foreign supply during the five years inclusive 1861-65:—

HOME PRODUCTION

Acres	
Acres under Flax in Ireland in 1866	263,659
	Cwts.
Estimated produce in 1866	1,054,000

FOREIGN PRODUCE IMPORTED FOR CONSUMPTION			
Years	Flax	Hemp	Jute
	Cwts.	Cwts.	Cwts.
1861	1,286,000	738,000	817,000
1862	1,788,000	908,000	849,000
1863	1,416,000	956,000	1,057,000
1864	1,774,000	943,000	1,754,000
1865	1,867,000	913,000	1,691,000

A large proportion of hemp is used in the manufacture of ropes, cords, &c.

In 1861 the area under flax in Ireland was only 148,000 acres, and the estimated produce 451,000 cwts.

There are no returns of the growth of flax in Scotland; it is not, however, cultivated to any great extent, and its cultivation is believed to have declined during the past ten years. The exports of British flax are insignificant in amount, being 35,000 cwts. in 1865. The total of the raw material employed in the linen and jute industries in 1865 may be therefore roughly estimated at between four to five million cwts.

In 1865 Russia supplied 76 per cent. of the flax and 60 per cent. of the raw hemp imported.

Austria and the Philippine Islands also contributed large supplies of hemp. Jute is imported entirely from British India.

3. The number of persons of each sex and of different ages engaged in flax, hemp, and jute factories in each division of the kingdom was, according to the last return (1861), as shown below:—

	England and Wales	Scotland	Ireland	United Kingdom
Males:				
Under 13	886	328	236	1,450
13 to 18	1,422	3,461	3,771	8,654
Above 18	3,682	6,842	6,142	16,666
Total	5,990	10,631	10,149	26,770
Females:				
Under 13	1,108	627	459	2,194
Above 13	13,376	28,304	23,359	65,039
Total	14,484	28,931	23,818	67,233
Total males and females	20,474	39,562	33,967	94,003

The number of operatives at present engaged in the linen and jute trades is, however, greatly in excess of the above.

The increased consumption of the raw material during the past five or six years has been previously shown, and as a natural consequence a large additional number of hands has been required for its manufacture.

The number of operatives employed in the jute industry at Dundee is now about 28,000,

of which number nearly one-third are males, and two-thirds females.

4. The average rates of wages paid in the linen trade at Belfast and Dundee in 1866 were—

		Per Day of 10 Hours	Per Week of 60 Hours
		s. d.	s. d.
At Belfast (Linen)	To spinners (women)	1 4½	
	„ weavers (women and girls)	1 8	
At Dundee (Linen)	To spinners (women)	8 6 to 14 6	
	„ weavers (women)	8 0 „ 15 0	

The condition of the linen operatives has much improved of late years, owing to the increased and constant demand for their labour.

The rates of wages paid in the Jute trade in 1866 were—

	Per Week of 60 Hours
	s. d. s. d.
Spinners (women)	10 0
Weavers (women)	12 6 to 13 4

The jute factories are well built, well aired, and the comforts of the operatives well considered. The workpeople as a class enjoy good health, and are sober, industrious, and provident.

5. Compared with the exportations, the importations of linen yarns and tissues are small in amount. In 1865, 1,216,480 lbs. of linen yarn, and 153,104l. worth of tissues, were imported into the United Kingdom. 1,958,000 lbs. of jute yarn, chiefly from France, were also imported in the same year; the total value of the foregoing articles being 278,000l.

6. The exportations of these articles, on the other hand, were very considerable. The next table shows the value of British linen and jute yarns and tissues, &c. exported during the six years 1860-65:—

Years	Jute *			
	Yarns		Tissues, &c.	
	£	£	£	£
1860	1,801,000	4,804,000	not stated	not stated
1861	1,622,000	3,852,000	85,126	127,031
1862	1,852,000	5,139,000	96,152	133,149
1863	2,530,000	6,508,000	154,618	243,379
1864	2,991,000	8,172,000	114,503	356,764
1865	2,535,000	9,156,000	82,141	311,540

* These figures do not represent the whole of the jute exports, a large proportion being classed with linen goods.

The value of white, plain, and damask tissues amounted to seven-and-a-half millions sterling, out of the total value of nine millions in 1865. The value of linen thread for sewing exported in the same year was 558,000l.

During the ten years from 1851 to 1860, the export trade of linen goods from the United Kingdom remained in a stationary position, amounting to little over four millions sterling per annum.

The relative proportions of the quantities and

values of the chief kinds of linen goods exported in 1860 and 1865 were:—

	Quantities	
	1860	1865
Linen Yarn . . lbs.	31,210,000	36,796,000
Tissues:		
"White, plain, and damask . . yds.	136,936,000	222,790,000
Printed, dyed, or checked . yds.	3,203,000	16,965,000
Sailcloth . . "	3,857,000	7,250,000
Thread for sewing . lbs.	3,229,000	3,935,000
	Value £	
	1860	1865
Linen Yarn	1,801,000	2,535,000
Tissues:		
"White, plain, and damask . .	4,161,000	7,537,000
Printed, dyed, or checked	98,000	606,000
Sailcloth . . .	175,000	383,000
Thread for sewing . .	340,000	558,000

7. The linen trade is carried on almost entirely by means of machinery; handlooms are, it is true, still in use in Ireland, but the employment of such looms is rapidly decreasing. Dr. Watts states in *The Facts of the Cotton Famine* that 'the economy of labour in the production of linen yarns appears to have made great progress during the last decade. Ten years ago, nine or ten leas per spindle per week of No. 30's yarn was considered good work; but in 1865, eighteen leas per week of the same No. were produced.'

The jute trade may also be said to be entirely performed by machinery.

8. The jury appointed to examine the linen goods sent to the London Exhibition in 1862, reported that 'both England and Ireland appear to have made considerable improvements in the cultivation and after management of flax.' Ireland, it is stated, deserved especial notice for the great taste displayed in the collection of printed cambrics and linens. The printed linens are chiefly consumed abroad. Praise was also accorded to the fine quality of the Irish bleached linens, which is ascribed to the suitability of the climate for bleaching purposes, and to the happy combination of the open-air process with the use of chemical means. Great progress was also noticed in the make of tow yarns, and in the extension of the use of power-looms.

The stationary position of the linen export trade during the ten years previous to 1861 has already been noticed. M. Alcan, the reporter to class 19 at the Exhibition of 1862, gave some very interesting remarks upon this subject, in which he attributed the want of progress to the difficulties experienced in working the raw material as compared with the facility of spinning raw cotton. He stated that flax yarns made by machinery cost more in equal length for the same weight of fibre than cotton yarns. The machinery necessary for spinning flax is much stronger and requires more steam power

than that used for spinning cotton. This is owing to the present defective mode of steeping the flax, which leaves an excessive quantity of gum in the fibre, and thus renders it more difficult to spin.

One result of the stoppage of the cotton trade during the American war was to increase the demand for linen manufactures, and thus an extraordinary impetus was given to the linen industry of the country. The high prices which linens commanded during the cotton panic induced landowners to cultivate more largely the flax crop, as well as stimulated foreign producers of flax to send their produce to the English markets; the consequence of which was a great revival of the linen trade. There is every reason to hope that, if the exertions which have been made during the past few years be maintained, the linen industry will date a new era from the temporary suspension of the cotton trade, and materially add to the wealth of the country.

As regards the jute industry, improvement in machinery is constantly being made, and, owing to recent discoveries, the application of jute to various purposes of manufacture is widely extending. The number of students attending the Dundee School of Art in the year 1865 was 1,922, and it is stated that the mechanics and operatives connected with the jute trade have derived great benefit from the instruction which they there received.

[For *Hosiery* and *Underclothing* see CLASS 34.]

Class XXIX.

COMBED WOOL AND WORSTED FABRICS.

1. The term 'Worsted,' given to fabrics made of combed wool, is said to have derived its origin from a village of Norfolk of that name, and where its manufacture was first carried on. The worsted industry is of very ancient date, but it is comparatively only of late years that it has attained its present importance. From the year 1825 it made great progress, but up to that time worsteds of pure wool only were manufactured. A few years later on the introduction of cotton warps was made, and a great impetus was thus given to the manufacture. Worsteds are now made both of pure wool, and of mixtures of wool, and cotton, silk, alpaca, mohair, &c.; and the annual value of the worsted trade is now quite equal to, if not greater, than that of the woollen industry.

Worsteds of pure wool include merinos, single and double twilled, shallons, serges, lastings, &c., and damask for hangings. Of the mixed fabrics, those composed of wool and cotton, such as 'coburgs' and 'orleans,' have had an immense consumption; the other mixtures are also manufactured on a very large scale and of every degree of quality. Bradford is renowned

for the production of single twilled merinos and mixed fabrics, and Halifax for heavy worsteds and damasks, &c.

Bradford, in the county of York, is the chief seat of the worsted industry. The number of worsted factories in each division of the United Kingdom in 1861 was:—

Divisions	Number of Factories	Number of Spindles	Number of Power-looms
England and Wales:			
Yorkshire	443	1,149,072	40,577
Other Counties	69	96,454	2,391
Total	512	1,245,526	42,968
Scotland	17	38,946	89
Ireland	3	4,700	—
Total, United Kingdom	532	1,289,172	43,048

Although there are no more recent official statistics of the number of spindles and looms employed in the worsted trade, it is generally known that their number has very much increased since 1861.

2. The sources of the supply of the raw wool, cotton, and silk used in the worsted industry will be found in the remarks to Classes 27, 30, and 31. As regards the supply of mohair, the following table shows the importations during the five years 1861-65:—

	Goats' Hair or Wool lbs.
1861	3,335,000
1862	4,048,000
1863	3,434,000
1864	4,737,000
1865	5,402,000

Mr. Behrens estimated the total quantity of raw materials (wool, mohair, cotton, &c.) used in the worsted trade in the year 1864 at about 150 million pounds, representing a value of about £33,600,000 in a manufactured state.

3. Of the total number of operatives employed in worsted factories in the United Kingdom in 1861, 76,000, or 88 per cent., were engaged in factories in Yorkshire. The ages and sex of the total number of operatives are given in the following table:—

	In England and Wales	In Scotland	In Ireland	In United Kingdom
Males:				
Under 13	6,268	—	—	6,268
13 to 18	6,424	178	12	6,614
Above 18	17,700	895	24	18,619
Total	30,392	1,073	36	31,501
Females:				
Under 13	6,906	4	—	6,910
Above 13	45,674	1,839	139	47,652
Total	52,580	1,843	139	54,562
Total	82,972	2,916	175	86,063

The above is the last official return of the

number of persons employed, but it is believed to be considerably below that of the actual number now engaged in the worsted trade of the country.

4. The average rates of wages paid in the leading branches of the worsted trade in 1866 were:—

Spinners: AT BRADFORD.

Women 7s. 0d. to 10s. 0d. per week of 55 hours

Weavers:

Men	18s. 0d.	69	”
Women	12s. 0d.	55	”

Spinners: AT HALIFAX.

Men	30s. 0d.	69	”
Women 7s. 6d. to 8s. 6d.	”	”	”

Weavers:

Men 16s. 0d. to 24s. 0d.	”	”	”
Women 8s. 0d. to 12s. 0d.	”	”	”

5. The importations of worsted yarns are noticed in the remarks to Class 30. The importations of worsted stuffs are not very large in amount. In the year 1865, 151,000 pieces were imported, valued at 334,000*l.* These goods came chiefly from France.

6. A vast increase in the exportation of worsted fabrics has taken place since the year 1860, as will be seen from the following statement:—

Articles		1860	1865
Worsted Yarn	lbs. £	26,455,000	30,221,000
		3,578,000	5,074,000
Worsted Stuffs	yds. £	148,685,000	233,078,000
		7,013,000	13,361,000

A very large trade in worsted stuffs has been carried on with France since the conclusion of the Commercial Treaty with that country, the value of such exports having reached the sum of 1,332,000*l.* sterling in the year 1865.

7. The worsted trade is entirely carried on by means of machinery. The motive power used in worsted factories in 1861 was returned as 26,234 steam horse power, and 1,970 water horse power.

8. The success of the worsted trade of England is owing to the perseverance and ingenuity displayed in originating an infinite variety of goods made of combinations of animal with vegetable fibres, which, from the range of their qualities and prices, have caused them to enter largely into the supply of the wants of the population for clothing and furniture purposes.

The chemical processes required in order that a fabric composed of both animal and vegetable substances may be made to receive an equal and regular dye, are necessarily varied and intricate; but so successful have been the efforts of the dyer, that goods made of white cotton warp and worsted weft can be dyed quite as perfect in colour as French merino of wool alone.

As regards the recent progress of the trade, the jury on mixed fabrics in 1862 reported a

'great improvement in the dye of the cotton warp goods, in the finish of the various fabrics from bright wools and mohair, and more especially in the taste and knowledge of colouring displayed in the fancy goods, which now form so large a portion of the trade.'

A School of Art was established at Bradford in the year 1865, and it will no doubt be the means of still further improving the taste of all classes connected with the important worsted industry of that district.

[For *Hosiery* and *Underclothing* see CLASS 34.]

Class XXX.

CARDED WOOL AND WOOLLEN FABRICS.

1. Although the woollen industry existed in England at a very early date, there can be little doubt that it owes its permanent establishment in a great measure to the act of King Edward III. in inviting the Flemish manufacturers to settle in this country in the year 1331. Previous to that event English wool was exported to Flanders and returned in a manufactured shape; since that period, however, the woollen manufacture has been constantly increasing and regarded as one of the most important industries of the State.

The woollen manufactures of the West Riding of Yorkshire, and those of the west of England, which were established in the reign of Edward III., have remained to the present time the chief seats of this extensive industry. Leeds is the most important centre of the West Riding district, and may be considered as the metropolis of the woollen trade. Huddersfield, with its neighbourhood, is the second in importance, and is famed, in addition to the production of broadcloths, for its large trade in fancy trousseings, &c. In the west of England, Trowbridge, in Wiltshire, is the centre of a large district which produces fancy goods and light cloths of many descriptions; and Stroud, in Gloucestershire, is celebrated for its scarlet and other bright-coloured cloths, a celebrity which it derives from the peculiar fitness of its waters for the dyeing processes. The Scotch goods, tweeds, tartans, &c., are generally of a beautiful soft character and permanent dye. Blankets, which are also included in this class, are made chiefly at Witney in Oxfordshire and at Dewsbury in Yorkshire. Flannels are produced in Wales, chiefly by hand labour, and Rochdale and district is now the centre of the English branch of this trade. Felt druggeting is made in the Yorkshire district, and is largely used in England as a cheap substitute for carpets.

A very important branch of the woollen trade, and one which deserves more than a passing notice, is that of the shoddy trade. The following interesting remarks on this trade were made by the jury on woollens at the Exhibition of 1862:—'Shoddy is of three

kinds. 1. Shoddy, as manufactured from soft woollen rags, as of flannels, blankets, stockings, carpets, &c. 2. Mungo, manufactured from hard and soft woollen rags and new cloth cuttings, &c. 3. Extract of wool, that is, wool extracted from mixed cotton and woollen rags by a chemical process, which consumes the cotton leaving the wool intact. The combination of shoddy with wool, together with the use of cotton warps, is the most valuable adaptation of materials in the history of the woollen trade which the ingenuity of man has discovered. By it multitudes of the humbler classes are enabled to obtain useful and comfortable articles of clothing, which formerly were beyond their means. Dewsbury, Batley, and the surrounding towns in the West Riding of Yorkshire are the centres of its manufacture.

The statistics of the woollen industry of the United Kingdom in the year 1861 are given below:—

Division and Counties	Number of Woollen Factories	Number of Spindles	Number of Power- looms
England and Wales :			
Yorkshire	924	1,296,190	11,405
Devonshire	16	12,585	255
Gloucestershire	49	59,986	618
Lancashire	101	277,655	6,377
Montgomery	43	20,920	262
Somersetshire	26	31,401	401
Wiltshire	32	44,825	549
Other Counties	265	109,288	477
Total	1,456	1,846,850	20,344
Scotland :			
Aberdeen	25	17,510	93
Clackmannan	15	38,311	214
Peebles	7	51,142	101
Perth	16	16,353	—
Roxburgh	21	60,747	300
Selkirk	16	46,368	158
Stirling	23	32,950	64
Other Counties	61	59,804	373
Total	184	317,185	1,303
Ireland	39	18,574	123
Total, United Kingdom	1,679	2,182,609	21,770

The number of spindles and looms returned in 1861 is, however, considerably less than the number now in use, a great impulse having been given to the woollen industry by the rise in the price of cotton goods during the cotton famine.

2. The raw material of the woollen industry is produced to a considerable extent in the country, but as no records of the actual amount of the home supply exists, only an estimate can be given. Basing the estimate on the number of sheep in the country, the home production probably amounts to 152,000,000 lbs. annually.

The annual average exportation of British wool during the past five years was 10,100,000 lbs.

Of the foreign supply above 70 per cent. is furnished on an average by the British colonies,—Australia and the possessions in

South Africa taking the lead. Germany supplies some of the finer qualities of wool, and a large quantity is also imported from South America. The rapid progress in the woollen trade of late years is shown by the following table of the importations of raw wool of all descriptions (sheep and lambs', alpaca, llama, and vicuna) in 1855, 1860, and 1865:—

Countries from which imported	In 1855	In 1860	In 1865
	lbs.	lbs.	lbs.
British Colonies:			
Australia . . .	49,142,000	59,166,000	109,734,000
India . . .	14,283,000	20,214,000	17,105,000
Cape of Good Hope, &c. }	11,075,000	16,574,000	29,220,000
Foreign Countries:			
Spain . . .	68,000	1,000,000	115,000
Germany . . .	6,128,000	9,292,000	6,858,000
Other European States }	8,119,000	28,570,000	27,693,000
South America . . .	7,106,000	8,950,000	17,867,000
Other Countries . . .	3,379,000	4,630,000	3,614,000
Total Imports . . .	99,300,000	148,396,000	212,206,000
„ Exported . . .	29,453,000	30,761,000	82,445,000
Left for consumption . . .	69,847,000	117,635,000	129,761,000

It must be borne in mind that the above statistics relate to the raw wool &c. employed in the worsted as well as the woollen industry. Of the total of 212 million lbs. imported in 1865, nearly three million lbs. were of alpaca, llama, and vicuna wool.

In addition to the above, the following quantities of woollen rags &c. used in the shoddy trade were imported:—

	Woollen Rags Tons	Woollen Rags torn up to be used as Wool Tons
1861 . . .	3,290	7,602
1862 . . .	4,311	8,972
1863 . . .	5,766	9,866
1864 . . .	5,909	10,037
1865 . . .	5,462	9,316

Mr. Behrens estimates the annual production of shoddy wool in the country at 52 million lbs., and of wool extract at 5 million lbs.

The total estimated supply of raw materials employed in the woollen and worsted industries of the country in the year 1865 may be taken as follows:—

	Million lbs.
English wool (less exports) . . .	142
Foreign „ „ . . .	130
Shoddy „ home made . . .	52
„ „ imported . . .	22
Wool extract . . .	5
Woollen and worsted yarn . . .	4½
Goats' hair or wool . . .	5
	360½

Mr. Behrens estimated the total quantity of raw materials employed in the woollen and worsted industries in 1864 at 384,000,000 lbs., which amount he divided between the two industries as follows:—In the woollen industry, 234,000,000lbs., representing a value of

£30,800,000 sterling in a manufactured state; and in the worsted industry, 150,000,000 lbs., representing a value of £33,600,000 sterling when manufactured. The imports of foreign wool in 1865 were considerably below those imported in 1864.

3. The number of operatives of each sex and age employed in woollen factories in 1861 was:—

	England and Wales	Scotland	Ireland	United Kingdom
Males:				
Under 13 . . .	3,333	29	—	3,362
13 to 18 . . .	9,811	1,327	75	11,213
Above 18 . . .	30,954	3,855	370	35,179
Total . . .	44,098	5,211	445	49,754
Females:				
Under 13 . . .	2,598	9	—	2,607
Above 13 . . .	29,613	4,592	417	34,622
Total . . .	32,211	4,601	417	37,229
Total Males } and Females }	76,309	9,812	862	86,983

The above figures are considerably short of the actual number of operatives now employed, owing to the rapid extension of the woollen industry since the year 1861.

4. The average rates of wages earned in two of the principal divisions of the woollen trade in the year 1866 were as follows:—

	Males	Per Week of 60 Hours
At Huddersfield . . .	Spinners . . .	18s. to 30s.
	Weavers . . .	18s. to 23s. 6d.
	Pattern Weavers . . .	16s. to 30s.
	„ Designers . . .	30s. to 50s.
At Dewsbury . . .	Spinners . . .	34s.
	Weavers . . .	20s.
	Pattern Weavers . . .	22s.
	„ Designers . . .	36s.

5. The English trade accounts do not distinguish the imports of woollen from those of worsted yarns. The recent increase in the quantity of imported yarn, given in the official returns as 'woollen and worsted,' is probably more owing to the demand in the worsted than in the woollen branch of trade. The following amounts of both kinds of yarns were imported between 1861 and 1865:—

	lbs.
1861 . . .	1,577,000
1862 . . .	2,244,000
1863 . . .	4,526,000
1864 . . .	4,654,000
1865 . . .	4,392,000

The above figures also include Berlin wool and yarn for fancy purposes, which amounted to 211,000 lbs. in 1865.

The value of woollen cloths imported during the same period was:—

	£
1861 . . .	119,654
1862 . . .	124,245
1863 . . .	147,757
1864 . . .	177,922
1865 . . .	190,221

6. The returns of the exports of the principal descriptions of goods included in this class indicate a prosperous state of this branch of trade, as the comparative table below will show :—

	Quantities		Value	
	In 1860	In 1865	In 1860	In 1865
	lbs.	lbs.	£ not stated	£
Woollen yarns	not stated	203,929	{	35,694
Woolens : Cloths, coatings, &c.	yards	yards		
	23,968,000	25,616,000	2,996,000	4,024,000
Flannels, blankets, and baizes	12,641,000	14,769,000	848,000	1,203,000

7. The greater part of the woollen industry is performed by machinery, but although considerable progress has been made in perfecting the machinery employed, the woollen industry is in this respect far behind the cotton industry. Hand-loom weaving is still carried on in a few country districts in Yorkshire, but the use of hand-looms is gradually diminishing. The amount of motive power in use in woollen factories in 1861 was 26,879 steam horse power, and 9,598 water horse power.

8. The progress in the woollen industry during the past ten years has been very great in all its branches. The increased supply of the raw material, the introduction of new combinations of wool with other materials, of improved machinery, and of new methods of dyeing, may be quoted as evidences of progress. The extended use of the power-loom in weaving, especially as regards its adaptation to weave patterns in any variety of colours, has materially tended to the advancement of the woollen trade. Great improvements have also been made in almost every description of machinery employed in the manufacture. The important element of increased speed in the working of the machines has, moreover, been well kept in view.

The production of shoddy cloths at a cheap price as compared with real cloths, and possessing the same qualities as pure woollens, with the exception of finish and durability of colour, has proved an immense boon to many classes of the community, not only in providing the poorer classes with good articles of clothing, but at the same time utilising a material that was formerly regarded as waste, and affording in its manufacture employment to some thousands of operatives.

The great demand for fancy woollens of late years has afforded full employment both to pattern designers and to dyers. Leeds, Huddersfield, Stroud, and Trowbridge, each possess Schools of Art, and over eight thousand students received instruction at these schools during the year 1865. The discovery of aniline has led to vast improvements both in the

patterns and colours of the better classes of woollens.

The rapid increase of co-operative societies for supplying the operatives with provisions and clothing at wholesale prices for ready money will, it is hoped, tend to an extension of economical habits among the labouring population in the woollen districts.

Class XXXI.

SILK AND SILK MANUFACTURES.

1. The silk industry of the United Kingdom, though of less magnitude than that of the other textile manufactures of the country, is nevertheless of considerable importance. Its growth was for many years retarded by a system of prohibitions and restrictions on the importations of foreign silk goods, and the competition necessary in all cases to a large production being thus denied it, it remained for a long period in a most unsatisfactory condition. The security from foreign rivalry, and the monopoly of the limited home market, which the trade so long enjoyed, were purchased, however, at a great cost. Whilst in England the majority of the manufacturers contented themselves with supplying the close home markets, without effecting any material improvements in their manufactures, in foreign countries great advances were made in the various processes of manufacture, and consequently, upon the inauguration of the free-trade system, the British silk manufacturers found themselves in a most disadvantageous position. Since the year 1851 the English silk trade has nevertheless made great progress, notwithstanding the many difficulties that beset its path.

Between the years 1850 and 1861 the number of silk factories in the United Kingdom increased from 277 in the former year to 771 in the latter; the number of spindles from 1,225,000 to 1,338,000, and the number of power-looms from 6,092 to 10,709. The distribution of silk factories in 1861 in the three divisions of the kingdom was :—

	Number of Factories	Number of Spindles	Number of Power- looms
England and Wales :			
Cheshire . . .	175	409,470	1,509
Derbyshire . . .	42	98,210	449
Essex . . .	9	155,681	591
Lancashire . . .	48	128,109	4,201
Warwickshire . . .	331	6,732	2,065
Yorkshire . . .	27	122,952	8
Other Counties . . .	129	384,756	1,812
Total . . .	761	1,305,910	10,635
Scotland . . .	8	31,452	60
Ireland . . .	2	1,182	14
Total, United Kingdom	771	1,338,544	10,709

Silk stuffs are produced principally at Manchester, ribbons at Coventry, and fancy silk goods at Macclesfield.

2. The raw material employed in the silk industry is supplied chiefly by Italy, China, India, and Japan, the bulk being contributed by the three last-named countries.

The quantities of the raw material retained for consumption during the six years 1860-65 were:—

	Raw Silk lbs.	Knubs, Husks, and Waste lbs.
1860 . . .	6,024,000	1,784,000
1861 . . .	4,613,000	3,225,000
1862 . . .	5,166,000	2,678,000
1863 . . .	5,368,000	3,455,000
1864 . . .	1,733,000	2,691,000
1865 . . .	4,595,000	3,608,000
Average . .	4,583,000	2,907,000

A small quantity of thrown silk is also imported, but the importations have considerably fallen off since 1860. The imports in 1865 were 60,130 lbs. The above figures refer to the total supply of raw silk, part of which is consumed in the manufacture of mixed fabrics, hosiery, lace, &c.

3. The number of persons of each sex and age engaged in the silk manufacture in England and Wales in the year 1861 was:—

Males:	No.
Under 13 . . .	2,120
13 to 18 . . .	3,185
Above 18 . . .	9,996
Total . . .	15,301
Females:	
Under 13 . . .	4,673
Above 13 . . .	31,217
Total . . .	35,890
Total males and females . .	51,191

There are no returns of the number of operatives employed at the present time.

4. The wages in the Manchester silk trade increased 10 per cent. between the years 1849 and 1859; in the latter year the average rates paid to the principal operatives were:—

	Per Week of 60 Hours
	s. d.
Millmen and throwsters . . .	17 0
Spinners (young men and boys) . .	10 6
Doublers (women) . . .	8 9
Warpers (men) . . .	24 0
Weavers „ . . .	20 0

It was stated in a report by a local committee at the British Association at Birmingham in 1865, that the number of persons engaged in the Coventry ribbon trade was estimated at 2,000 males and 4,000 females in 1864; although the estimate especially as regards females was considered to be below the mark. The average wages paid in the ribbon

trade for an expert hand varied from 25s. to 28s. per week. The wages earned by females ranged from 7s. to 10s. per week.

5. The value of silk manufactures imported into the United Kingdom has increased rapidly since the year 1860. The increase is due to the extension of trade between this country and France, in consequence of the Commercial Treaty with that country. The chief imports from France consist of plain silk and satin, broad stuffs and ribbons.

The total value of silk manufactures imported during the six years, 1860-65, was—

	£
1860	3,314,000
1861	5,906,000
1862	6,618,000
1863	6,639,000
1864	7,620,000
1865	8,496,000

6. The value of British silk manufactures exported during the same years was—

	£
1860	1,587,000
1861	1,395,000
1862	1,264,000
1863	1,421,000
1864	1,460,000
1865	1,404,000

7. A portion of the silk ribbon trade is still carried on in the operatives' dwellings, but the general tendency is towards a concentration of the workpeople in factories.

Owing to many causes, the silk industry is perhaps the most fluctuating in nature of all the textile industries. The English silk trade, in common with that of other countries, has suffered materially the past few years from a disease in the silkworm, and from a change in fashion which has greatly affected the ribbon branch of the trade. Taking these facts into consideration, the statistics of the export trade in British silks may be quoted as evincing a more satisfactory position of the silk industry than might under the circumstances have been expected.

Great improvements have been made in the finish and colour of English ribbons, and it is believed that the specimens of these and other goods shown at the present Exhibition will manifest that a considerable progress has been made in the British silk trade generally since the last Paris Exhibition in 1855.

[For *Hosiery* and *Underclothing* see CLASS 34.]

Class XXXII.

SHAWLS.

The manufacture of shawls has made great advance during the past fifteen years in the United Kingdom. Woollen shawls are made chiefly in Scotland and in Yorkshire. Paisley

in Scotland has for many years been noted for the excellent quality of goods of this description, and Bradford now manufactures worsted shawls in great variety. Silk shawls are made principally at Norwich.

The chief descriptions of shawls imported are Cashmere from India, silk crape from China, &c., and woollen shawls principally from France.

The following are the statistics of the British export trade in this class of goods in the year 1865:—

	No.	£
Woollen and worsted shawls	431,350	—145,570
	Dozens	
Handkerchiefs, scarfs, and shawls of silk only	129,560	—235,825
Ditto of silk mixed with other materials	15,513	—16,461

Great improvements in the designs used for shawls have been made since 1851, especially in the Scotch goods. Paisley possesses a School of Art, established in 1848, in which 1,063 students received instruction in the year 1865.

Class XXXIII.

LACE, NET, EMBROIDERY, AND SMALL WARE MANUFACTURES.

1. The chief seat of machine lace manufacture is at Nottingham and the neighbourhood. It is also made in Derbyshire, at Tiverton, Barnstaple and Chard. The other descriptions of lace are made in the counties of Buckingham, Bedford, Oxford, and Northampton, and at Honiton and Limerick. The muslin embroidery trade is carried on in Ireland and Scotland.

The following statistics of the machine lace trade of the Nottingham and other districts in the year 1866 are taken from a return made to the Board of Trade by the Chamber of Commerce of Nottingham:—

	No.
Circular machines making bobbin net	1,797
Lever's machines, making fancy lace goods	1,589
Sundry machines	166

Of the 1,797 circular machines above stated, 700 were employed at Nottingham and neighbourhood, 500 in Derbyshire, 200 at Tiverton, 100 at Barnstaple, and 300 at Chard. The whole of the 'Lever's' and 'sundry' machines were at work in the Nottingham district.

2. The sources of the supply of the raw material used in these industries will be found stated in the remarks to Classes 27–31.

3. The number of persons employed in this industry at Nottingham and district (exclusive of girls engaged from an early age in the houses of 'mistresses,' often their own mothers, at

work of a variety of kinds from warehouses, &c.), is about 38,000 persons.

According to the report of the jury on Class 24 at the London Exhibition of 1862, the pillow-lace industry affords employment to about 25,000 women and children, who are engaged in the work at their own homes; and the muslin embroidery trade, when in full work, to not less than 200,000 persons in Ireland, and to 25,000 persons in Scotland, who also work at their own homes.

4. The average rates of wages paid to the leading classes of operatives in the Nottingham district in 1866 were—

Employed at bobbin-net machines making all kinds of plain and fancy lace:—

Males:	Wages per Week	Hours of Labour per Day
Boys	5s.	10½
Young men	16s.	{ Each machine, as a rule, employs two men (who work in shifts) from 9 to 10 hours each per day.
Men	25s.	
„ first-class hands	35s. to 50s.	
Superintendents of machinery	35s.	10½

Females:		
From 7 years of age, menders and threaders	4s. to 8s.	Variable hours.
White menders and folders	9s. to 12s.	{ In factories, 10½
Dressers	10s.	
Overlookers and superior warehouse women	13s. to 15s.	{ In warehouses, from 8 a.m. to 7 p.m.

The girls from seven years of age, employed as menders, are chiefly engaged at their own homes.

Occasional overtime in the trade generally is paid extra.

5. The following table shows the value of lace and embroidery imported into the United Kingdom in the year 1865:—

Lace:	£
Mohair or worsted	256
Pillow-lace of thread or cotton	78,861
„ „ silk	18,855
Machine or imitation lace not made by hand	69,734

Embroidery and Needlework:	
Curtains embroidered on muslin or net	16,115
Of other sorts	41,970

Pillow-lace is imported chiefly from Belgium, and machine-lace from France.

6. The exportations of the articles of British produce comprised in this class during the same year were:—

Cotton lace and patent net . . .	£ 465,611
Linen lace	322
Silk lace, of pure silk	63,351
„ mixed with other materials .	84,314
Embroidery and needlework of all kinds	174,670

7. The divisions of the trade carried on by hand and by machinery have already been referred to.

8. Mr. Birkin, in reporting upon the progress of machine-made lace in 1862, says that 'the style of work and designs generally are much improved, and more elaborate patterns are produced than formerly. This, no doubt, has been promoted by the facilities the application of the Jacquard has given to the lace-machine, and the more correct taste diffused amongst the designers and draughtsmen by the Schools of Art.' A School of Art has been in existence at Nottingham since 1843.

A considerable progress has also taken place in the manufacture of lace curtains.

Class XXXIV.

HOSIERY AND UNDERCLOTHING, AND ARTICLES APPERTAINING THERETO.

1. The manufacture of hosiery is principally carried on in the counties of Nottingham, Leicester, and Derby, and at a few towns in other counties in England; at Balbriggan in Ireland; and at Hawick, Galashiels, &c., in Scotland. Nottingham produces cotton and silk goods, Derby chiefly silk, and Leicester woollen articles.

The statistics of the Nottingham trade, as furnished by the Chamber of Commerce of that town to the Board of Trade, for 1866, were as follows:—

	No.
Narrow hand frames . . .	11,000
Wide hand frames . . .	4,250
Rotary frames . . .	1,000
Sets, circular frames . .	1,200
Warp frames . . .	400

There are no recent returns of each description of machinery employed at Leicester, but it is stated by the Chamber of Commerce that the old-fashioned narrow frames are being superseded by wide frames; also that the number of circular frames, which are used for low-priced goods principally, is rapidly increasing. The increase of the total population in the Leicester district from 67,000 persons in 1861 to over 80,000 persons in 1866, will indicate to some extent the progress that is taking place in the manufactures of the district.

The latest returns for Derby and Scotland are those published in 1861, at which date there were four hosiery factories in Derby, and four in Scotland.

The glove and umbrella trades are both of

considerable importance, although there are no returns of the actual production of these articles. Gloves are principally made at Worcester, Leicester, Nottingham, and in London. Large branches of the umbrella trade are located in Lancashire and in the Metropolis; and the manufacture of umbrella frames is extensively carried on in Birmingham.

2. The sources whence the raw materials employed in the hosiery trades are derived will be found noticed in the remarks to Classes 27–31.

3. The number of persons employed in the hosiery trade at Nottingham and district is about 64,000. There are no returns of the number of persons now engaged in the Leicester branch of this manufacture; but, according to the census of 1861, 22,000 were returned as so employed.

The average rate of wages paid to operatives in the hosiery trades at Nottingham and Leicester in the year 1866 were—

At Nottingham:		Per Week
Employed on—		
Narrow hand frames . .	Men, women, and youths . .	10s. 6d.
Wide hand frames . .	Men . . .	15s.
	Girls and women	4s.
Rotary frames	Men . . .	20s. to 32s.
	Girls and women	5s.
Circular frames	Men . . .	20s. to 35s.
	Youths and women	12s. to 20s.
	Girls and women (menders)	7s. to 12s.
Warp frames	Men . . .	16s. to 35s.
	Youths . . .	12s. to 20s.

The narrow and wide frames were at work in 4,700 shops, averaging three to four frames each, usually forming part of the dwelling-houses of the operatives. The operatives on the other machines are employed the usual number of factory hours.

At Leicester:		Per Week of 60 Hours
Plain Hosiery and Underclothing:		
Employed on narrow frames (males)		9s. to 15s.
„ wide frames „		20s. to 30s.
„ circular frames (females)		12s. to 20s.
Fancy Hosiery and Underclothing:		
Ordinary workmen (males)		14s. to 28s.
Skilled „ „		20s. to 35s.

The general condition of the workpeople in these trades has very much improved of late years.

5. The value of the principal articles included in this class imported into the United Kingdom in 1865 was—

	£
Hosiery, cotton . . .	70,502
„ woollen . . .	18,480
Stays . . .	8,890
Umbrellas and parasols (silk) .	4,722
Canes and sticks . . .	85,200

6. The value of the principal articles of British produce of the same kinds exported in 1865 was :—

Hosiery, underclothing, gloves, &c.:	£
Of cotton	453,837
„ linen	20,091
„ silk	26,698
„ wool	307,782
Umbrellas and parasols	160,177

7. A considerable proportion of the hosiery trade is performed by hand labour, but the productions by machinery are annually increasing in quantity, quality, and cheapness.

8. The extension of the home demand for the articles comprised in this class, in addition to the demand in the colonies, has led to great progress and improvement in these branches of national industry. One of the most important recent achievements at Nottingham has been the production of perfectly formed stockings and underclothing on the machines. The colours of fancy hosiery have also been greatly improved.

Class XXXV.

CLOTHING FOR BOTH SEXES.

Clothing of all descriptions, it is unnecessary to observe, is to a greater or less extent produced in every town and village throughout the country. There are, however, three important industries included in this class, viz. those of hat, bonnet, and boot and shoe making, which, having special localities of production, may be briefly noticed. As regards clothing peculiar to various professions and trades, the distinction of dress as marking particular classes of the community has, with few exceptions, disappeared in England. The national costumes of Wales, Scotland, and Ireland are to a certain extent maintained, but the general tendency of the middle and lower classes of society is to imitate the style of their superiors in matter of dress; the chief difference in their costume being that of fashion as to make, and quality as to material of which made. In no other country in the world, except perhaps America, do the working classes dress so well or so expensively as in the United Kingdom.

Hats are made in London, at Manchester and neighbourhood, and in other parts of Lancashire, Cheshire, Edinburgh, Glasgow, &c. The straw plait industry, which furnishes the raw material for straw hats and bonnets, is chiefly carried on at St. Albans, Dunstable, Tring, and a few other localities in England. The manufacture of boots and shoes is conducted on a very large scale at Northampton, Norwich, and Leicester. The latter is a special wholesale manufacture of riveted instead of sewn goods, and affords employment to some thousands of workpeople.

The following number of persons were employed in some of the principal branches of

trade connected with the manufacture of clothing in the year 1861 :—

Trades	In England and Wales	In Scotland	In Ireland
Tailors :			
Males	109,004	17,276	22,523
Females	27,386	473	932
Total	136,390	17,749	23,455
Milliners :			
Males	803	31	—
Females	286,298	33,066	50,854
Total	287,101	33,097	50,854
Hatters & Cap Makers :			
Males	11,502	707	886
Females	7,911	1,697	719
Total	19,413	2,404	1,605
Straw Hat and Bonnet Makers :			
Males	1,740	313	15
Females	22,245	1,336	1,343
Total	23,985	1,649	1,358
Straw-plait Makers			
Males	2,128	1	6
Females	27,739	30	162
Total	29,867	31	168
Boot and Shoe Makers :			
Males	211,233	26,786	41,207
Females	39,358	2,093	5,329
Total	250,591	28,879	46,536

The number of females employed in the manufacture of boots and shoes is exclusive of shoemakers' wives, who, in many instances, assist their husbands in some branches of the work. The total number of shoemakers' wives in Great Britain was returned as 90,970.

The average rates of wages paid in the Leicester boot and shoe trade in 1866 were—

	Per Week of 60 Hours	
	s.	d.
To machine hands (females)	12	0
„ fitters	11	0
„ nailers (males)	22	0
„ finishers „	30	0
„ cutters „	23	6

Fifty per cent. of the manufacture is performed by female operatives.

There are no recent statistics of the Northampton trade, but, according to the census of 1861, about 20,000 persons were engaged in the boot and shoe trade in that year.

The average rates paid in the hat trade at the undermentioned places in 1866 were :—

Silk Hat Makers	At Bristol	At Edinburgh	At Glasgow
	Per Week s. d.	Per Week s. d.	Per Week s. d.
Body makers . . .	25 0	33 0	34 0
Silk finishers . . .	25 0	30 0	36 0
Tipplers off . . .	30 0	39 0	40 0
Hours of labour per day . . .	8	12 to 15	10

The value of the imports and exports of hats, bonnets, &c., and of boots and shoes in 1865 was:—

IMPORTS.

Hats and bonnets :	£
Of straw	556,065
„ felt	35,812
Platting of straw . . .	102,886
„ other kinds	30,225
Boots and shoes	104,693

EXPORTS.

British Produce.

Hats :	£
Of felt	280,851
„ silk	25,909
„ straw	166,599
„ other kinds	10,235
Hatters' wares	70,343
Platting of straw, &c. . .	49,996
Boots and shoes	1,462,105

France furnishes the greater part of the imported goods, and the Australian colonies are the chief consumers of the British goods exported.

There is also a large export trade in apparel and slops from the United Kingdom, and which amounted in the year 1865 to—

Apparel, old and new . .	£ 1,933,000
Slops and negro clothing .	706,000

£2,639,000

About one-half of these exports went to the Australian colonies.

Class XXXVI.

JEWELLERY AND PRECIOUS STONES.

The manufacture of jewellery and of imitation jewellery in the United Kingdom is of considerable importance; the seat of the former being principally in the Metropolis, and of the latter at Birmingham. Owing to the increased wealth of the population of late years, the home demand for this class of goods has been very great. There are no returns of the production of the superior kinds of jewellery. The value of gold, silver, and precious stones used annually in the Birmingham trade is estimated at about one million and a quarter sterling. The number of persons who are employed in the Birmingham branch of the trade is about 7,500,

and the rates of wages earned by jewellers from 25s. to 50s. per week, and in some instances more. Enamellers earn from 3*l.* to 5*l.* per week; boys from 4*s.* to 11*s.*

The number of persons (exclusive of workmen) in the Metropolis engaged in the jewellery trade at the present time amounts to—

Jewellers	484
„ and goldsmiths . . .	159
Chasers	41
Jewellery case makers . .	36

The value of jewellery imported in 1865, chiefly from France and Belgium, amounted to 87,981*l.*, and of precious stones (exclusive of diamonds), 32,000*l.* The value of jewellery of British manufacture exported in the same year was:—

Jewellery &c. of gold or silver .	£ 94,313
„ of other sorts	69,918
	£164,231

A considerable rise in the value of precious stones has taken place during the last twenty years.

Machinery and steam power are employed in some branches of the jewellery trade, which have enabled the manufacturer to effect a large reduction in the price of the goods.

Mr. J. S. Wright, in reporting upon the Birmingham jewellery trade, says that it would not be right to omit to mention that the School of Art established in that town has largely contributed to the development of the artistic faculty in the jewellers of the place. Many hundreds of workmen have been trained there. The effects of the instruction they have received will be still more strongly marked in years to come.

Class XXXVII.

PORTABLE WEAPONS.

1. The manufacture of small arms is carried on at Enfield (the Government factory), at Birmingham, and in London. Bayonets, matchets, and swords are principally made at Birmingham, the latter from pieces of steel called 'sword moulds,' which are manufactured at Sheffield. The bulk of the fire-arms made for exportation is produced at Birmingham. The London manufacturers are celebrated for the make and finish of first-class rifles and sporting guns. Both the Birmingham Small Arms Association and the London Armoury Company manufacture fire-arms for the use of the Government.

2. The wood used for gun stocks is beech, grown chiefly in Gloucestershire and Herefordshire; and walnut, imported from Italy and Germany. The iron used for the making of gun barrels requires extraordinary care in its

preparation, and the Birmingham operatives have attained a high degree of perfection in its manufacture.

3. The number of workmen employed at the Government factory, when in full operation, is about 2,000. The Birmingham branch is estimated to employ over 7,000 operatives. The London trade afforded employment to about 2,000 persons in the year 1861.

The total number of persons employed as gunsmiths or gun manufacturers, in 1861, as returned by the census, was:—

In England and Wales	11,873
Scotland	204
Ireland	256
Total	12,333

4. According to a return made by the Birmingham Chamber of Commerce to the Board of Trade, in 1866, the average rates of wages in the gun-making trade ranged as follows:—

	Per Week of 60 Hours	
	s.	s.
Males—Adult	12	to 60
„ Boys	3	15
Females—Adult	6	12
„ Girls	3	4 6d.

Mr. Goodman, Chairman of the Birmingham Small Arms Company, in a report to the British Association in 1865, stated that, during the past ten years, there was little doubt that the wages earned in the gun trade had exceeded those in any other trade, and that workmen in some of the branches which require great skill earn, when in full employment, as much as from 5*l.* to 6*l.* a week.

5. The value of fire and side arms of all descriptions imported into the United Kingdom in the year 1865 amounted to 243,699*l.*, of which 192,000*l.* was from Belgium. The total importation of walnut wood was 5,689 tons, and of rough gun stocks 5,204 cwts. More than thirty-eight million percussion caps were also imported.

6. The following is the official return of the number and value of British small arms exported from the United Kingdom during the five years 1861–65:—

	No.	Value
1861	315,000	£515,000
1862	702,000	1,573,000
1863	439,000	856,000
1864	254,000	348,000
1865	291,000	424,000

The large exports at the beginning of the above period were caused by the demand in the United States. Mr. Goodman believes that the above returns understate the real value of the British export trade, as large numbers, and particularly high-priced sporting guns, are sent

out of the country without being entered at the Custom-house.

The principal descriptions of fire-arms, &c. exported in the year 1865 were:—

	No.
Muskets	173,153
Rifles	85,322
Fowling-pieces	15,505
Revolvers	8,061
Pistols, &c.	8,994
£	
Swords, cutlases, bayonets, &c.	4,538
Mille.	
Percussion caps	284,895

7. Machinery is now employed in the manufacture of all parts of fire-arms, and by its aid the English maker is enabled to compete successfully with manufacturers in foreign countries, who would otherwise, on account of the cheapness of labour at their command, be enabled to undersell him in the various markets of the world.

8. The improvements that have taken place in the last few years in the make of small arms are so widely known that a reference in this place is scarcely required. The most important recent improvement is the general introduction of the principle of breech-loading.

There are many branches connected with the trade in which the art-workman may find ample scope for his talents, and in which English makers already display a considerable amount of taste. The English workmen who may visit the present Exhibition will do well, however, to take a lesson from the articles exhibited by the Paris gun-makers, whose goods are renowned for the artistic beauty of their decorations.

Class XXXVIII.

TRAVELLING APPARATUS AND CAMP EQUIPAGE.

The manufacture of trunks, travelling-bags, and other articles comprised in this class forms an industry of considerable importance, but there are no means of ascertaining its actual extent. New forms of portmanteaus are almost daily appearing, intended to suit the wants of the numerous classes of travellers in the present day. Great improvements have also been made in the make of travelling-bags during the last ten years. The manufacture of travelling-rugs or railway-wrappers is carried on at Dewsbury and Huddersfield, and has now become a large branch of the woollen trade. The use of tents in the United Kingdom, with the exception of those used for agricultural purposes, is very limited, the chief manufacture being for the use of the Army on foreign stations.

Class XXXIX.**TOYS.**

Many descriptions of toys (especially wax-dolls) are largely produced in the United Kingdom, but owing to the peculiarities of the toy trade it is impossible to ascertain the value of the annual production of these articles.

The number of manufacturers engaged in

the toy trade in London (not including operatives) is:—

Toy makers . . .	44
„ dealers . . .	153
Doll makers . . .	19
Rocking-horse makers . .	8

The import trade in foreign toys has greatly increased since the year 1850, having risen from 46,130*l.* in that year to 163,024*l.* in the year 1865.

GROUP V.

(CLASSES XL.-XLVI.)

PRODUCTS (RAW AND MANUFACTURED) OF MINING
INDUSTRY, FORESTRY, &c.

Class XL.

MINING AND METALLURGY.

1. This class relates to the most important branch of the native productions of the country. It is principally owing to the abundance of her mineral wealth, and especially to the happy circumstance of coal and iron being produced in the same localities, that England has attained such a high position as a manufacturing state. The rapid development of railways and of steam navigation are also to be attributed to the same cause. The following abstracts of the production of minerals and metals in the United Kingdom in the year 1865 are taken from the official returns compiled by Mr. Robert Hunt, the Keeper of Mining Records:—

Coal produced in 1865.

Where produced	Amount raised
	Tons
Durham and Northumberland . .	25,032,694
Cumberland	1,431,047
Yorkshire	9,355,100
Derbyshire	4,595,750
Nottinghamshire	1,095,500
Leicestershire	965,500
Warwickshire	859,000
Stafford and Worcestershires . .	12,200,989
Lancashire	11,962,000
Cheshire	850,000
Shropshire	1,135,000
Gloucester, Somerset, and Devon-shires	1,875,000
Monmouthshire	4,125,000
South Wales	7,911,507
North Wales	1,983,000
Scotland	12,650,000
Ireland	123,500
Total	98,150,587

After deducting 9,000,000 of tons exported, and nearly 29,000,000 used in the manufacture of pig and bar iron, &c., there remained about 60,000,000 of tons for home consumption in domestic and other uses, or an average of more than 2 tons per head of the population. The annual average of coal produced in the ten years ending 1865 was 84,960,000 tons.

IRON ORE.—The total production of this ore in the year 1865 amounted to 9,910,000 tons.

It was raised in twenty English counties,—the largest returns being from the North Riding of Yorkshire, Cumberland, and Staffordshire—and in Wales, Scotland, and Ireland.

PIG IRON MADE.—The total make of pig iron in 1865 was 4,819,000 tons. The following table shows the chief localities of manufacture:—

Divisions and Counties	No. of Iron Works	No. of Furnaces built	No. of Furnaces in blast	Tons of Pig Iron produced
England:				
S. Staffordshire . .	64	172	114	692,627
York: N. Riding . .	14	65	53	486,421
Durham	19	65	47	476,767
N. Staffordshire . .	8	35	27	206,268
Lancashire	6	24	16	204,925
Derbyshire	15	41	34	189,364
York: W. Riding . .	14	38	29	123,233
Shropshire	11	29	23	117,343
Cumberland	4	16	9	107,430
Other counties . . .	21	42	24	134,489
Total	176	527	376	2,738,867
Wales:				
Glamorganshire . .	18	81	64	408,416
Monmouthshire . .	10	68	45	357,656
Other counties . . .	21	63	31	150,837
Total	49	212	140	916,909
Scotland:				
Lanarkshire	15	101	84	1,163,478
Other counties . . .	17	79	57	
Total	32	180	141	

The following number of forges and mills were at work in 1865, engaged in the production of finished iron:—

Divisions and Counties	No of Works	No. of Puddling Furnaces	No. of Rolling Mills
England:			
South Staffordshire . .	118	2,116	224
Durham	16	688	61
Yorkshire	30	922	115
Other counties	34	903	113
Total	198	4,629	513
Wales	39	1,395	170
Scotland	15	383	47
Total	252	6,407	730

There are no returns of the total production of *finished iron* in the United Kingdom. Mr. J. Jones, in a report to the British Association, at Birmingham, in 1865, estimated the annual production of the Staffordshire district at 855,000 tons, and the production of the iron-works in connection with the Northumberland and Durham coal-field is estimated at about 300,000 tons per annum.

The manufacture of steel is carried on to a large extent in the country, chiefly at Sheffield and also in Staffordshire and Northumberland, but there are no statistics of the total production.

The estimated production in Sheffield in 1862 was 79,000 tons of blistered, and 52,000 tons of cast, steel.

LEAD.—The amount of ore raised was 90,452 tons, and of lead produced 67,181 tons. Lead is produced in each division of the kingdom; the largest supply in 1865 was raised from mines in Durham and Northumberland.

COPPER.—198,298 tons of ore were raised, principally in the counties of Cornwall, Devonshire, and Cheshire; and 11,888 tons of Copper were produced in the United Kingdom in 1865.

TIN.—This mineral is found in Cornwall and Devonshire; and the amount of tin ore raised in 1865 was 15,686 tons. 10,039 tons of metallic Tin were produced in the same year.

Zinc, pyrites, small quantities of silver and gold, and several kinds of earthy minerals, are also produced in the United Kingdom; as are also building stones and clay, in large quantities.

Salt is produced in Cheshire, in Worcestershire, and in Ireland. The Cheshire salt works are capable of producing 1,000,000 tons per annum; the production of the Worcestershire works is about 200,000 tons per annum. The production of salt in Ireland is on a comparatively small scale.

The total value of the mineral productions of the United Kingdom in 1865 is stated as follows:—

	£
Metals	15,773,000
Coal	24,538,000
Earthy minerals . .	1,434,000

£41,745,000

The value of salt, clay, and building stones is not included in the above figures.

It would be impossible to give an outline of the numerous important trades connected with this class in the limited space allotted to these remarks. It can only be briefly mentioned that the iron hardware trades are centred chiefly at Birmingham, Wolverhampton, Walsall, and Sheffield; the brass and copper manufactures at Birmingham and Bristol; electro-plated wares at Sheffield and Birmingham; needles and fish-hooks at Redditch; pins at Birmingham; wire-drawing at Birmingham, Sheffield, Manchester, &c.; and edge-tools at Sheffield.

2. The raw materials employed in the British metal manufactures are chiefly drawn from the home supplies. Considerable quantities of minerals and metals are, however, annually imported. The subjoined table shows the quantities of the leading descriptions imported in 1865:—

Articles	Quantities
	Tons
Copper ore	82,562
„ regulus	39,686
„ unwrought and part wrought	21,717
Iron ore	76,977
„ pig	11,380
„ bar	51,464
Steel	6,777
Lead ore	5,584
„ pig and sheet	34,903
Silver ore	6,587
Tin ore	639
„ blocks, bars, &c.	5,698
Zinc, in cakes	22,193
„ rolled	8,492

Chili supplied the greater part of copper ore and regulus; Spain, France, and Sweden, the iron ore; Sweden, pig and bar iron and steel; Italy, lead ore; Spain, pig and sheet lead; and the Dutch settlements in the Eastern Archipelago, tin. Zinc was chiefly imported from Belgium, Holland, Hamburg, and Prussia.

3. The estimated number of males employed in collieries in the United Kingdom in the year 1865 was 315,000. The rates of wages paid to miners and hewers, adults, at Newcastle in 1866 was 5s. 9d. per day of 7 hours. The wages of males in other occupations connected with coal-mining ranged from about 3s. to 5s. per day; boys, 1s. to 3s. per day. The net earnings per head in the Staffordshire iron trade are roughly estimated at about 28s. to 30s. per week, though some workmen earn from 2l. to 4l. In Glasgow, iron-moulders, adults, obtained 29s. per week of 60 hours in 1866; boys, 4s. to 16s.; for other occupations in foundries, 15s. to 25s. In the Birmingham brass trade, blacksmiths and whitesmiths, 24s.; pattern makers, 33s.; and joiners in engineer work, 30s. per week of 58 hours. Cabinet lock-makers, 40s. In the Sheffield edge-tool trade, in 1866—forgers, 31s. to 36s.; strikers, 21s. to 24s.; grinders, 45s. to 50s.; and hardeners, 24s. to 28s. per week of 42 hours. There are no official returns of the number of persons employed in the above trades, and owing to the diversity of the occupations connected with them, it is scarcely possible to form a correct estimate.

The total number of persons engaged in connection with mining and metal manufactures in the United Kingdom in 1861 was about 1½ million persons. The condition of the miners is now the subject of much greater care on the part of the employer than was formerly the case, and the majority of owners of mines and of metal manufactures not only endeavour to promote the health and comfort of their workpeople, but also do a great deal to

to encourage the education of their children, and generally to contribute to the welfare of their families.

4. The total value of metal manufactures imported into the United Kingdom in the year 1865 was less than half a million sterling. The chief part of the importations consisted of iron wares, principally from Belgium and Holland.

5. The following table shows the quantities of the principal articles of British produce, comprised in this class, exported from the United Kingdom in the year 1865 :—

Articles	Quantities
Coal and coke Tons	9,170,000
Copper and wares Cwts.	632,000
Brass "	44,000
Hardwares £	3,924,000
Iron, pig Tons	547,000
" bar "	254,000
" railroad "	434,000
" other kinds and wares "	357,000
Steel "	24,000
Lead "	27,000
Plated wares £	112,000
Salt Tons	579,000
Tin Cwts.	104,000
" plates £	1,481,000
Zinc Cwts.	89,000

The total value of the above articles exceeded 28 millions sterling.

6. It is not possible to distinguish the divisions of the above trades which are carried on by hand and by machinery. The general tendency, however, is to substitute machine for hand labour wherever practicable.

7. The progress in the mining industry of the United Kingdom since the date of the last Paris Exhibition may be gathered from the increased production of minerals and metals in 1865 as compared with 1855. The production of coal increased 59 per cent. during the period; pig iron, 50 per cent.; tin, 66 per cent.; lead, 3 per cent.; while copper declined 44 per cent.

Great improvements have been made in the British hardware manufactures since 1851, most if not all of which may either directly or indirectly be said to have had their origin in the Industrial Exhibition held in London in that year. The work begun by the Exhibition was followed up by the Department of Science and Art, and by means of local exhibitions and instruction afforded at local Schools of Art, established in the centres of the manufacturing districts, an immense advance in the design and style of English goods has become apparent.

The jury on hardwares at the Exhibition of 1862 reported that 'it is gratifying to be able to state, that in one way or other there is an improvement in almost every object exhibited. There is greater neatness and regularity in the forms of the low-priced goods. More appropriate ornamentation is displayed on those articles which are both useful and ornamental, and a higher standard of art has been attained in ornamental metal-work for domestic and ecclesiastical decoration.'

Class XLI.

PRODUCTS OF THE CULTIVATION OF FORESTS, AND OF THE TRADES APPERTAINING THERETO.

Compared with those of foreign nations, the forests of the United Kingdom are of small extent. The annual value of the production of timber and other descriptions of wood is estimated at about two millions sterling. Oak, though not the most abundant, is the most important and valuable of British trees, and is extensively cultivated in the Royal forests.

The home production of timber is considerably below the demand, and large importations are annually made from abroad. Many other forest productions, not grown in the country, are also used in vast quantities. The following table shows the principal importations of such articles in the year 1865 :—

Articles	Quantities
Ashes, pearl and pot Cwts.	144,000
Bark, for tanning or dyeing "	431,000
Cork "	122,000
Corks, ready cut Lbs.	2,012,000
Galls Cwts.	16,000
Shumac Tons	18,000
Terra Japonica "	16,000
Valonia "	20,000
Wood and timber :	
Not sawn or split, including teak Loads	1,686,000
Deals, battens, &c., sawn or split "	2,136,000
Staves "	67,000
Firewood "	180,000
Hoops "	8,000
Lathwood "	105,000
Dyewoods Tons	44,000
Hardwoods "	68,000

The total value of the above articles amounted to 15,888,000*l.* sterling. A small amount of foreign timber is re-exported, but it is not of sufficient importance to be noticed.

Pot and pearl ashes were obtained chiefly from the British colonies in North America; bark from Belgium and Holland; cork from Portugal; corks, ready cut, from France, Spain, and Portugal; galls from China, India, and Turkey; shumac from Sicily; terra japonica from India and Singapore; valonia from Turkey; wood and timber from British North America and the Baltic; teak from India and Singapore; cedar from Cuba; and mahogany from Central America and the United States.

Class XLII.

PRODUCTS OF SHOOTING, FISHING, AND OF THE GATHERING OF FRUITS OBTAINED WITHOUT CULTIVATION.

Several articles comprised in this class, such as hare, rabbit, and other skins, feathers, horn, bone, wax, &c., are produced in the United

Kingdom but there are no means of ascertaining the extent of their production. The supplies of fish-oils and of whalebone have declined of late years, owing, in a great measure, to the discovery of materials which have been found to be better suited to the purposes for which the older articles were employed.

Although many of the most important articles included in this class are not produced in the country, they are largely consumed. The following figures show the quantities of the principal foreign products of shooting, fishing, &c., imported into the United Kingdom in 1865:—

Bark, Quercitron . . .	cwts.	24,954
„ for tanners . . .	„	405,856
Bones for manufacturing purposes . . .	tons	8,666
Bristles . . .	lbs.	2,566,000
Cork, uncut . . .	tons	6,103
Feathers, for beds . . .	cwts.	13,493
„ ornamental . . .	lbs.	54,211
Nuts, cocoa . . .	no.	2,545,000
„ ground . . .	tons.	1,939
Gums . . .	cwts.	182,000
Caoutchouc . . .	„	71,392
Gutta percha . . .	„	29,077
Hair, cow, ox, horse, &c. . .	„	74,851
Horns . . .	tons.	3,678
Isinglass . . .	cwts.	2,764
Oil, train . . .	tons.	10,005
„ spermaceti . . .	„	2,438
Quills . . .	no.	10,949,000
Rosin . . .	cwts.	459,000
Skins, coney . . .	no.	1,059,000
„ deer . . .	„	92,000
„ goat . . .	„	2,797,000
„ kid . . .	„	330,000
„ lamb . . .	„	708,000
„ sheep . . .	„	4,300,000
„ seal . . .	„	529,000
Ivory, elephants' teeth . . .	cwts.	10,268
„ vegetable . . .	„	22,313
Tortoiseshell . . .	lbs.	39,288
Wax, bees . . .	cwts.	10,600

The above figures relate to the total import trade; in some cases, a considerable re-exportation takes place.

Class XLIII.

AGRICULTURAL PRODUCTS (NOT USED AS FOOD) EASILY PRESERVED.

The principal articles produced in the United Kingdom which come within the limits of this class are raw flax and wool, seed-oils, and oak-bark. The production of the two former articles are referred to in Classes 28 and 30; but there are no means of arriving at the extent of the production of oak-bark in the country. As regards the production of seed-oil, there are no returns of its manufacture for domestic

and other purposes. It is, however, largely exported from the United Kingdom. In the year 1865 no less than eleven million gallons, valued at 1,547,000*l.*, were sent out of the country, but this quantity was not made from British seeds alone, large quantities of seeds for expressing oil therefrom being annually imported. In the year 1865 1,697,000 quarters of linseed, rapeseed, and other oil seeds were imported. In addition to the home production of bark, large quantities of tanning substances are imported. In the year 1865 the principal kinds of such substances imported were:—

	Tons
Bark for dyers or tanners . . .	20,292
Cutch . . .	2,120
Gambier . . .	13,588
Valonia . . .	19,702
Divi-divi . . .	3,711
Shumac . . .	13,045

The importations of seed-oils, chiefly from France, Holland, and Hamburg, amounted in the same year to 12,811 tuns, valued at £595,000.

Class XLIV.

CHEMICAL AND PHARMACEUTICAL PRODUCTS.

The manufacture of chemical products constitutes one of the leading industries of the country; and it may be regarded as important, not only as forming an independent trade of considerable extent, but also in its connection with the various manufacturing processes of the country in which chemical products are so largely employed. The chief seats of this industry are in the neighbourhoods of Newcastle, Liverpool, Glasgow, Bristol, and Birmingham. Chemicals are also produced in other parts of Lancashire, and the midland and southern counties of England.

The manufacture of most of the other articles comprised in this class is so widely scattered over the country that it is very difficult to particularise any special localities of production.

As regards the manufacture of soap and candles, the ordinary descriptions are made in almost all large towns throughout the kingdom. Soap is extensively produced; in the year 1852, the year before the repeal of the excise duty on soap, 203 million lbs. of hard, and 21 million lbs. of soft soap were charged with duty in the United Kingdom in that year. Since the repeal of the duty, no reliable accounts of the production have been obtained, although it is known to have considerably increased. So long as the excise duty remained upon the production of soap, very little was done in the way of improving and cheapening its manufacture; but upon the repeal of the duty a considerable amount of chemical knowledge was directed towards this object, and

soap may now be had at 2*d.* per lb. which formerly would have been chargeable with 3*d.* a lb. duty. Great improvements have been made in the production of the various kinds of perfumed and fancy soaps, of which there is now an extensive consumption. The fancy soaps are largely made in London, and in some of the chief towns of the country.

As regards candles, the tallow candle trade is carried on in almost every town in the country, and affords employment to many hundred hands. The manufacture of other descriptions of candles, such as wax and sperm, is chiefly located in large towns; and that of stearine, paraffine, and composite candles, with the exception of two works in Scotland and one in Ireland, is entirely confined to London and neighbourhood. There are no returns of the number of persons employed in the candle manufacture at the present date. According to the census of 1861, the following number were so employed in each division of Great Britain:—

	Males	Females	Total
In England and Wales	4,467	219	4,686
Scotland . . .	298	25	323
	4,765	244	5,009

Since the introduction of paraffine candles, the trade has remarkably improved and increased. Messrs. Field, who are exhibitors in this class, were the first to introduce this description of candle, which they did in the year 1857, since which time they have effected considerable improvements in their make, the most recent of which is the method of making the candles self-fitting. The chief recommendations of paraffine candles are—perfect freedom from grease, the production of a pure and beautiful light of a high illuminating power, and cheapness of price, taking their good qualities into account. Owing to the nature of paraffine, it is capable of being tinted in all colours, without detriment to its burning qualities.

The manufacture of india-rubber and gutta-percha has greatly increased during the past ten years, and is extensively carried on in many parts of the kingdom. Great progress has also been made in the production of dyes and colours within the same period. Alum, which forms an article of commerce of some importance, is largely produced at Whitby in Yorkshire. Phosphorus is made in very large quantities by the Messrs. Albright and Wilson, at Oldbury. The manufacture of mineral and other waters is carried on in many parts of the country, and afforded employment to 1,501 male and 98 females in the year 1861.

As there are no official statistics of the industrial productions of the country, it is impossible to ascertain the total number of persons engaged in the various trades comprised

in this class. The total number of Manufacturing Chemists returned by the census of 1861 in Great Britain was:—

	Males	Females	Total
In England and Wales	7,505	243	7,748
Scotland . . .	1,253	50	1,303
Total . . .	8,758	293	9,051

British Alkali Trade.

The most important manufacture in this class is that of the alkali trade, which comprises the allied industries of carbonate of sodium, sulphuric acid, hydrochloric acid, and bleaching agents; and as this manufacture is now carried on under Government inspection, the returns of the amount of salt decomposed afford a measure of the extent and increase of the trade. At the time of the Anglo-French Treaty of 1860, the quantity of salt used in the manufacture of alkali in this country was estimated by the representatives of the trade at about 250,000 tons per annum. The first report of the alkali inspector gives the quantity used in 1864 at about 300,000 tons, and the second report, for 1865, 325,000 tons, or an increase of thirty per cent. in five years. There are no accurate returns of the products derived from this decomposition, but estimates have been frequently formed.

Thus the jury on Class 2 at the Exhibition of 1862 published some interesting facts, furnished by Mr. C. Allhusen, relating to the alkali trade of the United Kingdom, by which it appeared that, so far back as 1852, the production of this trade amounted to—

	Tons	Value £
Alkali	71,193	711,930
Crystallised Soda . . .	61,044	305,220
Bicarbonate of Soda . .	5,762	86,430
Bleaching Powder . . .	13,100	131,000
	151,099	1,234,580

The increase in the trade between 1852 and 1861 is stated to have been as follows:—

	1852 (According to Mr. Allhusen's Return)	1861 (According to Mr. Gossage's Return)
	Tons	Tons
Alkali	71,193	156,000
Soda Crystals	61,044	104,000
Bicarbonate of Soda . .	5,762	13,000
Bleaching Powder . . .	13,100	20,000

Mr. Gossage estimated the total value of the products in 1861 to exceed two millions sterling, and the number of workpeople employed, in about fifty establishments, at 10,000.

The following table shows the production of the two principal alkali districts in the year 1861:—

	Newcastle-upon-Tyne	Lancashire (according to Messrs. Schunk, Smith, and Roscoe's Statement)
	Tons	Tons
Alkali	35,000	93,600
Soda crystals.	82,000	8,840
Bicarbonate of soda	12,000	11,700
Bleaching powder	11,400	8,060

Mr. E. K. Muspratt, the honorary secretary to the Lancashire branch of the Alkali Manufacturers' Association, states that, according to the returns of the manufacturers in that district, the present amount of salt annually decomposed is about 170,000 tons, or more than fifty per cent. of the whole trade of the kingdom.

The quantities of the undermentioned products manufactured in the Lancashire or Western district in 1866 amounted to—

	Tons
Soda Ash	81,800
Caustic Soda	11,500
Crystals of Soda	23,000
Bicarbonate of Soda	6,400
Sulphate of Soda, for sale as Sulphate	24,600
Bleaching powder	17,500

The computed value of the above products, at the current prices, was £1,726,200.

In addition to the alkalies manufactured in the district, large quantities of sulphuric acid (18,000 tons) and of hydrochloric acid (14,000 tons) were produced in 1866. The quantities of many other products have not been ascertained, but the total value of the chemical productions of the district may be estimated at about two millions sterling.

The production of the Tyne branch of the alkali trade at the present time (February 1867), is stated by Mr. R. Cail to be as follows:—

	Quantities	Value
	Tons	£
Soda Crystals	86,000	473,000
Soda Ash and Alkali	74,000	814,000
Bicarbonate of Soda	11,000	198,000
Sulphate of Soda	2,400	10,200
Bleaching Powder	27,000	278,000
Epsom Salts	590	4,720
Caustic Soda: 70 o/o	3,720	96,720
Glauber Salts	20	135
Oil of Vitriol, for sale	9,000	36,000
Sulphate of Copper	200	5,200
Muriatic Acid	700	2,100
Hyposulphite of Soda	400	7,200
Chloride of Manganese	1,300	4,550
Total	216,330	1,929,825

The two greatest improvements in the alkali manufacture during the last few years have been the increased production of caustic soda and bleaching powder, which are extensively used by papermakers in the preparation of esparto grass to serve as a substitute for rags.

It is to the abolition of the excise duties on

salt, glass, soap, and paper that the alkali trade of England owes its great development and perfection.

There are no returns of the production of other descriptions of chemical products, but they are extensively manufactured in different parts of the country.

In addition to the home production of raw materials employed in the manufacture of articles included in this class, there is a considerable importation from abroad, as will be seen from the table given below, showing the importations into the United Kingdom in the year 1865:—

Articles	Quantities
Alkali:	
Barilla	cwts. 15,762
Pearl and Pot Ashes	„ 143,779
Liquid Ammonia	lbs. 11,334
Other sorts	cwts. 19,352
Alum	„ 10,890
Annatto, roll and flag	„ 3,647
Argol	„ 20,004
Balsam:	
Capivi	lbs. 230,508
Peru	„ 17,626
Unenumerated	„ 46,240
Bark:	
Peruvian	cwts. 15,510

Wax, Bees	cwts. 10,678
Vegetable	" 3,079

It must be borne in mind, however, that in some instances a large proportion of these articles is re-exported.

The average rates of wages paid to operatives in some of the principal branches of the chemical manufactures of the country, according to returns furnished to the Board of Trade in 1866 by the Newcastle and Bristol Chambers of Commerce, were:—

	At Newcastle Per Day of 10 Hours	At Bristol Per Day of 10½ Hours
	s. d.	s. d.
Sulphuric acid makers	4 6	3 6
Sulphate of soda "	4 8	4 8
Crude soda "	4 6	4 0*
Carbonate of soda "	4 6	4 8
Crystals of soda "	3 8	3 0
Bicarbonate of soda "	3 8	—
Bleaching powder "	5 2	4 0*
Caustic soda "	—	4 6
Chloride calcium "	—	3 0
Sal Ammoniac "	—	4 0

* Eight hours per day.

The average rates of weekly wages paid in the soap-boiling trade in the year 1866 at the three following places were:—

	At Bristol	At Edinburgh	At Glasgow
Soap boilers	40s.	25s.	36s.
Assistant "	16s. 6d.	15s. to 19s.	18s.
Vat men "	18s. to 20s.	15s.	12s. to 18s.

Hours of labour, 60 hours.

In the paraffine candle trade the average rates of wages paid to the leading men in the trade is about 30s. to 42s. per week. Hours of labour ten and a half per day.

The exports of the principal descriptions of

British chemical productions, soap, candles, &c., in the year 1865 were as follows:—

	Quantities	Value
Alkali :		£
Caustic soda, } soda ash, and refined alkali, }	cwts. 1,799,637	842,170
Crystals of soda . . .	641,442	199,376
Bicarbonate of soda . .	131,715	82,400
Alum	75,166	26,885
Aniline, dye stuffs . .	41,165	1,914
Blackening	£ —	20,674
Bleaching materials . .	cwts. 220,140	117,148
Borax, refined in the United King- dom	" 16,897	46,440
Brimstone	" 57,795	31,783
Candles :		
Stearine	lbs. 3,222,585	110,575

The exportations of alkali and soda have increased very largely during the past ten years. In the year 1866 only 1,405,000 cwts. were exported, against 2,998,000 cwts. in 1866.

The progress in the manufacture of chemical products in recent years has fully kept pace with the increased demand for them, and, as has just been stated with regard to the important class of alkalies, in addition to furnishing the increased wants of home manufacturers, the foreign trade has been greatly extended. Considerable improvements have been made in the processes employed in the manufacture of sulphuric acid and many other chemicals, and especially in the condensation of hydrochloric acid gas in the alkali manufactories. An important revival in the phosphorus trade has also taken place: instead of importing phosphorus, as was the case some few years back, the English manufacturers now successfully

compete with foreign makers in most of the continental markets. The improvements in the manufacture of soap and candles, owing to many recent discoveries, have been very great, and the discovery of aniline and similar dyes has given rise to a very extensive trade in these articles. The application of india-rubber to an infinity of trade and domestic purposes, has also been the means of affording employment to a large class of operatives. A reference to the articles exhibited in this class will, however, afford a better idea of the importance of the various branches of industry connected with it than it is possible to convey in the limited space allotted to these introductory remarks.

Class XLV.

SPECIMENS OF THE CHEMICAL PROCESSES FOR BLEACHING, DYEING, PRINTING, AND DRESSING.

A notice of any important improvements in the processes comprised in this class will be found in the introductions to the classes on textile manufactures and carpets, &c.

Class XLVI.

LEATHER AND SKINS.

The manufacture of leather has been estimated as only fourth in importance among the national manufactures of Great Britain. It is very largely carried on at Bermondsey, near London, and to a less extent in several parts of the country. Compared with the population, more leather for general use is prepared in England than in any other country. The total annual value of leather manufactures was computed in the year 1851 at fourteen millions sterling; but this is probably far below the present value, as the trade has steadily increased since that date. There are no records of the quantities of raw

hides produced in the United Kingdom; but, in addition to the home supply, which must be very extensive, large importations of raw hides from India, South America, and other parts of the world are annually made. There is also a large importation of tanned, tawed, and dressed leather.

The following table shows the quantities and value of hides and leather imported during the five years, 1861-65:—

Years	Hides, raw	Hides, tanned, &c.	Total value
		lbs.	£
1861 . .	830,000	5,219,000	2,903,000
1862 . .	943,000	5,512,000	3,204,000
1863 . .	1,023,000	5,202,000	3,230,000
1864 . .	954,000	6,446,000	3,152,000
1865 . .	968,000	7,352,000	3,073,000

A large proportion of foreign raw hides is re-exported. The exports of British tanned leather, unwrought, in the five years 1861-5 amounted to—

	Cwts.	£
1861 . .	40,000	361,000
1862 . .	43,000	406,000
1863 . .	47,000	441,000
1864 . .	38,000	382,000
1865 . .	43,000	409,000

The exportations of leather manufactures will be found noticed in other classes, under which they are arranged.

The rates of wages earned by tanners are about 25s. per week, and by curriers and dressers 34s.

Several new raw materials for the purpose of dressing skins were exhibited at the London Exhibition of 1862, many of which were pronounced by the jury to be equal, if not superior, to the ordinary oak-bark usually employed; but the old method of tanning is still extensively in use.

The manufacture of leather for gloves, of parchment, of gold-beaters' skin, and of strings for musical instruments is also carried on in the United Kingdom, but there are no records of the extent of the respective industries.

GROUP VI.

(CLASSES XLVII.-LXVI.)

APPARATUS AND PROCESSES USED IN THE COMMON ARTS.

Class XLVII.

APPARATUS AND PROCESSES OF THE ART OF MINING AND METALLURGY.

It would require more space than can be here devoted, to enumerate the almost countless descriptions of apparatus and machinery which are employed in the various branches of industry comprised in this class. The development of the mining and metallurgical resources of the country is chiefly owing to the use of machinery; and, in fact, many mines could never have been worked, and many metallurgical processes could never have been performed, without the aid of steam power. There are no records of the number of steam-engines, nor of the amount of motive-power employed in the mines and in the metal manufactories of the United Kingdom. Machinery is, however, extensively used for raising minerals in the shafts, for draining mines, and, in some cases, for purposes of ventilation, although, for the most part, English coal-mines are ventilated by means of furnaces. Considerable improvements have been made in late years in winding machinery, in the better adaptation of the furnace for ventilating purposes, and also in the construction of mechanical ventilators. Boring by steam is one of the most important recent inventions. Machines for coal-cutting, and a complete model of the apparatus and machinery employed in the Bessemer process of manufacturing steel are exhibited in this class.

As regards safety-cages, or parachutes, none of the methods at present devised have given general satisfaction, although several kinds are in use.

The safety-lamps used in the coal-mines in Great Britain are chiefly the old-fashioned 'Davy' and the 'Stephenson' or 'Geordie' lamp, both protected throughout by gauze, although Mueseler's lamps have been successfully introduced into a few English collieries.

Class XLVIII.

AGRICULTURAL APPARATUS AND PROCESSES USED IN THE CULTIVATION OF FIELDS AND FORESTS.

The manufacture of machines and implements for agricultural purposes has been brought to a high pitch of excellence in the United Kingdom; and, in addition to being largely produced for home use, agricultural machinery and implements are annually exported in considerable quantities. The employment of steam power for many farming operations is now in very general use. Great attention has been given to farming of late years, and by means of improved drainage and the use of artificial manures and improved apparatus the fertility of the soil has been vastly augmented. The carts and waggons employed in the United Kingdom for agricultural purposes are, as a rule, greatly superior to those used abroad for similar purposes.

In noticing the recent progress in the objects comprised in this class, the jury on agricultural implements at the London Exhibition of 1862, especially drew attention to the increased use of the movable steam-engine for corn-thrashing, of the steam plough and cultivator, of the reaping and mowing machines, and of the employment of machinery for pulping the food for cattle.

The manufacture of agricultural implements and machinery is extensively carried on at Lincoln, Peterborough, Grantham, Bedford, Ipswich, Leiston, Stowmarket and many other parts of the country.

There are no statistics of the production of the articles included in this branch of native industry, but some idea of their importance may be inferred from the number of exhibitors in this class.

The value of agricultural implements exported from the United Kingdom in the year 1865, amounted to 210,000*l.*; of agricultural

machinery (except steam), 282,000*l.*; and of implements composed wholly of iron, 13,000*l.* There is no separate return of locomotives for agricultural purposes exported, but some hundreds are annually sent to foreign countries.

The following were the principal articles imported in the year 1865 for purposes of manure:—

	Quantities	Value
	Tons	£
Bones	65,642	362,000
Guano	237,393	2,676,000
Manures: Unenumerated	8,025	49,000

Class XLIX.

APPARATUS USED IN SHOOTING; FISHING TACKLE; AND IMPLEMENTS USED IN GATHERING FRUITS OBTAINED WITHOUT CULTURE.

The manufacture of sporting guns is carried on chiefly at Birmingham and in London. A notice of the industry will be found under Class 37.

Fishing tackle is made to some extent in the country. Fish-hooks, eel-spears, harpoons, and baits and tackle are extensively manufactured at Redditch, and a large branch of the trade in fishing-rods, artificial flies, lines, floats, nets, &c., is carried on in London.

About 600 persons are employed at Redditch in the manufacture of fish-hooks, and according to the census of 1861, 670 persons were employed in England and Wales, and 60 persons in Ireland in the manufacture of fishing rods and tackle. Artificial flies and baits are made at Redditch chiefly by girls and women. The rates of wages earned at Redditch are stated to be about 8*s.* to 15*s.* per week for women and 12*s.* to 40*s.* for men. In London the rates are higher, the leading operatives in the trade earning from 40*s.* to 80*s.* per week, working from eight to twelve hours per day.

The value of fishing-tackle exported from the United Kingdom in the year 1865, amounted to \$1,000*l.*

Class L.

APPARATUS AND PROCESSES USED IN AGRICULTURAL WORKS, AND IN WORKS FOR THE PREPARATION OF FOOD.

Machinery is very extensively used in the United Kingdom for the manufacture of drain-pipes, for bone-crushing, for grinding corn, and for bread-making, for many other processes comprised in this class. It is not possible in this place to refer to the numerous

improvements that have been made in various parts of the machinery employed in the above branches of trade; but the increasing competition of manufacturers in the home and foreign markets, is sufficient of itself to induce producers to adopt every improvement that is discovered for the purposes of increasing the power of their production, and thus enabling them either to undersell or make greater profits than their rivals.

There are no returns of the number or steam power of machines employed in the trades referred to in this class.

Class LI.

APPARATUS USED IN CHEMISTRY, PHARMACY, AND IN TAN YARDS.

The multiplicity of processes in use in the several branches of trade connected with this class renders it difficult, in the short space allotted to these remarks, to allude to even the more important apparatus at present in use. The rapid progress of science of late years, however, has been greatly instrumental in perfecting many old as well as in introducing many new processes connected with the chemical productions of the country. A few of the recent improvements are exhibited in this class.

Class LII.

PRIME MOVERS, BOILERS, AND ENGINES SPECIALLY ADAPTED TO THE REQUIREMENTS OF THE EXHIBITION.

As the articles exhibited in this class have been selected for a particular purpose, it remains for the decision of the authorities to state how far the articles furnished by English exhibitors have been found suited to the purpose. A notice of the general British machinery trade will be found under Class 53.

Class LIII.

MACHINES AND APPARATUS IN GENERAL.

The commercial prosperity of the United Kingdom is due, in a very great degree, to the possession of an abundant supply of the raw materials requisite for the manufacture of machinery, and of coal for working it when made, as well as to the high degree of perfection to which the manufacture has been brought in its application to the almost countless processes connected with the national industries of the country. If no other proof existed of the

importance of the trade, the mere fact of the annually increasing demand for British machinery in foreign countries, would be sufficient to prove the high position it holds among the manufactures of the country.

Machines and machinery are largely manufactured at Manchester, Leeds, Birmingham, Sheffield, Newcastle, Glasgow, and many other places throughout the country. Marine engines are made chiefly at the works on the banks of the Thames and the Clyde, although they are produced on a smaller scale at Newcastle, and in other parts of the kingdom.

The manufacture of hydraulic machinery, pulley-blocks, sewing-machines, and nail-making machinery, is extensively carried on at Birmingham, as well as that of brass and copper tubes for machinery, which latter articles are also produced in Bristol, Manchester, Liverpool, and Newcastle. Agricultural machinery also forms an important branch of the machinery trade, but as it is included in Class 74 it need not be further alluded to in this place.

The number of male persons engaged in the manufacture of machinery in each division of the United Kingdom, according to the census of 1861, was—

In England and Wales, about	72,000
Scotland	10,500
Ireland	900
	83,400

Owing to the numerous subdivisions of the machinery trade it is difficult to ascertain the actual number of persons engaged in it. The above figures, however, are believed to be tolerably correct.

There are no complete returns of the average rates of wages earned in the general machinery trade of the country; in most branches, however, skilled labour is very highly remunerated, and, owing to the constant employment afforded, the operatives connected with the trade are, comparatively speaking, in easy circumstances. The last returns of the average rates of wages paid to mechanics at Manchester were made in 1859, at which date they were as follows:—

Pattern-makers, smiths, boiler-makers, and millwrights, 32s.; joiners, 28s.; planers, 22s.; borers, 20s.; and strikers, screwers, drillers, and slotters, 18s., per week of 58 hours. The average rates at Glasgow in 1866 were stated as 25s. for boiler-makers, and 24s. for smiths, per week of 60 hours. The average rates earned in the manufacture of hydraulic machinery at Birmingham are stated to be, for skilled hands, about 55s.; and for second-rate hands, from 30s. to 40s. per week.

The value of British machinery of all kinds exported from the United Kingdom, increased from 2,243,000*l.* in the year 1855, to 5,222,000*l.* in 1865. The following table shows the principal descriptions of machinery exported in the last-named year:—

Machinery and mill-work:		£
Steam engines or parts of steam engines	{ Locomotive Other than locomotive	945,451
		1,013,082
Not being steam-engines	{ Agricultural Other descriptions	282,019
		2,982,081
Total		5,222,633

In a class comprising such an infinite variety of objects, and in which improvements are of daily occurrence, it is difficult in a few lines to point out what amount of progress has been made within the past few years. The jury on Class 8 at the Exhibition of 1862, taking the articles exhibited at the previous Exhibition of 1851 as their standard of comparison, stated that, 'with respect to steam-engines, it may be observed that they show an increased employment of high pressure, great expansion and super-heating, an increased use of surface condensation (generally effected by means of a great number of small horizontal tubes), a tendency towards simplicity in the framing and main-moving parts, a general abandonment of devices that are more curious than useful, and a higher perfection of workmanship and finish, all of which improvements continue to produce greater economy of fuel, power, and repairs.' 'The general remarks as to progress in land-engines, are applicable to marine engines also. The improvements in workmanship are even more striking.' Considerable progress was also noticed in heavy castings, or forgings in the rough, as well as in many separate parts of machines and miscellaneous pieces of mechanism. With regard to any important improvements since 1862, most of them will doubtless be found amongst the articles exhibited in this class.

Class LIV.

MACHINE TOOLS.

The manufacture of machine tools has already been brought to a high degree of perfection in the United Kingdom, but there is still room for greater improvement, both as regards simplicity in the construction of many of the tools, as well as in their adaptation to a greater variety of uses.

Machine tools are extensively made in Manchester, Sheffield, Leeds, and many other towns, &c. in the kingdom. Since the introduction of steam as a motive power the increased employment of machine tools has been enormous, and there are now few processes connected with the leading manufactures of the country that are not carried on by means of machinery and machine tools.

The chief advantages derived from the use of machine tools as compared with hand labour, are increased power of production, exactness in

quality, and regularity in amount of work accomplished; and, owing to the greater power of production secured to the manufacturer by the use of such implements, he is enabled to pay high rates of wages to skilled hands, and thus to improve the condition of the operative.

There are no returns of the number of workpeople employed in this branch of industry, nor of the annual value of the production of the trade. In addition, however, to the make of these articles for home use, they are largely exported. In the year 1865 the exportations of machinery &c. more or less connected with this class were:—

	£
Steam engines and parts of steam engines (other than locomotive) . . .	1,013,000
Machinery and mill-work (other than steam engines) . . .	2,982,000
Tools and implements for industrial purposes, not being classed as machinery . . .	87,000

The establishment of Government Schools of Science and Art in the various manufacturing towns has been very beneficial to the class of operatives employed in the manufacture of machinery and machine tools, who are enabled by the instruction they receive, not only to become better workmen, but also improvers of old, as well as inventors of new machinery; increasing thereby the manufacturing power of the country, and at the same time elevating their position in the social scale.

Class LV.

APPARATUS AND PROCESSES USED IN SPINNING AND ROPEMAKING.

The manufacture of rope, cordage, &c. is widely spread throughout the country, but the chief seats of the rope-making industry are at Liverpool, Newcastle and other Tyne ports, in London, and in a few Scotch ports. Ropes for the use of the Navy are also made at the Royal Dockyards. The rapid extension of the use of wire-rope for rigging of ships, and colliery and other purposes, has led to great improvements in the manufacture of rope-making. The two submarine cables which now exist between the United Kingdom and America are sufficient of themselves to mark the high position to which wire rope-making has attained in the country. As regards machinery employed in spinning, a notice will be found under the respective classes of textile manufactures; several machines are, however, exhibited in this class showing the latest improvements that have been made in this kind of machinery.

The number of persons engaged in the manufacture of ropes, cord, &c., according to the census of 1861, was:—

	Males	Females	Total
In England and Wales . . .	11,762	1,724	13,486
Scotland . . .	2,313	267	2,580
Ireland . . .	1,132	33	1,165
Total . . .	15,207	2,024	17,231

The materials used in the manufacture of ropes are chiefly imported from Russia, Italy, and the East Indies. In the year 1865 the principal articles imported for this purpose were as follows:—

	Quantities	Value
Cable yarn of hemp } lbs. 11,082,747		£163,932
&c. (except coir) . . .		
„ of coir . . . cwt. 97,674		177,609
Hemp dressed and undressed . . .	1,065,705	1,704,187

The above figures represent the total quantities of hemp imported—only part of which is employed in the rope manufacture.

Wire-rope is made principally at Gateshead and Birmingham, although the wire used is chiefly drawn at the latter place.

The quantities and value of British cordage and twine exported in the year 1865 were:—

	Quantities	Value
Cables and ropes:		
Hemp . . . cwt. 130,715		£268,677
Other kinds . . .	14,009	27,692
Twine . . .	23,449	117,844

Wire-ropes are not distinguished in the exportations from other manufactures of wire.

Class LVI.

APPARATUS AND PROCESSES USED IN WEAVING.

The chief seats of the manufacture of machinery for weaving, as also for spinning, are at Manchester, Oldham, Bury, and many other parts of Lancashire, at Leeds, Halifax, Bradford in Yorkshire, and at Glasgow and Dundee in Scotland. Although this class of machinery has been brought to a high degree of excellence, improvements are constantly being made in various parts of the machinery, rendering it more complete and self-acting, and increasing its power of production. An inspection of the complete series of preparing, spinning, and weaving machinery for cotton, woollen and worsted, exhibited by the well-known firm of Messrs. Platt & Co. in Class 55, will afford a better idea of the character of this class of machinery now in use in the English factories, than any short description can convey.

There are no statistics of the number of persons employed in this branch of the machinery manufacture of the country. A considerable amount of industrial machinery is annually exported from the country, as will be seen by referring to the remarks under Class 53.

Class LVII.**APPARATUS AND PROCESSES FOR SEWING
AND FOR MAKING-UP CLOTHING.**

The most important apparatus included in this class are those for sewing and boot-making by machinery. Sewing-machines were first introduced into England, from America, in 1845 or 1846, since which date numerous improvements have been effected in their construction, and they are now almost universally employed for plain and ornamental work. The jury at the London Exhibition of 1862 stated that during the ten years since 1851, considerable progress had been made in the manufacture of boots and shoes by machinery. A very large wholesale trade of riveted boots and shoes, principally for women and children, has sprung up, during the last few years, at Leicester. The shoe-pegging and peg-cutting machines of Messrs. Greenwood and Batley were highly commended by the jury in 1862, and obtained a prize-medal. As the manufacture of boots by machinery effects a great saving in the cost of production when compared with that of hand labour, it is hoped that the present Exhibition will disclose still further improvements in the machinery already in use in this important branch of industry.

Class LVIII.**APPARATUS AND PROCESSES USED IN THE
MANUFACTURE OF FURNITURE AND OBJECTS
FOR DWELLINGS.**

Several of the apparatus falling within the limits of this class, such as wood-cutting, planing, and moulding machines, &c. will be found exhibited in Class 54 as machine tools. Machinery is now so generally employed in all branches of manufacture in the United Kingdom, that a brief allusion to the several descriptions in use would exceed the limits of these remarks. The growing tendency of trade towards a concentration of the leading manufactures of the country in the hands of large firms and companies, employing a considerable amount of capital, has led to an increased use of machinery for facilitating their vast operations, and for economising their expenditure for labour. A notice of the chief localities of manufacture will be found under Class 53.

Class LIX.**APPARATUS AND PROCESSES USED IN PAPER-
MAKING, DYEING, AND PRINTING.**

The importance of the paper trade has already been noticed in the remarks to Class 7. But although the production of paper has of late years so vastly increased, few improvements

have been made upon the continuous paper-making machine, introduced about the beginning of the present century. Specimens of paper-making machinery now employed will be found exhibited in this class. The chief improvements connected with printing processes since 1851, are the introduction of machinery for casting type, and of type composing and distributing apparatus. Many improvements in machinery for printing have also been made during the past ten years to meet the enormously increased demand for newspapers, books, and periodicals, which has taken place within the same period. The exports of the several descriptions of machinery included in this class are not separately registered, but are included in the general returns, which will be found stated under Class 53. The value of British made printing type and materials exported from the United Kingdom in the year 1865 amounted to 68,930*l*.

Class LX.**MACHINES, INSTRUMENTS, AND PROCESSES
USED IN VARIOUS WORKS.**

Although no great changes have taken place of late years in the machinery employed for the manufacture of most of the articles included in this class, many important improvements have been made in the direction of perfecting already existing machinery. The manufacture of buttons, pins, pens, and needles, constitutes a considerable branch of native industry. The chief seat of the manufacture is at Birmingham and neighbourhood. The button trade is estimated to employ about 6,000 persons, and the average rates of wages paid to males employed in the trade is about 2*s*.; to females, 7*s*. to 9*s*.; and to girls and young children, 1*s*. to 1*s*. 6*d*. per week. There are no statistics of the number of persons engaged in the pin trade at the present time, but according to the returns made at the census of 1861, the total number of males employed in this branch of trade in England and Wales was 322, and of females 407. Pins are now almost entirely made by machinery—a machine being employed which, during the revolution of a single wheel, produces a perfect pin. Needles are principally made at Redditch, and the manufacture employs about 8,000 workpeople. The average rates of wages earned in the trade are for males, 12*s*. to 40*s*.; for females, 8*s*. to 15*s*.; and for children, 1*s*. 6*d*. to 5*s*. per week. Messrs. Bartlett and Woodward, in reporting upon the needle trade of Redditch, state that in social condition the workpeople are generally above the average in cleanliness and tidiness. A needle has to pass through seventy pairs of hands before it is considered to be finished and fit for use. The manufacture of steel pens is chiefly located at Birmingham, and affords employment to about

360 men and to 2,000 women and children. The number of pens made weekly is 98,000 gross. Most of the steel used in the manufacture is produced at Sheffield. The above figures are extracted from a report of Mr. Timmins, who also states that the condition of the workpeople engaged in the pen trade is very satisfactory. The wages of girls range from 5s. to 12s. per week, some of the younger only earning from 2s. 6d. to 3s. 6d. A few skilful workwomen make from 15s. to 20s. Men earn from 18s. to 20s.; boys, according to skill, from 4s. 6d. to 16s.; and skilled adults, males, from 30s. to 80s. per week. Hours of labour $52\frac{1}{2}$ to 57 per week. The process of pen-making, as well as that of pin and needle making, will be found illustrated in the contributions from Birmingham, Stadel, and Redditch exhibited in this class.

Class LXI.

CARRIAGES AND WHEELWRIGHTS' WORK.

The chief seat of the carriage manufacture is in London, though the industry is carried on at Edinburgh, Dublin, Liverpool, Derby, Manchester, Nottingham, Glasgow, Southampton, Newcastle, and other towns in the kingdom.

The number of persons engaged in this branch of trade in each division of the United Kingdom in the year 1861 was:—

	Coachmakers	Wheelwrights
In England and Wales	18,870	30,070
Scotland	1,550	1,282
Ireland	3,000	591
Total	23,420	31,943

There are no general returns of the rates of wages paid to operatives employed in coachbuilding, but the rates paid in this branch of trade in Edinburgh in 1866 were:—

	Per week of 57 hours	
	1st class	2nd class
Males :	£ s. d.	£ s. d.
Smiths	1 7 0	1 2 0
Body makers	1 10 0	1 2 0
Carriage makers	1 3 0	—
Painters	1 2 0	1 0 0
Trimmers	1 5 0	1 0 0
Wheelwrights	1 2 0	0 18 0
Spring makers	1 6 0	—

It was stated in the report upon carriages at the London Exhibition of 1862 that the condition of the operatives engaged in coachbuilding has much improved of recent years; intemperate habits have diminished among them, and education has increased. As the success of coachbuilding depends much on a knowledge of sound mechanical principles, of the arts of design, and the harmonious combination of

colours, it is essential that the operatives in this branch of industry should receive a sound art education.

The value of carriages imported into the United Kingdom in the year 1865 amounted only to 5,800l. The value of British carriages exported in the same year was 175,000l.; and of carts and waggons, 8,400l. A large number of the carriages were sent to British India.

Among the improvements that have taken place in the manufacture of carriages, the application of machinery in some branches of the trade is worthy of notice. Owing, however, to the peculiar nature of the trade, it is doubtful whether machinery will ever be economically used for making private carriages, which necessarily differ in every respect as widely as the tastes of the persons who order them to be built. Considerable progress has been made in the design, colour, and lightness of private carriages since 1851, as well as in the tools required for their construction.

A great increase in the demand for vans, waggons, and carts has been created by the extension of the railway system throughout the country, and many new descriptions of vehicles have been introduced for the purpose of distributing goods from the several railway stations. Considerable improvements have also been made since 1851 in the omnibuses used in the metropolis, as well as in vans for the removal of furniture.

Railway carriages are noticed in Class 63.

Class LXII.

HARNESS AND SADDLERY.

1. English saddlery and harness has long been celebrated for the excellence of its quality and workmanship. The chief centres of the manufacture are at Walsall, Birmingham, the Metropolis, and Glasgow; it is also made at many other towns in the kingdom. Several smaller trades are connected with this industry, such as the manufacture of bits, stirrups, chains, and other fittings and ornaments, which are chiefly made in the same localities.

2. The leather employed in the trade is principally of home manufacture.

3. According to the census of 1861, the following number of persons were engaged in this branch of industry:—

In England and Wales	18,229
Scotland	1,822
Ireland	2,968

23,019

And probably from 500 to 600 persons employed as saddle-tree makers and saddlers' ironmongers.

4. The wages in the Walsall saddlery and harness trades are rather above the average. The earnings of workmen vary from 20s. to 45s.

per week. The girls and women can earn from 8s. to 13s. per week. The wages of apprentices for the first year is 3s.; in the latter years of their apprenticeship they get from 12s. to 14s. Hours of labour, 7 or 8 a.m. to 7 p.m.

The saddle and harness factories at Walsall are very neat and well built.

It is stated that about 60 per cent. of the employment at Walsall is carried on by female operatives, many of whom work at their own homes. The introduction of the sewing-machine for stitching harness has greatly economised labour in this branch of the trade.

5. There are scarcely any importations of saddlery and harness into the country.

6. The value of British saddlery and harness exported from the United Kingdom during the five years 1861-65 amounted to—

	£
1861	307,700
1862	343,600
1863	341,600
1864	345,900
1865	350,500

The greater proportion of these exports went to the British colonies, and especially to Australia.

7. Mr. Franklin, in reporting upon the Walsall trades in 1865, states that 'it may be worthy of remark that little inventive genius has been displayed, and few changes of form and appearance made in harness or saddlery since 1849, the exception being the "Nolan" saddle, invented during the Crimean war, and now generally used in the Army: it is, however, only suitable for military purposes. Considerable progress has, however, been made in the ornamentation of saddles and harness, and many of the saddlers who turn their special attention to this branch of the trade have had regular art instruction in the Schools of Design.'

Class LXIII.

RAILWAY APPARATUS.

It can scarcely be denied that the welfare of the country is due, in a great measure, to the extensive means of communication which exist between all parts of the kingdom, and amongst these, railways occupy the most prominent position. In the present age, when time represents money, the possession of rapid means of transport has become an absolute necessity, and England may fairly claim the honour of having inaugurated the present railway system, which has, comparatively speaking, overcome both time and distance.

The manufacture of railway apparatus is carried on in several parts of the country; rails, chairs, &c. being chiefly produced in the iron districts, and steel rails at Sheffield.

Locomotives are largely made at Newcastle, Manchester, Leeds, Glasgow, and other towns, and also at the private works of some of the principal railway companies. There is also an extensive manufacture of passenger-carriages, goods-waggons, and other descriptions of rolling stock, at Birmingham.

There are no general statistics of the production of railway apparatus in the United Kingdom, many of them being included with the hardware trades of the country. In a volume on the resources of the Tyne, Wear, and Tees district, published in 1864, it was stated that since the commencement of the manufacture of locomotives, about 2,400 had been turned out by the manufacturers of Newcastle alone, and upwards of 900 of them had been sent abroad.

Taking an average cost of 2,000*l.*, the gross value of the exported locomotives would amount to 1,800,000*l.* To this must be added the value of those manufactured for use in Great Britain and Ireland, at a cost of 1,500*l.*, making 2,700,000*l.*: giving a total of 4,500,000*l.* sterling. Mr. Timmins, in a paper on the manufacture of rolling-stock at Birmingham, states that the building of railway carriages, waggons, &c. commenced at that town as far back as the year 1838, and from the central position of Birmingham, it has since become the seat of a very large trade. Some idea of the importance of this industry may be gathered from the fact that more than thirteen thousand miles of railway are at work in the kingdom, employing about 18,000 passenger-carriages, and 233,000 waggons, &c. Mr. Timmins estimates the value of the rolling-stock of the country at about 17,000,000*l.*, and upon this sum the annual depreciations amount to about 1,250,000*l.* The number of locomotives employed on the railways of the country during 1865 was 7,414.

In addition, however, to supplying the materials for working the home railways, large quantities are produced for exportation. In the year 1865, the following principal articles of British manufacture connected with this class, were exported from the United Kingdom:

	Quantities		Value
	No.	£	
Carriages, Railway:			
For passengers	1,261	177,000	
Waggons, trucks, &c.	580	22,000	
Iron, Railroad:	Tons		
Rails and tie rods	330,588	2,627,000	
Chairs and sleepers	76,098	393,000	
Wheels and axles	4,872	118,000	
Other kinds	23,000	412,000	
Machinery: Steam Engines and parts thereof:			
Locomotives	—	945,000	

The general progress of railways in the United Kingdom during the past eleven years, may be gathered from the following statistics:—

	In 1855	In 1865
Length of lines open	Miles 8,280	Miles 13,289
Total capital paid up, shares, loans, &c.	£297,584,000	£455,478,000
No. of passengers conveyed	118,595,000	251,960,000
No. of passengers per mile	14,323	18,960
Total traffic receipts	21,507,000	35,731,000
„ working expenses	10,299,000	17,149,000
„ net receipts	11,208,000	18,582,000

Amongst the most recent improvements may be mentioned the employment of steel for rails, tyres, &c., and the invention of the central rail apparatus for working on inclined planes.

Considerable improvements have also been made in locomotives. Mr. Humber in his recent work on Modern Engineering, enumerates the following:—Adaptation of the locomotive to consume coal instead of coke, and to consume its own smoke. The heating of the feed water by the waste steam. Balancing the reciprocating and revolving parts of the engine, whereby the wear and tear of road and engine are considerably reduced, and the safe maintenance of high speeds rendered practicable; and superheating the steam on its way to the cylinders so as to maintain its normal heat, and reduce the loss of power caused by condensation.

Class LXIV.

TELEGRAPHIC APPARATUS AND PROCESSES.

It was stated by the jury on Class 13 at the London Exhibition in 1862, that since the Exhibition of 1851 there had not been any great discoveries in electrical science, nor any important practical application of principles. On the other hand, a great extension of the telegraphic system had taken place, as well as the introduction of submarine cables. The greatest achievement since 1862 has undoubtedly been the successful accomplishment of the submarine cable between the old and the new world. During the year 1866, the third attempt to establish a telegraphic communication between Ireland and Newfoundland, a distance of 1,670 nautical miles, was crowned with success; for not only was a new submarine cable laid, but the broken cable of the previous year was recovered from the depths of the ocean, and continued to the shores of the new world; thus forming a double line of communication. The greatest depth of water encountered was 2,400 fathoms, or less than $2\frac{1}{2}$ nautical miles. The first cable laid was in the year 1858, which was completed and worked for about three weeks, when it suddenly failed. The second cable, partly laid in 1865, broke away in mid-ocean. The cable of 1858 was much lighter in make than that of the subsequent cables, possessing only a breaking strain of 3 tons 5 cwt., or equal to 4·85

times its weight in water per knot; whereas that of the 1865 cable was 7 tons 15 cwt., and that of the 1866 cable 8 tons 2 cwt., or equal to eleven times their own weight in water per knot. The speed of working through the new cable of 1866, as stated by the Atlantic Telegraph Company, with the present improved instruments, is not less than eight words per minute.

According to a return published by the Board of Trade, there were (exclusive of railway and private lines) 16,953 miles of telegraphs in the United Kingdom in the year 1865, using 80,123 miles of wires, and about 8,000 instruments. The increase of private telegraphs in the metropolis and other large towns has been very considerable during the past few years. Great improvements have also been made in all telegraphic apparatus.

Class LXV.

CIVIL ENGINEERING, PUBLIC WORKS, AND ARCHITECTURE.

The progress that has been made in the United Kingdom in the three branches of civil engineering, public works, and architecture since the last Paris Exhibition is so great that it is not easy in a few lines to give any adequate idea of its magnitude. The rapid extension of railway communication, leading, as it does, to increased trade, and to an augmentation in the number of persons who travel about the country, has been one of the chief causes of progress.

Many important engineering works in all parts of the country might be alluded to. In the metropolitan district alone, five new railway bridges and two new passenger bridges have been erected across the Thames, and a third passenger bridge is now in course of construction at Blackfriars. The new passenger bridge at Westminster and many of the other bridges, which are for the most part made of iron, are remarkable for boldness of design and novelty of construction. A remarkable feature in some of the new railway bridges is that they are entirely carried upon piers, which are formed of hollow iron caissons sunk in the river, without the aid of exterior works of any kind. These caissons are afterwards filled with concrete or masonry, the whole forming together gigantic columns which carry the bridge. The importance of combining ornament with utility has, moreover, not been overlooked, and in many instances the iron-work used in the superstructures displays a considerable amount of taste, and marks a very decided advance in the art of constructing iron bridges. Three other important works, viz.: the Underground Railway, the Thames Embankment, and the Main Drainage system, may also be noticed as evidences of progress. The Underground Railway is

for the most part constructed below the main thoroughfares of the city, and when completed will form the inner circle of railway communication in the Metropolis. The portion that is already open for traffic between the east and west end of the town has exceeded all expectations, both as respects utility to the public and profit to the company. The Thames Embankment, which is now in an advanced state on the north side of the river, will form a noble thoroughfare from Westminster to the city; and the Main Drainage system, when fully complete will, it is hoped, restore purity to the water of the Thames. The extension of docks and harbours is constantly going on, and large sums are annually voted by Parliament for the construction of harbours of refuge and breakwaters; amongst those completed or in course of construction may be mentioned the works at Portland, Dover, and Holyhead. The total number of lighthouses on the coasts of the United Kingdom (exclusive of private harbour lights) is 212, besides 42 floating light vessels.

As regards architecture, a very great improvement has taken place in public buildings of all kinds, and the new public edifices of London will bear comparison with those in any other part of the world. The new railway stations in the Metropolis display a vast amount of engineering talent; whilst the spacious hotels that have been erected in connection with them reflect great credit upon the architectural profession. The new Government offices at Whitehall, the new churches, banks, insurance offices, club houses, mansions, concert-rooms, and model lodging-houses built during the last ten years, may also be noticed as evidences of progress. These edifices, which far surpass the older class of buildings as to size, are also remarkable as showing a greater appreciation of the principles of art, both as respects their general outline and methods of decoration. The introduction of coloured marbles and terra-cotta for purposes of ornamentation has in many instances been most successfully employed. The most notable example of the use of terra-cotta is to be seen in the new museum buildings now in course of erection at South Kensington, and which, when completed, will form one of the chief ornaments of the Metropolis.

Intimately connected with the works in this class, may be mentioned the recent establishment of the Metropolitan and Local Boards of Works and of Health, whose business it is to watch over the general and sanitary condition of the various districts committed to their charge; the steps taken to abate the smoke nuisance, the improvements in the public parks and gardens, as well as many other minor provisions for the welfare of the people.

The manufacture of locks, which are exhibited in this class, is a trade of great importance, and is principally carried on at Wolverhampton and other towns in South Staffordshire.

The following extracts from a report of Mr. J. C. Tiddesley to the British Association in 1865, afford a very complete view of the principal branches of the lock-making trade in the United Kingdom:—

Localities of Production, and Description of Locks made	Number of Employers	Approximate Number of Hands	Average Weekly Earnings	
			s.	s.
Wolverhampton:				
Best till and cabinet .	20	400	25	40
Levered rim and mortice, and fine plate	50	800	25	40
Willenhall (including Short Heath, &c.):				
Warded rim, dead mortice, drawback, pad, and till . . .	275	3,060	18	30
Walsall (including Bloxwich):				
Iron pad and cabinet .	35	400	18	30
Wednesfield:				
Iron cabinet and keys	50	200	15	25
Brewood:				
Fine plate . . .	30	150	18	28
Total . . .	460	4,950		

‘The total weekly production of locks in the district is estimated as follows:—pad, 24,000 dozen; cabinet, till, and chest, 3,000 dozen; rim, dead mortice, and drawback, 3,000 dozen; fine plate, 1,000 dozen; and secure levered locks and other descriptions, 500 dozen; being an aggregate production of 31,500 dozens of locks per week.’

‘Perhaps no extensive branch of local industry has taken less advantage of the recent progress of mechanical science than the lock-trade. In most cases they are constructed now in precisely the same manner as they were twenty years ago. To the fact of the trade being so much in the hands of small capitalists, must be mainly attributed the lack of that enterprise and progression which have characterised other departments of local industry. The recent spread of the lock-trade to Lancashire, London, and other districts will, however, doubtless produce a change in the mode of manufacture here.’ ‘The condition of the artisans engaged in this branch of industry has much improved of late years, but there is still room for amendment.’

As respects the development of art in the lock-trade, there is also room for great improvement both in design and ornamentation, without detracting from the useful qualities of these important articles. In connection with the manufacture of the superior kinds of locks, the articles made by Messrs. Chubb & Hobbs are too well-known to require any description.

As regards building materials produced in the United Kingdom, in addition to stones, slates, lime, &c., vast quantities of bricks and tiles are annually made in various of the country. Timber for building purposes is chiefly imported from North America and the Baltic. The foreign trade in the leading

descriptions of building materials in the year 1865 was as follows:—

Imports.

	Quantities	Value
		£
Marble, rough . . . tons	9,994	74,085
„ sawn, &c. . . cwt.	40,572	29,043
Wood and timber not sawn or split, includ- ing teak . . . loads	1,685,000	5,570,000
Ditto, deals, battens, &c. } sawn or split . . . „	2,136,000	6,559,000
Ditto, lathwood . . . „	105,000	206,000

Exports (British Produce).

	Quantities	Value
		£
Bricks mille	33,221	86,245
Cement cwt.	2,257,000	285,898
Stones:		
Slate, by tale . . . mille	7,134	49,664
„ by weight . . . tons	2,544	11,061
Others of all sorts . value		91,016
Chalk and lime . . . tons	14,425	8,683
Tiles, roofing and paving mille	1,167	8,347
„ drainpipes, &c. . No.	454,600	27,066

Class LXVI.

NAVIGATION AND LIFE BOATS.

The revolution in the construction of vessels of war, during the past ten or fifteen years, is so familiar to the world, that a reference to it in this place is not necessary; it may be mentioned, however, that a large trade in the manufacture of armour plates has sprung up in the country, in consequence of the new method of building ships of war.

The following table shows the number of armour-clad vessels, belonging to the Royal Navy, afloat and building, according to a return made to Parliament in 1866:—

	No.	Tonnage	Guns
	Afloat		
Iron-plated Ships:			
Wholly armour-clad.	13	49,782	219
Partially „	17	59,485	258
Floating Batteries:			
Wholly armour-clad.	4	7,367	62
	Building		
Iron-plated Ships:			
Wholly armour-clad.	2	9,732	12
Partially „	2	8,223	22

One ship on Capt. Coles' cupola plan is included with the list of ships afloat, and two on the same principle are building, the three vessels are wholly armour-clad.

Leaving aside, however, the consideration of vessels of war for purposes of defence and for the protection of commerce, a country that employs annually nearly 50 millions of tons of shipping in its home and foreign trades, must be deeply concerned in the trade of shipbuilding. The chief seats of the shipbuilding trade are on the Thames, Humber, Tyne, Wear, Tees, Severn, Mersey, and Clyde; and at Dundee, Belfast, and many other ports of the kingdom.

The tonnage of merchant vessels belonging to the United Kingdom and Islands in the British Season the 31st December, 1865, was:—

	Sailing vessels	Total tonnage
	Steam „	4,937,000
		824,000
Total		5,761,000

Some idea of the importance of shipbuilding as an industry may be gathered from the number of new vessels built annually in the country. The following table shows the number of vessels built in the United Kingdom and registered during the last three years:—

Years	Sailing Vessels		Steam Vessel	
	Vessels	Tons	Vessels	Tons
1863. .	883	255,000	280	110,000
1864. .	873	272,000	376	161,000
1865. .	922	236,000	382	180,000

Of the total number of vessels built in the year 1865, 844 vessels of 153,000 tons were constructed of timber; and 460 vessels of 262,000 tons, of iron.

The iron used in the construction of iron vessels is produced in the country, but the timber employed in wooden shipbuilding is chiefly imported from abroad. Large quantities of hemp, coir, &c. for rope and rigging purposes are also imported, a notice of which will be found under Class 55.

There are no recent returns of the number of persons employed in shipbuilding &c. in the United Kingdom. According to the census of 1861, the total number of persons engaged in ship, boat, barge, mast and sail making, &c. was:—

Divisions	Males	Females	Total
In England and Wales	43,704	75	43,779
Scotland	9,148	6	9,154
Ireland	2,220	9	2,229
Total	55,072	90	55,162

The following table of the average rates of wages paid to operatives in the shipbuilding trade is compiled from returns furnished to the Board of Trade by the respective Chambers of Commerce in the year 1866:—

Description of Occupation	Locality	Rates of Wages	
		per Week	s.
Shipwrights	At Hull . . .	33	
	Bristol . . .	30	
	Glasgow . . .	30	
	Dundee . . .	24 to 26	
	Belfast . . .	33	
Shipsmiths	Hull . . .	27	33
	Bristol . . .	28	
	Glasgow . . .	20	32
	Dundee . . .	24	30
	Belfast . . .	26	
Strikers or helpers	Hull . . .	15	18
	Bristol . . .	18	
	Glasgow . . .	14	18
	Dundee . . .	16	
	Belfast . . .	13	
Sawyers	Hull . . .	27	33
	Bristol . . .	24	
	Dundee . . .	24	
	Belfast . . .	22	
	Hull . . .	26	28
Joiners	Bristol . . .	30	
	Glasgow . . .	24	29
	Dundee . . .	23	
	Belfast . . .	30	
	Hull . . .	33	
Ship carpenters	Bristol . . .	30	
	Dundee . . .	24	26
	Hull . . .	42	63
	Bristol . . .	42	
	Dundee . . .	30	45
Foremen	Belfast . . .	39	
	Hull . . .	5	10/6
	Glasgow . . .	8	12
	Dundee . . .	6	12
	Belfast . . .	5	10
Apprentices	Hull . . .	18	21
	Bristol . . .	16	
	Glasgow . . .	12	16
	Dundee . . .	13	15
	Bristol . . .	36	
Platers and boiler makers	Glasgow . . .	28	30
	Dundee . . .	27	
	Glasgow . . .	24	29
	Dundee . . .	28	
	Glasgow . . .	26	
Angle-iron smiths	Dundee . . .	23	
	Bristol . . .	18	
	Glasgow . . .	16	
	Dundee . . .	15	
	Bristol . . .	18	
Rivettters	Glasgow . . .	26	
	Dundee . . .	23	
	Bristol . . .	18	
	Glasgow . . .	16	
	Dundee . . .	15	
Holders-up	Bristol . . .	18	
	Glasgow . . .	16	
	Dundee . . .	15	
	Bristol . . .	18	
	Glasgow . . .	16	

In noticing the progress that has been made in recent years in shipbuilding in this country, it would hardly be fair to omit to state that, in addition to the construction of the new armour-clad fleet, the Government has effected the conversion of nearly the whole of the sailing ships belonging to the Royal navy into screw steam vessels, thus providing the country with a steam navy of great power.

In general construction, the wave line principle, introduced by Mr. Scott Russell, has been widely adopted by shipbuilders, and owing to the general employment of iron, ships are now

built much longer and with finer lines, thus adding to their sailing or steaming qualities, to their carrying power, and consequently to greater commercial results. Amongst the most recent inventions and improvements, twin screw ships, the cigar ship, the use of steel in place of iron sheets for the outer skin of vessels, and the new method of hydraulic propulsion may be mentioned. H.M.S. 'Waterwitch,' which is fitted with the new mode of propulsion, has lately made some successful experimental trials; the machinery consists of a large turbine wheel, called the 'Ruthven propeller,' which draws the water in through the bottom of the vessel and ejects it through an aperture on each side of the ship, near the water line.

As regards signals for use at sea, an International Commission was recently held in Paris under the auspices of M. le Marquis de Chasseloup Laubat, the French Minister of Marine, and under the presidency of Admiral la Roncière le Noury. Mr. W. F. Larkins of the Board of Trade, and M. Sallandrouze de Lamornaix of the French Imperial Navy, were charged by the Commission with the revision and correction of the Signal Book. The 'International Commercial Code of Signals' has since been introduced for use on board ships of war and merchant vessels of all countries, for exchanging communications at sea or with shore stations and semaphores.

The code differs from other codes hitherto in use in having the code flags lettered B, C, D, &c. instead of numbered 1, 2, 3, &c.

The advantage of lettering is that 18 distinct signs are obtained, which (taking 2 together, 3 together, and 4 together,) give 78,642 separate combinations for making signals, each being complete in itself, and no signal being composed of more than four flags in the hoist.

Throughout the code, the principle is maintained that the *form* of the *hoist* shall denote the nature of the signal, whether the hoist be of 2, 3, or 4 flags. For instance, a signal made with two of the code flags should always be attended to, all 2 flag signals being the most important.

Again, in hoists of 4 flags, if the flag B (the burgee) is uppermost, the signal will always be geographical.

If any of the 13 square flags of the code are uppermost in a hoist of 4 flags, the signal will always be one indicating a ship's name.

A code list of ships is published as an annex to the signal book, giving to each vessel her name, tonnage, and horse power (if a steamer). The code is sufficiently comprehensive to admit of the appropriation of upwards of 40,000 distinct signals for ship's names exclusively.

The Governments of France and Great Britain have (as was done in the case of steamers' lights some years ago) addressed a joint note to the governments of the principal maritime states, recommending the universal adoption of the commercial code, with the view of establishing

a uniform international system of signalling at sea.

The Government of France was the first to adopt this code, to the exclusion of all others, on board French vessels, and at all semaphore stations, and the Governments of Spain, Portugal, Italy, Holland, Belgium, and Greece, have already signified their intention of following the example of France.

There is a further novelty in the commercial code which should be noticed. It provides for making distant signals by a code to be used when it is found impossible to make out the *colours* of the flags. This is managed by the use of 1 or 2 black balls to be hoisted in conjunction with any two of the code pennants or flags; and these signals can be worked, in common with the semaphores already existing on the coasts of France, by a simple adaptation of the distant signal code for the purpose as explained in the signal book.

The commercial code is printed and published by Mr. W. Mitchell, of 54 Gracechurch Street, London; and by Messrs. Galignani, in Paris.

A most important class of objects exhibited in this section of the Exhibition is that of life boats and apparatus for saving life at sea.

In a country possessing so large a coasting and foreign trade, in addition to extensive fisheries on all parts of the coast, the provision of ample means of affording succour to vessels in distress is a matter of the deepest import. A mere glance at the annual wreck chart for the United Kingdom will suffice to show what an amount of work there is for life boats to accomplish. The total number of ships lost or damaged in 1865 was 2,012; and the total number of lives lost, 698. Of this number, 275 perished in vessels that foundered; 53 on board vessels in collisions; 335 in vessels stranded or cast ashore; and 35 from various other causes. When it is remembered that this loss of life occurred at a time when our life boat system was in its

greatest state of efficiency, it is clear that much yet remains to be done in providing for the rescue of our fellow creatures from the untimely death of a watery grave.

The maintenance of life boats on the shores of the United Kingdom is under the charge of the Royal National Life Boat Institution, which is supported by voluntary contributions. During the past ten years great improvements have been made in the construction of life boats, and the Society has placed many additional boats on dangerous parts of the coast, hitherto entirely devoid of such means of rendering assistance to vessels in distress. The total number of boats belonging to the Institution (November 1866) on various parts of the coasts of the United Kingdom amounted to 172, 125 of which were in England and Wales, 19 in Scotland, and 28 in Ireland. There were also about 20 other life boats in different parts of the kingdom provided for by local means. In addition to the life boats, the Board of Trade supports 249 life saving rocket apparatus stations, which are worked by the coastguard. Models of the improved life boat, and also of the rocket and other apparatus for saving life at sea, will be found exhibited in this class.

The number of lives saved in 1865 was, by life boats belonging to the Institution, 532; by shore boats, 182; and by rocket apparatus, 180.

The expense of establishing a life boat station is 620*l*. Its cost is made up as follows:—

Life boat and her equipment, including life belts for the crew and transporting carriage for the life boat	£ 420
Boat house (average cost)	200
Total	£620

The average annual expense of maintaining a life boat station is 50*l*.

GROUP VII.

(CLASSES LXVII.-LXXIII.)

FOOD (FRESH OR PRESERVED) IN VARIOUS STATES OF PRESERVATION.

Class LXVII.

CEREALS AND OTHER EATABLE FARINACEOUS PRODUCTS, AND THE PRODUCTS DERIVED FROM THEM.

THE objects exhibited in this class possess a great amount of interest, being intimately connected with the capabilities of the country to supply one of the staple articles of the food required by its population; and although the production of cereal crops in the United Kingdom is insufficient to supply the wants of the population, a large area of the country is devoted to their cultivation. Until the year 1866, no complete returns were made of the acreage of the entire kingdom under cultivation. The following table exhibits the area under each description of corn crop in that year, in the several divisions of the United Kingdom:—

	Acreage under Crop (in Statute Acres)		
	In England	In Wales	In Scotland
Wheat .	3,161,431	113,862	110,101
Barley .	1,877,387	146,323	213,619
Oats .	1,503,990	251,893	1,004,040
Rye .	50,570	2,452	7,055
Beans .	492,586	3,534	28,537
Peas .	314,206	3,010	3,188
Total .	7,400,170	521,074	1,366,540

	Acreage under Crop (in Statute Acres)			
	In Ireland	In Isle of Man	In Jersey	In Guernsey, &c.
Wheat .	300,474	8,075	2,702	990
Barley .	152,777	7,736	111	532
Oats .	1,697,048	11,010	288	428
Rye .	7,753	9	13	27
Beans .	12,175	320	15	43
Peas .	2,606	116	13	21
Total .	2,173,433	27,266	3,142	2,041

There are no returns of the quantities of the several kinds of grain produced in the country; but, as regards wheat, it is estimated to amount

to about 27 bushels per acre in England and Wales and Scotland, and to 25 bushels in Ireland. This would give an estimated produce of about 12,364,000 quarters for the United Kingdom, excluding the Isle of Man and Channel Islands.

The following table shows the proportion of corn crops to the total area of the country under crops and pastures &c.:—

Divisions	Total Area under all kinds of Crops, Bare, Fallow and Grass	Per Centage of Total Area under Corn Crops
England	Acres 22,262,000	33·3
Wales	2,284,000	22·8
Scotland	4,158,000	32·9
Isle of Man . . .	83,000	32·9
Channel Islands:		
Jersey	20,000	15·4
Guernsey	12,000	17·0
Ireland	*15,549,000	14·0

* This acreage includes hill pastures, which are not taken in in the other returns, and consequently makes the percentage under corn less than it would be were it taken upon the same basis as in the other divisions of the kingdom.

The chief corn-growing districts in England are situated in the eastern and south-eastern parts of the country; the midland and western counties also produce corn, but a large extent of their area is under grass. In Scotland the same division exists, corn being grown principally in the eastern counties, and grass in the south and south-western. In Ireland the corn-producing districts are situated in the northern and southern portions of the island.

The following extracts from Mr. Caird's work on English agriculture afford a complete view of the changes which farming operations have undergone during the present century. On a comparison of the statistics collected by him in 1850-1 with similar information obtained by Mr. A. Young, in 26 counties in England in 1770, the following progress was observable:—

	1770	1850
	<i>s. d.</i>	<i>s. d.</i>
Rent of cultivated land . per acre	13 4	26 10
	Bushels	Bushels
Produce of wheat	23 0	26½
	<i>s. d.</i>	<i>s. d.</i>
Labourers' wages average, per week	7 3	9 7
Cottage rents	0 8	1 5
Price of bread . . . per lb.	0 1½	0 1½
„ meat	0 3½	0 5
„ butter	0 6	1 0

‘It thus appears that, in a period of 80 years, the average rent of arable land has risen 100 per cent.; the average produce of wheat per acre has increased 14 per cent.; the labourer's wages 34 per cent., and his cottage rent 100 per cent.; while the price of bread, the great staple food of the English labourer, is about the same as it was in 1770. The price of butter has increased 100 per cent.; meat about 70 per cent; and wool upwards of 100 per cent.’ Since the year 1850, the value of butter, meat, and wool has considerably further risen in price.

‘The increase of 14 per cent. in the average yield of wheat per acre does not indicate the total increased produce. The extent of land in cultivation in 1770 was, without doubt, much less than it is now; and the produce, given then, was the average of a higher quality of land, the best having of course been earliest taken into cultivation. The increase of acreable corn produce has therefore been obtained by better farming, notwithstanding the contrary influence arising from the employment of inferior soils. The increased breadth now under wheat, with the higher average produce, bear, however, no proportion to the increase of rent in the same period; and the price of wheat now is much the same as it was then. We must therefore look to the returns from stock to explain this discrepancy.

‘While wheat has not increased in price, meat, butter, and wool have nearly doubled in value. The quantity produced has also greatly increased, the same land now carrying larger cows, cattle which arrive at earlier maturity, and of greater size, and sheep of better weight and quality, and yielding more wool. On dairy farms, and on such as are adapted for the rearing of stock, especially of sheep stock, the value of the annual produce has kept pace with the rent. With the corn farmers the case is very different. In former times the strong clay lands were looked upon as the true wheat soils of the country. They paid the highest rent, the heaviest tithe, and employed the greatest number of labourers. But modern improvements have entirely changed their position. The extension of green crops and the feeding of stock have so raised the productive quality of the light lands that they now produce corn at less cost than the clays, with the further important advantage that the stock maintained on them yields a large profit besides.’

The total area returned as under green crops in the United Kingdom in 1866 (the first complete returns that have been collected) was 5,055,220 acres, of which 2,750,000 acres were in England; 139,265 in Wales; 663,257 in Scotland; 1,482,091 in Ireland; 12,208 in the Isle of Man; 5,253 in Jersey; and 2,938 in Guernsey.

The average prices of British wheat, barley, and oats per imperial quarter, during the five years 1861–65 were:—

	Wheat	Barley	Oats
	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>
1861	55 4	36 1	23 9
1862	55 5	35 1	22 7
1863	44 9	33 11	21 2
1864	40 2	29 11	20 1
1865	41 10	29 9	21 10

It has already been stated that the home production of corn in the United Kingdom is inadequate to the wants of the population, and vast quantities are therefore imported. During the twelve years from 1854 to 1865, the average annual value of corn imported into the kingdom amounted to no less than 24,000,000*l.* sterling. The quantities of the principal descriptions of corn imported in 1865, and the sources of supply, are indicated in the following table:—

Countries whence imported	Quantities entered for Consumption Cwts.
Wheat:	
Russia	8,160,000
Denmark	647,000
Prussia	5,426,000
France	2,266,000
British North America	307,000
United States	1,183,000
Other countries	2,946,000
Total	20,935,000
Wheat Flour:	
France	3,058,000
British North America	181,000
United States	262,000
Other countries	382,000
Total	3,883,000
Barley:	
Denmark	1,550,000
Prussia	770,000
Hanse Towns	400,000
France	1,583,000
Turkey Proper	2,087,000
Other countries	1,428,000
Total	7,818,000
Oats:	
Russia	1,963,000
Sweden	3,090,000
Denmark	1,071,000
Prussia	65,000
Holland	726,000
Other countries	796,000
Total	7,711,000

Countries whence imported	Quantities entered for Consumption Cwts.
Maize :	
Russia	1,194,000
Wallachia and Moldavia	545,000
Turkey	3,178,000
United States	1,771,000
Other countries	399,000
Total	7,087,000

The countries named in the above table, with the addition of Egypt, which for many years furnished large quantities of wheat, barley, and maize, have been the chief sources of supply for the last fifteen years. Owing to the late civil war in the United States, the quantities of grain received from that country in 1865 were considerably below the ordinary importations. Corn and grain is liable to an import duty of 3d. per cwt., and flour to 4½d. per cwt.

Large quantities of rice, sago, tapioca, semolina, macaroni and vermicelli, which are not produced in the country, are also imported. In the year 1865 the following importations were made :—

Articles	Quantities	Value
		£
Rice, rough in the husk . qrs.	6,478	15,310
„ not in the husk . cwts.	1,938,816	1,330,941
Sago	148,582	121,285
Tapioca	22,363	37,025
Semolina	2,453	2,773
Macaroni and vermicelli „	7,486	18,012
Total		1,525,346

The total number of persons engaged in agriculture, i.e. in the cultivation of fields and pastures, in each division of the United Kingdom in the year 1861 was :—

Divisions	Males	Females	Total
In England and Wales	1,457,075	376,577	1,833,652
Scotland	215,716	120,773	336,489
Ireland	850,121	81,714	931,835
Total	2,522,912	579,064	3,101,976

The condition of the agricultural labourer in all parts of the country has long been the subject of consideration. As an employment, agriculture affords less remuneration to the workman than any other occupation. The rates of wages vary considerably in all parts of the country; but in those districts in which even the highest wages are paid, the condition of the labourer is not at all satisfactory.

According to returns laid before Parliament in the year 1861, the following rates were paid to agricultural labourers in the three divisions of the country :—

Highest and lowest Rates of average Weekly Wages, without Lodging or Food.

Divisions and Districts	Males		Females		Children under 16.	
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
England :	10 0	to 13 6	3 6	to 6 0	2 6	to 6 0
S. Eastern	10 0	13 0	3 6	5 0	2 0	8 0
S. Midland	10 0	13 0	3 6	5 0	1 6	8 0
Eastern	8 0	10 0	3 0	5 0	1 6	7 0
S. Western	9 0	12 0	3 0	5 0	2 0	6 0
W. Midland	12 0	15 0	4 0	6 0	1 6	8 0
N. Midland	10 0	15 0	3 6	11 0	2 0	6 0
N. Western	12 0	16 6	4 2	8 0	3 0	7 6
Northern	10 0	13 0	2 6	6 0	1 6	9 0

Wales	10 0	16 0	4 0	8 0	2 0	7 0
Scotland (about)	5 7	10 2	2 9	5 0	1 7	4 0
Ireland (about)						

Weekly earnings by task-work ranged from 2s. to 5s. in excess of the above rates.

Much progress has been made in agricultural science in the United Kingdom of late years, and more especially in England and Scotland. The improved methods of farming introduced, including a better system of rotation in crops, a vast extension of drainage and of the use of artificial manures, as well as of the employment of machinery for many farming operations, have tended to place the agricultural industry of the country in a far better position than it formerly occupied. The increase in the rearing of live stock on farms has also been attended with very profitable results; and the recent experiments of steam cultivation on clay lands are reported to have been highly successful. A notice of agricultural machinery, which is now extensively employed throughout the country, will be found under Class 48. The annual exhibitions of the Royal Agricultural Society, and the several international and other exhibitions that have taken place since 1851, have been the means of increasing the use of the most improved machinery; while the researches of many eminent chemists and scientific men have led to a better understanding of the nature of soils, and consequently have largely contributed to the welfare of the agricultural industry of the kingdom.

Class LXVIII.

BREAD AND PASTRY.

Within the last few years bread-making by machinery has rapidly increased. Among the bread-making machines exhibited at the London Exhibition of 1862, those for kneading bread were well represented. These machines were stated to effect a saving of three per cent. in flour alone. A travelling oven for biscuit-baking was also highly commended by the jury on Class 7, who expressed the hope that, in the interests of health and cleanliness, as well as in that of the welfare of the operatives

engaged in the business, the general adoption of machinery for bread-making would be accepted by the trade.

The annual consumption of wheat and wheat-flour for purposes of food in the United Kingdom is estimated to be about 20 million quarters, or about $5\frac{1}{2}$ bushels per head.

The number of bakers and confectioners in each division of the United Kingdom in 1861 was :—

	Bakers	Confectioners
In England and Wales . . .	54,140	14,526
Scotland	10,894	1,924
Ireland	9,293	1,547
Total	74,327	17,997

There are no official returns of the price of bread. The average price of wheat, per quarter, in England and Wales during the five years 1861-65 was :—

	s.	d.
1861	55	4
1862	55	5
1863	44	9
1864	40	2
1865	41	10

Class LXIX.

FATTY SUBSTANCES USED AS FOOD : MILK AND EGGS.

Edible oils are not produced in the United Kingdom, and as respects the other articles included in this class, the home production is not sufficient to meet the wants of the population. Large quantities of butter, cheese, and eggs are annually imported into the country. The statistics relating to the foreign trade in the articles comprised in this class are given below :—

Quantities and Value of Articles Imported for Consumption.

Years	Olive Oil	Butter	Cheese	Eggs
	Quantities			
	Tons	Cwts.	Cwts.	Gt. hundreds
1861	15,981	987,000	698,000	1,694,000
1862	20,077	1,024,000	695,000	1,936,000
1863	18,949	957,000	747,000	2,224,000
1864	15,726	1,038,000	826,000	2,794,000
1865	30,716	1,068,000	842,000	3,033,000
	Value			
	£	£	£	£
1861	908,600	4,874,000	1,618,000	550,000
1862	1,152,800	4,860,000	1,530,000	594,000
1863	1,085,800	4,402,000	1,863,000	673,000
1864	902,200	5,569,000	2,151,000	835,000
1865	1,616,900	5,871,000	2,432,000	928,000

Olive oil is imported principally from Italy and Spain ; butter from Holland, Belgium,

France, Hamburg, and Denmark ; cheese from Holland and the United States ; and eggs from France.

The value of butter and cheese of British make exported during the five years 1861-65 was :—

	Butter	Cheese
	£	£
1861	466,000	130,000
1862	374,000	127,000
1863	472,000	157,000
1864	327,000	147,000
1865	333,000	111,000

Class LXX.

MEAT AND FISH.

Although the consumption of meat in the United Kingdom is very great, there are no means of ascertaining the amount of the annual consumption. Owing to the high price of meat of late years, several schemes for the introduction of preserved meat from South America have been set on foot, but hitherto they have remained without any significant results.

The sea which surrounds the coasts of the British Islands affords a plentiful supply of fish. The chief kinds are cod, turbot, soles, mackerel, whiting, herrings, pilchards, shrimps, oysters, and lobsters. According to the report of a commission lately appointed to enquire into the condition of the British fisheries, it is stated that the supply of fish on the coasts of Great Britain is annually increasing. The decline in the oyster supply during the past three years is attributed to a succession of bad breeding seasons, for which no well-ascertained cause can be assigned.

The Scotch and Irish salmon fisheries are also of considerable importance ; but there are no returns of their annual production ; large quantities of salmon are exported.

The principal branches of the British fishing trade are those of the herring and pilchard fisheries, large quantities of these two descriptions of fish being annually exported, in addition to the vast number that are consumed in the country.

Since the extension of railway communication, the consumption of fish has greatly increased, and most large towns throughout the country are now daily supplied with fresh fish. There are no statistics of the English fisheries, although the herring fishery of Yarmouth and other parts of the coast, as well as the pilchard fishery on the coasts of Devon and Cornwall, afford employment to a large number of boats and fishermen. In addition to these two branches of fishing, the fishing-boats are engaged at other seasons in catching mackerel, turbot, soles, cod, &c. &c. It is estimated that

there are between 800 and 900 trawl-vessels engaged in supplying the London market with fish; and assuming the annual average take to be 90 tons, this would give a total of some 80,000 tons of fish. This is irrespective of the vast quantities of herrings, sprats, shell, and other descriptions of fish which are supplied by other modes of fishing.

The following were the number and tonnage of boats and of men and boys employed in the Scotch, Isle of Man, and Irish fisheries in the year 1864:—

	Fisheries		
	Scotch	Isle of Man	Irish
No. of vessels .	12,703	628	9,300
Tonnage .	92,887	5,635	—
Number of men and boys .	40,934	2,550	40,946

The produce of these fisheries in the same year was:—

		Scotland	Isle of Man
Cod and Ling:			
Taken or purchased	{ cwts. 161,000 barrels 7,900	19,600	
Cured . . .	{ cwts. 107,600 barrels 7,900	138	—
Herrings:			
Caught . . .	barrels 691,000	44,000	
Cured . . .	„ 609,000	34,000	

There are no returns of the produce of the Irish fisheries, which have declined of late years. It is stated that the majority of small fishing-boats in that country belong to farmers who dwell on the coast, and they are only occasionally employed; the fish taken is not sent to market, but disposed of in the immediate neighbourhood of the fishing.

There are no returns of the average prices of meat in the several parts of the country. The average prices of meat at the Metropolitan live meat market during the three years 1863–65 was:—

Per Stone of 8 lbs. (sinking the Offal.)

	1863	1864	1865
Beasts:	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>
Inferior . . .	3 7½	3 9	3 10
2nd class . . .	4 2	4 4½	4 4½
3rd class (large prime)	4 8	4 9½	4 9½
4th class (Scots) . .	4 11½	5 1	5 2
Sheep:			
Inferior . . .	4 0	4 2½	4 8
2nd class . . .	4 7½	4 9½	5 4
3rd class (long coarse wool)	5 1	5 3	5 11
4th class (South Downs)	5 5½	5 8	6 4½

Although the above prices do not afford any indication of the retail prices of meat, as paid

by the generality of consumers, they represent pretty accurately the wholesale prices of this important article of food. As respects the price of fish, the Commissioners of Fisheries obtained two statements showing the variation in price at a seaport and at an inland town between the years 1856 and 1865, which were as follows:—

At Newcastle-upon-Tyne	1856		1865	
	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>
Turbot . . per stone	2 0	2 6	4 6	6 6
Soles . . . pair	0 9	1 3	1 9	2 0
Cod . . . each	0 9	1 3	2 6	3 0
Codlings . .	0 3	0 9	0 6	1 3
Haddock . .	0 3	0 6	0 6	0 9
Skate . . .	0 6	0 9	2 6	3 0
Whiting . . per stone	0 9	1 0	1 3	1 6
Lobsters . .	15 0	20 0	18 0	25 0

At Manchester	1856		1865	
	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>
Turbot . . per lb.	1 0	1 6	0 8	1 0
Soles . . .	0 3	0 4	0 6	0 8
Cod . . .	0 2	0 4	0 3	0 4
Sparlings . .	—	1 6	1 0	1 6
Haddock . .	0 2	0 4	0 3	0 4
Pilchard . .	—	0 2	0 1½	0 2
Brill . . .	0 4	0 6	0 4	0 5
Ray . . .	—	0 2	—	0 3
Halibut . .	0 4	0 6	—	0 6

The above are retail prices.

The price of cured herrings at Leith, in 1865, ranged from 28s. to 34s. per barrel; and at Greenock, from 26s. to 40s. per barrel.

There are no official returns of the prices of fish sold in the London market.

The quantities and value of foreign fish imported into the United Kingdom in the year 1865, were—

	Quantities	Value
Fish, fresh . . .	Cwts. 118,502	£ 130,570
„ cured or salted .	366,958	384,142
	485,460	514,712

Fresh fish is imported chiefly from Holland and Norway, and cured fish from British North America, France, Holland, Norway, and Iceland.

The exports of British fish in the same year were:—

	Quantities	Value
Herrings . . barrels	352,250	£ 500,233
Cod and ling . cwts.	36,433	40,361
Salmon . . .	4,311	23,388
Pilchards . . hhd.	11,783	38,342
Oysters . . bushels	97,030	63,130
Other kinds . .	—	23,784
		689,238

Herrings are sent principally to Germany, Italy, and Austria; salmon and oysters to France and Belgium; and pilchards to Italy and Austria.

Class LXXI.

VEGETABLES AND FRUIT.

The cultivation of vegetables and fruit has been brought to a great state of perfection in the United Kingdom; and both are largely consumed by all classes of the community. There are no statistics of the annual productions of gardens. The area under cultivation of potatoes, exclusive of gardens, in the United Kingdom in the year 1866 was 1,556,000 acres.

In addition to the home supply, considerable importations of fruits and vegetables are annually made. In the year 1865 the chief imports consisted of—

Apples, raw . . .	bushels	516,000
Grapes . . .	"	58,000
Oranges and lemons . . .	"	1,567,000
Pears, raw . . .	"	41,000
Other raw fruit . . .	"	226,000
Onions . . .	"	529,000
Potatoes . . .	cwts.	807,000

Class LXXII.

CONDIMENTS AND STIMULANTS; SUGAR AND CONFECTIONERY.

The principal articles included in this class which are produced in the United Kingdom, are table salt, vinegar, mustard, sauces, and preserved fruits and jams. The manufacture of table salt is principally located in the counties of Cheshire and Worcester, where it is prepared in very large quantities, although some of the finest salt is manufactured in London from the rougher descriptions produced in the above-named places. English mustard and sauces, besides supplying the home demand, enjoy a high renown in most continental towns, and are also largely used in the colonies. The consumption of some of the articles comprised in this class, which are not produced in the country, is very great. The following table exhibits the quantities of the principal articles of foreign growth retained for consumption in the year 1865:—

Pepper . . .	lbs.	4,713,000
Cocoa . . .	"	3,826,000
Coffee . . .	"	30,511,000
Tea . . .	"	97,834,000
Sugar, raw . . .	cwts.	9,876,000
" refined . . .	"	724,000

Pepper is obtained chiefly from the Dutch East Indies, *via* Singapore; cocoa from the British West Indies and Central America; coffee from Ceylon, India, and Brazil; tea from China and Assam; raw sugar from the British West Indies, Cuba, and Brazil, and refined sugar from Holland, France, and Belgium. Cinnamon, cloves, pimento, &c. are also imported,

but they are not consumed in very large quantities.

The consumption of tea and of raw sugar has greatly increased during the past ten years. In 1856 only 63,000,000 lbs. of tea and 6,813,000 cwts. of raw sugar were imported for consumption. On comparing the quantities similarly imported in 1865, they show an increase of 55 per cent. in tea and 44 in raw sugar. The recent reduction of the tea duty to 6*d.* per lb. has greatly tended to increase the consumption of this article, and has proved a great boon to the poorer classes of the community.

The average annual consumption of tea in 1865 was about $3\frac{1}{4}$ lbs. per head of the population; and of sugar, 39 lbs.

The consumption of cocoa remains almost stationary, whilst that of coffee has slightly declined.

The value of salt, pickles and sauces, vinegar, and confectionery exported from the United Kingdom in the year 1865 amounted to—

	Quantities	Value
		£
Salt, rock and white . tons	579,050	274,631
Pickles and sauces . value	—	328,381
Vinegar . . . gals.	345,123	33,149
Confectionery . . lbs.	2,041,348	85,465

Class LXXIII.

FERMENTED DRINKS.

There are no records of the production of British wines, which are to a great extent made from foreign fruits, such as oranges, raisins, ginger, &c. as well as from home-grown fruits, such as currants, gooseberries, and raspberries. Cider is largely produced in Devonshire, Herefordshire, and other counties in the south-west of England, where in a great measure, it takes the place of beer as a beverage for the working classes. The better descriptions of cider, as well as perry, are occasionally used by the upper classes. Beer is the ordinary beverage of the majority of the population, and is produced in large quantities, not only for home consumption, but also for exportation. The manufacture of spirits is also very extensive. Scotch and Irish whiskey are the most celebrated of English spirits, though less consumed, perhaps, than gin and brandy and rum, which latter spirit is not made in the country. The quantity of malt used by distillers of spirits in the United Kingdom during the three years 1863-65 amounted to—

	Bushels
1862-3 . . .	4,133,000
1863-4 . . .	4,986,000
1864-5 . . .	4,408,000

The number of persons licensed to brew beer in each division of the United Kingdom in the year 1865 was:—

In England and Wales	34,218
Scotland	220
Ireland	90
Total	34,528

The number of distillers of spirits in the same year was:—

In England and Wales	8
Scotland	116
Ireland	25
Total	149

The number of distillers annually becomes smaller, owing to the concentration of the business in the hands of large distillers, who employ all the modern improvements, and who are thus enabled to successfully rival the small producers.

The following table shows the quantities of beer and British spirits, as well as foreign wines and spirits, retained for consumption in the United Kingdom in the year 1865:—

	Gallons
Beer (estimated) . . .	684,000,000
British spirits	21,005,000
Wine, foreign	11,994,000
Foreign spirits	6,732,000

As respects the consumption of the above drinks during the past ten years, there has been an increase in beer, a decrease in British spirits, an increase in foreign spirits, and a large increase in wine. The increased consumption of wine is in a great measure attributable to the reduction of the import duty on that article which was made on the occasion of the negotiation of the Commercial Treaty with France in 1860.

The importations of wine for consumption from the principal countries of production in 1859 and 1865, were:—

Countries whence imported		1859	1865
		Gallons	Gallons
France . {	Red . . .	423,000	1,782,000
	White . . .	272,000	829,000
Portugal {	Red . . .	1,971,000	2,851,000
	White . . .	49,000	38,000
Spain . {	Red . . .	47,000	506,000
	White . . .	2,829,000	4,685,000

The principal descriptions of spirits imported are rum and brandy. The chief sources of supply are exhibited in the following table:—

Imports for Consumption, 1865.

		Gallons
Rum . . {	From British West Indies . .	1,499,000
	„ British Guiana . .	1,870,000
Brandy . {	„ France . .	2,581,000
	„ other parts . .	85,000

The quantities of beer and ale and of British spirits exported from the United Kingdom during the five years 1861-65 are stated below:—

	Beer and Ale	Spirits
	Barrels	Gallons
1861	378,000	4,085,000
1862	465,000	3,752,000
1863	491,000	4,076,000
1864	499,000	4,194,000
1865	562,000	1,987,000

The total value of the above, in the year 1865, amounted to 2,305,000*l*.

GROUP VIII.

(CLASSES LXXIV.-LXXXII.)

LIVE STOCK AND SPECIMENS OF AGRICULTURAL BUILDINGS.

Class LXXIV.

FARM BUILDINGS AND AGRICULTURAL WORKS.

THE position of agriculture in any country possessing a large population must always remain a subject of deep importance. Of late years much greater attention has been paid to the cultivation of the soil than was formerly the case, and owing to the labours of many scientific men, farming is now to a great extent carried on in the United Kingdom on scientific principles. The introduction of steam power for performing many farming operations has also led to a considerable improvement in the methods of farming throughout the country, which have been still further aided by the superior descriptions of implements and machines manufactured in England for agricultural purposes. Great advancement is also manifest in the farm buildings that are now erected, as well as in the utensils and apparatus employed in them.

The manufacture of agricultural machinery and implements forms a very important industry of the country, although there are no returns of the actual number of persons engaged in it. It is made at Lincoln, Bedford, in many parts of Suffolk, at Peterborough, Banbury, and Manchester. The English makers of this class of machinery, in addition to an extensive home trade, have a large foreign trade in their productions; and there can be little doubt that as a class they have considerably profited by the exhibition of their goods at International Exhibitions.

The value of British agricultural implements and machinery exported from the United Kingdom in the year 1865 amounted to—

	£
Agricultural implements, un- enumerated. }	210,300
Agricultural implements com- posed wholly of iron . . . }	13,177
Agricultural machinery (except steam engines) }	282,019

Steam engines for agricultural purposes are not separately specified in the trade accounts, but this branch of the trade is of considerable value.

A statement of the area under cultivation of the principal crops in the United Kingdom in the year 1866 will be found under Class 67, and the number of live stock under Classes 75 to 77.

Class LXXV.

HORSES, ASSES, MULES.

There are no returns of the number of horses in Great Britain, except those of the number of horses and mules charged with and exempt from duty. The following were the numbers taxed and exempted from duty in each division of Great Britain in the year 1864:—

	Horses and mules No.
In England and Wales, taxed	537,639
„ „ exempt from tax	330,584
In Scotland, taxed	55,428
„ „ exempt from tax	147,444
Total for Great Britain	1,071,095
According to the returns for Ireland in 1866	535,000
Total, United Kingdom	1,606,095

There are no records of the number of asses in the kingdom.

The following table gives the number and value of horses imported into and exported from the United Kingdom during the five years 1861-65:—

Years	Imported		Exported (British)	
	Number	Value	Number	Value
1861	1,595	£ 37,693	2,954	237,813
1862	1,978	40,581	4,288	267,956
1863	1,441	39,264	5,204	269,825
1864	1,357	34,319	4,664	230,391
1865	1,332	39,658	4,400	185,367

Only 4 asses, valued at 20*l.*, were imported in the year 1865; and 130 asses and mules, valued at 1,291*l.*, were exported in the same year.

Class LXXVI.

BULLS, BUFFALOS, ETC.

The following is the return of cattle in each division of the United Kingdom, as ascertained in the year 1866:—

Divisions	Cows	Other Cattle	Total
England . . .	1,290,529	2,016,505	3,307,034
Wales . . .	222,546	318,855	541,401
Scotland . . .	370,447	566,954	937,401
Ireland . . .	1,481,446	2,261,486	3,742,932
Isle of Man . .	7,755	10,932	18,687
Channel Islands:			
Jersey . . .	5,815	6,222	12,037
Guernsey . .	3,030	3,946	6,976
Total . . .	3,381,568	5,184,900	8,566,468

In addition to the number of cattle reared in the country for purposes of food, a large number is annually imported from abroad, chiefly from the northern states of Europe. A very considerable increase in the importations will be observed in 1864 and 1865, which was in great part owing to the plague that existed amongst the home stock. The number and value of cattle of all kinds imported into the United Kingdom during the five years 1861–65 are given below:—

	No.	Value
1861 . . .	107,096	£1,558,065
1862 . . .	97,887	1,301,602
1863 . . .	150,898	1,931,814
1864 . . .	231,733	3,208,851
1865 . . .	283,271	4,401,482

The exports of cattle are exceedingly insignificant.

The total number of cattle reported to have been attacked by the cattle disease in Great Britain since the commencement of the epidemic to the 10th November 1866, amounted to 253,730. Of this number, 85,018 were killed, 124,305 died, 33,413 recovered, and 10,994 unaccounted for; 52,415 healthy animals were also slaughtered in the same period to prevent the spread of the disease. The percentage of the estimated ordinary stock of cattle attacked by the disease up to the 10th November 1866 was 5·141.

Class LXXVII.

SHEEP, GOATS.

The total number of sheep in each division of the United Kingdom in the year 1866 was:—

	No.
In England . . .	15,124,000
Wales . . .	1,668,000
Scotland . . .	5,255,000
Ireland . . .	4,270,000
Isle of Man . .	55,954
Channel Islands:	
Jersey . . .	517
Guernsey . .	1,214
Total . . .	26,374,685

In consequence, however, of the period of the year at which the return for England was taken, it is probably short by a large number of lambs. There are no returns of the number of goats in the United Kingdom, they are not kept in large numbers.

A considerable importation of sheep and lambs is annually made into the kingdom, almost exclusively from Europe, and principally from Hamburg, Holland, and Belgium. The importations during the five years 1861–65 are given below:—

	No.	Value
1861 . . .	312,923	£616,020
1862 . . .	299,472	569,315
1863 . . .	430,788	669,573
1864 . . .	496,243	873,905
1865 . . .	914,170	1,787,866

The large increase in 1865 is attributable to the scarcity of meat in the home market owing to the disease in the cattle.

The number of sheep exported is very small, in the year 1865 only 2,477 sheep, valued at 22,134*l.*, were sent out of the country.

Class LXXVIII.

PIGS, RABBITS.

The return of the number of pigs in the United Kingdom is incomplete, inasmuch as pigs kept by cottagers and pigs kept in towns in England, Wales, and Scotland are not included in the return. Exclusive of pigs so maintained, however, the total number in the United Kingdom in 1866 is stated at 3,990,000. Rabbits abound in all parts of the country, but no records exist of the supposed number.

The importations of swine and hogs during the five years 1861–65 were:—

	No.	Value
1861 . . .	30,308	£37,884
1862 . . .	18,162	17,319
1863 . . .	27,137	53,685
1864 . . .	85,362	192,566
1865 . . .	132,943	359,065

A considerable number of rabbits are imported from the Continent, but the customs' returns do not distinguish the number separately. Very few pigs are exported; in 1865 the number was 148, valued at £559.

Class LXXIX.**POULTRY.**

There are no statistics of the number of poultry in the country, but it must be sufficient to supply the wants of the population, as the importations are comparatively of trifling value. Eggs are not included in this class but will be found noticed in Class 69.

The value of poultry, including game and rabbits, imported into the United Kingdom during the five years 1861–65 was :—

	£
1861	74,000
1862	86,000
1863	109,000
1864	131,000
1865	148,000

Class LXXX.**SPORTING DOGS AND WATCH DOGS.**

There are no statistics of the number of dogs in the United Kingdom; for although they are liable to a tax, the evasions of the duty are so numerous as to render the official returns useless for the purpose of showing the number of these animals kept in the country.

Class LXXXI.**USEFUL INSECTS.**

The only insects reared in the United Kingdom which come within the range of this class are bees, which are kept to a considerable extent in many parts of the country. Several improvements in the make of apiaries have been introduced within the past ten years, but as a rule the old straw beehive is the usual form of hive employed for the preservation of bees in this country. The quantities of honey and bees' wax imported into the United Kingdom in the year 1865 were :—

	Cwts.
Honey	4,519
Bees' wax	10,678

There are no returns of the amount of the home production of these articles.

Class LXXXII.**FISH, CRUSTACEA, AND MOLLUSCA.**

The most important apparatus comprised within the limits of this class is that for the artificial rearing of fish, which has been successfully employed in many parts of the country. The apparatus is now, however, so generally known that allusion to it in this place is unnecessary. A notice of the production of the British fisheries will be found under Class 70.

GROUP IX.

(CLASSES LXXXIII.-LXXXVIII.)

TREES, PLANTS, VEGETABLES, AND SPECIMENS OF HORTICULTURAL BUILDINGS, &c.

Class LXXXIII.

HOthouse AND HORTICULTURAL APPARATUS.

SEVERAL improvements have been made within the last few years in the construction of hothouses and conservatories, especially as regards the design of the latter. As respects apparatus, the invention and introduction of the mowing machine for lawns is one of the most important; it will cut grass at all times of the day and year, whereas the scythe can only be used when the dew is on the grass. Many other improvements in gardeners' implements and apparatus have been made during the past ten years, owing to the increased attention that has been paid to the cultivation and ornamentation of gardens, as well as to conservatories and other buildings for the artificial culture of plants, which are now attached to most modern houses of any size.

Class LXXXIV.

FLOWERS AND ORNAMENTAL PLANTS.

In addition to the natural taste of the people for the cultivation of flowers, the numerous horticultural and botanical societies, by means of the establishment of gardens and by frequent public exhibitions of flowers and plants, have been greatly instrumental in fostering this national peculiarity. The flower gardens of the upper and middle classes of society are generally acknowledged to be unsurpassed by those of any other nation of the world; and from the intimate connection of England with all quarters of the globe, her gardens have been enriched by contributions from every clime. Amongst recent introductions, may be mentioned many beautiful and hitherto rare flowers and plants from Japan. The art of ornamental gardening has of late years been extensively developed in England, owing in a great measure to the increased wealth of the middle classes.

Class LXXXV.

VEGETABLES.

Vegetables of all descriptions are largely grown in the United Kingdom, but with the exception of potatoes, there are no returns of the extent of their cultivation.

The area of land under the cultivation of potatoes (exclusive of gardens) in the year 1866 was:—

	Acres
In England and Wales . . .	356,000
Scotland . . .	143,000
Ireland . . .	1,051,000
Isle of Man . . .	4,000
Channel Islands . . .	2,000
Total . . .	1,556,000

Potatoes and onions are also imported in large quantities, chiefly from France and Holland, Belgium and Portugal. In the year 1865, 807,000 cwts. of potatoes, valued at 162,000*l.*, and 529,000 bushels of onions, valued at 121,000*l.*, were imported into the United Kingdom.

Class LXXXVI.

FRUIT TREES.

Fruit-trees of many descriptions, especially apples, pears, and cherries, are extensively cultivated in several parts of the kingdom. In Devonshire, Somerset, and Herefordshire, apples are largely grown for the manufacture of cider. Kentish cherries are also highly celebrated for their good qualities. Many other fruits are grown in private and in what are termed market-gardens, and the annual production is very large, although there are no means of estimating its value. Great attention is paid to the propagation of fruit-trees, and each year witnesses the introduction of several improved descriptions of fruit.

In addition to the home supply, large quantities of common fruits are annually imported

into the country, amongst the principal of which, in 1865, were:—

	Bushels
Apples, raw	516,000
Pears	41,000
Walnuts	143,000
Small nuts	251,000
Chesnuts	72,000
Grapes	58,000

The latter are not grown as an outdoor crop in the United Kingdom, but are largely produced in hothouses.

Raisins, dried; sweet almonds, dates, figs, oranges, and lemons. are not produced in the country, but are imported. In 1865 the quantities of these fruits amounted to:—

	Cwts.
Raisins	368,000
Sweet almonds	32,000
Figs, dried	78,000
Dates	16,000
	Bushels
Oranges and Lemons	1,576,000

Class LXXXVII.

SEEDS AND SAPLINGS OF FOREST TREES.

Although the cultivation of forests in the United Kingdom is comparatively limited in extent, being confined to those belonging to the crown and to a few extensive landed proprietors, the rearing of trees for woods and plantations receives great attention. The parks which surround the country residences of the

landed proprietors are studded with forest-trees of all descriptions, but they are cultivated chiefly with regard to ornamentation. There are few countries, perhaps, in which such a diversified grouping of foliage can be seen as in the woods and plantations of many counties of England.

Class LXXXVIII.

HOTHOUSE PLANTS.

It is impossible, within the limits of these remarks, to point out the several methods of culture of hothouse plants in the United Kingdom; but it is hoped that some of the more recent modes may be represented at the exhibition. For heating purposes, the brick flue is still largely used, although hot water and gas apparatus are also very generally employed. Many improvements in the construction of hothouses have been made of late years, some of the more important of which are due to the late Sir J. Paxton; and the reduction in the price of glass has also given the designers of ornamental structures a much greater latitude in the erection of these buildings. The cultivation of hothouse plants, apart from their growth for purposes of pleasure, is greatly encouraged by the exhibitions which are held by the Horticultural and other societies in the kingdom, at which prizes are awarded for the best specimens of known flowers, as well as for the successful introduction of any novelties in stove-plants.

GROUP X.

(CLASSES LXXXIX.-XCIII.)

ARTICLES EXHIBITED WITH THE SPECIAL OBJECT OF
IMPROVING THE PHYSICAL AND MORAL CONDITION
OF THE PEOPLE.

Class LXXXIX.

APPARATUS AND METHODS USED IN THE
INSTRUCTION OF CHILDREN.

ALTHOUGH not exhibitors at the present Exhibition, there are numerous societies in the United Kingdom supported by private subscriptions, whose object it is to afford to elementary schools, as well as to the public generally, the means of obtaining sound educational works at a very low cost. As regards school buildings, the Department of Science and Art maintains a permanent exhibition of the most approved models for public schools, and of school furniture and apparatus. Great attention has been paid to the education of the blind in England, where they are not only taught to read, but are also instructed in music, and taught several trades. There are many institutions in London and other large towns for the reception of this class of the population, capable of affording support to several hundred persons. It is stated that, in the well-known institution for the indigent blind in Southwark, from twelve to fifteen young persons are annually turned out from the school well instructed in religious and secular knowledge; masters of a trade, as shoe-makers, mat-makers, weavers, brush-makers, or basket-makers, and some of them are able to play on the organ, or other instrument. Similar results are obtained at most of the other institutions.

The total number of blind persons in the United Kingdom at the taking of the census in 1861 was:—

	Persons	
In England and Wales	19,352 or 1 to every 1,037 persons	
Scotland	2,820	1,086
Ireland	6,879	843
Islands in British Seas	197	728
	29,248	994

The exhibition of educational works and maps &c. will of itself be sufficient to show the great amount of interest that is displayed in providing for the moral and social condition of the people.

Class XC.

LIBRARIES AND APPARATUS USED IN THE
INSTRUCTION OF ADULTS—AT HOME,
IN THE WORKSHOP, OR IN SCHOOLS
AND COLLEGES.

The establishment of libraries and reading-rooms for the use of the working-classes, has existed for many years in connection with the Mechanics' and Literary Institutes which are to be found in almost every town and considerable village throughout the country. The establishment of Free Libraries in large towns for the use of all classes, is of later date. Instruction to adults belonging to the humbler classes is given in Working-men's Colleges, and at evening classes held at the Mechanics' and other institutions. The efforts of the promoters of all these institutions have been ably seconded by a large number of publishers in different parts of the country who have had the real welfare of the operative at heart. The publication of cheap educational works, and especially those adapted to self-instruction, is now so extensive that the difficulty that exists is, not that of obtaining, but of selecting from the vast supply offered. The large circulation of cheap periodicals, of reprints of standard works, and particularly of cheap newspapers, must be regarded as an evidence of the improved educational standard of large classes of the community.

Class XCI.

FURNITURE, CLOTHING, AND FOOD FROM
ALL SOURCES, REMARKABLE FOR USEFUL
QUALITIES COMBINED WITH CHEAP-
NESS.

In a country like the United Kingdom, where so large a proportion of the manufactures are produced for the 'million,' it is not easy to specify what particular articles fall within the limit of this class. Owing to their large consumption, and to the employment of machinery

in their manufacture, most of the ordinary articles of furniture, clothing, and food are sold at prices sufficiently low to place them within the reach of all able-bodied, industrious members of the community. The price of most of the articles used by the poorer classes of the population is also kept down by the vast competition that exists to supply them, as from the nature of the trade (being chiefly a ready-money one) large returns are realised, although the articles are sold at a very small profit.

The establishment and rapid increase of co-operative and provident societies, which supply their members, principally of the operative classes, with many articles of food and clothing at cost price, besides giving them a bonus upon their purchases at the stores, deserves a notice in this place.

Class XCII.

SPECIMENS OF THE CLOTHING WORN BY THE PEOPLE OF DIFFERENT COUNTRIES.

A few remarks as to the descriptions of clothing worn by different classes in the United Kingdom, will be found under Class 35.

Class XCIII.

EXAMPLES OF DWELLINGS CHARACTERISED BY CHEAPNESS, COMBINED WITH THE CONDITIONS NECESSARY FOR HEALTH AND COMFORT.

The subject of the improvement of the dwellings of the working classes has long occupied attention in England. Those who

visited the London Exhibition of 1851 will doubtless call to mind the model lodging-houses erected under the direction of the late Prince Consort, in connection with the Exhibition, and which attracted so much attention. Since that date, the consideration of the best means of improving the dwellings of the labouring classes has been warmly taken up by the Society of Arts, as well as by other societies and private individuals, and many large blocks of houses for the use of the operative classes have been erected in various parts of the city; but, although much has already been accomplished, the majority of the poorer classes are condemned to dwell in miserable habitations. Owing to the extension of railways and of public improvements, the demand for operatives' houses in the metropolis is annually increasing. Some relief has been afforded by the conveyance of working men by one or two of the railway companies at low rates from and to the suburbs, and if this boon were conceded by all the railway companies of the metropolis, a very beneficial result might be anticipated. It must, however, be borne in mind that the early hour at which operatives commence their labours precludes their living at any considerable distance from their work. The want of proper accommodation for the working classes is not, unfortunately, confined to the metropolis, but is experienced in most large towns in the country as well as in many agricultural districts, and, in fact, has now assumed such vast proportions that it can only be relieved by undertakings carried out on a very large scale. It is hoped that the objects exhibited in this class may be the means of awaking a still deeper interest in this important work.

STATISTIQUES DE LA GRANDE EXPOSITION DE TOUTES LES NATIONS À LONDRES EN 1851, DE L'EXPOSITION UNIVERSELLE DE PARIS DE 1855, ET DE L'EXPOSITION INTERNATIONALE DE 1862.

PAR WILLIAM MATCHWICK, F.L.S.

GRANDE EXPOSITION DE TOUTES LES NATIONS EN 1851.

L'ÉDIFICE destiné à cette Exposition — dans la construction duquel entrèrent principalement le verre et le fer — fut élevé dans Hyde Park, à Londres, sur un emplacement peu fréquenté par le public, mais parfaitement bien adapté au but qu'on se proposait. Sur le côté méridional du parc s'ouvre un espace de dimensions considérables, parallèle et contigu à la route qui conduit à Kensington et Hammersmith, et qui constitue la grande voie de communication de l'ouest avec la métropole. Cet espace est situé à mi-chemin environ entre les casernes de cavalerie existant à Knightsbridge et la nouvelle entrée du parc appelée Queen's Gate (Porte de la Reine), entrée qui se trouve à quelques deux ou trois cents yards à l'est de la vieille barrière de Kensington. Une vingtaine d'acres — environ huit hectares — de cet emplacement (qu'avait originairement suggéré pour cet objet le feu Prince Consort) furent choisis pour l'édifice projeté par les Commissaires Royaux de l'Exposition.

Cependant il était nécessaire, avant que rien ne fut fait, d'obtenir le consentement de la Couronne à cet emploi d'une portion du plus important des parcs de Londres; consentement qui fut gracieusement accordé, mais accompagné de la condition que, après la clôture de l'Exposition, le terrain serait rétabli dans son état originel et rendu de nouveau propre à la récréation et aux délassements du public. Cette condition fut, en dépit d'énergiques efforts faits pour conserver l'édifice en son lieu d'érection, fidèlement observée, et toutes traces de l'Exposition étaient complètement effacées au 1^{er} juin 1852; c'est à dire un peu plus de vingt mois depuis la pose de la première colonne, le 25 septembre 1850. Rien qui puisse dénoter que là existait une semblable construction n'est demeuré sur le terrain, si ce n'est deux ormes soigneusement protégés par des grillages en fer. L'un et l'autre de ces arbres s'élevaient, avec d'autres, dans le transept; l'un à l'extrémité nord et l'autre à l'extrémité sud. Ils servent à marquer le centre de l'édifice, et fournissent,

quoique leur croissance se soit nécessairement fort ressentie de ce long emprisonnement contre nature, une idée passable de la hauteur et de la longueur du transept central, attendu qu'ils étaient déjà dans la maturité de leur âge, et de beaux spécimens d'arbres des forêts dans leur espèce.

A l'ouest de cet emplacement, cependant, et en ligne avec lui, est maintenant en cours d'érection le Monument National Commémoratif en l'honneur du feu Prince Consort, qui s'était si complètement identifié avec la Grande Exposition de 1851. Ce monument servira, après son achèvement, à indiquer d'une façon certaine l'emplacement de la Grande Exposition de 1851, quoique se trouvant à quelques 500 yards de l'extrémité orientale de cet emplacement. Le Palais de Cristal, à Sydenham, est principalement construit avec les matériaux mêmes de l'édifice de la Grande Exposition de 1851.

L'architecte qui le construisit était feu Sir Joseph Paxton, et les entrepreneurs furent MM. Fox (maintenant Sir Charles Fox) et Henderson.

De fort considérables changements furent, néanmoins, opérés dans le plan originel de Sir Joseph Paxton, lequel plan était, en principe, celui qu'il avait adopté pour l'érection de la grande serre de Chatsworth, le château du Duc de Devonshire; et c'est à Sir Charles Barry, à Sir William Cubitt, à M. Robert Stephenson et à M. Brunel qu'est dû en grande partie l'honneur du mérite que possédait l'édifice.

DIMENSIONS D'ESPACE.

L'espace entier couvert, ou superficie totale de l'édifice, avait été originairement fixé à 800,000 pieds carrés (74,311 m. carrés), mais il fut plus tard poussé jusqu'à plus d'un million de pieds carrés (92,889 m. carrés), ou plus de vingt acres de terrain (environ huit hectares). Sur cet espace il fut calculé que la moitié (500,000 pieds carrés ou 46,444 m. carrés) serait nécessaire pour l'exposition des objets, et que

l'autre moitié serait prise par les passages, etc. Les Commissaires posèrent en principe, en apportionnant cet espace, qu'une moitié en serait donnée à la Grande-Bretagne et ses colonies, et l'autre aux pays étrangers.

NOMBRE D'EXPOSANTS.

Le nombre total des exposants a été de 13,937, dont 7,381 appartenaient à la Grande-Bretagne et ses colonies, et 6,556 aux pays étrangers. Quelques pays cependant—tels que l'Inde, la Turquie, l'Égypte, et Tunis—et des individus qui se réunirent pour envoyer ensemble leurs contributions—sont classés comme un seul exposant; de sorte qu'en les comprenant le grand total des exposants peut s'estimer à un chiffre entre 15,000 et 16,000.

Le tableau suivant donne le nombre des exposants de chaque pays, et l'espace occupé respectivement par eux:—

	Nombre d'Exposants	Espace occupé
Grande-Bretagne . . .	6,861	Mètres carrés 46,762
Colonies Anglaises. . .	520	3,798
Total . . .	7,381	50,560
Amérique (États-Unis) . .	499	4,119
Autriche	721	4,494
Belgique	506	3,449

DÉPENSES DE L'EXPOSITION.

Il ressort de l'analyse des dépenses publiée par les Commissaires Royaux que les sommes payées pour la construction et l'appropriation de l'édifice s'élevèrent à 170,000*l.* (4,250,000*fr.*). En estimant la superficie nette de l'espace occupé à un million de pieds carrés—92,889 m. carrés—il en résulte que le pied carré—0,0929 m. carré—a dû coûter environ 3*s.* 5*d.*—4*f.* 25*c.*

Voici quels sont les principaux chapitres de dépenses:—

Francs

Services personnels, y compris l'état-major de la Commission Royale, le comité exécutif, aide professionnel et les jurés; montant à .	1,799,375
Police	491,200
Dépenses générales d'administration, telles que loyers, mobiliers, papeterie, impressions, frais de poste, annonces, etc.	221,725
Entretien général de l'Exposition, y compris houille pour les chaudières, éclairage, eau, arrosage des routes, machines et outils, réparations, accidents, etc.	121,850
Département du Jury—Coût des médailles, étuis à médailles, diplômes, photographes, comptes-rendus de présentations, épreuves d'instruments de travail agricole et autres	172,925
Dépenses judiciaires, intérêts sur avances, et imprévu	262,700
Total	Fr. 3,069,875

Ce qui porte les frais totaux de l'Exposition, y compris l'édifice, à environ 292,795*l.*, ou 7,319,875*fr.*

On doit se rappeler, néanmoins, que la convention faite avec MM. Fox et Henderson ne comprenait pas la vente *absolue* de l'édifice à la Commission Royale, mais seulement son *usage*, la construction elle-même demeurant la propriété des entrepreneurs. S'il en eût été autrement, les dépenses de l'Exposition se fussent accrues d'au moins 100,000*l.* (2,500,000 francs).

L'Exposition fut ouverte au public le jeudi, 1^{er} mai, et close définitivement le samedi, 11 octobre, étant ainsi demeurée ouverte durant 141 jours. Cependant les lundi et mardi suivants les exposants et leurs amis y furent admis gratis, et le mercredi, 15 octobre, la cérémonie finale de clôture eut lieu en présence des exposants, des jurés, des commissaires étrangers et locaux, représentants de comités, et autres.

Le public fut admis à l'Exposition par des billets de saison et un paiement en argent aux portes. Les billets de saison pour hommes étaient de trois guinées—78*fr.* 75*c.*—ceux pour dames de deux guinées seulement—52*fr.* 50*c.* Ces taux furent réduits après le 31 juillet à 1*l.* 10*s.* et 1*l.* respectivement—37*fr.* 50*c.* et 25*fr.* Nul argent ne fut reçu aux portes le jour de l'ouverture, les porteurs de billets de saison étant seuls admis. Durant les deux premiers jours après l'ouverture le prix d'admission fut de 1*l.*—25*fr.* Du 5 au 24 mai inclusivement ce prix fut de 5*s.*—6*fr.* 25*c.* Du 26 mai au 2 août inclusivement il fut fixé comme suit:—les lundis, mardis, mercredis et jeudis, 1*s.*—1*fr.* 25*c.*; les vendredis, 2*s.* 6*d.*—3*fr.* 10*c.*; les samedis, 5*s.*—6*fr.* 25*c.*; et à partir de la dernière date jusqu'à la clôture de l'Exposition nul autre changement n'y fut apporté, à l'ex-

ception de la réduction du prix d'entrée du samedi à 2s. 6d.—3 fr. 10 c.

D'abord les portes furent ouvertes à dix heures du matin et fermées à six heures du soir, à l'exception des samedis, jour où elles ne s'ouvriraient point avant midi. Mais le lundi, 18 août, elles furent ouvertes à neuf heures au lieu de dix, et il en fut ainsi jusqu'à la clôture de l'Exposition. Quant à leur fermeture, quelques modifications y furent ultérieurement faites selon la saison. Cette fermeture, ne s'opérait point avant sept heures au cœur de l'été; et à mesure qu'avancait la saison la cloche de la retraite fut sonnée à six heures, et, plus tard, dix minutes avant le coucher du soleil.

RECETTES.

Les recettes, brutes ou nettes, provenant de toutes sources, furent comme suit:—

	Francs
Souscriptions	1,697,425
Privilage du catalogue	80,000
Privilage des rafraichissements	137,500
Billets de saison	1,687,850
Reçu aux portes	8,906,950
Chambres privées, parapluies, médailles frappées dans l'édifice, et cartes atmosphériques	114,500
Intérêts et prime sur billets de l'Echiquier	22,450
Divers	5,925
Total	Fr. 12,652,500

Le nombre de billets de saison vendus fut de 25,605, dont 13,494 pour hommes et 12,111 pour dames. Sur ce nombre, 135 billets d'hommes et 184 billets de dames furent vendus après le 31 juillet, aux prix réduits de 30s. et 20s. respectivement—37 fr. 50 c. et 25 fr.

La moyenne des recettes journalières aux portes (non compris le jour d'ouverture, où nul argent ne fut reçu) s'éleva à 2,548l.—63,700 fr.—durant tout le cours de l'Exposition. Durant les trois premières semaines, alors que le prix d'admission était de 5s.—6 fr. 25 c.—la moyenne journalière fut de 2,546l.—63,650 fr.—chiffre qui se rapproche de très-près de celui mentionné ci-dessus. La recette la plus considérable faite en un jour fut celle du mercredi, 8 octobre (jour à 1s.—1 fr. 25 c.), où l'on reçut aux portes 5,283l. (132,075 fr.), et la moindre fut celle du lundi, 26 mai, qui ne s'éleva qu'à 920l. (23,000 fr.). Il est vrai que ce jour était le premier de ceux où le prix d'admission fut réduit à 1s. (1 fr. 25 c.), et le chiffre, comparativement si peu élevé de cette recette, fut dû à une certaine appréhension de la part du public qu'un prix d'admission aussi bas n'aménât une foule si énorme à l'Exposition que la visiter ce

jour-là serait non seulement éminemment inconfortable, mais positivement dangereux.

Le tableau suivant montre les recettes totales faites aux portes aux divers taux de payement :

Nombre de Jours	Prix d'Entrée		Montant perçu		Moyenne journalière	
	Fr.	Ces.	Fr.	Ces.	Fr.	Ces.
2	25	0	26,050	0	13,025	0
28	6	25	1,533,675	0	54,775	0
30	3	10	1,811,188	75	60,371	25
80	1	25	5,549,278	75	69,365	0
140			8,920,192	50		

La perte sur l'or qui n'était pas de poids, et sur les pièces de monnaie étrangères, effacées et fausses, fut considérable, car elle s'éleva à plus de 13,250 fr., chiffre qui, déduit du total ci-dessus, explique la différence apparente entre le montant donné précédemment et celui du tableau ci-dessus.

NOMBRE DE VISITEURS.

Le nombre total des visiteurs fut pour toute la durée de l'Exposition de 6,039,195. Durant 141 jours, 773,766 personnes entrèrent avec des billets de saison; 1,042 personnes payèrent aux portes dans les deux jours où le prix d'entrée était de 1l.—25 fr. Dans 28 jours au prix d'entrée de 5s.—6 fr. 25 c.—ce prix fut payé par 245,389 visiteurs. Dans 30 jours au prix d'entrée de 2s. 6d.—3 fr. 10—il fut payé par 579,579 personnes; enfin dans les 80 jours où le prix d'admission était de 1s.—1 fr. 25—il fut payé par 4,439,419 visiteurs. Si l'on prend la moyenne journalière de ces chiffres, on aura les résultats suivants:—

Billets de saison	5,473 par jour
Visiteurs à 25 fr. d'entrée	521 „
„ à 6 fr. 25 „	8,763 „
„ à 3 fr. 10 „	19,319 „
„ à 1 fr. 25 „	55,493 „

Toutes facilités furent accordées par les Commissaires Royaux et le Comité Exécutif pour l'admission gratuite de tous ceux dont la présence dans l'édifice était absolument nécessaire, mais aucune liste de faveur, à proprement parler, ne fut en opération. Toutes les personnes employées par la Commission Royale, la police, la force armée, les commissaires étrangers, certains exposants, les agents et employés d'exposants, des membres de la presse de la métropole et de la province, et nombre d'autres personnes non désignées d'une manière spéciale, furent admises gratuitement pendant toute la durée de l'Exposition, augmentant ainsi considérablement le chiffre de celles toujours présentes dans l'édifice. La plupart entraient avant que les portes ne fussent ouvertes, et n'étaient point comptées par la police; en un mot, s'il était connu qu'elles étaient appelées par quelque motif d'affaire dans l'édifice, la règle était de ne pas les compter à quelque heure qu'elles vissent.

Ce fut le mardi, 7 octobre (quatre jours avant la clôture) que se trouva rassemblé dans l'édifice le plus grand nombre de personnes qu'il ait jamais contenu. Le chiffre des visiteurs s'éleva dans ce jour à 109,915 (le chiffre le plus haut d'un seul jour quelconque pendant toute la durée de l'Exposition); et il fut calculé qu'à deux heures près de cent mille personnes s'y trouvaient réunies. Le lundi, 6 octobre, le chiffre fut de 107,815; le mercredi, 8 octobre, de 107,760; et le jeudi, 9 octobre, de 90,813. Ces quatre jours étaient les derniers jours d'entrée à un shilling; ils fournirent donc un total de 418,303 visiteurs, ou une moyenne de 104,576 pour chaque jour.

JURY.

Le nombre des jurés nommés pour l'Exposition fut de 318—161 Anglais et 157 Étrangers—ainsi répartis:—

Autriche	17
Belgique	14
Danemark	1
Égypte	2
France	38
Grande-Bretagne	161
Grèce	1
Allemagne du Nord	2
Hollande	2
Italie	6
Portugal	2
Russie	7
Sicile	1
Espagne	4
Suisse	7
Suède	1
Turquie	5
États-Unis	24
Zollverein	23

Total . . . 318

Attachés aux jurés étaient des jurés-associés au nombre de 100, spécialement nommés par les dits jurés pour les aider à rendre leurs décisions, mais n'ayant point le droit de voter. Soixante-dix des jurés et jurés-associés étaient aussi exposants. Le tableau ci-dessous montre le nombre de jurés et jurés-associés dans chaque classe.

Classe	MATIERES BRUTES	No. de Jurés	No. de Jurés Associés
1	Mines, carrières, opérations métallurgiques et produits minéraux	8	1
2	Procédés, et produits en général, chimiques et de pharmacie	8	8
3	Substances servant à l'alimentation	6	nul
4	Substances végétales et animales principalement employées en manufacture	8	1

Classe	MATIERES BRUTES	No. de Jurés	No. de Jurés Associés
	INSTRUMENTS DE TRAVAIL.		
5	Machines d'un usage direct, comprenant les voitures et machines pour chemins de fer et navires	18	2
6	Machines et outils à manufacturer	12	6
7	Génie civil, inventions à l'usage de l'architecture et de la construction des bâtiments	8	nul
8	Architecture navale et Génie militaire, artillerie, armures de navires, et équipement	8	7
9	Machines et outils d'agriculture et d'horticulture	15	1
10	Instruments et procédés scientifiques; instruments de musique, d'horlogerie et de chirurgie	32	7
	MANUFACTURES.		
11	Coton	10	3
12	Étoffes de laine et laines filées	12	9
13	Soie et velours	10	nul
14	Articles fabriqués avec le lin et le chanvre	10	nul
15	Tissus mélangés	12	2
16	Cuir, peaux, fourrures, plumes et crin	10	1
17	Papier et articles de papeterie, impressions et reliure	8	1
18	Tissus au métier, filés, feutrés, comme spécimens d'impression et de teinture	10	2
19	Tapisserie, y compris tapis, dentelles, broderies et ouvrages de fantaisie	10	nul
20	Vêtements d'usage personnel ou domestique	8	8
21	Coutellerie et outils tranchants	6	4
22	Fer et quincaillerie en général	12	7
23	Métaux précieux travaillés, bijouterie, etc.	10	5
24	Verre	8	12
25	Articles de manufacture céramique, porcelaine, poterie, etc.	8	2
26	Meubles, décorations, papiers de tenture, articles en papier-mâché et vernis	12	4
27	Objets fabriqués avec des substances minérales pour l'usage de la construction ou de la décoration	8	3
28	Articles manufacturés avec des substances animales et végétales, non tissés ni feutrés, et non inclus dans d'autres classes	8	1
29	Articles divers et menus objets	8	3
	BEAUX ARTS.		
30	Sculpture, modèles et objets de plastique	15	nul
	Total . . .	318	100

Ce chiffre de trente classes fut plus tard élevé en réalité jusqu'à trente-quatre, par l'addition d'une sous-classe à la Classe 5 et de trois sous-classes à la Classe 10, portant ainsi le nombre des jurés à trente-quatre aussi.

RÉCOMPENSES.

Deux médailles de bronze furent décernées par les jurés, la médaille du Conseil et la simple médaille. Un certificat de mention honorable

constituait aussi une troisième récompense. La médaille du Conseil fut presque exclusivement réservée comme récompense d'inventions remarquables, n'étant pas considérée comme applicable aux cas où l'excellence de l'exécution était le seul mérite à récompenser.

Dans quelques cas rares des présents en espèces furent ajoutés aux distinctions honoraires de la médaille ou de la mention honorable, quand, par exemple, de simples artisans avaient eu à faire une dépense considérable pour produire un objet digne d'intérêt, sans qu'il y eût possibilité pour eux de rentrer dans leurs déboursés.

Le nombre total des récompenses décernées par les jurés fut :—

Médailles du Conseil . . .	171
Médailles Simples . . .	2,954
Mentions Honorables . . .	2,123
Total . . .	5,248

RÉCAPITULATION DES RÉCOMPENSES.

	— 2,807
Total . . .	5,248

EXPOSITION UNIVERSELLE DE PARIS DE 1855.

IL est quelque peu difficile de désigner exactement les localités et positions relatives des divers édifices de l'Exposition Universelle de Paris de 1855. Le principal consistait en une vaste construction rectangulaire, de forme presque carrée, située dans la principale avenue des Champs Élysées, et bien connue sous le nom de Palais de l'Industrie. Cet édifice était solidement construit, et dans un but de durée. Il servit à exposer principalement les produits des vingt-sept classes industrielles. Au sud de l'édifice principal, et reliée à lui par des galeries et passages couverts, était une longue et étroite construction appelée l'Annexe ou Galerie du Quai, et qui s'étendait sur la rive nord de la Seine, dont elle était très proche. Cette Annexe, longue de 4,000 pieds, fut consacrée principalement à l'exposition des machines. Le troisième édifice, destiné aux trois classes formant la division des Beaux-Arts (Palais des Beaux-Arts), était situé à une distance assez considérable des deux autres, se trouvant à l'extrémité sud-ouest, ou celle aboutissant au fleuve, de l'Avenue Montaigne. Ce dernier édifice était complètement séparé des deux premiers, la distance et la localité rendant impossible l'établissement même de passages pour le relier à eux.

Entre le Palais de l'Industrie et l'Annexe était une construction circulaire, connue sous le nom de Panorama ou Rotonde du Panorama, dans laquelle étaient exposés les joyaux de la couronne de France, et une grande variété de tapisseries, tapis, etc. À l'extérieur, et entourant cette Rotonde, s'étendait un espace considérable, couvert en partie, dans lequel avait lieu l'exposition des voitures et véhicules de toutes sortes, ainsi que des instruments et outils de travail agricole. Une ample portion de cet espace était consacrée aux salles de rafraîchissements. La seule construction dont il nous reste à faire mention

était l'Exposition chinoise, attachée au Palais des Beaux-Arts, mais nullement reliée à lui. Dans le fait, cette Exposition chinoise ne fut jamais considérée comme faisant partie intégrante de l'Exposition Internationale; et si nous la mentionnons ici, ce n'est qu'afin de compléter notre description, et parce que l'espace qu'elle occupait était réellement (quoique séparé) une portion de celui occupé par l'édifice consacré aux Beaux-Arts.

L'Exposition Internationale française de 1855 comprenait donc, sans compter la Rotonde du Panorama, trois édifices distincts et séparés : le Palais de l'Industrie, ou édifice central, l'Annexe des Machines, et le Palais des Beaux-Arts. Relativement à ce dernier, le Gouvernement français avait eu en vue la possibilité de consacrer une partie du nouveau Palais du Louvre à l'exposition des objets d'art envoyés; et il n'est point douteux que cette intention n'eût été réalisée si ce n'eût été l'impossibilité de le faire sans apporter un trop grand obstacle à la continuation des importants et urgents travaux alors en cours d'exécution tant à l'intérieur qu'à l'extérieur du palais.

Quoique les préparatifs et l'érection de ces édifices pour l'Exposition Universelle de Paris de 1855 aient été initiés et principalement réalisés avec le capital d'une Compagnie commerciale organisée à Paris, ce fut le Gouvernement français seul qui eût, en réalité, la direction pleine et entière de l'Exposition, et qui prit pour lui tous les risques de l'entreprise en garantissant à la Compagnie un certain tant pour cent de bénéfice sur ses déboursés. En conséquence, une Commission Impériale, présidée par le Prince Napoléon, fut nommée par l'Empereur pour diriger l'Exposition; et quoique la Compagnie eût bien certains privilèges et pouvoir de faire quelques règlements, ce n'en fut pas moins le Gouvernement

qui se mit virtuellement en son lieu et place, et se chargea exclusivement du contrôle entier de l'entreprise.

Messieurs Viel et Desjardins furent les architectes de l'édifice principal, et MM. York et Cie. furent les entrepreneurs qui exécutèrent les travaux. Toutes les constructions étaient d'un caractère temporaire excepté l'édifice principal et central; et toutes, par conséquent, furent, à cette exception près, enlevées très peu de temps après la clôture de l'Exposition. L'édifice principal (Palais de l'Industrie) dans les Champs-Élysées fut seul conservé, et existe encore. Il appartient au Gouvernement, et sert à l'exposition d'œuvres d'art, et autres usages de même nature.

DIMENSIONS D'ESPACE.

La totalité de l'espace horizontal occupé par tous les pays qui exposèrent dans les divisions Industrielles, y compris passages et toutes entrées, ainsi que bureaux et pièces de réception, était de 152,052 mètres carrés, ou environ 1,770,000 pieds superficiels Anglais. Dans l'édifice consacré aux Beaux-Arts l'espace total occupé par les œuvres d'art dans les classes de peinture, gravure, lithographie, sculpture, et architecture, fut de 17,639 mètres carrés—15,603 mètres carrés de superficie verticale pour les peintures, gravures, etc., et 2,036 mètres carrés de superficie horizontale pour les œuvres de sculpture—ce qui fait ensemble un total de 169,691 mètres carrés (environ 1,866,000 pieds carrés) pour l'espace occupé par les exposants dans les diverses classes de l'Exposition, et par les passages, bureaux, et toutes accommodations en vue de la convenance générale du public. Dans ces chiffres ne sont point compris les entrées, bureaux, et l'espace superficiel de plancher non occupé par des œuvres d'art, dans le Palais des Beaux-Arts; détails que ne donne point; au reste, le rapport de la Commission Impériale.

La répartition de l'espace d'exposition dans l'édifice principal ou Palais de l'Industrie, la Rotonde du Panorama, et l'Annexe des Machines, fut comme suit:—

	Mètres carrés
France	55,669
Pays étrangers	46,097
Passages, etc. . . .	17,021
Total	118,786

Dans la division des Beaux-Arts la France occupa, d'après le rapport, 2,400 mètres carrés de superficie murale pour peintures, etc.; la Grande-Bretagne, 938 mètres carrés; le surplus de l'espace fut réparti entre dix autres pays. En réalité, l'espace occupé par le Royaume-Uni pour œuvres d'art s'éleva environ à 14,184 pieds carrés.

Le total de l'espace horizontal occupé à l'Exposition Universelle de Paris de 1855 par la Grande-Bretagne et ses Colonies à l'intérieur des

divers édifices fut—aussi près qu'il est possible de s'en assurer—de 183,000 pieds carrés, dont 14,184 pieds carrés consacrés aux œuvres exposées dans les trois classes des Beaux-Arts.

Quoique l'espace occupé par chaque pays dans la division des Beaux-Arts ne soit pas mentionné dans le rapport de la Commission Impériale, il donne néanmoins le nombre d'exposants dans chacune des trois classes.

Dans le rapport présenté au Parlement sur la division anglaise de l'Exposition, le nombre des artistes anglais qui ont exposé dans la section des Beaux-Arts est ainsi donné, avec le nombre de leurs œuvres:—

Peintures à l'huile	234	exposées	par 99	artistes
Aquarelles	145	„	52	„
Gravures et Litho- graphies	197	„	62	„
Œuvres d'Archi- tecture	127	„	51	„
Statues	51			
Bustes et Bas-re- liefs	24	„	35	„
Total	778		299	

Et la valeur des œuvres anglaises envoyées est estimée comme suit:—

	Francs
Peintures à l'huile	2,403,250
Aquarelles	391,325
Gravures et Lithographies	41,900
Œuvres d'Architecture	144,125
Sculpture	458,400

Total Fr. 3,439,000

Ce qui donne une valeur moyenne de 4117. (10,275 fr.) pour chaque peinture à l'huile; de 1087. environ (2,700 fr.) pour chaque aquarelle; et de 2447. environ (6,100 fr.) pour chaque œuvre de sculpture. Les gravures, lithographies et dessins d'architecture, ne sont point compris, pour raisons évidentes, dans ce calcul.

En addition aux statistiques qui précèdent relativement à l'espace horizontal ou superficiel de l'Exposition de Paris, il sera peut-être intéressant de faire connaître le total de surface verticale occupée par les objets exposés, et le mesurage linéaire ou courant de la totalité des vingt-sept classes industrielles. Ces calculs sont extraits du rapport de la Commission Impériale.

	Mesurage Linéaire	Surface verticale ou de Muraille Mètres carrés
	Mètres	
France, Algérie et Colonies	18,949	33,421
Autriche	2,335	3,512
Belgique	1,509	2,350
Grande-Bretagne et Colonies	4,404	6,373
Prusse	1,828	2,796
Suède	464	442
Suisse	409	584
Autres pays, en- semble	3,871	4,131
Totaux	33,769	53,099

NOMBRE D'EXPOSANTS.

Le nombre total des exposants qui participèrent à l'Exposition Universelle de Paris de 1855 fut de 23,954. Sur ce chiffre 21,779 ont exposé dans les vingt-sept classes industrielles, et 2,175 dans les trois classes de la division des Beaux-Arts.

Le nombre d'exposants de chaque pays dans les classes industrielles a été comme suit :—

	Exposants
France	10,003
Algérie	728
Colonies	183
	<hr/> 10,914
Amérique (États-Unis)	131
Amérique du Sud	38
Autriche	1,298
Bade	88
Bavière	172
Belgique	687
Danemark	90
Espagne	569
États Pontificaux	72
Grande-Bretagne	1,589
Canada	348
Australie et Terre de Van Diemen	405
Inde	599
Guiane anglaise	95
Colonies moindres	233
	<hr/> 3,269
Grèce	131
Hesse	88
Mexique	107
Nassau	59
Norvège	121
Hollande	411
Portugal	443
Prusse	1,319
Sardaigne	294
Saxe	96
Suède	418
Suisse	408
Toscane	197
Villes hanséatiques	89
Wurtemberg	207
Autres pays, savoir: Anhalt-Dessau et Cöthen, 15; Brunswick, 16; Confédération Germanique, 20; Égypte, 6; Francfort-sur-le- Mein, 24; Hanovre, 18; Royaume Hawaïen, 5; Luxembourg, 23; Saxe (cinq duchés), 23; Tunis, 1; Turquie, 2	153
	<hr/> Total . 21,779

Le nombre d'exposants de chaque pays dans la division des Beaux-Arts est mentionné dans le texte anglais.

Cinquante-trois états étrangers et vingt-deux colonies étrangères furent représentés à l'Exposition, non compris la France, les trois provinces d'Algérie et huit Colonies françaises.

Si on divise le nombre total d'exposants, y compris ceux dans les classes des Beaux-Arts,

en Français et étrangers, les chiffres seront les suivants :—

Empire français	11,986
États étrangers	11,968

Total . 23,954

Le rapprochement extrême des deux nombres formant ce total ne peut manquer d'être remarqué comme un fait fort extraordinaire.

DÉPENSE DE L'EXPOSITION.

D'après le rapport de la Commission Impériale sur l'Exposition Universelle de Paris de 1855, cette Exposition a coûté comme suit :—

	Francs	Sterling
Division Industrielle	8,961,620	£358,464 16s.
Division des Beaux-Arts	2,302,900	= £92,116 0s.

Total . Fr. 11,264,520 = £450,580 16s.

Dans cette somme n'est point compris ce qu'a coûté l'édifice principal, ou Palais de l'Industrie, plus tard acheté par le Gouvernement Français : par conséquent la dépense totale de l'Exposition doit être évaluée à presque le double, sinon plus, et a dépassé, selon toutes probabilités, un million sterling—25,000,000 fr.

Prenant donc 500,000 fr.—12,500,000 fr.—pour le chiffre de ce qu'a coûté le Palais de l'Industrie, et acceptant les chiffres donnés dans le rapport de la Commission Impériale pour les autres édifices, savoir :

	Francs
L'Annexe	2,602,000
La Galerie de Jonction et la Rotonde du Panorama	607,000
Le Palais des Beaux-Arts	1,051,700
Constructions supplémentaires	105,800

on approchera du chiffre exact en disant que les bâtiments seuls ont coûté 674,660 fr.—16,856,500 fr.

Calculant que le total d'espace horizontal ait été de 169,691 mètres carrés, ou environ 1,866,000 pieds carrés, et que la dépense totale encourue pour les bâtiments, à part l'acquisition du Palais de l'Industrie, ait été celle indiquée plus haut, il s'ensuit que le pied carré —0,092 m. c.—a coûté près de 7s. 3d.—9 fr. 0s.

Il était nécessaire que le Gouvernement anglais prêtât son aide pour que la Grande-Bretagne fût représentée à l'Exposition Universelle de Paris de 1855 d'une manière convenable et proportionnée à son importance. Des devis furent en conséquence préparés et soumis au Parlement, et le résultat fut le vote d'une somme de 50,000 fr.—1,250,000 fr.—dont l'emploi demeurerait sous la responsabilité du Ministère du Commerce.

Or, la dépense nette faite en vertu de ce vote ne fut que de 39,259 fr.—981,475 fr.—plus de 10,000 fr.—250,000 fr.—de moins que le

montant de la somme octroyée par le Parlement—démonstration pratique de l'économie rigide qui présida à l'emploi de cet argent.

Les dépenses totales de la division anglaise furent les suivantes pour les divers chapitres du service :—

	Francs
Arrangements préliminaires	79,275
Fret, transport des objets, frais de douane, etc.	189,700
Dépenses d'administration à Paris	82,050
Complètement et décoration de la division anglaise	99,625
Entretien, nettoyage et surveillance	86,150
Enlèvement et enmagasinage des caisses d'emballage	23,575
Impressions, annonces, frais de poste, de bureaux, papeterie, etc.	34,575
Frais faits pour assurer une représentation convenable des produits bruts et des appareils scientifiques	51,675
Division des Beaux-Arts	161,925
Jurés et leurs rapports	104,125
Imprévus	68,800
Total	Fr. 981,475

Un article considérable dans les dépenses relatives à la division anglaise des Beaux-Arts fut l'assurance des diverses œuvres envoyées, contre les risques du voyage, par chemins de fer et par mer, et contre les risques d'incendie durant leur transit et durant leur séjour dans l'édifice. Les taux d'assurance varièrent de 2½. 10s. à 3½. pour cent, et le montant payé aux assureurs du Lloyd, et autre part, s'éleva à la somme de 2,715*l.*—65,875 fr.

ADMISSION DES VISITEURS.

L'Exposition Universelle de Paris de 1855 fut ouverte par l'Empereur en personne le mardi, 15 mai; mais, à cette date, les installations générales étaient si incomplètes, et tellement en retard, que le Palais des Beaux-Arts et une partie des divisions de l'Industrie seulement étaient dans un état de progrès suffisant pour supporter l'examen. L'Annexe des Machines, la Rotonde du Panorama, et les constructions extérieures ne furent ouvertes qu'à une période beaucoup plus avancée.* L'intention première était d'ouvrir l'Exposition le 1^{er} mai, et un décret Impérial fut même publié annonçant ce jour comme celui de l'ouverture; mais elle dut être inévitablement remise en raison de l'état d'imperfection et d'inachèvement de presque toutes les divisions. Le jeudi, 15

novembre, eut lieu la cérémonie de clôture en présence de l'Empereur, avec grand succès et grande ponctualité. Enfin, le vendredi, 30 novembre, l'Exposition fut définitivement close, quoique l'enlèvement des objets exposés eût réellement commencé le jour qui suivit la cérémonie de clôture, et eût continué tous les jours suivants sans interruption.

Le nombre total de jours durant lesquels fut ouverte l'Exposition, c'est-à-dire du 15 mai au 30 novembre (inclusivement), fut de 200 exactement, dimanches compris.

Les visiteurs étaient admis par billets de saison et par paiements aux portes. Un seul jour, le dimanche, 27 mai, l'Exposition entière fut ouverte gratuitement au public.

Les billets de saison étaient de 50 francs pour la division de l'Industrie, et autant pour celle des Beaux-Arts; de sorte qu'un billet de saison pour l'Exposition entière coûtait 100 francs. D'autres billets également de saison, mais conférant des privilèges restreints, furent aussi mis à la disposition du public à raison de 25 francs chaque. Les prix d'entrée payables aux portes furent de 5 francs, 2 francs, 1 franc, et 20 centimes. Les lundis, mardis, mercredis, jeudis, et samedis, le prix d'entrée était de 1 franc; les vendredis, de 5 francs; et les dimanches, de 20 centimes. Les tarifs d'admission étaient les mêmes pour le Palais des Beaux-Arts. A partir du 1^{er} août le prix d'entrée du vendredi fut réduit à 2 francs; et à partir du 11 du même mois les compagnies de chemins de fer et autres furent autorisées à organiser—les dimanches et lundis de chaque semaine—des trains d'Exposition, dont les voyageurs non seulement jouissaient d'une réduction de 40 pour cent sur le prix habituel des places, mais avaient encore leur entrée gratuite aux divisions de l'Industrie et des Beaux-Arts, ou pouvaient visiter deux fois l'une ou l'autre gratuitement. En outre, durant le mois d'août, un grand nombre de visiteurs appartenant aux classes ouvrières, et venus de tous les points de la France, furent admis au prix de 20 centimes seulement. Tous les militaires, tant en activité de service qu'en retraite, avaient le privilège d'entrée journalière gratuite, jusqu'à concurrence d'un certain nombre, entre neuf et onze heures. Le même privilège, soumis à de faciles règlements, était aussi accordé aux élèves des écoles militaires, ainsi qu'aux membres de la presse, soit française, soit étrangère. Les porteurs de billets de saison furent seuls admis le jour de l'ouverture, ainsi que celui de la visite de la Reine Victoria à l'Exposition, le 24 août.

RECETTES.

Le total des recettes atteignit le chiffre de 3,202,485 francs.

Le nombre de billets de saison vendus fut de 4,843, dont 4,663 pour les parties de l'Exposition consacrées à l'Industrie, et 180 pour le

* Machines Agricoles, 5 juin; Annexe, 10 juin; Panorama et Galerie de Jonction, 30 juin.

Palais des Beaux-Arts, produisant ensemble la somme de 200,400 francs. Après avoir déduit le jour de l'ouverture, où les porteurs de billets de saison furent seuls admis, et celui où l'Exposition fut ouverte gratuitement, la moyenne des recettes journalières fut de 16,174 francs. Les recettes pour la division de l'Industrie furent 2,566,195 francs, et pour celle des Beaux-Arts 636,290 francs; ce qui fait une moyenne journalière de recette, pour la première de 12,960 francs, et pour la seconde de 3,213 francs et demi.

NOMBRE DE VISITEURS.

Le nombre total des visiteurs de l'Exposition Universelle de Paris de 1855 fut de 5,162,330, dont 4,180,117 entrèrent dans les diverses divisions Industrielles, et 982,213 visitèrent la division des Beaux-Arts. Dans ce dernier chiffre, néanmoins, sont compris 46,612 visiteurs de l'Exposition Chinoise, à laquelle on a fait allusion plus haut. Le nombre de visites faites à la division Industrielle par les porteurs de billets de saison a été estimé à 94,000; celui des visites faites à celle des Beaux-Arts à 3,800. Le nombre total des visiteurs de la division Industrielle dans les jours à 5 francs d'entrée fut de 22,747, et de 11,179 pour celle des Beaux-Arts: ensemble 33,926. Dans les jours à 2 francs d'entrée les totaux furent, pour la division Industrielle, 73,816; pour celle des Beaux-Arts, 21,872: ensemble 95,688. Pour les jours à 1 franc d'entrée le nombre total de visiteurs fut de 2,103,535, dont 1,683,798 pour l'Industrie, et 419,737 pour les Beaux-Arts. Enfin, dans les jours où le prix d'entrée n'était que de 20 centimes, 2,196,795 personnes visitèrent l'Exposition, savoir, 1,752,518 la division Industrielle, et 444,277 celle des Beaux-Arts. A ces chiffres on doit ajouter 26,322 visiteurs de la collection Chinoise les jours où le prix d'entrée en était de 50 centimes.

Le nombre des personnes qui entrèrent avec des cartes d'exposants a été estimé, approximativement, à 445,000, dont 420,000 pour les classes Industrielles, et 20,000 pour la division des Beaux-Arts. Les soldats et militaires en retraite qui usèrent du privilège d'entrée gratuite dans la division Industrielle, entre 9 et 11 heures, s'élevèrent à 80,118 en totalité; et le nombre des élèves des écoles militaires qui profitèrent de ce même privilège, mais pour l'Exposition entière, fut de 797. Enfin le nombre total de visites faites à l'Exposition par les personnes faisant partie des trains d'excursions privilégiés, les dimanches et lundis, s'éleva à 24,455; mais ces chiffres, qu'on le comprenne bien, ne sont qu'une approximation du nombre de visites faites par les visiteurs des diverses catégories, et ne représentent nullement des individus séparés. Ainsi, par exemple, si un militaire en retraite allait dix fois à l'Exposition, il était compté comme dix visiteurs, et ainsi de suite.

Le dimanche, 27 mai, jour auquel l'Exposition entière fut ouverte gratuitement au public, le nombre total de visiteurs s'éleva à 105,022, dont 80,118 entrèrent dans la division de l'Industrie, et 24,904 dans celle des Beaux-Arts.

Le plus grand nombre de visiteurs en un seul jour, durant toute la durée de l'Exposition, se présenta le dimanche, 9 septembre, où l'on compta qu'il était entré 123,017 personnes. Au reste, des chiffres fort élevés s'offrirent dans chacun des 24 dimanches du 3 juin au 11 novembre, la moyenne étant de 89,223 pour chaque dimanche; et dans huit d'entr'eux le nombre de visiteurs dépassa de beaucoup 100,000.

Il paraît que près de 160,000 étrangers visitèrent Paris durant l'Exposition, dont plus de 40,000 étaient sujets anglais, ou plus des deux tiers du nombre d'étrangers qui visitèrent Londres dans l'année de l'Exposition de 1851. D'après les rapports de la police française, les divers départements de la France auraient envoyé plus de 350,000 visiteurs à Paris durant l'Exposition de 1855.

JURÉS.

La classification de l'Exposition de Paris de 1855 fut comme suit :—

Classe

1. Mines et Produits Métallurgiques.
2. Produits Forestiers, de la Chasse, de la Pêche, et autres obtenus sans culture.
3. Agriculture.
4. Mécanique Générale Appliquée à l'Industrie.
5. Machines et Appareils Spéciaux pour Chemins de Fer et autres modes de transport.
6. Machines et Appareils Spéciaux pour Ateliers industriels.
7. Machines et Appareils Spéciaux pour la manufacture des Tissus.
8. Arts de Précision, Industries se rattachant aux Sciences et à l'Enseignement.
9. Industries concernant l'emploi économique de la Chaleur, de la Lumière, et de l'Électricité.
10. Produits Chimiques, Teinture et Impression, Papier, Cuir, Peaux, Caoutchouc, &c..
11. Préparation et Conservation des Substances Alimentaires.
12. Hygiène, Pharmacie, Chirurgie, et Médecine.
13. Marine et Art Militaire.
14. Génie Civil et Constructions.
15. Acier et ses Produits.
16. Ouvrages en Métaux en général.
17. Orfèvrerie, Bijouterie, et Bronzes.
18. Industrie de la Verrerie et de la Céramique.
19. Manufactures de Coton.
20. Manufactures de Laine tissée et filée.
21. Manufactures de Soie.
22. Manufactures de Lin et de Chanvre.
23. Bonneterie, Tapis, Broderie, Dentelle de toutes sortes, Franges d'Or et d'Argent, etc.

24. Meubles et Décoration.
25. Articles d'Habillement ; objets de Mode et de Fantaisie.
26. Dessin et Plastique appliqué à l'Industrie, Photographie, etc.
27. Manufacture d'Instruments de Musique.
28. Peinture, Gravure, et Lithographie.
29. Sculpture et Gravure en creux.
30. Architecture.

Ces trois dernières classes constituaient la division des Beaux-Arts.

Une autre classe fut ajoutée après l'ouverture de l'Exposition, la Classe 31, Produits d'Economie Domestique, comprenant des articles d'une utilité et d'un bon marché remarquables, et choisis principalement parmi ceux exposés dans les autres classes.

RÉCOMPENSES.

Par Décret Impérial, en date du 10 Mai, 1855, les récompenses à décerner par les Jurés Internationaux furent les suivantes :

Pour les vingt-sept classes Industrielles : 1^o, une Médaille d'Or (Médaille d'Honneur) ; 2^o, une Médaille d'Argent ; 3^o, une Médaille de Bronze ; et, 4^o, un Certificat de Mention Honorable.

Pour la Division des Beaux-Arts : 1^o, une Médaille d'Or de Première Classe ; 2^o, une Médaille d'Or de Seconde Classe ; 3^o, une Médaille d'Or de Troisième Classe ; et 4^o, un Certificat de Mention Honorable.

Et, en outre, la récompense spéciale de la Grande Médaille d'Honneur.

Des récompenses en argent furent aussi accordées dans des cas particuliers. La Décoration de la Légion d'Honneur fut en outre largement distribuée par l'Empereur à ceux qui participèrent à l'Exposition, et peut presque être considérée comme un supplément de récompense à celles déjà mentionnées.

D'après le rapport de la Commission Impé-

riale, la valeur de chacune des Médailles d'Or était comme suit :—La Grande Médaille d'Or d'Honneur, 5,000 francs ; Médaille d'Or de Première Classe, 750 francs ; Médaille d'Or de Seconde Classe, 650 francs ; Médaille d'Or de Troisième Classe, 550 francs.

Par un Décret d'une date postérieure à celui que nous avons cité plus haut, la dénomination des médailles décernées aux divisions Industrielles fut changée ainsi : La Médaille d'Or fut appelée la Grande Médaille d'Honneur ; la Médaille d'Argent devint la Médaille de Première Classe ; et la Médaille de Bronze la Médaille de Seconde Classe.

On ne trouve dans le Rapport de la Commission Impériale nul tableau montrant le nombre de récompenses décernées dans chaque classe et à chaque pays. Ce renseignement est néanmoins donné dans les Rapports des Jurés, mais d'une façon qui rend impossible de l'utiliser pour le but que se propose cette notice. C'est une lacune regrettable, car un semblable tableau eût sans doute fourni des statistiques de valeur et d'un grand intérêt.

Des récompenses furent aussi décernées aux co-opérateurs et ouvriers (colonies comprises) qui, bien que n'étant point exposants, avaient contribué à l'invention, la production, et l'arrangement des articles et substances envoyées à l'Exposition. Une Grande Médaille d'Honneur, une Médaille d'Honneur, 27 Médailles de Première Classe, 56 Médailles de Seconde Classe, et 42 Mentions Honorables furent ainsi distribuées ; ce qui constitue une addition de 130 récompenses décernées par le Jury à celles énumérées ci-dessus.

Dans les trois classes des Beaux-Arts le nombre total des récompenses décernées aux exposants Anglais fut de 64, savoir : 2 Grandes Médailles d'Honneur ; 9 Médailles de Première Classe ; 8 Médailles de Seconde Classe ; 11 Médailles de Troisième Classe, et 34 Certificats de Mention Honorable.

EXPOSITION INTERNATIONALE DE 1862.

Les divers édifices qui constituaient l'Exposition Internationale de 1862 furent élevés sur une pièce de terrain contigue à l'extrémité méridionale des Jardins Royaux d'Horticulture à South Kensington et obtenue pour cet objet des Commissaires Royaux de la Grande Exposition de 1851. Ce terrain faisait partie de propriétés achetées par les Commissaires avec le surplus résultant de l'Exposition, augmenté d'une somme octroyée par le Parlement.

La quantité totale de terrains ainsi achetées dans le voisinage immédiat de cet emplacement (auquel, dans le fait, ils sont contigus) était de 86 acres—34,792 h.—qui coûtèrent 280,000^l., 7,000,000^{frs.}—ou une moyenne de 3,250^l.—81,250 frs.—l'acre : 4,056 a. Pri-

mitivement on avait pensé que 300,000^l.—7,500,000^{frs.}—suffiraient pour acquérir tout le terrain désiré, les Commissaires Royaux convenant de consacrer à cette acquisition 150,000^l.—3,750,000 frs.—de leur surplus, qui s'élevait à 170,000^l.—4,250,000^{frs.}—environ, et le Parlement fournissant une somme égale afin d'assurer la possession d'un ensemble de terrains situés dans le voisinage immédiat de la métropole, et sur lequel on pût ériger des édifices consacrés à l'éducation, afin de favoriser le progrès des sciences, des arts, et des manufactures.

Les propriétés achetées furent les suivantes :—celle de Gore House, située à Kensington Gore, presque en face de l'emplacement de la

Grande Exposition de 1851, comprenant 21 acres — 8,498 hectares — et coûtant 60,000l. — 1,500,000frs. ; la propriété de Villars, acquise des curateurs à la succession du Baron de Villars, de 48 acres — 19,424 h. — et coûtant 153,500l. — 3,387,500frs. Contigus à ces deux propriétés se trouvaient 17 acres — 6,879 h. — appartenant au Comte de Harrington, qui furent payés environ 66,500l. — 1,662,500frs.

En 1858 fut dissoute par le Parlement l'association existant entre lui et les Commissaires Royaux ; en conséquence, la totalité du terrain acquis se trouva en la possession de ces derniers seuls, à l'exception cependant de 12 acres — 4,856 h. — sur lesquels s'élève les bâtiments du Département de Science et d'Art, mieux connu sous le nom de 'Musée de South Kensington,' et dont le Gouvernement consentit à déduire le prix (60,000l. — 1,500,000frs.) des 150,000l. votées, et qu'avaient alors à rembourser les Commissaires.

Les constructions principales de l'Exposition Internationale de 1862 couvraient environ 17 acres de terrain — 6,879 h. — non compris les deux annexes à l'est et à l'ouest des Jardins d'Horticulture, que l'on peut estimer à 7 acres — 2,832 h. — de plus : la superficie totale de l'ensemble des constructions était donc de plus de 24 acres — 4,712 h. La configuration de l'emplacement était presque rectangulaire, mesurant 1,200 pieds — 365,72 m. — de l'est à l'ouest, et 560 pieds — 160,63 m. — du nord au sud. La façade principale se trouvait dans Cromwell-road, l'entrée occidentale dans Prince Albert's-road, et celle orientale dans Exhibition-road.

Quoique la plus grande partie de l'édifice de 1862 fût d'un caractère massif et substantiel, et qu'il eût été construit avec une intention évidente de durée, il n'en était pas moins condamné à être démoli, et l'emplacement sur lequel il s'élevait devait rentrer dans son premier état — non pas que de grands efforts n'aient été faits pour le sauver, surtout les nombreuses galeries d'exposition des tableaux. Quoiqu'il en soit, le Parlement acheta le terrain des Commissaires Royaux dans le but de le consacrer à des projets d'utilité nationale (par un vote de 120,000l. — 3,000,000frs. — pour 17½ acres — 7,081 h. — passé le 13 Juin, 1863), mais se refusa à acquérir les bâtiments, qui disparurent en conséquence, laissant le terrain libre. Cet emplacement n'est toujours pas occupé, et nul reste de l'édifice de l'Exposition de 1862 ne subsiste, à l'exception cependant des salles de rafraîchissements et des galeries s'élevant sur l'arcade méridionale des Jardins d'Horticulture, et qu'acheta aussi le Gouvernement. Ces galeries sont maintenant occupées par le Département de Science et d'Art en vertu d'un arrangement avec le Ministère des Travaux Publics.

L'Édifice — ou plutôt les Édifices — furent construits d'après les plans du feu Capitaine Fowke, du Génie Royal, architecte et ingénieur du Département de Science et d'Art, et les entrepreneurs étaient M. Kelk et MM. Lucas Frères.

DIMENSIONS D'ESPACE.

La superficie totale de l'espace couvert par l'édifice se montait à 1,291,800 pieds — 119,994 mètres — carrés ; dont 147,700 pieds — 13,720 m. — carrés étaient pris par les salles de rafraîchissements, les bureaux d'administration, entrées et escaliers, laissant 1,144,100 pieds — 106,274 m. — carrés disponibles pour l'Exposition proprement dite.

Dans la répartition de cet espace les Commissaires Royaux se conformèrent au principe, maintenant généralement reconnu et admis, d'en donner une moitié au pays dans lequel a lieu l'Exposition, et l'autre aux pays étrangers.

NOMBRE DES EXPOSANTS.

Le nombre total des exposants à l'Exposition Internationale de 1862 fut de 23,653, y compris 2,305 artistes dont les œuvres furent exposées dans les quatre classes de la division des Beaux Arts. Le nombre total d'exposants dans les trente-six classes industrielles fut de 26,348, dont 8,487 Anglais (y compris les colonies) et 17,861 étrangers. Dans la section des Beaux Arts, le nombre d'artistes Anglais représentés fut de 990, et d'artistes étrangers de 1315 ; et le nombre total de leurs œuvres exposées fut de 6,259, dont 3,651 anglaises, et 2,878 étrangères.

DÉPENSE.

La dépense totale de l'entreprise peut être établie en chiffres ronds à 460,000l. — 11,500,000fr.

Avant de donner les divers items composant ce chiffre nous ferons d'abord observer que le marché fait avec les entrepreneurs pour l'édifice principal, y compris l'acre central des galeries de tableaux et l'annexe occidentale, ne comprenait que son usage et la détérioration en résultant, avec faculté d'achat, à des conditions spécifiées, à la clôture de l'Exposition. Les termes de ce marché stipulaient que les entrepreneurs recevaient le prix absolu de 200,000l. — 5,000,000 frs. ; plus une somme additionnelle de 100,000l. — 2,500,000 frs. — si les recettes atteignaient le chiffre de un demi-million — 12,500,000 frs. ; mais au cas où ils eussent reçu les 300,000l. — 7,500,000 frs. — l'aire centrale de la galerie de tableaux fût devenu la propriété des Commissaires de l'Exposition.

Nous ferons encore observer que, dans le but de faire face à une perte pécuniaire possible dans une si vaste entreprise, la Société des Arts avait recommandé aux Commissaires Royaux de l'Exposition de 1851 l'établissement d'un fonds de garantie d'au moins 250,000l. — 6,250,000 frs. L'appel à cet effet qui fut, en conséquence, fait au public eut un résultat dépassant toutes les espérances, puis-

que le montant souscrit s'éleva à plus de 450,000.—11,250,000 frs. Aux termes de l'Acte de Garantie la responsabilité de chaque garant était limitée à sa part au prorata du capital total à constituer. Le nombre de personnes se portant garants qui signèrent l'Acte fut de 1,152, et la limite de responsabilité fut fixée à 250,000.—6,250,000 frs.

Les principaux items de dépense furent les suivants :—

Aux entrepreneurs de la construction, y compris 86,833.—2,170,825 frs.—pour l'annexe orientale	Francs 8,017,000
Plans, dessins, et surintendance professionnelle	208,075
Routes et approches	358,975
Police	485,900
Assurance et pompiers	102,200
Appointements et salaires	1,144,450
Loyers, impôts, réparations, mobilier, impressions, papeterie, articles de bureau, annonces et dépenses fortuites	293,725
Entretien, y compris la cérémonie d'ouverture, déclaration des récompenses, gaz, combustible, eau, etc., etc.	242,250
Transport de tableaux, etc.	105,050
Médailles	160,250
Dépenses préliminaires et frais judiciaires	91,700
Mesurage de l'espace et arrangement général	91,900
Intérêts sur prêt par la Banque d'Angleterre, déduction faite des intérêts sur fonds placés	183,275
Autres items de dépenses non énumérées	31,175
Total . . .	Frs. 11,480,925

Prenant, par conséquent, le chiffre de 321,000.—8,025,000 frs.—pour total de ce qu'a coûté l'édifice de l'Exposition, et celui de 1,292,000 pieds—120,012 m.—carrés pour le total d'espace couvert, on trouvera que la dépense a été de près de cinq shillings—6 fr. 25—par pied carré.

ADMISSION DES VISITEURS.

L'Exposition Internationale de 1862 fut ouverte au public le jeudi, 1 mai, et close le samedi, 15 novembre, ce qui fait un total de 171 jours durant lesquels y furent admis les visiteurs.

L'admission du public eut lieu :—

1° Par billets de saison.

2° Par paiement aux portes.

Les porteurs de billets de saison furent seuls admis le jour de l'ouverture. Le prix d'en-

trée fut fixé à 1l.—25 fr.—pour les deux jours suivants; puis, du 5 au 17 mai (inclusivement) à 5s.—6fr. 25—par personne; du 19 au 31 mai (inclusivement) à 2s. 6d.—3fr. 10—à l'exception du samedi de chaque semaine, jour auquel ce prix était de 5s.—6fr. 25; du 2 au 14 juin il fut de 1s.—1fr. 25—pour les quatre premiers jours de la semaine, de 2s. 6d.—3fr. 10—pour les vendredis, et de 5s.—6fr. 25—pour les samedis; du 16 juin au 1 novembre le prix d'admission fut de 1s.—1fr. 25—pour les quatre premiers jours de chaque semaine; et de 2s. 6d.—3fr. 10—le vendredi et le samedi, à l'exception du vendredi, 11 juillet (le jour de la déclaration des récompenses décernées par le jury), où il fut de 10s.—12fr. 50—par personne; enfin du 3 au 15 novembre (inclusivement) le prix d'entrée fut chaque jour d'une demi-couronne—3fr. 10.

Les billets de saison étaient de deux espèces—les billets ordinaires à trois guinées, 78 fr. 75, et les billets spéciaux à cinq guinées, 131 fr. 25: ces derniers donnaient à leurs propriétaires le droit d'assister aux expositions de fleurs, aux fêtes et promenades dont furent le théâtre les jardins de la Société Royale d'Horticulture pendant la durée de l'Exposition; une portion de leur prix était en conséquence attribuée à la Société en considération des privilèges accordés à leurs possesseurs. Au mois de juillet le prix des billets de saison fut réduit de moitié, et d'autres billets, également de saison, mais pour les jours à 1s.—1 fr. 25—seulement, furent délivrés à 10s.—12 fr. 50—chaque. Enfin des billets d'entrée journaliers, en paquets de vingt et un pour 20s.—25 fr.—furent aussi mis à la disposition du public peu après l'ouverture de l'Exposition.

RECETTES.

Les recettes brutes ou nettes provenant de toutes sources furent comme suit :—

	Frs.	Ces.
Billets de saison	1,991,801	55
Par paiement aux portes	8,221,450	50
Marchés avec les entrepreneurs de rafraîchissements	732,131	10
Catalogues officiels	97,977	25
Licences de photographes	48,125	0
Licences de vendeurs de lunettes	6,250	0
Loyer payé par le bureau télégraphique	2,500	0
Produit des cannes et parapluies	52,966	0
Chambres privées	25,000	0
Commission sur les photographes, médailles, etc. vendus dans l'édifice	31,036	85
Divers	6,551	75
Contribution des entrepreneurs de l'édifice, d'après conventions	275,000	0
Total . . .	Frs. 11,420,790	0

Total .	Frs. 2,231,202	50

Moins 8,672 $\frac{1}{2}$ 5s.—216,806 frs.)	
25—payés à la Société Royale d'Horticulture en vertu de l'arrangement précité, et 903 $\frac{1}{2}$ 15s.	239,400 90
9d.—22,594 frs. 65—pour commission à agents, ensemble .	

Total net . Frs. 1,991,801 60

La somme la plus considérable perçue aux portes en un seul jour fut 2,935 $\frac{1}{2}$ 12s. 4d.—73,390 frs. 40—le lundi, 30 octobre, dernier jour à un shilling; et celle la plus minime perçue aussi en un seul jour fut 241 $\frac{1}{2}$ —6,025 frs.—le samedi, 3 mai, jour auquel le prix d'entrée était de 1 $\frac{1}{2}$ —25 fr.—par personne. La moyenne des recettes journalières aux portes, pendant toute la durée de l'Exposition, à l'exception du premier jour réservé exclusivement aux billets de saison, s'éleva à 1,934 $\frac{1}{2}$ et une fraction—48,350 frs.

Suivent les divers totaux perçus aux portes d'après chaque tarif d'admission :—

	Frs.	Ces.	Frs.	Ces.
Recettes totales de 2 jours à 25			12,650	0
" " 1 " à 12 50			26,310	40
" " 16 " à 6 25			445,585	50
" " 63 " à 3 10			2,401,667	80
" " 88 " à 1 25			5,335,236	75
170			8,221,450	45

Ainsi la moyenne des recettes journalières aux portes fut de 1,114 $\frac{1}{2}$ —27,850 frs.—pour les jours à 6 fr. 25; de 1,525 $\frac{1}{2}$ —38,125 frs.—pour ceux à 3 fr. 10; et de 2,425 $\frac{1}{2}$ —60,625 frs.—pour les jours à un franc vingt-cinq centimes.

NOMBRE DE VISITEURS.

Le nombre total des visiteurs de l'Exposition Internationale de 1862 s'est élevé à près d'un million et quart, le chiffre exact et officiel étant 6,211,103. La moyenne par jour a été de 36,328, et le plus grand nombre de visiteurs en un seul jour fut de 67,891, le jeudi, 30 Octobre (jour à un shilling). Le nombre le plus minime qui ait été admis en un jour fut celui du mercredi, 5 novembre (prix d'entrée, 3 fr. 10); il ne fut que de 5,615; mais comme l'Exposition était virtuellement close alors, il ne serait guère juste de prendre ce chiffre pour le

minimum des visiteurs. Ce minimum se prendrait avec plus de justice en un jour entre le 1er mai et le 1er novembre, tel que le jeudi, 15 mai, jour à cinq shillings—6 fr. 25—d'entrée, où le nombre de visiteurs ne fut que de 7,367.

Quoique les exposants n'eussent point droit à admission gratuite après l'ouverture de l'Exposition, néanmoins toutes facilités d'entrée furent fournies à toutes personnes dont la présence y était réellement nécessaire. Nous donnons ci-après les chiffres totaux d'admissions par billets de saison, passes gratuites, et payement aux portes :—

Billets de saison ordinaires .	770,704
Billets de saison pour jours à un shilling	58,536
Passes gratuites aux exposants, employés, et personnel de la Commission	257,246
Par payement aux portes, billets d'entrée journaliers et billets de retour des Jardins d'Horticulture	5,124,617
	6,211,103

La moyenne par jour des visiteurs admis par billets de saison, et moyennant divers prix d'entrée payés aux portes, fut comme suit :—

	Moyenne de Visiteurs par Jour
Billets de saison	4,507
Do. pour les jours à 1s. = 1fr. 25	829
Entrée à 5s. = 6fr. 25	12,352
Do. à 2s. 6d. = 3fr. 10	19,610
Do. à 1s. = 1fr. 25	14,904

Il résulte d'un compte-rendu officiel montrant le nombre des visiteurs durant les mêmes jours de chaque semaine successive que le total, en gros, fut pour :—

Les lundis de	1,240,615
mardis	1,286,213
mercredis	1,203,658
jeudis	1,270,388
vendredis	641,996
samedis	568,233

Enfin la moyenne par jour des visiteurs fut, pour les Lundis, de 44,307; les mardis, 45,936; les mercredis, 43,988; les jeudis, 44,806; les vendredis, 22,138; et les samedis, 19,594. Cette approximation de la moyenne des quatre premiers jours de la semaine est fort remarquable.

Toutes les personnes entrant chaque jour à l'Exposition avec des passes gratuites, de quelque nature qu'elles fussent, ainsi que tous les détails statistiques relatifs aux visiteurs qui précèdent, sont compris dans le tableau qui se trouvera dans le texte anglais. Le nombre total de ces admissions privilégiées a déjà été donné.

JURY.

Le tableau suivant donne le nombre de Jurés et Jurés-associés siégeant pour chacune des 36 Classes Industrielles.

Classe		Jurés	Jurés Associés
1	Mines, carrières, métallurgie et produits minéraux	16	3
2	Substances et produits chimiques, et procédés de pharmacie	24	3
3	Substances servant à l'alimentation	45	3
4	Substances animales et végétales employées en manufacture	45	6
5	Matériel de chemins de fer, y compris locomotives et voitures	11	—
6	Voitures autres que celles à l'usage des chemins de fer, ou à traction de vapeur, ou à traction de chevaux	6	1
7	Machines et outils de manufactures	15	3
8	Instruments de travail en général	30	2
9	Machines et outils agricoles et d'horticulture	18	1
10	Génie civil, inventions en architecture et constructions	23	2
11	Génie militaire, armure et équipement, artillerie, armes à feu	23	1
12	Constructions navales et agrès de navires	14	3
13	Instruments scientifiques et procédés dépendant de leur usage	13	4
14	Photographie et appareils photographiques	5	2
15	Instruments d'horlogerie . . .	9	—
16	Instruments de musique . . .	11	—
17	Instruments et appareils de chirurgie	7	4
18	Coton	12	2
19	Lin et chanvre	9	—
20	Soie et velours	11	1
21	Étoffes de laine et laines tissées, y compris tissus mélangés	16	8
22	Tapis	6	—
23	Tissus au métier, filés, feutrés, exposés comme spécimens d'impression et de teinture	10	1
24	Tapisserie, dentelle et broderie .	11	1

Classe		Jurés	Jurés Associés
25	Peaux, fourrures, plumes et crin .	11	2
26	Cuir, y compris sellerie et harnais	15	1
27	Articles d'habillement	24	1
28	Papier, papeterie, articles de bureaux et reliure	24	1
29	Ouvrages et objets d'éducation .	21	5
30	Meubles, aménagements, décorations d'appartements, y compris papiers de tenture et articles en papier mâché	19	—
31	Fer et quincaillerie en général .	24	3
32	Acier, coutellerie et outils tranchants	13	—
33	Ouvrages en métaux précieux et leurs imitations, et bijouterie	12	1
34	Verre	13	2
35	Poterie	9	—
36	Nécessaires de toilette, boîtes à dépêches et nécessaires de voyage	7	1
Totaux		582	68

Sont compris dans le tableau ci-dessus 15 Jurés nommés spécialement pour les pompes à incendies dans la Classe 8.

RÉCOMPENSES.

Il n'y eut point de médailles de plusieurs degrés à l'Exposition Internationale de 1862; une seule et unique médaille fut décernée par les jurés, plus des certificats de mention honorable. Le nombre total des médailles décernées fut de 8,141; de mentions honorables, 5,282. Sur ce chiffre de récompenses, 2,382 médailles et 1,697 certificats de mention furent accordés à la Grande-Bretagne et ses colonies, et 5,759 médailles et 3,585 certificats aux pays étrangers.

Aucune récompense ne fut décernée dans les quatre classes des Beaux Arts.

TABLEAU DES MONNAIES, MESURES ET POIDS ANGLAIS,

DONT ON A FAIT USAGE DANS LES NOTES STATISTIQUES SUR L'INDUSTRIE ET LE COMMERCE DU ROYAUME-UNI, CONVERTIS EN MONNAIES, MESURES ET POIDS FRANÇAIS.

INTRODUCTION GÉNÉRALE.

PREMIÈRE PARTIE.—ROYAUME-UNI.

Les résumés statistiques que l'on trouvera plus loin pour le Royaume-Uni ont été dressés d'après le vœu exprimé aux Commissaires de Sa Majesté par la Commission Impériale française pour l'Exposition de 1867, dans une lettre datée du 15 septembre 1866, par laquelle on demande des informations détaillées sous les différents titres de Territoire, Population, Production, Commerce étranger et indigène, Marine marchande, Armée, Marine militaire, Finances, etc. etc.

TERRITOIRE.—Position Géographique—Mers —Montagnes—Fleuves—Surface du Pays —Climat.

(a.) *Position géographique.*—Le Royaume-Uni, qui se compose de l'Angleterre et du pays de Galles, de l'Écosse, de l'Irlande, de l'Île de Man et des îles de la Manche, est situé au nord-ouest du continent européen, entre les 50° et 58° 41' de latitude nord, 1° 46' est, et 10° 26' de longitude ouest.

(b.) *Mers.*—Le Royaume-Uni est borné au nord et à l'ouest par l'Océan Atlantique; au sud, par la Manche; et à l'est par la Mer du Nord. L'Irlande est séparée de la Grande-Bretagne par la Mer d'Irlande. La côte de mer est donc, par rapport à l'étendue du pays, très-considérable.

(c.) *Montagnes.*—Bien que, comparées à celles des États du continent européen, les montagnes du royaume soient beaucoup moins élevées, il y en a cependant plusieurs chaînes dans le pays. Les quatre principales sont, pour l'Angleterre: 1° La Pennine, qui part des monts Cheviots sur les frontières d'Écosse, et vient, en se dirigeant vers le sud, s'arrêter près de Derby; les plus hauts sommets de cette chaîne n'atteignent pas 3,000 pieds. 2° La chaîne Cumbrian, qui est située, en grande partie, dans le Cumberland et le Westmoreland, et où se rencontre quelques-uns des points les plus élevés de l'Angleterre, tels que le mont Helvellyn, haut de 3,055 pieds; ceux de Scafell et de Skiddaw, qui ont respectivement 3,166 et 3,022 pieds de hauteur. 3° La chaîne Cambrian, qui se développe dans presque tout le pays de Galles, et dont le Snowdon, qui en est le mont le plus

élevé, mesure 3,571 pieds. 4° La chaîne Devonian, qui traverse les comtés de Somerset, de Devon et de Cornouailles, et dont les plus hauts sommets ne dépassent pas 1,800 pieds.

En Écosse, la chaîne la plus remarquable est celle des Grampians; le Ben Nevis, qui est à 4,406 pieds au-dessus du niveau de la mer, est le mont le plus élevé de l'Écosse et de la Grande-Bretagne. Les monts Cheviots, situés partie en Écosse et partie en Angleterre, occupent une vaste superficie territoriale.

Les principales montagnes de l'Irlande sont les chaînes du Mourne et de Wicklow; le point le plus élevé du pays est le Carran Tual, qui se trouve dans le comté de Kerry, et qui a 3,414 pieds de hauteur.

(d.) *Fleuves.*—Le fleuve le plus important de l'Angleterre, bien qu'il ne soit pas le plus long, est la Tamise, sur les bords duquel est située la métropole. Il prend sa source dans les monts du Gloucestershire, et est connu sous le nom de 'Isis' jusqu'à son point de jonction avec la 'Thame', où il prend celui de Tamise; il court généralement vers l'est, et se jette dans la Mer du Nord, après avoir parcouru une longueur de 215 milles.

Les autres fleuves importants de l'Angleterre sont: la Severn, qui a 240 milles de longueur, et qui se jette dans le Canal de Bristol; la Trent, la Tyne, la Wear, la Tees, l'Ouse, l'Humber, la Mersey, la Dee, la Wye, la Medway, et l'Avon. Les principaux ports du pays se trouvent, en grande partie, situés sur les rives de ces fleuves: tels que Newcastle et Shields, qui sont sur la Tyne; Hartlepool, Stockton, et Middlesborough sur la Tees; Hull sur l'Humber; Bristol, sur l'Avon; Liverpool, sur la Mersey.

Les principaux fleuves de l'Écosse sont la Tweed, la Forth, la Tay, la Spey, et la Clyde. Leith est situé sur la Forth, Dundee sur la Tay, Greenock et le port de Glasgow sur la Clyde.

Les fleuves les plus remarquables de l'Irlande sont: la Shannon, qui a 150 milles de longueur, la Suir, la Barrow, la Slaney, la Boyne, la Bandon, la Bann et la Liffey.

(e.) *Surface du Pays.*—Peu de contrées offrent une surface plus variée que celle de l'Angleterre; la douceur de son climat et une quantité suffisante de pluies rendent son sol

excessivement fertile, et propre surtout à la culture des céréales et des plantes potagères, ainsi qu'aux pâturages; les deux tiers de la superficie totale du pays étaient mis en culture en 1866. Le pays de Galles et l'Ecosse sont plus montagneux que l'Angleterre; et, en ne comprenant pas les pâturages, environ la moitié seulement de la surface du pays de Galles et un cinquième de celle de l'Ecosse étaient consacrés à la culture pendant l'année dernière. L'Irlande est comparativement un pays plat, et les marais y couvrent une grande étendue; et, bien que son sol, à cause de l'humidité de la température, ne soit pas, au même degré que celui des autres parties du royaume, apte à la production des céréales, elle a cependant une superficie considérable de terrains à fourrages et de pâturages. Ces derniers, y compris les collines en pâturages, occupaient en 1866 la moitié environ de la surface totale du pays.

(f.) *Climat.*—Bien que, dans certaines limites, il soit plus humide et plus variable, le climat de l'Angleterre est plus égal et plus doux que celui de toute autre contrée placée à la même distance de l'équateur. Par suite de la position géographique de l'Angleterre, son

climat est influencé au sud-ouest et à l'ouest par les vents chauds de l'Atlantique, par les courants provenant des immenses champs de glaces du Nord, et, d'un côté par les vapeurs qui s'échappent de l'Atlantique et de l'autre par l'air comparativement sec du continent. Ces causes et d'autres encore suffisent pour expliquer les changements de la température.

En Ecosse, la température est plus froide qu'en Angleterre; mais à cause des nombreuses baies et embouchures de rivières qui pénètrent la côte, les extrêmes ne sont pas aussi grands qu'on pourrait le supposer d'après la position septentrionale du pays.

Le climat de l'Irlande est plus doux et plus humide que celui de l'Angleterre et de l'Ecosse, et plus propice pour les pâturages que pour la culture des grains. Les plantes qui, en Angleterre, réclament une chaleur artificielle, croissent et se développent au grand air en Irlande.

Le tableau suivant, établi d'après des relevés du Professeur Airy, l'astronome royal, indique, pour les vingt-cinq dernières années, les *extrêmes* de la température et de la pluie tombée, dans les trois grandes divisions du Royaume-Uni:—

Température annuelle et Quantité de Pluie tombée (autant qu'on a pu constater) pendant les Vingt-cinq Années comprises entre 1841 et 1865.

Stations	Latitude (Nord)	Longitude (Ouest)	Hauteur de la Station au-dessus du Niveau de la Mer	Moyenne annuelle de la Température		Moyenne annuelle de la Pluie tombée	
				La plus élevée	La plus basse	La plus élevée	La plus basse
En Angleterre et le pays de Galles :

Limerick	52 39	8 38	160	51.1	49.0	48.2	30.8

* Hauteur de la jauge pluviale.

† L'échelle de la température, pour 1853-65, et celle de la pluie tombée, pour 1853-60, ont été dressées d'après les relevés fournis par le Capt. Wilkinson, R.E., Dublin.

ADMINISTRATION.—(a.) *Administration générale.*—En Angleterre le gouvernement est ce que l'on appelle généralement de 'forme mixte,' le pouvoir législatif étant séparé du pouvoir exécutif. Ce dernier appartient exclusivement au roi ou à la reine, qui représente aussi la nation dans toutes les transactions et tous les traités internationaux; tandis que le pouvoir législatif est dévolu au grand conseil national, que l'on nomme Parlement, et qui se compose des trois corps politiques du royaume, c'est-à-dire de la reine, des lords spirituels et temporels, et de la Chambre des Communes. La reine est investie du pouvoir souverain; toutes les lois sont censé émaner d'elle, mais doivent avoir obtenu l'assentiment préalable des deux chambres; ses fonctions sont héréditaires. Les lords spirituels et temporels sont les prélats et les pairs du royaume. La Chambre des Communes se compose de représentants choisis par le peuple, partie pour les comtés, et partie pour les cités et bourgs; ils sont élus au commencement de chaque parlement, et conservent leur siège pendant toute sa durée.

Les lords composent une des deux chambres, et ils siègent en personne; les membres des Communes forment l'autre et siègent également en personne. La reine a son siège dans la Chambre des Lords, mais elle ne l'occupe que dans les circonstances solennelles, comme lorsqu'elle ouvre une session ou donne son assentiment aux *bills* qui ont passé par les deux chambres. Elle ne peut, d'après les traditions constitutionnelles, être présente à aucune des délibérations, et elle est même censé ignorer ce qui se passe, soit à la Chambre des Lords, soit à celle des Communes, jusqu'à ce qu'elle en reçoive la communication officielle. Aucune loi ne peut être passée ni aucune taxe imposée sans le consentement du parlement, c'est-à-dire de la reine et des deux Chambres des Lords et des Communes; et ce consentement doit être donné par chacun de ces pouvoirs séparément. Toutefois la reine n'a que le droit de veto, et aucune mesure ne peut émaner de son autorité si ce n'est lorsqu'il s'agit d'user de son droit de grâce. Les deux chambres ont le pouvoir de prendre l'initiative de toutes les lois indistinctement, à l'exception de celles qui intéresseraient les droits de la pairie, ou qui auraient pour objet l'allocation de subsides; l'initiative des premières appartient en effet à la Chambre des lords, et celle des secondes à la Chambre des Communes. Dans aucun de ces cas le *bill* présenté dans l'une des chambres ne saurait subir ou recevoir de modifications dans l'autre. La reine convoque le parlement et elle le proroge ou le dissout lorsqu'elle le juge à propos. Elle est cependant obligée de le convoquer '*une fois au moins par an, et plus souvent si c'est nécessaire.*'

La prorogation est l'ajournement du Parlement d'une session à l'autre; la dissolution est sa mort naturelle, qui a lieu à l'expiration de sept années depuis le commencement, à moins qu'il n'ait été dissous auparavant par procla-

mation royale. Toutes les fonctions dans l'ordre administratif et exécutif du gouvernement sont remplies au nom de la reine. En se servant, à cette fin, des tribunaux et des autres rouages judiciaires, la reine préside à l'administration de la justice, et veille à ce que les lois soient dûment exécutées.

Toutes les cours de justice, et tous les fonctionnaires tels que juges, shérifs, juges de paix, constables, etc., qui y sont attachés, tiennent leur mandat directement de la souveraine. Il rentre dans les devoirs et les attributions de la reine de réprimer les désordres et de maintenir la tranquillité dans tout le royaume; en conséquence toute violation de la paix publique est qualifiée de '*breach of the Queen's peace.*' En ce qui concerne la politique extérieure, la reine a le droit de faire la guerre ou la paix, de négocier des traités, de nommer des ambassadeurs et de recevoir ceux des puissances étrangères. Pour faire face à ces nombreuses charges, la reine dispose entièrement des forces tant civiles que militaires de la nation. Les officiers des deux ordres civils et militaires tiennent leur nomination de la reine, et leur traitement des Chambres. Dans l'exercice des prérogatives de la couronne, telles que la Constitution les détermine, la reine n'est responsable à qui que ce soit, et même si un acte accompli par ses ordres sortait de la limite de ses pouvoirs elle serait exempte de la responsabilité *personnelle*. De là vient que la reine, dans tous les actes publics, se sert d'agents qui ne peuvent pas invoquer les mêmes immunités, et laisse la conduite des affaires de l'état à ses ministres, dont un certain nombre forment ce que l'on appelle le conseil du cabinet. L'action du pouvoir exécutif est aussi nécessairement renfermée dans des limites nettement définies relativement au budget; en effet, comme les revenus ordinaires de la couronne ne sont plus en rapport avec les besoins de l'état, un appel fréquent à la Chambre des Communes est devenu nécessaire. Les mesures proposées par les ministres pour cet objet sont d'ordinaire discutées, et la chambre peut, ou bien leur refuser le crédit qu'ils demandent, ou bien le leur accorder sous certaines conditions. Il est cependant évident que le droit d'opposer un refus absolu ne peut être exercé avec fruit que lorsque les demandes n'intéressent pas essentiellement la chose publique; ainsi il serait très déplacé pour la Chambre des Communes de chercher à paralyser l'action des ministres de la couronne en refusant de servir l'intérêt de la dette nationale ou de maintenir les administrations civiles et militaires de l'Empire Britannique.

(b.) *Administration locale.*—En ce qui concerne l'administration locale, le pays est divisé civilement en comtés, cités, bourgs et paroisses. Les affaires civiles et judiciaires du comté sont conduites par le haut-shérif, le *coroner* et les juges de paix. Le gouvernement militaire est confié au lord lieutenant, qui est assisté par des lieutenants délégués (*deputy lieutenants*).

Le lord lieutenant a le commandement de la milice, et est souvent le *custos rotularum* ou le conservateur des archives du comté. Les principales fonctions de l'administration locale consistent dans le maintien de l'ordre et de la tranquillité; dans le service des pauvres et de la police; et dans la construction et l'entretien des routes, rues, ponts, &c. &c. Les fonds affectés à ces divers objets sont prélevés par contributions sur la propriété foncière du comté.

L'administration des cités municipales et des bourgs est conférée aux maires et aux corporations, et celle des paroisses à divers fonctionnaires de la commune. Dans beaucoup de villes peuplées non incorporées, des commissaires et des conseils, tels que conseils de salubrité, commissaires des améliorations (improvements), &c. &c., sont élus par les contribuables, sous l'autorité du parlement, à l'effet de présider à l'exécution des travaux utiles, et d'administrer les affaires de la localité.

(c.) *Établissements religieux.*—L'église établie d'Angleterre est protestante épiscopale, mais toutes les religions sont tolérées. L'administration de la religion de l'état est confiée aux membres du clergé, qui forment une catégorie à part et constituent ce que l'on est convenu d'appeler l'Église Anglicane; ils sont soutenus par les revenus de terres, par les dîmes, les taxes pour l'entretien des églises, les droits de chaises, les offrandes, le casuel, &c. &c. L'Angleterre et le pays de Galles sont ecclésiastiquement divisés en provinces ou archevêchés, en évêchés ou diocèses, archidiaconés, diocèses, doyennés et paroisses; chacune de ces divisions a ses fonctionnaires propres, sous l'autorité desquels sont placés ceux des divisions inférieures, et tous sont subordonnés à la reine en sa qualité de Chef de l'Église. Il y a deux archevêques, celui de Canterbury et celui d'York, et vingt-cinq évêques sous leurs ordres. Pour la conduite des affaires ecclésiastiques les provinces ont chacune un conseil ou *assemblée* (*convocation*), composée des évêques, des archidiaconés et des doyens en personne, ainsi que d'un certain nombre de *proctors*, agissant comme mandataires du petit clergé. Ces conseils sont convoqués par les archevêques respectifs en vertu d'une décision de la reine. Les sectes dissidentes administrent leurs affaires elles-mêmes. L'église d'Écosse est gouvernée par une assemblée générale, qui se réunit tous les ans; un représentant de la souveraine, portant le titre de 'Lord High Commissioner' (le lord haut-commissaire), assiste à l'assemblée. L'église d'Irlande, comme celle d'Angleterre, est protestante épiscopale, et est administrée de la même manière. La masse de la population Irlandaise (les quatre cinquièmes, environ) professent toutefois la religion catholique Romaine.

(d.) *Principales Villes.*—Les villes et cités les plus importantes de l'Angleterre sont Londres, Liverpool, Manchester et Salford, Birmingham, Leeds, Sheffield, Bristol, Wolver-

hampton, Newcastle-sur-Tyne, Stoke-sur-Trent, et Hull. La population de chacune de ces villes excède 100,000 âmes. Il y avait en Angleterre et le pays de Galles, lors du recensement de 1861, 72 villes ayant chacune plus de 20,000 habitants. Les principales villes de l'Écosse sont Edimbourg, Glasgow, Dundee, Aberdeen, Paisley, Greenock, Leith et Perth; et de l'Irlande, Dublin, Belfast, Cork, Limerick, Waterford et Londonderry. La population des trois capitales était, en 1861; à Londres de 2,803,989 habitants; à Edimbourg de 170,444, et à Dublin de 314,409.

SUPERFICIE.—Superficie totale — Ligne côtière—Ports.

(a.) *Superficie totale.*—La surface totale du Royaume-Uni est de 121,115 milles carrés, ou 77,513,000 acres, répartis comme suit :—

Divisions, etc.	Superficie		Étendue du Terrain couvert par les récoltes et l'herbe, en jachère et en friche (d'après les relevés de 1861)
	En Milles carrés	En Acres	
Angleterre . . .	50,923	32,590,000	22,262,000
Pays de Galles . .	7,398	4,735,000	2,284,000
Angleterre et Pays de Galles }	58,321	37,325,000	24,546,000
Écosse . . .	30,685	19,639,000	4,158,000
Irlande . . .	31,755	20,322,000	15,550,000
Iles des Mers Britanniques }	354	227,000	115,000
Total, Royaume-Uni }	121,115	77,513,000	44,369,000*

* Dans les chiffres afférents à l'Irlande figurent les pâturages, ce qui peut faire paraître la superficie des terres cultivées de cette division relativement plus grande que celles des autres divisions du Royaume qui ne comprennent pas les pâturages.

(b.) *Ligne côtière.*—L'étendue de la ligne côtière de l'Angleterre et du pays de Galles est estimée à 2,000 milles, environ, et celle de l'Écosse à 2,500. Les côtes d'Irlande atteignent un développement de 750 milles, et sont en grande partie profondément dentelées par des bras de mer, surtout à l'ouest et au sud-ouest.

(c.) *Ports.*—Les meilleurs ports, tant de la Grande-Bretagne que de l'Irlande, sont situés sur les côtes du sud et du sud-ouest; ceux de l'est offrent bien moins de commodités aux navires.

Les plus vastes ports du Royaume-Uni sont ceux de Portsmouth, du Plymouth, de Milford et de Cork, qui ont peu ou peut-être point d'égaux dans le monde entier; leurs eaux sont très-profondes, et ils peuvent offrir un refuge à la plus grande flotte qui existe. Les ports de Holyhead et de Douvres, en cours d'achèvement, procureront aussi à la navigation un abri

important. Des sommes d'argent considérables ont été affectées aux travaux des différents ports du royaume. Londres occupe le premier rang comme port de fleuve dans la Grande-Bretagne. La Mersey est la seconde rivière commerciale du pays. Newcastle, Hull, Bristol, Greenock, Sunderland, Leith, Dundee, Aberdeen, Port Patrick, Kingstown et beaucoup d'autres ports encore peuvent recevoir des navires d'une grande capacité; et, sur tous les points du royaume, bien des ports d'une importance secondaire admettent dans leurs eaux des cabotiers, ce qui facilite considérablement le commerce intérieur du pays.

MOYENS DE COMMUNICATION. — Rivières—Canaux—Routes—Lacs—Chemins de Fer—Télégraphes Électriques.

(a.) *Fleuves et Rivières, Canaux, Routes et Lacs.*—Indépendamment des fleuves et rivières navigables, qui représentent une longueur de 2,500 milles, il y a en Angleterre et dans le pays de Galles environ 2,800 milles de canaux, 24,000 milles de grandes routes, et 100,000 milles de chemins vicinaux. Presque toutes les grandes villes, les ports de mer et les centres manufacturiers sont reliés entre eux par des cours d'eau aussi bien que par des voies de communication terrestres. Les principaux canaux de l'Écosse sont : le grand canal qui joint le Forth à la Clyde, les canaux de l'Union, de Crinan, et le Canal calédonien. Ce dernier, en réunissant un certain nombre de lacs, forme une voie de communication complète par le centre du pays. On estime à 3,700 milles la longueur des routes. Il y a, en Irlande, environ 210 milles de rivières navigables, et 300 milles de canaux. On n'a aucune information en ce qui concerne le développement actuel des routes en Irlande.

L'Angleterre a très-peu de lacs, et aucun de quelque étendue. Ceux qu'elle possède sont principalement situés dans le Westmoreland et

le Cumberland; le plus grand (celui de Windermere) a environ 12 milles de longueur sur un de largeur. Les lacs les plus remarquables de l'Écosse sont : le lac Lomond, entre les comtés de Dumbarton et de Stirling; le lac Ness, dans l'Inverness-shire; le lac Awe, dans l'Argyleshire; et les lacs Tay, Rannock et Erich, dans le Perthshire. Le lac le plus important de l'Irlande est le Lough Neagh, dans l'Ulster, qui a 98,000 acres de superficie. Les lacs Erne, Corrib, Mask, Conn et Killarney méritent également une mention spéciale.

(b.) *Chemins de Fer.*—Le système des chemins de fer dans le Royaume-Uni a pris un développement très-rapide pendant ces quinze dernières années; et, outre les nombreux moyens de communication qu'offrent les fleuves, les canaux et les routes, il y a actuellement 13,289 milles de lignes de chemins de fer qui, on peut le dire, forment un réseau continu qui relie entre eux chaque ville et chaque district du pays.

L'étendue des lignes de chemins de fer ouvertes au trafic dans chacune des divisions du royaume était, au 31 décembre 1865 :—

	Lignes doubles	Lignes simples	Total
	Milles	Milles	Milles
En Angleterre et le pays de Galles	6,081	3,170	9,251
Écosse	946	1,254	2,200
Irlande	476	1,362	1,838
Royaume-Uni	7,503	5,786	13,289

Le montant total du capital versé sur actions, emprunts, etc., des chemins du Royaume-Uni était, au 31 décembre 1865, de 455,478,000*l*.

Le nombre total des voyageurs transportés pendant les années 1864 et 1865, ainsi que celui des chevaux et des chiens, a été, pour chacune des divisions du royaume, savoir :—

	Années	En Angleterre et le Pays de Galles	En Écosse	En Irlande	Dans le Royaume-Uni
Voyageurs :		No.	No.	No.	No.
De 1ères classes	{ 1864 23,467,020	2,691,301	1,543,094	27,701,415	
	{ 1865 25,053,443	2,840,446	1,769,316	29,663,205	
De 2èmes classes	{ 1864 59,681,016	1,998,949	3,589,204	65,269,169	
	{ 1865 64,520,007	2,349,500	3,913,734	70,783,241	
De 3èmes classes (y compris les voya- geurs parlementaires (*Parliamentary passengers)	{ 1864 114,016,625	15,515,205	6,769,751	136,301,581	
	{ 1865 127,120,088	16,805,582	7,490,599	151,416,269	
Total	{ 1864 197,164,661	20,205,455	11,902,049	229,272,165	
	{ 1865 216,693,538	21,995,528	13,173,649	251,862,715	
Porteurs de billets de saison . . .	{ 1864 51,914	15,403	9,182	76,499	
	{ 1865 63,997	20,744	12,406	97,147

(c.) *Télégraphes électriques*.—La statistique des télégraphes publics présente, d'après les relevés adressés, en 1865, au Board of Trade,

par les compagnies respectives, les résultats suivants :—

Noms des Compagnies télégraphiques	Longueur des Lignes télégraphiques	Longueur des Fils employés	Nombre de Stations ouvertes au Public	Nombre d'Appareils	Nombre de Dépêches
	Milles	Milles			
Électrique et International . . .	9,306	45,044	1,022	5,778	n'ont pas été constatées 1,251,265 88,711 66,523 316,272 743,870
Magnétique Britannique et Irlandais* . . .	4,401	18,668	491	inconnu	
Du Chemin de fer du Sud-Est† . . .	323½	3,064½	104	159	
Du Chemin de fer de Londres, Brighton et la Côte du Sud . . .	240¾	688	57	92	
District de Londres‡ . . .	123	470	83	195	
Du Royaume-Uni . . .	1,672	9,506	125	358	
Total . . .	16,066½	77,440½	1,882	—	
Sous-Marin § . . .	887 (en 1863)	—	—	—	

* Les dépêches continentales reçues et transmises conjointement par cette compagnie et celle du Télégraphe Sous-Marin, ainsi que les dépêches des compagnies de chemins de fer, de la presse, et des cabinets de lecture, ne sont pas comprises dans le chiffre des messages du public ; on estime leur nombre à 250,000 environ, par an.

† La compagnie du chemin de fer du Sud-Est n'a passé de conventions spéciales avec aucune des compagnies de Télégraphe Électrique.

‡ Non compris les télégraphes privés que cette compagnie entretient pour le compte des maisons de commerce ou des personnes ayant deux sièges d'affaires, et le système télégraphique de la 'London Fire Brigade' (Brigade des Sapeurs-pompiers).

§ Ligne de Calais, 24 milles ; de Boulogne, 25 milles ; de Dieppe, 78 milles ; de Jersey, 30 milles ; d'Ostende, 70 milles ; de Hanovre, 280 milles ; et du Danemark, 380 milles.

Outre les lignes qui précèdent, il y a encore les deux câbles de la Compagnie du Télégraphe Atlantique, entre l'Irlande et St. Jean de Terre-Neuve. La longueur du câble noyé pour la ligne de 1865 était de 2,300 milles nautiques, et, en 1866, la pose du nouveau câble et la réparation des dommages éprouvés par celui de l'année précédente n'ont pas employé moins de 2,730 milles marins de câble.

POPULATION.—Nationalités—Religions—Occupations—Des Principales Villes—Augmentation depuis 1855—Émigration—Aveugles—Sourds—Muets—Naissances—Décès—Mariages—Indigents—Délits.

(a.) *Population*.—La population totale du Royaume-Uni était, lors du recensement de 1861, en chiffres ronds, de 29,070,000 âmes, ainsi réparties :—

Divisions	Population (non compris les Marins et Militaires hors du Royaume)			Soldats, Marins et Matelots qui se trouvaient hors du Royaume
	Sexe masculin	Sexe féminin	Total	
En Angleterre	9,224,000	9,730,000	18,954,000	162,273
Galles (pays de)	552,000	560,000	1,112,000	
Écosse	1,450,000	1,612,000	3,062,000	34,514
Irlande	2,837,000	2,962,000	5,799,000	51,342
Îles de la Manche et autres	66,000	77,000	143,000	2,227
Royaume-Uni	14,129,000	14,941,000	29,070,000	250,356

Le chiffre proportionnel de la population de chacune des quatre divisions du royaume était donc, par rapport à l'ensemble :— En Angleterre et le pays de Galles, de 69·1 ; en Écosse, de 10·5 ; en Irlande, de 19·9 ; et dans les Îles de 5 ; ou bien, en divisant le chiffre total de la population en dix parties, sept environ sont applicables à l'Angleterre et le pays de Galles, deux à l'Irlande, une à l'Écosse et $\frac{1}{20}$ aux Îles de la Manche.

Le royaume comptait, en 1861, 14,379,000 personnes du sexe masculin (y compris les militaires, marins, etc., hors du territoire), et 14,941,000 du sexe féminin. On estime que la population du Royaume-Uni atteignait, vers

le milieu de l'année 1866, le chiffre de 30,329,207 (en comprenant les militaires et marins en service hors du pays).

Le chiffre moyen de la population par mille carré était, en 1861, savoir :—

En Angleterre	372·2
Dans le pays de Galles	150·3
En Écosse	99·7
„ Irlande	182·6
Dans les Îles	403·9
Royaume-Uni	240·0

(b.) *Nationalités.*— La nationalité de la population, dans les différentes divisions, était à la même date :—

Nationalités	En Angleterre et le Pays de Galles	En Écosse	En Irlande	Dans les Îles des Mers Britanniques
Anglais	17,985,617	54,920	50,936	19,525
Gallois	1,134,435	1,112		290
Écossais	169,202	2,785,804	16,925	1,235
Irlandais	601,634	204,083	5,720,686	5,534
Nés dans les îles des mers britanniques	18,423	628	10,420	111,354
„ „ les colonies et les Indes orientales	51,572	7,559		1,262
„ „ les pays étrangers	101,832*	8,188†		4,184‡
„ en mer	3,509			63
Total	20,066,224	3,062,294	5,798,967	143,447

* Y compris 84,090
† „ 3,969
‡ „ 3,923 } personnes qui étaient de nationalités étrangères.

(c.) *Religions.*— Il n'y a point de relevés statistiques sur le nombre de personnes appartenant à chacune des communions qui existent dans la Grande-Bretagne. Le nombre, en ce qui concerne les diverses sectes de l'Irlande, était, en 1861 :—

	Personnes
Appartenant à l'Église établie	693,357
Presbytériens	523,291
Méthodistes	45,399
Indépendants	4,532
Baptistes	4,237
Quakers	3,695
Autres croyances	14,695
Total des Protestants	1,289,206
Catholiques Romains	4,505,265
Juifs	393
Non dénommés	4,103
Total	5,798,967

(d.) *Occupations.*— En comparant les occupations du peuple de la Grande-Bretagne, en

1851 (époque à laquelle apparurent les premières statistiques sur lesquelles on put se baser), avec les relevés analogues publiés en 1861, on constate, dans les trois grandes divisions des emplois, les changements ci-après.

1° La moyenne proportionnelle de la population attachée aux travaux de l'agriculture est tombée de 12 à 10%.

2° Celle des occupations commerciales s'est élevée de 21 à 27 pour %.

3° Et celle de tous les autres emplois est descendue de 67 à 63 p. %.

Ces faits ressortiront peut-être plus clairement de l'exposé suivant :—

	Attachés aux Travaux agricoles	Occupations commerciales	Autres Emplois
En 1851	12	21	67
En 1861	10	27	63

On rencontre de grandes difficultés à établir des relevés exacts concernant les occupations du peuple ; et, bien qu'on en ait surmonté beaucoup lors du recensement de 1861, les résultats obtenus furent cependant considérés

comme laissant à désirer sous bien des rapports ; toutefois, les six grandes divisions d'emplois qui figurent dans le recensement se rapprochent beaucoup de la vérité. Ainsi, en Angleterre et le Pays de Galles, sur une population de 20,066,224 âmes, les relevés d'occupations qu'on a obtenus s'appliquaient à 19,915,334 individus. En Écosse, ces relevés furent complets, et en Irlande on a pu constater, sur un chiffre total de 5,798,967, les occupations de 5,416,806 personnes.

La table ci-dessous indique quelles étaient, en 1861, pour le Royaume-Uni, les proportions de la population dans les six classes d'occupations :—

Classes d'Occupations	Proportions par rapport à 100		
	Angleterre et le Pays de Galles	Écosse	Irlande
(1) Professionnelles	2.4	1.7	1.8
(2) Domestiques .	57.4	57.0	56.8
(3) Commerciales .	3.1	2.8	2.2
(4) Agricoles . .	10.1	12.5	18.3
(5) Industrielles	24.3	22.8	12.3
(6) Non définies et d'aucun rapport .	2.7	3.2	8.6
	100.0	100.0	100.0

- (1) Y compris les personnes employées par le Gouvernement ou à la défense du pays, et dans les arts, sciences, etc.
- (2) On comprend dans cette classe toutes les personnes ayant des devoirs de famille à remplir ; épouses, mères, veuves, enfants et autres, les écoliers, les personnes louant des logements garnis, les domestiques, etc.
- (3) Comprenant les personnes occupées dans les opérations commerciales, tous les négociants et marchands en général, les entrepreneurs de transports par eau et par terre, les individus employés dans les magasins, les messagers et les porteurs.
- (4) Comprenant toutes les personnes attachées aux travaux de l'agriculture, de l'arboriculture, de l'horticulture, et à l'élevage des bestiaux.
- (5) Les personnes employées dans les manufactures de toutes sortes, non autrement désignées.
- (6) Dans cette classe sont compris les manœuvres, les propriétaires et personnages n'ayant pas d'emploi spécial. Les personnes n'ayant point d'occupation déterminée, et qui sont entretenues aux frais de l'État, telles que pensionnaires, indigents, les aliénés, les prisonniers, les vagabonds, etc., et tous ceux qui n'ont pas de métier fixe.

Le tableau ci-après contient le nombre total de personnes des deux sexes employées comme domestiques, et celles occupées aux travaux de l'agriculture et de l'industrie dans chaque division du Royaume-Uni, en 1861. Les chiffres des occupations agricoles et industrielles comprennent toutes les personnes liées à l'agriculture ou à chaque branche de commerce, c'est à dire les fermiers, les manufacturiers, les marchands, les ouvriers, les artisans, etc. etc. (*Voyez le tableau, p. 145.*)

(e.) *Population des principales Villes.*—La table ci-après contient, pour les années 1851 et 1861, le chiffre réel de la population des

principales villes de chacune des grandes divisions du royaume, ainsi que le nombre *approximatif* des habitants pour l'année 1866 :—

Cités, Villes, etc.	Chiffre de la Population		Chiffre approximatif des Habitants vers le milieu de l'année 1866
	En 1851	En 1861	
En Angleterre :			
Londres (métropole)	2,362,236	2,803,989	3,037,991
Liverpool (bourg)	375,955	443,938	484,337
Manchester (cité)	303,382	338,722	358,855
Salford (bourg)	85,108	102,449	112,904
Birmingham (bourg)	232,841	296,076	335,798
Leeds (bourg)	172,270	207,165	228,187
Sheffield (bourg)	135,310	185,172	218,257
Bristol (cité)	137,328	154,093	163,680
Newcastle-sur-Tyne (bourg) }	87,784	109,108	122,277
Hull (bourg)	84,690	97,661	105,233
En Écosse :			
Édimbourg (cité)	161,648	170,444	175,128
Glasgow (cité)	329,097	395,503	432,265
Dundee	80,027	91,664	—
Aberdeen	71,973	73,900	—
Paisley	48,071	47,427	—
Greenock	37,436	43,894	—
Leith	32,219	36,029	—
Perth	24,670	26,094	—
En Irlande :			
Dublin (cité)	—	314,409	318,437
Belfast	—	123,479	—
Cork	—	93,389	—
Limerick	—	50,068	—
Waterford	—	30,570	—
Londonderry	—	20,366	—

Nota.—En 1861, il y avait en Angleterre et dans le pays de Galles soixante-douze villes, qui comprenaient chacune plus de 20,000 âmes.

Le relevés ci-dessous montrent, pour quelques-unes des principales villes, l'augmentation qui s'est manifestée dans le chiffre de la population entre les années 1855 et 1865 :—

	Évaluation totale des Habitants	
	En 1855	En 1865
Londres (métropole)	2,548,382	2,993,513
Liverpool	403,547	476,368
Manchester	317,966	354,930
Salford	92,106	110,833
Birmingham	257,941	327,842
Leeds	186,356	224,025
Sheffield	154,662	211,529
Bristol	144,236	161,809
Newcastle-sur-Tyne	96,307	119,651

(f.) *Augmentation générale de la Population depuis 1855.*—L'augmentation totale de la population de la Grande-Bretagne entre les années 1855 et 1866 (non compris les militaires, marins, etc., absents du pays) peut être estimée à 12 pour cent ; le chiffre des habitants s'étant élevé de 21,807,000 in 1851, à 24,363,000 en 1866. En Irlande, la population a décréu, pendant la même période, de sept pour cent ; ce résultat doit surtout être attribué à l'émigration considérable qui a eu lieu.

Nombre de Personnes des deux sexes employées comme domestiques, et occupées aux travaux de l'agriculture, et d'autres branches d'industrie dans chaque division du Royaume-Uni, d'après le recensement de 1861.

Branches de Commerce, d'Industrie, etc.	En Angleterre et dans le Pays de Galles			En Écosse			En Irlande		
	Sexe		Total	Sexe		Total	Sexe		Total
	Masculin	Féminin		Masculin	Féminin		Masculin	Féminin

Fers et aciers	299,697	16,875	316,572	44,869	131	45,000	26,576	152	26,728

(g.) *Emigration.*—Pendant la période décennale terminée en 1865, 1,607,745 personnes émigrèrent du Royaume-Uni. De ce nombre, 139,802 se dirigèrent vers les colonies de l'Amérique du Nord, 1,005,844 allèrent aux États-Unis, 397,302 en Australie, et 64,797 dans différents autres pays. Il

n'existe point de relevé concernant l'immigration dans le Royaume-Uni.

(h.) *Aveugles.*—D'après le recensement de 1861, il y avait, à cette époque, dans le Royaume-Uni, 29,248 personnes privées de la vue, et qui se répartissaient comme suit :—

En Angleterre et le Pays de Galles	19,352 ou 1 sur 1,037 habitants
Écosse . . .	2,820 „ 1 „ 1,086 „
Irlande . . .	6,879 „ 1 „ 843 „
Îles des mers britanniques }	197 „ 1 „ 728 „
Royaume-Uni	29,248 ou 1 sur 994 „

Londres possède plusieurs institutions pour les aveugles indigents; il en existe également dans beaucoup d'autres villes du royaume.

(i.) *Sourds et Muets*.—Le nombre total des sourds et muets était, à la même date, de 20,311, ainsi répartis :—

En Angleterre et le pays de Galles	12,236 ou 1 sur 1,640 habitants
Écosse . . .	2,335 „ 1 „ 1,311 „
Irlande . . .	6,635 „ 1 „ 1,026 „
Royaume-Uni (y compris les îles)	20,311 ou 1 sur 1,432 „

Les comtés du nord de l'Écosse contiennent une plus grande proportion de sourds et muets que toute autre partie de la Grande-Bretagne.

(j.) *Naissances, Décès, Mariages*.

Années	Chiffre approximatif de la Population	Naissances	Décès	Mariages
Angleterre et Pays de Galles				
1863	20,554,137	727,417	473,837	173,510

* Population en 1861.

(k.) *Indigents*.—Le nombre total des indigents assistés dans les asiles et à domicile était, au

1^{er} janvier 1866, dans chacune des divisions du Royaume-Uni, savoir :—

En Angleterre et dans le Pays de Galles . . .	920,344
Écosse . . .	121,394
Irlande . . .	65,057

(l.) *Crimes et Délits en 1865*.

	En Angle- terre et le Pays de Galles	En Écosse	En Irlande
Nombre de personnes accusées . . .	19,614	2,567	4,657
Nombre de personnes condamnées . . .	14,740	2,360	2,663
Nombre de personnes acquittées (non-com- pris celles reconnues atteintes d'aliénation mentale et détenues)	4,842	207	1,966

PRODUCTION. — Agriculture — Récoltes — Laine—Lin—Produits vivants—Importance des Fermes—Forêts—Pêcheries—Charbon — Métaux — Pétrole—Argiles—Grès—Sel—Tissus—Autres Manufactures.

(a.) *Agriculture*.—En ce qui concerne les productions du sol, il n'y a, malheureusement, aucun rapport officiel relativement aux quantités de céréales, de viande, de laine, ou de beurre, fromages et autres articles de laiterie, annuellement produites. Sous ce rapport l'Angleterre est bien en arrière de la plupart des nations du continent, où, depuis quelques années, un système complet de statistique agricole a été mis en action. On ne possède, jusqu'en 1866, aucun relevé complet pour le royaume entier, pas même pour ce qui regarde l'étendue du terrain mis en culture, et le nombre des bestiaux.

Le tableau ci-après indique la superficie des terres cultivées en 1866 dans chacune des divisions du royaume :—

Divisions	Superficie totale	Superficie totale du Terrain en culture, en jachère, en friche, etc.	Superficie consacrée à la Culture	
			des Céréales	des Plantes fourragères et potagères
	Acres	Acres		
Angleterre	32,590,397	22,261,833	7,400,170	2,750,008
Pays de Galles	4,734,486	2,284,674	521,074	139,265
Écosse	19,639,377	4,158,360	1,366,540	663,257
Grande-Bretagne	56,964,260	28,704,867	9,287,784	3,552,530
Irlande	20,322,641	*15,549,796	2,173,433	1,482,091
Île de Man	180,000	82,902	27,266	12,208
Îles de la Manche—Jersey	28,717	20,357	3,142	5,253
Guernesey	17,967	11,999	2,041	2,938
Total, Royaume-Uni	77,513,585	—	11,493,666	5,055,020

* Ces chiffres comprennent les pâturages qui ne figurent pas dans les relevés des autres divisions du royaume.

(b.) *Récoltes.*—L'étendue totale du terrain affecté à la culture des principales récoltes de grains, était :—

	Acres
Pour le blé	3,697,635
l'orge	2,398,485
l'avoine	4,469,297
le seigle	67,879
les fèves	537,210
les pois	323,160
	<hr/> 11,493,666

En prenant pour la Grande-Bretagne vingt-sept boisseaux de blé comme rendement moyen par acre, et, pour l'Irlande, vingt-cinq boisseaux, la production annuelle du froment peut être estimée à 12,364,000 quarters, environ, pour tout le Royaume-Uni. La production indigène du froment est cependant loin de suffire aux besoins de la consommation, et il s'en importe, ainsi que d'autres sortes de grains, de grandes quantités, comme on pourra le voir en se référant aux remarques sur le commerce général des importations du pays. Mr. Caird, autorité bien connue en matière d'agriculture, estime que le rendement moyen des autres espèces de grains, en Angleterre, est de 38 boisseaux par acre pour l'orge; de 44 boisseaux pour le seigle et les avoines; et de 30 boisseaux pour les fèves et les pois.

L'élevage des bestiaux dans la Grande-Bretagne a été, ces dernières années, l'objet d'une attention toute particulière; conséquemment une grande surface du terrain du pays a été consacrée à la culture des racines. La superficie totale couverte par les récoltes des plantes potagères et fourragères dans le Royaume-Uni, en 1866, était de 5,055,020 acres, dont 1,555,609 en pommes de terre; 2,468,564 en navets et rabioles; 279,987 en mangel-worzel; 22,061 en carottes; 216,610 en choux, kohl-rabi et navettes; et 512,189 en vesces, luzerne et autres fourrages, à l'exception du trèfle et de l'herbe.

(c.) *Laine et Lin.*—De toutes les matières utilisées dans les manufactures textiles, il n'y a que le lin et la laine qui soient produits dans le Royaume-Uni. Mr. Behrens, prenant pour base le chiffre des moutons du pays, estime à 152,000,000 de livres la production de la laine. C'est en Irlande surtout que croît le lin, bien qu'il s'en cultive dans des proportions restreintes en Angleterre et en Écosse. L'étendue totale du terrain affecté, en 1866, à la culture de ce textile en Irlande était de 263,659 acres, ayant donné approximativement 1,051,000 quintaux de lin.

(d.) *Produits vivants.*—Le nombre total de chaque sorte de bétail qui existait, en 1866, dans les différentes divisions de Royaume-Uni, était :—

Divisions	Gros Bétail			Moutons	Porcs
	Vaches	Autres Bestiaux	Total		
	Nombre	Nombre	Nombre	Nombre	Nombre
Angleterre	1,290,529	2,016,505	3,307,034	15,124,541	2,066,299
Pays de Galles	222,546	318,855	541,401	1,668,663	191,604
Écosse	370,447	566,954	937,401	5,255,077	219,716
Irlande	1,481,446	2,261,486	3,742,932	4,270,027	1,493,000
Île de Man	7,755	10,932	18,687	55,954	10,956
Îles de la Manche—Jersey	5,815	6,222	12,037	517	6,332
Guernesey	3,030	3,946	6,976	1,214	5,599
Total (Royaume-Uni)	3,381,568	5,184,900	8,566,468	26,375,993	3,993,506

Par suite des pertes qu'a fait subir la peste bovine, les relevés ci-dessus sont inférieurs au chiffre ordinaire du bétail entretenu dans le pays. En ajoutant le montant des pertes aux totaux indiqués dans le tableau qui précède, on aurait alors 8,716,279 têtes de gros bétail. La date à laquelle les relevés ont été faits n'a probablement pas pu permettre de comprendre dans le nombre des moutons une grande quantité d'agneaux de l'année (1866), du moins pour ce qui regarde les comtés du nord de l'Angleterre et l'Écosse. Les porcs élevés par les paysans et dans les villes ne figurent pas dans les chiffres cités plus haut pour les différentes divisions de la Grande-Bretagne.

Lorsqu'on a relevé les statistiques qui précèdent, pour la Grande-Bretagne, aucune disposition n'avait été prise pour s'assurer du nombre de chevaux existant. D'après les

informations puisées dans les registres du fisc, il y avait en 1864 dans la Grande-Bretagne 1,071,095 chevaux et mulets; et d'un autre côté on a constaté qu'il existait, en 1866, 535,000 de ces animaux en Irlande, ce qui donnerait un total d'un million et demi environ pour tout le royaume.

(e.) *Importance des Fermes.*—1. *Grande-Bretagne.*—Les dernières statistiques relatives à l'importance (*étendue*) des fermes de la Grande-Bretagne datent de 1851; à cette époque, le nombre total des fermes, dans chacune des divisions du pays, était de—

	Nombre de Fermes
En Angleterre et le pays de Galles	225,318
„ Écosse	56,650
Dans les îles des mers britanniques	3,968
Total	<hr/> 285,936

L'étendue moyenne de chaque ferme, dans la Grande-Bretagne, était de 102 acres ; de 111 acres en Angleterre et le pays de Galles ; de 74 acres en Écosse, et de moins de 100 acres dans les îles. On comptait, dans la Grande-Bretagne, sur mille fermes, les proportions suivantes :—

Au-dessous de 100 acres	. 672 fermes
De 100 à 200 acres	. 187 "
De 200 à 1,000 acres	. 137 "
Au-dessus de 1,000 acres	. 4 "

1,000

L'étendue des terres se trouvant entre les mains de 2,038 fermiers, ayant des cultures de 700 acres et au-dessus, en Angleterre et dans le pays de Galles, à la même date, excédait de 10,060 acres celle des terres tenues par 97,800 petits fermiers, ainsi du reste qu'on va le voir :—

	Nombre de Fermiers	Acres de Terre
Fermiers ayant des cultures de 700 acres et au-dessus	2,038	2,152,050
Petits fermiers	97,800	2,141,990

2. *Irlande*.—L'étendue des fermes en Irlande était, en 1864 :—

Étendue des Cultures	Nombre de Fermes
Au-dessous de 5 acres	. 130,690
De 5 à 15 acres	. 176,368
De 15 à 30 „	. 136,578

Étendue des Cultures	Nombre de Fermes
De 30 à 50 „	. 71,961
De 50 à 100 „	. 54,347
Total, au-dessous de 100 acres	. 569,844
De 100 à 200 acres	. 22,065
De 200 à 500 „	. 8,303
Au-dessus de 500 acres	. 1,559
Total général	. 601,771

(f.) *Forêts*.—On ne possède aucun renseignement sur la quantité de bois de haute futaie produite dans le Royaume-Uni, mais on estime à environ deux millions de livres sterling sa valeur annuelle.

(g.) *Pêcheries*.—Les pêcheries britanniques sont très-importantes, et on trouvera, à leur sujet, un exposé général dans les notes statistiques de la Classe 70.

(h.) *Charbons et Métaux*.—Les ressources minérales du Royaume-Uni sont considérables, et elles forment une des plus grandes branches de la richesse nationale. Depuis 1854, des relevés statistiques complets de la production minérale du pays ont été recueillis sous la surveillance de Mr. Robert Hunt, conservateur des archives minérales attaché au Musée de Géologie de l'État. La valeur totale des charbons et des métaux produits dans le Royaume-Uni pendant l'année 1865 s'élève à 41,745,429*l.* sterling. Le tableau ci-après contient les quantités et valeurs des productions minérales en 1865 :—

	Quantités		Valeur estimative sur les Lieux de Production	
	de Minéraux extraits	de Métaux produits	des Minéraux extraits	des Métaux produits
Charbons Tonnes	98,150,587	—	£ 24,537,646	£ —
Fers „	9,910,045	4,819,254	3,324,804	11,774,220
Plomb „	90,451	67,181	1,153,134	1,433,161
Cuivre „	198,298	11,888	927,938	1,134,664
Étain „	15,686	10,039	867,435	971,273
Zinc „	17,842	4,040	52,478	104,810
Pyrites „	114,195	—	71,174	—
Or (Quartz) „	4,280	once 1,664	—	5,824
Argent Onces	—	724,856	—	199,335
Minéraux non métalliques (d'après comptendu)	—	—	774,496	—
Minéraux non métalliques (d'après estimation)	—	—	650,000	—
Minerais métallifères et métaux autres que ceux ci-dessus (estimation)	—	—	—	150,000
Total	—	—	32,359,105	15,773,287

La valeur totale du charbon et des métaux était donc de—

	£
Charbon	24,537,646
Métaux	15,773,287
Minéraux non-métalliques et non compris les argiles et les pierres à bâtir	1,434,496
Total	41,745,429

On trouvera dans les notes statistiques de la Classe 40 un exposé détaillé de la production des divers minéraux et métaux.

(i.) *Pétrole*.—L'importance de la production du pétrole n'a pas encore été constatée, mais l'extraction de cette huile minérale des différentes sources bitumineuses du pays est actuellement l'objet d'un commerce assez étendu.

(j.) *Argiles et Terres à Porcelaine*.—En 1865 le produit total des argiles et terres à porcelaine a été de 1,125,924 tonnes, représentant une valeur de 373,916*l.*

(k.) *Sel*.—Le sel est tiré du Cheshire, du Worcestershire et de l'Irlande. Les salines du Cheshire peuvent fabriquer un million de

tonnes de sel par an ; celles du Worcestershire 200,000 tonnes environ. La production de cet article en Irlande est relativement bien inférieure.

(*l.*) *Manufactures Textiles.*—La fabrication des tissus a lieu sur une échelle considérable dans le Royaume-Uni. Ou pourra avoir une idée de son importance par ce fait, qu'en 1865, outre

les produits textiles manufacturés pour la consommation intérieure, il en a été exporté pour une valeur d'environ *quatre-vingt sept millions de livres sterling.*

Le nombre des fabriques en activité dans le Royaume-Uni était, d'après le recensement de 1861 :—

Genre de Fabrique ou Filature	Nombre de Fabriques	Nombre de Broches	Nombre de Métiers mécaniques	Nombre d'Ouvriers		Chevaux de Force Motrice	
				Sexe masculin	Sexe féminin	Vapeur	Eau
Coton	2,887	30,387,467	399,992	182,556	269,013	281,663	12,467
Lin	399	1,216,674	14,792	24,616	62,813	31,727	4,354
Soie	771	1,338,544	10,709	15,530	36,899	6,186	864
Étoffes de laine	1,679	2,182,609	21,770	49,754	37,229	26,879	9,598
Étoffes d'estame	532	1,289,172	43,048	31,501	54,562	26,234	1,970
Chanvre	5	2,580	1	105	502	127	—
Jute	36	32,982	554	2,049	3,918	2,048	60
Bonneterie	69	—	—	2,162	2,325	447	46
Total	5,378	36,450,028	490,866	308,273	467,261	375,311	29,359

Les notes statistiques des Classes 27 à 30 contiennent l'exposé de la production des diverses industries textiles du pays.

(*m.*) *Autres Manufactures.*—On trouvera aux Classes sous lesquelles sont respectivement exposés les articles, des renseignements généraux sur les différentes manufactures et industries du pays.

COMMERCE.—Chambres de Commerce—Commerce extérieur—Importations—Droits d'Importation—Exportations—Droits d'Exportation—Marchandises—Métaux précieux—Transbordements—Articles importés—Articles exportés—Commerce des Ports.

(*a.*) *Commerce.*—À l'exception du commerce de quelques articles sur lesquels le gouvernement exerce une certaine surveillance pour l'application des droits et la remise des primes de 'drawback,' etc., l'industrie commerciale est, dans toutes ses branches, parfaitement libre et dégagée de tous liens. Chacun peut, à sa guise, entreprendre où bon lui semble le genre d'affaires qui lui convient, pourvu toutefois qu'il n'enfreigne pas les lois ordinaires du pays.

Les trois grandes classes d'individus liés à l'industrie commerciale sont le producteur et le manufacturier, le marchand et l'agent intermédiaire, et le négociant en gros ou en détail, qui fournit directement aux consommateurs.

La majeure partie du commerce extérieur du pays se trouve généralement entre les mains du marchand, qui vend les produits du manufacturier aux risques et périls de ce dernier, ou bien achète ces produits, et les vend pour son propre compte. Dans le premier cas le marchand reçoit une commission sur les ventes, et dans le second on lui fait un escompte considérable sur le prix des marchandises.

(*b.*) *Chambres de Commerce.*—Il existe des Chambres de Commerce dans presque toutes les villes et centres manufacturiers importants de la Grande-Bretagne ; elles se composent des

principaux marchands et manufacturiers de la localité, qui, tout en soignant les intérêts des industries auxquelles ils se trouvent plus intimement liés, s'occupent également des questions se rattachant au commerce général du pays. Vers le commencement de chaque année a lieu, à Londres, une assemblée des Chambres de Commerce réunies.

(*c.*) *Commerce Extérieur.*—Le commerce extérieur du Royaume-Uni, qui s'étend à toutes les parties du monde, a pris un développement considérable pendant les dix dernières années ; la valeur des importations a passé du chiffre de cent soixante-douze millions de livres sterling à celui de deux cent soixante-onze millions. Le montant des exportations pendant la même période, s'est élevé de cent trente-neuf à deux cent dix-huit millions sterling. Il ne rentre pas dans les limites de ces remarques sommaires de s'arrêter au détail de chaque branche d'industrie, mais il n'est pas sans intérêt d'indiquer ici le chiffre des échanges commerciaux entre le Royaume-Uni et les États les plus importants du globe.

(*d.*) *Importations.*—En ce qui concerne les importations, les pays ci-après désignés ont été les principaux sources d'approvisionnement en 1861 et en 1865 :—

Pays	En 1861	En 1865
	£	£
Russie	12,822,000	17,383,000
Prusse	6,440,000	6,126,000
Villes hanséatiques	6,058,000	8,837,000
Hollande	7,692,000	12,413,000
Belgique	3,817,000	7,354,000
France	17,826,000	31,625,000
Espagne	4,458,000	4,769,000
Italie	2,478,000	2,486,000
Turquie	3,632,000	5,405,000
Égypte	8,398,000	21,773,000
Chine	8,608,000	10,499,000
États-Unis	49,389,000	21,624,000
Pérou	3,169,000	4,002,000
Chili	2,416,000	3,798,000
Brésil	2,631,000	6,797,000
Possessions britanniques	52,676,000	72,840,000

La diminution dans les chiffres relatifs aux États-Unis n'a pas besoin de commentaires. Les augmentations que l'on remarque pour la Turquie, l'Égypte, la Chine, le Brésil et les possessions britanniques sont dues, en grande partie, au surcroît des importations de coton brut tiré de ces pays pendant la cessation des arrivages américains.

Le progrès remarquable des importations françaises s'explique par l'accroissement continu des échanges entre les deux pays depuis la conclusion du Traité de Commerce de 1860.

(c.) *Droits d'Importation.*—La table ci-dessous indique les droits d'entrée auxquels sont actuellement soumises les marchandises étrangères de toutes sortes.

Liste des articles sujets aux droits d'entrée dans le Royaume-Uni.

* L'esprit de preuve contient 50 pour cent d'alcool, d'après l'hydromètre de Sykes. (Clement's Customs' Guide, etc.)

(f.) *Exportations.*—Les principaux débouchés des exportations britanniques en 1861 et 1865, étaient :—

Pays	En 1861	En 1865
Russie	£ 5,765,000	£ 6,180,000
Prusse	4,057,000	4,010,000
Villes hanséatiques	13,046,000	22,984,000
Hollande	10,989,000	14,960,000
Belgique	4,914,000	6,896,000
France	17,427,000	25,355,000
Espagne	3,386,000	3,015,000
Turquie	3,104,000	5,847,000
Égypte	2,398,000	6,168,000
Chine	3,161,000	3,688,000
États-Unis	11,025,000	25,170,000
„ „ en 1860	22,907,000	
Bésil	4,690,000	5,771,000
Colonies britanniques	45,139,000	51,546,000

(g.) *Droits d'Exportation*.—Les articles exportés du Royaume-Uni sont exempts de tous droits.

(h.) *Commerce général.*—Les chiffres contenus dans les tableaux ci-après font ressortir le progrès général du commerce du pays.

1. *Marchandises*.—La valeur totale des importations pour consommation et celle des produits indigènes exportés pendant les dix dernières années a été:—

Années	Importations			Exportation des Produits britanniques et irlandais
	Totaux	Ré-exportations	Gardées pour la consommation	
1856	£ 172,544,000	£ 23,393,000	£ 149,151,000	115,827,000
1857	187,844,000	24,108,000	163,736,000	122,066,000
1858	164,584,000	23,174,000	141,410,000	116,608,000
1859	179,182,000	25,281,000	153,901,000	130,411,000
1860	210,531,000	28,639,000	181,901,000	135,891,000
1861	217,485,000	34,529,000	182,956,000	125,103,000
1862	225,717,000	42,176,000	183,541,000	123,992,000
1863	248,919,000	50,300,000	198,619,000	146,602,000
1864	274,952,000	52,139,000	222,813,000	160,449,000
1865	271,072,000	52,996,000	218,076,000	165,836,000

Le déclin constaté dans le trafic général en 1858 a été le résultat de la panique commerciale de 1857, et la diminution des exportations, en 1861-62, doit être attribuée à la guerre des États-Uni et à la disette du coton.

2. *Métaux précieux*.—La valeur totale des lingots d'or et d'argent importés dans le Royaume-Uni et exportés, depuis 1858 (première année où l'on a commencé à enregistrer les importations) a été :—

	Importa- tions £	Exporta- tions £
1858 .	29,493,000 .	19,628,000
1859 .	37,070,000 .	35,688,000
1860 .	22,978,000 .	25,534,000
1861 .	18,747,000 .	20,811,000
1862 .	31,656,000 .	29,326,000
1863 .	30,030,000 .	26,544,000
1864 .	27,728,000 .	23,132,000
1865 .	21,462,000 .	15,092,000

3. *Transbordements.*—Cette branche de commerce, qui n'est pas comprise dans les relevés statistiques ci-dessus, a fait de grands progrès pendant les dix dernières années. La valeur totale des marchandises étrangères transbordées dans les ports du Royaume-Uni était, en 1856, de 4,579,000*l.* sterling, tandis qu'elle atteignait 6,469,000*l.* en 1865.

Les chiffres contenus dans les tableaux qui précèdent font ressortir clairement l'importance du commerce général et spécial du pays.

(i.) *Articles importés.*—Les principales importations consistent en articles pour l'alimentation, etc., et en matières premières pour manufactures. Les seules marchandises fabriquées qui soient importées sur une grande échelle, sont les soieries, les cuirs ouvrés et les lainages. Il n'existe point de relevés concernant la valeur des objets retenus pour les besoins intérieurs ; mais si l'on déduit du chiffre total des importations celui des marchandises étrangères ré-exportées, on en obtiendra approximativement le montant. La table ci-dessous indique la valeur des importations et des ré-exportations, et celle des principaux articles retenus pour la consommation, en 1865 :—

Principaux Articles	Importations totales	Ré- exportations	Retenu pour Consomma- tion
1. Articles alimen- taires, boissons, etc.			
Animaux vivants :			
Bœufs, tau- reaux, etc.	£ 4,401,482	£ 70	£ 4,401,412

(j.) *Articles d'Exportation.*—Le commerce d'exportation du Royaume se compose des marchandises étrangères mentionnées au tableau précédent et des produits indigènes.

Les exportations britanniques consistent principalement en articles fabriqués, en minéraux et en métaux. Les produits textiles manufacturés représentent à eux seuls environ soixante pour cent de la valeur totale des exportations de 1865. La table ci-après indique le chiffre des principaux articles exportés pendant la même année :—

Articles principaux	Valeur £
Instruments d'agriculture . . .	210,300
Alcali, soude . . .	1,123,946
Vêtements de toutes sortes . . .	2,639,012

Articles divers	6,700,238
Total	165,835,725

(k.) *Commerce des Ports.*—On n'a point de relevés statistiques en ce qui concerne la valeur des importations dans les principaux ports du royaume. Liverpool, Londres, Hull, Grimsby, Southampton, Newcastle, Hartlepool, Folkestone et Cardiff, pour l'Angleterre et le Pays de Galles ; Glasgow et Leith pour l'Ecosse, sont les ports les plus importants pour l'embarquement des marchandises britanniques destinées à l'exportation. Les produits irlandais sont, pour la plupart, embarqués à Liverpool, etc. Soixante-six pour cent des exportations totales de 1865

quittèrent les ports de Liverpool et de Londres.

COMMERCE INTÉRIEUR.—Les seules données statistiques qui existent et qui puissent permettre de se former une idée sur l'ensemble du

commerce intérieur, sont celles relatives aux chemins de fer et au petit cabotage. Le tableau ci-dessous indique le tonnage des marchandises transportées par voies ferrées, dans tout le Royaume, pendant les années 1864 et 1865 :—

		En Angleterre et le Pays de Galles	En Écosse	En Irlande	Royaume- Uni
		Tonnes	Tonnes	Tonnes	Tonnes
Marchandises générales	{ 1864	28,802,262	4,577,483	1,535,168	34,914,913
	{ 1865	30,640,967	4,487,135	1,659,536	36,787,638
Charbons, coques, et autres minéraux	{ 1864	61,890,054	13,254,363	310,364	75,445,781
	{ 1865	63,892,007	13,556,710	357,069	77,805,786
Produits vivants :					
		Nombre	Nombre	Nombre	Nombre
Gros bétail	{ 1864	2,083,254	482,656	427,447	2,993,357
	{ 1865	1,874,020	488,762	407,048	2,769,890
Moutons	{ 1864	6,786,127	1,241,279	428,275	8,455,681
	{ 1865	7,001,654	1,819,125	515,632	9,336,411
Porcs	{ 1864	1,426,264	65,329	733,155	2,224,748
	{ 1865	1,448,731	88,388	887,577	2,424,696

Le tonnage général des marchandises transportées au cabotage pendant les cinq années comprises entre 1861 and 1865, était, pour le Royaume-Uni :—

	Navires britanniques	Navires étrangers	Totaux
	Tonnes	Tonnes	Tonnes
1861	17,261,779	93,456	17,355,235
1862	17,327,687	72,673	17,400,360
1863	17,465,635	81,897	17,547,532
1864	17,350,579	66,107	17,416,686
1865	18,150,649	77,705	18,228,354

NAVIGATION. — (a.) *Commerce extérieur.* — Le tonnage total des navires entrés et sortis (avec cargaison ou sur lest) concernant le commerce extérieur du Royaume-Uni pour les années 1856, 1860 et 1865 s'est élevé, savoir :—

(b.) *Cabotage.*—Un grand nombre de bâtiments sont employés au commerce de cabotage du pays. Les navires étrangers ont été admis à trafiquer sur les côtes, dès l'année 1854 ; les chiffres ci-après marquent les progrès qu'a faits cette industrie depuis 1856 :—

Tonnage des Navires (avec cargaisons) employés au petit cabotage.

	Britanniques	Étrangers	Total
En 1856	15,164,000	53,000	15,217,000
1865	18,150,000	78,000	18,228,000

(c.) *Tonnage appartenant au Royaume-Uni.* — Le tonnage total des navires du Royaume-Uni, enregistré au 31, décembre 1865, était de 4,936,776 tonneaux pour les bâtiments à voiles, et de 823,533 tonneaux pour les navires à vapeur. Celui des bateaux à hélice était de 255,654.

ADMINISTRATION DES POSTES.—Dans son

Années	Tonnage d'Entrée			Tonnage de Sortie			Totaux		
	Britannique	Étranger	Total	Britannique	Étranger	Total	Britannique	Étranger	Total
	Tonnes	Tonnes	Tonnes	Tonnes	Tonnes	Tonnes	Tonnes	Tonnes	Tonnes
1856	6,390,715	4,162,419	10,553,134	6,555,056	4,480,859	11,035,915	12,945,771	8,643,278	21,589,049
1860	6,889,009	5,283,776	12,172,785	7,025,914	5,490,593	12,516,507	13,914,923	10,774,369	24,689,292
1865	9,623,432	4,694,454	14,317,886	9,735,523	4,843,683	14,579,206	19,358,955	9,538,137	28,897,092

dernier rapport, le Directeur-Général des postes disait que 'l'accroissement continu des affaires de l'administration des postes, pendant une longue suite d'années, permettait d'espérer, si la prospérité du pays ne décline pas, que le service postal, tout en n'épargnant aucun effort pour satisfaire aux justes demandes du public, et tout en marchant dans la voie des améliorations, donnera dans quelques années un revenu net presque égal au produit actuel de l' 'Income Tax' (Taxe sur les revenus).

L'augmentation des revenus, dans les dix dernières années comprises entre 1856 et 1865 a été :—

	Total du Revenu postal	Dépenses de l'admin. des Postes	Produit net
	£	£	£
1856	3,035,954	2,438,732	597,222
1865	4,423,608	2,941,086	1,482,522
Augmentation en faveur de 1865 }	1,387,654	502,354	885,300

Cette augmentation est le résultat de plus grandes facilités procurées au public en diminuant les prix d'affranchissement, en créant de nouveaux bureaux de poste, en installant un

plus grand nombre de boîtes aux lettres, et en faisant le service de la distribution avec plus de rapidité.

Voici le taux d'affranchissement des lettres à l'intérieur :—

Pour les lettres dont le poids n'excède pas une demi-once	1d.
Au-dessus d'une demi-once, mais ne dépassant pas 1 once	2d.
Au-dessus d'une demi-once, mais ne dépassant pas 1 once et demie	3d.
Au-dessus d'une once et demie, mais ne dépassant pas 2 onces	4d.

Et ainsi de suite, à raison d'un penny pour chaque demi-once ou fraction de demi-once en sus.

De grandes facilités sont également accordées pour la transmission des livres imprimés, et autres objets de même nature, moyennant une taxe de :—

Au-dessous de 4 onces	1d.
„ „ 8 „	2d.

et ainsi pour toute demi-livre additionnelle à ce dernier poids. Aucun paquet ne doit avoir plus de 24 pouces de longueur.

La poste se charge également de l'envoi des échantillons dont le poids ne dépasse pas 24 onces; ils doivent être affranchis à l'avance : 2 pence jusqu'à 4 onces; 4 p. au-dessous de 8 onces; 8 p. jusqu'à 1 livre, et 1 sh. pour 24 onces.

Le tableau ci-dessous indique quel a été, dans chacune des divisions du Royaume, le nombre de lettres, journaux, paquets et échantillons envoyés par la poste, en 1865 :—

Divisions	Lettres	Journaux, Livres, etc.	Échantillons
	No.	No.	No.
En Angleterre et le Pays de Galles	597,277,616	73,192,132	940,771
En Écosse	67,048,891	11,324,040	175,474
En Irlande	56,140,500	12,736,594	169,871
Dans le Royaume-Uni	720,467,007	97,252,766	1,286,116

Le Bureau des Mandats (*Money Order Department*) pour l'envoi des sommes d'argent forme une branche importante de l'administration des Postes. Moyennant une légère commission, on peut faire parvenir des fonds d'un bureau à l'autre dans toutes les parties du pays, sans courir aucun risque. Le système des Mandats *Postaux* est également en vigueur entre le Royaume-Uni et plusieurs de ses Colonies, et des négociations sont entamées dans le but d'étendre cette institution à divers états étrangers. Le montant total des mandats émis, dans le Royaume-Uni, en 1865, s'est élevé à 17,829,290l. et la valeur des mandats payés à 18,144,550l. sterling.

MESSAGES TÉLÉGRAPHIQUES.—On ne possède point d'informations complètes concernant le

nombre des télégrammes expédiés annuellement dans les différentes parties du pays. Les relevés statistiques des lignes télégraphiques, autant qu'il soit possible de les donner, figurent sous le titre de 'Télégraphes Electriques.'

ARMÉE.—Forces Régulières et Auxiliaires.

(a.) *Forces régulières*.—Le total des forces militaires britanniques, d'après le budget de 1866-67, est de 137,195 soldats de tous rangs à la solde de l'État, et 65,287 hommes, servant dans les Indes et entretenus aux frais du Gouvernement pour l'Inde. Les 178 Indous servant dans le Labuan sont également entretenus aux frais du Gouvernement britannique. Le tableau ci-dessous indique la nombre d'officiers, de soldats et de chevaux appartenant aux différentes branches du service militaire. Il faut remarquer que ces troupes ne sont pas toutes en garnison dans le Royaume-Uni; il y en a un nombre considérable qui servent dans les nombreuses colonies et dépendances de l'État.

(b.) *Forces Auxiliaires*.—Les forces auxiliaires du royaume sont formées de la milice, de la cavalerie des yeomans, des volontaires, des pensionnaires inscrits, et de la réserve.

La milice a un état-major permanent de 5,070 officiers and sous-officiers. Ce corps est appelé sous les armes une fois par an, et se livre aux exercices et manœuvres militaires pendant vingt-sept jours. On estime le chiffre total des miliciens à 3,507 officiers, 5,464 sous-officiers et 120,000 soldats pour la présente année.

La cavalerie des yeomans comprend 390 officiers et sous-officiers. Le service se réduit à huit jours d'exercice par an, et on évalue à 16,000 hommes environ les forces de ce corps pour l'année courante.

L'armée des volontaires se compose d'artillerie, de chevaux-légers, de génie et de tirailleurs. Le Gouvernement alloue une indemnité de trente shillings par tête aux artilleurs volontaires, et de vingt shillings aux chevaux-légers, aux soldats du génie et aux tirailleurs qui assistent à un nombre déterminé d'exercices et de manœuvres, dans le courant de l'année. Le corps des volontaires compte de 130,000 à 140,000 hommes.

MARINE ROYALE.—Flotte — Gardes-côtes—Troupes de Marine—Vaisseaux.

Les relevés ci-après, concernant les forces de la Marine Royale ont été extraits des 'Navy Estimates' (budget de la marine) de 1866-67.

(a.) *Flotte—Service de Mer.*

(d.) *Vaisseaux, etc., Marine Royale.*—Tableau du nombre de bâtiments à vapeur, à flot et en construction, et de celui des navires à voiles également à flot au 1^{er} février 1866. *Voyez* p. 157.

MARINE MARCHANDE.—(a.) *Marins.*—Le nombre total des équipages appartenant aux navires enregistrés de la marine marchande britannique était, au 31 décembre 1865, de 255,654 hommes.

(b.) *Navires marchands.*—Le nombre et le

tonnage des navires de la marine marchande du Royaume-Uni étaient, au 31 décembre 1865 :

	Nombre	Tonnage
Bâtiments à voiles	26,069	4,936,776
Bâtiments à vapeur	2,718	823,533
Total	28,787	5,760,309

FINANCES.—**Recettes—Dépenses—Branches de Revenu—Taxes abolies—Branches de Dépenses—Budget—Dette Nationale.**

Le revenu du Royaume-Uni se compose de contributions directes et indirectes. Les principales branches des premières sont les *assessed taxes*, les taxes sur le revenu et l'impôt foncier; celles des dernières sont les droits de douane, l'accise et les droits de timbre.

Le total général des recettes et des dépenses de l'état pendant les trois dernières années s'est élevé, savoir :—

Années terminées au 31 mars	Revenus £	Dépenses £
1864	70,208,964	67,056,286
1865	70,313,437	66,462,207
1866	67,812,292	65,914,357

Comme on le voit, chaque budget présente un excédant de recettes considérable. Dans le chiffre des dépenses ne sont pas comprises celles relatives aux fortifications, qui s'élèveront respectivement pour chacune des années ci-dessus à 800,000£, 620,000£, et 560,000£. aux-

quelles il a été pourvu par la création d'annuités rachetables.

(a.) *Branches du Revenu.*—Il suffira pour faire connaître les principales sources du revenu de l'Etat, de mentionner les chiffres qui se rapportent à l'année terminée au 31 mars 1866, et qui se répartissent comme suit :—

Branches du Revenu	Revenu total (les frais de perception ne sont pas déduits)
Droits de douane	£21,276,000
Accise	19,788,000
Timbre	9,560,000
Assessed taxes	3,350,000
Impôts sur les revenus et } impôts fonciers*	6,390,000
Administration des postes	4,250,000
Terres de la couronne	320,000
Divers	2,878,292
Total	67,812,292

* Par suite de la réduction de l'impôt sur les revenus (Income Tax) à 4d. par livre sterling, le montant qui figure dans la colonne ci-dessus pour cette branche du revenu de l'Etat est considérablement inférieur à ceux des années précédentes.

Il peut être intéressant d'indiquer ici la catégorie des articles qui ont alimenté le revenu des douanes et de l'accise pendant l'année mentionnée plus haut.

Les recettes de la douane proviennent presque entièrement du droit acquitté par les sept articles que voici :—

	En 1866 £
Sucre et mélasses	5,228,460
Thé	2,599,817
Café	371,495
Céréales et farines	743,145
Spiritueux	3,505,176
Vins	1,407,021
Tabacs	6,274,298

La taxe sur le thé ayant été réduite à 6d. par livre, les recettes de la douane pour cet article sont nécessairement bien inférieures à ce qu'elles étaient les années précédentes.

Les principales sources du revenu de l'accise en 1865 étaient :—

Les spiritueux	10,176,731
Le malt	6,394,553
Les licences	2,144,402

Taxes abolies, etc.—Le tableau ci-dessous indique le montant des taxes abolies ou réduites et celui des taxes imposées, pendant les 15 années comprises entre 1851 et 1865 :—

Branches	Taxes abolies ou réduites	Imposées	Diminution (—) ou Augmentation (+)
	£	£	£
Douanes . . .	14,089,384	3,293,396	—10,795,988
Accise . . .	5,161,000	6,380,000	+ 1,219,000
Impôt foncier et income tax	18,865,006	14,764,000	— 4,101,000
Autres taxes . . .	2,608,000	600,000	— 2,008,000
Timbre (y compris les droits de successions) . . .	1,428,000	2,411,200	+ 983,200
Total . . .	42,151,384	27,443,596	—14,707,788

(b.) *Branches des Dépenses de l'État.*—Les principales branches des dépenses pour l'année terminée au 31 mars 1866, étaient :—

Intérêts et frais d'administration de la dette nationale :—

	£
Dette consolidée . . .	25,904,408
„ non consolidée . . .	328,800
Total de la dette . . .	26,233,288
Liste civile et charges de toutes sortes . . .	10,250,065
Forces : armée de terre . . .	14,569,279
„ marine . . .	10,259,788
Total de forces . . .	24,829,067
Frais de perception du revenu . . .	4,601,937
Total général de la dépense . . .	65,914,357

(c.) *Budget, 1866-1867.*—L'estimation du revenu pour l'année terminée au 31 mars, 1867, est évaluée à 67,013,000*l.* et celle de la dépense à 66,662,000*l.*

(d.) *Dette nationale.*—Le montant totale de la dette nationale au 31 mars 1866, était :—

Dette consolidée : . . .	£
Capital de la dette non amortie . . .	773,313,229
Capital estimé des annuités rachetables . . .	21,342,020
Dette non consolidée . . .	8,187,700

TAXES LOCALES.—Le montant des taxes locales a été constaté, depuis l'année 1862, pour l'Angleterre et le Pays de Galles seulement, et il n'existe aucuns relevés analogues concernant les autres divisions du Royaume. Les différentes branches des taxes locales de l'Angleterre et du Pays de Galles, en 1864, étaient (non compris les administrations d'enterrement, *Burial Boards*) :—

Détail des taxes	Montant de Perceptions
	£
Taxes de l'Église . . .	241,960
„ des égoûts . . .	44,009

Détail des taxes, etc.	Montant de Perceptions
	£
Commission des égoûts de la cité de Londres . . .	17,242
Drainage et remblayage . . .	147,145
Eclairage, etc. . .	42,194
Commissaires des améliorations . . .	332,983
Métropole : Adm. locale . . .	850,504
Drainage général . . .	150,881
Marchés et foires . . .	44,547
Ponts et bacs . . .	108,773
Ports . . .	1,107,751
Administrations locales (y compris la caisse des districts, les améliorations particulières, et la taxe pour l'approvisionnement de l'eau . . .	352,016
Taxe des pauvres (y compris la taxe des Comtés et la taxe de la Police) . . .	9,448,319
Taxe de la Police métropolitaine . . .	354,627
Cité de Londres (y compris les droits sur les charbons et les vins et les taxes des égoûts, de la Police et des arrondissements . . .	421,625
Revenu des bourgs . . .	311,953
„ des voies de grande communication . . .	1,416,629
Droits de péage . . .	1,066,156
Trinity House (droits de phares et de pilotage) . . .	374,115
Total . . .	16,833,429

Banques.—Le nombre total des banques existant en 1864, dans chacune des divisions ci-après du Royaume-Uni, était :

	En Angleterre et le Pays de Galles	En Écosse	En Irlande	Dans le Royaume-Uni
Banques d'Angleterre et d'Irlande et leurs succursales, etc. . .	12	—	30	42
Banques particulières et leurs succursales . . .	553	—	4	557
'Joint - Stock Banks' (banques par actions) et leurs succursales . . .	857	614	181	1,652
Total . . .	1,422	614	215	2,251

La valeur moyenne des billets à ordre issus des banques particulières, en 1864, a été de 3,112,725*l.* ; et de 33,286,921*l.* pour les Joint-Stock Banks.

Statistiques de l'ensemble des sommes auxquelles se sont élevés les billets à ordre payables à vue au porteur, et qui se trouvaient en circulation, dans le dernier mois de chacune des années 1863, 1864 et 1865, en Angleterre : le Pays de Galles, l'Écosse et l'Irlande—

	1863	1864	1865
	£	£	£
En Angleterre et le Pays de Galles :			
Banque d'Angleterre . . .	21,355,000	20,330,000	21,294,000
Banques particulières . . .	3,220,036	3,058,931	2,977,264
'Joint - Stock Banks' . . .	2,899,560	2,754,068	2,789,654
En Écosse :			
Banques existant en vertu d'une charte ; banques particulières et 'Joint - Stock Banks' . . .	4,639,664	4,626,796	4,903,980
En Irlande :			
Banque d'Irlande	2,528,500	2,491,000	2,744,950
Banques particulières et 'Joint - Stock Banks' . . .	3,411,753	3,381,706	3,946,290
Total . . .	38,054,513	36,642,501	38,656,138

jugeaient les plus avantageux, et enfin de provoquer les lois de 1856, 1857, 1862 et celle de 1865. Cette dernière loi, quoique laissant beaucoup à désirer encore, a permis aux gens d'affaires, associés en grand ou petit nombre, d'emprunter du capital, et de le faire produire de la manière la plus avantageuse.

L'introduction du principe de la responsabilité limitée a donné naissance à un grand nombre de nouvelles compagnies ; et beaucoup de maisons de commerce particulières, dans tout le Royaume, se sont, pendant les deux dernières années, formées en compagnies limitées, avec la persuasion d'obtenir ainsi de bien meilleurs résultats que sous le régime qu'elles avaient suivi jusqu'alors.

ÉDUCATION.—Générale—Instruction primaire —Écoles de la Semaine—Écoles du dimanche—Sciences et Arts—Examens de la Classe moyenne.

Le système d'éducation du Royaume-Uni est excessivement compliqué. L'enseignement est entièrement libre ; chacun peut, à sa guise, fonder des écoles, réunir des enfants et leur apprendre ses doctrines. Jusqu'en 1833, l'État ne prit aucune part à l'éducation du peuple, mais à partir de cette époque il commença et continue encore à accorder, sous certaines conditions, des subventions aux écoles primaires. Le Département de Science et d'Art (fondée en 1853) est également entretenue aux frais de l'État, ainsi que diverses autres institutions pour l'encouragement des sciences.

Une liste des différents collèges, écoles, etc., et autres institutions analogues, sera peut-être le meilleur moyen de faire comprendre le système de l'instruction publique du pays :—

1. Écoles primaires pour la semaine et le dimanche.
2. Écoles normales, d'où sortent les instituteurs des établissements primaires.
3. Écoles particulières.
4. Écoles publiques (dotées, dites 'grammar' ou 'foundation schools').
5. Écoles publiques, telles que école militaire, navale, des bois et forêts, des corporations, des maisons de refuge, des prisons, etc.
- Asiles des indigents, des orphelins, des aveugles, des sourds et muets, des idiots, écoles industrielles, attachées aux fabriques, aux houillères, aux établissements chimiques, etc.
6. Universités et collèges.
7. Instruction à domicile et classes particulières.
8. Examens locaux ou de la classe moyenne, organisés par le Collège des Précepteurs, en 1854, par la Société des Arts, en 1856, et par les Universités d'Oxford et de Cambridge en 1858.
9. 'Mechanics' institutes' (pour les artisans) écoles d'ouvriers et classes du soir.

RESPONSABILITÉ LIMITÉE.—On peut faire ici une rapide allusion aux changements récents apportés dans la responsabilité des associations financières et de toutes les grandes entreprises commerciales. Les paragraphes suivants sont extraits d'un article lu devant la Société des Arts par M. W. Hawes :—

'Avant ces quelques dernières années, deux sortes d'associations commerciales étaient en usage dans ce pays. L'une consistait dans la réunion de plusieurs individus associés dans un but d'intérêt commun, et qui exerçaient leur négoce sous la protection de chartes royales, ou, plus récemment, étaient réglementés par des actes du Parlement qui limitaient strictement la responsabilité des associés au montant de leur apport. L'autre association se composait de particuliers faisant les affaires en leur propre nom ou collectivement ; ils étaient régis par des conventions ou contrats passés entre eux, et ils acceptaient une responsabilité qui engageait toute leur fortune personnelle pour payer les dettes de la compagnie.

'Toutefois, ce dernier genre d'association de un ou de plusieurs individus, à responsabilité illimitée, a toujours prévalu, et la grosse masse des affaires commerciales du pays ont été conduites sous son régime.

'Le rappel des lois sur l'usure, l'augmentation du nombre des patentes et des actes du Parlement, les uns et les autres ayant pour base la responsabilité limitée, et l'accroissement de notre commerce extérieur avec des États où le principe de la responsabilité limitée était ordinairement en usage dans les associations commerciales, toutes ces causes ont eu pour résultat d'attirer le capital vers les opérations du négoce, de détruire l'obstacle qui empêchait les individus de faire, pour l'exploitation de leur industrie, tels contrats qu'ils

Toutes ces écoles ou institutions peuvent être considérées comme appartenant à l'instruction ordinaire. Celles dont la nomenclature vient ci-après ont surtout pour objet de vulgariser l'éducation des arts et des sciences :—

Le Département de Science et d'Art, ayant des écoles succursales dans tout le pays.

L'École Royale d'Architecture Navale et d'Ingénieurs de la Marine.

L'École Royale des Mines.

Le Musée des Sciences et des Arts d'Édimbourg.

Le Musée de l'Industrie Irlandaise.

La Société Royale de Dublin ; et beaucoup d'autres encore.

Les Académies Royales de Peinture et de Musique méritent également d'être particulièrement mentionnées comme contribuant, à un haut degré, à l'épuration du goût national. Les avocats, les avoués, les chirurgiens, les pharmaciens, etc., doivent aussi subir un examen avant d'être autorisés à exercer leur profession. Il en est de même pour les candidats de l'armée, de la marine et des services civils ; ils ne sont pas admis sans avoir satisfait aux conditions du programme de l'examen.

Il serait difficile de donner en quelques lignes des renseignements généraux sur chaque sorte d'écoles, etc., etc. Toutefois, elles peuvent être divisées en deux catégories—1^o les *Écoles Particulières*, et 2^o les *Écoles Publiques*. Les premières sont tout à fait entretenues par les élèves, et elles comptent sur leurs bancs la majeure partie des enfants appartenant à la haute et à la moyenne classe de société. Les secondes comprennent toutes ces écoles dont une portion du revenu leur provient de toute autre source que des élèves ; c'est à cette catégorie qu'appartient l'éducation des classes laborieuses de la population ; et il peut être intéressant de donner ici quelques informations relatives aux moyens employés pour leur instruction.

Instruction primaire.—1. Grande-Bretagne.

—On a déjà dit que l'État a commencé à venir en aide aux écoles primaires du Royaume en 1833. Jusqu'à cette époque, l'enseignement des classes moyennes du peuple dépendait entièrement de libéralités particulières où le zèle religieux avait la plus grande part, et c'est principalement par l'intermédiaire des deux grandes sociétés, la *Britannique* et la *Nationale*, que l'éducation était répandue quotidiennement dans les masses.

De 1839 à 1866, le gouvernement a consacré à la cause de l'éducation populaire dans la Grande-Bretagne, 8,724,000 livres sterling. Les sommes annuellement votées par le Parlement pour le même objet sont administrées par le Département de l'Instruction Publique. Le

but de ces subsides est d'encourager et de répandre l'éducation parmi les enfants appartenant aux classes qui gagnent leur vie par un travail manuel. L'énumération des conditions auxquelles sont subordonnées les subventions de l'État, est trop longue pour permettre de l'insérer ici, mais on trouvera à cet égard tous les renseignements désirables dans le rapport du Comité du Conseil d'Instruction.

D'après la dernière statistique pour l'année 1865, les inspecteurs visitèrent 12,950 écoles ou classes ayant chacune séparément leurs professeurs. Le nombre des enfants présents au moment des inspections était de 1,246,055 ; celui des instituteurs brevetés, de 11,266 ; celui des sous-maîtres, de 933 ; plus 11,383 élèves instituteurs. Sur le chiffre total des écoles, il y en avait 2,282 pour les garçons seulement ; 1,888 pour les filles ; 5,858 écoles mixtes ; 1,707 pour les enfants au-dessous de 7 ans, et 1,215 écoles du soir. Le nombre des enfants présents se composait de 698,221 élèves du sexe masculin, et 547,834 du sexe féminin.

Il faut rappeler ici, toutefois, qu'il existe un assez grand nombre d'écoles primaires qui ne sont pas placées sous la surveillance du Département de l'instruction.

Le tableau ci-après indique les branches de recettes et de dépenses de 7,770 des écoles inspectées dans le courant de l'année 1865 :—

Branches de Recettes	Montant	Branches de Dépenses	Montant
	£		£
Dotations	56,424	Honoraires des instituteurs	980,056
Contributions volontaires	356,810	Livres et matériel	53,389
Denier des écoliers	424,547	Divers	256,956
Subventions de l'État	322,846		
Autres recettes	98,299		
Total	1,258,926	Total	1,290,401

La moyenne totale du revenu et de la dépense par élève était :—

	En Angleterre et le Pays de Galles	En Écosse
	£ s. d.	£ s. d.
Y compris les subventions de l'État :		
Revenu	1 5 8 $\frac{3}{4}$	—
Dépense	1 6 5 $\frac{1}{2}$	—
Non compris les subventions de l'État :		
Revenu	0 18 2 $\frac{3}{4}$	0 18 1 $\frac{1}{2}$
Dépense	0 18 11 $\frac{1}{2}$	0 18 0 $\frac{1}{2}$

* En Écosse, les subventions du gouvernement sont payés aux professeurs et aux sous-maîtres directement, et elles ne sont pas comprises dans les fonds placés à la disposition des directeurs.

Age des Écoliers.—En 1865, 71 pour cent du nombre total des élèves avaient moins de dix ans, 27 pour cent avaient de dix à quatorze ans, et 2 pour cent étaient âgés de plus de quatorze ans.

Honoraires des Instituteurs.—La moyenne annuelle des honoraires payés aux professeurs d'écoles subventionnées par l'État était, en 1865, pour la Grande-Bretagne :—

	Brevetés	Non-brevetés
	£ s. d.	£ s. d.
Instituteurs	86 10 9	58 16 4
Institutrices	55 2 1	38 8 5
des écoles pour l'enfance	52 3 3	30 1 1

2. *Écoles Nationales, en Irlande.*—L'éducation primaire, en Irlande, est sous la direction du Conseil de l'Instruction Nationale. Dans les écoles irlandaises les principes religieux sont enseignés à part de l'instruction ordinaire. Le nombre total des écoles nationales en Irlande, à la fin de 1864, était de 6,263, fréquentées par une moyenne quotidienne de 315,108 élèves. Le montant du revenu était de 340,758*l.*, dont 251,016*l.* de subvention de l'État. On comptait également, à cette même date, 35 écoles modèles et 55 écoles ordinaires d'agriculture, et 3 kindergarten. Le salaire des professeurs de 1^{re} classe variait de 38*l.* à 42*l.* par an; celui des institutrices de 30*l.* à 42*l.*, et le traitement des instituteurs subalternes variait selon l'importance de leurs fonctions, tout en restant inférieur à ce dernier chiffre.

Statistiques générales.—Les tableaux ci-après contiennent les plus récents relevés statistiques du nombre total de personnes fréquentant les écoles de tous genres en Angleterre et le Pays de Galles :—

Écoles	Écoliers		
	Du Sexe masculin	Du Sexe féminin	Total
Écoles de la semaine :			
Publiques	24,563	911,152	764,006
Particuliers	34,412	389,607	470,697
Total	58,975	1,300,759	1,234,703
Écoles du dimanche	33,872	1,189,725	1,221,829
			2,535,462

Le relevé ci-dessus a été fait en 1858, et il s'applique aux écoles de toutes les sectes religieuses sans distinction.

D'après le recensement de 1861, le nombre total des écoliers des deux sexes dans chacune des grandes divisions du Royaume-Uni était :—

Divisions	Écoliers		
	Sexe masculin	Sexe féminin	Total
En Angleterre et le Pays de Galles	1,552,738	1,597,310	3,150,048
En Écosse	241,803	225,253	467,056
En Irlande	342,997	305,380	648,377
Dans le Royaume-Uni	2,137,538	2,127,943	4,265,481

Éducation scientifique et artistique.—Il résulte du dernier rapport du Département de Science et d'Art pour 1865, qu'il y avait, à cette date, 158 Écoles de science et institutions (non compris six écoles de navigation), où les connaissances scientifiques étaient enseignées par des professeurs brevetés. De ce nombre, 121 écoles appartenaient à l'Angleterre, 8 à l'Écosse et 29 à l'Irlande, contenant en tout 484 classes fréquentées par 6,835 étudiants.

Il existait, à la même époque, 92 Écoles d'art, fréquentées par 16,621 étudiants; de plus elles démontraient les principes élémentaires de l'art à 89,967 enfants des institutions primaires.

Outre l'assistance qu'il accorde aux classes industrielles pour les aider à acquérir les connaissances scientifiques et artistiques, qui ont un rapport direct avec leurs occupations, le Département est chargé de l'administration du Musée de South Kensington, dépôt central d'objets modèles de science et d'art, que l'on cherche, autant que possible, à rendre profitables à tous dans le royaume.

Examens de la Classe moyenne.—En 1854, l'institution fondée par le 'Collège des Précepteurs' pour l'examen des élèves dans les écoles, donna une grande impulsion au développement de l'éducation parmi les classes moyennes. De son côté la Société des Arts commença, en 1856, à mettre à exécution son plan d'examen des personnes fréquentant les 'Mechanics' Institutions' (Institutions des Artisans); et enfin les Universités d'Oxford et de Cambridge établirent, en 1858, ce qui est connu sous le nom de 'University Local Examinations.' Le nombre des candidats examinés par ces différents corps, dans plusieurs parties du pays, s'élevait à 587 en 1854 et est arrivé graduellement au chiffre de 5,438, qu'il atteignait à la fin de l'année 1866. Les examens faits par l'Université de Cambridge, le Collège des Précepteurs et la Société des Arts, sont ouverts aux personnes des deux sexes; ceux de l'Université d'Oxford sont, pour le présent, limités aux individus du sexe masculin seulement.

Voici le nombre de candidats qui se sont présentés aux examens pendant l'année 1866 :—

De l'Université d'Oxford	1,228
De l'Université de Cambridge	1,538
Du Collège des Précepteurs	1,575
De la Société des Arts	1,027

On ne saurait trop apprécier l'importance de ce mouvement, qui a déjà apporté de grandes améliorations dans l'éducation des classes moyennes, surtout dans les écoles particulières.

ASSURANCES.—Sur la Vie et Maritimes— Contre l'Incendie.

(a.) *Sur la Vie et Maritimes.*—Les Compagnies d'Assurances Maritimes et sur la Vie n'étant pas tenues de faire des rapports sur leur situation, on ne possède, par suite, aucuns renseignements statistiques concernant le chiffre de leurs affaires. Toutefois, on a constaté que les dernières ont pris une extension considérable pendant les quinze dernières années.

(b.) *Contre l'Incendie.*—Les polices des Compagnies d'Assurances sur la Propriété et le Matériel de l'Agriculture ayant, tous les ans, à acquitter un droit de timbre, il est dès-lors possible, en se référant aux relevés de l'administration du fisc, de connaître le chiffre de la valeur couverte par les assurances. Cette valeur était, en 1864, pour chacune des grandes divisions du royaume, savoir :—

Divisions	Valeur estimative des propriétés assurées	Valeur estimative du matériel d'agriculture assuré
	£	£
En Angleterre et le Pays de Galles	1,101,444,000	69,455,000
En Écosse . . .	92,234,000	6,564,000
En Irlande . . .	58,202,000	1,151,000
Total . . .	1,251,880,000	77,170,000

Le matériel d'agriculture est exempt du droit de timbre. Les assurances contre l'incendie acquittent un droit de 1s. 6d. par chaque somme assurée de 100 livres sterling.

INSTITUTIONS SE RATTACHANT AU BIEN-ÊTRE DES CLASSES LABOUREUSES.—Caisses d'Épar- gnes—Post Office Savings Banks—An- nuités et Assurances—Sociétés Mutuelles —Sociétés Co-opératives, etc.

(a.) *Caisses d'Épargne.*—Il existe actuellement deux sortes de caisses d'épargne. 1^o Celles qui fonctionnent depuis l'année 1817; et 2^o les 'Post Office Savings Banks' (Caisses d'Épargne de l'Administration des Postes) qui furent établies en 1861.

Une banque de dépôts pour les marins a été récemment institué à Liverpool, à titre d'essai, sous la surveillance du Ministère de Commerce. Les dépôts ne produisent aucun intérêt, mais un matelot peut, en tout temps, y verser des sommes d'argent, et les retirer à volonté. Les gens de mer qui s'embarquent pour un voyage peuvent faire opérer le transfert de leur argent sur un livret de caisse d'épargne, et, dans ce cas, ils touchent un intérêt de trois pour cent. par an.

Le tableau suivant, établi d'après les comptes-rendus présentés, le 20 novembre 1865, par les caisses d'épargne, aux Commissaires de la

Dettes Nationale, contient le nombre de particuliers, d'institutions charitables, et d'associations de secours mutuels, qui ont déposé leurs fonds dans les anciennes caisses; il renferme également, divisé par catégories, le montant des sommes déposées.

	Nombre de Déposants	Montant des Dépôts (y compris les intérêts)	Moyenne du Montant de chaque Compte
Au 20 novembre 1865			
N'excédant pas £1	251,820	£ 69,058	£ s. d. 0 5 5

* Sociétés de secours mutuels	11,619	1,869,970	161 0 0
Total	1,457,567	38,444,007	26 7 8

* Les chiffres représentant le nombre et le montant des dépôts des sociétés mutuelles ne concernent que celles de ces associations qui ont leurs fonds placés dans les caisses d'épargne, et non pas celles qui déposent leur argent directement entre les mains des commissaires.

Le nombre des sociétés mutuelles en compte direct avec les commissaires, au 20 novembre 1865, était de 545; montant des dépôts, 1,915,703l. sterling; moyenne du montant de chaque compte, 3,496l.

(b.) *Post Office Savings Banks.*—La situation des Caisses d'Épargne de l'Administration des Postes, au 38 décembre 1865, présentait l'aspect suivant :—

Nombre de 'Post Office Savings Banks' . . .	3,321
Nombre de Dépôts reçus depuis le 16 septembre 1861	3,895,135
Montant total des dépôts . . .	£ 11,834,979
Moyenne du montant de chaque dépôt . . .	3l. 0s. 9d.
Total des sommes retirées depuis le 16 septembre 1861	£ 5,619,250
Montant moyen de chaque retrait . . .	5l. 11s. 1d.
Frais généraux . . .	141,375
Moyenne de la dépense par dépôt ou retrait . . .	6 ⁹ / ₁₀ d.
Montant total au crédit de tous les comptes ouverts, y compris les intérêts, à la date du 31 décembre 1865 . . .	£ 6,526,400

prennent aucuns frais accessoires, il y aura

Moyenne du montant figurant au crédit de chaque compte ouvert, au 31 décembre 1865 .	10 <i>l</i> . 13 <i>s</i> . 4 <i>d</i> .
--	--

Les Post Office Savings Banks sont établis dans tous les bureaux du Royaume-Uni où se paient et se délivrent journellement pendant certaines heures déterminées, les mandats ou bons de postes.

Ces caisses d'épargne reçoivent des dépôts de un shilling ou plus, sans toutefois que la somme déposée puisse dépasser trente livres sterling pour la même année, ou plus de cent cinquante livres en tout, non compris les intérêts.

Un intérêt annuel de 2*l*. 10*s*. (ce qui représente un taux de 6*d*. par livre et par an, ou d'un demi penny par livre et par mois, à compter du 1^{er} du mois qui suit le dépôt complétant la livre jusqu'au dernier du mois précédant le jour du retrait de la somme) est payé jusqu'à ce que la somme due au déposant s'élève à deux cents livres; à partir de ce moment, les intérêts cessent de courir. Au 31 décembre de chaque année les intérêts revenant aux déposants sont ajoutés à leur capital respectif.

(c.) *Annuités et Assurances.*—Ce qui distingue encore les caisses d'épargne, c'est qu'elles concèdent des annuités. Le montant de celles accordées par les anciennes caisses d'épargne aux classes laborieuses ne dépasse pas 30*l*. chaque, tandis que, de la façon dont sont organisées celles de l'Administration des Postes, on peut à la fois toucher des annuités et se faire assurer.

Voici quelques-unes des principales règles concernant le Bureau des Assurances et Annuités du Gouvernement :—

Le Directeur-Général des Postes, en vertu de l'Acte 27 & 28 *Victoria*, cap. 43, est autorisé à assurer la vie de personnes des deux sexes âgées de 16 à 60 ans, pour une somme qui ne peut être moindre de 20*l*., ni dépasser 100*l*. Il est également autorisé, par les dispositions du même Acte, à concéder des annuités immédiates ou différées, pour une somme n'excédant pas 50*l*., sur la vie des personnes des deux sexes âgées de dix ans et au-dessus. L'État se porte garant du remboursement des sommes aux époques voulues, envers les personnes dont la vie est assurée, ou auxquelles ont été accordées des annuités par le Directeur-Général des Postes.

Un certain nombre de bureaux de postes, dont il est facile de se procurer les noms, ont été ouverts pour la réception des demandes d'assurances sur la vie et d'achat d'annuités; on trouve dans ces mêmes bureaux des formes pour propositions avec toutes les indications concernant la manière de les remplir, et de les faire parvenir à leur destination propre. Des tables faisant connaître les primes à payer pour les assurances sur la vie, pour la concession d'annuités immédiates, pour la concession d'annuités différées, ou d'allocations mensuelles différées, sans restitution du prix

d'achat, et pour la concession d'annuités différées, on d'allocations mensuelles différées avec remboursement du prix d'achat, ont été imprimées et peuvent être consultées dans les bureaux de postes qui ont été désignés pour recevoir les demandes d'assurance. Le coût des tables pour les assurances sur la vie et la concession d'annuités sans restitution du prix d'achat, est de 3*½**d*.; les tables relatives aux annuités avec remboursement du prix, coûtent 2*d*. Si elles sont envoyées par la poste, ce prix est respectivement de 5 et de 3 pence.

Les primes à payer pour les assurances sur la vie varient selon l'âge des personnes à assurer et selon le mode de paiement des primes.

Toute annuité ou allocation mensuelle concédée ne peut excéder 50*l*. par an ou 4*l*. 3*s*. 4*d*. par mois. Il n'est pas nécessaire d'acheter l'annuité ou l'allocation mensuelle en une seule fois; cet achat peut se faire par fractions et progressivement selon que les moyens de l'acheteur le lui permettent.

Le mari et la femme ont la faculté de se faire assurer chacun pour le maximum de la somme, c'est-à-dire pour 100*l*., et ils peuvent l'un et l'autre acheter une annuité de 50*l*. ou une allocation mensuelle de 4*l*. 3*s*. 4*d*. Deux personnes peuvent obtenir conjointement, sur leur existence, une annuité, avec ou sans jouissance au survivant.

Les personnes ayant contracté un engagement d'assurance sur leur vie, ou acheté des annuités ou des allocations mensuelles, pourront verser leurs primes périodiques ou leurs à-comptes sur le prix d'achat indifféremment et selon leur convenance dans un des bureaux actuellement ouverts, ou qui pourront l'être par la suite dans ce but.

Toute personne désirant se faire assurer, ou qui voudrait acheter des allocations mensuelles différées, devra se procurer, à ses frais, le certificat de sa naissance ou autre pièce authentique pouvant constater son âge, et qui pourrait lui être réclamée; mais elle n'aura rien à payer pour se faire visiter par le médecin, ni pour les informations que le Directeur-Général des Postes croirait devoir prendre concernant sa santé, ses habitudes, son âge et ses occupations. Cette personne n'aura également à sa charge aucuns frais de contrat, d'affranchissement pour la transmission de propositions ou de correspondance échangée à cet égard avec le Directeur des Postes. Toutes ces dépenses accessoires sont comprises dans les primes que l'on aura à payer conformément aux tables dressées à cet effet, pour les assurances sur la vie ou l'achat d'allocations mensuelles différées.

Les personnes ayant l'intention d'acheter des annuités immédiates ou différées, payables par semestre, fourniront, à leur compte, soit le certificat de naissance ou de baptême, soit toute autre preuve authentique qui pourra leur être demandée pour s'assurer de leur âge; et comme les primes fixées par les tables concernant les annuités dont il s'agit ne com-

à payer, au moment de l'achat, un droit de 1s. par livre sterling d'annuité concédée.

Le nombre d'assurances en vigueur à la fin de 1865, était de 560, et le chiffre total des sommes assurées de 41,734*l.*; 94 annuités immédiates, et 54 annuités différées étaient, à la même date, concédées ou en cours d'achat. L'existence de Bureaux d'annuités et d'assurances du Post Office n'est pas encore généralement connue des classes laborieuses du pays; mais il n'est pas douteux qu'avant peu d'années, elles sauront profiter largement des avantages offerts par cette double institution.

(d.) *Sociétés mutuelles.*—Dans son dernier rapport le Registrar (Inspecteur) des Sociétés mutuelles (Friendly societies) dit: 'que les associations mutuelles qui auraient pu se fonder sous la protection des lois régissant la matière, étaient à l'origine, limitées aux objets suivants: d'allouer une certaine somme d'argent lors de la naissance d'un enfant à l'un des membres, ou lors du décès d'un associé; pour frais d'enterrement de la femme ou d'un enfant d'associé; pour secours et assistance aux membres, à leurs maris, à leurs femmes, frères, sœurs, neveux ou nièces, dans la vieillesse, la maladie ou le veuvage; pour dotation à l'un des membres de la société ou à ses représentants, sans distinction d'âge; et enfin pour tout autre objet qui aurait pu être autorisé par l'un des principaux Secrétares d'Etat de sa Majesté, comme rentrant dans l'esprit de la loi sur les associations mutuelles. Par suite de la latitude d'interprétation que contiennent les dispositions de cette loi, son but primitif a été considérablement élargi. Ainsi le Secrétaire d'Etat a successivement autorisé les associations à assister ceux de leurs membres qui sont obligés de faire des déplacements onéreux pour se procurer du travail; à allouer des secours temporaires à ceux qui se trouvent dans une situation gênée; à assister et entretenir les associés frappés de cécité ou de tout autre accident corporel; à acheter du charbon et autres objets de première nécessité pour l'approvisionnement des associés; à payer un intérêt sur l'excédant de la somme restant disponible après avoir acquitté des dépenses qui précèdent; à accorder des indemnités dans les cas de naufrages, de perte ou d'avaries de bateaux et de filets; et à assurer les membres de la société contre les pertes qu'ils pourraient éprouver, soit par la maladie, soit par la mort du bétail employé dans les travaux agricoles; et enfin pour la fondation de clubs d'ouvriers. Il existe actuellement dans différentes parties du pays des associations mutuelles ayant pour but de réaliser un ou plusieurs des desseins qui viennent d'être énumérés. En décembre 1865 le Registrar de ces sociétés a transmis aux diverses sociétés 22,834 formes pour obtenir d'elles leurs rapports annuels sur leur situation financière et mobilière; ainsi qu'un nombre égal d'états à remplir concernant les maladies et la mortalité, conformément à l'acte 18 et 19 Vict. c. 63, s. 45. Il n'était rentré jusqu'au 1^{er} juillet 1866, que 10,345 des rapports

annuels, et seulement 7,706 des rapports quinquennaux; 170 de ces rapports n'indiquaient ni le nom ni le siège de la société. Le fonctionnaire qui négligerait de transmettre l'état du compte-rendu général serait passible d'une amende ne pouvant excéder 20s., mais aucune peine n'est infligée pour l'omission de l'envoi du rapport quinquennal des maladies et de la mortalité. D'après les 10,345 rapports mentionnés plus haut, le nombre des sociétaires s'élevait à 1,347,425, et le montant des fonds, à 5,362,028 livres sterling.

(e.) *Sociétés coopératives.*—Il résulte des rapports présentés, en conformité de l'acte 25 et 26 Vict. c. 87, au Registrar, par 417 de ces sociétés, et pour l'année terminée au 31 décembre 1865, que:—

Le nombre de membres était de	148,586
Le nombre de membres admis pendant l'année, de	29,182
Le nombre de membres qui se sont retirés pendant l'année, de	11,815
Montant total reçu ou crédité sur actions depuis l'origine de la société	1,017,106
Montant des cotisations reçues dans le courant de l'année	£ 307,356
Montant des cotisations remboursées pendant l'année	180,812
Montant du capital versé au 31 décembre 1865	761,313
Montant du capital emprunté au 31 décembre 1865	112,733
Montant reçu sur prêt pendant l'année	24,631
Emprunts remboursés pendant l'année	19,101
Montant des intérêts payés pendant l'année	33,686
Somme payée pour achat de marchandises, dans le courant de l'année	3,063,088
Somme reçue pour marchandises vendues dans l'année	3,337,837
Profits réalisés dans l'année	279,226
Montant total des dépenses faites pendant l'année, y compris les salaires, loyers, taxes et autres frais, pour travaux, réparations etc.	190,538
Montant des sommes qui se trouvaient entre les mains de banquiers, trésoriers et officiers, au 31 décembre 1865	136,923
Montant total de l'actif des sociétés au 31 décembre 1865	1,105,685
Montant total de leur passif à la même date	273,480

Toutefois, un très-petit nombre des sociétés dont il vient d'être question, doivent être classées dans les 'coopératives' comprenant les travailleurs; le plus grand nombre d'entre elles ne sont que des 'sociétés coopératives d'approvisionnements de toutes sortes, à des prix de revient. Elles n'en offrent pas moins de grands avantages pour les classes laborieuses

auxquelles elles fournissent des provisions, etc. etc., à de bien meilleures conditions que chez le détaillant ordinaire; et, de plus, comme les achats se font généralement argent comptant, les acheteurs contractent peu à peu des habitudes d'économie.

(f.) *Sociétés de prêt.*—D'après les rapports présentés au Registrar (conformément à l'acte 3 et 4 Vict. c. 110) par 856 de ces sociétés, et pour l'année terminée au 31 décembre 1865, il résulte que :—

	£
Le montant versé par les actionnaires ou déposants était de	253,523
Sommes prêtées et non rentrées au 31 décembre 1865	518,866
Montant des fonds mis en circulation pendant l'année	857,814
Nombre de demandes d'emprunt, dans le courant de l'année	184,171
Nombre d'individus auxquels il a été fait des prêts dans l'année	170,318
Montant payé pour formes de demandes et pour droits de renseignements	10,345
Intérêts payés par les emprunteurs, ou par les garants pendant l'année	42,140
Bénéfices bruts (comprenant les sommes reçues des emprunteurs, et celles payées pour formes de demandes et frais de renseignements pendant l'année)	58,509
Frais généraux	21,345
Intérêts payés aux actionnaires	32,859
Bénéfices nets, déduction faite des intérêts payés aux actionnaires et des frais généraux, pour l'année	6,391
Nombre d'assignations lancées dans l'année	13,208
Nombre de mandats d'arrêt lancés	2,101
Montant des sommes pour le recouvrement desquelles on a donné des assignations	31,586
Montant des sommes recouvrées dans l'année	23,991
Montant des frais acquittés par les sociétés	2,940
Montant des frais acquittés par les débiteurs	2,390

(g.) *Sociétés dites: 'Benefit Building Societies.'* * —Ces sociétés sont répandues dans différentes parties du Royaume, mais il n'existe aucun relevé statistique concernant leur administration et le nombre actuel de leurs membres. On sait toutefois qu'elles comptent plusieurs millions de sociétaires et que leurs opérations sont très-importantes.

(h.) *Sociétés foncières (Land Societies).*—Les 'Land Societies' furent, à l'origine, fondées principalement dans un but politique, c'est-à-dire quelles cherchaient à acquérir à bon marché, en faveur des membres de toutes les classes, surtout les plus humbles, un franc-

alleu dans les comtés, ce qui leur donnait droit de vote.

Aujourd'hui l'objet principal de ces sociétés est de fournir aux mêmes classes les moyens de devenir possesseurs de biens fonds et d'y construire des maisons. Dans le premier cas, les sociétés achètent de grands terrains qu'elles revendent ensuite aux membres, et elles font également à ces derniers des avances d'argent pour construire; le prix d'achat du terrain et le montant des avances peuvent être remboursés aux sociétés par à-comptes; on accorde généralement environ dix ans pour effectuer ces remboursements. Dans quelques-unes des sociétés, où les membres doivent devenir actionnaires, outre d'autres avantages, ils participent aux profits et gains de la compagnie. Il n'existe aucun relevé complet relativement aux transactions des 'land societies,' mais on pourra se faire une idée de leur importance par les chiffres ci-après extraits du dernier rapport d'une des plus grandes sociétés, celle dite 'Conservative Land Society.'

Nombre total des actions émises de septembre 1852 à septembre 1866	25,674
Valeur du terrain vendu depuis la formation de la société jusqu'en septembre, 1866	£ 493,091

Les opérations de la 'National Freehold Land Society' et de la 'British Land Company,' sont plus importantes encore que celles de la 'Conservative Society.'

Cependant le point le plus remarquable à noter, c'est qu'avec l'aide de ces sociétés les artisans laborieux peuvent, dans le cours de quelques années, devenir propriétaires de petites portions de terrain avec maisons d'habitation.

(i.) *Clubs des Ouvriers.*—Les efforts des 'Working Men's Club and Institute Union' sont parvenus à fonder pendant les cinq dernières années, environ 300 clubs comptant 60,000 membres. Quarante-un de ces clubs sont situés dans les districts métropolitains. L'Union dit que ces résultats ne sont que les premiers fruits de ce qu'ils espèrent accomplir en relevant l'ouvrier, et en détruisant les sources de ces maux que beaucoup de sociétés de bienfaisance cherchent seulement à pallier. Le but de l'Union est d'aider les ouvriers à établir des institutions et des clubs où ils puissent se réunir, s'instruire, converser, causer de leurs affaires; ils rencontrent là, aussi, des sujets de récréation capables de perfectionner leur moral; des rafraichissements sont tenus à leur disposition, de sorte qu'ils n'ont aucun prétexte d'aller au *public house* (cabaret.)

Lorsqu'on considère les améliorations qui se sont manifestées depuis un demi-siècle dans les habitudes des hautes et moyennes classes de la société, il est permis d'espérer qu'un perfectionnement analogue finira par atteindre les plus basses classes; et les clubs mentionnés dans le précédent paragraphe contribueront sans aucun doute largement à obtenir ce résultat désirable.

* 'Sociétés mutuelles de construction.'

* Dans le tableau qui précède, les hommes de garnison ne sont pas compris dans le chiffre de la population de Malte et de Gibraltar. Les chiffres afférents aux finances, à la dette publique, et aux importations et exportations, représentent, comme unités, milles livres sterling, et pour la navigation, milles tonnes. La marine comprend le commerce extérieur seulement.

† Les États-Unis seulement.

L'aperçu qu'on vient de lire, sur la situation du Royaume-Uni, ne serait pas complet si l'on ne faisait une rapide allusion aux nombreuses dépendances de la couronne britannique. Les avantages que la métropole retire de ses vastes colonies sont considérables. Elles offrent d'abord un précieux débouché à la portion émigrante de la population de la mère-patrie, et fournissent en abondance ces matières premières qui alimentent les manufactures de l'intérieur; tandis que les produits manufacturés britanniques trouvent largement à s'écouler sur leurs marchés.

Et puis, ce n'est pas un médiocre avantage pour une nation commerciale comme l'Angleterre que de posséder, dans toutes les parties du monde, des ports où ses navires marchands peuvent se réfugier en cas d'orages et de tempêtes, et trouver, en temps de guerre, un abri contre les attaques des corsaires ennemis.

Un autre avantage également important pour la Grande-Bretagne, et qu'elle doit à la possession de ses colonies, c'est la diffusion pour ainsi dire universelle de la langue anglaise, l'extension de la religion anglicane, et la vulgarisation de la forme du gouvernement britannique. Du nord au sud et de l'est à l'ouest, le sceptre britannique étend sa domination sur un empire duquel on peut dire que

le soleil ne s'y couche jamais, et qui renferme au-delà de cent cinquante millions d'habitants, tous soumis plus ou moins aux lois, aux coutumes et à l'influence britanniques.

Les principaux produits commerciaux des colonies les plus importantes sont :—

Pour l'Inde. Café, coton brut, matières tinctoriales, peaux, jute, huiles, opium, riz, salpêtre, graines, châles de cachemire, soie grège, épices, bois de construction et autres.—*Ceylan.* Cannelle, café, huile de noix de coco.—*Ile Maurice.* Rhum et sucre.

Port Natal. Peaux, ivoire, et laines.—*Cap de Bonne Espérance.* Minerai de cuivre, peaux, vin et laines.—*Canada.* Bestiaux, productions animales et agricoles, poisson, potasse, perlasse, et bois de construction.—*Ile du Prince Edouard.* Poisson, grains et bestiaux.—*Terre-Neuve.* Morue, huiles et peaux de phoques.—*Jamaïque.* Café, gingembre, piment, rhum, sucre, bois de campêche.—*Barbade.* Poisson, mélasses, riz, rhum et sucre.—*Trinité.* Cacao, mélasses, rhum et sucre.—*Guyane Anglaise.* Mélasses, rhum et sucre.

Nouvelle Galles du Sud. Or, peaux, suif et laine.—*Victoria.* Or, suif et laine.—*Australie du Sud.* Cuivre, céréales, or et laine.—*Nouvelle Zélande.* Or et laine.—*Queensland.* Or, peaux, suif et laine.

Classe VI.

PRODUITS D'IMPRIMERIE ET DE LIBRAIRIE.

L'ART de l'imprimerie est parvenu, dans le Royaume-Uni, à un grand degré de perfection; et peut-être une des meilleures preuves de son développement ressort-elle de la production quotidienne des principaux journaux, tels que le 'Times,' par exemple. Le fait seul de pouvoir composer et imprimer, en quelques heures, des milliers d'exemplaires de ces journaux, marque suffisamment le rang élevé qu'occupe l'Angleterre dans le commerce de l'imprimerie.

Parmi les causes qui ont récemment contribué au perfectionnement de l'imprimerie dans ce pays, figurent en première ligne l'abolition du droit de timbre sur les journaux, et du droit d'exciise sur le papier. La suppression de ces taxes a permis aux journaux, qui ont néanmoins conservé leur ancien format, d'être vendus au prix d'un penny (10 centimes); il en est résulté que, tout en étant placés à la portée des masses, de grandes améliorations ont été introduites dans les divers procédés se rattachant à leur publication.

Par suite de l'instruction toujours croissante des différentes classes de la société, les demandes de livres imprimés ont considérablement augmenté; et, sans déprécier les œuvres d'un ordre supérieur, on ne saurait trop reconnaître les services rendus par ces innombrables éditions à bon marché qui, dans ces dernières années, ont été publiées dans un but de récréation et d'instruction. La gravure et la chromolithographie ont, en même temps atteint un haut degré de perfection, ainsi qu'on pourra, du reste, le voir par l'examen des spécimens exposés.

D'après le recensement de 1861, le nombre de personnes employées dans le commerce de l'imprimerie était à cette date :—

En Angleterre et le pays de Galles	30,590
Ecosse	4,470
Irlande	2,845

Total 37,905

Sur ce chiffre, 13,937 personnes ont été occupées dans le même commerce à Londres seulement.

Le salaire fixe des imprimeurs à Londres est ainsi qu'il suit :—

Compositeurs	} 36s. par semaine de 60 heures.
Pressiers	
Mécaniciens (ouvriers chargés du soin des machines)	

Une indemnité de 3*d.* (30 centimes) est, en outre, accordée pour chacune des heures de travail supplémentaire, comprises entre 9 heures du soir et 8 heures du matin pendant les jours de la semaine. Nul emploi ne peut être taxé au-dessous d'un shilling entre 10 heures du soir et 6 heures du matin dans la semaine. Le travail du dimanche est payé à raison de 6*d.* extra par heure, mais dans aucun cas l'ouvrier ne recevra moins de 2*s.* 6*d.* à titre supplémentaire.

Dans plusieurs grandes imprimeries le travail, concernant plus spécialement l'impression des livres, se paie aux pièces, et n'est pas généralement exécuté aux gages fixes. Les compositeurs engagés à ces conditions peuvent gagner de 20*s.* à 50*s.* par semaine, selon la nature de l'ouvrage, et l'habileté et l'assiduité de l'ouvrier.

Le travail des journaux, qui se fait à heures irrégulières, est payé à la pièce.

Le taux moyen des salaires a été, à Édimbourg, en 1866 :—

Compositeurs	de 20 à 40	} par semaine
Pressiers	„ 26 „ 28	
Apprentis	„ 3 „ 20	

La valeur des livres, gravures, etc., importés dans le Royaume-Uni, et celle des mêmes articles exportés, a été, en 1865 :—

	Importation £	Exportation £
Livres	119,486	511,388
Imprimés, gravures, etc.	36,525	30,936

Il n'existe aucun travail statistique sur la quantité de livres qui s'impriment annuellement. Le nombre des journaux et publications périodiques, enregistrés dans l'année terminée

au 30 juin 1864, était, pour chacune des divisions du Royaume-Uni, savoir :—

Angleterre	1,307
Pays de Galles	60
Ecosse	133
Irlande	157

Total . . . 1,657

Les principales améliorations, qui, depuis 1851, aient été observées par le jury sur la classe xxxviii. de l'Exposition de Londres, en 1862, sont la substitution des machines au travail à la main pour la fonte des caractères, d'où il est résulté une épargne de travail considérable; l'emploi de machines à composer, d'appareils distributeurs et de presses horizontales; et l'application de la stéréotypie pour la publication rapide, sûre et économique des journaux les plus répandus. On a également constaté la supériorité d'exécution de la typographie en général, même dans les œuvres à bon marché; la pureté des caractères et la netteté du travail étant remarquables. L'imprimerie en couleur avait aussi subi une amélioration sensible, et le perfectionnement a été, dans la lithographie et principalement dans la chromolithographie, plus grand encore.

La publication récente des œuvres complètes de Shakspeare à un shilling le volume, et celle des romans de Walter Scott à six pence le volume, pourront donner une idée du progrès réalisé par la réimpression des 'éditions nouvelles d'ouvrages déjà connus.'

Classe VII.

OBJETS DE PAPETERIE; RELIURES; MATÉRIEL DES ARTS DE LA PEINTURE ET DU DESSIN.

1. Cette classe comprend comme industrie principale la fabrication du papier, qui est d'une grande importance. Le papier se fabrique en divers endroits de l'Angleterre; les moulins à papier du comté de Kent sont depuis longtemps célèbres pour leurs produits de papiers fins pour l'écriture et le dessin. Il y a aussi à Newcastle une grande manufacture de papier d'espèces plus communes. Il se fait aussi du papier, quoique en moindre quantité, en Ecosse et en Irlande. Le nombre des fabricants de papier patentés dans chaque division du Royaume-Uni dans l'année 1865 était—

En Angleterre et dans le pays de Galles	316
Ecosse	56
Irlande	20

Total . . . 392

Parmi les autres articles compris dans cette classe, l'encre pour l'écriture et pour l'imprimerie, la cire à cacheter, les plumes et les autres articles de bureau, les registres et les

couleurs à l'aquarelle, composent chacun un commerce spécial et important; cependant, à l'exception du commerce des plumes métalliques, il n'existe pas de données précises sur le nombre total des personnes employées dans la manufacture de ces divers articles. Le nombre de personnes employées à Londres dans la production de quelques-uns de ces articles, non compris les ouvriers, est ainsi qu'il suit :—

Fabricants d'encre d'imprimerie . . .	21
" " à écrire . . .	43
" de cire à cacheter . . .	24
" de plumes . . .	9

Il n'existe pas de relevé du nombre d'ouvriers employés par ces fabricants. Comme conséquence naturelle de la vaste production annuelle de livres, le commerce de reliure, aussi compris dans cette classe, est très-étendu, et so fait en connexion avec le commerce des publications dans les principales villes du royaume.

Le centre du commerce des plumes métalliques anglaises est à Birmingham, et d'après un rapport fait par Mr. Timmins à l'Association Britannique, réunie dans cette ville en 1865, le nombre des manufactures de plumes métalliques était de 12; le nombre d'ouvriers employés de 360; de femmes et filles de 2,050; et la force de chevaux à peu près de 330. La fabrication de chaque semaine se montait à 98,000 grosses de plumes. La quantité d'acier employée par semaine était de 9½ à 10 tonnes. La valeur des plumes ordinaires varie de 1½d. à 1s. par grosse, celle des plumes à tuyau de 7d. à 12s., et les autres espèces d'un prix plus élevé, d'après leur grosseur et leur fini.

La plupart des opérations pour la fabrication des plumes sont exécutées par des presses à main; elles découpent les flans, percent les trous, forment la pointe, repoussent le dessin et impriment le nom; les machines fonctionnent d'elles-mêmes et ne sont employées que pour la fabrication des plumes des espèces les plus communes.

La condition des ouvriers est satisfaisante, les manufactures étant parfaitement saines. Les gages des jeunes filles varient de 5s. à 12s., d'autres de 2s. 6d. à 3s. 6d.; les ouvrières plus âgées et plus capables gagnent de 15s. à 20s. par semaine. Les hommes gagnent de 18s. à 25s., et les garçons de 4s. 6d. à 8s., et, s'ils sont capables, de 8s. à 16s. Les bons ouvriers adultes gagnent de 30s. à 80s., et même de 90s. à 100s. par semaine. Les heures de travail varient de 52½ à 57 heures par semaine.

2. La plus grande proportion des matières premières employées dans la fabrication du papier est obtenue dans le pays, quoiqu'une quantité considérable de chiffons et d'autres substances pour le même usage soient annuellement reçues de l'étranger. Pendant les dix dernières années plusieurs différentes substances ont été proposées comme substitut du chiffon dans la fabrication du papier, mais sur le nombre, la paille et le sparte ont seuls jusqu'à présent été employés en grandes quantités.

Le tableau suivant fait voir la quantité de chiffons et autres substances d'espèces différentes importés dans le Royaume-Uni pendant les quatre années 1862-65 :—

	1862	1863	1864	1865
	Tonnes	Tonnes	Tonnes	Tonnes
Chiffons, toile et coton	21,966	25,287	23,732	18,273
Sparte et autres fibres végétales	878	19,326	43,403	52,324
Vieux cordages, &c.	932	736	528	463
Pulpe	166	233	156	94
Total des importations	23,942	45,582	67,319	71,154
Réexportations	3,513	1,510	243	1,505
Resté pour la consommation	20,429	44,072	67,576	69,649

On fera observer que la grande augmentation dans la table précédente est due à l'importation croissante de sparte, qu'on reçoit d'Espagne. On l'emploie pour faire les papiers communs et les papiers d'imprimerie qui ont été dernièrement en si grande demande.

3. Il n'y a pas de rapport du nombre des personnes actuellement employées dans le commerce du papier. D'après le recensement de 1861, le nombre des personnes ainsi occupées était de—

	Hommes	Femmes	Total
En Angleterre et dans le pays de Galles	7,746	5,611	13,357
Écosse	1,648	2,773	4,421
Irlande	289	113	402
	9,683	8,497	18,180

Le nombre des relieurs et pleurs de livres, à la même date, était de—

	Hommes	Femmes	Total
En Angleterre et dans le pays de Galles	6,556	5,364	11,920
Écosse	1,176	1,194	2,370
Irlande	448	686	1,134
	8,180	7,244	15,424

Une grande partie du commerce de reliure se fait dans la capitale. En 1861, 4,063 ouvrières et 3,691 ouvriers étaient ainsi employés à Londres.

On doit remarquer que ces deux branches de commerce ont augmenté depuis 1861.

4. D'après un rapport fourni au Ministère du Commerce (Board of Trade) par la Chambre de Commerce d'Edimbourg en 1866, la moyenne du taux des salaires payés aux ouvriers employés à la manufacture du papier dans ce district était :—

	Par semaine	s.	s.	d.
Aux Machinistes	.	20	à	22 0
Mécaniciens	.	17	„	20 0
Finisseurs	.	12	„	18 0

	Par semaine	s.	s.	d.
Blanchisseurs	.	16	à	20 0
Coupeurs de chiffons	.	13	„	16 0
Colleurs de feuilles	.	17	„	18 6
Sécheurs	.	15	„	16 6
Coupeurs de papier	.	15	„	18 0
Ajusteurs	.	22	„	28 0
Chauffeurs	.	15	„	18 0
Autres Ouvriers	.	11	„	17 0

Heures de travail, 10 à 12 par jour.

Il n'y a aucun rapport sur le taux des gages payés dans les fabriques de papier des environs de Londres ; le taux varie considérablement, mais comme règle on croit qu'il est plus élevé que ceux mentionnés ci-dessus.

5. Un accroissement considérable a eu lieu dans la quantité du papier importé depuis 1860 ; ce qui est dû en grande partie à l'abolition du droit sur le papier :—

		Papiers Étrangers (excepté les Tentures)		
		Importés	Exportés	Restés pour la Consommation
Quantités	En	Quintaux	Quintaux	Quintaux
	1860	42,446	9,217	33,229
	1865	239,707	24,537	215,170
Valeurs	En	£	£	£
	1860	128,383	25,995	102,388
	1865	494,222	57,477	436,745

6. Les quantités et la valeur du papier anglais (excepté les papiers de tentures) exporté dans les mêmes années étaient de—

		En	Quintaux	£
Quantités	1860	.	112,514	
	1865	.	141,075	
Valeur	1860	.	£ 450,589	
	1865	.	£ 447,741	

En comparant les tables ci-dessus, on verra que les qualités du papier importées sont considérablement meilleur marché que les qualités exportées.

La quantité de chiffons anglais et de matières premières pour la fabrication du papier exportée dans l'année 1865 se montait à 6,704 tonnes.

La valeur des articles anglais de papeterie (autres que du papier) exportés du Royaume-Uni pendant les cinq années 1861-65 était de—

	£
1861	287,000
1862	285,000
1863	342,000
1864	360,000
1865	405,000

7. L'emploi de la vapeur comme moteur est devenu presque universel en Angleterre, et quoique le prix de la main-d'œuvre y soit plus élevé que sur le Continent, cependant, grâce aux soins et à l'habileté des ouvriers anglais et à la grande supériorité des machines employées il est douteux que le prix de manufacture du

papier en Angleterre ne soit aussi réduit que dans les autres pays.

8. Mr. Richardson, de Newcastle, constate que les principales améliorations qui ont été apportées dans la manufacture du papier, pendant les dernières années, sont dans les détails et dans l'efficacité générale du mécanisme; par ces perfectionnements une quantité beaucoup plus grande est produite avec le même appareil qu'autrefois; et par la conduite supérieure des procédés chimiques une matière qui autrefois n'était d'aucun usage est maintenant convertie en papier commun de boutique; les chiffons inférieurs sont nettoyés, blanchis et convertis en bon papier blanc; ces chiffons autrefois n'eussent donné qu'un papier commun. Presque tout le papier de journal contient une portion de sparte, étant quelquefois seulement un quart chiffon.

Lors de l'abolition du droit de timbre sur les journaux, un grand nombre de feuilles à bon marché prit naissance, ce qui créa un besoin considérable de papier à bas prix. Ce besoin a été rempli en partie par la manufacture du papier de sparte, etc. comme il est dit plus haut, et en partie en important de l'étranger du papier à bon marché. Le jury de l'Exposition de Londres en 1862, observant une tendance croissante à fabriquer des qualités inférieures de papier, éleva sagement la voix contre son usage pour des ouvrages qui devaient avoir quelque durée; mais pour les besoins quotidiens une source de papier à bon marché est, pour les grandes masses de la population, un bienfait inestimable.

De grandes améliorations ont été faites pendant les quelques dernières années dans tous les différents genres de reliure, et notamment dans l'application de la couleur et des ornements à la reliure à bon marché. L'extension de ce commerce a été si considérable qu'il est devenu indispensable d'introduire des machines pour repousser les dessins et gaufrer, afin de permettre au relieur de faire face aux demandes de ses clients.

Classe VIII.

APPLICATIONS DU DESSIN ET DE LA PLASTIQUE AUX ARTS USUELS.

Bien qu'il n'existe aucun mémoire sur les progrès réalisés dans ces dernières années par les différentes branches de commerce comprises dans les limites de cette classe, on a, cependant, généralement pu constater une remarquable amélioration dans le style des dessins appliqués aux manufactures, ainsi qu'un notable perfectionnement du goût dans l'art de la plastique, de la gravure en creux, et de la gravure des sceaux.

Les dessins destinés aux manufactures étant, pour la plupart, exécutés en secret, ce n'est que dans les expositions publiques qu'il est possible

de reconnaître le degré d'avancement qui s'est produit sous ce rapport; c'est donc aux jurés des différentes classes de manufactures représentées à l'Exposition actuelle qu'il appartient de décider quels progrès ont été faits par les dessinateurs anglais depuis la dernière exposition internationale de Paris, en 1855.

On peut justement espérer que le Département de Science et d'Art trouvera, dans ces décisions, la récompense des efforts qu'il fait depuis plusieurs années, notamment pour l'extension et l'application de l'art à toutes les branches de l'industrie nationale.

Classe IX.

ÉPREUVES ET APPAREILS DE PHOTOGRAPHIE.

Considéré au point de vue mercantile, et à part son importance artistique, la photographie fournit, dans ses diverses branches, de l'occupation à des milliers de personnes.

Il ne rentre pas dans les limites de ces observations de retracer l'histoire de son invention et de son rapide développement, mais, selon les expressions du rapporteur pour la photographie, etc., à l'Exposition de Londres, en 1862, il suffira de dire qu'il 'n'existe peut-être pas une branche d'art, de science, d'économie ou même d'intérêts humains dans leur plus large acception, à laquelle l'application de la photographie n'ait été utile.'

Aucun relevé statistique indiquant le nombre des personnes employées dans le commerce de la photographie n'a encore paru, mais, d'après le recensement de 1861, on comptait à cet époque 2,957 artistes photographes.

Le nombre de personnes employées dans les diverses branches du commerce à Londres, non-compris les ouvriers, est ainsi qu'il suit:—

Artistes-photographes . . .	284
Fabricants d'appareils . . .	38
„ d'albums . . .	14
„ de produits chimiques } pour la photographie }	17
Monteurs . . .	6
Fabricants de papier pour la photo- graphie . . .	15
Imprimeurs . . .	7
Éditeurs . . .	16
Marchands du matériel de photo- graphie . . .	23

Bien que le jury pour la section de photographie à l'Exposition de Londres ait constaté que d'immenses progrès avaient été faits depuis le précédent Concours International, en 1851, il jugea cependant que cet art était susceptible d'atteindre de plus grands perfectionnements encore, et il fut convaincu que la prochaine Exposition Internationale montrerait des résultats 'dépassant de beaucoup en beauté, en grandeur, et en importance,' ceux auxquels il faisait alors allusion.

Classe X.

INSTRUMENTS DE MUSIQUE.

La fabrication des instruments de musique dans le Royaume-Uni, donne lieu à un commerce très-étendu. Les principales sortes d'instruments fabriqués sont les orgues, les harpes, les instruments de cuivre, et les pianos, dont les derniers occupent le rang le plus important. Les pianos sortant des ateliers de Londres sont, depuis longtemps, reconnus pour l'excellence de leur ton et la supériorité de leur main-d'œuvre. Les méthodes perfectionnées adoptées par les fabricants anglais pour la construction des orgues, tendent à assurer une haute réputation à ces instruments, tant à l'intérieur qu'à l'étranger.

On ne possède aucun renseignement exact sur le nombre total de personnes employées, dans le Royaume-Uni, à la fabrication des instruments de musique de toute sorte, mais les tableaux suivants, qui indiquent quelle a été, pour ces articles, la valeur des importations pendant les cinq années 1861-65, montrent que la production indigène est restée inférieure aux besoins du pays.

Valeur des instruments de musique de toute sorte importés dans le Royaume-Uni :—

Années	Pianos	Harmoniums et Séraphines	Boîtes à Musique.	Sortes diverses	Totaux
	£	£	£	£	£
1861	24,542	33,971	13,774	91,271	163,558
1862	43,343	53,681	13,494	80,388	190,906
1863	97,378	18,372	12,495	80,943	209,188
1864	111,234	15,548	17,015	80,452	224,249
1865	66,702	68,313	30,384	78,414	243,813

Les pianos et les harmoniums sont principalement importés de France.

Le nombre de fabricants d'instruments de musique à Londres, non-compris les ouvriers, est ainsi qu'il suit :—

Instruments	No. de Fabricants
Concertinas	11
Tambours	9
Flûtes et flageolets	14
Guitares	4
Harmonicas	1
Harmoniums	28
Harpes	4
Cors, cornets et trompettes	7
Instruments de musique militaire	10
Séraphines	3
Violons	8
Archets de violons	8
Violoncelles	2
Boîtes à musique	5
Pianos	286
Orgues	43
Fabricants de cordes	17
Divers	47

La valeur des exportations d'instruments de

musique de manufacture britannique a été, pour les cinq années 1861-65 :—

Années	Pianos	Sortes diverses	Totaux
	£	£	£
1861	non-indiqué	non-indiqué	147,144
1862	82,615	69,155	151,770
1863	112,821	53,972	166,793
1864	107,871	59,980	167,851
1865	93,071	59,757	152,828

Classe XI.

APPAREILS ET INSTRUMENTS DE L'ART MÉDICAL.

Quoiqu'on ne puisse dire que les articles compris dans cette classe représentent une industrie nationale étendue, cependant ils possèdent une valeur dont l'argent peut à peine être un équivalent. De tous les arts, il n'y en a pas de plus noble que celui du chirurgien, et par conséquent les instruments dont il se sert dans ses opérations participent nécessairement à l'honneur qui s'attache à sa profession.

Presque la totalité des instruments de chirurgie employés en Angleterre sont de manufacture anglaise, et à cause des divers modes de traitement adoptés en différents pays, il ne peut se faire qu'un échange très-limité de ces articles entre le Royaume-Uni et l'étranger. La plupart des instruments de chirurgie se fabriquent à Sheffield, mais les instruments qui sortent des ateliers de Londres peuvent être regardés comme sans rivaux dans le monde entier. Le nombre de fabricants d'instruments de chirurgie à Londres est de 95 ; de fabricants de trousses, 5 ; et de fabricants de bandages, 25. La valeur des instruments de chirurgie et d'anatomie importés dans l'année 1865 était de 566*l.* et exportés de 12,752*l.*

Classe XII.

INSTRUMENTS DE PRÉCISION ET MATÉRIEL DE L'ENSEIGNEMENT DES SCIENCES.

La manufacture des articles compris dans cette classe est considérable, mais par le manque de statistique industrielle il n'y a aucun moyen d'arriver à connaître l'importance exacte des diverses branches de ce commerce dans le Royaume-Uni. Le nombre de personnes employées dans les diverses branches de ce commerce, à Londres, non-compris les ouvriers, est ainsi qu'il suit :—

Fabricants d'instruments de précision	72
„ de boîtes	7
„ d'instruments de marine	32
„ „ de physique, etc.	78
„ „ d'optique	204

En outre des instruments de fabrique nationale, il y a aussi une importation d'instruments scientifiques de l'étranger. La valeur

de ces instruments et appareils importés dans le Royaume-Uni et les articles anglais de la même espèce exportés pendant l'année 1865 était de—

1865. Importations, 14,2247.
 „ Exportations, 71,058'.

Classe XIII.

CARTES ET APPAREILS DE GÉOGRAPHIE ET DE COSMOGRAPHIE.

Les ouvrages les plus importants et qui méritent le plus l'attention dans cette classe sont les cartes levées par les Commissions d'artillerie et de géologie. Les premières sont publiées sur trois échelles différentes, la carte sur l'échelle d'un pouce par mille est une excellente carte du royaume. La carte géologique des Îles Britanniques, dont une partie a été exposée à l'Exposition de Paris en 1855, a été déclarée sans rivale par tous les juges com-

pétents. Depuis 1855, quelques-uns des districts minéraux les plus importants ont été inspectés et les cartes qui les concernent complétées. On exécute dans ce moment les cartes des comtés du nord de l'Angleterre et la carte d'Irlande sur une échelle de six pouces au mille ; plus de la moitié de la surface de l'Angleterre et de l'Irlande a déjà été inspectée, et, prenant en considération la nature du travail, de grands progrès se font annuellement.

Il n'y a aucun moyen de déterminer la valeur ou l'extension du commerce des cartes, mais il est d'une importance considérable, et les ouvrages produits sont très-supérieurs. Le nombre de personnes, non-compris les ouvriers, actuellement employées dans les diverses branches de ce commerce, à Londres, est de—

Marchands et éditeurs de cartes	. 24
Fabricants, coloristes, et monteurs	. 44
Graveurs 18

La valeur des cartes terrestres et marines exportées en 1865 s'est élevé à 6,5717.

GROUPE III.

(CLASSES XIV. à XXVI.)

MEUBLES ET AUTRES OBJETS DESTINÉS À L'HABITATION.

Classe XIV.

MEUBLES DE LUXE.

AUCUNE des branches de l'industrie du pays n'a retiré plus de profit des Expositions Internationales que le commerce des meubles de fantaisie. Dans la période de temps comprise entre le commencement de ce siècle et l'année 1851, le progrès, en ce qui concerne la fabrication des articles d'ameublement, a été relativement faible dans le Royaume-Uni; mais, à partir de cette dernière époque, il s'est manifesté un perfectionnement soutenu, non-seulement au point de vue de l'économie dans la production, mais aussi sous le rapport du dessin et de l'ornementation, ainsi que dans une meilleure adaptation des différents articles aux usages qui leur étaient destinés.

Il suffit de jeter un coup d'œil sur la vie domestique moderne, en Angleterre, pour s'apercevoir des grands changements apportés, pendant ces dix ou quinze dernières années, dans les embellissements intérieurs des habitations de la haute et de la moyenne classe de la société; et il n'est pas douteux que l'extension des connaissances artistiques contribuera davantage encore à produire et à faire apprécier des articles qui réunissent les trois conditions nécessaires; convenance du but, beauté du dessin et de l'ornementation, et excellence de la main-d'œuvre.

Le nombre de fabricants à Londres occupés dans les diverses branches de cette industrie, non-compris les ouvriers, est ainsi qu'il suit:—

Ébénistes	812
Tapissiers	486
Sculpteurs et doreurs	342
Vernisseurs	142
Fabricants de glaces	61
Étameurs	24
Sculpteurs, incrusteurs, etc.	108
Fabricants de lits	43
„ de lits de fer	44
„ de chaises, de sofas, de } tabourets	252

La valeur des articles d'ameublement importés dans le Royaume-Uni pendant l'année

1865, a été de 128,925*l*. Celle des exportations s'est montée à 289,887*l*.

Classe XV.

OUVRAGES DE TAPISSIER ET DE DÉCORATEUR.

Les articles compris dans cette catégorie ont nécessairement participé aux progrès signalés pour la fabrication de ceux mentionnés à la classe précédente. La fortune toujours croissante des classes moyennes de la société, a particulièrement accru le chiffre des commandes pour les travaux d'embellissement au dedans des habitations. Le genre spécial aux édifices religieux a subi de notables perfectionnements, par suite du retour, dans ces derniers temps, aux anciens styles d'architecture qui nécessitent pour ainsi dire un surcroît d'ornementation dans la décoration intérieure des églises. Le carton-pierre, qui produit tant d'objets variés pour la décoration, occupe le premier rang; il se fait principalement à Birmingham, et des centaines de personnes sont employées à sa fabrication. Le taux moyen des salaires est de 10*s*. à 16*s*. par semaine, pour l'ouvrier ordinaire, et de 30*s*. à 50*s*. pour ceux qui sont chargés de la partie artistique. Ces derniers ont, paraît-il, beaucoup profité des enseignements de l'École d'Art établie à Birmingham.

Classe XVI.

CRISTAUX, VERRERIE DE LUXE ET VITRAUX.

1. Les principales qualités de verre fabriquées dans le Royaume-Uni, sont des glaces, du verre blanc, du verre à vitres et des cristaux. Les principales verreries sont à St. Helen's, dans le comté de Lancaster, mais il y a aussi de grandes fabriques dans d'autres endroits, en particulier celles de Messrs. Chance, de Birmingham, et Messrs. Hartley, de Sunderland. La gobelet-

terie de cristal est aussi fabriquée à Londres. Le commerce du verre à bouteilles qui se fait dans le voisinage de Newcastle est très-considérable. Le verre à dessins colorés ou peints se fabrique aussi à Londres, à Sunderland et à Birmingham. Le verre pour les instruments d'optique, quoique nécessairement ne formant pas une branche considérable de ce commerce, se fabrique aussi dans le Royaume-Uni, et Messrs. Chance de Birmingham ont des produits de verres pour phares bien connus du monde scientifique.

Quoique la manufacture de cette belle matière représente maintenant une des principales industries du pays, c'est seulement depuis les vingt dernières années qu'elle a pris un développement un peu rapide. Jusqu'en 1845, les droits excessifs qui en frappaient la fabrication, et les règlements incommodes associés à la perception de ces droits, retardaient entièrement ses progrès; il est de fait que entre 1789 et 1844 les quantités de verre produites et gardées pour la consommation au lieu d'augmenter avec la population avaient plutôt une tendance à diminuer. Cependant, depuis l'abolition des droits sur le verre, l'accroissement de cette industrie a été très-considérable, et l'abolition de l'impôt sur les fenêtres en 1851 a encore contribué au succès de cette industrie.

2. Les matières premières employées dans la fabrication du verre sont presque entièrement obtenues dans le pays; mais dans quelques branches de l'industrie on emploie le sable de Fontainebleau.

3. Il n'y a pas de statistique officielle du nombre des personnes employées dans l'industrie de la verrerie pour une époque plus récente que 1861; dans cette année le nombre suivant de personnes se trouvaient ainsi engagées:—

	Hommes	Femmes	Total
En Angleterre et le pays	13,809	1,237	15,046
de Galles . . .			
Ecosse . . .	1,189	28	1,217
Irlande . . .	231	31	262
Total . .	15,229	1,296	16,525

Les extraits suivants, tirés d'un rapport de M. H. Chance, fait à l'Association Britannique à Birmingham en 1865, montreront l'importance actuelle de quelques unes des branches de cette industrie. La production de glaces est d'environ 100,000 pieds par semaine. Il y a sept fabricants de verre blanc et de verre à vitres, dont trois font soixante-quinze pour cent de la production totale. Le nombre des ouvriers employés dans ces trois verreries est, dit-on, de 2,500, et la quantité de verre produite de 17,000 tonnes. Il n'y a pas de statistique complète de la production du cristal; les produits annuels de la région de la Tyne et la Wear seulement sont estimés à dix millions de livres; ceux de Birmingham à environ cinq millions, et ceux de Stourbridge à trois millions et demi de livres. La fabrication des bouteilles de verre sur la Tyne et la Wear dans l'année 1862 est

donnée par M. Swinburne comme se montant à environ 4,230,000 douzaines.

4. La moyenne des salaires payés à Birmingham en 1866 pour la manufacture du cristal et cristaux pour l'usage domestique était de—

Pour les Ouvriers.

Dans quelques branches du commerce du verre, les rapports entre les patrons et les ouvriers, et les habitudes des ouvriers eux-mêmes, sont susceptibles de grandes améliorations. M. Swinburne dit que les rapports entre le patron et l'ouvrier dans le commerce du verre soufflé et des bouteilles sont l'équivalent d'une grève chronique. De plus, à cause d'un supplément en outre du salaire, appelé 'pour boire,' et qui est dépensé tous les jours en liqueurs enivrantes, les habitudes de l'ouvrier deviennent généralement irrégulières et dégénèrent dans la majorité des cas en une ivresse habituelle. Dans d'autres branches, on dit que les ouvriers possèdent une intelligence et une éducation considérables et profitent volontiers des diverses institutions établies pour l'amélioration intellectuelle des classes ouvrières.

5. La table qui suit donne un rapport complet des différentes espèces de verre importées dans le Royaume Uni en 1865 :—

	Quantités	Valeur
	Quintaux	£
Vitres (excepté les glaces)	264,056	211,246
Cristal taillé, de couleur et orné	32,961	172,405
Cristal uni, bouteilles comprises	23,039	32,254
Glaces . . .	28,631	133,613
Glaces étamées ou miroirs . . .	1,699	10,700
Bouteilles de verre commun } ou vert . . .	17,113	8,984
Produits non-classés . . .	12,650	60,773
	380,149	629,975
	Livres	
Perles rondes et ovales . . .	3,365,221	178,310

L'importation des vitres et du cristal se fait principalement de Belgique et de Hambourg, celle des glaces et des miroirs de France et de Belgique.

La réexportation des vitres et des grains de verre dans la même année a été considérable, étant de 37,842 quintaux et 2,057,000 livres respectivement.

6. Une petite portion seulement de l'exportation de verre, excepté les bouteilles, se fait à l'étranger et en particulier dans les États de l'Europe, la plus grande partie des marchandises étant exportée aux États-Unis et dans les Colonies anglaises. L'emballage étant nécessairement dispendieux pour assurer une transmission sûre, et la perte en casse au déballage, ajoutée au fret et autres frais de transport, représentant une forte somme, une addition aux prix de vente sous la forme d'un droit à l'importation équivaut à une prohibition réelle du commerce de cet article; et comme le taux des droits d'importation à présent levés en Europe est généralement considérable, le manque de commerce avec cette partie du monde se comprendra facilement, surtout dans les états qui produisent largement, et où la main-d'œuvre, étant à bon marché, permet au manufacturier du pays d'approvisionner les marchés de sa patrie de marchandises à bas prix.

Quoique beaucoup de marchés aient été et soient encore ainsi fermés aux producteurs de verre anglais, on verra d'après la table suivante que le commerce d'exportation a fait de grands progrès pendant les quinze dernières années.

Années	Cristal	Verre à Vitres	Bouteilles ordinaires	Glaces
Quantités				
	Quintaux	Quintaux	Quintaux	Quintaux
1851	25,900	16,459	329,025	Voir la valeur
1855	39,295	21,537	513,140	
1860	79,544	33,498	629,511	
1865	99,314	50,955	722,496	
Valeur				
	£	£	£	£
1851	110,666	22,223	174,318	20,743
1855	141,890	33,659	279,471	52,312
1860	222,380	44,063	324,189	62,566
1865	302,105	60,857	310,245	71,987

7. La plus grande partie des verroteries se fait par un travail manuel, aidé de moyens mécaniques; la manufacture du verre moulé est, cependant, en plus grande partie faite par des machines. La vapeur est aussi beaucoup employée pour la taille et les façons diverses des cristaux.

8. M. Swinburne constate que, 'quant à ce qui regarde la manufacture générale du verre, on ne peut nier qu'il n'y ait à présent matière à amélioration.' Beaucoup de progrès ont été faits cependant dans plusieurs branches de ce commerce, parmi lesquels on peut spécifier l'augmentation de la grandeur des plaques, vitres, etc.; le perfectionnement dans la couleur du verre, et aussi dans la manufacture du verre moulé. L'introduction de ces dernières marchandises a fait descendre si bas le prix des cristaux, que presque les plus pauvres de la population peuvent obtenir pour l'usage domestique des articles élégants qui, il y a quelques années, eussent été de beaucoup au delà de leurs moyens.

Les progrès du commerce du verre sont dûs en plus grande partie, comme il a déjà été dit,

à l'abolition des droits, qui autrefois entraient ses transactions. Lors de l'abolition de ces droits eut lieu une grande baisse sur le prix du verre, et une consommation considérablement augmentée en fut le résultat. Les prix suivants des principaux articles de verre avant l'abolition des droits, et les prix actuels donnés par M. Chance, offrent une preuve intéressante des bienfaits dérivés de cette abolition et de l'avancement général de cette industrie. Un miroir de glace 50 x 40 pouces, en 1844, coûtait environ 10*l.*, en 1865, moins de la moitié. De bon verre blanc par caisse, en 1844, coûtait environ 12*l.*, en 1865, 2*l.* 8*s.*; le verre à vitres ordinaire par pied, en 1844, 1*s.* 2*d.*, en 1865, 2*d.* Si les droits sur le verre avaient existé, en 1851, un Palais de Cristal eût été presque une impossibilité; d'autre part, l'abolition de l'impôt sur les fenêtres a amené un usage plus répandu du verre dans les bâtiments de toute espèce, et a matériellement contribué au bien-être et à la bonne santé de la population.

Quant à l'application de l'art à la décoration du verre manufacturé, le jury de l'Exposition Internationale de 1862 a constaté que les plus grands progrès étaient sensibles dans le verre gravé. Il remarqua aussi particulièrement les formes plus gracieuses des objets d'un usage général, ce qui fut attribué en grande partie au goût émanant des écoles de dessin répandues dans le pays, aux efforts de beaucoup de manufacturiers encourageant une meilleure appréciation de la forme chez les acheteurs et à une avance générale du public dans sa connaissance de l'art. Le jury attribue beaucoup de ce progrès aux expositions nationales et internationales et spécialement aux dernières, dans lesquelles les exposants apprennent les uns des autres, par la concurrence dans les arts de la paix.

Classe XVII.

PORCELAINES, FAÏENCES ET AUTRES POTERIES DE LUXE.

1. La poterie en général, qui forme aujourd'hui une des principales industries du pays, prospère depuis plus de deux siècles dans le Staffordshire. L'Angleterre ne possède pas, comme la plupart des peuples du Continent, des manufactures appartenant à l'État, et instituées en vue du développement des différentes branches de l'art céramique. Conséquemment, cette industrie est laissée à l'initiative des entreprises particulières. Le centre manufacturier le plus important se trouve dans le Staffordshire, avec succursales à Glasgow, Worcester, Newcastle et Lambeth. Les poteries du Staffordshire produisent, pour ainsi dire, toutes les variétés d'articles en terre cuite; celles de Worcester fabriquent des objets de qualité supérieure; Newcastle n'en fournit que du deuxième ordre; et Lambeth fait principalement la

poterie de grès, telle que bouteilles, jarres, terrines, tuyaux de drainage, etc. etc. Il se fait également dans le royaume une grande fabrication d'articles en argile réfractaire. Newcastle et Stourbridge notamment en produisent des quantités considérables.

2. Le pays fournit presque toute la matière première, qui se tire des comtés de Dorset, de Devon et de Cornouailles. D'après les relevés officiels, 374,358 tonnes d'argile et de terre à porcelaine ont été extraites dans le courant de l'année 1865, et 751,566 tonnes d'argile réfractaire fournies par les comtés de Stafford, York, Derby, etc.

On constate que la consommation annuelle dans les poteries du Staffordshire des argiles préparées s'élève à environ 160,000 tonnes. En outre des argiles, M. Coghill fournit le relevé suivant de la quantité des autres matières premières employées dans le Staffordshire. 'La consommation annuelle de la houille dans cette industrie est d'environ 450,000 tonnes. Pour l'application des couleurs on emploie environ 67,000 livres de l'oxyde de cobalt; pour le vernissage on emploie environ 1,100 tonnes de borax et d'acide borique; et pour la décoration par la dorure on emploie 12,000 onces d'or. La quantité d'os calcinés qui se consomme annuellement dans la manufacture est d'environ 4,500 tonnes, qui sont importés principalement de l'Amérique du Sud.'

3. Le tableau suivant indique, d'après le recensement de 1861, quel était, à cette date, le nombre de personnes, employées dans les poteries et dans les manufactures de porcelaine:—

	Hommes	Femmes	Totaux
En Angleterre et le pays de Galles	26,138	11,934	38,072
Écosse	1,922	595	2,517
Irlande	101	7	108
Total	28,161	12,536	40,697

On comptait également en 1861, 3,471 hommes et 1,115 femmes occupés à la fabrication des pipes à fumer.

Il résulte des indications fournies par M. Coghill, que les poteries du Staffordshire employaient en 1864, 27,873 personnes, dont 10,598 femmes.

4. La moyenne des gages payés, en 1866, aux ouvriers du comté de Staffordshire a été, savoir:—

	Par jour	s. d.	s. d.
Pour les hommes	de 1 6 à 7 0		
Pour les femmes	„ 1 6 „ 1 8		
À Worcester:	Par semaine	s. d.	s. d.
Pour les hommes	de 16 0 à 50		
Pour les femmes	„ 10 6 „ 14		
À Newcastle:			
Pour les hommes	„ 10 0 „ 30		
Pour les femmes	„ 10 0		

5. L'importation de la poterie dans le Roy-

aume-Uni est presque insignifiante, et celle concernant la faïence et la porcelaine est assez faible; elle est représentée pour l'année 1865 par un poids de 18,705 quintaux, d'une valeur de 166,098*l.* La plus grande partie de cette dernière importation était de provenance française.

6. Les chiffres suivants montrent quelle a été pour les cinq années 1861-65 la valeur de la faïence et de la poterie exportées du Royaume-Uni:

	£
1861	1,070,000
1862	1,220,000
1863	1,341,000
1864	1,422,000
1865	1,442,000

7. On se sert de machines dans quelques-unes des branches de cette industrie, mais pas autant qu'il serait à désirer.

8. De grands progrès ont été faits ces dernières années dans la fabrication de la faïence et de la poterie en général; et les articles ordinaires fabriqués aujourd'hui pour l'usage domestique sont renommés pour leur bon marché, leur légèreté, et l'excellence du fini. On s'est aussi beaucoup occupé à remplacer les produits chimiques vénéneux employés pour le vernissage par des substances inoffensives; les résultats ont été très-satisfaisants.

Les perfectionnements apportés dans le dessin et l'exécution des objets de l'ordre supérieur sont dus aux efforts réunis de quelques-uns des principaux fabricants, et à l'éducation donnée, par les écoles d'art, aux ouvriers des districts manufacturiers. L'usage plus général des machines contribuerait beaucoup à développer la fabrication des poteries diverses du pays. Le progrès dans la fabrication des articles en argile réfractaire a aussi été considérable: 80,000,000 de briques sont annuellement produites par le district de Newcastle, et environ 30,000,000 par celui de Stourbridge, sans parler des cornues et des tuyaux de drainage, etc., dont on fait de très-grandes quantités.

Classe XVIII.

TAPIS, TAPISSERIES ET AUTRES TISSUS D'AMEUBLEMENT.

1. Les principaux articles compris dans cette classe, et dont la fabrication est considérable en Angleterre, sont les tapis, étoffes pour meubles, toiles cirées, tapis en caoutchouc et tissus de crin. Les genres les plus importants de tapis de manufacture anglaise sont les 'Jacquard' dit Bruxelles, et les 'Tapestry' ou tapis imprimés: les premiers sont surtout fabriqués à Kidderminster, et aussi à Halifax et Durham, les derniers à Halifax.

'Parmi les autres espèces de tapis, les 'Axminster' sont fabriqués à Wilton; les 'Kidderminster' et les 'Axminsters breyetés' sont faits à Glasgow et ailleurs en Écosse; let

étoffes peintes dites 'Figure twills' se font à Durham, les qualités communes de tapis, dites 'Super,' les tissus hollandais et les feutres se fabriquent dans le West Riding du Yorkshire, etc. La manufacture des tapis de jute à Dundee a aujourd'hui quelque importance. Les cotonnades pour meubles se préparent à Manchester, les lainages et damas de laine à Halifax.

Les toiles cirées pour parquets et pour dessus de tables, etc., sont beaucoup employées dans le Royaume-Uni pour les usages domestiques, et il s'en exporte des quantités considérables. Un grand nombre de manufactures de ce genre sont exploitées dans le voisinage de Londres, mais il en existe également dans les autres parties du royaume.

Les tissus de crin pour sièges font l'objet de quelques affaires, cependant cet article n'est pas aussi communément employé qu'autrefois à la fabrication des meubles. La manufacture des tapis en caoutchouc, etc., s'est accrue considérablement depuis quelques années.

2. La provenance de la matière première employée dans la manufacture des tapis sera expliquée dans les observations sur les Classes 27, 28 et 30. Il s'importe des quantités considérables de crin, principalement de Russie et d'Amérique. Les arrivages de cet article se sont élevés, pour l'année 1865, à 21,078 quintaux, d'une valeur de 106,938 $\frac{1}{2}$. Les matières premières surtout employées dans la manufacture des tapis de gomme élastique, etc., sont le caoutchouc et la gutta-percha; le premier est particulièrement tiré de l'Amérique du Sud et la dernière de Singapore et de l'Archipel oriental.

La quantité et la valeur des matières de cette espèce importées dans le Royaume-Uni, pour l'année 1865, donnent les chiffres suivants :—

	Quintaux	Valeur £
Caoutchouc brut . . .	71,392	530,538
Gutta-percha . . .	29,077	160,565

Une grande quantité de caoutchouc est ré-exportée, et le reste, ainsi que la gutta-percha, sert à la fabrication des tapis, et de plus est employée pour une foule d'autres objets.

3. A l'exception de la manufacture des tapis, il est impossible d'indiquer le nombre des ouvriers employés dans les différentes branches du commerce compris dans cette classe. A l'Exposition de Londres, en 1862, le jury de la Classe 22 évalua le nombre des personnes occupées à la fabrication des tapis à environ 40,000 pour le Royaume-Uni.

4. On a constaté que la moyenne des salaires payés en 1851 aux ouvriers avait été de 16s. à 28s. par semaine, mais ces chiffres sont probablement bien inférieurs aux chiffres actuels. La valeur totale approximative des tapis fabriqués dans le pays donnera quelque idée de l'importance de ce commerce considéré comme ressource pour la classe ouvrière. Les chiffres suivants furent donnés par le jury à

l'Exposition de 1862, comme une estimation de la fabrication des tapis pendant cette année :—

	£
Yorkshire	980,000
Kidderminster et environs	630,000
Durham, Kendal et environs	120,000
Somersetshire et Wiltshire	40,000
Ecosse	340,000
Total	2,110,000

5. La table ci-après indique les quantités et la valeur des tapis de laine et des foyers importés en Angleterre, pendant les cinq années 1861-65 :—

	Yards carrés	Valeur £
1861	61,869	27,538
1862	111,896	33,165
1863	83,696	30,743
1864	78,311	32,392
1865	98,936	39,247

6. L'exportation des tapis anglais et des bures est considérable, les quantités et la valeur de ces articles pendant les quatre années 1862-65 se sont élevés à :—

Années	Tapis	Tapis de Foyer	Bures et Feutres
	Quantités		
	Yards	Nombre	Yards
1862	4,799,000	36,640	579,000
1863	5,582,000	45,907	676,000
1864	5,620,000	40,257	372,000
1865	5,284,000	60,991	459,000
	Valeur		
	£	£	£
	1862 620,700	14,737	50,515
	1863 747,521	17,578	63,262
	1864 825,098	14,782	36,400
	1865 818,847	17,904	42,600

Les États-Unis offrent le meilleur débouché pour les tapis anglais; 2,164,000 yards ont été expédiés dans ce pays en 1865.

Les exportations de toiles cirées britanniques ont été, pour l'année 1865 :—

	Quantité Yards carrés	Valeur £
Toiles cirées, vernissées, etc.	2,094,000	138,459
Toiles cirées, pour parquets et tapis de caoutchouc	320,000	40,448

7. La manufacture des tapis se fait aujourd'hui principalement au moyen de machines; le tissage 'Jacquard' à la main ayant été presque entièrement remplacé par le tissage à la vapeur.

8. Il a été clairement démontré, par l'amélioration du goût, par les couleurs et le dessin des articles exposés en 1862, comparés avec ceux de l'Exposition de Londres en 1851, que le commerce des tapis, en Angleterre, avait fait de grands progrès depuis 1851, tandis que l'usage généralisé de la vapeur avait accru de beaucoup la fabrication de cette espèce de marchandise. Le rapide développement de la

manufacture de tapis dit 'Tapestry,' de MM. Crossley, à Halifax, est peut-être une des plus grandes preuves des progrès récents de cette industrie en Angleterre. Durham, Glasgow, Halifax, Kidderminster possèdent chacune des écoles d'art, et l'on ne peut mettre en doute que l'instruction donnée aux classes ouvrières dans ces écoles doit avoir une influence très-salutaire sur la fabrication spéciale à ces districts.

Un progrès considérable dans le dessin des toiles cirées a aussi été obtenu depuis l'année 1855.

Classe XIX.

PAPIERS PEINTS.

Il y a un siècle et plus, que l'on fabrique le papier de tenture dans le Royaume-Uni. Cette industrie est exploitée dans les environs de Londres, à Manchester, à Edimbourg et dans d'autres provinces. Les manufacturiers anglais excellent surtout dans la fabrication des papiers peints faits à la mécanique, et qui, par leur bon marché, sont placés à la portée des plus pauvres, leur permettant ainsi de donner aux murs de leurs habitations un aspect gai et réjouissant.

2. Une quantité considérable de papier, de couleurs, de laine et de métal est annuellement consommée pour la fabrication du papier de tenture, mais il n'existe aucun relevé statistique à cet égard.

3. Le recensement de 1861 nous apprend que le nombre d'ouvriers employés à la fabrication du papier-tenture était alors, pour chacune des divisions du Royaume-Uni, savoir :—

	Hommes	Femmes	Total
En Angleterre et le pays de Galles . }	1,556	399	1,955
Ecosse . . .	77	38	115
Irlande . . .	96	9	105
Total . . .	1,729	446	2,175

4. Il n'existe aucun rapport général du taux moyen des salaires payés pour la fabrication du papier de tenture. La Chambre de Commerce d'Edimbourg a adressé, à ce sujet, un relevé au 'Board of Trade' (Ministère du Commerce), duquel il résulte que la moyenne des gages alloués dans cette localité a été, en 1866, de, savoir :—

	Par semaine de 57 heures
Pour les apprêteurs de couleurs .	12
„ „ glaceurs ou vernisseurs, etc.	15
„ „ imprimeurs et marbreaux de 20 à 40	

5. La quantité et la valeur des papiers de tenture importés dans le Royaume-Uni, pendant les cinq années 1861–65, donnent les chiffres suivants :—

Années	Papiers de Tenture	
	Quantités	Valeur
1861	Quintaux 2,975	£ 15,395
1862	4,210	17,680
1863	5,177	21,740
1864	5,979	25,110
1865	5,684	23,873

La plus grande partie des papiers de tenture importés dans le pays est de provenance française.

6. Le tableau suivant indique quelles ont été les quantités et la valeur des papiers de tenture britanniques exportés pendant la même période :—

Années	Papiers de Tenture Britanniques	
	Quantités	Valeurs
1861	Quintaux 13,415	£ 105,984
1862	19,874	64,505
1863	25,874	84,403
1864	25,163	82,819
1865	32,893	109,320

7. L'emploi des machines, qui dans ces dernières années ont subi de grands perfectionnements, est presque général pour la fabrication des papiers de tenture de qualité inférieure ; chacune de ces machines peut imprimer de 1,000 à 1,500 pièces par jour.

8. Jusqu'en 1846, le droit élevé auquel étaient soumis les papiers de tenture de provenance étrangère, avait eu pour résultat de les exclure presque entièrement du marché britannique, et l'absence de toute concurrence a fait que les fabricants anglais ont laissé le progrès stationnaire. Cependant, depuis que les articles étrangers ont été admis dans le royaume au même titre que ceux fabriqués dans le pays, il s'est manifesté un perfectionnement marqué dans le style et la main-d'œuvre des papiers anglais, tandis que, d'un autre côté, le progrès apporté dans l'emploi des machines pour la fabrication a permis de fournir de beaux papiers de tenture aux prix les plus modérés.

Classe XX.

COUTELLERIE.

1. L'Angleterre a été longtemps renommée pour toute espèce de coutellerie, le siège principal de cette manufacture est à Sheffield. La coutellerie se fait aussi en petites quantités à Londres et dans d'autres parties du royaume.

2. L'acier employé dans la manufacture de la coutellerie est produit à Sheffield, principalement de fers étrangers. En 1862 le nombre des hauts-fourneaux de conversion dans cette ville était de 205, produisant annuellement environ 79,000 tonnes d'acier ampoulé, et le nombre des fourneaux de fonte de 2,437, pro-

duisant environ 52,000 tonnes d'acier fondu par an. Une partie seulement de ces produits est employée dans la coutellerie.

3. Le jury sur la coutellerie à l'Exposition de Londres en 1862 a constaté que, dans les diverses branches du commerce de Sheffield comprenant la coutellerie de table, les rasoirs, les canifs et couteaux de poche et les ciseaux, l'augmentation du nombre des ouvriers avait été moins grande qu'autrefois entre cette date et l'Exposition précédente de 1851; mais que, grâce à l'usage plus étendu des machines, on avait néanmoins produit une quantité plus considérable de coutellerie de table que dans les années précédentes.

Le nombre de personnes employées à Sheffield dans les principales branches de cette industrie en 1864, était ainsi qu'il suit :—

Industries	Ouvriers	Ouvrières	Total
Fabrication des ciseaux	1,089	331	1,420
„ des limes	4,345	589	4,934
„ des scies	1,232	—	1,232
„ de la cou- tellerie	3,294	184	3,478
„ des lames	1,797	—	1,797
„ des cou- teaux	4,944	—	4,944
„ des rasoirs	817	—	817
Total . .	17,518	1,104	18,622

4. La moyenne du taux des gages payés par semaine dans les principales branches du commerce de Sheffield, en 1866, était—

Fabrication de la Coutellerie de Table			
Emplois	Gages	Heures de Travail	
	s.		
Forgeurs	28		60
Frappeurs	24		60
Emmancheurs	21		60
Remouleurs	30		60
Fabrication de la Coutellerie de Poche			
Emplois	Gages	Heures de Travail	
	s.		
Ouvrage fin			
Remouleurs	30		60
Forgeurs	30		60
Couteliers	25		60
Ouvriers pour manches et ressorts	25		60
Fabrication des Ciseaux			
Emplois	Gages	Heures de Travail	
	s. s.		
Forgeurs	20 à 30		60
Limeurs	20 „ 30		60
Remouleurs	27 „ 35		54
Polisseurs	22 „ 32		54

5. La valeur de la coutellerie anglaise exportée du Royaume-Uni pendant les quatre années 1862-65, était :—

	£
1862	291,244
1863	304,119
1864	386,859
1865	402,294

6. On emploie des machines dans quelques branches de la coutellerie, mais la plupart des opérations importantes se font à la main.

7. Quoique récemment aucune amélioration notable n'ait été faite dans la coutellerie, les produits de Sheffield soutiennent encore leur réputation pour l'excellence de la qualité, de la main-d'œuvre, de la beauté du dessin et du fini. Une École d'Art est établie à Sheffield depuis 1843, et le nombre des élèves instruits dans cette école en 1865 était de 1,763.

Classe XXI.

ORFÈVRERIE.

La fabrication des articles de métaux précieux se fait dans les principales villes du royaume, les principaux établissements de la métropole produisent annuellement de grandes quantités de vaisselle d'argent. Dans les dernières années l'usage très-étendu des objets plaqués a eu une tendance à limiter les opérations du commerce des métaux précieux; cependant on calcule que la valeur de l'argenterie de manufacture anglaise employée annuellement dans le pays dépasse la somme d'un million de livres sterling. Il se fait aussi un commerce d'exportation de cet article, dont la valeur s'élevait en 1865 à 62,532.

Il n'y a aucune statistique du nombre total des personnes employées à présent dans la manufacture des articles compris dans cette classe. Le nombre des orfèvres et bijoutiers à Londres est de 159, et de ciseleurs de 41.

Des progrès considérables ont été faits dans les dix dernières années dans l'application de l'art à la manufacture des ouvrages en métaux précieux; mais quant à la forme et à l'ornementation, une culture plus élevée comme pureté de style est en grand besoin parmi les ouvriers anglais dessinateurs d'argenterie.

Classe XXII.

BRONZES D'ART, FONTES D'ART DIVERSES ET OUVRAGES EN MÉTAUX REPOUSSÉS.

La manufacture des bronzes d'art dans le Royaume-Uni est d'une étendue très-limitée. La rareté des bons ciseleurs anglais a été attribuée à la méthode d'enseignement adoptée dans les écoles d'art, qui est plutôt calculée pour la production d'artistes et de sculpteurs que pour celle de bons ouvriers sur métaux.

La France fournit la plus grande partie des bronzes importés dans le pays, ayant envoyé pour la valeur de 55,168, sur un total d'importation de 61,307, dans l'année 1865.

Classe XXIII.

HORLOGERIE.

La manufacture des ouvrages d'horlogerie se fait principalement à Londres, Coventry,

Liverpool et Manchester. Les montres pour lesquelles les fabricants anglais sont surtout renommés sont les chronomètres et autres montres d'un ordre supérieur, quoiqu'un grand nombre de montres à bon marché se fasse dans le pays. Les meilleurs mouvements se font dans le comté de Lancaster, et une exportation considérable de mouvements de montres se fait annuellement aux États-Unis, où ils sont mis dans des boîtiers et finis. D'après le recensement de 1861, le nombre de personnes employées dans l'horlogerie dans chaque division du pays était de—

	Ouvriers	Ouvrières	Total
En Angleterre et dans le pays de Galles	20,221	536	20,757
Écosse . . .	1,699	8	1,707
Irlande . . .	951	12	963
Total . . .	22,871	556	23,427

Le nombre de personnes actuellement engagées dans les diverses branches de cette industrie à Londres, non-compris les ouvriers, est ainsi qu'il suit :—

Horlogers (montres) . . .	412
Fabricants de boîtiers . . .	55
Joailliers . . .	31
Fabricants de mouvements de montres . . .	277
Horlogers (pendules) . . .	162
Fabricants de boîtes d'horloges . . .	14

La valeur des pendules et montres importées pendant les cinq dernières années est restée presque stationnaire; en 1865 une valeur de 216,677*l.* en pendules et de 257,076*l.* en montres a été importée dans le Royaume-Uni. La valeur des marchandises anglaises exportées dans la même année s'élevait à 24,695*l.* en pendules, et à 69,179*l.* en montres.

Classe XXIV.

APPAREILS ET PROCÉDÉS DE CHAUFFAGE ET D'ÉCLAIRAGE.

La fabrication des espèces supérieures de grilles, de garde-cendres et de pèles et pin-cettes en fer et acier, se fait à Sheffield, où cette industrie est établie depuis 60 ou 70 ans; avant cette époque les corbeilles de qualité supérieure se fabriquaient à Londres et à Edimbourg. Les espèces plus communes de cheminées à l'anglaise se font principalement au Carron et autres fonderies en Écosse; à Coalbrookdale, à Londres, Northampton, Dudley, Rotherham, Birmingham, Mansfield, Nottingham et Derby. L'art de travailler, de polir, et de brunir l'acier est presque spécial à Sheffield, et à ses environs. Les districts où se trouvent les hauts-fourneaux de fonte offrent au fondeur le grand avantage du fer et du charbon à bon marché; c'est pourquoi il s'y fait la plus grande partie du commerce des cheminées à l'anglaise.

On peut à peine admettre que les appareils de chauffage par la circulation de l'air chaud, et les appareils de ventilation, aient été jusqu'à présent portés à une grande perfection; le manque de succès est peut-être attribuable, jusqu'à un certain point, au mode de construction des bâtiments auxquels ces appareils ont été appliqués.

Pour l'éclairage, l'usage croissant du gaz dans ces dernières années a considérablement remplacé l'huile, et un grand nombre des manufactures des anciennes lampes a cédé la place aux manufactures d'appareils à gaz. Quoique la consommation des huiles végétales et de poisson ait diminué, l'usage de l'huile paraffine récemment découverte a beaucoup augmenté et a donné naissance à la fabrication d'une nouvelle espèce de lampes, faites maintenant en grandes quantités à Birmingham, à des prix variant de 4*d.* à 50*s.* la pièce. Le développement rapide des communications à vapeur par terre et par mer a aussi donné naissance à une grande demande de lampes à signaux et autres, et a ainsi procuré de l'emploi aux fabricants autrefois engagés dans le commerce des lampes à l'huile de l'ancien système.

Classe XXV.

PARFUMERIE.

Le centre principal du commerce de la parfumerie est à Londres, quoique la manufacture des parfums, pommades, cosmétiques, etc., se fasse en moindres quantités dans la plupart des grandes villes du pays. Une faible partie de la matière première employée dans la manufacture de la parfumerie est le produit du pays; on l'importe principalement des états méridionaux de l'Europe et de l'Asie. La fabrication des savons de toilette dans le Royaume-Uni est très-considérable, le savon le plus renommé, peut-être, est celui connu sous le nom de 'savon de Windsor,' dont non-seulement l'emploi est considérable dans le pays, mais dont l'exportation se fait dans toutes les parties du monde. L'eau de lavande anglaise jouit aussi depuis longtemps d'une grande réputation.

Il n'y a pas de statistique officielle du nombre total des personnes engagées dans la fabrication de la parfumerie et du savon. Cependant l'accroissement général de ces diverses branches a créé un emploi pour un grand nombre de personnes, et l'introduction d'ouvrières pour les travaux légers a ouvert pour les femmes une nouvelle source d'occupations.

Le nombre de personnes engagées actuellement à Londres, dans les industries auxquelles se rattache la parfumerie, est ainsi qu'il suit :—

Parfumeurs :	
En gros . . .	151
En détail . . .	849
Fabricants de teintures pour les cheveux . . .	16

La valeur de la parfumerie anglaise (excepté les savons de toilette) exportée pendant l'année 1865 se montait à 94,351/. L'exportation des savons de toilette dans la même année a été de 7,628 quintaux, évalués à 32,361/.

Pendant les dernières dix années de grands progrès ont été faits dans les diverses branches de la parfumerie, et l'abolition du droit sur le savon en 1853 a eu les plus heureux effets sur la fabrication de cet article important et de première nécessité.

Classe XXVI.

OBJETS DE MAROQUINERIE, DE TABLETTERIE ET DE VANNERIE.

Il n'y a aucun moyen de déterminer la quantité produite des divers articles inclus dans cette classe. Peut-être la plus importante industrie qui s'y rattache est celle de la fabrication des brosses. L'emploi général des brosses dans les usages domestiques et du commerce a produit nécessairement une grande fabrication, l'étendue n'en est cependant pas déterminée. D'après le recensement de 1861, le nombre suivant de fabricants de brosses et de

balais de crin a été compté dans chaque division du royaume :—

En Angleterre et le pays de Galles	11,178
Écosse	535
Irlande	617

Total . . . 12,330

L'importation des brosses et balais de crin est de peu d'importance, et l'exportation de ces marchandises de fabrication anglaise en 1865 se montait seulement à 52,000/., la plus grande partie ayant été expédiée en Australie. D'autre part une importation considérable de soies de porc se fait annuellement; en 1865, 2,566,000 livres ont été importées principalement de Russie. De grandes quantités de brosses se font aussi de fibres de noix de coco.

Le commerce de vannerie du Royaume-Uni est principalement limité à la production d'articles d'une espèce commune, tels que corbeilles, mannequins, paniers d'emballage, etc.; quoique divers articles de fantaisie pour l'usage domestique se fassent aussi.

Les nécessaires de toilette anglais jouissent d'une haute réputation pour l'excellence de la manufacture et la perfection des arrangements; il y en a à tous prix depuis quelques shillings jusqu'à mille guinées. De grands perfectionnements ont été apportés dans la manufacture de ces articles depuis 1851.

GROUPE IV.

(CLASSES XXVII. à XXXIX.)

VÊTEMENTS (TISSUS COMPRIS) ET AUTRES OBJETS PORTÉS
PAR LA PERSONNE.

Classe XXVII.

FILS ET TISSUS DE COTON.

La manufacture du coton forme toujours la principale branche de l'industrie nationale du Royaume-Uni, malgré la crise sévère que le commerce du coton du pays, en commun avec celui de toute l'Europe, vient dernièrement de traverser.

1. Les sièges principaux de cette industrie en Angleterre sont dans le comté de Lancaster, et en Écosse dans le Lanarkshire. Les comtés de York, Chester, Derby et Nottingham ont aussi un grand nombre de filatures de coton.

D'après le rapport le plus récent (1861), le nombre total des filatures de coton dans le Royaume-Uni était de 2,887; sur ce nombre 2,715 pour l'Angleterre et le pays de Galles, 163 pour l'Écosse et 9 pour l'Irlande. Une courte table donnera peut-être une meilleure idée de la distribution de cette industrie dans les trois divisions du royaume:—

Divisions et Comtés	Nombre des Filatures	Nombre des Fusaux	Nombre des Métiers
Angleterre et pays de Galles :			
Lancaster . . .	1,979	21,530,532	306,423
York . . .	369	2,414,898	17,393
Chester . . .	212	3,373,113	32,926
Derby . . .	79	682,008	7,581
Nottingham . .	26	36,000	—
Autres comtés .	50	315,574	3,802
Total . . .	2,715	28,352,125	368,125
Écosse :			
Lanarkshire . .	96	1,138,602	24,149
Renfrew . . .	44	408,742	2,963
Autres comtés .	23	368,054	2,993
Total . . .	163	1,915,398	30,110
Irlande . . .	9	119,944	1,757
Royaume-Uni .	2,887	30,387,467	399,992

La table ci-dessus peut être prise comme une juste représentation de l'industrie du coton dans un temps d'activité ordinaire. Beaucoup

de nouvelles machines ont été ajoutées depuis 1861, mais plusieurs filatures sont encore inactives.

Dans le comté de Lancaster et dans les districts du Cheshire, dont Manchester peut être considéré comme le centre, on produit des fils de coton, des marchandises en pièce légères et fortes, des calicos imprimés, des velours, etc. etc. de toutes qualités; tandis qu'à Glasgow, qui est le centre de l'industrie du coton en Écosse, on produit surtout les espèces plus légères comme les batistes, les jaconas, etc.

Quant aux tissus mixtes, qui sont inclus dans cette classe, il est à peine possible de décrire les articles presque innombrables dont le coton forme une partie constituante. Les plus importants, cependant, sont manufacturés à Bradford et autres parties du comté d'York, c'est à dire, les étoffes de laine et coton qui ont toute l'apparence des étoffes pur laine, quoique nécessairement d'un prix beaucoup plus réduit. De plus amples informations sur ces tissus seront données Classe 29.

2. Avant la guerre civile des États-Unis, l'Angleterre recevait de ce pays la plus grande partie des matières premières employées dans cette industrie. La moyenne de l'importation totale du coton brut dans les cinq années de 1856 à 1860 se montait à 1,129 millions de livres par an, dont 869 millions de livres provenaient annuellement des États-Unis.

Pendant la même période une moyenne de 171 millions de livres s'exportait annuellement, laissant 958 millions de livres pour la moyenne de la consommation annuelle du pays.

Au commencement de la guerre d'Amérique, la Chambre de Commerce de Manchester prit des mesures actives pour encourager la culture du coton dans diverses parties du globe, et plusieurs contrées, particulièrement les Indes Anglaises, l'Égypte, le Brésil et d'autres états de l'Amérique du Sud, et même la Chine et le Japon, augmentèrent considérablement leur culture du coton, et contribuèrent à approvisionner les marchés Anglais pendant les années de 1861 à 1865. Dans la dernière année, cependant, la provision reçue de quelques-uns de ces pays

diminua, et il est probable qu'ils ne pourront entrer en concurrence avec le producteur américain en temps de paix et de tranquillité.

Les trois pays qui fournissaient la plus grande quantité de coton pendant la guerre d'Amérique étaient les Indes Anglaises, l'Égypte et le Brésil. Les importations de cotons bruts pendant l'année 1865 ont été de—

	Livres
L'Inde Anglaise	446,000,000
États-Unis, y compris les Bahamas et le Mexique . . . }	190,000,000
Égypte	177,000,000
Brésil	55,000,000
Chine	36,000,000
Littoral de la Méditerranée (excepté l'Égypte) . . . }	27,000,000
Autres pays	47,000,000
Total	978,000,000

Sur cette quantité 303 millions de livres ont été réexportées, laissant 675 millions de livres pour la consommation.

Les importations de coton brut dans les onze premiers mois de 1866 se montaient à 1,260 millions de livres, et dépassaient de 482 millions de livres les importations du même produit dans l'année précédente. De cette quantité 474 millions de livres furent tirées des États-Unis, et 586 millions de livres de l'Inde Anglaise; 361 millions de livres ont été réexportées pendant les onze mois, laissant 899 millions de livres pour la consommation.

Les variations dans le prix du coton de 1860 au moment présent ont été comme suit :—

En décembre	Coton des plateaux de l'Amérique, bonne qualité, par livre
1860	7 $\frac{1}{4}$
1861	11
1862	23 $\frac{3}{8}$
1863	27 $\frac{1}{8}$
1864	27 $\frac{1}{2}$
1865	22

En juillet et août 1864 la côte s'est élevée à 31 $\frac{1}{2}$ d. par livre. Le coton indien obtint aussi des prix élevés de 1862 à 1865. Les prix actuels (décembre 1866) sont de 16d. pour le coton américain, bonne qualité, et de 12 $\frac{1}{2}$ d. pour le bon Dhollerah (indien).

Il faut remarquer que pendant la crise, le prix des marchandises de coton ne s'est pas élevé dans les mêmes proportions que le prix du coton brut; les frais de fabrication étant restés les mêmes depuis quelques années, ayant plutôt légèrement baissé, à cause de l'emploi de meilleures machines, et afin de maintenir la modicité des prix des tissus, on les fit plus légers en qualité, et contenant par conséquent moins des matières devenues chères. La baisse dans le prix du coton et le retour de demandes régulières de marchandises a heureusement permis aux manufacturiers de revenir maintenant aux anciennes qualités et de rétablir la réputation de leurs marchandises.

3. Sur 451,000 personnes employées dans les filatures de coton dans le Royaume-Uni en 1861, 315,000, ou 70 pour cent, étaient ainsi occupées dans le district du comté de Lancaster. La table suivante donne le sexe et l'âge du nombre total des ouvriers :—

	En Angleterre et le Pays de Galles	En Écosse	En Irlande	Dans le Royaume-Uni
Hommes :	No.	No.	No.	No.
Au-dessous de 13 . . .	21,774	307	—	22,081
De 13 à 18 . . .	38,210	2,661	336	41,207
Au-dessus de 18 . . .	113,720	5,060	488	119,268
Total . . .	173,704	8,028	824	182,556
Femmes :				
Au-dessous de 13 . . .	17,382	325	—	17,707
Au-dessus de 13 . . .	216,512	32,884	1,910	251,306
Total . . .	233,894	33,209	1,910	269,013
Total . . .	407,598	41,237	2,734	451,569

Il est inutile de répéter ici l'histoire de la famine du coton et ses conséquences sur les ouvriers. Le résultat de cet événement fut, pendant un temps considérable, d'engager tous ceux qui pouvaient obtenir de l'emploi à le chercher dans d'autres branches d'industrie, et par conséquent lorsque les filatures furent de nouveau ouvertes, on éprouva quelque difficulté à obtenir de bons ouvriers. Si on juge par la quantité présente de produits et la probable continuation des demandes, tant dans le pays qu'à l'étranger, il y a toute raison d'espérer que la manufacture du coton donnera des moyens d'existence à un aussi grand nombre de personnes, maintenant, qu'en 1861. D'après de bonnes informations, la quantité de coton employée maintenant (décembre) est presque égale à celle employée en 1860.

4. La moyenne du taux des gages reçus dans les principales branches de l'industrie du coton dans le district de Lancaster en 1860 était :—

	Par semaine de 60 heures
Filature :	s. s. d.
Fileurs aux métiers automoteurs	20 à 22 0
Tissage :	
Tisserands aux métiers mus par la vapeur (pour la plupart ouvrières) sur 2 métiers . . .	10 „ 10 9
„ 3 „ . . .	15 „ 16 0
„ 4 „ . . .	16 „ 20 0

Le taux des gages actuels est d'environ 10 pour cent plus élevé que ceux payés en 1860 à cause de la rareté des ouvriers.

Si on prend en considération la sévère épreuve que la population ouvrière a supportée dernièrement dans ces districts, on trouvera la condition générale des ouvriers, très-satisfaisante. On peut se permettre de leur donner de l'emploi à de bons gages, et comme plusieurs membres de la même famille trouvent une occupation

dans les filatures, leurs gains réunis suffisent pour les maintenir dans une position aisée.

M. H. Ashworth a constaté, dans un mémoire lu devant l'Association de Sciences Sociales à Manchester, en octobre 1866, 'que l'augmentation dans les dernières années des écoles journalières, des écoles du dimanche et des écoles des filatures, a eu une grande tendance à développer l'intelligence et à améliorer la conduite et les mœurs des classes ouvrières.

'Un grand nombre d'institutions (Mechanics' Institutes), de clubs et de collèges d'ouvriers, de bibliothèques gratuites et autres institutions semblables qui donnent des moyens de culture morale, ont été établis, et sont très-fréquentés et appréciés de la classe ouvrière. En outre de cela une presse libre et à bon marché a placé dans les mains de l'ouvrier anglais un moyen d'éducation dont on ne jouit encore dans presque aucune autre partie du monde.

'Des habitudes de frugalité et de prévoyance sont visibles dans le désir d'un grand nombre d'entre eux d'arriver à la possession de ressources qui les placeraient à l'abri du besoin, ou même les conduiraient à une richesse supérieure. L'établissement parmi eux de sociétés co-opératives et de compagnies manufacturières et commerciales, formées à l'aide des fonds de réserve du peuple, et conduites exclusivement par les plus capables et les plus intégrés de leurs membres, est un signe de leurs habitudes de prévoyance et d'économie.' Le 31 décembre 1865 il y avait 139 de ces sociétés en existence dans le Lancashire seulement.

5. La valeur des tissus de coton importés dans le Royaume-Uni est petite comparée à celle des exportations, étant moins d'un million de livres sterling par an. Les articles importés consistent principalement en mousselines françaises; en indiennes et autres marchandises en pièces (dont une grande partie est réexportée); et en bonneterie venant principalement d'Allemagne.

6. D'autre part, le fil de coton et les tissus exportés du Royaume-Uni forment la plus grande partie des exportations du pays, comme on le verra par la table suivante :—

Années	En millions de £ sterling					
	Fils de Coton	Marchandises en Pièces		Autres Espèces	Total des Fils de Cotons et Tissus	Valeur Totale des Exportations Anglaises
		Blanches ou Unies	Imprimées, à Carreaux, ou Teintes			
1860	10	23	17	2	52	136
1861	9	22	14	1	46	125
1862	6	16	12	2	36	124
1863	8	23	14	2	47	146
1864	9	27	17	2	55	160
1865	10	28	17	2	57	166

La table suivante des quantités et de la valeur des marchandises et du fil exportés en 1860 et en 1865 donnera une idée générale de l'augmentation de la valeur des produits de coton :—

Coton filé :	Quantités Livres	Valeur £
1860 . .	197,343,000	9,870,000
1865 . .	103,533,000	10,343,000
Fil à coudre :		
1860 . .	6,297,000	741,000
1865 . .	4,626,000	753,000

Marchandises en pièce de toutes espèces :

	Yards	£
1860 . .	2,776,000,000	40,346,000
1865 . .	2,015,000,000	44,860,000

7. La manufacture du coton se fait presque entièrement au moyen de machines. Le total de la force motrice en 1861 était de 281,663 chevaux (de vapeur), et de 12,467 chevaux (hydrauliques). On a, cependant, beaucoup ajouté aux machines depuis 1861.

8. Il serait difficile de désigner ici les nombreuses améliorations qui ont été faites dans les machines et les procédés employés dans la manufacture du coton à cause du grand développement qui a eu lieu depuis quelques années dans ce commerce du Royaume-Uni. Les progrès se sont faits plutôt en simplifiant et perfectionnant les machines existantes, qu'en introduisant de nouveaux modes de fabrication.

Le jury nommé pour faire un rapport sur les machines à l'Exposition de Londres en 1862 a constaté 'que les mécaniques anglaises pour la filature du coton ne pouvaient être trop hautement recommandées, tant pour ce qui regarde la construction générale des machines, l'arrangement judicieux et l'ajustage des diverses pièces les unes aux autres, la perfection obtenue par l'introduction d'améliorations nouvelles, que pour l'excellence du travail et du fini.

'Par les perfectionnements apportés, les exposants s'étaient appliqués à rendre leurs machines aussi certaines dans leurs divers changements et mouvements, aussi automatiques et aussi parfaites que possible. Ces efforts ont été en très-grande partie couronnés de succès, et ont eu comme conséquence la construction de machines d'une plus grande efficacité, tant pour la production que pour la qualité du travail, efficacité plus grande que celle obtenue jusque là.'

Quant aux métiers à tisser, il fut aussi mentionné 'que, pour les arrangements et le travail, les louanges faites des machines à filer étaient également dues aux machines à tisser.'

De grands progrès ont aussi été observés dans les métiers à dévider, à apprêter et à ourdir, comparés à ceux exposés en 1851.

Le changement le plus important depuis 1862 a été l'adaptation d'une grande partie des machines existantes au travail du coton, courte soie, des Indes, et autres cotons, dont on ne faisait que peu d'usage avant la guerre d'Amérique. On accélère le mouvement des machines autant que possible, mais les qualités inférieures de coton ne peuvent être filées avec une grande rapidité, et demandent une plus grande quantité de mécanique que les qualités supérieures.

9. En outre des progrès qui ont été faits dans les branches mécaniques de l'industrie du coton, les moyens adoptés par le gouvernement pour perfectionner l'éducation et le goût des artisans, ne doivent pas être passés sous silence. Des écoles de science et d'art sont maintenant établies, en relation avec le Département de Science et d'Art, dans le centre des districts manufacturiers, ainsi que dans d'autres parties du pays, et plusieurs milliers d'élèves y sont instruits annuellement dans les éléments des sciences et dans les principes bien fondés de l'art. En outre de ces écoles, des collections d'objets d'art ont été organisées et sont envoyées de provinces en provinces, et ainsi beaucoup d'ouvriers, qui ne pourraient se permettre de faire la dépense d'un voyage dans la capitale pour visiter les collections d'objets d'art, ont d'excellents modèles apportés jusque chez eux.

L'instruction ainsi donnée a produit les plus heureux résultats dans les manufactures du pays. Un grand progrès fut évident pour tous ceux qui visitèrent les deux expositions de 1851 et 1862; et on croit que les objets exposés dans cette classe de la Section Britannique de l'Exposition montreront un avancement considérable dans l'appréciation des beaux-arts, tant pour couleur que pour dessin, comparés à ceux exposés dans la dernière exposition de Paris en 1855.

[Pour les articles de *Bonneterie* et de *Lingerie*, voir la Classe 34.]

Classe XXVIII.

FILS ET TISSUS DE LIN, DE CHANVRE, ETC.

1. On comprend dans cette classe les fils de lin et les produits fabriqués de fibres végétales autres que le coton.

L'industrie des toiles, ou tissus de lin et de chanvre, est très-considérable dans tout le royaume, mais plus particulièrement en Irlande dans les comtés de Antrim et de Down. Les principales branches de ce commerce en Angleterre se trouvent dans les comtés de York et de Lancaster; et en Écosse dans les comtés de Forfar et de Fife.

Les tissus de jute (qui sont, pour ainsi dire, inconnus dans les pays étrangers excepté en France et en Hollande) sont devenus d'une si grande importance en Écosse qu'ils méritent d'être mentionnés à part. Le siège de la manufacture est à Dundee. La jute est une plante fibreuse ressemblant beaucoup au chanvre et qui est employée principalement pour les grosses toiles à sacs et à emballages et pour les tapis.

Le nombre des manufactures de lin, de chanvre et de jute dans les trois divisions du Royaume-Uni en 1861 était—

Divisions et Comtés	Filatures	Fuseaux	Métiers à Vapeur
FILATURES DE LIN			
Angleterre et pays de Galles :			
Lancaster . . .	13	117,412	489
York . . .	70	172,272	1,403
Autres comtés . .	53	54,624	268
Total . .	136	344,308	2,160
Écosse :			
Forfar . . .	85	160,090	5,108
Fife . . .	46	54,383	1,823
Autres comtés . .	32	64,912	1,935
Total . .	163	279,385	7,966
Irlande :			
Antrim . . .	47	260,592	2,854
Down . . .	15	103,630	128
Autres comtés . .	38	128,759	1,684
Total . .	100	592,981	4,666
Total Royaume-Uni .	399	1,216,674	14,792
FILATURES DE CHANVRE			
Angleterre et pays de Galles :	3	264	1
Écosse . . .	2	2,316	—
Irlande . . .	—	—	—
Total . .	5	2,580	1
FILATURES DE JUTE			
Angleterre et pays de Galles :	4	620	—
Écosse . . .	27	30,538	554
Irlande . . .	5	1,824	—
Total . .	36	32,982	554

Depuis 1861, cependant, le commerce des toiles et de jute a fait de grands progrès, comme on peut le voir par les statistiques suivantes.

Ce qui suit est un rapport de la position de l'industrie de la toile en Irlande au 1^{er} janvier 1866, publié par M. McIlwrath, Secrétaire du Comité du Commerce des Toiles à Belfast :—

Filatures de Lin.

Nombre des filatures, 86; fuseaux employés 759,452; id. non-employés, 11,362: total, 770,814, et une addition proposée de 103,792 fuseaux.

Tissage à Vapeur

Nombre des manufactures, 44; métiers employés, 10,538; id. non-employés, 266: total, 10,804, et une addition proposée de 6,484 métiers.

Il y avait aussi 17,786 fuseaux, et une addition proposée de 4,656 fuseaux employés à tordre le fil. On construisait aussi de nouvelles manufactures et filatures pouvant contenir une addition proposée de 62,000 fuseaux et de 1,400 métiers.

On produit dans les localités de Belfast, Forfar, Brechin, Dunfermline, Barnsley et Manchester, les toiles unies et damassées, la batiste,

les mouchoirs et autres toiles légères, tandis que les tissus plus forts, toiles à voiles, à sacs, etc. comprises, se font dans les districts de Dundee, Hull, Greenock et Arbroath. On fabrique aussi largement les fils de lin à Leeds.

M. R. Sturrock, Secrétaire de la Chambre de Commerce de Dundee, rapporte que la manufacture de la jute fut connue pour la première fois à Dundee vers 1830, et qu'en 1865 près de soixante-douze mille tonnes de jute brute étaient importées dans cette ville.

Il évalue le nombre présent de manufactures pour filer et tisser la jute à environ 60, contenant 100,000 fuseaux et 5,000 métiers à vapeur.

2. Une grande partie des matières premières employées dans l'industrie des lins du Royaume-Uni se produit dans le pays. La table suivante montre les quantités respectives de la production du pays évaluée en 1866, et des importations de l'étranger dans les cinq années 1861-65:—

PRODUCTION DU ROYAUME-UNI.

	Acres
Nombre d'acres cultivés en lin en Irlande en 1866	263,659
Produit évalué en 1866	Quintaux 1,054,000

PRODUITS ÉTRANGERS IMPORTÉS POUR LA CONSOMMATION

Années	Lin	Chanvre	Jute
	Quintaux	Quintaux	Quintaux
1861	1,286,000	738,000	817,000
1862	1,788,000	908,000	849,000
1863	1,416,000	956,000	1,057,000
1864	1,774,000	943,000	1,754,000
1865	1,867,000	913,000	1,691,000

Une proportion considérable du chanvre est employée dans la manufacture des cordes, cordages, etc.

En 1861 les champs de lin couvraient en Irlande une surface de seulement 148,000 acres, et le produit en était évalué à 451,000 quintaux.

Il n'y a aucune statistique sur la culture du lin en Ecosse; on ne l'y produit d'ailleurs qu'en petites quantités, et on croit que la culture a diminué pendant les derniers dix ans. Les exportations de lin anglais sont de proportions insignifiantes, n'ayant été que de 35,000 quintaux en 1865. Le total des matières premières employées dans les industries des lins et de la jute peut donc être à peu près évalué entre quatre et cinq millions de quintaux.

En 1865 la Russie a envoyé 76 pour cent du lin et 60 pour cent du chanvre bruts importés.

L'Autriche et les Îles Philippines ont aussi beaucoup contribué à fournir du chanvre. La jute est entièrement importée des Indes Anglaises.

3. Le nombre des personnes des deux sexes et de tout âge employées dans les filatures de lin, de chanvre et de jute, dans chaque division du royaume, était, selon le dernier recensement (1861), comme suit:—

	Angleterre et Pays de Galles	Écosse	Irlande	Royaume-Uni
Ouvriers:				
Au-dessous de 13	866	328	236	1,450
De 13 à 18 .	1,422	3,461	3,771	8,654
Au-dessus de 18 .	3,682	6,842	6,142	16,666
Total . . .	5,990	10,631	10,149	26,770
Ouvrières:				
Au-dessous de 13	1,108	627	459	2,194
Au-dessus de 13 .	13,376	28,304	23,359	65,039
Total . . .	14,484	28,931	23,818	67,233
Total hommes et femmes . . .	20,474	39,562	33,967	94,003

Le nombre des ouvriers employés actuellement dans le commerce de la toile et de la jute excède de beaucoup le total ci-dessus.

On a déjà fait voir l'accroissement de la consommation des matières brutes pendant les cinq ou six dernières années; la conséquence naturelle en a été une considérable addition d'industriels dans les manufactures.

Le nombre des ouvriers employés à Dundee dans l'industrie de la jute est maintenant d'environ 28,000; sur ce nombre près d'un tiers sont des hommes et deux tiers des femmes.

4. La moyenne du taux des gages payés dans le commerce des lins à Belfast et à Dundee en 1866 était:—

	Par jour de 10 heures
	s. d.
À Belfast { Aux fileuses	1 4½
(toile) { „ tisserands (femmes)	1 8
	et filles)
	Par semaine de 60 heures
	s. d. s. d.
À Dundee { Aux fileuses	8 6 à 14 6
(toile) { „ tisserands (femmes)	8 0 „ 15 0

La condition des industriels s'est beaucoup améliorée dans les dernières années, grâce à l'augmentation des demandes et au besoin constant de leur travail.

Le taux des gages payés dans les manufactures de jute en 1866 était:—

	Par semaine de 60 heures
	s. d. s. d.
Fileuses	10 0
Tisserands (femmes)	12 6 à 13 4

Les filatures de jute sont bien bâties, bien aérées, et beaucoup d'attention a été donnée au bien-être de l'ouvrier. La classe ouvrière prise en masse jouit d'une bonne santé, est sobre, industrielle et prévoyante.

5. Les importations de toiles, etc., fils et tissus, sont petites comparées avec les exportations. En 1865, 1,216,480 livres de fil de lin, et une valeur de 153,104*l.*, en tissus ont été importés dans le Royaume-Uni. 1,958,000 livres de jute filée, principalement de France, ont aussi été importées dans la même année; la

valeur totale des articles précédents étant de 278,000.

6. D'un autre côté, les exportations de ces articles ont été très-considérables. La table suivante montre la valeur de la toile anglaise, jute filée et tissus exportés pendant les six années 1860-65 :—

Années	Toile		Jute*	
	Fils	Tissus, etc.	Fils	Tissus, etc.
	£	£	non-rapporté	non-rapporté
1860	1,801,000	4,804,000		
1861	1,622,000	3,852,000	85,426	127,031
1862	1,852,000	5,133,000	96,152	133,149
1863	2,530,000	6,508,000	154,618	243,379
1864	2,991,000	8,172,000	114,503	356,764
1865	2,535,000	9,156,000	82,141	311,540

* Ces chiffres ne représentent pas la totalité des exportations de jute, une grande partie étant comprise dans la classe des marchandises de fil.

La valeur des tissus blancs, unis et damassés se montait à sept millions et demi sterling sur une valeur totale de neuf millions en 1865. La valeur du fil de lin à coudre exporté dans la même année était de 558,000.

Pendant les dix années 1851-60, le commerce d'exportation des marchandises de fil du Royaume-Uni resta stationnaire, se montant à un peu plus de quatre millions sterling par an.

Les proportions relatives de la quantité et de la valeur des principales espèces des marchandises de fil exportées en 1860 et 1865 étaient de—

		1860	1865
		Quantités	
Fils de lin . . . livres		31,210,000	36,796,000
Tissus :			
Blancs, unis et damassés . . . yards		136,936,000	222,790,000
Imprimés, teints, ou à carreaux . . . "		3,203,000	16,965,000
Toile à voile . . . "		3,857,000	7,250,000
Fil à coudre . . . livres		3,229,000	3,935,000
		Valeur	
Fils de lin . . . livres		£ 1,801,000	£ 2,535,000
Tissus :			
Blancs, unis et damassés . . . yards		4,161,000	7,537,000
Imprimés, teints, ou à carreaux . . . "		98,000	606,000
Toile à voile . . . "		175,000	383,000
Fil à coudre . . . livres		340,000	558,000

7. La fabrication de la toile se fait presque entièrement par le moyen de machines ; il est vrai que les métiers à la main sont encore employés en Irlande, mais l'usage en décroît rapidement. Le Dr. Watts rapporte, dans *The Facts of the Cotton Famine*, que 'l'économie du travail dans la production des fils de lin semble avoir fait de grands progrès pendant les derniers dix ans. Il y a dix ans, neuf ou dix échevettes par fuseau par semaine du fil No. 30 étaient considérées comme un bon travail ; mais en 1865 dix-huit échevettes du même fil par semaine étaient produites.'

On peut dire aussi que la manufacture de la jute est entièrement exécutée par des machines.

8. Le jury nommé pour examiner les marchandises de lin envoyées à l'Exposition de Londres en 1862 a rapporté que 'l'Angleterre et l'Irlande semblent l'une et l'autre avoir fait des progrès considérables dans la culture et les préparations du lin.' L'Irlande a aussi mérité une mention spéciale pour le bon goût montré dans ses collections de batistes imprimées et ses toiles. Les toiles imprimées sont principalement en usage à l'étranger. On constata aussi la bonne qualité des toiles d'Irlande blanchies, ce qu'on attribue à la nature convenable du climat pour le blanchissage et à l'heureuse combinaison des procédés en plein air et des moyens chimiques. De grands progrès ont aussi été remarqués dans la fabrication des étoupes de lin et l'emploi plus étendu de métiers à vapeur.

On a déjà mentionné la position stationnaire de l'exportation du linge pendant les dix ans qui ont précédé 1861. M. Alcan, rapporteur de la Classe 19 à l'Exposition de 1862, a fait des remarques très-intéressantes sur ce sujet, et il attribuait le manque d'accroissement aux difficultés éprouvées à travailler la matière en nature, en comparaison de la facilité avec laquelle on file le coton brut. Il a constaté que les fils de lin faits par les machines coûtent plus à égales longueurs, pour le même poids de fibres, que les fils de coton. Les machines nécessaires pour filer le lin sont beaucoup plus fortes et demandent une plus grande force de vapeur que les machines à filer le coton. Ceci est dû au mode défectueux de la mise en trempe du lin, qui laisse une trop grande quantité de gomme dans les fibres, ce qui les rend plus difficiles à filer.

Une conséquence de l'interruption du commerce du coton pendant la guerre d'Amérique a été d'augmenter les demandes pour les tissus de fil, et ainsi un élan extraordinaire a été donné à l'industrie des lins. Les prix élevés auxquels se vendaient les toiles pendant la panique du coton engagèrent les propriétaires fonciers à cultiver le lin plus largement ; ils ont aussi stimulé les producteurs étrangers à envoyer leurs produits sur les marchés anglais ; le résultat fut de raviver considérablement le commerce de la toile. Il y a toute raison d'espérer que si les efforts qui ont été faits pendant les dernières années sont soutenus, l'industrie des lins comptera une ère nouvelle de la suspension du commerce du coton et ajoutera matériellement à la richesse du pays.

Quant à l'industrie de la jute, des perfectionnements constants se font dans les machines, et grâce à de récentes découvertes, l'application de la jute à divers articles manufacturés s'étend considérablement. Le nombre des élèves de l'École d'Art de Dundee en 1865 était de 1,922, et on a constaté que les ouvriers dans le commerce de la jute avaient tiré de grands avantages de l'instruction qu'ils y recevaient.

Classe XXIX.

FILS ET TISSUS DE LAINE PEIGNÉE.

1. Le nom de 'Worsted,' donné aux tissus faits de laine peignée, est, dit-on, dérivé du nom d'un village du comté de Norfolk où cette fabrication prit naissance. L'industrie de la laine filée est de très-ancienne date, mais c'est comparativement récemment qu'elle a atteint son importance actuelle. Depuis 1825 elle fit de grands progrès, mais jusqu'à cette époque des fils de laine pure seulement étaient manufacturés. Quelques années plus tard une chaîne de coton fut introduite, et un grand élan fut ainsi donné à la fabrication. On fait maintenant des fils de laine peignée pure, et des mélanges de laine, de coton, de soie, d'alpaca, etc., et le commerce des 'worsteds' est aujourd'hui aussi considérable, sinon plus considérable, que l'industrie des laines.

Les tissus de laine peignée pure comprennent les mérinos simples et croisés, serges et sergettes, lastings, etc., et damas pour tentures. Parmi les tissus mixtes, ceux composés de laine et coton comme 'cobourgs et orléans' ont été en grande vogue; les autres mélanges se fabriquent aussi sur une grande échelle et dans tous les divers degrés de qualité. Bradford est renommé pour la production des mérinos simples et des tissus mixtes, et Halifax pour les tissus épais et les damas, etc.

Bradford, dans le comté d'York, est le siège principal de l'industrie des tissus de laine peignée. Le nombre des filatures de laine peignée dans chaque division du Royaume-Uni en 1861 était de—

Divisions	Nombre des Filatures	Nombre des Fuseaux	Nombre des Métiers à Vapeur
Angleterre et pays de Galles :			
Comté d'York . . .	443	1,149,072	40,577
Autres comtés . . .	69	96,454	2,391
Total . . .	512	1,245,526	42,968
Écosse . . .	17	38,946	80
Irlande . . .	3	4,700	—
Total, Royaume-Uni	532	1,289,172	43,048

Quoiqu'il n'y ait pas de statistique officielle plus récente du nombre de fuseaux et de métiers employés dans la filature de la laine peignée, il est certain que le nombre en a beaucoup augmenté depuis 1861.

2. Les sources d'approvisionnement de laine, de coton et de soie à l'état brut employés dans l'industrie de la laine peignée se trouvera dans les notes sur les Classes 27, 30 et 31. Pour le poil de chèvre la table suivante montre les importations des cinq années 1861-65:—

	Poils de chèvre ou laine
1861 . . .	Livres 3,335,000
1862 . . .	4,048,000
1863 . . .	3,434,000
1864 . . .	4,737,000
1865 . . .	5,402,000

M. Behrens a évalué la quantité totale des matières premières (laine, poil de chèvre, coton, etc.) employées dans l'industrie de la laine peignée en 1864, à environ 150 millions de livres, dont la valeur, après manufacture, était d'environ 33,600,000*l.* sterling.

3. Sur le nombre total des ouvriers employés dans les filatures de laine peignée du Royaume-Uni en 1861, 76,000 ou 88 pour cent étaient engagés dans les filatures du comté d'York. L'âge et le sexe du nombre total des ouvriers sont donnés dans la table suivante:—

	En Angleterre et le Pays de Galles	En Écosse	En Irlande	Dans le Royaume-Uni
Hommes :				
Au-dessous de 13	6,268	—	—	6,268
De 13 à 18 . . .	6,424	178	12	6,614
Au-dessus de 18	17,700	895	24	18,619
Total . . .	30,392	1,073	36	31,501
Femmes :				
Au-dessous de 13	6,906	4	—	6,910
Au-dessus de 13	45,674	1,839	139	47,652
Total . . .	52,580	1,843	139	54,562
Total . . .	82,972	2,916	175	86,063

Ce qui précède est le dernier rapport officiel du nombre de personnes employées, mais on croit qu'il est considérablement au-dessous du nombre actuellement en emploi dans les filatures de laine peignée du pays.

4. La moyenne du taux des gages payés dans les principales branches de cette industrie en 1866 était—

À BRADFORD.

Fileuses 7*s.* à 10*s.* par semaine de 55 heures
Tisserands :

Hommes . . .	18 <i>s.</i>	„	„	60	„
Femmes . . .	12 <i>s.</i>	„	„	55	„

À HALIFAX.

Fileurs :

Hommes . . .	30 <i>s.</i>	par semaine de 60 heures
Femmes 7 <i>s.</i> 6 <i>d.</i> à 8 <i>s.</i> 6 <i>d.</i>	„	„ 60 „

Tisserands :

Hommes . . .	16 <i>s.</i> „ 24 <i>s.</i>	„	„ 60	„
Femmes . . .	8 <i>s.</i> „ 12 <i>s.</i>	„	„ 60	„

5. Les importations de fils de laine peignée sont mentionnées sous la Classe 30. Les importations de tissus de laine peignée ne sont pas très-considérables. En 1865, 154,000 pièces ont été importées, évaluées à 334,000*l.* Ces marchandises venaient principalement de France.

6. Un grand accroissement dans l'exportation des tissus de laine peignée a eu lieu

depuis l'an 1860, comme on le verra par la table suivante :—

		1860	1865
Fils de laine { livres		26,455,000	30,221,000
peignée . . . { £		3,578,000	5,074,000
Tissus de laine { yards		148,685,000	233,078,000
peignée . . . { £		7,013,000	13,361,000

Un grand commerce de tissus de laine peignée s'est fait avec la France depuis la conclusion du traité de commerce avec ce pays, la valeur de ces exportations s'étant élevée à la somme de 1,332,000*l.* sterling en 1865.

7. La filature de la laine peignée se fait entièrement au moyen de machines. La force motrice employée dans les manufactures en 1861 était de 26,234 chevaux de vapeur et de 1,970 chevaux de force hydraulique.

8. Le succès du commerce des laines peignées en Angleterre est dû à la persévérance et à l'habileté manifestées par l'introduction d'une variété infinie de marchandises faites de mélanges de laines animales et de fibres végétales, qui, par le grand choix des qualités et des prix, sont entrées largement dans l'usage de la population pour vêtements et ameublement.

Les procédés chimiques nécessaires pour teindre d'une manière égale et régulière les tissus composés de substances animales et végétales sont nécessairement variés et compliqués; mais les efforts du teinturier ont été si heureux que les marchandises faites d'une chaîne de coton blanc et d'une trame de laine peignée peuvent se teindre d'une couleur aussi unie que le mérinos français pur laine.

Quant aux progrès récents de ce commerce, le jury des tissus mélangés en 1862 a constaté 'un grand perfectionnement dans la teinture des marchandises trame coton, dans le fini des divers tissus de laine lustrée et de poil de chèvre, et plus spécialement dans le goût et la connaissance des couleurs que l'on remarquait dans les tissus façonnés qui forment maintenant une branche si importante de ce commerce.'

Une École d'Art fut établie à Bradford en 1865, et elle contribuera sans doute à perfectionner le goût de toutes les personnes engagées dans l'importante industrie de ce district.

[Pour les articles de *Bonneterie* et de *Lingerie*, voir la Classe 34.]

Classe XXX.

FILS ET TISSUS DE LAINE CARDÉE.

1. Quoique l'industrie des laines existât en Angleterre à une époque très-reculée, il y a peu

de doute que l'acte du roi Édouard III n'en ait fait un établissement permanent en invitant les manufacturiers flamands à venir s'établir dans ce pays dans l'année 1331. Avant cet acte la laine anglaise était exportée en Flandre, et revenait manufacturée; mais depuis cette époque, les manufactures de laine ont constamment augmenté, et ont toujours été regardées comme une des plus importantes industries du pays.

Les manufactures de laine du West-Riding du Yorkshire et celles de l'ouest de l'Angleterre, qui furent établies sous le règne d'Édouard III, sont restées jusqu'à ce jour les sièges principaux de cette grande industrie. Leeds est le centre le plus important du district du West-Riding et peut être considéré comme la métropole du commerce des lainages. Huddersfield, et les environs, est la seconde ville en importance, et est renommée, en outre de ses produits en draps fins, par un grand commerce de draps de fantaisie pour pantalons, etc. Dans l'ouest de l'Angleterre, Trowbridge, en Wiltshire, est le centre d'un grand district qui produit des marchandises de fantaisie et des draps légers de divers genres; Stroud, dans le comté de Gloucester, est célèbre pour ses draps écarlates et autres couleurs brillantes; cette célébrité vient de la qualité particulièrement bonne des eaux pour les opérations de teinture. Les tissus écossais, tweeds, tartans, etc. sont généralement très-souples et de bon teint. Les couvertures de laine, qui sont aussi comprises dans cette classe, se font principalement à Witney, dans le comté d'Oxford, et à Dewsbury, dans le comté d'York. Les flanelles se produisent dans le pays de Galles principalement à la main; Rochdale et les environs sont maintenant le centre de cette branche du commerce anglais. Les tapis de feutre se font aussi dans le comté d'York et sont en grand usage en Angleterre comme substitués à bon marché des tapis.

Une branche très-importante du commerce des lainages, et qui mérite d'être mentionnée plus spécialement, est celle appelée 'shoddy.' Les remarques intéressantes suivantes sur ce commerce ont été faites par le jury pour l'industrie des laines à l'Exposition de 1862 :— Le "shoddy" est de trois espèces : 1. Le shoddy manufacturé de chiffons de laine doux, tels que flanelles, couvertures, bas, tapis, etc.; 2. Le "mungo," manufacturé de chiffons de laine souples et fermes et de rognures de drap neuf, etc.; 3. Un extrait de laine, c'est-à-dire, de la laine obtenue de chiffons de laine et de coton mêlés, qui ont été soumis à un procédé chimique qui consume le coton, laissant la laine intacte. La combinaison du "shoddy" avec de la laine, et l'usage de chaînes de coton, est un des plus heureux mélanges découverts par l'ingéniosité de l'homme, dans l'histoire du commerce des lainages. Par ce moyen la multitude des classes inférieures peut obtenir des articles de vêtement d'un bon usage et confortables, qui autrefois eussent été

au-delà de ses moyens. Dewsbury, Batley, et les villes environnantes dans le West-Riding du comté d'York sont les centres de cette manufacture.'

Les statistiques de l'industrie des laines du Royaume-Uni en 1861 sont données ci-dessous :—

Divisions et Comtés	Nombre des Filatures de Laine	Nombre des Fusaux	Nombre des Mé- tiers à Vapeur
Angleterre et pays de Galles :			
Yorkshire . . .	924	1,296,190	11,405
Devonshire . . .	16	12,585	255
Gloucestershire . .	49	59,986	618
Lancashire . . .	101	277,655	6,377
Montgomery . . .	43	20,920	262
Somersetshire . . .	26	31,401	401
Wiltshire . . .	32	44,825	549
Autres comtés . . .	265	103,288	477
Total . . .	1,456	1,846,850	20,344
Ecosse :			
Aberdeen . . .	25	17,510	93
Clackmannan . . .	15	38,311	214
Peebles . . .	7	51,142	101
Perth . . .	16	16,353	—
Roxburgh . . .	21	60,747	300
Selkirk . . .	16	46,368	158
Stirling . . .	23	32,950	64
Autres comtés . . .	61	53,804	373
Total . . .	184	317,185	1,303
Irlande	39	18,574	123
Total du Royaume- Uni	1,679	2,182,609	21,770

Le nombre des fuseaux et métiers en usage en 1861 était cependant considérablement moindre que le nombre actuel, une grande impulsion ayant été donnée au commerce du lainage lors de la hausse du prix des tissus de coton pendant la famine de coton.

2. La matière première de l'industrie des laines est en grande partie la production du pays, mais comme il n'existe pas de rapport de la quantité actuelle fournie, une idée approximative peut seulement être donnée. En se basant sur le nombre des moutons, la production se monte probablement à 152,000,000 de livres annuellement.

La moyenne de l'exportation de laine anglaise pendant les dernières cinq années a été de 10,100,000 livres. Quant aux importations de l'étranger, plus de 70 pour cent sont fournies en moyenne par les colonies anglaises—l'Australie et les possessions au sud de l'Afrique étant les premières. L'Allemagne fournit quelques-unes des laines de qualités fines, et une grande quantité est aussi importée de l'Amérique du Sud. Les progrès rapides du commerce de la laine dans les dernières années sont montrés par la table suivante des importations de laines brutes de toute espèce (moutons et agneaux, alpaca, lama et vigogne) en 1855, 1860 et 1865 :—

Pays d'Exportation	En 1855	En 1860	En 1865
Colonies anglaises :	Livres	Livres	Livres
Australie	49,142,000	59,166,000	109,734,000
Indes	14,283,000	20,214,000	17,105,000
Cap de Bonne Espérance }	11,075,000	16,574,000	29,220,000
Pays étrangers :			
Espagne	68,000	1,000,000	115,000
Allemagne	6,128,000	9,292,000	6,858,000
Autres Etats de l'Europe }	8,119,000	28,570,000	27,693,000
Amérique du Sud }	7,106,000	8,950,000	17,867,000
Autres pays	3,379,000	4,630,000	3,614,000
Importations totales . }	99,300,000	148,396,000	212,206,000
Exportations totales . }	29,453,000	30,761,000	82,445,000
Resté pour la consomma- tion . }	69,847,000	117,635,000	129,761,000

Il faut se souvenir que les statistiques ci-dessus se rapportent à la laine, etc. en nature employée dans l'industrie des laines peignées et des laines cardées. Sur le total de 212 millions de livres importées en 1866, près de 3 millions de livres étaient de la laine d'alpaca, de lama et de vigogne. En outre, les quantités suivantes de chiffons de laine, etc. employés dans la manufacture du 'shoddy,' ont été importées:—

	Chiffons de laine	Chiffons de laine en lambeaux employés comme laine
	Tonnes	Tonnes
1861 . .	3,290	7,602
1862 . .	4,311	8,972
1863 . .	5,766	9,866
1864 . .	5,909	10,037
1865 . .	5,462	9,316

Mr. Behrens évalue la production annuelle de laine 'shoddy' du pays à 52 millions de livres, et d'extrait de laine à 5 millions de livres.

L'évaluation totale de l'approvisionnement des matières premières employées dans les branches d'industries de laine peignée et de laine cardée, en 1865, peut être établie comme suit :—

	Millions de livres
Laine anglaise (moins les exportations)	142
étrangère	130
' Shoddy ' de manufacture anglaise	52
importé	22
Extrait de laine	5
Fils de laine peignée et cardée	4½
Poil ou laine de chèvre	5
	<hr/> 360½

M. Behrens évalua la quantité totale des matières premières employées dans les industries des laines et des laines peignées en 1864, à 384 millions de livres, et il en fit la répartition entre les deux industries ainsi qu'il suit : dans l'industrie des laines 234 millions de

livres, représentant une valeur de 30,800,000*l.* sterling après manufacture; et dans l'industrie des laines peignées 150 millions de livres, représentant une valeur de 33,600,000*l.* sterling après manufacture. Les importations de laine de l'étranger en 1865 furent beaucoup moins considérables qu'en 1864.

3. Le nombre des ouvriers des deux sexes et de tout âge employés dans les manufactures de lainage en 1861 était de—

	Angle- terre et le Pays de Galles	Écosse	Irlande	Royaume- Uni
Hommes :				
Au-dessous de 13	3,333	29	—	3,362
De 13 à 18	9,811	1,327	75	11,213
Au-dessus de 18	30,954	3,855	370	35,179
Total . .	44,098	5,211	445	49,754
Femmes :				
Au-dessous de 13	2,598	9	—	2,607
Au-dessus de 13	29,613	4,592	417	34,622
Total . .	32,211	4,601	417	37,229
Total, hommes et femmes }	76,309	9,812	862	86,983

Les chiffres précédents sont bien au-dessous du nombre des ouvriers actuellement employés, l'industrie des laines ayant pris une extension considérable depuis 1861.

4. La moyenne du taux des gages reçus dans deux des principales branches du commerce des lainages en 1866 était comme suit :—

	Ouvriers	Par semaine de 60 heures	
		s.	s. d.
À Hudders- field . .	Fileurs . .	18	à 30 0
	Tisserands .	18	„ 23 6
	Tisserands en dessins .	16	„ 30 0
	Dessinateurs .	30	„ 50 0
Dewsbury	Fileurs . .	34	
	Tisserands .	20	
	Tisserands en dessins .	22	
	Dessinateurs .	36	

5. Les rapports du commerce anglais n'établissent aucune distinction entre les importations de fils de laine peignée et de fils de laine cardée. L'augmentation récente dans la quantité de fils de laine importés, désignés dans le rapport officiel comme 'laine filée et estame,' est due probablement davantage à la demande de laine filée qu'à la demande d'estame. Les quantités suivantes de fils des deux genres ont été importées de 1861 à 1865 :—

	Livres
1861	1,577,000
1862	2,244,000
1863	4,526,000
1864	4,654,000
1865	4,392,000

Les chiffres ci-dessus comprennent la laine de Berlin et la laine filée pour ouvrages de fantaisie; le montant en était de 211,000 livres, en 1865.

La valeur des étoffes de laine importées pendant la même période était de—

	£
1861	119,654
1862	124,245
1863	147,757
1864	177,922
1865	190,221

6. Le rapport des exportations des principales espèces de marchandises incluses dans cette classe, indique un état prospère dans cette branche d'industrie, comme la table comparative ci-dessous fera voir :—

	Quantités		Valeur	
	En 1860	En 1865	En 1860	En 1865
Fils de laine .	Livres { non- men- tion- nées	Livres	£ { non- men- tion- née	£
		203,929		35,694
Lainages :	Yards			
	Étoffes, draps d'habits	23,968,000	25,616,000	2,996,000 4,024,000
Flanelles, couvertures, espagnol- lettes .	12,641,000	14,769,000	848,000	1,203,000

7. La plus grande partie de la manufacture des lainages se fait par des machines, mais quoique des progrès considérables aient été faits dans le perfectionnement des machines employées, la manufacture des lainages est sous ce rapport bien en arrière de la manufacture du coton. On tisse encore à la main dans un petit nombre de districts du comté d'York, mais l'usage de ces métiers diminue graduellement. Le total de la force motrice employée dans les filatures de laine, en 1861, était de 26,879 chevaux de vapeur, et de 9,598 chevaux hydrauliques.

8. Les progrès de l'industrie des laines ont été très-considérables dans toutes les branches pendant les dernières dix années. L'approvisionnement croissant de laine en nature, l'introduction de nouvelles combinaisons de laine et autres matières, de machines perfectionnées, et de nouveaux modes de teinture, peuvent être cités comme évidence du progrès. L'usage plus étendu du tissage à vapeur, spécialement en ce qui concerne l'adaptation des métiers à tisser des dessins de diverses couleurs, a matériellement tendu à l'avancement de l'industrie des lainages. De grandes améliorations ont aussi été faites dans presque tous les appareils employés dans la manufacture. En outre on n'a pas perdu de vue l'importance d'une vitesse accélérée dans le travail des machines.

La production des étoffes de 'shoddy,' à bas prix en comparaison des véritables draps, qui possèdent les mêmes qualités que les draps de

laine pure, à l'exception du fini et de la solidité de la couleur, a été un immense bienfait pour beaucoup de classes de la société, non-seulement en fournissant aux classes inférieures de bons articles de vêtement, mais aussi en utilisant une matière qui autrefois était perdue, et créant par sa manufacture un emploi pour des milliers d'ouvriers.

La grande demande pour les lainages de fantaisie dans les dernières années a donné beaucoup d'occupation aux dessinateurs et aux teinturiers. Leeds, Huddersfield, Stroud et Trowbridge possèdent chacune une École d'Art, et plus de huit mille élèves étaient instruits dans ces écoles pendant l'année 1865. La découverte de l'aniline a amené de grandes améliorations dans les dessins et les couleurs des meilleurs tissus de laine.

Le nombre croissant des sociétés co-opératives destinées à fournir aux ouvriers des provisions et des habits pour de l'argent comptant au prix du gros tendra, on espère, à provoquer des habitudes d'économie parmi les classes ouvrières des districts de la manufacture des laines.

Classe XXXI.

SOIES ET TISSUS DE SOIE.

1. L'industrie de la soie dans le Royaume-Uni, quoique d'une moins grande importance que celle des autres matières textiles du pays, est cependant considérable. L'extension en a été pendant nombre d'années retardée par un système de prohibition et de restriction sur les importations de soieries étrangères, et la concurrence toujours nécessaire à une grande production lui étant refusée, cette industrie est restée pendant une longue période dans les conditions les moins satisfaisantes. La sécurité contre les rivaux étrangers, et le monopole limité du marché intérieur, dont ce commerce a longtemps joui, ont été cependant achetés à un très-grand prix. Tandis qu'en Angleterre la majorité des manufacturiers se contentait de fournir aux besoins des marchés nationaux sans faire d'améliorations sensibles dans leurs manufactures, à l'étranger on faisait de grands pas en avant dans les divers procédés de la fabrication, et en conséquence à l'inauguration du libre échange, les fabricants de soie anglais se trouvèrent dans une position des plus désavantageuses. Depuis 1851 le commerce de la soie en Angleterre a cependant fait de grands progrès malgré les difficultés nombreuses qui l'entravaient.

De l'année 1850 à 1861 le nombre des filatures de soie dans le Royaume-Uni augmenta depuis 277 dans la première année jusqu'à 771 dans la seconde; le nombre des fuseaux augmenta depuis 1,225,000 jusqu'à 1,338,000, et le nombre des métiers à vapeur depuis 6,092 jusqu'à 10,709. La distribution des filatures de soie en 1861, dans les trois divisions du royaume, était comme suit :—

	Nombre des Filatures	Nombre des Fuseaux	Nombre des Métiers à Vapeur
Angleterre et pays de Galles :			
Cheshire . . .	175	409,470	1,509
Derbyshire . . .	42	98,210	449
Essex . . .	9	155,681	591
Lancashire . . .	48	128,109	4,201
Warwickshire . . .	331	6,732	2,065
Yorkshire . . .	27	122,952	8
Autres comtés . .	129	384,756	1,812
Total . . .	761	1,305,910	10,635
Écosse . . .	8	31,452	60
Irlande . . .	2	1,182	14
Total du Royaume-Uni . . .	771	1,338,544	10,709

Les soieries se produisent principalement à Manchester, les rubans à Coventry, et les soies de fantaisie à Macclesfield.

2. Les matières premières employées dans la manufacture de la soie sont reçues principalement d'Italie, de Chine, des Indes et du Japon, la plus grande partie étant fournie par ces trois derniers pays.

Les quantités de matière première gardées pour la consommation pendant les six années 1860-65 étaient :—

	Soies grèges Livres	Déchet, etc. Livres
1860 . . .	6,024,000	1,784,000
1861 . . .	4,613,000	3,225,000
1862 . . .	5,166,000	2,678,000
1863 . . .	5,368,000	3,455,000
1864 . . .	1,733,000	2,691,000
1865 . . .	4,595,000	3,608,000
Moyenne . . .	4,583,000	2,907,000

On importe aussi une petite quantité de soie moulinée, mais les importations ont considérablement diminué depuis 1860. Les importations en 1865 étaient de 60,130 livres. Les chiffres ci-dessus ont rapport à l'approvisionnement total de soies grèges, dont une partie est employée pour la fabrication des tissus mélangés, des articles de bonneterie, de la dentelle, etc.

3. Le nombre des personnes des deux sexes et de tout âge engagées dans l'industrie des soies en Angleterre et dans le pays de Galles en 1861 était :—

Ouvriers :	Nombre
Au-dessous de 13 ans . . .	2,120
De 13 à 18 . . .	3,185
Au-dessus de 18 . . .	9,996
Total . . .	15,301

Ouvrières :	Nombre
Au-dessous de 13 . . .	4,673
Au-dessus de 13 . . .	31,217
Total . . .	35,890

Total des ouvriers et ouvrières . . 51,191

Il n'y a aucun rapport du nombre des ouvriers employés actuellement.

4. Les gages dans le commerce de la soie de

Manchester ont augmenté de 10 pour cent depuis 1849 jusqu'à 1859; dans cette dernière année la moyenne du taux des gages payés aux principaux ouvriers était :—

	Par semaine de 60 heures	
	s.	d.
Organsineurs et tordeurs	17	0
Fleurs (jeunes gens et garçons)	10	0
Doubleuses	8	9
Monteurs sur métier (hommes)	24	0
Tisserands	20	0

Il a été dit dans un rapport fait par un comité local à l'Association Britannique à Birmingham en 1865, que le nombre des personnes occupées dans le commerce des rubans à Coventry était estimé à 2,000 ouvriers et 4,000 ouvrières en 1864, mais on croyait que le chiffre des ouvrières surtout était au-dessous du nombre véritable. La moyenne des gages payés dans la manufacture des rubans aux bons ouvriers variait de 25s. à 28s. par semaine. Les gages des femmes variaient de 7s. à 10s. par semaine.

5. La valeur des tissus de soie importés dans le Royaume-Uni a augmenté rapidement depuis 1865. L'accroissement est dû à l'extension du commerce entre l'Angleterre et la France en conséquence du traité de commerce entre les deux pays. Les importations principales de France consistent en soies et satins unis grande largeur et rubans.

La valeur totale des tissus de soie importés pendant les six années 1860-65, était :—

	£
1860	3,344,000
1861	5,906,000
1862	6,618,000
1863	6,639,000
1864	7,620,000
1865	8,496,000

La valeur des tissus de soie anglais exportés pendant les mêmes années était :—

	£
1860	1,587,000
1861	1,395,000
1862	1,264,000
1863	1,421,000
1864	1,460,000
1865	1,404,000

7. Une partie de la manufacture des rubans de soie se fait encore dans la demeure des ouvriers, mais la tendance générale est vers la concentration des ouvriers dans les filatures.

Pour beaucoup de causes, l'industrie de la soie est peut-être la plus variable de toutes les industries en matières textiles. L'industrie de la soie en Angleterre, en commun avec celle des autres pays, a souffert matériellement, dans les quelques dernières années, par une maladie des vers-à-soie, et par un changement de mode qui a beaucoup affecté la branche des rubans dans ce commerce. En prenant ces faits en considération, les statistiques du commerce d'exportation des soies anglaises peuvent être regardées comme témoignant une position plus

satisfaisante pour l'industrie des soies qu'on n'aurait pu s'y attendre dans de telles circonstances.

De grands progrès ont été faits dans le fini et la couleur des rubans anglais, et on croit que les échantillons de rubans et autres tissus envoyés à l'Exposition présente montreront qu'un progrès considérable a été fait généralement dans la manufacture de la soie en Angleterre depuis la dernière Exposition de Paris en 1855.

[Pour les articles de *Bonneterie* et de *Lingerie*, voir la Classe 34.]

Classe XXXII.

CHÂLES.

La manufacture des châles a fait de grands progrès pendant les derniers quinze ans dans le Royaume-Uni. Les châles de laine se font principalement en Écosse et dans le comté d'York. Paisley, en Écosse, a depuis plusieurs années été renommée pour l'excellente qualité des marchandises de cette espèce, et Bradford fabrique maintenant des châles de laine en grande variété. Les châles de soie se font principalement à Norwich.

Les principales espèces de châles importés sont le cachemire de l'Inde, le crêpe de Chine, etc., et les châles de laine principalement reçus de France.

Suivent les statistiques du commerce d'exportation de cette classe de marchandises en 1865 :—

	Nombre	£
Châles de laine	431,350	145,570
Foulards, écharpes et châles de soie pure	129,560	235,825
	Douzaines	
Id. de soie mélangée d'au- tres matières	15,513	16,461

De grandes améliorations dans les dessins de châles ont été faites depuis 1851, spécialement dans les marchandises écossaises. Paisley possède une Ecole d'Art, établie en 1848, dans laquelle 1,063 élèves étaient enseignés en 1865.

Classe XXXIII.

DENTELLES, TULLES, BRODERIES ET PASSEMENTERIES.

1. Le siège principal de la manufacture de dentelles par le moyen de machines est à Nottingham et les environs. On en fabrique aussi dans le comté de Derby, à Tiverton, Barnstaple et Chard. Les autres espèces de dentelles se font dans les comtés de Buckingham, Bedford, Oxford et Northampton, et à Honiton et Limerick. Le commerce de la mousseline brodée se fait en Irlande et en Écosse.

Les statistiques suivantes de la fabrication de la dentelle au métier à Nottingham et autres districts en 1866, sont recueillies d'un rapport fait au Ministère de Commerce (Board

of Trade') par la Chambre de Commerce de Nottingham:—

	Nombre
Métiers circulaires à tulle . . .	1,797
Métiers 'Lever' pour dentelles de fantaisie . . .	1,589
Métiers divers . . .	166

Sur les 1,797 métiers circulaires mentionnés au-dessus, 700 étaient employés à Nottingham et dans les environs, 500 dans le comté de Derby, 200 à Tiverton, 100 à Barnstaple, et 300 à Chard. Tous les métiers 'Lever' et 'métiers divers' étaient en opération dans le district de Nottingham.

2. Les sources d'approvisionnement des matières premières employées dans ces industries sont mentionnées aux Classes 27 et 31.

3. Le nombre de personnes employées dans cette industrie à Nottingham et les environs—non compris les filles engagées depuis leur enfance dans les ateliers de patronnes (*mistresses*), souvent leurs propres mères, travaillant en divers genres pour des maisons en gros, etc.—est évalué à 38,000 personnes.

D'après le rapport du jury sur la Classe 24 à l'Exposition de Londres en 1862, l'industrie de la dentelle sur tambour donne de l'emploi à environ 25,000 femmes et enfants, travaillant chez eux; et le commerce de la broderie sur mousseline, en plein travail, à non moins de 200,000 personnes en Irlande et à 25,000 personnes en Ecosse, qui travaillent aussi dans leurs demeures.

4. La moyenne du taux des gages payés aux meilleurs ouvriers dans le district de Nottingham en 1866 était:—

Employés aux métiers à tulle pour la fabrication de toutes espèces de dentelles unies et façonnées.

Ouvriers :	Par semaine	Heures de travail par jour
Garçons . . .	s. s. 5	10½
Jeunes gens . . .	16	Ordinairement deux ouvriers (qui se relèvent) pour chaque métier, travaillent de 9 à 10 heures chacun
Hommes . . .	25	
" chefs de métiers	35 à 50	
Surveillants de la mécanique . . .	35	10½
Ouvrières :		
Depuis 7 ans, raccommodeuses et enfleuses . . .	4 à 8	Heures variables
Raccommodeuses et plieuses . . .	9, 12	Dans les manufactures, 10½; dans les magasins, de 8 heures du matin à 7 heures du soir
Apprêteuses . . .	10	
Surveillantes et gardes-magasin . . .	13, 15	

5. La table suivante montre la valeur des dentelles et broderies importées dans le Royaume-Uni en 1865:—

Dentelles :	£
De poil de chèvre ou laine . . .	256
Dentelles au tambour de fil ou coton . . .	78,861
" " de soie . . .	18,855
Dentelles à la mécanique ou dentelles imitations non-faites à la main . . .	69,734
Broderies et ouvrages à l'aiguille :	
Rideaux brodés sur mousseline ou tulle . . .	16,115
Autres espèces . . .	41,970

La dentelle au tambour s'importe principalement de Belgique, et la dentelle à la mécanique de France.

6. Les exportations des articles de production anglaise, compris dans cette classe, pendant la même année, ont été:—

	£
Dentelle de coton et tulle breveté . . .	465,611
Dentelle de fil . . .	322
Dentelle de soie, pur soie . . .	63,351
" mélangée d'autres matières . . .	84,314
Broderies et ouvrages à l'aiguille de toute espèce . . .	174,670

7. Les divisions de la manufacture faite à la main et à la mécanique ont déjà été mentionnées.

8. M. Birkin, dans son rapport sur le progrès de la dentelle à la mécanique en 1862, dit que 'le genre de travail et des dessins en général s'est beaucoup amélioré, et qu'on a produit des dessins plus compliqués qu'autrefois. Ceci sans doute a été causé par les facilités que l'application du métier Jacquard a données à la fabrication de la dentelle, et par le goût plus correct répandu parmi les dessinateurs par les Ecoles d'Art.' Une École d'Art existe à Nottingham depuis 1843. De grands progrès se sont aussi manifestés dans la fabrication des rideaux de dentelle.

Classe XXXIV.

ARTICLES DE BONNETERIE ET DE LINGERIE; OBJETS ACCESSOIRES DU VÊTEMENT.

1. La manufacture de la bonneterie se fait principalement dans les comtés de Nottingham, Leicester et Derby, et quelques villes des autres comtés de l'Angleterre; à Balbriggan en Irlande; et à Hawick, Galashiels, etc., en Ecosse. Nottingham produit des marchandises de coton et de soie, Derby principalement des articles de soie, et Leicester des articles de laine.

Les statistiques de la manufacture de Nottingham, fournies au Ministère de Commerce par la Chambre de Commerce de cette ville, pour 1866, étaient comme suit:—

	Nombre
Métiers étroits . . .	11,000
Métiers larges . . .	4,250
Métiers rotatoires . . .	1,000
Jeux de métiers circulaires . . .	1,200
Métiers à chaîne . . .	400

Il n'y a aucun rapport récent de chaque espèce de machine employée à Leicester, mais il est constaté par la Chambre de Commerce que les anciens métiers étroits sont remplacés par les métiers larges; aussi que le nombre des métiers circulaires, employés principalement pour les marchandises à bas prix, augmente rapidement. L'accroissement du total de la population dans le district de Leicester, qui était de 67,000 personnes en 1861, et qui dépasse maintenant 80,000 personnes (1866), fera voir, jusqu'à un certain point, les progrès qui se font dans les manufactures du district.

Les derniers rapports de Derby et de l'Écosse sont ceux qui ont été publiés en 1861 : à cette époque il y avait quatre manufactures de bonneterie dans le Derby et quatre en Écosse.

Les commerces de gants et de parapluies sont l'un et l'autre d'une importance considérable; il n'y a cependant aucun compte rendu de la production actuelle de ces articles. Les gants se font principalement à Worcester, Leicester, Nottingham et Londres. Des branches considérables du commerce des parapluies se trouvent dans le comté de Lancaster, et dans la métropole, et il se fabrique à Birmingham une grande quantité de montures de parapluies.

2. Les sources des matières premières employées dans le commerce de la bonneterie sont mentionnées aux Classes 27 et 31.

3. Le nombre de personnes employées dans le commerce de la bonneterie à Nottingham et aux environs est à peu près de 64,000. Il n'y a aucun relevé du nombre de personnes employées dans cette branche de manufacture à Leicester; mais d'après le recensement de 1861, 22,000 furent rapportées.

4. La moyenne du taux des gages payés aux ouvriers dans la bonneterie à Nottingham et Leicester en 1866 était :—

À Nottingham.

		Par semaine	
Employés aux—		s.	d.
Métiers étroits	Hommes, femmes, et garçons	10	6
	Hommes	15	0
Métiers larges	Filles et femmes.	4	0
Métiers rotatoires	Hommes	20	à 32
	Filles et femmes.	5	
Métiers circulaires	Hommes	20	„ 35
	Femmes et garçons	12	„ 20
	Filles et femmes (raccommodeuses)	7	„ 12
Métiers à chaînes	Hommes	16	„ 35
	Garçons	12	„ 20

Les métiers étroits et larges étaient en opération dans 4,700 ateliers, formant une moyenne de 3 à 4 métiers par atelier. Ces ateliers sont d'habitude une partie des demeures des ouvriers. Les ouvriers aux autres machines sont occupés pendant le nombre d'heures ordinaire dans les manufactures.

À Leicester.

		Par semaine de 60 heures	
		s.	s.
Bonneterie unie et tricotés :			
Employés aux métiers étroits (hommes)	}	9	à 15
Employés aux métiers larges (hommes)		20	„ 30
Employées aux métiers circulaires (femmes)	}	12	„ 20
Bonneterie et tricotés de fantaisie :			
Ouvriers ordinaires		14	„ 28
Ouvriers chefs de métier		20	„ 35

La condition générale des ouvriers employés à cette manufacture s'est beaucoup améliorée dans les dernières années.

5. La valeur des principaux articles compris dans cette classe et importés dans le Royaume-Uni en 1865 était :—

	£
Bonneterie de coton	70,502
„ de laine	18,480
Corsets	8,890
Parapluies et ombrelles (soie)	4,722
Cannes	85,200

6. La valeur des principaux articles de production anglaise de la même espèce exportés en 1865 était :—

Bonneterie, tricotés, gants, etc. :	£
De coton	453,837
„ fil	20,091
„ soie	26,698
„ laine.	307,782
Parapluies et ombrelles	160,177

7. Une proportion considérable des articles de bonneterie se fait à la main, mais les produits à la mécanique augmentent annuellement en qualité, quantité et bon marché.

8. Les demandes plus considérables du pays pour les articles compris dans cette classe, ajoutées aux demandes des colonies, ont amené de grands progrès et améliorations dans ces branches de l'industrie nationale. Un des perfectionnements récents les plus notables peut-être à Nottingham est celui de la confection parfaite des bas et des articles de bonneterie par les métiers. On a aussi apporté de grandes améliorations dans les couleurs de la bonneterie de fantaisie.

Classe XXXV.

HABILLEMENTS DES DEUX SEXES.

Il est inutile d'observer que les vêtements de tous genres sont faits en plus ou moins grandes quantités dans toutes les villes et villages du pays. Il y a, cependant, trois industries principales comprises dans cette classe, c'est à dire, la manufacture des chapeaux d'hommes, des chapeaux de femmes, des bottes et des souliers, qu'on peut mentionner comme ayant des localités particulières de production. Quant à la différence des vêtements spéciaux aux divers

métiers et professions, et à la différence marquant des classes particulières de la société, elles ont, à peu d'exception près, disparu en Angleterre. Les costumes nationaux du pays de Galles, de l'Écosse et de l'Irlande se sont, jusqu'à un certain point, maintenus, mais la tendance générale de la classe moyenne et de la basse classe de la société est d'imiter le genre de costume de leurs supérieurs; la principale différence étant dans la forme des vêtements et la qualité des étoffes dont ils sont faits. Dans aucun autre pays du monde, excepté peut-être en Amérique, les classes ouvrières ne s'habillent aussi bien et d'une manière aussi couteuse que dans le Royaume-Uni.

Les chapeaux d'homme se font à Londres, à Manchester et ses environs et dans d'autres parties du Lancashire, dans le Cheshire, à Edimbourg, Glasgow, etc. L'industrie des tresses de paille, qui fournit les matières premières pour la manufacture des chapeaux de paille pour hommes et femmes, se fait principalement à St. Alban's, Dunstable, Tring et quelques autres localités en Angleterre. La manufacture des bottes et des souliers se fait sur une très-grande échelle à Northampton, Norwich et Leicester. Cette dernière ville est une manufacture spéciale en gros de chaussures chevillées au lieu d'être cousues, et donne de l'emploi à plusieurs milliers d'ouvriers.

Le nombre de personnes employées dans quelques-unes des principales branches des industries ayant rapport au vêtement, en 1861, était ainsi qu'il suit:—

Industries	En Angleterre et le Pays de Galles	En Écosse	En Irlande
Taillieurs { Hommes . Femmes .	109,004 27,386	17,276 473	22,523 932
Total .	136,390	17,749	23,455
Modistes { Hommes . Femmes .	803 286,298	31 33,066	— 50,854
Total .	287,101	33,097	50,854
Chapeliors { Hommes . Femmes .	11,502 7,911	707 1,697	886 719
Total .	19,413	2,404	1,605
Fabricants de chapeaux de paille { Hommes . Femmes .	1,740 22,245	313 1,336	15 1,343
Total .	23,985	1,649	1,358
Tresseurs de paille { Hommes . Femmes .	2,128 27,739	1 30	6 162
Total .	29,867	31	168
Bottiers et cordonniers { Hommes . Femmes .	211,233 39,353	26,786 2,093	41,297 5,329
Total .	250,591	28,879	46,536

Le nombre d'ouvrières employées dans la fabrication des chaussures ne comprend pas les femmes des cordonniers, qui pour la plupart aident leurs maris dans quelques parties du travail. D'après le recensement de 1861, le nombre total des femmes de cordonniers dans le Royaume-Uni était de 90,970.

La moyenne du taux des gages payés dans le commerce des bottes et souliers de Leicester en 1865 était:—

	Par semaine de 60 heures
	s. d.
Ouvrières (à la mécanique)	12 0
Ajusteurs (femmes)	11 0
Cloueurs	22 0
Finisseurs	30 0
Coupeurs	23 6

Cinquante pour cent de la manufacture se fait par des ouvrières.

Il n'y a aucune statistique récente du commerce de Northampton, mais d'après le recensement de 1861, environ 20,000 personnes étaient engagées dans le commerce des bottes et des souliers à cette époque.

La moyenne des gages payés dans l'industrie des chapeaux des villes ci-dessous, en 1866, était:—

Chapeaux de Soie	À Bristol	À Edimbourg	À Glasgow
	Par semaine	Par semaine	Par semaine
	s. d.	s. d.	s. d.
Ouvriers qui font la carcasse	25	33	34
Finisseurs (soie)	25	30	36
Tourneurs	30	39	40
Heures de travail par jour	8	12 à 15	10

La valeur des importations et des exportations des chapeaux, coiffures, etc., et des chaussures, était en 1865:—

Importation.

Chapeaux d'hommes et de femmes :	£
De paille	556,065
De feutre	35,812
Tresses de paille	102,886
„ d'autres espèces	30,225
Bottes et souliers	104,693

Exportation (Produits Anglais).

Chapeau d'hommes :	£
De feutre	280,851
De soie	25,909
De paille	166,599
D'autres espèces	10,235
Fournitures de chapeliors	70,343
Tresses de paille, etc. . . .	49,996
Bottes et souliers	1,462,105

La France fournit la plus grande partie des marchandises importées, et l'Australie est le principal débouché des marchandises anglaises exportées.

Il se fait aussi un grand commerce d'ex-

portation du Royaume-Uni de vêtements neufs et d'occasion, qui s'élevait en 1865 à—

Vêtements vieux et neufs	1,933,000
Vêtements d'occasion, et habits de nègres	706,000
Total	2,639,000

Environ la moitié des exportations était pour l'Australie.

Classe XXXVI.

JOAILLERIE ET BIJOUTERIE.

La manufacture de la bijouterie et des imitations est de grande importance dans le Royaume-Uni ; le siège de la manufacture de la bijouterie d'or est principalement à Londres, l'imitation se fait à Birmingham. L'accroissement de la richesse nationale dans ces dernières années a causé une demande considérable de cette espèce de marchandise. Il n'y a aucun rapport de la production des espèces supérieures de bijouterie. La valeur de l'or, de l'argent et des pierres précieuses employés annuellement dans le commerce de Birmingham est évaluée à environ un million et un quart sterling. Le nombre des personnes qui sont employées dans cette branche de commerce à Birmingham est d'environ 7,500, et le taux des gages des ouvriers bijoutiers varie de 25s. à 50s. et quelquefois au-dessus par semaine. Les émailleurs gagnent de 3l. à 5l. par semaine, les garçons de 4s. à 11s.

Le nombre de personnes (non-compris les ouvriers) employés actuellement à Londres dans le commerce de la bijouterie est de—

Bijoutiers	484
„ et orfèvres	159
Ciseleurs	41
Fabricants de boîtes	36

La valeur de la bijouterie importée en 1865, principalement de France et de Belgique, se montait à 87,981l. et des pierres précieuses (excepté les diamants) à 32,000l. La valeur de la bijouterie de manufacture anglaise exportée dans la même année était :—

Bijouterie, etc. d'or, d'argent	94,313
„ d'autres espèces	69,918
	164,231

Dans les dernières vingt années une hausse considérable a eu lieu dans la valeur des pierres précieuses.

On emploie des machines et la vapeur dans quelques branches du commerce de bijouterie, ce qui a permis aux fabricants de faire une grande réduction dans le prix des marchandises.

M. J. S. Wright, dans son rapport sur le commerce de bijouterie de Birmingham, dit

qu'il ne serait pas juste de ne pas mentionner que l'Ecole d'Art établie dans cette ville a grandement contribué au développement du goût artistique parmi les bijoutiers de l'endroit. Plusieurs centaines d'ouvriers y ont été instruits. Les effets de l'instruction qu'ils y ont reçue se feront sentir plus fortement encore dans l'avenir.

Classe XXXVII.

ARMES PORTATIVES.

1. La manufacture des armes portatives se fait à Enfield (fabrique de l'Etat), à Birmingham et à Londres. Les baïonnettes, les machettes et les sabres se font principalement à Birmingham, ces derniers de morceaux d'acier dégrossis (dits 'sword moulds'), fabriqués à Sheffield. La plus grande quantité des armes-à-feu pour l'exportation se fait à Birmingham. Les armuriers de Londres sont célèbres pour le travail et le fini de leurs carabines rayées et fusils de chasse de qualité supérieure. La 'Birmingham Small Arms Association' et la 'London Armoury Company' fabriquent l'une et l'autre des armes-à-feu pour le gouvernement.

2. Le bois employé pour la crosse des fusils est du hêtre provenant principalement des comtés de Gloucester et de Hereford, et du noyer importé d'Italie et d'Allemagne. Le fer employé pour les canons de fusil exige des soins tout particuliers de préparation, et les ouvriers de Birmingham ont atteint un très-haut degré de perfection dans cette fabrication.

3. Le nombre des ouvriers employés dans la manufacture de Enfield, dans les temps de pleine activité, est d'environ 2,000. On évalue que Birmingham emploie plus de 7,000 ouvriers. La manufacture de Londres donnait du travail à environ 2,000 personnes en 1861.

Le nombre total de personnes employées dans la manufacture des fusils en 1861, d'après le recensement, était :—

En Angleterre et le pays de Galles	11,873
Ecosse	204
Irlande	256
Total	12,333

4. D'après un rapport fait par la Chambre de Commerce de Birmingham au Ministère de Commerce, en 1866, la moyenne du taux des gages dans la manufacture des fusils variait comme suit :—

	Par semaine de 60 heures	
	s.	d.
Ouvriers	12	60 0
Garçons	3	15 0
Femmes	6	12 0
Fillles	3	4 6

M. Goodman, Président de la 'Birmingham

Small Arms Company,' dans un rapport à l'Association Britannique en 1865, a constaté que, pendant les derniers dix ans, il était peu douteux que les gages reçus dans la manufacture des fusils n'eussent dépassé ceux de toutes les autres industries, et que, dans quelques-unes des branches qui demandent le plus d'habileté, les ouvriers en pleine activité gagnent de 5*l.* à 6*l.* par semaine.

5. La valeur des armes-à-feu et des sabres de toute espèce importés dans le Royaume-Uni en 1865 se montait à 243,699*l.*, dont 192,000*l.* venaient de Belgique. Le total d'importation de bois de noyer était de 5,689 tonnes, et de crosses de fusil dégrossies était de 5,204 quintaux. Plus de trente-huit millions de capsules ont aussi été importées.

6. D'après le relevé officiel le nombre et la valeur des armes portatives anglaises exportées du Royaume-Uni pendant les cinq années 1861-65 étaient:—

	Nombre	Valeur £
1861 .	315,000 .	515,000
1862 .	702,000 .	1,573,000
1863 .	439,000 .	856,000
1864 .	254,000 .	348,000
1865 .	291,000 .	424,000

La grande exportation au commencement des années ci-dessus a été causée par la demande des États-Unis. M. Goodman est d'avis que ce relevé est au-dessous de la valeur réelle du commerce anglais d'exportation, parceque un grand nombre de fusils de chasse, surtout des qualités les plus chères, sortent du royaume sans passer par les douanes.

Les principales espèces d'armes-à-feu, etc. exportées en 1865, étaient:—

	Nombre
Fusils de munition . . .	173,153
Carabines rayées . . .	85,322
Fusils de chasse . . .	15,505
Revolvers . . .	8,061
Pistolets, etc.	8,994

Epées, coutelas, baïonnettes, etc. 4,538

Capsules Millions 284,895

7. On emploie maintenant des machines pour la fabrication de toutes les pièces des armes-à-feu; par ce moyen l'armurier anglais peut avec succès faire la concurrence aux armuriers étrangers, qui, autrement, à cause du bas prix de la main-d'œuvre dans leurs pays, pourraient vendre meilleur marché que lui sur tous les marchés du monde.

8. Les perfectionnements qui ont été faits pendant les dernières années dans la fabrication des armes portatives, sont si généralement connus qu'il est à peine nécessaire d'en parler ici. Le perfectionnement le plus récent et le plus im-

portant est l'introduction générale du principe de charger par la culasse.

Il y a beaucoup de branches rattachées à ce commerce dans lesquelles l'ouvrier-artiste peut trouver ample occasion de montrer ses talents, et dans lesquelles les fabricants anglais ont déjà fait voir beaucoup de goût. Cependant les ouvriers anglais qui visiteront l'Exposition Universelle feront bien de chercher à s'instruire par la vue des articles exposés par les armuriers de Paris, dont les armes sont renommées pour les beautés artistiques de l'ornementation.

Classe XXXVIII.

OBJETS DE VOYAGE ET DE CAMPEMENT.

La manufacture des malles, sacs de voyage, et autres articles compris dans cette classe, est d'une importance considérable, mais il n'y a aucun moyen de s'assurer de son étendue exacte. De nouveaux genres de portemanteaux sont presque tous les jours inventés, dans le but de satisfaire aux besoins des nombreux voyageurs de nos jours. De grandes améliorations ont aussi été faites dans la confection des sacs de voyage pendant les dernières dix années. La manufacture des couvertures de voyage se fait à Dewsbury et à Huddersfield, et est devenue aujourd'hui une branche considérable du commerce des laines. L'usage de tentes, à l'exception de celles dont on se sert dans l'agriculture, est très-limité dans le Royaume-Uni, la principale manufacture étant pour l'usage de l'armée en station à l'étranger.

Classe XXXIX.

[BIMBELOTERIE.

Des jouets d'espèces diverses (particulièrement des poupées de cire) sont fabriqués largement dans le Royaume-Uni, mais à cause de certaines circonstances spéciales dans le commerce des jouets, il est impossible de préciser la valeur annuelle de la production de ces articles.

Le nombre de fabricants d'articles de bimbeloterie à Londres (non-compris les ouvriers), est de —

Fabricants de jouets . . .	44
Marchands „ „ . . .	153
Fabricants de poupées . . .	19
„ „ chevaux à bas- cule . . . }	8

Le commerce d'importation des jouets étrangers a considérablement augmenté depuis 1850 s'étant élevé de 46,130*l.*, depuis cette année à 163,024*l.* en 1865.

GROUPE V.

(CLASSES XL. à LXVI.)

PRODUITS (BRUTS ET OUVRÉS) DES INDUSTRIES
EXTRACTIVES.

Classe XL.

PRODUITS DE L'EXPLOITATION DES MINES
ET DE LA MÉTALLURGIE.

1. CETTE classe comprend la branche la plus importante des productions nationales du pays. C'est principalement à cause de l'abondance de ses richesses minérales, et spécialement à l'heureuse circonstance de la production du charbon et du fer dans les mêmes localités, que l'Angleterre a atteint une si haute position comme nation manufacturière. Le développement rapide des chemins de fer et de la navigation à vapeur doit aussi être attribué à la même cause. Les résumés suivants de la production de minéraux et de métaux dans le Royaume-Uni en 1865 sont extraits du rapport officiel fait par M. Robert Hunt, Conservateur des Archives des Mines :—

Lieu de Production	Quantités Exploitées
Comtés de :	Tonnes
Durham et Northumberland	25,032,694
Cumberland	1,431,047
York	9,355,100
Derby	4,595,750
Nottingham	1,095,500
Leicester	965,500
Warwick	859,000
Stafford et Worcester	12,200,989
Lancaster	11,962,000
Cheshire	850,000
Shropshire	1,135,000
Gloucester, Somerset et Devon	1,875,000
Monmouth	4,125,000
Pays de Galles (provinces du sud)	7,911,507
Pays de Galles (provinces du nord)	1,983,000
Écosse	12,650,000
Irlande	123,500
Total	98,150,587

Après avoir déduit 9,000,000 de tonnes exportées, et près de 29,000,000 de tonnes employées dans la manufacture de fer en saumons et en barres, etc., il restait encore environ 60,000,000 de tonnes pour la consommation du pays pour les usages domestiques et autres, ou une moyenne de plus de deux tonnes par tête de la population. La moyenne annuelle du charbon produit dans les dix années finissant en 1865 était de 84,960,000 de tonnes.

MINÉRAI DE FER.—La production totale de ce minerai en 1865 s'élevait à 9,910,000 de tonnes ; il a été tiré de vingt comtés anglais,

et du pays de Galles, de l'Écosse et de l'Irlande, les plus grandes proportions étant pour le North-Riding du Yorkshire, Cumberland et Staffordshire.

FONTES DE FER EN GUEUSES.—La fonte totale du fer en gueuses en 1865 était de 4,819,000 de tonnes. La table suivante montre les principales localités de fonte :—

Divisions et Comtés	No. de Fonderies	No. de Hauts- Four- neaux Con- struits	No. de Four- neaux en Acti- vité	Tonnes de Fer en Gueuses
Angleterre :				
Staffordshire (S.)	64	172	114	692,627
York : N. Riding	14	65	53	486,421
Durham	19	65	47	476,767
Staffordshire (N.)	8	35	27	206,268
Lancashire	6	24	16	204,925
Derbyshire	15	41	34	189,364
York : W. Riding	14	38	29	123,233
Shropshire	11	29	23	117,343
Cumberland	4	16	9	107,403
Autres comtés	21	42	24	134,489
Total	176	527	376	2,738,867
Pays de Galles :				
Glamorganshire	18	81	64	408,416
Monmouthshire	10	68	45	357,656
Autres comtés	21	63	31	150,837
Total	49	212	140	916,909
Écosse :				
Lanarkshire	15	101	84	1,163,478
Autres comtés	17	79	57	
Total	32	180	141	

Le nombre suivant de forges et martinets était en activité en 1865, produisant du fer fabriqué :—

Divisions et Comtés	Nombre des Usines	Nombre des For- neaux de Puddlage	Nombre des Laminoirs
Angleterre :			
Staffordshire (sud)	118	2,116	224
Durham	16	688	61
Yorkshire	30	922	115
Autres comtés	34	903	113
Total	198	4,629	513
Pays de Galles	39	1,395	170
Écosse	15	383	47
Total	252	6,407	730

Il n'y a aucune statistique de la production totale de fer fabriqué dans le Royaume-Uni. M. J. Jones, dans un rapport à l'Association Britannique à Birmingham en 1865, a estimé la production annuelle du district du comté de Staffordshire à 855,000 tonnes, et la production des fonderies en rapport avec les houillères de Northumberland et Durham est évaluée à environ 300,000 tonnes par an.

La manufacture de l'acier se fait sur une grande échelle dans le pays, principalement à Sheffield, et dans les comtés de Staffordshire et Northumberland, mais il n'y a aucune statistique de la production totale. On a évalué la production de Sheffield en 1862 à 79,000 tonnes d'acier ampoulé, et à 52,000 tonnes d'acier fondu.

PLOMB.—La quantité de minerai extrait était de 90,452 tonnes, et le plomb produit était de 67,181 tonnes. Le plomb est exploité dans toutes les divisions du royaume; en 1865, la plus grande quantité a été tirée des mines de Durham et de Northumberland.

CUivre ROUGE.—198,298 tonnes de minerai ont été extraites principalement des comtés de Cornouailles, Devonshire et Cheshire; et 11,888 tonnes de cuivre rouge ont été produites dans le Royaume-Uni en 1865.

ÉTAIN.—Ce métal se trouve en Cornouailles et Devonshire, et la quantité de minerai extrait en 1865 était de 15,686 tonnes. 10,039 tonnes d'étain ont été produites la même année.

Du zinc, des pyrites, de petites quantités d'argent et d'or, et diverses autres espèces de produits minéraux non-métalliques sont exploités aussi dans le Royaume-Uni; on y trouve aussi des pierres de construction et de l'argile, en grandes quantités.

Le sel se produit dans le Cheshire, dans le Worcestershire et en Irlande. Les salines de Cheshire peuvent produire 1,000,000 de tonnes par an; la production annuelle des salines du Worcestershire est d'environ 200,000 tonnes. La production du sel en Irlande est comparativement sur une petite échelle.

La valeur totale des productions minérales du Royaume-Uni en 1865 est établie ainsi qu'il suit:—

	£
Métaux	15,773,000
Charbon de terre	24,538,000
Minéraux non-métalliques	1,434,000
	<hr/>
	41,745,000

La valeur du sel, de l'argile et des pierres à bâtir, n'est pas comprise dans les chiffres ci-dessus.

Il serait impossible de donner un aperçu des nombreuses et importantes industries se rattachant à cette classe dans l'espace limité affecté à ces observations. On peut seulement mentionner brièvement que les centres de la fabrication de quincaillerie sont à Birmingham, Wolverhampton, Walsall et Sheffield; des articles de cuivre rouge et jaune à Birmingham et Bristol; des produits galvanoplastiques à Shef-

field et Birmingham; des aiguilles et hameçons à Redditch; des épingles à Birmingham; des fils métalliques à Birmingham, Sheffield, Manchester, etc.; et les outils tranchants à Sheffield.

2. Les matières premières employées dans la fabrication des objets de métal en Angleterre sont principalement tirées du pays même. Des quantités considérables de minéraux et de métaux sont, cependant, importées annuellement. La table suivante montre les quantités des principales importations en 1865:—

Articles	Quantités
	Tonnes
Minerai de cuivre	82,562
Régule	39,686
Cuivre brut ou en partie ouvré	21,717
Minerai de fer	76,977
Fer en gueuses	11,380
en barres	51,464
Acier	6,777
Minerai de plomb	5,584
Saumons et feuilles de plomb	34,903
Minerai d'argent	6,587
d'étain	639
Étain en lingots et en barres	5,698
Zinc en plaques	22,193
laminé	8,492

Le Chili a fourni la plus grande partie du minerai de cuivre et du régule; l'Espagne, la France et la Suède, le minerai de fer; la Suède, le fer en gueuses et en barres et l'acier; l'Italie, le minerai de plomb; l'Espagne, le plomb en saumons et en feuilles; et les Colonies Hollandaises de l'Océanie, l'étain. Le zinc était importé principalement de Belgique, de Hollande, de Hambourg et de Prusse.

3. On a évalué le nombre des ouvriers employés dans les houillères du Royaume-Uni en 1865 à 315,000. Le taux des gages payés aux mineurs et coupeurs, adultes, à Newcastle, en 1866, était de 5s. 9d. par jour de 7 heures. Les gages des ouvriers dans les autres branches en relation avec l'exploitation des houillères variaient de 3s. à 5s. par jour; des garçons de 1s. à 3s. par jour. Les gages nets par tête dans les fonderies de fer du Staffordshire sont évalués à environ 28s. ou 30s. par semaine, mais quelques ouvriers gagnent de 2l. à 4l. À Glasgow les mouleurs de fer, adultes, obtenaient 29s. par semaine de 60 heures en 1866; les garçons, de 4s. à 16s.; pour les autres travaux dans les fonderies, de 15s. à 25s. À Birmingham, dans le commerce du cuivre et laiton, les forgerons, 24s.; les modelleurs, 33s.; les ajusteurs mécaniciens, 30s. par semaine de 58 heures. Les serruriers-ébénistes, 40s. Dans la manufacture des outils tranchants de Sheffield en 1866—les forgers, de 31s. à 36s.; les frappeurs, de 21s. à 24s.; les remouleurs, de 45s. à 50s.; les trempereurs, de 24s. à 28s. par semaine de 42 heures. Il n'y a aucun rapport officiel du nombre de personnes engagées dans ces diverses branches de l'industrie, et à cause de la diversité de leurs occupations, il est à peine possible de former une évaluation correcte.

Le nombre total des personnes occupées dans les travaux relatifs aux mines et aux métaux dans le Royaume-Uni en 1861 peut être estimé à $1\frac{1}{2}$ million de personnes. La condition des mineurs est maintenant le sujet de beaucoup plus d'attention de la part des patrons, qu'elle n'était autrefois, et la plupart des propriétaires de mines et d'usines à traiter les métaux non-seulement font des efforts pour conserver la santé et le bien-être de leurs ouvriers, mais aussi font beaucoup pour encourager l'éducation de leurs enfants, et généralement pour augmenter le bien-être de leurs familles.

4. La valeur totale des objets de métal importés dans le Royaume-Uni en 1865 était de moins d'un demi million sterling. La plus grande partie des importations consistait de marchandises de fer venant principalement de Belgique et de Hollande.

5. Dans la table suivante on verra les quantités des principaux articles de production anglaise, compris dans cette classe, exportés du Royaume-Uni en 1865 :—

Articles	Quantités
Houille et coke tonnes	9,170,000
Cuivre et articles de } cuivre quintaux	632,000
Cuivre jaune	44,000
Quincaillerie	3,924,000
Fer en gueuses tonnes	547,000
„ barres	254,000
Rails, etc., de chemin de fer „	434,000
Autres espèces et articles } de fer „	357,000
Acier	24,000
Plomb	27,000
Objets plaqués	112,000
Sel tonnes	579,000
Étain quintaux	104,000
„ en feuilles	1,481,000
Zinc quintaux	89,000

La valeur totale des articles ci-dessus dépassait 28 millions sterling.

6. Il n'est pas possible de faire de distinction entre les différentes branches de ces manufactures faites à la main et à la mécanique. Cependant la tendance générale est de substituer, autant que possible, les machines au travail manuel.

7. Les progrès dans l'exploitation des mines du Royaume-Uni, depuis la dernière Exposition de Paris, peuvent être inférés par la production croissante de minéraux et de métaux en 1865 en comparaison avec 1855. La production des houilles a augmenté de 59 pour cent pendant cette période; du fer en gueuses de 50 pour cent; de l'étain de 66 pour cent; du plomb de 3 pour cent; tandis que la production du cuivre rouge a baissé de 44 pour cent.

De grandes améliorations ont été faites dans a manufacture de la quincaillerie anglaise depuis 1851, dont la plupart, sinon toutes, ont eu on peut dire, directement ou indirectement, leur origine dans l'Exposition d'Industrie de Londres de cette année. Le travail commencé par l'Exposition a été poursuivi par le Département de Science et d'Art, et au moyen d'expo-

sitions locales et de l'instruction donnée dans les Écoles d'art établies dans les centres des régions manufacturières, un progrès immense a été visible dans le dessin et le style des marchandises anglaises.

Le jury de quincaillerie à l'Exposition de 1862 a rapporté que—'il était satisfaisant de pouvoir constater que, d'une manière ou d'une autre, il y a de l'amélioration dans presque tous les objets exposés. Il y a plus d'élégance et de régularité dans les formes des marchandises à bas prix. Une décoration plus appropriée se fait voir dans les articles qui sont à la fois une utilité et un ornement, et un degré plus élevé de l'art a été atteint dans les objets d'ornement de métal pour les décorations d'appartement et pour les services religieux.'

Classe XLI.

PRODUITS DES EXPLOITATIONS ET DES INDUSTRIES FORESTIÈRES.

Comparés à celles des nations étrangères, les forêts du Royaume-Uni sont de peu d'étendue. La valeur annuelle de la production du bois de construction et pour autres usages est évaluée à environ deux millions sterling. Quoique le chêne ne soit pas le plus abondant, c'est cependant de tous les arbres anglais celui qui a le plus d'importance et de valeur, et on le cultive largement dans les forêts royales.

La production indigène des bois employés pour les constructions est considérablement au-dessous de la demande, et de grandes importations se font annuellement de l'étranger. Beaucoup d'autres produits des exploitations forestières qui ne se trouvent pas dans le pays sont aussi employés en très-grandes quantités. La table suivante montre les principales importations de ces articles en 1865 :—

Articles	Quantités
Cendres, potasse et perlasse quintaux	144,000
Ecorce, pour le tannage et la teinture } „	431,000
Liège	122,000
Bouchons livres	2,012,000
Noix de galle quintaux	16,000
Sumac tonnes	13,000
Cachou	16,000
Avellanède	20,000
Bois de construction et autres :	
Non-sciés ni fendus (bois de teck inclus) } lasts	1,686,000
Sapins, voliges, etc. sciés et fendus } „	2,136,000
Douves	67,000
Bois de chauffage	180,000
Cercles	8,000
Bois de lattes	105,000
Bois de teinture tonnes	44,000
Bois durs	68,000

La valeur totale des articles ci-dessus se montait à 15,888,000/. Une petite quantité de bois de construction étranger est réexporté, mais l'importance n'en est pas assez considérable pour être mentionnée.

Les potasses et perlasse étaient importées principalement des colonies britanniques de l'Amérique du Nord; l'écorce, de la Belgique et de la Hollande; le liège, du Portugal; les bouchons, de France, d'Espagne et du Portugal; les noix de galle, de Chine, des Indes et de Turquie; le sumac, de Sicile; le cachou, de l'Inde et de Singapour; l'avelanède de Turquie; les bois de construction et autres, des possessions anglaises de l'Amérique du Nord, et de la Baltique; le bois de teck, de l'Inde et de Singapour; le cèdre, de l'île de Cuba; et l'acajou, de l'Amérique Centrale et des États-Unis.

Classe XLII.

PRODUITS DE LA CHASSE, DE LA PÊCHE ET DES CUEILLETES.

Plusieurs articles compris dans cette classe, tels que les peaux de lièvres, de lapins, etc., les plumes, la corne, les os, la cire, etc., sont produits dans le Royaume-Uni; mais il n'y a aucun moyen de déterminer les quantités produites. L'approvisionnement des huiles de poisson, et des baleines, est moindre depuis quelques années, principalement à cause de la découverte de substances qui répondent mieux aux besoins pour lesquels ces articles étaient autrefois employés.

Quoique beaucoup des articles les plus importants inclus dans cette classe ne soient pas produits dans le pays, ils y sont néanmoins largement employés. Les chiffres suivants montrent les quantités des principaux produits étrangers de chasse, de pêche, etc. importés dans le Royaume-Uni en 1865:—

Écorce, Quercitron . . .	quintaux	24,954
„ à tan . . .	„	405,856
Os pour manufactures . .	tonnes	8,666
Soies de porc . . .	livres	2,566,000
Liège . . .	tonnes	6,103
Plumes pour literie . . .	quintaux	13,493
„ d'ornement . . .	livres	54,211
Noix de coco . . .	nombre	2,545,000
„ broyées . . .	tonnes	1,939
Gommes . . .	quintaux	182,000
Caoutchouc . . .	„	71,392
Gutta-percha . . .	„	29,077
Poils de vaches, de } bœufs et de chevaux }	„	74,851
Cornes . . .	tonnes	3,678
Colle de poisson . . .	quintaux	2,764
Huile de baleine . . .	tonnes	10,005
„ spermaceti . . .	„	2,438
Plumes d'oie . . .	nombre	10,949,000
Résine . . .	quintaux	459,000
Peaux de lapins . . .	nombre	1,059,000
„ „ daim . . .	„	92,000
„ „ chèvre . . .	„	2,797,000
„ „ chevreau . . .	„	330,000
„ „ agneau . . .	„	708,000
„ „ mouton . . .	„	4,300,000
„ „ veau marin . . .	„	529,000

Ivoire, défenses d'élé- phant . . .	quintaux	10,268
Ivoire végétale . . .	„	22,313
Écailles de tortues . .	livres	39,288
Cire d'abeilles . . .	quintaux	10,600

Les chiffres ci-dessus ont rapport au commerce total de l'importation; dans quelques cas a lieu une réexportation considérable.

Classe XLIII.

PRODUITS AGRICOLES (NON-ALIMENTAIRES) DE FACILE CONSERVATION.

Les principaux articles produits dans le Royaume-Uni et qui entrent dans les limites de cette classe, sont le lin et la laine en nature, les huiles de grains, et l'écorce de chêne. La production des deux premiers articles est mentionnée dans les Classes 28 et 30; mais il n'y a aucun moyen de déterminer l'étendue de la production de l'écorce de chêne dans le pays. Quant à la production de l'huile de grains, il n'y a aucun compte rendu de l'étendue de sa préparation pour les usages domestiques et autres. Cependant on l'exporte largement du Royaume-Uni. En 1865 non moins de onze millions de gallons, évalués à 1,547,000^l, ont été exportés, mais cette quantité n'était pas le produit de grains anglais seulement, de grandes quantités de grains oléagineux étant importés annuellement. En 1865, 1,697,000 de quarts (de quintaux) de graines de lin, de navette, et autres graines oléagineuses ont été importés. En outre de la production indigène de l'écorce, de grandes quantités de matières pour le tannage sont importées. En 1865 les principales espèces importées étaient:—

Écorce pour la teinture et le tannage . . .	Tonnes	20,292
Cachou . . .	„	2,120
'Gambier' . . .	„	13,588
Avelanède . . .	„	19,702
Libidibi . . .	„	3,711
Sumac . . .	„	13,045

Les importations d'huile de grains, principalement de France, de Hollande et de Hambourg, se montaient dans la même année à 12,811 tonneaux, évaluées à 595,000^l.

Classe XLIV.

PRODUITS CHIMIQUES ET PHARMACEU- TIQUES.

La fabrication des produits chimiques constitue une des principales industries du pays; elle n'est pas seulement importante en elle-même, mais aussi parce qu'elle se trouve intimement liée à la fabrication d'autres produits indigènes dans lesquels les premiers entrent pour une large part. C'est dans les environs de Newcastle, Liverpool, Glasgow, Bristol et Birmingham que s'exerce surtout cette industrie,

ainsi que dans diverses localités du Lancashire, et dans les comtés du sud et du centre de l'Angleterre. La manufacture de la plupart des autres articles compris dans cette classe est si disséminée dans tout le pays qu'il est difficile de désigner particulièrement des lieux spéciaux de production.

En ce qui concerne le savon et les chandelles, les qualités ordinaires sont fabriquées dans presque toutes les grandes villes du royaume.

La production du savon est considérable; ainsi, en 1852, c'est-à-dire, l'année précédant le rappel du droit d'accise sur cet article, 203 millions de livres de savon ordinaire et 21 millions de savon noir ont acquitté le droit dans le Royaume-Uni pendant cette même année. Depuis l'abolition de la taxe on n'a fait aucun relevé statistique exact de la production, bien que l'on sache cependant qu'elle a beaucoup augmenté. Aussi longtemps que le savon est resté frappé du droit d'accise, on n'a cherché ni à améliorer sa fabrication ni à la rendre moins coûteuse; mais, après la suppression de ce droit, la chimie a fait de nombreuses et sérieuses expériences sur ce point, et on peut aujourd'hui acheter, à 2*d.* la livre, du savon qui, autrefois, était soumis à un droit de 3*d.* pour la même quantité. De grands perfectionnements ont été réalisés dans la manufacture des différentes sortes de savons parfumés et de toilette, dont la consommation s'est considérablement accrue. Ces derniers sont surtout fabriqués à Londres et dans quelques-unes des principales villes du pays.

Quant aux chandelles, celles faites avec le suif sont produites dans presque toutes les villes du royaume, et leur fabrication fournit de l'occupation à plusieurs centaines d'individus. La manufacture des autres espèces, telles que chandelles de cire et de spermaceti, n'existe guère que dans les grandes villes; et celle des stéarines, des bougies de paraffine et des chandelles moulées, est entièrement concentrée à Londres et aux environs, à l'exception toutefois de deux fabriques en Écosse et une en Irlande. On ne possède aucun renseignement sur le nombre de personnes actuellement employées à la fabrication des chandelles; mais, d'après le recensement de 1861, ce nombre était, à cette époque, pour la Grande-Bretagne, savoir:—

	Hommes	Femmes	Totaux
En Angleterre et le Pays de Galles	4,467	219	4,686
Écosse	298	25	323
Total	4,765	244	5,009

Depuis l'introduction des bougies de paraffine cette industrie s'est améliorée et développée d'une façon remarquable. MM. Field, qui figurent parmi les exposants de cette classe, ont, les premiers, en 1857, fabriqué cette sorte de bougie à laquelle ils ont, depuis cette époque, fait subir de grands perfectionnements, dont le

plus récent consiste dans la forme de l'extrémité inférieure de ces bougies, qui permet de les adapter à n'importe quels chandeliers. Les principaux avantages des bougies de paraffine sont: absence de toute matière grasse, lumière pure et d'une grande puissance de clarté, et prix modéré en égard à leurs qualités. La substance dont sont faites ces bougies les rend susceptibles de recevoir toute espèce de teintes sans nuire en aucune façon à leur lumière.

La fabrication du caoutchouc et de la gutta-percha a pris un développement considérable pendant ces dix dernières années; elle a lieu sur une grande échelle dans diverses parties du royaume. On a également fait beaucoup de progrès, durant la même période, en ce qui concerne les teintures et les couleurs. L'alun, qui forme un article de commerce de quelque importance, est produit, en grande quantité, à Whitby, dans le Yorkshire. MM. Albright et Wilson, de Oldbury, fournissent en abondance du phosphore. Les eaux minérales et autres sont fabriquées dans diverses localités du pays; cette industrie occupait, en 1861, 1,501 hommes et 98 femmes.

Comme il n'existe aucune statistique officielle des productions industrielles du pays, il est impossible de connaître le nombre de personnes employées dans les diverses industries comprises dans cette classe. Le nombre total des chimistes occupés à la fabrication des produits chimiques, accusé par le recensement de 1861, était dans la Grande-Bretagne:—

	Hommes	Femmes	Total
En Angleterre et le Pays de Galles	7,505	243	7,748
Écosse	1,253	50	1,303
Total	8,758	293	9,051

Industrie des Alcalis.

La plus importante des fabrications de cette classe est celle de l'alcali, à laquelle se trouvent rattachées celles du carbonate de soude, de l'acide sulfurique, de l'acide hydrochlorique et des matières utilisées pour le blanchiment. Comme cette manufacture a lieu aujourd'hui sous le contrôle du gouvernement, les relevés des quantités de sel décomposé fournissent un moyen certain de connaître l'extension et l'accroissement de cette industrie. À l'époque de la signature du Traité anglo-français, en 1860, la quantité de sel annuellement employée pour la fabrication de l'alcali, dans le Royaume-Uni, était estimée, par les fabricants eux-mêmes, à environ 250,000 tonnes. Il ressort du premier rapport de l'inspecteur des alcalis, qu'il a été employé environ 300 mille tonnes de ce produit en 1864, et d'après le second rapport concernant 1865, 325,000 tonnes, soit une augmentation de 30 pour cent en cinq ans. Il n'existe pas de relevés exacts des dérivés de ce produit, mais on a fréquemment fait des estimations.

Ainsi le jury sur la Classe 2, à l'Exposition

de 1862, a publié quelques renseignements intéressants sur le commerce de l'alcali dans le Royaume-Uni, et qui lui avaient été fournis par M. C. Allhusen; ils démontraient que, dès l'année 1852, la production de cette industrie présentait les résultats ci-après:—

	Tonnes	Valeur £
Alcali	71,193	711,930
Soude cristallisée	61,044	305,220
Bicarbonate de soude	5,762	86,430
Poudres de blanchiment	13,100	131,000
	151,099	1,234,580

Les chiffres suivants font connaître l'accroissement qui s'est manifesté dans cette production entre les années 1852 et 1861:—

	1852 (d'après les relevés de M. Allhusen)	1861 (d'après les relevés de M. Gossage)
	Tonnes	Tonnes
Alcali	71,193	156,000
Cristaux de soude	61,044	104,000
Bicarbonate de soude	5,762	13,000
Poudres de blanchiment	13,100	20,000

M. Gossage estimait que la valeur totale des produits, en 1861, excédait 2 millions sterling, et à 10,000, le nombre de personnes employées dans 50 établissements environ.

Le tableau suivant indique quelle a été, en 1861, la production des deux districts qui fournissent le plus d'alcali:—

	Newcastle-sur-Tyne	Lancashire (d'après les relevés de M. M. Schunk, Smith, & Roscoe)
	Tonnes	Tonnes
Alcali	35,000	93,600
Cristaux de soude	82,000	8,840
Bicarbonate de soude	12,000	11,700
Poudres de blanchiment	11,400	8,060

M. E. K. Muspratt, Secrétaire honoraire de l'Association des Fabricants d'Alcali du Lancashire, dit que, d'après les relevés des manufacturiers de ce district, la quantité de sel annuellement décomposé est d'environ 170,000 tonnes, ou plus de 50 pour cent, de la fabrication totale du royaume.

Les quantités des produits ci-après mentionnés, fabriqués dans le Lancashire ou district de l'ouest, s'élevèrent, en 1866, à—

	Tonnes
Cendres de soude	81,800
Soude caustique	11,500
Cristaux de soude	23,000
Bicarbonate de soude	6,400
Sulfate de soude (pour vendre comme sulfate)	24,600
Poudres de blanchiment	17,500

La valeur des articles qui précèdent a été, aux prix courants, de 1,726,200*l*.

Outre les alcalis, des quantités considérables d'acide sulfurique (18,000 tonnes) et d'acide hydrochlorique (14,000 tonnes) ont été fournis par le même district, en 1866. On n'a pas relevé les quantités de divers autres articles, mais la valeur totale des produits chimiques du comté peut être évaluée à environ deux millions sterling.

D'après le rapport de M. R. Cail la production de l'industrie des alcalis, dans le district de la Tyne, s'élève actuellement (février 1867) à—

	Quantités	Valeur £
	Tonnes	£
Cristaux de soude	86,000	473,000
Cendres de soude et alcali	74,000	814,000
Bicarbonate de soude	11,000	198,000
Sulfate de soude	2,400	10,200
Poudres de blanchiment	27,000	278,000
Sel d'Epsom	590	4,720
Soude caustique : 70	3,720	96,720
Sel de Glauber	20	135
Acide sulfurique du commerce	9,000	36,000
Sulfate de cuivre	200	5,200
Acide muriatique	700	2,100
Hypo-sulfite de soude	400	7,200
Chlorure de manganèse	1,300	4,550
Total	216,330	1,929,825

Les deux plus grands perfectionnements apportés pendant les cinq dernières années dans la fabrication de l'alcali sont: l'accroissement dans la production de la soude caustique et de la poudre de blanchiment, dont on se sert beaucoup dans les papeteries pour la préparation du sparte que l'on substitue aux chiffons.

C'est à l'abolition des droits d'accise sur le sel, le verre, le savon et le papier, que le commerce de l'alcali en Angleterre doit son développement et ses progrès.

On ne possède aucun renseignement statistique en ce qui concerne les autres produits chimiques, mais il s'en fabrique en abondance dans différentes parties du pays.

En dehors de la production indigène des matières premières employées à la manufacture des articles compris dans cette classe, on en importe considérablement de l'étranger, ainsi qu'on le verra par la table suivante qui indique les entrées, dans le Royaume-Uni, en 1865:—

Articles	Quantités
Alcalis —	
Barille	quintaux 15,762
Potasse et perlasse	„ 143,779
Ammoniaque liquide	livres 11,334

„ végétale	3,079

On ne doit pas oublier toutefois que dans

bien des cas on réexporte une grande proportion de ces articles.

La moyenne des salaires payés aux ouvriers dans quelques-unes des principales branches de la fabrication de produits chimiques du pays était, d'après un rapport présenté au 'Board of Trade' en 1866, par les Chambres de commerce de Newcastle et de Bristol, savoir:—

	À Newcastle par journée de 10 heures	À Bristol par journée de 10 heures
Ouvriers occupés à la fabri-		
cation de—	s. d.	s. d.
L'acide sulfurique	4 6	3 6
Sulfate de soude	4 8	4 8
Soude brute	4 6	4 0*
Carbonate de soude	4 6	4 8
Cristaux de soude	3 8	3 0
Bicarbonate de soude	3 8	—
Poudres de blanchiment	5 2	4 0*
Soude caustique	—	4 6
Chlorure de calcium	—	3 0
Sel ammoniac	—	4 0

* Huit heures par jour.

Le taux moyen, par semaine, des gages payés pour la fabrication du savon, dans les villes ci-après désignées était, en 1866 :—

	À Bristol	À Édim- bourg	À Glasgow
Ouvrier occupé			
à liquéfier le	40s.	25s.	36s.
savon			
Aide	16s. 6d.	15s. à 19s.	18s.
Ouvrier préposé	18s. à 20s.	15s.	12s. à 18s.
à la chaudière			

Heures de travail : 60 heures.

Dans la chandellerie de paraffine la moyenne des salaires payés aux principaux ouvriers est de 30s. à 42s., environ, par semaine. Heures de travail : dix heures et demi par jour.

Les exportations des principales sortes de produits chimiques britanniques, savons, bougies, etc., ont été, en 1865, savoir:—

	Quantités	Valeur

Térébenthine (l'huile et l'essence de), et produits tenant lieu de térébenthine . . .	gallons	88,713	22,105

L'exportation de l'alcali et de la soude a considérablement augmenté pendant les dix dernières années. 1,405,000 quintaux seulement ont été exportés en 1856, contre 2,998,000 quintaux en 1866.

Le progrès dans la fabrication des produits chimiques, pendant ces dernières années, s'est largement soutenu au niveau des besoins, et, ainsi qu'on vient de le dire pour ce qui concerne la catégorie importante des alcalis, après avoir satisfait les demandes croissantes de la fabrication indigène, il a permis d'exporter ces articles dans de grandes proportions.

De notables perfectionnements ont été apportés aux procédés de la manufacture de l'acide sulfurique et divers autres produits chimiques, mais surtout à la condensation du gaz hydrochlorique, dans les fabriques d'alcali. Une nouvelle activité s'est manifestée dans le commerce du phosphore : au lieu d'importer ce produit, comme cela avait lieu il y a quelques années, les manufacturiers anglais soutiennent la concurrence avec ceux de l'étranger sur divers marchés du Continent. Grâce à de récentes découvertes la manufacture des chandelles et du savon a réalisé de grands progrès. L'introduction de l'aniline et autres matières tinctoriales analogues a donné lieu à des opérations très-importantes dans ces articles. L'application du caoutchouc à une infinité d'usages commerciaux et domestiques a

aussi fourni de l'occupation à un grand nombre d'ouvriers. L'inspection des objets exposés sous cette classe donnera une connaissance des différentes branches d'industrie qui s'y rattachent, plus exacte qu'il n'est possible de le faire dans l'espace limité qui est accordé à ces remarques sommaires.

Classe XLV.

SPÉCIMENS DES PROCÉDÉS CHIMIQUES DE BLANCHIMENT, DE TEINTURE, D'IMPRESION, ET D'APPRÊTS.

On trouvera indiqués dans les classes consacrées aux matières textiles et tapis, etc., les perfectionnements les plus remarquables apportés aux procédés compris dans la présente classe.

Classe XLVI.

CUIRS ET PEaux.

L'industrie des cuirs a été considérée comme quatrième seulement en importance parmi les industries nationales de la Grande Bretagne. Elle se fait largement à Bermondsey, près de Londres, et sur une moins grande échelle dans diverses parties du pays. En comparaison de la population, il se fait plus de cuir pour l'usage général en Angleterre que dans aucun autre pays. La valeur totale annuelle des articles de cuir était évaluée, en 1851, à quatorze millions sterling; mais cette somme est probablement beaucoup au-dessous de la valeur actuelle, parceque le commerce a constamment augmenté depuis cette année. Il n'y a pas de compte rendu de la quantité de peaux produites dans le Royaume-Uni; mais en outre de la production nationale, qui doit être très-considérable, de grandes importations de peaux se font annuellement de l'Inde, de l'Amérique du Sud, et d'autres parties du monde. Il y a aussi une grande importation de peaux mégissées, tannées et apprêtées.

La table suivante montre les quantités et la valeur des peaux et cuirs importés pendant les cinq années 1861-65 :—

	Peaux	Peaux Tannées, etc.	Valeur Totale
	Quintaux	Livres	£
1861	830,000	5,219,000	2,903,000
1862	943,000	5,512,000	3,204,000
1863	1,023,000	5,202,000	3,230,000
1864	954,000	6,446,000	3,152,000
1865	968,000	7,352,000	3,073,000

Une grande quantité de peaux de l'étranger est réexportée. Les exportations de cuir an-

glais tanné, non-mégissé, se montaient dans les cinq années 1861-1865 à—

	Quintaux	£
1861 . . .	40,000	361,000
1862 . . .	43,000	406,000
1863 . . .	47,000	441,000
1864 . . .	38,000	382,000
1865 . . .	43,000	439,000

Les exportations de marchandises de cuir sont mentionnées dans les classes où ces articles ont été rangés.

Le taux des gages reçus par les tanneurs est

d'environ 25s. par semaine, et par les corroyeurs et apprêteurs de 34s.

Plusieurs nouvelles matières premières pour apprêter les peaux ont été exposées à l'Exposition de Londres de 1862, dont plusieurs ont été jugées par le jury comme également bonnes, si non supérieures à l'écorce de chêne ou tan habituellement employé ; mais l'ancien système de tannage est encore en grand usage.

La préparation de peaux pour gants, de parchemins, de baudruches, et de cordes à boyaux pour instruments de musique se fait aussi dans le Royaume-Uni, mais il n'y a aucun compte rendu de l'étendue de ces industries.

GROUPE VI.

(CLASSES XLVII. à LXVI.)

INSTRUMENTS ET PROCÉDÉS DES ARTS USUELS.

Classe XLVII.

MATÉRIEL ET PROCÉDÉS DE L'EXPLOITATION DES MINES ET DE LA MÉTALLURGIE.

Il faudrait plus d'espace qu'on n'en peut donner ici pour énumérer les espèces presque innombrables d'appareils et de machines employés dans les diverses branches de l'industrie comprises dans cette classe. Le développement des ressources des mines et de la métallurgie du pays est dû principalement à l'emploi des machines : en effet, beaucoup de mines n'auraient jamais été exploitées, et beaucoup de procédés métallurgiques n'auraient jamais pu être accomplis sans l'aide de la vapeur. Il n'y a aucun compte-rendu du nombre des machines à vapeur, ni de la force motrice employées dans les mines et dans les usines et fonderies de métaux du Royaume-Uni. Les machines sont d'ailleurs largement employées pour élever les minéraux du fond des puits, pour épuiser l'eau des mines, et dans quelques cas pour la ventilation, quoique le plus souvent les houillères anglaises sont ventilées par le moyen de fournaies. Des améliorations considérables ont été faites dans les dernières années dans les machines servant à élever les bennes, dans la manière de se servir des fournaies pour la ventilation, et aussi dans la construction des ventilateurs mécaniques. Le sondage des puits par la vapeur est une des plus importantes et des plus récentes inventions. Parmi les objets exposés dans cette classe on trouvera des machines à abattre la houille, et un modèle complet des appareils et de la mécanique employés pour la fabrication de l'acier par le procédé Bessemer.

Quant aux cages de sûreté ou parachutes, aucun des systèmes inventés jusqu'à présent n'a donné une satisfaction générale, quoique plusieurs genres soient en usage.

Les lampes de sûreté employées dans les mines de charbon de la Grande Bretagne sont principalement les anciennes lampes, systèmes 'Davy,' 'Stephenson,' ou 'Geordie,' qui sont toutes protégées par un tissu métallique. Cependant les lampes Mueseler ont été intro-

duites avec succès dans quelques houillères de l'Angleterre.

Classe XLVIII.

MATÉRIEL ET PROCÉDÉS DES EXPLOITATIONS RURALES ET FORESTIÈRES.

La fabrication des machines et outils d'agriculture a atteint un haut degré de perfection dans le Royaume-Uni, et, en outre de la grande production nationale pour l'usage du pays, des machines et instruments d'agriculture s'exportent annuellement en quantités considérables. L'emploi de la vapeur pour beaucoup de travaux agricoles est maintenant très-répandu. Une grande attention a été donnée à l'agriculture dans les dernières années, et au moyen d'un drainage meilleur, d'engrais artificiels, et d'appareils perfectionnés, la fertilité du sol a été beaucoup augmentée. Les charrettes et chariots employés dans le Royaume-Uni pour les travaux d'agriculture sont en général bien supérieurs à ceux qu'on emploie à l'étranger pour ces mêmes travaux.

En mentionnant les progrès récents dans les objets compris dans cette classe, le jury des instruments d'agriculture à l'Exposition de Londres en 1862 a spécialement attiré l'attention sur l'usage croissant des machines à vapeur locomobiles à battre le blé, des charrues et cultivateurs à vapeur, des machines à moissonner et à faucher, et des machines à broyer la nourriture des bestiaux.

La manufacture des instruments et machines d'agriculture se fait largement à Lincoln, Peterborough, Grantham, Bedford, Ipswich, Leiston, Stowmarket et dans beaucoup d'autres parties du pays.

Il n'y a aucune statistique de la production des articles inclus dans cette branche de l'industrie nationale, mais on peut former quelque idée de son importance par le nombre des exposants dans cette classe.

La valeur des instruments d'agriculture exportés du Royaume-Uni en 1865 s'élevait

à 210,000l.; de machines agricoles (excepté à vapeur) à 282,000l.; et d'instruments faits entièrement de fer, à 13,000l. Il n'y a pas de rapport distinct des machines locomobiles pour l'agriculture exportées, mais plusieurs centaines sont expédiées annuellement dans les pays étrangers.

Suivent les principaux articles d'engrais importés en 1865 :—

	Quantités	Valeurs
	Tonnes	£
Os	65,642	362,000
Guanos	237,393	2,676,000
Substances non-énumérées	8,025	49,000

Classe XLIX.

ENGINS ET INSTRUMENTS DE LA CHASSE, DE LA PÊCHE ET DES CUEILLETES.

La manufacture des fusils de chasse se fait principalement à Birmingham et à Londres. Cette industrie est mentionnée dans la Classe 37. La fabrication des appareils de pêche dans le pays a quelque importance. La fabrication des hameçons, des tridents à anguilles, et des harpons, ainsi que celle des appâts et des appareils de pêche est établie principalement à Redditch, et une branche importante du commerce des cannes à pêche, des amorces artificielles, des lignes, flottes, filets, etc., est établie à Londres.

Environ 600 personnes sont employées à Redditch dans la fabrication des hameçons, et d'après le recensement de 1861, 670 personnes étaient occupées en Angleterre et le pays de Galles et 60 personnes en Irlande à la fabrication des cannes et autres engins de pêche. Les mouches et amorces artificielles sont faites à Redditch, principalement par des femmes et des filles. Le taux des gages payés à Redditch est environ de 8s. à 15s. par semaine pour les femmes, et de 12s. à 40s. pour les hommes. À Londres le taux des gages est plus élevé, et les bons ouvriers gagnent de 40s. à 80s. par semaine pour un travail de huit à douze heures par jour. La valeur des appareils et engins de pêche exportés du Royaume-Uni en 1865 s'élevait à 81,000l.

Classe L.

MATÉRIEL ET PROCÉDÉS DES USINES AGRICOLES ET DES INDUSTRIES ALIMENTAIRES.

L'emploi des machines est très-répandu dans le Royaume-Uni pour la fabrication des tuyaux de drainage, pour broyer les os, pour mouder le grain, pour la manutention, et pour diverses autres industries comprises dans cette classe. Il n'est pas possible de retracer ici les nombreux perfectionnements qui ont été apportés dans les

différents genres de mécanique utilisés dans les branches de commerce qui viennent d'être mentionnées; mais l'accroissement continu du nombre des manufacturiers concurrents, tant sur le marché anglais qu'à l'étranger, est un motif suffisant de déterminer les producteurs à s'emparer de tout progrès qui aurait pour résultat d'augmenter la force de production, ce qui les mettra ainsi à même, soit de vendre à plus bas prix, soit de réaliser de plus grands bénéfices que leurs rivaux.

Il n'existe aucun relevé sur la quantité ou la force motrice des machines à vapeur employées dans les industries dont il vient d'être question.

Classe LI.

MATÉRIEL DES ARTS CHIMIQUES, DE LA PHARMACIE ET DE LA TANNERIE.

La multiplicité des procédés employés dans les diverses branches des industries comprises dans cette classe ne permet pas, à cause du peu d'espace dans lequel doivent se renfermer ces remarques, de s'arrêter même aux appareils les plus importants actuellement en usage. Les progrès rapides de la science, dans ces dernières années, ont grandement contribué à perfectionner d'anciens procédés se rattachant aux productions chimiques du pays, et à en inventer d'autres. On trouvera exposés sous cette classe quelques spécimens des plus récents perfectionnements.

Classe LII.

MOTEURS, GÉNÉRATEURS ET APPAREILS MÉCANIQUES SPÉCIALEMENT ADAPTÉS AUX BESOINS DE L'EXPOSITION.

Les articles compris dans cette classe ayant été désignés pour une destination spéciale, c'est à l'autorité compétente qu'il appartient de décider jusqu'à quel point ceux fournis par les exposants anglais ont atteint le but proposé. On lira à la Classe 53 des observations sur les machines britanniques en général.

Classe LIII.

MACHINES ET APPAREILS DE LA MÉCANIQUE GÉNÉRALE.

La prospérité commerciale du Royaume-Uni est due, en grande partie, à la possession d'un abondant approvisionnement de la matière première employée pour la construction des machines, et du charbon nécessaire à leur fonctionnement; les perfectionnements remarquables apportés dans l'application des machines aux innombrables procédés se rattachant aux manufactures nationales ont également contribué à cette prospérité. A défaut d'autres

preuves de l'importance de cette industrie, l'exportation des machines britanniques, qui augmente chaque année, démontre surabondamment le rang élevé qu'elle occupe parmi toutes celles du pays. Les machines et mécaniques sont principalement faites à Manchester, Leeds, Birmingham, Sheffield, Newcastle, Glasgow et autres centres manufacturiers du pays. Celles destinées à l'usage maritime sortent particulièrement des usines de la Tamise et de la Clyde; il s'en construit également ailleurs dans le royaume, et notamment à Newcastle, mais dans des proportions moindres.

Birmingham produit sur une grande échelle des machines hydrauliques, des poulies mouflées, des machines à coudre et à faire les clous, ainsi que des tubes en cuivre et en laiton; ces derniers articles sont également manufacturés à Bristol, Manchester, Liverpool, Newcastle, etc. Les machines agricoles forment aussi une branche importante du commerce des machines en général; mais comme elles sont comprises dans la Classe 74, il est inutile de s'y arrêter davantage ici.

Le nombre d'ouvriers occupés à la manufacture des machines dans chacune des divisions du Royaume-Uni était, d'après le recensement de 1861:—

En Angleterre et le pays de Galles	72,000
(environ)	
Écosse	10,500
Irlande	900
Total	83,400

Les nombreuses subdivisions qui existent dans cette manufacture permettent difficilement de s'assurer du nombre de personnes qui y sont employées. On pense toutefois que les chiffres ci-dessus se rapprochent assez de la vérité.

Il n'existe point de renseignements statistiques complets sur la moyenne des salaires payés dans l'industrie des machines en Angleterre; cependant dans la plupart des branches le travail habilement exécuté est largement rétribué, et la permanence des travaux procure aux ouvriers de cette catégorie une aisance relative. Les derniers relevés qui aient été faits à Manchester sur la moyenne des gages des artisans remontent à 1859, et ils présentaient, à cette date, les résultats suivants: modeleurs, forgerons, chaudronniers et ajusteurs, 32s.; menuisiers, 28s.; raboteurs, 22s.; foreurs, 20s.; frappeurs, visseurs, taraudeurs et mortaiseurs, 18s. par semaine de 58 heures. La moyenne des salaires à Glasgow était en 1866 de 25s. pour les chaudronniers et de 24s. pour les forgerons, par semaine de 60 heures.

En ce qui concerne la construction des machines hydrauliques à Birmingham, cette moyenne est d'environ 55s. par semaine pour l'ouvrier habile, et de 30s. à 40s. pour l'artisan de deuxième ordre.

La valeur des machines britanniques de toutes sortes exportées du Royaume-Uni, qui

était de 2,243,000l. en 1855, atteignait, en 1865, le chiffre de 5,222,000l.

Le tableau suivant indique les principales sortes de machines exportées en 1865:—

Machines et pièces détachées de machines:	£
Machines à vapeur et pièces détachées de machines	Locomotives 945,451 Autres que locomotives } 1,013,082
Autres que machines à vapeur	Machines agricoles } 282,019 Autres sortes } 2,982,081
Total	5,222,633

Dans une classe qui comprend une telle variété d'objets que l'on perfectionne tous les jours, il est bien difficile de retracer en quelques lignes le progrès qui a été fait pendant ces quelques dernières années. Le jury sur la Classe 8 à l'Exposition de 1862, prenant comme type de comparaison les articles exposés au concours international de 1851, dit: 'En ce qui concerne les machines à vapeur, on constate un plus grand emploi du système à haute pression, plus d'expansion et de surchauffage, et l'usage plus répandu de condenseurs de surfaces (ce qui est obtenu au moyen d'un grand nombre de petits tubes horizontaux); une tendance marquée vers la simplification des cages de machines et des principales parties mouvantes, une renonciation complète à certains accessoires plus curieux qu'utiles, et enfin une plus haute perfection de la main-d'œuvre et du fini. Il résulte de toutes ces améliorations une plus grande économie dans le combustible, la force motrice, et les réparations. Tous les perfectionnements qui viennent d'être énumérés sont aussi applicables aux machines pour le service maritime: on constate même, en faveur de ces dernières, un perfectionnement plus frappant encore dans la main-d'œuvre.' On a remarqué également que des progrès considérables avaient été faits dans la fonte et la forge des grosses pièces, ainsi que dans beaucoup de parties détachées de machines et de pièces de mécaniques. On trouvera sans doute parmi les articles exposés sous cette classe la plupart de ceux qui, depuis 1862, ont reçu quelque perfectionnement important.

Classe LIV.

MACHINES-OUTILS.

La fabrication des machines-outils a déjà atteint, dans le Royaume-Uni, un haut degré de perfection, mais elle est susceptible de recevoir encore de nombreuses améliorations, notamment sous le rapport de la simplicité dans la construction de certains outils, et de leur emploi pour une grande variété d'usages.

Les machines-outils sont faites sur une grande échelle à Manchester, Sheffield, Leeds, et dans

plusieurs autres villes du royaume. Depuis l'emploi de la vapeur comme force motrice, l'usage des machines-outils s'est répandu dans des proportions énormes, et les manufactures les plus importantes du pays exécutent aujourd'hui bien peu de travaux autrement que par le moyen des machines et des machines-outils.

Les principaux avantages résultant de l'emploi des machines-outils comparées avec le travail à la main sont : augmentation de la puissance productrice, et plus de précision et de régularité dans la quantité du travail accompli ; d'un autre côté, cette augmentation de force productrice, garantie au fabricant par l'emploi de ces outils, lui permet de payer un salaire élevé aux artisans habiles, contribuant ainsi à améliorer la position des ouvriers.

Il n'existe aucun rapport sur le nombre de personnes occupées dans cette branche de l'industrie, ni sur la valeur annuelle des articles produits. Cependant, outre la fabrication de ces articles pour les besoins du pays, il s'en exporte considérablement. En 1865 l'exportation des machines, etc. ayant plus ou moins de rapport avec cette classe a été :—

	£
Machines à vapeur et pièces détachées (autres que les locomotives)	1,013,000
Mécaniques et pièces pour la construction des moulins (autres que machines à vapeur)	2,982,000
Outils et instruments destinés à l'industrie, mais qui ne sont pas classés comme machines	87,000

L'établissement, dans les différentes villes manufacturières, des Ecoles de science et d'art du gouvernement a été très-profitable à la classe des ouvriers employés à la construction des machines et des machines-outils ; l'instruction qu'ils y reçoivent non-seulement en fait de meilleurs artisans, mais les rend capables de perfectionner les anciennes machines et d'en inventer d'autres ; ils augmentent ainsi la puissance manufacturière du pays en même temps que leur position s'élève sur les degrés de l'échelle sociale.

Classe LV.

MATÉRIEL ET PROCÉDÉS DU FILAGE ET DE LA CORDERIE.

La fabrication des cordes, cordages, etc. est très-répandue dans tout le pays, mais les principaux centres de cette industrie sont à Liverpool, Newcastle et autres ports de la Tyne, à Londres, et dans quelques villes maritimes de l'Ecosse. On fait également des cordages destinés au service de la marine, dans les arsenaux de l'Etat. L'extension rapide de l'emploi des cordes en fil de fer pour le grée-

ment des navires, pour l'usage des houillères et pour divers autres objets, a amené de grands perfectionnements dans la manufacture des cordes. Les deux câbles sous-marins qui existent aujourd'hui entre le Royaume-Uni et l'Amérique marquent suffisamment la haute position à laquelle est parvenue en Angleterre la fabrication des câbles en fil métallique. En ce qui concerne les machines employées pour le filage, elles sont respectivement mentionnées dans les classes consacrées aux manufactures textiles. Toutefois on trouvera exposées sous cette classe diverses machines montrant les derniers perfectionnements qui ont été faits dans cette partie de la mécanique.

Le nombre de personnes occupées à la confection des cordes, câbles, etc. était, d'après le recensement de 1861 :—

	Hommes	Femmes	Total
En Angleterre et dans le pays de Galles }	11,762	1,724	13,486
Ecosse	2,313	267	2,580
Irlande	1,132	33	1,165
Total	15,207	2,024	17,231

Les matériaux employés à la manufacture des cordes arrivent surtout de Russie, d'Italie et des Indes Orientales ; les principaux articles de ce genre importés en 1865 étant :—

	Quantités	Valeur
Fil de chanvre, etc. pour câbles (excepté la bourre de coco)	livres . 11,082,747	£ 163,932
Bourre de coco pour câbles	quint. 97,674	177,609
Chanvre apprêté et non apprêté	„ 1,065,705	1,704,187

Les chiffres ci-dessus représentent l'importation totale du chanvre, dont une partie seulement est utilisée pour la corderie.

Les câbles en fil métallique se font principalement à Gateshead et à Birmingham, et les fils servant à leur confection sont en grande partie fournis par cette dernière ville.

Les quantités et valeurs des cordages et ficelles britanniques exportés en 1865 étaient, savoir :—

	Quantités	Valeur
Câbles et cordes :		£
De chanvre	quint. 130,715	268,677
Autres sortes	„ 14,009	27,692
Ficelles	„ 23,449	117,844

Les câbles en fil de fer ne sont point distingués, dans les exportations, des autres produits en fils métalliques.

Classe LVI.

MATÉRIEL ET PROCÉDÉS DU TISSAGE.

Les principaux ateliers pour la construction des machines à tisser et à filer sont ceux de

Manchester, Oldham, Bury et autres lieux du Lancashire, de Leeds, Halifax et Bradford dans le Yorkshire, et de Glasgow et Dundee en Ecosse. Bien que ces machines aient subi de grandes améliorations, elles reçoivent cependant tous les jours de nouveaux perfectionnements qui ont pour but de les compléter davantage, de les faire agir d'elles-mêmes, et d'augmenter leur puissance de production. L'inspection de la série complète des machines à préparer, filer et tisser le coton et les laines, exposées dans la Classe 55, par la maison bien connue de MM. Platt et Cie., pourra, mieux que ne saurait le faire une courte description, donner une idée exacte du genre de mécaniques actuellement en usage dans les filatures anglaises.

Il n'y a point de relevés statistiques du nombre de personnes employées à cette branche de la manufacture des machines du pays.

Il s'exporte annuellement une grande quantité de machines industrielles, ainsi, du reste, qu'on pourra le voir aux observations contenues dans la Classe 53.

Classe LVII.

MATÉRIEL ET PROCÉDÉS DE LA COUTURE ET DE LA CONFECTION DES VÊTEMENTS.

Les appareils ou procédés les plus importants compris dans cette classe sont ceux pour la couture et la confection des souliers à la mécanique. C'est en 1845 ou 1846 que les premières machines à coudre furent introduites d'Amérique en Angleterre : elles ont depuis cette époque reçu de nombreux perfectionnements, et sont aujourd'hui presque universellement employées, aussi bien pour le travail simple que pour le compliqué. Le jury, à l'Exposition de Londres en 1862, a constaté que des progrès considérables avaient été faits dans la fabrication des bottines et des souliers à la mécanique pendant les dix dernières années écoulées depuis 1851. Il se fait depuis quelques années à Leicester un commerce considérable pour la vente en gros de bottines et souliers cloués ou chevillés, principalement pour femmes et enfants.

Les machines de MM. Greenwood et Batley pour le chevillage des souliers et la taille des chevilles ont été hautement recommandées par le jury en 1862, et elles ont obtenu une médaille. Comme la manufacture des chaussures à la mécanique réalise, comparativement au travail à la main, une grande économie dans les frais de fabrication, on espère que la présente Exposition mettra au jour quelques nouveaux perfectionnements apportés aux machines dont on se sert actuellement dans cette importante branche de l'industrie.

Classe LVIII.

MATÉRIEL ET PROCÉDÉS DE LA CONFECTION DES OBJETS DE MOBILIER ET D'HABITATION.

Plusieurs des appareils rentrant dans les limites de cette classe, tels que machines à couper le bois, à raboter, à faire les moulures, etc., sont compris dans la Classe 54, comme machines-outils. La mécanique est aujourd'hui si généralement employée dans toutes les branches de l'industrie manufacturière du Royaume-Uni, que faire même une simple allusion aux différentes sortes de machines en usage serait dépasser les limites de ces observations.

La tendance toujours croissante des principales manufactures du pays à se concentrer entre les mains de grandes sociétés ou compagnies disposant de capitaux considérables a eu pour résultat d'augmenter l'emploi des machines ; ce qui facilite les vastes opérations de ces compagnies et réduit les dépenses de la main-d'œuvre. On trouvera à la Classe 53 quelques remarques sur les localités possédant les principaux ateliers de construction.

Classe LIX.

MATÉRIEL ET PROCÉDÉS DE LA PAPETERIE, DES TEINTURES ET DES IMPRESSIONS.

L'importance du commerce des papiers a déjà été signalée dans les observations sur la Classe 7 ; mais bien que la production de cet article ait considérablement augmenté ces dernières années, peu de perfectionnements ont été ajoutés à la machine-continue à faire le papier sans fin, inventée vers le commencement de ce siècle. On trouvera exposés sous cette classe des spécimens de machines actuellement en usage. Le principal progrès qui ait été apporté, depuis 1851, dans les procédés se rattachant à l'imprimerie est l'introduction de la machine à fondre et d'appareils à composer et à distribuer les caractères. Pour faire face aux besoins résultant de l'accroissement énorme des demandes de livres, de journaux et de publications périodiques, qui s'est manifesté pendant ces dix dernières années, on a dû également perfectionner les presses à imprimer. L'exportation des diverses sortes de machines figurant dans cette classe n'est pas enregistrée séparément, mais elle se trouve comprise dans les relevés généraux dont il est fait mention à la Classe 53. La valeur des caractères et du matériel d'imprimerie d'origine britannique exportés du Royaume-Uni en 1865 s'élève à 68,930/.

Classe LX.

MACHINES, INSTRUMENTS ET PROCÉDÉS USITÉS DANS DIVERS TRAVAUX.

Bien qu'il n'y ait pas eu de grands changements, ces dernières années, dans les procédés

mécaniques employés pour la manufacture de la plupart des articles compris dans cette classe, de notables perfectionnements ont cependant été apportés aux machines déjà existantes. La fabrication des boutons, des épingles, des plumes métalliques et des aiguilles constitue une branche considérable de l'industrie du pays. Le principal siège de cette fabrication est à Birmingham et aux environs. On estime à 6,000 le nombre de personnes occupées à la manufacture des boutons, et la moyenne des salaires par semaine est d'environ 25s. pour les hommes; de 7s. à 9s. pour les femmes; et de 1s. à 1s. 6d. pour les jeunes filles et les enfants. Il n'a pas été fait de relevés statistiques sur le nombre d'ouvriers actuellement employés à la fabrication des épingles; mais, d'après le recensement de 1861, ce nombre était, à cette époque, pour l'Angleterre et le pays de Galles de 729, dont 322 hommes et 407 femmes. Les épingles sont aujourd'hui presque entièrement produites au moyen de procédés mécaniques. On se sert d'une machine qui, à chaque tour d'une seule roue, donne une épingle parfaite. Les aiguilles sont principalement faites à Redditch, et cette industrie fournit du travail à 8,000 personnes environ. La moyenne des gages par semaine est de 12s. à 40s. pour les hommes, de 8s. à 15s. pour les femmes, et de 1s. 6d. à 5s. pour les enfants. MM. Bartlett et Woodward, dans leur rapport sur le commerce des aiguilles de Redditch, affirment que la condition sociale des ouvriers employés à cette fabrication est, au point de vue de l'ordre et de la propreté, généralement au-dessus de celle de la moyenne des autres classes de travailleurs. Avant d'être terminée et prête à servir, une aiguille passe par les mains de 70 personnes différentes. Le centre manufacturier des plumes métalliques se trouve à Birmingham. Cette industrie occupe environ 360 ouvriers et 2,000 femmes et enfants. Il se fait 98,000 grosses de plumes par semaine. La majeure partie de l'acier employé à cette fabrication est tirée de Sheffield. Les informations qui précèdent sont extraites d'un rapport de M. Timmins, qui a également reconnu que la condition des ouvriers en plumes métalliques était très-satisfaisante. Le gain des filles varie de 5s. à 12s. par semaine, et 2s. 6d. à 3s. 6d. seulement pour celles qui sont plus jeunes: quelques habiles ouvrières se font de 15s. à 20s. Les hommes gagnent de 18s. à 20s., les jeunes garçons de 4s. 6d. à 16s., selon leur dextérité, et les ouvriers adultes de 30s. à 80s. par semaine. Les heures de travail varient de 52½ à 57 heures par semaine. On trouvera dans les contingents de Birmingham, Studley et Redditch, exposés sous cette classe, des spécimens des procédés utilisés à la fabrication des plumes métalliques, des épingles, et des aiguilles.

Classe LXI.

CARROSSERIE ET CHARRONNAGE.

Le principal centre de la carrosserie se trouve à Londres, bien que cette industrie s'exerce également à Édimbourg, Dublin, Liverpool, Derby, Manchester, Nottingham, Glasgow, Southampton, Newcastle et autres villes du royaume.

Le nombre de personnes employées dans cette branche de commerce était, en 1861, pour chacune des divisions du pays—

	Carrossiers	Charrons
Angleterre et Pays de Galles .	18,870	30,070
Écosse : : : : .	1,550	1,282
Irlande : : : : .	3,000	591
Total . .	23,420	31,943

Il n'existe aucun rapport général sur la moyenne des gages payés aux ouvriers employés à la carrosserie, mais, en ce qui concerne Édimbourg seulement, cette moyenne était en 1866, savoir:—

	Par Semaine de 57 Heures			
	1re Classe		2e Classe	
	£	s. d.	£	s. d.
L'ouvrier,				
Serrurier : : .	1	7 0	1	2 0
Ménisier : : .	1	10 0	1	2 0
Chargé de faire le train de la voiture }	1	3 0	—	
Peintre . . .	1	2 0	1	0 0
Garnisseur . . .	1	5 0	1	0 0
Charron . . .	1	2 0	0	18 0
Qui fait les ressorts .	1	6 0	—	

Le rapport de l'Exposition de Londres, en 1862, sur la carrosserie, a constaté un progrès favorable survenu dans la condition des ouvriers employés à la construction des voitures; les habitudes d'intempérance avaient diminué en même temps que l'éducation s'était développée. Les succès de la carrosserie dépendent beaucoup d'une profonde connaissance des principes mécaniques, du dessin et de l'harmonie des couleurs, il est donc nécessaire que les personnes occupées dans cette branche de l'industrie reçoivent une solide éducation artistique.

La valeur applicable à l'importation, dans le Royaume-Uni, de la carrosserie en général, s'est élevée à 5,800l. seulement, en 1865. L'exportation de la carrosserie britannique proprement dite est représentée, pour la même année, par une somme de 175,000l.; celle des charriots, charrettes, etc. par 8,400l. Une grande partie de la carrosserie a été envoyée aux Indes Anglaises.

Parmi les progrès introduits dans la carrosserie, on doit mentionner l'emploi de la mécanique pour l'exécution de quelques-unes de ses parties. Il est douteux, cependant, en présence de la nature spéciale des travaux, que les machines soient utilement employées pour la construction des voitures particulières, qui

étant nécessairement subordonnées au goût et au caprice de ceux qui les commandent, peuvent différer du tout au tout. Des progrès considérables ont été faits depuis 1851 en ce qui concerne le dessin, la peinture et la légèreté des voitures de luxe, ainsi que dans l'outillage nécessaire à leur construction.

Par suite du développement qu'a pris l'institution des chemins de fer dans le pays entier, la demande des chars, charrettes-couvertes et charriots a considérablement augmenté, et plusieurs genres de véhicules ont été nouvellement inventés pour les transports à destination des marchandises arrivant aux différentes gares de chemins de fer. De grands perfectionnements ont également été faits, depuis 1851, dans la construction des omnibus faisant le service de la métropole et dans celle des voitures de déménagements.

Les wagons de chemins de fer sont mentionnés dans la Classe 63.

Classe LXII.

BOURRELLERIE ET SELLERIE.

1. La bourrellerie et la sellerie anglaises sont depuis longtemps célèbres pour l'excellence de la qualité et de la main-d'œuvre. Les principaux centres manufacturiers sont à Walsall, Birmingham, la métropole et Glasgow; ce commerce existe également dans d'autres villes du royaume. Plusieurs industries d'un ordre secondaire se rattachent à celles de la bourrellerie et de la sellerie, telles que la fabrication des mors, des étriers, des chaînes et autres objets accessoires qui se font presque entièrement dans les mêmes localités.

2. Presque tout le cuir absorbé par le commerce est tiré du pays.

3. Le recensement de 1861 a réparti ainsi qu'il suit le nombre des personnes employées dans cette branche de l'industrie :—

Angleterre et pays de Galles	18,229
Écosse	1,822
Irlande	2,968
Total	23,019

Et probablement de 500 à 600 personnes occupées à faire les pontets et la quincaillerie de sellerie.

4. A Walsall les gages des bourrelliers et des selliers est un peu au-dessus de la moyenne. Les ouvriers gagnent de 20s. à 45s. par semaine; les femmes et les filles peuvent se faire de 8s. à 13s. par semaine. Le salaire des apprentis pour la première année est de 3s. et vers la fin de leur apprentissage de 12s. à 14s. par semaine. Les heures de travail sont de 7 ou de 8 heures du matin jusqu'à 7 heures du soir. Les manufactures de bourrellerie et de sellerie à Walsall sont très-propres et bien bâties.

On a constaté que 60 pour cent des emplois à Walsall sont occupés par des femmes, dont

beaucoup font le travail chez elles. L'introduction des machines à coudre pour le piquage des harnais a considérablement réduit le labeur dans cette branche du commerce.

5. L'importation de la bourrellerie et de la sellerie en Angleterre est, pour ainsi dire, nulle.

6. La valeur de la bourrellerie et de la sellerie britanniques exportées du Royaume-Uni, pendant les cinq années 1861-65, était de—

1861	£ 307,700
1862	343,600
1863	341,600
1864	345,900
1865	350,500

La plus grande partie de ces exportations était destinée aux colonies britanniques, principalement à l'Australie.

7. M. Franklin, dans son rapport sur les industries de Walsall, en 1865, dit :—' Il est à remarquer que le génie de l'invention s'est bien peu manifesté dans cette industrie. En effet, la bourrellerie et la sellerie n'ont subi presque aucun changement dans l'aspect et la forme, depuis 1849; la selle dite "Nolan," inventée pendant la guerre de Crimée, et qui est aujourd'hui généralement adoptée pour le service de l'armée, est la seule exception à signaler; cette selle ne peut toutefois convenir qu'à l'usage militaire. Il a néanmoins été fait de grands progrès dans l'ornementation de la sellerie et de la bourrellerie, et un grand nombre des selliers qui font cette spécialité ont reçu, dans les écoles de dessin, une instruction complète sur cet art.'

Classe LXIII.

MATÉRIEL DES CHEMINS DE FER.

On ne saurait nier que la prospérité du pays est due, en grande partie, à l'extension des moyens de communication qui existent sur tous les points du royaume, et parmi lesquels les chemins de fer doivent être placés au premier rang. À l'époque où nous vivons, et lorsque le 'temps c'est de l'argent,' la possession de moyens rapides de communication est devenue une nécessité absolue, et l'Angleterre peut, à juste titre, réclamer l'honneur d'avoir inauguré le système actuel de chemins de fer, qui a, pour ainsi dire, triomphé du temps et de la distance.

La fabrication du matériel des chemins de fer a lieu dans différentes parties du pays; les rails, coussinets, etc. se font ordinairement dans les districts où l'on extrait le fer, et les rails d'acier à Sheffield. La construction des locomotives s'opère sur une grande échelle à Newcastle, Manchester, Leeds, Glasgow et autres villes, ainsi que dans les ateliers particuliers de quelques-unes des grandes compagnies de chemins de fer. À Birmingham on construit un nombre considérable de wagons

pour voyageurs, de fourgons et autres sortes de voitures pour le transport des marchandises.

Il n'existe point de statistique générale sur la quantité de matériel des chemins de fer produite dans le Royaume-Uni, une partie de ce matériel étant comprise dans le commerce de la quincaillerie du pays. D'après un ouvrage sur les ressources de la Tyne, de la Wear, et du district de la Tees, publié en 1864, 2,400 locomotives étaient sorties des ateliers de Newcastle seulement, depuis l'origine des chemins de fer, et, de ce nombre, plus de 900 avaient été envoyées à l'étranger.

En adoptant le prix moyen de 2,000*l.*, la valeur brute des locomotives exportées se serait élevée à 1,800,000*l.* Il convient d'ajouter à ce chiffre la valeur des locomotives construites pour les besoins de la Grande-Bretagne et de l'Irlande, soit, au prix de 1,500*l.*, 2,700,000*l.*, donnant ainsi un total général de 4,500,000*l.* sterling.

M. Timmins, dans un rapport sur la fabrication du matériel-roulant à Birmingham, dit que la construction, dans cette ville, des wagons, fourgons, etc. remonte déjà à 1838, et, par suite de la position centrale qu'occupe Birmingham, ce commerce a, depuis, pris des proportions considérables. On pourra se former une idée de l'importance de cette industrie en songeant que la longueur totale des lignes de chemins de fer actuellement livrées à la circulation dans le royaume s'élève à plus de 13,000 milles, employant environ 18,000 wagons pour voyageurs et 233,000 fourgons, etc. pour le transport des marchandises. M. Timmins estime à 17,000,000*l.* la valeur du matériel-roulant du pays, subissant une dépréciation annuelle de 1,250,000*l.* Le nombre des locomotives employées sur les chemins de fer du royaume, en 1865, était de 7,414.

Cependant, outre le matériel fourni pour les besoins des chemins de fer à l'intérieur, il s'en exporte aussi une grande quantité. Le tableau suivant indique quels ont été, en 1865, les principaux articles d'origine britannique, compris dans cette classe, exportés du Royaume-Uni :—

	Quantités	Valeur
Wagons de chemins de fer :	Nombre	£
Pour voyageurs . . .	1,261	177,000
Fourgons, camions, etc.	580	22,000
Fer, voie ferrée :	Tonnes	
Rails et tirans . . .	330,588	2,627,000
Coussinets et traverses	76,098	393,000
Roues et essieux . . .	4,872	118,000
Divers . . .	23,000	412,000
Machines à vapeur et pièces détachées :		
Locomotives . . .	—	945,000

Les relevés statistiques suivants pourront donner une idée du développement général des chemins de fer dans le Royaume-Uni pendant les onze années, de 1855 à 1865 :—

	En 1855	En 1865
Longueur des lignes ouvertes	Milles 8,280	Milles 13,289
Total du capital versé, actions, emprunts, etc.	£ 297,584,000	£ 455,478,000
Nombre des voyageurs transportés	118,595,000	251,960,000
Nombre de voyageurs par mille	14,323	18,960
Total général des recettes	£ 21,507,000	£ 35,731,000
des dépenses	10,299,000	17,149,000
Excédant net des recettes	11,208,000	18,582,000

Au nombre des plus récentes innovations on doit mentionner l'emploi de l'acier pour les rails, bandes, etc. et l'invention de l'appareil à rail central pour plans inclinés.

Des perfectionnements considérables ont aussi été apportés dans les locomotives; M. Humber, dans son ouvrage récent sur l'art moderne de l'ingénieur, énumère les suivants: adaptation de l'appareil permettant aux locomotives d'être chauffées au charbon au lieu du coke, et d'absorber leur propre fumée; le chauffage de l'eau d'approvisionnement par la vapeur perdue; le contrebalancement des parties de la machine exécutant un mouvement de rotation et de va-et-vient, d'où résulte une diminution considérable dans l'usure de la voie et de la machine, et la possibilité d'entretenir, sans danger, une grande vitesse dans la marche; et, enfin, le moyen de surchauffer la vapeur dans son trajet vers les cylindres, de façon à maintenir sa chaleur normale, et à diminuer la perte de force causée par la condensation.

Classe LXIV.

MATÉRIEL ET PROCÉDÉS DE LA TÉLÉGRAPHIE.

Le jury de la Classe 13 à l'Exposition de Londres en 1862 a constaté qu'il n'y avait point eu, depuis le concours international de 1851, de grandes découvertes dans la science électrique, ni aucune importante application pratique de principes. D'un autre côté, le système de la télégraphie a pris une grande extension, notamment celui de la télégraphie sous-marine au moyen de câbles. Le plus grand fait qui se soit accompli depuis 1862 est, sans contredit, la pose du nouveau câble qui relie l'ancien et le nouveau monde. C'est en 1866 qu'a été couronnée de succès la troisième tentative faite pour établir une communication télégraphique entre l'Irlande et la Terre-neuve, comprenant une distance de 1,670 milles marines. On a non-seulement posé un nouveau câble, mais celui qui s'était rompu l'année précédente a été repêché du fond de l'océan, et prolongé jusqu'aux rivages du nouveau monde, créant ainsi une double ligne de communication. La plus grande profondeur d'eau qu'on ait ren-

contrée a été de 2,400 brasses, ou moins de deux milles et demi marins. C'est en 1858 qu'a été posé le premier câble, qui fut complété et qui marchait depuis trois semaines lorsqu'il cessa tout à coup de fonctionner. Le deuxième, dont la pose s'est effectuée en partie en 1865, se rompit au milieu de l'océan. Le câble de 1858 était de fabrication beaucoup plus légère que les suivants; sa force de résistance était de 3 tonnes 5 quintaux, ou égale à 4.85 fois son poids, par nœud, dans l'eau; tandis que, pour le câble de 1865, cette force était de 7 tonnes 15 quintaux, et de 8 tonnes 2 quintaux pour celui de 1866, ou égale à 11 fois leur propre poids, par nœud, dans l'eau. D'après un exposé de la Compagnie du Télégraphe Transatlantique, la vitesse de transmission par le nouveau câble de 1866, et avec les appareils récemment perfectionnés, n'est pas inférieure à huit mots par minute.

Il résulte d'un rapport publié par le 'Board of Trade' (Ministère du Commerce) qu'il y avait, en 1865, dans le Royaume-Uni, et non compris les lignes le long des chemins de fer et de particuliers, 16,953 milles de lignes télégraphiques, employant 80,123 milles de fil de fer, et environ 8,000 appareils. L'augmentation des télégraphes privés, dans la métropole et autres grandes villes, a été considérable pendant ces quelques dernières années. Le matériel de la télégraphie a également reçu de nombreux perfectionnements.

Classe LXV.

MATÉRIEL ET PROCÉDÉS DU GÉNIE CIVIL, DES TRAVAUX PUBLICS ET DE L'ARCHITECTURE.

Le progrès qui a été fait en Angleterre, depuis la dernière Exposition Universelle à Paris, dans les diverses branches du génie civil, des travaux publics et de l'architecture est si grand qu'il est bien difficile de donner en quelques lignes une idée suffisante de son importance. L'extension rapide des communications par voies ferrées, imprimant, comme cela a lieu, une plus grande activité au commerce, et augmentant le nombre des personnes qui voyagent dans le pays, est une des principales causes de ce progrès.

On pourrait mentionner, en ce qui concerne le génie civil, bien des travaux considérables sur tous les points du royaume. Dans le district métropolitain seulement, cinq nouveaux ponts de chemins de fer et deux de passagers ont été jetés sur la Tamise; un troisième est en cours de construction à Blackfriars. Le nouveau pont public de Westminster et d'autres encore, pour la plupart construits en fer, sont remarquables par la hardiesse du dessin et la nouveauté du système de construction. Ce qu'il y a de particulier dans quelques uns des ponts de chemins de fer dont il vient d'être

question, c'est qu'ils reposent entièrement sur des piles formées de caissons en fer, et enfoncées dans le fleuve sans le secours d'aucune espèce de travaux extérieurs. On a comblé ensuite ces caissons avec une maçonnerie en béton, et le tout constitue de gigantesques colonnes supportant le pont. On n'a pas non plus perdu de vue l'importance qu'il y a de joindre l'utile à l'agréable, et dans bien des cas les ouvrages en métaux employés pour la superstructure dénotent un goût très-élevé, et marquent un progrès décidé dans l'art de construire les ponts en fers. Trois autres travaux importants: le chemin de fer souterrain, l'endiguement de la Tamise et le système de l'égoût collecteur, peuvent également être cités comme preuves de progrès. Le chemin de fer souterrain est presque entièrement construit sous les principales artères de la cité, et lorsqu'il sera terminé il formera le cercle intérieur des communications par voies ferrées dans la métropole. La partie qui est actuellement livrée au trafic, entre l'est et l'ouest de la ville, a dépassé toutes les prévisions, tant sous le rapport de l'utilité pour le public que sous celui des bénéfices acquis à la compagnie. L'endiguement de la rive septentrionale de la Tamise, qui se trouve actuellement fort avancé, créera une belle voie de communication entre Westminster et la Cité; et l'égoût collecteur une fois complété contribuera, on l'espère, à rendre aux eaux de la Tamise leur pureté. Les docks et les havres tendent à s'accroître continuellement, et des sommes considérables sont votées annuellement par le Parlement pour les ports de refuge et les brise-lames; parmi ceux qui sont terminés ou en cours d'exécution, on peut mentionner les travaux de Portland, de Douvres et de Holyhead.

Le nombre total des phares sur les côtes du Royaume-Uni est de 212, non-compris les feux particuliers à chaque port, et 42 feux flottants.

En ce qui regarde l'architecture, il s'est manifesté un grand perfectionnement dans les constructions de toutes sortes, et les édifices publics de Londres, récemment élevés, peuvent soutenir la comparaison avec ceux de toute autre partie du monde. Les nouvelles stations de chemins de fer dans la métropole dénotent un grand talent dans l'art de l'ingénieur, tandis que les spacieux hôtels attenants à ces stations font le plus grand honneur à l'architecture moderne. Les bureaux du gouvernement à Whitehall, les églises, les bâtiments occupés par les banques, les compagnies d'assurances et les clubs, les hôtels, les salles de concert et les maisons d'habitation modèles, qui ont été construits pendant les dix dernières années, attestent également en faveur de la marche du progrès. Ces édifices ou constructions, qui surpassent de beaucoup comme dimension ceux élevés à une date antérieure, sont également remarquables en ce qu'ils prouvent une plus grande appréciation des principes de l'art, tant au point de vue de l'ensemble ou de l'aspect général que dans le système de la décoration.

Les marbres de couleur et la terra-cotta, adoptés pour les travaux d'embellissement, ont été employés avec succès dans différentes occasions. Les nouveaux bâtiments du Musée en cours d'exécution à South Kensington offrent un exemple intéressant de l'emploi de la terra-cotta ; et, une fois achevés, ils formeront un des plus beaux ornements de la capitale.

On peut citer comme étant intimement liée avec les travaux de cette classe, l'institution récente des conseils de santé et de l'administration des travaux publics établis dans les différents districts de la métropole, et dont la mission consiste à surveiller l'état général et les conditions sanitaires des quartiers qui se trouvent placés dans leur ressort respectif ; à prendre les mesures nécessaires pour diminuer les inconvénients produits par la fumée de charbon, pour l'amélioration des parcs et jardins publics, ainsi que toute autre mesure ayant pour but le bien-être du peuple.

La fabrication des serrures, dont il est question dans cette classe, donne lieu à un commerce très-important, et se fait particulièrement à Wolverhampton, et autres villes dans le Staffordshire Sud.

Les extraits suivants d'un rapport adressé en 1865 à l'Association Britannique, par M. J. C. Tiddlesley, donnent une idée complète des principales branches de la serrurerie dans le Royaume-Uni :—

Lieux de Production et Sortes de Serrures confectionnées	Nombre de Patrons	Nombre approxi- matif des Ouvriers	Moyenne des Salaires hebdoma- daires
Wolverhampton :			s. s.
Serrures en laiton pour tiroirs de comptoir et meubles	20	400	25 à 40
Serrures ordinaires pour portes de magasins, greniers, etc.	50	800	25 „ 40
Willenhall (et Short Heath, etc.) :			
Serrures communes, à mortaise fixe, à verroux, cadenas, etc.	275	3,000	18 „ 30
Walsall (et Bloxwich) :			
Serrures pour meu- bles, cadenas en fer	35	400	18 „ 30
Wednesfield :			
Serrures et clefs en fer pour meubles	50	200	15 „ 25
Brewood :			
Serrures pour maga- sins, etc.	30	150	18 „ 28
Total . . .	460	4,950	

‘ La production des serrures dans le district est estimée par semaine à, savoir : 24,000 douzaines de cadenas ; 3,000 douzaines de serrures d'armoires, de tiroirs et de coffres ; 3,000 douzaines de serrures communes, à mortaise fixe et à verroux ; 1,000 douzaines de serrures ordinaires ; 500 douzaines de serrures à combinaisons de sûreté et autres : faisant une production totale de 31,500 douzaines de serrures par semaine.

‘ Aucune des industries locales n'a peut-être

moins profité des récents progrès de la science mécanique que la fabrication des serrures, qui sont encore pour la plupart confectionnées de la même manière qu'il y a vingt ans. On doit principalement attribuer l'état anormal qui, contrairement à ce qu'on remarque pour les autres branches du commerce, existe dans la serrurerie, à ce fait que les diverses fractions de cette industrie se trouvent réparties entre les mains de petits capitalistes. Toutefois, le commerce de la serrurerie s'étant nouvellement étendu à divers districts, notamment à ceux du Lancashire et de Londres, il y a dès lors lieu d'espérer qu'il se produira un changement favorable dans le mode de cette fabrication. La position des artisans employés à la confection des serrures s'est beaucoup améliorée dans ces dernières années, mais il reste encore quelquechose à faire sous ce rapport.

En ce qui concerne le développement de l'art appliqué à la serrurerie, il y a également place pour de grands perfectionnements, tant sous le rapport du dessin que sous celui de l'ornementation, sans toutefois nuire aux qualités utiles de cet important produit.

Parmi les articles de serrurerie de fabrication supérieure, ceux sortant des ateliers de MM. Chubb et Hobbs sont trop connus pour qu'il soit nécessaire de s'y arrêter.

Quant aux matériaux de construction tirés du Royaume-Uni, outre les pierres, les ardoises, la chaux, etc., des quantités considérables de briques et de tuiles sont annuellement produites dans diverses parties du pays. Les bois de charpente sont surtout importés de l'Amérique du Nord et de la Baltique. Le commerce étranger pour les principales sortes de matériaux de construction donne, pour l'année 1865, les résultats suivants :—

Imports.

	Quantités	Valeur
		£
Marbre brut . . . Tonnes	9,994	74,085
„ scié, etc. . . Quintaux	40,572	29,043
Bois de charpente et autres (ni scié ni fendu) y compris le teck . . . Lasts ou Loads	1,685,000	5,570,000
Bois de sapin, vo- liges, etc. (sciés ou fendus) . . . „	2,136,000	6,559,000
Lattes . . . „	105,000	206,000

Exports (Produits Britanniques).

	Quantités	Valeur
		£
Briques . . . Mille	33,221	86,245
Ciment . . . Quintaux	2,257,000	285,898
Pierres :		
Ardoises (au nom- bre) . . . Mille	7,134	49,664
Ardoises au poids . . Tonnes	2,544	11,061
Sortes diverses . . Valeur		91,016
Craie et chaux . . Tonnes	14,425	8,683
Tuiles et carreaux . Mille	1,167	8,947
Tuyaux de drai- nage, etc. . . Nombre	454,600	27,066

Classe LXVI.

MATÉRIEL DE LA NAVIGATION ET DU SAUVETAGE.

La révolution qui s'est opérée dans la construction des navires de guerre pendant les dix ou quinze dernières années est si universellement connue qu'il serait superflu d'en parler ici; on peut mentionner, toutefois, le commerce considérable qu'a fait surgir dans tout le pays la fabrication des plaques destinées au blindage des nouveaux bâtiments de guerre.

Le tableau suivant indique, d'après un rapport adressé au Parlement en 1866, le nombre de navires cuirassés, à flot et en construction, appartenant à la marine royale :—

	Nombre	Tonnage	Canons
	À flot		
Bâtiments cuirassés :			
Entièrement blindés .	13	49,782	219
Partiellement „ .	17	59,485	258
Batteries flottantes :			
Entièrement blindés .	4	7,367	62
	En construction		
Bâtiments cuirassés :			
Entièrement blindés .	2	9,732	12
Partiellement „ .	2	8,223	22

Au nombre des navires à flot se trouve celui construit sur les plans à coupoles du Capitaine Coles, et deux des autres bâtiments, actuellement en chantier, seront établis d'après les mêmes principes : tous trois sont blindés entièrement.

Mettant toutefois de côté la considération que méritent les vaisseaux de guerre pour la défense et pour la protection du commerce, une nation qui emploie annuellement près de 50 millions de tonneaux de jauge effective pour sa navigation à l'intérieur et à l'étranger, doit être profondément intéressée dans la construction des navires. Les principaux chantiers sont ceux de la Tamise, de la Humber, la Tyne, la Wear, la Tees, la Severn, la Mersey et la Clyde; il y en a aussi à Dundee, Belfast et plusieurs autres ports du royaume.

Le tonnage des navires marchands appartenant au Royaume-Uni et aux îles des mers britanniques était, au 31 décembre 1865 :—

	Tonnage total
Bâtiments à voiles . . .	4,937,000
„ à vapeur . . .	824,000
Total . . .	5,761,000

On pourra se former une idée de l'importance de la construction des navires, au point de vue de l'industrie, en se référant au nombre de ces bâtiments qui sortent annuellement des chantiers du pays.

Le tableau suivant indique le nombre de navires construits et enregistrés dans le Royaume-Uni pendant les trois dernières années :—

Années	Bâtiments à Voiles		Bâtiments à Vapeur	
	Navires	Tonnage	Navires	Tonnage
1863	883	255,000	280	110,000
1864	873	272,000	376	161,000
1865	922	236,000	382	180,000

Sur le nombre total des bâtiments afférant à l'année 1865, 844, d'une jauge collective de 153,000 tonneaux, ont été construits en bois, et 460, jaugeant 262,000 tonneaux, en fer.

Le métal employé dans la construction des navires en fer sort des usines du pays, mais les matériaux servant à celle des navires en bois sont principalement importés. On importe également de grandes quantités de chanvre, de bourre de coco, etc., pour la fabrication des cordes et autres agrès, au sujet desquels on trouvera d'ailleurs des informations à la Classe 55.

Il n'existe aucun relevé récent sur le nombre de personnes occupées à la construction des navires, etc., dans le Royaume-Uni. D'après le recensement de 1861, le nombre total des individus employés à la construction des navires, bateaux, barques, mâts, et à la fabrication des voiles, etc. était—

Divisions	Hommes	Femmes	Totaux
En Angleterre et le pays de Galles . . .	43,704	75	43,779
Écosse . . .	9,148	6	9,154
Irlande . . .	2,220	9	2,229
Totaux . . .	55,072	90	55,162

Les relevés statistiques ci-après, de la moyenne des salaires payés aux ouvriers occupés à la construction des navires, ont été puisés dans les rapports adressés au 'Board of Trade' par chacune des Chambres de commerce en 1866—

En citant les perfectionnements apportés, ces dernières années, dans la construction des navires, en Angleterre, il serait injuste de ne pas mentionner que, outre la formation de la nouvelle flotte cuirassée, le gouvernement a transformé en navires à hélice presque tous les bâtiments à voiles de la marine royale, pourvoyant ainsi le pays d'une puissante marine à vapeur.

Les constructeurs de navires ont, en général, adopté le système 'wave line' introduit par M. Scott Russell, et, par suite de l'emploi universel du fer, les navires que l'on construit aujourd'hui sont beaucoup plus longs et leur forme beaucoup plus élégante; ce qui ajoute à leurs qualités nautiques et à leur capacité, et conséquemment augmente dans de grandes proportions les résultats commerciaux. Parmi les plus récentes inventions et perfectionnements, on peut citer les navires à hélices jumelles, le bateau-cigare, l'emploi de l'acier au lieu de feuilles de fer pour le doublage extérieur des bâtiments et la nouvelle méthode de propulsion hydraulique. Le vaisseau de S. M. Britannique 'Waterwitch,' pourvu du nouveau mode de propulsion, a fait dernièrement des expériences qui ont donné des résultats satisfaisants; le mécanisme consiste en une grande roue de turbine, nommé 'propulseur Ruthven,' qui aspire l'eau par le fond du navire et la rejette par des ouvertures latérales pratiquées à l'endroit de la ligne de flottaison.

En ce qui concerne les signaux maritimes,

une commission internationale s'est récemment réunie à ce sujet à Paris, sous les auspices de M. le Marquis de Chasseloup-Laubat, Ministre de la Marine, et sous la présidence de l'Amiral La Roncière le Noury. M. W. F. Larkins, du 'Board of Trade,' et M. Sallandrouze de Lamornaix, officier de la Marine Impériale Française, furent chargés par la commission de réviser et de corriger le livre des signaux. Le 'Code Commercial International des Signaux' a, depuis, été adopté par les bâtiments de guerre et les navires marchands de toutes nations pour l'échange de communications en mer ou avec les stations de signaux sémaphoriques établis sur les côtes.

Le code actuel diffère des autres codes employés jusqu'ici, en ce que les pavillons représentent les signes ou caractères B, C, D, etc. au lieu des numéros 1, 2, 3, etc.

L'avantage qu'offre le système des lettres, c'est qu'on obtient, au moyen de dix-huit signes distincts, pris 2 à 2, 3 à 3, ou 4 à 4, 78,642 combinaisons séparées pour faire des signaux, dont chaque groupe a une signification particulière. Le nombre maximum de signes frappés sur une drisse n'est jamais que de quatre.

Le principe général du code est que la forme même de la drisse indique la nature du signal, soit qu'elle fût composée de 2, 3 ou 4 pavillons. Les groupes de deux signes, notamment, ayant toujours une signification importante, on doit y prêter la plus grande attention.

Dans les groupes de 4 signes, si le signe B ou guidon est au-dessus, ce signal indiquera toujours un nom géographique.

Une drisse composée de 4 pavillons, et ayant pour signe supérieur un des treize pavillons carrés du code, forme le signal indiquant le nom d'un bâtiment.

Une liste, donnant le nom de chaque navire, son tonnage et sa force motrice (si c'est un vapeur), est publiée comme annexe au Code des Signaux. Le code est suffisamment riche en combinaisons pour permettre d'approprier plus de 40,000 signaux distincts à des noms de navires exclusivement.

Les gouvernements de la France et de la Grande-Bretagne (ainsi que cela a eu lieu il y a quelques années relativement aux fanaux pour les bâtiments à vapeur) ont adressé une note collective aux gouvernements des principales puissances maritimes, pour leur recommander l'adoption universelle du Code Commercial en vue d'établir un système uniforme de signaux en mer, à l'usage de toutes les nations.

Le gouvernement impérial de France a, le premier, adopté ce code, à l'exclusion de tous autres, pour l'usage des navires français, et de toutes les stations sémaphoriques. L'Espagne, le Portugal, l'Italie, la Hollande, la Belgique et la Grèce ont également manifesté l'intention de suivre l'exemple de la France.

Il y a une autre innovation apportée dans le Code Commercial, et qui doit être mentionnée.

Elle consiste en un code à l'usage des signaux de grandes distances, et que l'on emploie lorsqu'il est impossible de distinguer la couleur des pavillons. On se sert dans ce cas d'une ou de deux boules noires, avec deux des flammes ou pavillon du code; et ces signaux peuvent également être échangés avec les sémaphores actuellement établis sur les côtes de France, en appliquant simplement le code à l'usage des grandes distances dont les règles sont données dans le livre des signaux.

Le Code Commercial est imprimé et édité à Londres, No. 54 Gracechurch-street, par M. W. Mitchell, et à Paris, par MM. Galignani.

On trouve dans cette section de l'Exposition une catégorie d'objets d'une grande importance; ce sont les bateaux dits 'life-boats' et appareils du sauvetage maritime.

Dans un pays où le commerce du cabotage et de long cours est si considérable, sans compter les grandes pêcheries répandues sur tous les points de la côte, l'ensemble des mesures destinées à secourir les navires en détresse doit être l'objet d'un profond intérêt. Un simple coup-d'œil jeté sur la liste annuelle des naufrages pour le Royaume-Uni suffit pour faire comprendre la grande tâche qu'il est donné aux 'life-boats' d'accomplir. Le nombre total des navires perdus ou avariés était, en 1865, de 2,012, et celui des personnes qui ont péri de 698. De ce nombre, 275 personnes disparurent avec des bâtiments qui sombrèrent en mer, 53 furent tuées par suite de collisions de navires, 335 sur des bâtiments échoués à la côte, et enfin 35 sont mortes de causes diverses. Considérant que tant de monde a péri à une époque où notre système de sauvetage était dans toute son activité, il est clair qu'il reste encore beaucoup à faire pour arracher nos semblables à une mort prématurée.

L'entretien des 'life-boats' sur les côtes du Royaume-Uni est à la charge de l'Institution

Royale Nationale des Life-boats,' qui est supportée par des contributions volontaires. De grands perfectionnements ont été apportés, pendant ces dix dernières années, dans la construction des 'life-boats,' et la Société de Sauvetage a installé plusieurs de ces bateaux sur des points dangereux de la côte, qui, jusqu'alors, étaient tout-à-fait dépourvus de moyens aussi efficaces, pour secourir les navires en détresse. Le nombre total des 'life-boats' appartenant à l'Institution (novembre 1866), et répartis sur divers points de la côte du Royaume-Uni, s'élevait à 172, dont 125 en Angleterre et dans le pays de Galles, 19 en Écosse, et 28 en Irlande. Il y avait aussi environ vingt 'life-boats' disséminés dans différentes localités qui ont pourvu aux frais de ces bateaux. Outre les life-boats, le 'Board of Trade' entretient 249 stations de porte-amarres et de sauvetage qui sont servies par les gardes-côtes. Des spécimens du 'life-boat' perfectionné, de porte-amarres et autres appareils du sauvetage maritime sont exposés parmi les objets compris dans cette classe.

Le nombre de personnes sauvées, en 1865, par des 'life-boats' appartenant à l'Institution a été de 532; par les embarcations, de 182, et de 180 par les porte-amarres.

La dépense pour l'installation d'une station de 'life-boats' est de 620*l*. Cette dépense se répartit de la manière suivante:—

	£
'Life-boat' et son grément, y compris les ceintures de sauvetage pour l'équipage, et le charriot servant au transport du bateau	420
Hangar pour 'life-boat' (prix-moyen)	200
Total	£620

La moyenne de la dépense annuelle pour l'entretien d'une station de 'life-boats' est de 50*l*.

GROUPE VII.

(CLASSES LXVII. à LXXIII.)

ALIMENTS (FRAIS OU CONSERVÉS) À DIVERS DEGRÉS DE PRÉPARATION.

Classe LXVII.

CÉRÉALES ET AUTRES PRODUITS FARINEUX COMESTIBLES, AVEC LEURS DÉRIVÉS.

Les articles compris dans cette classe présentent un grand intérêt, parce qu'ils font connaître les ressources qu'offre le pays pour l'approvisionnement de denrées qui constituent une des principales bases de son alimentation, et bien que la production indigène soit insuffisante pour les besoins de la population, une étendue de terrain considérable est cependant consacrée à la culture des céréales. Jusqu'en 1866 il ne se fit aucun relevé complet de la superficie totale des terres cultivées dans la Grande-Bretagne. Le tableau suivant indique, pour cette même année, quelle a été, dans chacune des divisions du Royaume-Uni, la superficie affectée à la culture des produits farineux :—

	Superficies en Culture			
	En Angleterre	Pays de Galles	Ecosse	
Blé . acres	3,161,431	113,862	110,101	
Orge . "	1,877,387	146,323	213,619	
Avoine . "	1,503,990	251,893	1,004,040	
Seigle . "	50,570	2,452	7,055	
Fèves . "	492,586	3,534	28,537	
Pois . "	314,206	3,016	3,188	
Total .	7,400,170	521,074	1,366,540	
	Irlande	L'île de Man	Jersey	Guernesey etc.
Blé . acres	300,474	8,075	2,702	990
Orge . "	152,777	7,736	111	532
Avoine . "	1,697,648	11,010	288	428
Seigle . "	7,753	9	13	27
Fèves . "	12,175	320	15	43
Pois . "	2,606	116	13	21
Total .	2,173,433	27,266	3,142	2,041

On n'a point fait encore, pour les différentes sortes de grains, le relevé exact des quantités produites dans le pays; mais, en ce qui concerne le froment, on estime à 27 boisseaux environ par acre son rendement moyen pour

l'Angleterre, le pays de Galles et l'Ecosse, et à 25 boisseaux pour l'Irlande; ce qui donnerait approximativement une production de 12,364,000 quarts (35,855,600 hectolitres) pour le Royaume-Uni, non-compris l'île de Man et les îles de La Manche.

Le tableau ci-dessous fait connaître quelle est, par rapport à la superficie totale des terres cultivées et en pâturages, la proportion affectée à la culture des céréales :—

Divisions	Superficie Totale du Terrain en Culture: Vert, en Jachère et en Friche	Proportion de Terrain affectée à la Culture des Céréales
	Acres	Pour cent
Angleterre . .	22,262,000	33·3
Pays de Galles . .	2,284,000	22·8
Ecosse . .	4,158,000	32·9
Île de Man . .	83,000	32·9
Îles de La Manche :		
Jersey . .	20,000	15·4
Guernesey . .	12,000	17·0
Irlande . .	*15,549,000	14·0

* Cette superficie comprend également les pâturages, qui ne sont pas inclus dans les autres relevés; il en résulte naturellement, dans le chiffre de la proportion du terrain consacré aux céréales, une diminution qui serait bien moindre si on avait pris, pour l'Irlande, les mêmes bases que pour les autres divisions du royaume.

Les principaux districts producteurs de céréales, en Angleterre, sont ceux situés à l'est et au sud-est du pays; les contrées du milieu et de l'ouest fournissent également des grains, mais les prairies occupent une partie considérable de la superficie de ces comtés. Il en est de même pour l'Ecosse, où les céréales sont particulièrement cultivées dans les comtés de l'est, et les fourrages au sud et au sud-ouest. En Irlande, ce sont les districts du nord et du sud qui produisent surtout les grains.

Les extraits ci-après de l'ouvrage de M. Caird sur l'agriculture anglaise donnent une idée complète des changements survenus pendant le présent siècle dans les exploitations rurales. Les statistiques relevées par cet auteur en 1850-51, comparées avec les informations analogues recueillies en 1770 par M. A. Young

dans 26 comtés de l'Angleterre, présentent les différences que voici :—

		1770	1850
		s. d.	s. d.
Loyer des terres de labour	par acre	13 4	26 10
Rendement du blé	„ „	Boisseaux 23 0	Boisseaux 26 $\frac{1}{2}$
Moyenne des salaires des cultivateurs	par semaine	s. d. 7 3	s. d. 9 7
Loyer des habitations rurales	„ „	0 8	1 5
Prix du pain	par livre	0 1 $\frac{1}{2}$	0 1 $\frac{1}{2}$
„ de la viande	„ „	0 3 $\frac{1}{2}$	0 5
„ du beurre.	„ „	0 6	1 0

‘ Il ressort donc de ces chiffres que, dans une période de 80 ans, la moyenne du loyer des terres labourables a augmenté de cent pour cent; le rendement moyen du froment de 14 pour cent par acre; le salaire du cultivateur de 34, et le loyer de son habitation de 100 pour cent; au contraire, le prix du pain, le principal aliment du paysan anglais, est, à peu près, ce qu'il était en 1770. Le prix du beurre est de cent pour cent plus élevé; la viande de 70 pour cent; et la laine a augmenté de plus de cent pour cent.’ Depuis 1850 la valeur du beurre, de la viande, et de la laine s'est encore considérablement accrue.

‘ L'augmentation de quatorze pour cent par acre dans le rendement moyen du blé ne représente pas l'accroissement réel de la production. L'étendue de terrain cultivé en 1770 était, sans aucun doute, de beaucoup inférieure à ce qu'elle est aujourd'hui; et la moyenne du rendement à cette époque était basée sur des récoltes poussées dans des terres de qualité bien supérieure, qui ont naturellement été mises en culture les premières. Le progrès dans le rendement des céréales doit, dès lors, être attribué à un meilleur système de culture; et ce résultat est d'autant plus remarquable qu'il a été obtenu malgré l'infériorité relative du sol. L'augmentation de la superficie couverte par les céréales et celle de leur rendement moyen n'est toutefois pas proportionnée à l'augmentation des loyers de fermage pendant la même période; et le prix du blé est aujourd'hui à peu de chose près ce qu'il était alors; on doit donc, pour expliquer cette anomalie, recourir aux relevés statistiques de l'approvisionnement.’

‘ Tandis que le prix du blé n'a pas varié, ceux de la viande, du beurre et de la laine ont presque doublé. La production de ces derniers articles a également augmenté dans de grandes proportions par la raison que le même terrain nourrit un plus grand nombre de vaches, que le gros bétail est engraisé beaucoup plus vite et atteint de plus fortes dimensions, ainsi que les moutons, dont la chair est de meilleure qualité, et qui fournissent davantage de laine. Le revenu des fermes (laiteries) et autres exploitations rurales qui se livrent à l'élevage des bestiaux et spécialement à celui des moutons a été proportionné aux dépenses de loyer; il en

a été tout autrement pour les fermiers qui se sont adonnés à la culture des céréales. Autrefois, les terrains argileux étaient considérés comme les plus propres à la récolte des grains; ils acquittaient un plus fort loyer, payaient une plus lourde dîme, et nécessitaient l'emploi d'un plus grand nombre d'ouvriers; mais les perfectionnements modernes ont entièrement modifié cette manière de voir. L'extension donnée à la culture des plantes fourragères et légumineuses et les bestiaux nourris dans les prairies ont tellement augmenté le principe fertilisant des terres légères, qu'elles fournissent aujourd'hui des céréales à moins de frais que les terres argileuses, sans compter l'avantage important du profit retiré du bétail que l'on y fait paître.’

La superficie totale du terrain consacré à la culture des plantes fourragères et légumineuses dans le Royaume-Uni était, en 1866, de 5,055,220 acres, dont 2,750,000 en Angleterre; 139,265 dans le pays de Galles; 663,257 en Ecosse; 1,482,091 en Irlande; 12,208 dans l'île de Man; 5,253 à Jersey, et 2,938 à Guernesey. (Ces relevés sont les premiers qui ont été faits.)

Les prix moyens du froment, de l'orge, et de l'avoine britanniques ont été, par quarter impérial, pendant les cinq années 1860-65;—

	Froment	Orge	Avoine
	s. d.	s. d.	s. d.
1861	55 4	36 1	23 9
1862	55 5	35 1	22 7
1863	44 9	33 11	21 2
1864	40 2	29 11	20 1
1865	41 10	29 9	21 10

On a déjà dit que la production indigène des céréales dans le Royaume-Uni n'était pas proportionnée aux besoins de la population, et que, par conséquent, il s'en importait des quantités considérables. Pendant les douze années comprises entre 1854 et 1865, la valeur moyenne annuelle de l'importation des grains dans le royaume ne s'élève pas à moins de 24,000,000*l.* La table suivante fait connaître les quantités des principales sortes de farineux importés en 1865, ainsi que leurs lieux de provenance.

Lieux de provenance	Quantités entrées pour la consommation
Froment :	Quintaux
Russie	8,160,000
Danemark	647,000
Prusse	5,426,000
France	2,266,000
Amérique Britannique du Nord	307,000
Etats-Unis	1,183,000
Autres pays	2,946,000
Total	20,935,000
Farine de froment :	
France	3,058,000
Amérique Britannique du Nord	181,000
Etats-Unis	262,000
Autres pays	382,000
Total	3,883,000

Lieux de provenance	Quantités entrées pour la consommation
Orge:	Quintaux
Danemark	1,550,000
Prusse	770,000
Villes Hanséatiques	400,000
France	1,583,000
Turquie (proprement dite)	2,087,000
Autres pays	1,428,000
Total	7,818,000

Avoines:

Russie	1,963,000
Suède	3,090,000
Danemark	1,071,000
Prusse	65,000
Hollande	726,000
Autres pays	796,000
Total	7,711,000

Maïs:

Russie	1,194,000
Valachie et Moldavie	545,000
Turquie	3,178,000
États-Unis	1,771,000
Autres pays	399,000
Total	7,087,000

Les pays mentionnés dans la table ci-dessus, en y ajoutant l'Égypte, qui pendant bien longtemps a fourni en abondance du blé, de l'orge et du maïs, ont été les principales sources d'approvisionnement pendant les quinze dernières années. Par suite de la guerre civile qui a régné aux États-Unis, les quantités de grains reçues de cette contrée, en 1865, ont été bien au-dessous des importations ordinaires. Les céréales et les grains sont soumis à un droit d'entrée de 3*d.*, et la farine à 4½*d.* par quintal.

Il s'importe également sur une grande échelle du riz, du sagou, du tapioca, de la semoule, du macaroni, et du vermicelle, articles qui ne sont point produits dans le pays. Voici quelle a été l'importation en 1865:—

Articles	Quantités	Valeur
		£
Riz, non-mondé	quarters 6,478	15,310
Riz, mondé	quintaux 1,938,816	1,330,941
Sagou	148,582	121,285
Tapioca	22,363	37,025
Semoule	2,453	2,773
Macaroni et vermicelle	7,486	18,012
Total		1,525,346

Le nombre total des personnes employées aux travaux agricoles (culture des terres de labour et pâturages) était, en 1861, pour chacune des grandes divisions du Royaume-Uni—

Divisions	Hommes	Femmes	Totaux
Angleterre et pays de Galles	1,457,075	376,577	1,833,652
Écosse	215,716	120,773	336,489
Irlande	850,121	81,714	931,835
Totaux	2,522,912	579,064	3,101,976

La condition des ouvriers ruraux dans le pays entier a depuis longtemps fixé l'attention. Comme emploi, l'agriculture rémunère bien moins ses ouvriers que toute autre industrie. Le taux des gages varie considérablement dans toutes les parties du royaume; mais, même dans les districts où les salaires sont le plus élevés, la position des cultivateurs à gages n'est nullement satisfaisante.

Le tableau suivant indique, d'après un rapport présenté au Parlement en 1861, la moyenne des salaires payés aux ouvriers agriculteurs dans les trois divisions du pays:—

Taux des plus élevés et les plus bas de la moyenne des gages par semaine, sans logement ni nourriture.

Divisions et Districts	Hommes		Femmes		Enfants au-dessous de 6 ans	
Angleterre: District du sud-est	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
	de 10 0	à 13 6	3 6	à 6 0	2 6	à 6 0
District du sud central	10 0	13 0	3 6	5 0	2 0	8 0
District de l'est	10 0	13 0	3 6	5 0	1 6	8 0
District du sud-ouest	8 0	10 0	3 0	5 0	1 6	7 0
District de l'ouest central	9 0	12 0	3 0	5 0	2 0	6 0
District du nord central	12 0	15 0	4 0	6 0	1 6	8 0
District du nord-ouest	10 0	15 0	3 6	11 0	2 0	6 0
District du nord	12 0	16 6	4 2	8 0	3 0	7 6
District gallois	10 0	13 0	2 6	6 0	1 6	9 0
Pays de Galles	8 0	15 0	3 0	6 0	3 0	9 0
Écosse (en-viron)	10 0	16 0	4 0	8 0	2 0	7 0
Irlande (en-viron)	5 7	10 2	2 9	5 0	1 7	4 0

Les gains hebdomadaires, pour travaux à la tâche, étaient de 2*s.* à 5*s.* en plus des salaires ci-dessus.

La science agricole a fait, ces dernières années, de grands progrès dans le Royaume-Uni, particulièrement en Angleterre et en Écosse. Les méthodes perfectionnées suivies dans la grande culture, un meilleur système d'assolements, l'immense développement du drainage, l'usage des engrais artificiels et l'emploi de procédés mécaniques pour divers travaux de la ferme, ont contribué à placer

l'agriculture du pays dans une situation bien meilleure que celle qu'elle occupait autrefois; l'élevage toujours croissant du bétail à également produit des résultats très avantageux; et les récentes expériences de l'application de la vapeur aux travaux de labour sur les terrains argileux ont, paraît-il, complètement réussi. On trouvera à la Classe 48 une notice sur les machines agricoles dont l'usage est si généralement répandu dans le pays. Les expositions annuelles de la Société Royale d'Agriculture, et les divers concours internationaux et autres qui ont eu lieu depuis 1851, contribueront à répandre davantage l'emploi des procédés mécaniques les plus perfectionnées; et, d'un autre côté, grâce aux recherches de chimistes éminents et d'hommes de science, on est parvenu à mieux connaître la nature des terrains; ces savants ont ainsi largement participé au développement donné à l'agriculture du pays.

Classe LXVIII.

PRODUITS DE LA BOULANGERIE ET DE LA PÂTISSERIE.

La fabrication du pain à la mécanique s'est rapidement développé pendant ces quelques dernières années.

Parmi les machines à faire le pain exposées à Londres, en 1862, celles destinées au pétrissage étaient bien représentées. Il fut établi que, par l'emploi de ces machines, on réalisait une économie de trois pour cent sur la farine seulement. Un four portatif pour la cuisson du biscuit a été également très-remarqué par le jury de la classe vii., qui exprima l'espoir que, dans l'intérêt de la santé et de la propreté, aussi bien que dans celui du bien-être des ouvriers employés dans cette partie, l'usage général de machines pour la fabrication du pain fût adopté par le commerce de la boulangerie.

La consommation annuelle, dans le Royaume-Uni, du froment et de la farine de froment comme substances alimentaires, est estimée à 20 millions de quarts de quintal (quarters) environ, soit, à peu près, 5½ boisseaux par tête.

Le nombre des boulangers et des pâtisseries, dans chaque division du Royaume-Uni, était en 1861:—

	Boulangers	Pâtisseries
Angleterre et Pays de Galles.	54,140	14,526
Ecosse	10,894	1,924
Irlande	9,293	1,547
Total	74,327	17,997

Il n'existe aucun rapport officiel sur le prix du pain. Le prix moyen du froment, en

Angleterre et dans le pays de Galles, a été, pendant les cinq années 1861-65:—

	Par quart de quintal	
	s.	d.
1861	55	4
1862	55	5
1863	44	9
1864	40	2
1865	41	10

Classe LXIX.

CORPS GRAS ALIMENTAIRES, LAITAGES ET ŒUFS.

Le Royaume-Uni ne produit point d'huiles comestibles, et, en ce qui concerne les autres articles compris dans cette catégorie, la production du pays n'est pas suffisante pour satisfaire aux besoins de la population. De grandes quantités de beurre, de fromage et d'œufs sont annuellement importées dans le royaume. Les relevés statistiques suivants sont relatifs au commerce étranger pour les articles mentionnés dans cette classe:—

Quantités et Valeur des Articles importés pour la Consommation.

Années	Huiles d'Olive	Beurre	Fromage	Œufs
Quantités				
	Tonnes	Quintaux	Quintaux	Centaines
1861	15,981	987,000	698,000	1,694,000
1862	20,077	1,024,000	695,000	1,936,000
1863	18,949	957,000	747,000	2,224,000
1864	15,726	1,038,000	826,000	2,794,000
1865	30,716	1,068,000	842,000	3,033,000
Valeur				
	£	£	£	£
1861	908,600	4,874,000	1,618,000	550,000
1862	1,152,800	4,860,000	1,530,000	594,000
1863	1,085,800	4,402,000	1,863,000	673,000
1864	902,200	5,569,000	2,151,000	835,000
1865	1,616,900	5,871,000	2,432,000	928,000

L'huile d'olive est principalement importée d'Italie et d'Espagne; le beurre, de Hollande, de Belgique, de France, de Hambourg et du Danemark; le fromage, de Hollande et des États-Unis; et les œufs, de France.

La valeur du beurre et du fromage, de fabrication britannique, exportés pendant les cinq années 1861-65, a été de—

	Beurre	Fromage
	£	£
1861	466,000	130,000
1862	374,000	127,000
1863	472,000	157,000
1864	327,000	147,000
1865	333,000	111,000

Classe LXX.

VIANDES ET POISSONS.

Bien que la consommation de la viande soit très-grande dans le Royaume-Uni, il n'existe cependant aucun moyen de connaître la quantité annuellement consommée. Le prix élevé de cette denrée dans ces dernières années a fait rechercher diverses combinaisons tendant à introduire dans le pays, des viandes conservées provenant de l'Amérique du Sud; mais, jusqu'à ce jour, on n'a pu aboutir à aucun résultat pratique.

La mer, qui entoure les côtes des Îles Britanniques, fournit du poisson en abondance. Les principales sortes sont la morue, le turbot, la sole, le maquereau, le merlan, le hareng, le pilchard, la crevette, les huîtres et le homard. D'après le rapport d'une commission nommée récemment à l'effet de constater l'état des pêcheries britanniques, l'approvisionnement du poisson sur les côtes de la Grande-Bretagne augmenterait tous les ans.

Le déclin dans le rendement de la pêche des huîtres pendant les trois dernières années est attribué à une succession de générations défectueuses, et dont il n'a pas encore été possible de définir la cause.

Les pêcheries de saumons, en Écosse et en Irlande, ont aussi une grande importance, mais il n'existe point de relevés sur leur production annuelle; ce poisson donne lieu à un commerce d'exportation considérable.

Les principales branches du commerce de la pêche britannique sont celles de la pêche du hareng et du pilchard ou célan. Outre le nombre immense de ces poissons servant à l'alimentation du pays, il s'en exporte annuellement de grandes quantités.

La consommation du poisson a considérablement augmenté depuis l'extension des lignes de chemins de fer, et la plupart des grandes villes du pays sont journellement approvisionnées de poisson frais. Il n'a point été publié de statistiques des pêcheries anglaises, quoique cependant la pêche des harengs à Yarmouth et sur d'autres points de la côte, de même que celle des pilchards sur les côtes du Devon et de Cornouailles, occupent un grand nombre de bateaux et de pêcheurs. Dans d'autres saisons, ces bateaux sont encore employés pour la pêche du maquereau, du turbot, de la sole, de la morue, etc. etc. On estime à huit ou neuf cents le chiffre des petits bâtiments qui sont chargés d'approvisionner le marché de Londres; en admettant pour chacun d'eux un chargement annuel de 90 tonneaux, on aurait ainsi un total de 80,000 tonneaux de poisson, indépendamment de la masse de harengs, de melettes, de coquillages et autres espèces qui sont fournis par des modes de pêche différents.

Le tableau suivant indique quelle a été, en 1864, le tonnage des bateaux, et le nombre d'hommes et de jeunes garçons employés dans

les pêcheries de l'Écosse, de l'Île de Man et de l'Irlande:—

	Pêcheries		
	Écosse	Île de Man	Irlande
Nombre de bateaux . . .	12,703	628	9,300
Tonnage . . .	92,887	5,635	—
Nombre d'hommes et de garçons . . .	40,934	2,550	40,946

Le produit de ces pêcheries a été, pour la même année:—

	Pêcheries	
	Écosse	Île de Man
Mornes et lingues :		
Prises ou achetées { quintaux	161,000	19,600
{ barriques	7,900	—
Salées . . . { quintaux	107,600	138
{ barriques	7,900	—
Harengs :		
Pêchés . . . barriques	691,000	44,000
Salés . . . „	609,000	34,000

Il n'existe aucun rapport sur le produit des pêcheries de l'Irlande, qui ont faibli dans ces dernières années. La majeure partie des petits bateaux de pêche de cette contrée appartient à des fermiers qui habitent le long de la côte, et qui n'emploient ces embarcations qu'occasionnellement. Le poisson qu'ils prennent n'est pas envoyé au marché, il se consomme dans le voisinage immédiat du lieu où il se pêche.

On ne possède aucune publication sur les prix moyens de la viande dans les différentes parties du pays. Au 'marché métropolitain du bétail sur pied' cette moyenne a été, pendant les trois années 1863-65, savoir:—

Par stone de 8 livres (issues déduites):

	1863		1864		1865	
	s.	d.	s.	d.	s.	d.
Gros bétail :						
Inférieur . . .	3	7½	3	9	3	10
2 ^e classe . . .	4	2	4	4½	4	4½
3 ^e classe (morceaux de choix) . . .	4	8	4	9½	4	9½
4 ^e classe (écossais) . . .	4	11½	5	1	5	2
Moutons :						
Inférieur . . .	4	0	4	2½	4	8
2 ^e classe . . .	4	7½	4	9½	5	4
3 ^e classe (laine grosse et longue) . . .	5	1	5	3	5	11
4 ^e classe (plateau du sud, dits 'South Downs') . . .	5	5½	5	8	6	4½

Bien que les chiffres ci-dessus ne fournissent pas d'indications quant aux prix de détail de la viande payés par la généralité des consommateurs, ils représentent assez exactement les prix en gros de cet important article de l'alimentation. En ce qui concerne la valeur du poisson, les commissaires des pêcheries établissent deux relevés montrant les variations du prix dans un port de mer et une ville de l'intérieur pour les années, 1856 et 1865; voici ces relevés:—

À Newcastle-sur-Tyne		1856				1865			
		s. d.	d.	s. d.	d.	s. d.	d.	s. d.	d.
Turbot	. par stone	2	0	2	6	4	6	6	6

Les chiffres ci-dessus sont ceux des prix de détail.

Le prix des harengs salés à Leith en 1865, a varié de 28s. à 34s. par baril; et à Greenock, de 26s. à 40s. par baril.

Il n'y a point de relevés officiels des prix du poisson sur le marché de Londres.

Les quantités et la valeur du poisson étranger importé dans le Royaume-Uni pendant l'année 1865 ont été :—

	Quantités	Valeur
Poisson :	Quintaux	£
Frais	118,502	130,570
Mariné ou salé	366,958	384,142
	485,460	514,712

Le poisson frais est principalement importé de Hollande et de Norwège; le poisson salé, de l'Amérique Britannique du Nord, de France, de Hollande, de Norwège et d'Islande.

Les exportations du poisson britannique ont été, pendant la même année :—

	Quantités	Valeur
		£
Harengs . . . barils	352,250	500,233
Mornes et lingues quintaux	36,433	40,361
Saumons . . . "	4,311	23,388
Pilchards . . . barriques	11,783	38,342
Huitres . . . boisseaux	97,030	63,130
Autres sortes . . . "	—	23,784
	—	689,238

Les harengs sont surtout expédiés en Allemagne, en Italie et en Autriche; le saumon et les huitres, en France et en Belgique; et le pilchard, en Italie et en Autriche.

Classe LXXI.

LÉGUMES ET FRUITS.

La culture des légumes et des fruits est arrivée à un haut degré de perfection dans le Royaume-Uni, et il s'en fait une grande consommation dans toutes les classes de la société. Il n'existe point de statistique sur la production annuelle des jardins. L'étendue du terrain (jardins non-compris) consacré à la culture de la pomme de terre, dans le Royaume-Uni, était, en 1866, de 1,556,000 acres.

Outre l'approvisionnement intérieur il s'importe annuellement des quantités considérables de fruits et de légumes. En 1865, les principales importations consistaient en—

Pommes (vertes) . . . boisseaux	516,000
Raisin	58,000
Oranges et citrons	1,567,000
Poires (vertes)	41,000
Autres fruits verts	226,000
Oignons	529,000
Pommes de terre . . . quintaux	807,000

Classe LXXII.

CONDIMENTS ET STIMULANTS; SUCRES ET PRODUITS DE LA CONFISERIE.

Les principaux articles compris dans cette classe, produits dans le Royaume-Uni, sont: le sel de cuisine, le vinaigre, la moutarde, les sauces, les fruits confits et les marmelades. Le sel de cuisine provient particulièrement des salines situées dans les comtés de Cheshire et de Worcester, qui en produisent abondamment; il se raffine à Londres un sel de premier choix avec des sels de qualités inférieures tirés des endroits cités plus haut. La moutarde et les sauces anglaises, outre l'approvisionnement du pays, jouissent d'une grande renommée dans la plupart des villes du Continent, et il s'en absorbe aussi considérablement dans les colonies. La consommation de quelques articles de cette classe qui ne sont pas produits dans le royaume est très-grande. Le tableau suivant indique les principaux articles de provenance étrangère, retenus pour la consommation intérieure pendant l'année 1865 :—

Poivre livres	4,713,000
Cacao	3,826,000
Café	30,511,000
Thé	97,834,000
Sucre, brut . . . quintaux	9,876,000
„ raffiné	724,000

C'est des Indes Orientales néerlandaises, via Singapore, qu'arrive surtout le poivre; le cacao vient des Antilles Britanniques et de l'Amérique Centrale; le café, de Ceylan, de l'Inde et du Brésil; le thé, de Chine; le sucre brut, des

Antilles Anglaises, de Cuba et du Brésil; le raffiné, de Hollande, de France et de Belgique. Il s'importe également de la cannelle, des clous de girofles, du piment, etc., mais il ne s'en consomme pas de très-grandes quantités.

La consommation du thé et du sucre brut a considérablement augmenté pendant ces dix dernières années. En 1856, il n'est entré pour les besoins du pays que 63,000,000 de livres de thé et 6,813,000 quintaux de sucre brut. En comparant ces quantités avec celles importées en 1865, on trouve, en faveur de cette dernière année, une augmentation de 55 pour cent applicable au thé, et de 44 au sucre brut. La réduction récente à 6*d.* par livre du droit sur le thé, a beaucoup contribué à en augmenter la consommation, et a été un grand bienfait pour les plus pauvres classes de la société.

La moyenne annuelle de la consommation du thé a été, en 1865, de 3½ livres, environ, par individu; celle du sucre, de 39 livres.

La consommation du cacao reste, pour ainsi dire, stationnaire, et celle du café a légèrement diminué.

La valeur du sel, des conserves et sauces, du vinaigre et des produits de la confiserie, exportés du Royaume-Uni, en 1865, s'est élevée, savoir:—

	Quantités	Valeur
		£
Sel (blanc et en roche) . . . tonnes	579,050	274,631
Conserves et sauces . . . valeur	—	328,381
Vinaigre . . . gallons	345,123	33,149
Confiserie (produits de la) . . . livres	2,041,348	85,465

Classe LXXIII.

BOISSONS FERMENTÉES.

Il n'existe aucun relevé sur la production des vins britanniques, qui sont, en grande partie, faits avec des fruits étrangers tels que oranges, raisins secs, gingembre, etc., et avec des fruits du pays, tels que groseilles à grappes, groseilles à maquereau et framboises. Il se fait beaucoup de cidre dans le Devonshire, l'Herefordshire, et autres comtés du sud-ouest de l'Angleterre, où il remplace, dans de grandes proportions, la bière comme breuvage pour la classe ouvrière. Les meilleures qualités de cidre et de poiré sont parfois consommées par les classes supérieures. La bière forme la boisson ordinaire des différentes classes de la population, et se produit en grande quantité, non-seulement pour la consommation intérieure, mais aussi pour l'exportation. Les spiritueux sont également produits sur une grande échelle. Les whiskys d'Écosse et d'Ir-

lande sont les plus célèbres des spiritueux britanniques, bien qu'on en consomme peut-être moins que du genièvre, de l'eau-de-vie et du rhum (ce dernier n'est pas distillé dans le pays). La quantité de malt employée par les distilleries de spiritueux dans le Royaume-Uni a été, pendant les trois années 1863-65, savoir:—

	Boisseaux
1862-3 . . .	4,133,000
1863-4 . . .	4,986,000
1864-5 . . .	4,408,000

Le nombre de personnes patentées pour faire de la bière était, en 1865, dans chacune des divisions du Royaume-Uni, savoir:—

En Angleterre et le Pays de Galles . . .	34,218
Écosse . . .	220
Irlande . . .	90
Total . . .	34,528

Le nombre des distilleries de spiritueux était, dans la même année—

En Angleterre et le Pays de Galles . . .	8
Écosse . . .	116
Irlande . . .	25
Total . . .	149

Le nombre des distillateurs devient chaque année plus petit, à cause de la concentration du commerce entre les mains de ceux qui font des affaires considérables et qui profitent de tous les perfectionnements modernes; ils sont ainsi à même de faire une avantageuse concurrence à ceux qui ne font le commerce qu'en petit.

Le tableau suivant indique les quantités de bières et de spiritueux britanniques, ainsi que les vins et spiritueux étrangers, restés pour la consommation dans le Royaume-Uni pendant l'année 1865:—

	Gallons
Bière (estimation) . . .	684,000,000
Spiritueux britanniques . . .	21,005,000
Vins étrangers . . .	11,994,000
Spiritueux étrangers . . .	6,732,000

En ce qui concerne la consommation des liquides ci-dessus, pendant les dix dernières années, il y a eu augmentation pour la bière, les spiritueux étrangers et surtout pour le vin, et diminution pour les spiritueux britanniques.

L'augmentation dans la consommation des vins est due, en grande partie, à la réduction des droits d'entrée sur cet article; réduction qui a été consentie à l'occasion du traité de commerce conclu avec la France, en 1860.

L'importation des vins pour la consommation des principaux pays de production a été, en 1859 et en 1865, savoir:—

Pays de Provenance		1859	1865
		Gallons	Gallons
France	Rouge . .	423,000	1,782,000
	Blanc . .	272,000	829,000
Portugal	Rouge . .	1,971,000	2,851,000
	Blanc . .	49,000	38,000
Espagne	Rouge . .	47,000	506,000
	Blanc . .	2,829,000	4,685,000

Le rhum et l'eau-de-vie tiennent le premier rang dans l'importation des spiritueux; le tableau ci-après indique leurs principales sources d'approvisionnement:—

Importations pour la Consommation, 1865.

		Gallons
Rhum	Des Antilles Anglaises	1,499,000
	De la Guyane Anglaise	1,870,000

		Gallons
Eaux-de-vie	De France . .	2,581,000
	Autres lieux . .	85,000

Les quantités de bière et ale, et de spiritueux britanniques, exportés du Royaume-Uni pendant les cinq années 1861-65, ont été:—

	Bière et Ale	Spiritueux
	Barriques	Gallons
1861 . .	378,000	4,085,900
1862 . .	465,000	3,752,000
1863 . .	491,000	4,076,000
1864 . .	499,000	4,194,000
1865 . .	562,000	1,987,000

La valeur totale de ces quantités, pour 1865, s'est élevée à 2,305,000l.

GROUPE VIII.

(CLASSES LXXIV. à LXXXII.)

PRODUITS VIVANTS ET SPÉCIMENS D'ÉTABLISSEMENTS DE L'AGRICULTURE.

Classe LXXIV.

SPÉCIMENS D'EXPLOITATIONS RURALES ET D'USINES AGRICOLES.

L'ÉTAT de l'agriculture dans tout pays possédant une nombreuse population doit toujours être un sujet d'importance capitale. Depuis quelques années, la culture du sol a été l'objet de plus de soin qu'elle ne l'était auparavant, et, grâce au concours de plusieurs hommes spéciaux, les travaux de la ferme sont, dans une grande mesure, exécutés, en Angleterre, suivant des règles scientifiques. L'application de la vapeur à différents travaux agricoles a aussi opéré un progrès considérable dans les systèmes de culture employés dans le pays. Ce progrès s'est encore accru par la qualité supérieure des outils et machines manufacturés en Angleterre pour les besoins de l'agriculture; les bâtiments ruraux que l'on élève aujourd'hui offrent de grandes améliorations, de même que les outils et appareils qui y sont employés.

La manufacture des machines et instruments aratoires forme une branche très-importante du commerce du pays; il n'y a toutefois aucune statistique officielle du nombre d'ouvriers actuellement employés à cette manufacture; ces machines et instruments sont surtout fabriqués à Lincoln, Bedford, dans différentes parties du comté de Suffolk, à Peterborough, Banbury et Manchester. Outre un commerce considérable à l'intérieur, les fabricants d'instruments aratoires trouvent à l'étranger un débouché considérable pour leurs produits; il est certain que les industriels de cette catégorie ont beaucoup gagné à exposer leurs marchandises aux derniers concours internationaux.

La valeur des machines et instruments agricoles exportés du Royaume-Uni, pendant l'année 1865, s'élève à—

	£
Instruments d'agriculture de toutes sortes	210,300
Instruments d'agriculture (entièrement en fer)	13,177
Machines agricoles (à l'exception des machines à vapeur)	282,019

Les machines à vapeur employées à des usages agricoles ne sont pas spécifiées séparément dans les relevés commerciaux, mais cette branche de l'industrie a une valeur considérable.

L'étendue du terrain consacré à la culture des principales récoltes dans le Royaume-Uni, pour l'année 1866, se trouvera Classe 67. Le nombre de têtes de bétail vivant se lira Classes 75 à 77.

Classe LXXV.

CHEVAUX, ÂNES, MULETS, ETC.

Il n'y a point de rapport statistique sur la quantité de chevaux existant dans le Royaume-Uni, excepté toutefois ceux relatifs au nombre de chevaux et de mulets soumis à un droit ou qui en sont exemptés. Le nombre de ces derniers est indiqué ci-après, pour chacune des divisions du Royaume-Uni, en 1864 :—

	Chevaux et Mulets Nombre
En Angleterre et dans le Pays de Galles, taxés	537,639
En Angleterre et dans le Pays de Galles, exempts de droit	330,584
En Écosse, taxés	55,428
„ exempts de droit	147,444
Total pour la Grande-Bretagne	1,071,095
D'après les relevés concernant l'Irlande, en 1866	535,000
Total pour le Royaume-Uni	1,606,095

Il n'existe point de renseignements officiels sur le nombre d'ânes existant dans le pays.

Le tableau suivant donne les quantités et valeurs des chevaux importés dans le Royaume-Uni et de ceux exportés, pendant les cinq années 1861-65 :—

Années	Importés		Exportés (Britanniques)	
	Nombre	Valeur	Nombre	Valeur
		£		£
1861	1,595	37,693	2,954	237,813
1862	1,978	40,581	4,288	267,956
1863	1,441	39,264	5,204	269,825
1864	1,357	34,319	4,664	230,931
1865	1,332	39,658	4,400	185,367

Quatre ânes seulement, d'une valeur de 20%, ont été importés en 1865, et 130 ânes et mulets, évalués à 1,291%, ont été exportés dans la même année.

Classe LXXVI.

BŒUFS, BUFFLES, ETC.

Le relevé ci-après représente les quantités du bétail existant, en 1866, dans chacune des divisions du Royaume-Uni:—

Divisions	Vaches	Autres sortes de Bétail	Total
Angleterre . .	1,290,529	2,016,505	3,307,034
Pays de Galles . .	222,546	318,855	541,401
Écosse . .	370,447	566,954	937,401
Irlande . .	1,481,446	2,261,486	3,742,932
Île de Man . .	7,755	10,932	18,687
Jersey . .	5,815	6,222	12,037
Guernesey . .	3,030	3,946	6,976
Total . .	3,381,568	5,184,900	8,566,468

En dehors du bétail élevé dans le pays pour l'alimentation, il s'en importe considérablement de l'étranger, surtout des États du nord de l'Europe. L'augmentation que l'on remarquera dans le chiffre des importations de 1864 et 1865 était due, en grande partie, à la maladie (peste) qui a régné en Angleterre parmi les bêtes à cornes. Le nombre et la valeur des bestiaux de toutes sortes importés dans le Royaume-Uni pendant les cinq années 1861-65, ont été:—

	Nombre	Valeur £
1861 . .	107,096	1,558,065
1862 . .	97,887	1,301,602
1863 . .	150,898	1,931,814
1864 . .	231,733	3,208,851
1865 . .	283,271	4,401,482

L'exportation du bétail est tout-à-fait insignifiante.

Le nombre total des animaux de l'espèce bovine déclarés atteint par la maladie contagieuse dans la Grande-Bretagne, depuis le commencement de l'épidémie jusqu'au 10 novembre 1866, s'est élevé à 253,730. De ce chiffre, 85,018 ont été abattus, 124,305 ont succombé au mal, 33,413 furent guéris, et 10,994 dont il n'est pas fait mention; 52,415 têtes de bétail sain ont été abattues pendant la même période pour arrêter les progrès de la maladie. La proportion des animaux atteints jusqu'au 10 novembre 1866 a été, par rapport à l'ensemble du bétail, de 5-141 pour cent.

Classe LXXVII.

MOUTONS, CHÈVRES.

Le nombre total des moutons était, pour l'année 1866, dans chacune des divisions du Royaume-Uni, savoir:—

	Nombre
En Angleterre	15,124,000
Pays de Galles	1,668,000
Écosse	5,255,000
Irlande	4,270,000
Île de Man	55,954
Jersey	517
Guernesey	1,214

Total . 26,374,685

Toutefois, le chiffre afférent à l'Angleterre est probablement de beaucoup inférieur à ce qu'il devait être, car il n'a pas été possible, à l'époque où le relevé a été fait, d'y comprendre une grande quantité d'agneaux. On ne connaît pas le nombre de chèvres qu'il y a dans le Royaume-Uni, mais on n'en entretient que très-peu.

Il se fait annuellement, dans le Royaume-Uni, une importation considérable de moutons et d'agneaux, provenant presque exclusivement d'Europe, principalement de Hambourg, de la Hollande et de Belgique. Le chiffre de cette importation, pour les cinq années 1861-65, a été de—

	Nombre	Valeur £
1861 . .	312,923	616,020
1862 . .	299,472	569,315
1863 . .	430,788	669,573
1864 . .	496,243	873,905
1865 . .	914,170	1,787,866

L'augmentation considérable du chiffre des entrées, en 1865, doit être attribuée à la rareté de la viande sur le marché intérieur, produite par la maladie des bêtes à cornes.

Il s'exporte un très-petit nombre de moutons; il en est sorti, en 1865, 2,477 seulement, représentant une valeur de 22,134%.

Classe LXXVIII.

PORCS, LAPINS, ETC.

Le rapport sur le nombre de porcs existant dans le Royaume-Uni n'est pas complet, puisqu'il ne comprend pas, dans ses relevés, ceux de ces animaux qui sont élevés dans les chaumières ou 'cottage', et dans les villes de l'Angleterre, du pays de Galles et de l'Écosse. Toutefois, déduction faite de ces derniers, le chiffre total des porcs, dans le Royaume-Uni, s'élevait, en 1866, à 3,990,000. Les lapins abondent dans toutes les parties du pays, mais il n'y a aucun relevé de leur nombre supposé.

Les importations de porcs, pendant les cinq années 1861-65, ont été de—

		Nombre	Valeur £
1861	.	30,308	37,884
1862	.	18,162	17,319
1863	.	27,137	53,685
1864	.	85,362	192,566
1865	.	132,943	359,065

Il s'importe, du Continent, un grand nombre de lapins, mais les rapports des douanes n'en tiennent pas compte séparément. L'exportation des porcs est très-faible; ainsi, en 1865, il n'en est sorti que 148, d'une valeur de 559£.

Classe LXXIX.

OISEAUX DE BASSE-COUR.

Il n'existe point de statistique sur le nombre d'oiseaux de basse-cour existant dans le pays, mais il s'en produit suffisamment pour les besoins de la population puisque leur importation représente une valeur comparativement très-minime. Les œufs ne sont pas compris dans cette classe; ils se trouvent mentionnés dans la Classe 69.

La valeur de la volaille, y compris le gibier et les lapins, importée dans le Royaume-Uni pendant les cinq années 1861-65, a été :—

		£
1861	.	74,000
1862	.	86,000
1863	.	109,000
1864	.	131,000
1865	.	148,000

Classe LXXX.

CHIENS DE CHASSE ET DE GARDE.

Il n'y a point de relevés statistiques concernant le nombre de chiens, dans le Royaume-Uni, car, bien qu'ils soient soumis à une taxe,

le paiement du droit est si souvent éludé qu'il devient impossible de s'appuyer sur les rapports officiels pour arriver à obtenir une appréciation exacte de la quantité de ces animaux entretenus dans le pays.

Classe LXXXI.

INSECTES UTILES.

Les seuls insectes, élevés dans le Royaume-Uni, qui puissent être rangés dans cette classe, sont les abeilles, dont la culture atteint des proportions considérables sur différents points du pays. Divers perfectionnements ont été apportés, pendant les dix dernières années, dans la forme des ruchers, mais comme règle, c'est l'ancienne ruche de paille qui est le genre ordinairement adopté pour la conservation des abeilles dans ce pays. Les quantités de miel et de cire importées dans le Royaume-Uni, en 1865, ont été :—

		Quintaux
Miel	.	4,519
Cire	.	10,678

Il n'y a pas de statistique de la production indigène de ces articles.

Classe LXXXII.

POISSONS, CRUSTACÉS ET MOLLUSQUES.

L'appareil le plus important, compris dans les limites de cette classe est celui dont on se sert pour l'élevage artificiel du poisson; il a été employé avec succès dans différentes parties du pays. Cet appareil est aujourd'hui si généralement connu qu'il n'est pas nécessaire d'en parler davantage ici. On trouvera, à la Classe 70, des informations sur les produits des pêcheries britanniques.

GROUPE IX.

(CLASSES LXXXIII. à LXXXVIII.)

PRODUITS VIVANTS ET SPÉCIMENS D'ÉTABLISSEMENTS DE L'HORTICULTURE.

Classe LXXXIII.

SERRES ET MATÉRIEL DE L'HORTICULTURE.

DIVERS perfectionnements ont été faits, ces dernières années, dans la construction des serres-chaudes et des serres de jardins, particulièrement en ce qui concerne le dessin de ces dernières. Quant aux appareils, la machine inventée pour tondre le gazon est un des plus remarquables; elle peut couper l'herbe à toutes les époques de l'année et à toutes les heures du jour, tandis que la faux ne peut servir qu'autant que l'herbe est couverte de rosée. Plusieurs autres perfectionnements ont encore été apportés, depuis les dix dernières années, dans les ustensiles et appareils du jardinage; ces résultats sont dus à l'attention croissante dont la culture et l'ornementation des jardins sont l'objet, de même que les serres et autres constructions pour la culture artificielle des plantes, et qui font maintenant partie de la plupart des habitations modernes de quelque importance.

Classe LXXXIV.

FLEURS ET PLANTES D'ORNEMENT.

Outre les dispositions naturelles du peuple anglais pour la culture des fleurs, les nombreuses sociétés d'horticulture et de botanique ont puissamment contribué, par l'établissement de jardins et par de nombreuses expositions publiques de fleurs et de plantes, à entretenir ce goût national. Les parterres de fleurs appartenant aux hautes et moyennes classes de la société sont généralement reconnus pour n'être surpassés par ceux d'aucune autre nation du monde; et par suite des rapports intimes de l'Angleterre avec toutes les parties du globe, ses jardins ont été enrichis de spécimens de tous les climats. Parmi les récentes importations, peuvent être mentionnées plusieurs magnifiques fleurs et plantes du Japon, jusqu'ici très-rares. L'art de l'ornement dans le jardinage a été, ces dernières années, beaucoup développé en

Angleterre, ce qui est dû, en grande partie, à l'augmentation de la richesse des classes moyennes.

Classe LXXXV.

PLANTES POTAGÈRES.

Les légumes de toutes sortes sont cultivés sur une grande échelle dans le Royaume-Uni, mais, à l'exception des pommes de terre, il n'existe aucun relevé sur l'étendue de cette culture.

La superficie du terrain consacré à la culture des pommes de terre était, en 1866 (jardins non-compris):—

	Acres
En Angleterre et le pays de Galles	356,000
Écosse	143,000
Irlande	1,051,000
Île de Man	4,000
Îles de la Manche	2,000
Total	1,556,000

Il s'importe aussi de grandes quantités de pommes de terre et d'oignons, principalement de France, de Hollande, de Belgique et de Portugal. Cette importation a été, en 1865, pour le Royaume-Uni, de 807,000 quintaux de pommes de terre, d'une valeur de 162,000*l.*, et de 529,000 bushels (boisseaux) d'oignons, estimés à 121,000*l.*

Classe LXXXVI.

ARBRES FRUITIERS.

Des arbres fruitiers de diverses espèces, particulièrement le pommier, le poirier et le cerisier, sont cultivés en grand dans différentes parties du royaume. Les comtés de Devon, de Somerset, et d'Hereford, produisent des pommes en quantité pour la fabrication du cidre. Les cerises du comté de Kent sont aussi renommées pour leur bonnes qualités. Différents

autres genres de fruits poussent dans les réserves privées et dans ce qu'on appelle les *vergers du marché* ('market-gardens'); leur production annuelle est considérable, mais il n'existe aucun moyen d'en estimer la valeur. On apporte la plus grande attention au développement de la culture des arbres fruitiers, et chaque année on constate l'apparition de plusieurs sortes de fruits perfectionnés.

En dehors de la production du pays, de grandes quantités de fruits ordinaires sont annuellement importées dans le royaume; parmi les principaux figurent, en 1865:—

	Bushels (boisseaux)
Les pommes (vertes) . . .	516,000
„ poires . . .	41,000
„ noix . . .	143,000
„ noisettes . . .	251,000
„ marrons . . .	72,000
„ raisin . . .	58,000

Ce dernier fruit ne pousse pas en plein air dans le Royaume-Uni, mais les serres-chaudes en fournissent abondamment.

Les raisins secs, les amandes douces, les dattes, les figues, les oranges et les citrons ne sont point produits dans le pays, mais ils y sont importés.

Les chiffres de cette importation étaient, pour 1865:—

	Quintaux
Raisins . . .	368,000
Amandes douces . . .	32,000
Figues sèches . . .	78,000

	Boisseaux
Oranges et citrons . . .	1,567,000

Classe LXXXVII.

GRAINS ET PLANTS D'ESSENCES FORESTIÈRES.

Bien que la culture des forêts, dans le Royaume-Uni, soit comparativement assez

limitée comme étendue, puisqu'elle ne comprend que celles appartenant à la Couronne et à quelques grands propriétaires fonciers, l'élevage des arbres pour forêts et plantations est l'objet d'une grande attention. Les parcs qui entourent les résidences de province des propriétaires fonciers sont garnis d'arbres forestiers de toutes sortes, mais leur culture a principalement pour but l'ornementation. Il y a peu de pays, peut-être, où on rencontrerait, comme dans les bois et plantations de certains comtés de l'Angleterre, une si grande variété de feuillages.

Classe LXXXVIII.

PLANTES DE SERRES.

Il est impossible, dans les limites de ces remarques, d'indiquer les différentes méthodes adoptées dans le Royaume-Uni pour la culture des plantes de serres; mais il y a lieu d'espérer que quelques-uns des plus récents systèmes de culture seront représentés à l'Exposition. On se sert toujours beaucoup de tuyaux de briques pour le chauffage, bien qu'on emploie aussi dans une grande mesure les appareils à l'eau chaude et à gaz. Divers perfectionnements ont été introduits, ces dernières années, dans la construction des serres-chaudes; quelques-uns des plus importants sont dus à feu Sir J. Paxton; et la réduction dans les prix du verre a donné aux architectes une plus grande latitude pour ériger et orner ces bâtiments. La culture des plantes de serres-chaudes trouve, en dehors de leur entretien dans un but d'agrément, un grand encouragement dans les expositions provoquées par diverses sociétés du royaume, notamment par la Société d'Horticulture; on y décerne des prix pour les meilleurs spécimens de fleurs connues, ainsi que pour la production de quelque nouvelle plante de serre-chaude.

GROUPE X.

(CLASSES LXXXIX.-XCIII.)

OBJETS SPÉCIALEMENT EXPOSÉS EN VUE D'AMÉLIORER LA
CONDITION PHYSIQUE ET MORALE DE LA POPULATION.

Classe LXXXIX.

MATÉRIEL ET MÉTHODES DE L'ENSEIGNEMENT DES ENFANTS.

BIEN qu'elles ne soient pas représentées à l'Exposition actuelle, il y a, dans le Royaume-Uni, de nombreuses sociétés soutenues par des dons volontaires, et qui ont pour objet de fournir aux écoles primaires et au public en général le moyen d'obtenir à très-bas prix des livres d'une doctrine saine. Quant aux bâtiments scolaires, le Département de Science et d'Art entretient une exposition permanente des meilleurs modèles de ces bâtiments, et du matériel et mobilier d'école. On a donné beaucoup de soins à l'éducation des aveugles en Angleterre, où on leur enseigne non-seulement à lire, mais aussi la musique et différents métiers. Il y a plusieurs établissements à Londres et autres grandes villes pour servir de refuge à ces infortunés, et pouvant secourir des centaines d'individus.

On assure qu'il sort annuellement de la célèbre institution de Southwark pour les aveugles pauvres, de douze à quinze cents jeunes gens pourvus d'une bonne éducation religieuse et scolaire, et possédant un métier, tel que cordonnier, nattier, tisserand, brossier, vannier; et quelques-uns d'entre'eux sont en état de jouer de l'orgue et d'autres instruments. Des résultats analogues sont obtenus dans la plupart des autres institutions.

Le nombre total des aveugles dans le Royaume-Uni était, suivant le recensement de 1861 :—

En Angleterre et le	19,352	{ ou un aven-	1,037	{ habi-
Pays de Galles		gle sur		tants
Ecosse	2,820	"	1,086	"
Irlande	6,879	"	843	"
Iles des mers		"		
britanniques	197	"	728	"
	29,248	"	994	"

L'exposition des ouvrages d'éducation, des cartes, etc. démontrera suffisamment le soin que l'on prend du bien-être moral et social du peuple.

Classe XC.

BIBLIOTHÈQUES ET MATÉRIEL DE L'ENSEIGNEMENT DONNÉ AUX ADULTES DANS LA FAMILLE, L'ATELIER, LA COMMUNE OU LA CORPORATION.

Depuis plusieurs années des bibliothèques et des cabinets de lecture à l'usage des ouvriers ont été rattachés aux institutions littéraires et à celles dites des 'artisans' (Mechanics' Institutes) que l'on trouve dans presque toutes les villes et bourgs du royaume. L'établissement des bibliothèques publiques dans les grandes villes est de date plus récente. Les adultes appartenant aux plus pauvres classes de la société trouvent à s'instruire dans les écoles d'ouvriers et aux cours du soir qui ont lieu dans différentes institutions, et notamment dans celle des 'artisans.' Les promoteurs de toutes les institutions dont il vient d'être question ont été puissamment secondés dans leurs efforts par un grand nombre des éditeurs du pays, qui ont eu à cœur le bien-être réel de l'ouvrier. Les ouvrages d'éducation publiés à bon marché, notamment ceux destinés à apprendre par soi-même, sont aujourd'hui si nombreux que l'embarras n'est pas de se les procurer, mais bien de faire un choix parmi ces grandes quantités de livres. L'immense circulation des publications périodiques, des bons ouvrages réimprimés, et particulièrement celle des journaux à bas prix, peut être considérée comme une preuve évidente de progrès dans l'éducation des masses.

Classe XCI.

MEUBLES, VÊTEMENTS ET ALIMENTS DE TOUTE ORIGINE DISTINGUÉS PAR LES QUALITÉS UTILES UNIES AU BON MARCHÉ.

Dans un pays comme le Royaume-Uni, où une si grande partie de ses produits manufacturés sont destinés aux masses de la population, il devient difficile de désigner quels genres

spéciaux d'articles doivent être compris dans cette classe. Par suite d'un débit considérable et de l'emploi des machines pour leur manufacture, la plupart des articles ordinaires de meubles, vêtements et aliments, sont vendus suffisamment bon marché pour permettre à tous les membres actifs et laborieux de la société de se les procurer. Le prix des objets plus spécialement utilisés par les classes pauvres est également maintenu très-bas. Ce résultat est dû à la concurrence très-active que se font les fournisseurs, concurrence que justifie d'ailleurs la nature même du commerce qui ne se fait qu'au comptant, et qui rapporte de beaux bénéfices malgré que les articles vendus ne donnent au détail qu'un léger profit.

On doit mentionner ici l'établissement et le rapide développement des sociétés coopératives et de prévoyance qui procurent à leurs membres, principalement de la classe ouvrière, beaucoup d'articles de nourriture et de vêtement à prix coûtant, et sans compter le bénéfice qu'ils réalisent par suite de l'achat de ces articles aux magasins de dépôt.

Classe XCII.

SPÉCIMENS DES COSTUMES POPULAIRES DES DIVERSES CONTRÉES.

On trouvera à la Classe 35 quelques marques sur les diverses sortes de vêtements portés par les différentes classes de la société dans le Royaume-Uni.

Classe XCIII.

SPÉCIMENS D'HABITATIONS CARACTÉRISÉES PAR LE BON MARCHÉ UNI AUX CONDITIONS D'HYGIÈNE ET DE BIEN-ÊTRE.

Le perfectionnement des habitations destinées aux classes ouvrières a depuis longtemps été le

sujet d'une grande attention en Angleterre. Ceux qui visiteront l'Exposition de Londres en 1851 se rappelleront sans doute l'habitation modèle élevée sous la direction de feu le Prince Albert, et qui intéressa au plus haut point les visiteurs. Depuis cette époque, diverses sociétés, et notamment la Société des Arts, ainsi que des simples particuliers, ont recherché avec ardeur les meilleurs moyens d'améliorer les habitations d'ouvriers, et on a bâti dans diverses parties de la ville des masses de maisons à l'usage des classes de travailleurs; mais, malgré tout ce qu'on a déjà fait sous ce rapport, la majeure partie des pauvres est condamnée à vivre dans de misérables habitations. Par suite de l'extension donnée aux chemins de fer et aux travaux publics, le besoin de construire des maisons dans la métropole pour les classes ouvrières augmente chaque année. Deux ou trois compagnies de chemin de fer ont procuré quelques soulagements aux ouvriers en les transportant à prix réduits de Londres à la banlieue et vice versa; et si toutes les compagnies de chemins de fer de la métropole accordaient la même faveur, il en résulterait certainement un grand bienfait. Il ne faut toutefois pas oublier que l'heure matinale à laquelle les ouvriers commencent leur journée les empêche de demeurer à une trop grande distance de leur travail.

Malheureusement ce n'est pas dans la métropole seulement que les habitations des classes laborieuses laissent à désirer, car il en est de même dans plusieurs grandes villes de province, ainsi que dans beaucoup de districts agricoles. En effet, cette nécessité a atteint de si grandes proportions que l'on ne pourra y remédier qu'au moyen d'entreprises exécutées sur une grande échelle. On peut espérer que les spécimens exposés sous cette classe stimuleront davantage encore l'intérêt qui s'attache à cette importante question.

STATISTISCHE BERICHTE ÜBER DIE GROSSE AUSSTELLUNG ALLER NATIONEN VON 1851; DIE PARISER ALLGEMEINE AUSSTELLUNG VON 1855; DIE INTERNATIONALE AUSSTELLUNG VON 1862.

VON WILLIAM MATCHWICK, F.L.S.

DIE GROSSE AUSSTELLUNG ALLER NATIONEN IM JAHRE 1851.

DAS Ausstellungsgebäude, hauptsächlich aus Glas und Eisen bestehend, wurde im Hyde-Park zu London auf einem Flecke errichtet, den das Publicum nicht viel betritt, der aber zu dem beabsichtigten Zwecke besonders geeignet war.

An der Südseite des Parks ist ein offener Platz von bedeutendem Umfange, welcher, mit derselben parallel laufend, die Landstrasse nach Kensington und Hammersmith, der Hauptzufahrt von Westen in die Hauptstadt, begränzt. Der Platz liegt zwischen der Cavallerie-Caserne zu Knightsbridge und der Queen's Gate, dem neuen Eingange in den Park, zwei bis drei hundert Schritte vom alten Kensington Schlagbaum.

Ungefähr zwanzig Morgen von diesem Platze (vom Prinzgemahl zu diesem Behufe empfohlen) wurden von den königlichen Commissairen zur Errichtung des beabsichtigten Gebäudes gewählt.

Bevor jedoch irgend etwas unternommen werden konnte, war es nöthig, die Erlaubniss der Krone zur Benutzung eines Theiles dieses der bedeutendsten Parkes in London zu erwirken.

Diese wurde gnädigst ertheilt, jedoch unter der Bedingung, dass nach Beendigung der Ausstellung der eingeräumte Platz wieder in den ursprünglichen Zustand versetzt werden müsse, um wieder dem Publicum zur Benutzung und Erholung zu dienen.

Ungeachtet der eifrigsten und mannigfachen Bemühungen, das Gebäude zu erhalten, wurde die gestellte Bedingung gewissenhaft erfüllt, und jede Spur der Ausstellung war am 1. Juni 1852 verschwunden, also wenig mehr als zwanzig Monate vom Beginne der Arbeiten, denn die erste Säule wurde am 25. September 1850 errichtet.

An Ort und Stelle befindet sich jetzt nichts zur Bezeichnung des Fleckes als etwa die zwei

Ulmen, durch eiserne Umzäunung geschützt. Diese beiden Bäume standen (neben anderen) im Mittelschiffe, einer am nördlichen, der andere am südlichen Ende.

Sie dienen zur Bezeichnung des Mittelpunkts des Gebäudes und, obschon durch die lange und unnatürliche Einsperrung in ihrem weiteren Wachstume behindert, gewähren sie dennoch einen ziemlich genauen Begriff der Höhe und Länge des Mittelschiffes, denn sie sind von bedeutendem Alter und gute Waldexemplare ihrer Art.

Westlich von diesem Punkte, und in gleicher Linie, ist man mit der Errichtung des National-Denkmales zum Andenken an den Prinzgemahl, welcher sich so sehr mit der grossen Ausstellung in 1851 identificirt hat, beschäftigt. Dieses Denkmal wird nach seiner Vollendung den Ort der grossen Ausstellung bezeichnen, wenn selbes auch beiläufig 500 Yard von dem westlichen Ende des früheren Gebäudes sich befindet. Der Crystal-Palast zu Sydenham ist hauptsächlich aus den Materialien des grossen Ausstellungsgebäudes von 1851 errichtet.

Der Erbauer des Gebäudes war der verstorbene Sir Joseph Paxton, und die Bauunternehmer die Herren Fox (jetzt Sir Charles Fox) und Henderson.

Sir Joseph Paxton hatte in seinem Originalplan dasselbe Prinzip befolgt, welches er bei dem Bau der grossen Gewächshäuser zu Chatsworth, dem Sitze des Herzogs von Devonshire, angewandt hatte; es wurden jedoch bedeutende Veränderungen in dem ersten Plane angebracht und manche der Vorzüge des Gebäudes verdankt man dem Sir Charles Barry, Sir William Cubitt, Mr. Robert Stephenson und Mr. Brunell.

UMFANG DES GEBÄUDES.

Der ganze bedeckte Raum, oder der Total-

Flächenraum des Gebäudes, ward ursprünglich auf 800,000 Quadratfuss festgesetzt, späterhin aber auf ungefähr eine Million Quadratfuss, oder mehr als zwanzig Morgen Raum, erhöht.

Von diesem Flächenraume veranschlagte man die Hälfte (500,000 Quadratfuss) zur Ausstellung der Gegenstände, und die andere Hälfte zu Wegen und Durchgängen.

Bei der Vertheilung dieses Raumes machten es die königlichen Commissaire zur Bedingung, dass die Hälfte Grossbritannien und ihren Colonien und die andere Hälfte fremden Ländern eingeräumt werde.

An der Ost- und Westseite des Gebäudes war ein Raum von 30,712 Quadratfuss umzäunt, der zu Ausstellung von Gegenständen bestimmt war, welche nicht im Gebäude untergebracht werden konnten.

ANZAHL DER AUSSTELLER.

Die Gesamtzahl der Aussteller war 13,937, wovon 7,381 auf Grossbritannien und Colonien und 6,556 auf fremde Länder kamen. Einige Länder, als Indien, die Türkei, Egypten und Tunis, und gewisse Personen, welche sich zur Sendung von Gegenständen vereinigten, sind als nur ein Aussteller aufgezeichnet, so dass, mit Inbegriff dieser die Zahl der Aussteller wohl auf 15,000 bis 16,000 geschätzt werden darf.

Die folgende Uebersicht giebt die Zahl der Aussteller und den von ihnen benutzten Raum:—

	Anzahl der Aussteller	Benutzter Raum
		Quadratfuss
Grossbritannien . . .	6,861	503,424
Britische Colonien . . .	520	40,896
Summa . . .	7,381	544,320
Amerika (Vereinigte Staaten)	499	44,352
Oestreich	731	48,384
Belgien	506	37,440
China	30	5,184
Dänemark	39	1,152
Egypten	—	2,304
Frankreich	1,710	119,808
Preussen und Zollverein	1,402	77,184
Griechenland	36	576
Nord-Deutschland	134	2,880
Niederlande	113	4,608
Persien	12	576
Portugal	157	3,456
Rom	52	3,456
Russland	263	13,824

Summa fremder Staaten . .	6,556	403,776
Gesamtsumme	13,937	1,033,344

KOSTEN DER AUSSTELLUNG.

Es ergibt sich aus der Zusammenstellung der Ausgaben, welche die königlichen Commissaire veröffentlichten, dass dieselben für Erbauung und Einrichtung des Gebäudes 170,000 $\frac{1}{2}$ betrugten. Nimmt man die Oberfläche des überdeckten Raumes zu einer Million Quadratfuss an, so würde dies eine Auslage von ungefähr 3s. 5d. per Quadratfuss ausweisen.

Folgende sind die Hauptabtheilungen der Auslagen:—

Salaire, jene der königlichen Commissaire einbegriffen, Verwaltungsausschuss, Sachverständige, Preisrichter	£71,975
Polizei	19,648
Bureau Ausgaben, als Miethe, Möbel, Papier, Schreibmaterialien, Drucksachen, Briefporto, Annoncen u. s. w.	8,869
Allgemeine Unterhaltungskosten der Ausstellung, mit Inbegriff der Kohlen für Dampfkessel, Beleuchtung, Wasser, Bewässerung der Wege, Werkzeuge, Reparaturen, unvorhergesehene Unkosten u. s. w.	4,878
Juri-Abtheilung: Kosten der Medaillen, Etuis, Diplome, Photographien, Berichte, Versuche mit Ackerbaugeräthen und anderen Maschinen	6,917
Rechtskosten, Zinsen auf Vorschüsse u. s. w.	10,508
Summa	£122,795

wodurch sich die Gesamtauslagen für die Ausstellung, mit Inbegriff der Erbauung des Gebäudes, ungefähr auf 292,795 $\frac{1}{2}$ belaufen.

Man muss jedoch nicht aus dem Auge lassen, dass der Contract mit den Herren Fox und Henderson nicht den unbedingten Kauf des Gebäudes von Seiten der königlichen Commissaire feststellte, sondern es nur zur Benutzung derselben überliess, aber Eigenthum der Bauunternehmer blieb. Wäre dem nicht so gewesen, so würden die Gesamtkosten der Ausstellung wenigstens um weitere 100,000 $\frac{1}{2}$ erhöht worden sein.

ZULASSUNG VON BESUCHERN.

Die Ausstellung wurde dem Publicum am Donnerstag den 1. Maigeeöffnet und Sonnabend den 11. October geschlossen, nachdem sie daher 141 Tage offen gewesen. Am folgenden Montage und Dienstag hatten die Aussteller und deren Bekannte freien Zutritt, und am Mittwoch dem 15. October fand die endliche Schluss-Ceremonie in Anwesenheit der Aussteller, Preisrichter, fremden und inländischen Commissaire, der Ausschüsse und sonstiger Persönlichkeiten statt.

Der Zutritt war dem Publicum mittelst Abonnements-Billete oder Bezahlung am Eingange bewilligt. Der Preis der Abonnements-Billete war auf drei Guineen für Herren und zwei Guineen für Damen festgestellt. Nach dem 31. Juli fand eine Ermässigung auf je 1l. 10s. und 1l. statt. Am Eröffnungstage wurde kein Geld am Eingange angenommen; nur Abonnements-Billete berechtigten zum Eintritte. Während zwei Tagen nach der Eröffnung war der Zutrittspreis 1l., vom 5. bis 24. Mai (inclusive) 5s. Vom 26. Mai bis 2. August (inclusive) bestand folgender Satz, nämlich: Montag, Dienstag, Mittwoch und Donnerstag, 1s.; Freitag, 2s. 6d.; Sonnabend, 5s.; und von dem letztgenannten Datum bis zur Schliessung der Ausstellung ward hieran nichts geändert, ausser dass der Eintrittspreis an Sonntagen auf 2s. 6d. ermässigt wurde.

Anfangs wurden die Thore um zehn Uhr Morgens geöffnet und Abends um sechs Uhr geschlossen, mit Ausnahme von Sonntagen, an welchem Tage das Gebäude erst um zwölf Uhr Mittags geöffnet wurde.

Am Montage dem 18. August öffnete man um neun statt zehn Uhr Morgens, und so bis zur Schliessung der Ausstellung. Einige Abänderungen wurden später in den Schlussstunden gemacht, je nach der Jahreszeit. Im Hochsommer stand das Gebäude bis sieben Uhr Abends offen, und mit dem Vorrücken der Jahreszeit ertönte die Glocke um sechs Uhr, und später immer zehn Minuten vor Sonnenuntergang.

EINNAHMEN.

Die Gesamt-Einnahmen beliefen sich auf:—

Subscriptionen	£67,897
Catalog-Contract	3,200
Erfrischungs-Contract	5,500
Abonnements-Billete	67,514
Eintrittsgelder	356,278
Toilettenzimmer, Regenschirme, Prägung von Medaillen im Ge- bäude und Wetterkarten	4,580
Zinsen und Prämien auf Schatz- kammerscheine	898
Verschiedene Einnahmen	233
Summa	£506,100

Verkauft wurden 25,605 Abonnements-Billete, wovon 13,494 an Herren und 12,111 an Damen. Von dieser Anzahl wurden 135 an Herren und 184 an Damen zu den ermässigten Preisen von 30s. und 20s. abgegeben.

Die Durchschnittseinnahmen an den Thüren (den Eröffnungstag nicht inbegriffen, an dem kein Geld angenommen wurde) betrugen per Tag, die ganze Dauer der Ausstellung in Anschlag gebracht, 2,548l. Während der

ersten drei Wochen, bei 5s. Eintritt, betrug der tägliche Durchschnitt 2,546l., eine erstaunenswerthe Annäherung der erstgenannten Summe. Die grösste Einnahme an einem Tage wurde am 8. October (Shillingstag) erzielt, nämlich 5,283l., und die geringste am 26. Mai, nämlich 920l., dem ersten Tage der Herabsetzung auf 1s. Diese verhältnissmässig geringe Einnahme muss der Befürchtung von Seiten des Publicums zugeschrieben werden, dass ein so geringer Eintrittspreis eine solche Masse von Besuchern anlocken würde, dass die Anwesenheit im Ausstellungsgebäude nicht nur mit Unannehmlichkeiten, sondern selbst Gefahr verknüpft sein würde.

Die folgende Tabelle zeigt die Einnahmen an den Thüren zu den verschiedenen Eintrittspreisen:—

Tage	Eintrittspreise			Einnahmen			Durchschnitts-einnahmen		
	£	s.	d.	£	s.	d.	£	s.	d.
2	1	0	0	1,042	0	0	521	0	0
28	0	5	0	61,347	7	0	2,191	0	0
30	0	2	6	72,447	11	0	2,414	17	0
80	0	1	0	221,971	3	0	2,774	12	0
140				356,803	1	0			

Der Verlust an leichtem Golde, beschädigtem, falschem und fremdem Gelde war beträchtlich, etwas mehr als 530l., woraus sich der Unterschied zwischen der zuerst angegebenen und der obigen Summe erklären lässt.

ANZAHL DER BESUCHER.

Die Gesamtanzahl der Besucher während der Periode der Ausstellung belief sich auf 6,039,195. Während 141 Tagen kamen 773,766 Personen mit Subscriptions-Billets. An den zwei Tagen, wo 1l. zu bezahlen war, fanden sich 1,042 Personen ein. Die 28 Tage mit 5s. Entrée brachten 245,389l. und die 30 Tage zu 2s. 6d. 579,579 Besucher. Im Laufe der 80 Tage zu 1s. fanden sich 4,439,419 Personen ein. Eine Durchschnittsberechnung, auf diese Zahlen basirt, ergibt folgende Resultate:—

Abonnements-Billete	5,473	per Tag
Eintrittspreis	£ s. d.	
1 0 0	521	„ „
0 5 0	8,763	„ „
0 2 6	19,319	„ „
0 1 0	55,493	„ „

Die königlichen Commissaire und der Verwaltungsausschuss erleichterten, so viel als möglich, die freie Zulassung aller Personen, deren Anwesenheit unumgänglich nothwendig war; eigentliche Freikarten wurden aber nie ertheilt. Alle von der königlichen Commission Angestellte, Polizei, Militair, fremde Commissaire, gewisse Mitglieder der Presse Agenten und Diener der Aussteller, die Preisrichter und viele sonstige nicht besonders bezeichnete Per-

sonen hatten während der ganzen Dauer der Ausstellung freien Zutritt und vermehrten daher beträchtlich die Zahl der im Gebäude stets Anwesenden. Die grössere Anzahl so Begünstigter kamen vor Eröffnung der Thore und wurden von der Polizei nicht gezählt; im Gebäude beschäftigte Personen wurden als Regel nie gezählt.

Die grösste Anzahl von Anwesenden im Gebäude war am 7. October (vier Tage vor dem Schluss). An diesem Tage besuchten 109,915 Personen die Ausstellung, die grösste Anzahl an einem Tage während der ganzen Ausstellung; um zwei Uhr Nachmittags an diesem Tage schätzte man die Anwesenden im Gebäude auf nahe Hundert Tausend. Am Montage, 6. October, betrug die Zahl 107,815; Mittwoch, 8. October, 109,760; Donnerstag, 9. October, 90,813. Diese vier Tage waren die letzten Schillingstage während der Ausstellung; die Gesamtanzahl der Besucher an selben betrug 418,303, oder durchschnittlich 104,576 für jeden dieser vier Tage.

PREISGERICHTE (JURY).

Die wirkliche Zahl der Preisrichter für die Ausstellung belief sich auf 318, d. h. 161 Britische und 157 fremde und sie vertheilten sich wie folgt:—

Oestreich	17
Belgien	14
Dänemark	1
Egypten	2
Frankreich	38
Grossbritannien	161
Griechenland	1
Deutschland (Nord-)	2
Holland	2
Italien	6
Portugal	2
Russland	7
Sicilien	1
Spanien	4
Schweiz	7
Schweden	1
Türkei	5
Vereinigte Staaten	24
Zollverein	23
Summa	318

Den Preisrichtern waren 100 Hülfspreisrichter zur Seite gegeben, welche von den ersteren speciell ernannt wurden, um ihnen in ihren Entscheidungen beizustehen, ohne jedoch selbst Stimme zu haben. Siebenzig der Preisrichter und Hülfspreisrichter waren zugleich Aussteller. Die folgende Tabelle weist die Zahl der Preisrichter und Hülfspreisrichter für jede Klasse aus:—

Klasse		Preis-richter	Hülfpreis-richter
ROHSTOFFE.			
1	Bergbau, Steinbruch, metallurgische Arbeiten und Mineral-Erzeugnisse	8	1
2	Chemische und pharmaceutische Prozesse und Erzeugnisse im allgemeinen	8	8
3	Nahrungsmittel	6	keine
4	Thierische und Pflanzen-Substanzen, welche hauptsächlich zu Manufacturen verwendet sind	8	1
MASCHINEN.			
5	Maschinen zur unmittelbaren Benutzung, Kutschen inbegriffen, und Eisenbahn- und Schiff-Mechanismus	18	2
6	Fabrik-Maschinen und Werkzeuge	12	6
7	Ingenieurkunst, Architectur und Bauwesen	8	keine
8	Schiffbau, Kriegswesen, Geschütze und Waffen	8	7
9	Acker- und Gartenbaugeräthschaften	15	1
10	Physikalische, optische, musikalische, chirurgische Instrumente und Uhrwerke	32	7
MANUFACTURES.			
11	Baumwolle	10	3
12	Wolle und Wollengarn	12	9
13	Seide und Sammet	10	keine
14	Flachs und Hanf	10	keine
15	Gemischte Gewebe	12	2
16	Leder, Felle, Pelze, Federn, Haare	10	1
17	Papier und Schreibmaterialien, Drucksachen und Buchbinderei	8	1
18	Gewebe, gesponnene, gewalkte und gelegte Fabrikate, wenn selbe als Muster von Druck und vom Färben dienen	10	2

29	Verschiedenartige und kleine Erzeugnisse	8	3
SCHÖNE KÜNSTE.			
30	Bildhauerei, Modelle und plastische Arbeiten	15	keine
Summa		318	100

Die oben angeführten dreissig Klassen wurden später auf vier und dreissig erhöht, nämlich durch Hinzufügung einer Unterabtheilung zu Klasse 5, und drei Unterabtheilungen zu Klasse 10.

PREISE.

Zwei Bronzemedaillen wurden von den Juries zuerkannt, die Rathsm- und die Preismedaille. Ein Ehren-Certificat wurde als dritter Preis zuerkannt.

Die Rathsmedaille wurde fast ausschliesslich als Belohnung für merkwürdige Erfindungen, und nicht für Fälle, wo nur ausgezeichnete Handfertigkeit das einzige Verdienst bildete, ertheilt.

Nur in wenigen Fällen wurden ausser den Auszeichnungen durch Medaillen oder Ehren-Certificat Geldgeschenke verliehen. Letzteres geschah nur ausnahmsweise, wo Handwerker grosse Auslagen hatten, um Gegenstände von Werth und Wichtigkeit herzustellen, ohne dass es ihnen möglich gewesen sein würde, dafür Ersatz zu finden.

Die Preisrichter erkannten folgende Preise zu:—

Rathsmedaillen	. . .	171
Preismedaillen	. . .	2,954
Belobungsschreiben	. . .	2,123
Summa	. . .	5,248

ZUSAMMENSTELLUNG DER PREISE.

Grossbritannien:

Belobungsschreiben	. . .	930
	—	2,441

Fremde Länder:

Rathsmedaillen	. . .	92
Preismedaillen	. . .	1,592
Belobungsschreiben	. . .	1,193
	—	2,807

Summa . . . 5,248

DIE PARISER ALLGEMEINE AUSSTELLUNG IM JAHRE 1855.

Es ist nicht ganz leicht, die genauen Localitäten und die eigentliche Lage der verschiedenen Gebäude anzugeben, welche für die Pariser allgemeine Ausstellung im Jahre 1855 errichtet wurden.

Das Hauptgebäude war geräumig, ein etwas längliches Viereck, in der Hauptallee der Champs Élysées, und wohlbekannt unter dem Namen des *Palais de l'Industrie*. Dieses Gebäude war dauerhaft gebaut, in der Absicht es für immer zu bewahren. In diesem Gebäude wurden die Erzeugnisse der sieben und zwanzig Industrieklassen hauptsächlich ausgestellt.

Südlich von diesem Hauptgebäude, mit selbem durch bedeckte Gallerien verbunden, war ein langes schmales Gebäude, genannt die *Annexe*, oder die *Galerie du Quai*, welches sich längs und nahe dem nördlichen Ufer der Seine erstreckte. Dieses Anhängsel wurde vorzugsweise zur Ausstellung von Maschinen verwendet.

Ein drittes Gebäude, zur Ausstellung der drei Klassen, die Abtheilung der schönen Künste bildend (*Palais des Beaux Arts*), bestimmt, befand sich ziemlich von den zwei anderen entfernt, nämlich an dem südwestlichen oder Flussende der Avenue Montaigne. Dasselbe war gänzlich von den zwei anderen Gebäuden getrennt; Verbindungsgänge waren wegen der Entfernung und örtlichen Lage unmöglich.

Zwischen dem Palais de l'Industrie und der Annexe befand sich ein rundes Gebäude, unter dem Namen von *Panorama* oder *Panorama-Circus*, worin die Kron-Juwelen Frankreichs, Sessel, Teppiche u. s. w. ausgestellt waren. Ausserhalb und ringsum dieses Circus' war ein beträchtlicher Raum, theils offen, theils bedeckt,

in welchem Kutschen und Wagen jeder Art, Ackerbau- und andre Geräthschaften ausgestellt waren. Hier befanden sich auch geräumige Erfrischungszimmer. Noch muss eines Gebäudes erwähnt werden, die Chinesische Ausstellung, in der Nähe des Palais de l'Industrie, aber durchaus nicht mit selbem verbunden. Diese Chinesische Ausstellung wurde nie als ein Bestandtheil der internationalen Schau betrachtet, und sie wird nur der Vollständigkeit halber erwähnt, und weil Ort und Stelle, wo selbe stand, wirklich einen Theil (wenn auch getrennt) des Kunstpalastes bildete.

Demnach bestanden drei getrennte Gebäude, ausser dem Panorama-Circus, für die Französische internationale Ausstellung in 1855, der Industriepalast oder das Hauptgebäude, die Maschinen-Annexe und der Kunstpalast.

Mit Rücksicht auf dieses letzte Gebäude hatte die Französische Regierung die Absicht, einen Theil des neuen Louvre-Palastes zur Ausstellung von Kunstwerken zu benutzen und würde dies auch ohne Zweifel gethan haben, hätte sie sich daran nicht durch die dringenden und vielen Arbeiten, welche damals sowohl von aussen als innen an diesem Palaste vorgenommen werden mussten, verhindert gefunden.

Obleich die Vorbereitungen und Bauten zur und für die Pariser allgemeine Ausstellung in 1855 mit dem Capitale einer Gesellschaft in Paris in's Leben gerufen, und zum grössten Theile ausgeführt wurden, so war es dennoch die Französische Regierung, welche wirklich ganz und gar die Ausstellung leitete, indem sie alle Gefahren des Unternehmens trug,

und der Compagnie einen gewissen Antheil am Gewinne für ihre Auslagen zusicherte.

Demzufolge ernannte der Kaiser die Commissaire, an deren Spitze den Prinzen Napoleon, zur Ueberwachung der Ausstellung; und obsohn die Gesellschaft gewisse Vorrechte, und die Befugniss gewisse Verordnungen zu veröffentlichen, genoss, so war sie dennoch in Wirklichkeit ohne Einfluss, und die ganze Handhabung der Ausstellung fiel der Regierung anheim.

Die Herren Viel und Desjardins waren die Architecten des Hauptgebäudes, die Bauunternehmer die Herren York & Co.

Mit Ausnahme des Hauptgebäudes waren alle übrigen provisorisch und wurden daher kurz nach Beendigung der Ausstellung weggeschafft. Das Hauptgebäude (Palais de l'Industrie) in den Champs Elysées wurde davon ausgenommen und besteht noch gegenwärtig. Es gehört der Regierung und wird zu Kunst- und derartigen Ausstellungen verwendet.

AUSDEHNUNG UND UMFANG.

Der ganze Flächenraum der von den Ausstellern aller Nationen in den Industrie-Abtheilungen, mit Inbegriff von Durchgängen, Thoren, Arbeits- und Empfangszimmern, in Anspruch genommen wurde, betrug 152,052 Quadratmetres, oder ungefähr 1,770,000 Englische Fuss.

Im Kunstpalast war der Raum, den Kunstwerke aller Art, als Malerei, Kupferstecherkunst, Lithographie, Bildhauerei, erheischen, 17,693 Quadratmetres, oder 15,603 horizontal-verticale Quadratmetres für Gemälde, Lithographien, und 2,036 horizontale Quadratmetres für Bildhauerarbeiten, was Alles in Allem den von Ausstellern jeder Klasse erfordernden Raum auf 169,691 Quadratmetres (ungefähr 1,866,000 Quadratfuss) bringt, worin auch die nöthigen Durchgänge u. s. w. begriffen sind. In dieser Schätzung befinden sich jedoch die Eingänge, Ateliers, und Bodenfläche im Kunstpalaste, worin keine Kunstwerke standen, nicht; überhaupt fehlen hierüber von Seiten der kaiserlichen Commission alle Angaben.

Der Ausstellungsraum im Hauptgebäude, Circus und Maschinen-Annexe vertheilt sich wie folgt:—

	Quadratmetres.
Frankreich . . .	55,669
Fremde Länder . .	46,097
Durchgänge u. s. w. .	17,021

Summa . 118,786

In der Abtheilung für schöne Künste hat nach Angabe Frankreich 2,400 Quadratmetres Wandfläche für Gemälde u. s. w., Grossbritannien 938 Quadratmetres bedeckt; der übrige Raum war von 10 anderen Länder gefüllt. Der Raum, welchen Grossbritannien

zur Aufstellung von Kunstwerken erforderte, belief sich auf 14,184 Quadratfuss.

So genau, als es überhaupt ermittelt werden konnte, betrug der Raum, welchen Grossbritannien und seine Colonien in der Pariser Ausstellung benutzten, 183,000 Quadratfuss, wovon 14,184 Quadratfuss auf die drei Klassen schöner Künste kommen.

Obgleich der wirklich von jedem Lande benutzte Raum in der Abtheilung für schöne Künste in dem Berichte der kaiserlichen Commission nicht angegeben ist, so erscheint doch in demselben die Anzahl der bezüglichen Aussteller.

In dem Berichte, welcher dem Parlamente über die Britische Abtheilung der Ausstellung vorgelegt wurde, erscheint die Anzahl der Englischen Künstler und deren Werke wie folgt:—

Oelgemälde . . .	234	von 99	Künstler
Wasserfarbengemälde . . .	145	„ 52	„
Kupferstiche und Lithographien . . .	197	„ 62	„
Architectonische Zeichnungen u. s. . .	127	„ 51	„
Statuen . . .	51		
Büsten und Basreliefs . . .	24	„ 35	„
Summa . . .	778	299	

Der Schätzwurth der gesandten Britischen Kunstwerke belief sich auf:—

Oelgemälde . . .	£ 96,130
Wasserfarbengemälde . . .	15,653
Kupferstiche und Lithographien . . .	1,676
Architectonische Werke . . .	5,765
Bildhauer-Arbeiten . . .	18,336
Summa . . .	£137,560

Dies ergibt einen Durchschnittswurth von 411% für Oelgemälde, ungefähr 108% für Gemälde in Wasserfarben und beiläufig 244% für Bildhauerwerke.

Aus selbstverständlichen Gründen sind von dieser Schätzung Kupferstiche, Lithographien und architectonische Arbeiten ausgeschlossen.

Ausser den obigen statistischen Angaben möchte es wohl von Interesse sein zu erfahren, wie viel verticale Oberfläche und horizontales Mass von allen sieben und zwanzig Industrieklassen in der Pariser Ausstellung benöthigt wurden. Diese Angaben sind dem Berichte der kaiserlichen Commission entnommen.

	Flächen-mass Metres	Verticale oder Wandfläche Quadratmetres
Frankreich, Algier und Colonien . . .	18,949	33,421
Oestreich . . .	2,335	3,512
Belgien . . .	1,509	2,350
Grossbritannien und Colonien . . .	4,404	6,373

	Flächen- mass Metres	Verticale oder Wandfläche Quadratmetres
Preussen . . .	1,828	2,796
Schweden . . .	464	442
Schweiz . . .	409	584
Sonstige Länder . . .	3,871	4,131
Summa	33,769	53,609

5 Sächsische Herzogthümer	23
Tunis	1
Türkei	2
	153
Summa	21,779

ZAHLE DER AUSSTELLER.

Die Gesamtzahl derselben bei der Pariser allgemeinen Ausstellung in 1855 betrug 23,954. Hiervon kommen 21,779 auf die sieben und zwanzig Industrieklassen und 2,175 auf die drei Klassen schöner Künstler.

Je nach den verschiedenen Ländern vertheilten sich die industriellen Aussteller wie folgt:—

Frankreich	10,003
Algier	728
Französische Colonien	183
	10,914
Amerika (Vereinigte Staaten)	131
Amerika (Süd-)	38
Oestreich	1,293
Baden	88
Baiern	172
Belgien	687
Dänemark	90
Spanien	569
Grossbritannien	1,589
Canada	348
Australien und Vandiemens- land	405
Indien	599
Britisch-Guiana	95
Kleinere Colonien	233
	3,269
Griechenland	131
Hessen	88
Kirchenstaat	72
Mexico	107
Nassau	59
Norwegen	121
Niederlande	411
Portugal	443
Preussen	1,319
Sardinien	204
Sachsen	96
Schweden	418
Schweiz	408
Toscana	197
Hansestädte	89
Württemberg	207

Sonstige Länder, als:—

Anhalt-Dessau und Cöthen	15
Braunschweig	16
Deutscher Bund	20
Egypten	6
Frankfurt am Main	24
Hannover	18
Hawaii	5
Luxemburg	23

Die Zahl der von jedem Lande ausstellenden Künstler ist bereits angegeben.

Drei und fünfzig fremde Staaten und zwei und zwanzig fremde Colonien waren in der Ausstellung vertreten, Frankreich, die drei Provinzen in Alger und acht Französische Colonien nicht gerechnet.

Theilt man die Aussteller jeder Klasse in Französische und fremde, so ergibt sich folgendes Resultat:—

Französisches Kaiserreich	11,986
Fremde Staaten	11,968
Summa	23,954

Diese beiden so ausserordentlich annähernden Zahlen können als ein sehr aussergewöhnliches Ereigniss betrachtet werden.

KOSTEN DER AUSSTELLUNG.

Nach Angabe der kaiserlichen Commission beliefen sich die Kosten der Pariser allgemeinen Ausstellung auf:—

	Francs	Sterling
Industrielle Ab- theilung	8,961,620	= £358,464 16s.
Schöne Künste	2,302,900	= £92,116 0s.
Summa	11,264,520	= £450,580 16s.

Diese Summe begreift in sich nicht die Kosten des Hauptgebäudes, oder 'Palais de l'Industrie,' welches später durch die Französische Regierung erworben wurde; man muss daher die Gesamtunkosten der Ausstellung auf ungefähr das Doppelte annehmen, und dieselben belaufen sich aller Wahrscheinlichkeit nach auf nahe eine Million Pfund Sterling.

Nimmt man daher die Kosten für das 'Palais de l'Industrie' zu 500,000/. und die der anderen Gebäude, wie im Berichte der kaiserlichen Commission aufgeführt, an, nämlich:—

Annexe	£ 104,080
Verbindungsgallerie des Circus	24,280
Kunstpalast	42,068
Sonstige Baulichkeiten	4,232

so wird man ziemlich mit Richtigkeit die Kosten der Gebäude mit 674,000/. veranschlagen können.

Nimmt man nun den Gesamtflächenraum auf 169,691 Quadratmetres, oder ungefähr 1,866,000 Quadratfuss, an, und die Gesamtkosten der Gebäude, ohne das 'Palais de

l'Industrie,' wie oben angeführt, so ergibt sich so nahe wie möglich eine Auslage von 7s. 3d. per Quadratfuss.

Um die passende und erfolgreiche Vertretung Grossbritanniens in der Pariser allgemeinen Ausstellung von 1855 zu sichern, war es erforderlich, dass die Britische Regierung die nöthige Hülfe leistete.

Es wurden deshalb Kostenanschläge entworfen und dem Parlamente vorgelegt, welches eine Summe von 50,000*l.* hierzubewilligte, deren Verwendung der Obhut des Handels-Ministeriums anvertraut ward.

Hiervon wurden wirklich nur 39,259*l.* verausgabte, mehr als 10,000*l.* weniger als die vom Parlament bewilligte Summe, was ein Beweis der befolgten Sparsamkeit und Umsicht ist.

Die so verausgabten Summen vertheilen sich in:—

	£
Vorbereitungsauslagen	3,171
Fracht- und Mauth-Spesen u. s. w.	7,588
Bureau-Auslagen in Paris	3,282
Vollendung und Verzierung der Britischen Abtheilung	3,985
Unterhaltungs-, Reinigungs- u. s. w.	3,446
Unkosten	
Fortschaffung und Lagerung der Packkisten	943
Druck-, Anzeige-, Porto- und Schreibmaterialien-Unkosten u. s. w.	1,383
Auslagen zur Sicherung der Ausstellung der Rohproducte und wissenschaftlicher Apparate	2,067
Abtheilung für schöne Künste	6,477
Preisrichter und deren Berichte	4,165
Verschiedene Ausgaben	2,752
Summa	£39,259

Eine Hauptausgabe für die Britische Abtheilung der schönen Künste verursachte die Versicherung der gelieferten Werke gegen alle auf der Eisenbahn und zur See, auf der Hin- und Rückreise, und gleichfalls gegen Feuer im Palaste und auf der Reise. Die Prämien stellten sich zwischen 2*l.* 10s. und 8*l.* Procent, und den Versicherern auf Lloyds und anderwärts wurden 2,715*l.* bezahlt.

ZULASSUNG VON BESUCHERN.

Der Kaiser eröffnete in eigener Person die Pariser allgemeine Ausstellung von 1855 dem Publicum am Dienstag dem 15. Mai. Damals befanden sich die Einrichtungen noch so mangelhaft und verspätet, dass nur der Kunstpalast und ein Theil der industriellen Ausstellung besucht werden konnten. Der Anbau für Maschinen und der Panorama-Circus, so wie sonstige Gebäude, wurden erst viel später geöffnet.* Ursprünglich war es beabsichtigt, die

Ausstellung, laut einem veröffentlichten kaiserlichen Decret, am 1. Mai zu eröffnen; ein Aufschub musste aber stattfinden, denn Alles befand sich noch zu sehr im Rückstand.

Der Schluss ging in Gegenwart des Kaisers mit grosser Feier und Pünktlichkeit am 15. November vor sich. Freitag den 30. November wurde die Ausstellung endgültig geschlossen, obgleich die Wegschaffung der Gegenstände Tags nach der Schlussfeierlichkeit begonnen hatte, und täglich ohne Unterbrechung fortgesetzt worden war.

Die Zeit, während welcher die Ausstellung geöffnet blieb, nämlich vom 15. Mai bis 30. November (inclusive), erstreckte sich auf genau 200 Tage, Sonntage mit gerechnet.

Der Zutritt war durch Subscriptions-Billete und Bezahlung an den Thüren ermöglicht. An einem Tage, Sonntag den 27. Mai, wurde die ganze Ausstellung dem Publicum gratis geöffnet.

Subscriptions-Billete kosteten 50 Fr. (2*l.*) für die Industrie- und ebensoviel für die Kunstausstellung, was für die Ausstellung in ihrer Gesamtheit 100 Fr., oder 4*l.*, ausmachte. Es wurden jedoch Subscriptions-Billete mit beschränkten Vorrechten zu 25 Fr. (1*l.*) ausgegeben. Die Eintrittspreise an den Thoren waren 5 Fr. (4*s.*); 2 Fr. (1*s.* 8*d.*); 1 Fr. (10*d.*), und 20 Cent. (2*d.*). An Montagen, Dienstagen, Mittwochen, Donnerstagen und Sonnabenden hatte man 1 Fr., an Freitagen 5 Fr. und an Sonntagen 20 Cent. zu bezahlen.

Das Gleiche galt für den Kunstpalast. Nach dem 1. August wurde der Eintrittspreis an Freitagen auf 2 Fr. ermässigt, und nach dem 11. August erhielten die Eisenbahn- und andere Gesellschaften die Erlaubniss, specielle Züge fahren zu lassen, in welchen die Passagiere nicht nur 40 Procent billiger als gewöhnlich reisten, sondern auch noch freien Zutritt zu dem Industrie- und Kunstpalast genossen, oder statt dessen zweimal ein und denselben Palast gratis besuchen durften. Gleichfalls wurden während des Monats August bedeutende Massen von Arbeitern von allen Theilen Frankreichs für 20 Cent. zugelassen.

Alle Soldaten und Militair-Invaliden hatten täglich, während der Stunden von 9 bis 11 Uhr, das Recht freien Zutrittes.

Die Zöglinge der Militairschulen genossen ebenfalls, mit wenigen und gelinden Beschränkungen, freien Zutritt; Mitglieder der Französischen und fremden Presse hatten dieselben Vergünstigungen.

Am Tage der Eröffnungsfeierlichkeiten ermöglichten nur Subscriptions-Billete den Zutritt; dasselbe galt für den 24. August, an welchem Tage die Königin Victoria die Ausstellung besuchte.

EINNAHMEN.

Die Gesamteinnahmen beliefen sich auf 3,202,485 Fr., oder 128,099*l.* Sterling.

4,843 Subscriptions-Billete fanden Abnehmer; hiervon 4,663 für den Industrie- und 180

* Ackerbangeräthe, 5. Juni; Annexe, 10. Juni; Panorama-Circus, 30. Juni.

für den Kunstpalast; der Gesamterlös hieraus war 200,450 Fr., oder 8,018/ Sterling.

Nach Abzug des Eröffnungstages, an welchem nur Subscriptions-Billete Zutritt hatten, und ferner jenen, an welchem die Ausstellung gratis offen stand, berechneten sich die durchschnittlichen täglichen Einnahmen auf 16,174 Fr., oder 646/ 19s. 2d.

Die Einnahmen in dem Industriepalast beliefen sich auf 2,566,195 Fr. (102,647/ 16s.) und jene im Kunstpalast auf 636,290 Fr. (25,451/ 12s.), oder durchschnittlich per Tag in Ersterem 12,960 Fr. (518/ 8s.) und im Letztern 3,213 Fr. 50 Cent. (128/ 10s. 5d.).

ANZAHL DER BESUCHER.

Die Gesamtzahl der Besucher der Pariser allgemeinen Ausstellung von 1855 belief sich auf 5,162,330. Hiervon kommen 4,180,117 auf den Industriepalast und Anbauten, und 982,213 auf den Kunstpalast. In den für den Kunstpalast angegebenen Zahlen sind 46,612 Personen eingeschlossen, welche die schon früher erwähnte Chinesische Ausstellung besuchten.

Man schätzt, dass im Ganzen Inhaber von Subscriptions-Billetes die Ausstellung 94,000 Mal den Industrie- und 3,800 Mal den Kunstpalast besuchten. An allen Fünf franktagen zählte man 22,747 Besucher im Industrie- und 11,179 im Kunstpalast, zusammen 33,926; an allen Zweifranktagen 73,816 im Industrie-, 21,872 im Kunstpalast, im Ganzen 95,688. An den Tagen zu 1 Fr. stellten sich 2,103,535 Besucher ein, wovon 1,683,798 im Industriepalast und 419,737 in jenem für schöne Künste kommen.

Auf den niedrigsten Eintrittspreis, 20 Cent. (2d.) zählte man 2,196,795 Personen, davon betraten 1,752,518 den Industrie- und 444,277 den Kunstpalast.

Hierzu sollte man 26,322 Personen rechnen, welche die Chinesische Sammlung besichtigten, wenn selbe an gewissen Tagen zu 50 Cent. geöffnet war.

Die muthmassliche Anzahl, welche mit Ausstellerkarten Zutritt fand, belief sich auf 445,000, wovon 420,000 auf den Industrie- und 25,000 auf den Kunstpalast kommen.

Die Anzahl der Soldaten und Invaliden, welche von der Erlaubniss des freien Besuches zwischen 9 und 11 Uhr Gebrauch machten, betrug 80,118; jene der Militair-Zöglinge, mit freiem Besuche, 797, und der an Montagen und Dienstagen mit Specialzügen Angekommenen 24,455. Es wird bemerkt, dass diese Zahlen nur annähernd die Besuche der Personen der verschiedenen Categorien, nicht aber jeden einzelnen persönlichen Besuch, vorstellen. So z. B., wenn ein Invalide zehn Mal die Ausstellung besuchte, so wurde er natürlich für 10 Personen angenommen.

Am Sonntage, 27. Mai, als die Ausstellung

dem Publicum zum freien Besuche geöffnet war, zeigte die Totalanzahl der Besucher 105,022 Personen, wovon 80,118 den Industrie- und 24,904 den Kunstpalast in Augenschein nahmen.

Der grösste Andrang an irgend einem Tage während der Ausstellung fand am Sonntage dem 9. September statt, wo 123,017 Personen anwesend waren.

Grosse Massen stellten sich an jedem der 24 Sonntage zwischen dem 3. Juni und 11. November ein, und zwar so, dass die durchschnittliche Anzahl 89,223 für jeden Sonntag betrug. An acht von diesen Sonntagen wurde sogar die Zahl 100,000 bedeutend überschritten.

Es sollen während der Ausstellung 160,000 Fremde Paris besucht haben, davon mehr als 40,000 Britische Unterthanen, oder mehr als zwei Drittel der Gesamtzahl aller Fremden, welche London im Ausstellungsjahre 1851 besuchten. Nach den Berichten der Französischen Polizeibehörden sandten die verschiedenen Departments Frankreichs mehr als 350,000 Besucher zur Pariser Ausstellung von 1855.

PREISRICHTER.

Die zur Pariser Ausstellung gesandten Gegenstände wurden wie folgt classificirt:—

Klasse

1. Bergbau- und metallurgische Producte.
2. Erzeugnisse des Waldes, der Jagd und Fischerei, ohne Pflege und Bearbeitung gewonnen.
3. Ackerbau.
4. Maschinen im allgemeinen, zu Industriezwecken.
5. Specielle Maschinerien und Apparate für Eisenbahnen und sonstige Transportwege.
6. Specielle Maschinen und Apparate, in Arbeitslocalen verwendet.
7. Specielle Maschinen und Apparate zum Weben.
8. Künste, mit Bezug auf Wissenschaft und Unterricht.
9. Erzeugnisse und Maschinen, welche Hitze, Licht und Electricität billig erzeugen und verwenden lassen.
10. Chemische Präparate, Färberei und Druckerei, Papier, Leder, Felle, Caoutchouc u. s. w.
11. Zubereitung und Aufbewahrung von Nahrungsmitteln.
12. Medicin, Pharmacie, Chirurgie u. s. w.
13. Militairische und nautische Künste.
14. Ingenieur- und Bauwesen.
15. Stahl und dessen Producte.
16. Metallarbeiten im allgemeinen.
17. Gold- und Juwelier-Arbeiten, Bronze.
18. Glas- und Töpferwaaren.
19. Baumwollstoffe.
20. Wollen- und Halbwollenstoffe.
21. Seidenwaaren.

22. Flachs- und Hanfgewebe.
23. Strumpfwirkerei, Teppiche, Stickereien, Spitzen, Gold- und Silberfrangen u. s. w.
24. Möbel und Decoration.
25. Kleidungsstoffe; Modeartikel.
26. Zeichnungen und Modelle für industrielle Zwecke, Kupfer- und Stahlstich, Photographie.
27. Musikalische Instrumente.
28. Gemälde, Stahlstiche und Steindruck.
29. Bildhauerei und Schnitzarbeiten.
30. Architectur.

Diese drei letzten Klassen bildeten die Abtheilung der schönen Künste.

Eine weitere Klasse wurde nach Eröffnung der Ausstellung hinzugefügt, nämlich Klasse 31, Erzeugnisse zur Beförderung von häuslicher Bequemlichkeit und Ersparniss, hauptsächlich aus Gegenständen bestehend, welche den anderen Klassen entnommen wurden.

PREISE.

Durch ein kaiserliches Decret vom 10. Mai 1855 wurden folgende Belohnungen zur Ertheilung durch die Preisrichter für die Ausstellung festgestellt:—

Für die 27 industriellen Klassen.

1. Goldmedaille ('Médaille d'Honneur').
2. Silbermedaille.
3. Bronzemedaille.
4. Ehrendiplom.

Für schöne Künste.

1. Goldmedaille 1. Klasse.
2. Goldmedaille 2. Klasse.
3. Goldmedaille 3. Klasse.
4. Ehrendiplom.

Und ausserdem die Zuthheilung der grossen Goldmedaille.

Geldgeschenke wurden ebenfalls in besonderen Fällen zuerkannt.

Der Kaiser verlieh zahlreiche Ehrenlegions-Orden an Aussteller, was als eine weitere Belohnung und Anerkennung betrachtet werden muss.

Nach Angabe der kaiserlichen Commission war Folgendes der Werth der verschiedenen Goldmedaillen:

Die grosse Ehrenmedaille aus Gold, 5,000 Fr. (200%); Goldmedaille 1. Klasse, 750 Fr. (30%); ditto 2. Klasse, 650 Fr. (26%); ditto 3. Klasse, 550 Fr. (22%).

Durch ein späteres Decret wurde die Benennung der Ehrenmedaillen für die industrielle Abtheilung wie folgt abgeändert, nämlich:—

Die grosse Goldmedaille wurde die grosse Ehrenmedaille, die Silbermedaille die Medaille 1. Klasse und die Bronzemedaille die Medaille 2. Klasse genannt.

Es wurde von der kaiserlichen Commission keine tabellarische Uebersicht der Anzahl der in jeder Klasse und an jedes Land vertheilten Medaillen veröffentlicht. Diesen Mangel ersetzt aber der Bericht der Preisrichter; hiervon kann aber hier kein Gebrauch gemacht werden, was zu bedauern ist, denn die statistische Belehrung, welche eine solche Tabelle verschafft haben würde, wäre interessant und wünschenswerth gewesen.

Preise wurden auch an jene Britischen Mitarbeiter und Gehülfen (Colonien inbegriffen) verliehen, welche, obgleich keine Aussteller, doch mit der Erfindung, Erzeugung und Zubereitung von Gegenständen, welche zur Ausstellung kamen, in Verbindung standen.

Der Art wurden eine grosse Ehrenmedaille, 27 Medaillen 1. Klasse, 56 ditto 2. Klasse und 42 Ehrendiplome zuerkannt.

In der Abtheilung der schönen Künste wurden 64 Preise, nämlich: 2 grosse Ehrenmedaillen, 9 Medaillen 1. Klasse, 8 Medaillen 2. Klasse und 11 Medaillen 3. Klasse und 34 Ehrendiplome, an Britische Aussteller vertheilt.

DIE INTERNATIONALE AUSSTELLUNG IM JAHRE 1862.

DIE verschiedenen Gebäude, in welchen die internationale Ausstellung im Jahre 1862 stattfand, wurden auf einem Stücke Land erbaut, welches an die Gärten der Königlichen Gartengesellschaft zu South Kensington stösst, und zu diesem Behufe von den Commissairen der grossen Ausstellung vom Jahre 1851 erworben worden war. Dieser Grund war ein Theil des Besitzthums, welches die königlichen Commissaire durch Kauf aus dem Ueberschusse der Einnahmen in der Ausstellung und von der vom Parlamente bewilligten Summe erworben hatten.

Der Grundcomplex, auf diese Weise in dieser unmittelbaren Nachbarschaft angekauft, bestand aus 86 Acker und die Kauf-

summe hierfür 280,000%, oder durchschnittlich 3,250% per Acker.

Man vermuthete ursprünglich, dass 300,000% hinreichen würden, alles gewünschte Land zu erwerben. Die königlichen Commissaire willigten ein, von ihrem erwähnten Ueberschuss (ungefähr 170,000%) 150,000% dazu zu verwenden, und das Parlament gewährte einen gleichen Betrag, um einen wohlfeilen Landcomplex in der Nähe der Hauptstadt zu sichern, auf dem Unterrichts-Institute für Wissenschaft, Kunst und Gewerbe erbaut werden könnten.

Folgende Grundstücke wurden demnach erworben.

Der Gore-House-Besitz, zu Kensington-Gore, beinahe dem Boden der grossen Ausstellung

von 1851 gegenüber, 21 Acker umfassend, Kostpreis 60,000/. Der De-Villars-Besitz, von den Testamentsvollstreckern des Baron Villars erkauft, Umfang 48 Acker, für 153,000/. An diese zwei Grundstücke grenzten 17 Acker, vom Grafen Harrington, für 66,500/. erworben.

In 1858 hob das Parlament den Vertrag auf, welcher mit den königlichen Commissairen bestand, wodurch der ganze erworbene Grundbesitz Eigenthum der königlichen Commissaire wurde; hiervon blieben jedoch 12 Acker ausgeschlossen, auf welchen durch das Departement der Wissenschaft und Künste das als South-Kensington-Museum bekannte Gebäude, errichtet worden war.

Hierfür bewilligte die Regierung, von den gewährten 150,000/. den Betrag von 60,000/. in Abzug zu bringen, und hatten die Commissaire den erwachsenden Ueberschuss zu erlegen.

Das Hauptgebäude der internationalen Ausstellung von 1862 bedeckte ungefähr 17 Acker, ohne die zwei Flügel, östlich und westlich von den 'Horticultural Gardens' erbaut, welche weitere 7 Acker in Anspruch nahmen, wodurch im Ganzen beinahe 24 Acker benötigt wurden.

Die Form war ein längliches Viereck und mass ungefähr 1,200 Fuss von Osten nach Westen, und 560 Fuss von Norden nach Süden. Die Hauptfäçade war in Cromwell-road; der westliche Eingang in Prince Albert-road und der östliche in Exhibition-road.

Obleich der grössere Theil des in 1862 errichteten Gebäudes dauerhaft erbaut worden war, so ward es dennoch der Wegräumung unterworfen, und der Platz, auf dem es stand, wurde in den ursprünglichen Zustand zurückversetzt. Es wurden grosse Anstrengungen gemacht, das Gebäude, vorzüglich den die Bildergalerie bildenden Flügel, zu erhalten. Aber das Parlament kaufte den Grund von den königlichen Commissairen für öffentliche Zwecke (die Kaufsumme hierfür, 120,000/. wurde am 13. Juni 1863 bewilligt), verweigerte indessen, die Gebäude zu übernehmen, welche daher niedergerissen werden mussten. Der so hergestellte Platz liegt noch unbenutzt, und von der Ausstellung bleibt Nichts übrig, als die Erfrischungshallen und Gallerien über den südlichen Arcaden der Horticultural Gardens.

In Folge einer Uebereinkunft zwischen den Ministerien des Unterrichts und jenem der öffentlichen Bauten benutzt das Erstere den Platz.

Die Pläne für die Gebäude entwarf der verstorbene königliche Ingenieur Hauptmann Fowke, Architect des Kunst- und Wissenschafts-Departement.

Die Bauunternehmer waren die Herren Kelk und Gebrüder Lucas.

AUSDEHNUNG UND UMFANG.

Die Gesamtfläche des bedeckten Raumes betrug 1,291,800 Quadratfuss, wovon 147,700 Quadratfuss auf die Erfrischungshallen,

Bureaux, Eingänge und Treppen kamen; es blieben daher für Ausstellungszwecke 1,144,100 Quadratfuss übrig.

In Vertheilung dieses Raumes befolgten die königlichen Commissaire die nunmehr allgemein anerkannte Regel, dass sie der die Ausstellung veranstaltenden Nation die eine und den fremden Ländern die andere Hälfte anwiesen.

ANZAHL DER AUSSTELLER.

Die Gesamtzahl der Aussteller in der internationalen Ausstellung im Jahre 1862 betrug 28,653, worin 2,305 Künstler, welche in den vier Klassen der schönen Künste vertreten waren, inbegriffen sind.

In den sechs und dreissig industriellen Klassen befanden sich 26,348 Aussteller; davon waren 8,487 Britische (Colonien inbegriffen) und 17,861 Fremde. In der Abtheilung der schönen Künste betrug die Anzahl der vertretenen Britischen Künstler 900 und die der fremden 1,315; die Totalzahl der gelieferten Werke 6,529, wovon 3,651 Britische und 2878 fremde.

AUSLAGEN.

Die Gesamtsumme der Auslagen zur Instandsetzung und Ausführung des Unternehmens kann in runden Zahlen zu 460,000/. angenommen werden.

Ehe man zur Aufzählung der diese Summe bildenden Einzelheiten übergeht, glaubt man anführen zu müssen, dass das getroffene Uebereinkommen mit den Bauunternehmern der Art war, dass sie das Hauptgebäude, mit Inbegriff des Mittelschiffes, für die Gemäldegalerie und den westlichen Anbau nur für 'Gebrauch und Benutzung' herriichten; ausserdem hatte man sich das Recht vorbehalten, zu festgesetzten Bedingungen diese Gebäulichkeiten nach Schluss der Ausstellung ankaufen zu können.

Laut in dem Verträge übereingekommenen Bedingungen hatten die Bauunternehmer 200,000/. unbedingt zu erhalten, und weitere 100,000/. im Falle die Einnahmen eine halbe Million erreichen sollten.

Sollten sie auf diese Weise 300,000/. erhalten, so war der für die Gemäldegalerie erbaute Flügel alleiniges Eigenthum der Ausstellungs-Commissaire.

Es ist ferner zu bemerken, dass, um ein so grossartiges Unternehmen vor allem möglichen Verlust zu schützen, die 'Society of Arts' den königlichen Commissairen die Gründung eines Garantiefonds von nicht weniger als 250,000/. anempfahl. Diese erliessen daher einen Aufruf an das Publicum, welcher alle Erwartungen übertraf, denn es wurden 450,000/. unterzeichnet. Nach dem Wortlaute der Garantie-Urkunde beschränkte sich die Verbindlichkeit eines jeden Unterzeichners

für die möglicher Weise zu erhebende Summe im Verhältnisse zu der von ihm unterschriebenen Summe.

Die Zahl der Unterzeichner betrug 1,152, und die haftbare Summe 250,000*l*.

Die Hauptposten der Ausgaben zerfallen in:—

	£
Bauunternehmer für Gebäude, inclusive 86,833 <i>l</i> . für östlichen Anbau	320,680
Pläne, Architekten	8,323

Polizei	19,436
Versicherung und Feuerwache	4,088
Saläre und Löhne	45,778
Miethe, Abgaben, Möbel, Drucker, Schreibmaterialien, Anzeigen und andere Unkosten	11,749
Unterhaltungskosten, Eröffnungsfeierlichkeiten, Preise, Gas, Feuerungs-Material, Wasser u. s. w.	9,690
Fracht u. s. w. für Gemälde u. s. w.	4,202
Medaillen	6,410
Vorbereitungs- und Rechtskosten	3,668
Vermessungen und allgemeine Vorrichtungen	3,676
Zinsvergütung an die Bank von England für Darlehen, abzüglich eingenommener Zinsen	7,331
Verschiedene Auslagen	1,247
Summa	£459,637

Veranschlagt man die Kosten der Ausstellungsgebäude auf 321,000*l*. und den bedeckten Raum auf 1,292,400 Quadratfuss, so ergiebt sich die Herstellungsauslage auf beinahe 5*s*. per Quadratfuss.

ZULASSUNG VON BESUCHERN.

Die internationale Ausstellung im Jahre 1862 war dem Publicum am Donnerstag, 1. Mai, geöffnet und geschlossen am Sonnabend, 13. November, was die Dauer der Ausstellung auf 171 Tage bringt.

Die Bedingungen, unter welchen der Besuch stattfinden konnte, waren:—

1. Mit Abonnements-Bileten;
2. Durch Bezahlung an den Thüren.

Am Eröffnungstage konnte man nur mit Abonnements-Bileten Zutritt erlangen. Die folgenden zwei Tage kostete der Eintritt 1*l*.; vom 5. bis 17. Mai (inclusive) 5*s*.; vom 19. Mai bis 31. Mai (inclusive) 2*s*. 6*d*., Sonnabend jeder Woche ausgenommen, wo der Eintrittspreis auf 5*s*. erhöht wurde. Vom 2. bis 14. Juni (inclusive) war der Preis auf 1*s*. für die ersten vier Tage der Woche, auf 2*s*. 6*d*. an Freitagen und 5*s*. an Sonnabenden festgestellt; vom 16. Juni bis 1. November (inclusive) bezahlte man 1*s*. während der ersten vier Tage und 2*s*. 6*d*. an Freitagen und

Sonnabenden jeder Woche. Ausgenommen war hiervon der 11. Juli (an welchem Tage die Preisrichter die Preise zuerkannten und man 10*s*. Eintrittsgeld zu erlegen hatte. Vom 3. bis 15. November (inclusive) kostete der Eintritt jeden Tag 2*s*. 6*d*.

Die Abonnements-Billete waren zweierlei, nämlich gewöhnliche für drei Guineen und specielle für fünf Guineen.

Diese Letzteren berechtigten die Inhaber zu freiem Eintritt zu den Blumenausstellungen, Festlichkeiten und Promenaden in den Gärten der 'Horticultural Society' während der Dauer der Ausstellung, welcher Gesellschaft ein Theil des für ein solches Billet entrichteten Preises vergütet wurde. Im Monate Juli wurden die Preise für Subscriptions-Billete auf die Hälfte vermindert, so wie Subscriptions-Billete, nur für Schillingstage gültig, zu 10*s*. jedes ausgegeben. Tagsbillete in Bündeln von ein und zwanzig für 20*s*. waren ebenfalls kurz nach Eröffnung der Ausstellung zu bekommen.

EINNAHMEN.

Die Totalcinnahmen von allen Quellen beliefen sich, wie folgt, auf:—

	£	s.	d.
Abonnements-Billete	79,672	1	3
An den Thüren erhoben	328,858	0	5
Verpachtung der Erfrischungslocale	29,285	4	11
Officielle Cataloge	3,919	1	10
Photographie-Bewilligungen	1,925	0	0
Erlaubniss Perspective zu verleihen	250	0	0
Miethe von der Telegraphen-Compagnie	100	0	0
Regenschirm-Aufbewahrung	2,118	12	10
Toiletten-Zimmer	1,000	0	0
Provision auf Photographien, Münzen etc., im Gebäude verkauft	1,241	9	6
Verschiedene Ausgaben	262	1	5
Beitrag von den Bauunternehmern, laut Vertrag,	11,000	0	0
Summa	£459,631	12	2

Hier folgt Liste der verkauften Subscriptions-Billete:—

	£	s.	d.
Zu 5 Guineen	5,773	30	8
Zu 3 Guineen	17,719	55	8
Zu 50 <i>s</i>	26	65	0
Zu 30 <i>s</i>	919	1,378	10
Zu 10 <i>s</i> . für einen Tag gültig	3,363	1,681	2
Summa	£89,248	2	0

Abzüglich 8,672*l*. 5*s*. an die 'Horticultural Society,' laut erwähntem Verträge, und 903*l*. 15*s*. 9*d*. Provision an Agenten bezahlt

Summa £79,672 1 3

Der grösste an einem Tage bezahlte Betrag an den Thüren war 2,935*l.* 12*s.* 4*d.* am Montage, 30. October, dem letzten Schillingstage, und der geringste, 241*l.*, am Sonnabend 3. Mai, als der Eintritt 1*l.* per Person kostete. Die tägliche Durchschnittseinnahme während der Dauer der Ausstellung, den Eröffnungstag ausgenommen, an welchem nur Subscriptions-Billete gültig waren, betrug ungefähr 1,934*l.*

Je nach den verschiedenen Ansätzen fanden folgende Einnahmen statt:—

	£	s.	d.
Totaleinnahme von 2 Tagen } zu 20 <i>s.</i>	506	0	0
Totaleinnahme von 1 Tag } zu 10 <i>s.</i>	1,052	8	4
Totaleinnahme von 16 Tagen } zu 5 <i>s.</i>	17,823	8	5
Totaleinnahme von 63 Tagen } zu 2 <i>s.</i> 6 <i>d.</i>	96,066	14	3
Totaleinnahme von 88 Tagen } zu 1 <i>s.</i>	213,409	9	5
178 Tage	£328,858	0	5

Demnach berechnete sich der Durchschnitt der Einnahmen an den Thüren an den Tagen zu 5*s.* 1,114*l.*, zu 2*s.* 6*d.* 1,525*l.* und zu 1*s.* 2,425*l.*

ANZAHL DER BESUCHER.

Die Zahl der Besucher der internationalen Ausstellung in Jahre 1862 belief sich nahezu auf sechs und eine Viertel Million; die officiële Angabe sagt 6,211,103. Der tägliche Durchschnitt war 36,328 und die grösste Anzahl an einem Tage, nämlich 30. October (ein Schillingstag) erreichte 67,891. Am geringsten erscheint die Zahl der Besucher am Mittwoch, 5. November (Eintritt 2*s.* 6*d.*), 5,615; jedoch, da damals eigentlich die Ausstellung vorüber war, so ist es kaum billig, diese Anzahl als die geringste an irgend einem Tage zu betrachten. Es wäre vielmehr weit richtiger, hierfür die geringste Anzahl anzunehmen, welche sich an einem Tage zwischen dem 1. Mai. und 1. November, nämlich 7,367, am Donnerstag dem 15. Mai, einfand.

Obleich Aussteller nach Eröffnung der Ausstellung keinen freien Eintritt genossen, so ward dennoch Persönlichkeiten, deren Anwesenheit nöthig war, jede Erleichterung hierin gewährt.

Die folgenden Zahlen weisen aus, wie viele Personen vermittelst Subscriptions-Billets, Freischeinen und Bezahlung an den Thüren zugelassen wurden:—

Gewöhnliche Subscriptions-Billete	770,704
Subscriptions-Billete, für Schillingstage gültig	58,536
Freischeine an Angestellte, Aussteller und deren Gehülfen	257,246

Billete, an den Thüren verkauft, Tagesbillete und Contremarquen von den 'Horticultural Gardens' } 5,124,617

6,211,103

Die Durchschnittszahl der täglich mit Subscriptions-Billets und Bezahlung an den Thüren je nach dem Tarif Zugelassenen war wie folgt:—

Tägliche Durchschnittszahl:—	
Subscriptions-Billete	4,507
Dergleichen für Schillingstage	829
Zu 5 <i>s.</i> Eintritt	12,352
Zu 2 <i>s.</i> 6 <i>d.</i> Eintritt	19,610
Zu 1 <i>s.</i> Eintritt	44,904

Nach einer officiellen Nachweisung, die Zahl der an denselben Tagen jeder folgenden Woche Besuchenden enthaltend, geht hervor, dass an

Montagen deren Zahl betrug	1,240,615
Dienstagen „ „	1,286,213
Mittwochen „ „	1,203,658
Donnerstagen „ „	1,270,388
Freitagen „ „	641,996
Sonnabenden „ „	568,233

Die Durchschnittsanzahl der Besucher war an Montagen 44,307, Dienstagen 45,936, Mittwochen 43,988, Donnerstagen 44,806, Freitagen 22,138, Sonnabenden 19,594.

Die Gleichförmigkeit der ersten vier Tage jeder Woche ist bemerkenswerth.

Alle mit Freipässen jeder Art Zugelassene sind in den angegebenen statistischen Uebersichten eingeschlossen. Wie viele so privilegierte Personen Zutritt hatten, ist bereits angegeben.

PREISRICHTER.

Die nachfolgende Tabelle zeigt die Anzahl der Preisrichter und Hülfspreisrichter für jede der 36 industriellen Klassen.

Klasse		Preisrichter	Hülfspreisrichter
1	Bergbau, Steinbruch, metallurgische und mineralische Erzeugnisse	16	3
2	Chemische Bestandtheile und Erzeugnisse und pharmaceutische Prozesse	24	3
3	Nahrungsmittel	45	3
4	Thierische und Pflanzentheile, in Manufacturen benutzt	45	6
5	Eisenbahn-Materialien, mit Einschluss von Locomotiven und Wagen	11	—
6	Wagen, nicht mit Eisenbahnen in Beziehung	6	1
7	Maschinen und Werkzeuge	15	3
8	Maschinerie im Allgemeinen	30	2
9	Feld- und Gartenbaumaschinen und Werkzeuge	18	1
10	Instrumente u. s. w. für Ingenieure und Architekten	23	2
11	Militair-Genie-Wesen, Waffen, Kanonen und Gewehre	23	1

Klasse		Preis- richter	Hülf- preis- richter
12	Schiffbau und Ausrüstung . . .	14	3
13	Optische und physikalische Instrumente und deren Ver- wendung	13	4
14	Photographische Apparate, Pho- tographie	5	2
15	Uhren	9	—
16	Musikalische Instrumente . . .	11	—
17	Chirurgische Instrumente . . .	7	4
18	Baumwolle	12	2
19	Flachs und Hanf	9	—
20	Seide und Sammet	11	1
21	Wollene und halbwollene, so wie gemischte Stoffe	16	8
22	Teppiche	6	—
23	Gewebe, gesponnene, gewalkte und sonstige Stoffe, welche als Druck- und Färbemuster dienen	10	1
24	Gobelins, Spitzen und Stickereien	11	1
25	Felle, Pelze, Federn und Haare .	11	2
26	Leder-, Sattler- und Geschirrar- beiten	15	1
27	Kleidungsstoffe	24	1
28	Papier und Schreibmaterialien, Buchdruck und Buchbinderei	24	1
29	Erziehungs-Material und Ein- richtungen	21	5
30	Möbel und Tapezirer-Arbeiten, mit Einschluss von Tapeten und Papier-mâché	19	—
31	Eisen- und Metallwaaren . . .	24	3
32	Stahlwaaren, Messer und Schneidewerkzeuge	13	—
33	Arbeiten in Gold und Nach- ahmungen davon, Juwelierar- beiten	12	1
34	Glaswaaren	13	2
35	Töpferwaaren	9	—
36	Toiletten- und Reisegegenstände	7	1
	Summa	582	68

Mit obigen Preisrichtern sind 15 einbe-
griffen, welche besonders für Feuerspritzen in
Klasse 8 ernannt wurden.

PREISE.

In den bei der internationalen Ausstellung
im Jahre 1862 verliehenen Medaillen bestan-
den keine verschiedenen Klassen, sondern nur
eine und dieselbe.

Medaillen wurden von den Preisrichtern zu-
erkannt. Ausserdem wurden Ehrendiplome
verliehen.

Die Totalanzahl der vertheilten Medaillen
war 8,141 und die der Diplome 5,282.

Hiervon kamen 2,382 Medaillen und 1,697
Diplome auf England und Colonien; 5,759
Medaillen und 3,585 Diplome fielen fremden
Ausstellern zu.

Die vier Klassen, in welche die schönen
Künste zerfielen, erhielten keine Preise.

TABELLE DER ENGLISCHEN MÜNZEN, MAASSE UND GEWICHTE,

DEREN MAN SICH IN DEN STATISTISCHEN BEMERKUNGEN ÜBER DIE INDUSTRIE UND DEN HANDEL DES VEREINIGTEN KÖNIGREICHS BEDIENT HAT, UND DER EQUIVALENTE DERSELBEN IN DEUTSCHEN MÜNZEN, MAASSEN UND GEWICHTEN.

		MÜNZEN, MAASSE UND GEWICHTE

		Centner (cwt.)	112 Pfund
		Ton	2,240 Pfund

* Bei der grossen Verschiedenheit der in Deutschland bestehenden Münz-, Maass- und Gewichtsberechnungen ist es unmöglich, hier eine vollständige Tabelle zu geben.

ALLGEMEINE EINLEITUNG.

DIE vorliegende statistische Uebersicht über das Vereinigte Königreich wurde unternommen in Uebereinstimmung mit einem Wunsche, welchen die kaiserlich Französisch Commission für die allgemeine Ausstellung des Jahres 1867 den Commissairen Ihrer Majestät in einem Briefe vom 15. September 1866 aussprach, worin um sehr ausführliche Nachweise über Landesgebiet, Bevölkerung, Production, fremden und einheimischen Handel, die Handelsflotte, die Armee, die Kriegsflotte, die Finanzen etc. gebeten wurde.

**LANDESGEBIET. — Geographische Lage —
Meere—Gebirge—Flüsse—Oberfläche des
Landes—Clima.**

(a.) *Geographische Lage.*—Das Vereinigte Königreich, welches England und Wales, Schottland, Irland, die Insel Man und die Normannischen Inseln in sich schliesst, liegt im Nordwesten des Europäischen Festlandes, zwischen 50° und 58° 41' nördlicher Breite und 1° 46' östlicher und 10° 26' westlicher Länge.

(b.) *Meere.*—Das Königreich wird im Norden und Westen von dem Atlantischen Ocean, im Süden von dem Englischen Canal und im Osten von der Nordsee begrenzt. Irland ist von Grossbritannien getrennt durch die Irische See. Die Seeküste des Landes ist daher, im Verhältniss zu seiner Grösse, von beträchtlicher Ausdehnung.

(c.) *Gebirge.*—Obgleich die Berge des Vereinigten Königreichs, im Vergleich mit denen der festländischen Staaten Europas, eine sehr geringe Höhe erreichen, hat das Land doch mehrere Bergketten. In England sind die vier Hauptketten: 1. die Penninische, welche sich südlich von den Cheviots, an der Grenze von Schottland, bis in die Nähe von Derby erstreckt und deren höchste Gipfel unter 3,000' sind; 2. die Cumbrische Bergkette, welche grösstentheils in Cumberland und Westmoreland liegt und einige der höchsten Berge in England enthält, wie z. B. den Hevellyn, 3,055', den Scafell, 3,166', und den Skiddaw, 3,022'; 3. die Cambrische Kette, welche beinahe ganz Wales ausfüllt, und deren höchster Punkt sich in dem Snowdon 3,571' erhebt; und 4. die Devonische Kette, welche

sich durch die Grafschaften Somerset, Devon und Cornwall ansieht und deren höchste Gipfel nicht über 1,800' emporragen.

In Schottland ist die Hauptbergkette die der Grampians. Der höchste Berg in Schottland, und auch in Grossbritannien, ist der Ben Nevis, welcher sich 4,406' über die Meeresfläche erhebt. Die Cheviot-Berge liegen theils in Schottland und theils in England und dehnen sich durch einen weiten Landstrich aus.

In Irland sind die Hauptbergketten die von Mourne und Wicklow. Der höchste Punkt des Landes, der Carran Tual, liegt in der Grafschaft Kerry und erreicht eine Erhebung von 3,414'.

(d.) *Flüsse.*—Der wichtigste Fluss in England, obgleich nicht der längste, ist die Themse, an welcher die Hauptstadt liegt. Sie entspringt in den Hügeln von Gloucestershire und fliesst unter dem Namen der Isis, bis sie sich mit der Thame vereinigt. Dann nimmt sie ihren gewöhnlichen Namen Themse an, strömt hauptsächlich in östlicher Richtung und ergiesst sich in die Nordsee, nach einem Laufe von beinahe 215 Meilen.

Die andern wichtigen Flüsse von England sind die Severn, die sich nach einem Lauf von 240 Meilen in den Canal von Bristol ergiesst, die Trent, Tyne, Wear, Tees, Ouse, Humber, Mersey, Dee, Wye, Medway und Avon. Viele der hauptsächlichsten Häfen des Landes sind an den Ufern dieser Flüsse gelegen, wie z. B. Newcastle und Shields an der Tyne, Hartlepool, Stockton und Middlesbrough an der Tees, Hull an der Humber, Bristol an der Avon und Liverpool an der Mersey.

Die Hauptflüsse Schottlands sind die Tweed, Forth, Tay, Spey und Clyde. Leith liegt an der Forth, Dumdee an der Tay und Greenock und Port Glasgow an der Clyde.

Die Hauptflüsse von Irland sind die Shannon, mit einem Laufe von 159 Meilen, die Suir, Barrow, Slaney, Boyne, Bandon, Bann und Liffey.

(e.) *Oberfläche des Landes.*—Wenige Länder bieten eine grössere Mannigfaltigkeit der Oberfläche dar als England, und wegen der Milde des Klimas und genügender Regenmenge ist der Boden ausnehmend fruchtbar und wunderbar geeignet sowohl für den Anbau von

Korn und Wurzelsaaten als für Weideland. Mit Ausschluss von Mooren und Hügelweiden waren im Jahre 1866 zwei Drittel des gesammten Flächeninhalts des Landes im Anbau begriffen. Wales und Schottland sind bergiger als England, und mit Ausschluss der Hügelweiden wurde, während des eben erwähnten Jahres, nur etwa die Hälfte des gesammten Flächeninhalts von Wales und ein Fünftel von Schottland angebaut. Irland ist ein verhältnissmässig ebenes Land und enthält eine grosse Masse von Sumpfland; aber obgleich es nicht so gut wie andere Theile des Königreichs zu der Hervorbringung von Korn geeignet ist, hat es bei seinem feuchten Klima sehr umfangreiche Wiesenländer und Hügelweiden. Ungefähr die Hälfte des gesammten Flächeninhalts des Landes, mit Einschluss der Hügelweiden, wurde im Jahre 1866 als permanentes Weideland benutzt.

(f.) *Clima*.—Das Clima von England ist gleichförmiger und milder, obschon, innerhalb gewisser Grenzen, auch feuchter und veränderlicher als das irgend eines in derselben Entfernung vom Aequator gelegenen Landes. Wegen der Lage Englands wird sein Clima beeinflusst durch die warmen Strömungen des

Atlantischen Oceans im Südwesten und Westen und durch die von gewaltigen Eisfeldern ausgeströmte Kälte im Norden; durch die vom Atlantischen Ocean aufsteigenden Dünste auf der einen Seite und durch die verhältnissmässig trockene Luft des Festlands auf der andern. Diese und ähnliche Ursachen genügen, die beständigen Wechsel zu erklären, welche in der Temperatur stattfinden.

In Schottland herrscht eine kältere Temperatur als in England; aber wegen der zahlreichen Golfe und Meeresarme, welche die Küste durchschneiden, sind die Gegensätze nicht so gross, als man bei der nördlichen Lage des Landes erwarten möchte.

Das Clima von Irland ist milder und feuchter als das von England und Schottland und günstiger für Viehweiden als für Kornfelder. Pflanzen, welche in England künstliche Hitze erfordern, wachsen in Irland in freier Luft.

Die nachstehende, nach den Berichten des Professor Airy, des Königlichen Astronomen, entworfene Tabelle, zeigt die *Extreme* der Temperatur und der Regenmenge in den drei Provinzen des Königreichs, während der letzten fünf und zwanzig Jahre.

Wechsel der Jahrestemperatur und der Regenmenge (soweit dieselben beobachtet wurden) während der fünf und zwanzig Jahre von 1841 bis 1865.

* Höhe des Regenmessers.

† Die Wechsel der Temperatur für die Jahre 1853–65 und die der Regenmenge für die Jahre 1853–60 sind den Berichten des Capitain Wilkinson, R.C., Dublin, entlehnt.

LANDESVERWALTUNG. — Allgemeine — Localverwaltung — Religiöse Einrichtungen — Hauptstädte.

(a.) *Allgemeine Verwaltung.* — Die Regierungsform Englands wird gewöhnlich als eine 'gemischte' bezeichnet, da die gesetzgebende Gewalt und die Executivgewalt von einander getrennt gehalten werden. Mit der Letzteren ist der König oder die Königin allein bekleidet, die auch den Staat in allen internationalen Verhandlungen und Verträgen repräsentiren; während die gesetzgebende Gewalt durch den grossen Nationalrath ausgeübt wird, welcher Parlament heisst und aus den drei Ständen des Reiches, nämlich der Königin, den geistlichen und weltlichen Lords und den Gemeinen besteht. Die Königin hat die höchste Gewalt; in ihrem Namen kommen alle neuen Gesetze, mit der Einwilligung beider Häuser, zur Geltung, und ihre Würde ist erblich. Die geistlichen und weltlichen Lords sind die Prälaten und die Peers des Reiches. Die Gemeinen bestehen aus den gewählten Vertretern des Volkes. Sie werden, theils für die Grafschaften und theils für Städte und Flecken, im Beginn jeden Parlaments, gewählt und behalten ihre Sitze nur so lange dies Parlament dauert.

Die Lords bilden ein Haus und sitzen für sich; die Gemeinen bilden ein anderes, in welchem sie ebenfalls für sich sitzen. Die Königin sitzt mit den Lords; aber sie nimmt ihren Sitz nur bei formellen Veranlassungen ein, wie z. B. wenn sie die Sitzung eröffnet oder ihre Zustimmung zu Gesetzen giebt, welche in beiden Häusern durchgegangen sind. Nach der gegenwärtigen constitutionellen Praxis kann sie bei keiner Berathung zugegen sein; ebensowenig wird angenommen, dass sie auch nur bekannt ist mit dem, was entweder dort oder im Hause der Gemeinen vorgeht, bis ihr eine officiële Mittheilung gemacht wird. Kein Gesetz kann gemacht und keine Steuer aufgelegt werden ohne die Zustimmung des Parlaments, d. h. der Königin und der beiden Häuser der Lords und der Gemeinen, und diese Zustimmung muss von jedem abgesondert gegeben werden. Die Königin besitzt jedoch nur eine negative Stimme; und keine Massregel kann von ihr ausgehen, es sei denn bei Gelegenheit eines Gnadenacts. Die beiden Häuser besitzen die Macht, alle Massregeln ohne Unterschied einzuleiten, mit Ausnahme von Gesetzen, welche sich auf die Rechte des Adels oder auf Geldbewilligungen beziehen, von denen jene stets im Hause der Lords, diese im Hause der Gemeinen eingeführt werden müssen, und in keinem von beiden Fällen darf der so in einem Hause eingeführte Gesetzentwurf im andern eine Veränderung erleiden. Das Parlament wird von der Königin zusammenberufen und wird von ihr vertagt oder aufgelöst, so oft ihr gut dünkt. Sie ist jedoch verpflichtet, 'es wenigstens einmal jährlich zusammen zu berufen und öfter, wenn es nöthig ist.'

Eine Vertagung ist die Fortsetzung eines Parlaments von einer Session zur andern; eine Auflösung ist sein bürgerlicher Tod, welcher nach dem Gesetze alle sieben Jahre nach seinem Beginn eintritt, wenn nicht das Parlament schon vorher durch königliche Proclamation aufgelöst wurde. Die gesammten administrativen und executiven Geschäfte der Regierung werden im Namen der Königin besorgt. Vermittelt einer diesem Zwecke angepassten Maschinerie führt sie die Oberaufsicht über die Verwaltung des Rechts und verordnet die pünktliche Ausführung der Gesetze. Alle Gerichtshöfe und die an denselben angestellten Beamten, wie Richter, Sheriffs, Friedensrichter, Constabler etc., leiten ihre Autorität unmittelbar von ihr ab. Es ist die Pflicht und das Amt der Königin, Unruhen zu unterdrücken und Frieden im Reiche zu erhalten; jede Friedensverletzung wird daher ein Bruch des Friedens der Königin genannt. Mit Bezug auf die auswärtigen Verhältnisse erklärt sie Krieg und schliesst Frieden, verhandelt Verträge, schickt Gesandte in's Ausland und empfängt Gesandte im Inland. Als mit der Ausübung dieser schweren Pflichten verknüpft, hat die Königin die Gesamtverfügung sowohl über die Militair- als über die Civilmacht der Nation, und die Beamten beider werden von ihr ernannt, obgleich ihr Gehalt durch die Autorität des ganzen Parlaments beschafft wird. In der Ausübung ihrer Prärogative, innerhalb der durch das Gesetz bestimmten Grenzen, ist sie Niemandem verantwortlich; und auch, wenn eine auf ihren Befehl geschehene Handlung nicht innerhalb der anerkannten Macht der Krone liegt, ist sie frei von *persönlicher* Verantwortlichkeit. Aus diesem Grunde bedient sich die Königin bei allen ihren Handlungen der Vermittlung von Beamten oder Personen, welche durch keine solche gesetzliche Strafflosigkeit geschützt sind, und überlässt ohne Ausnahme die Leitung der Staatsangelegenheiten ihren Ministern, von denen eine gewisse Anzahl den sogenannten Cabinetsrath bilden. Die Handlungen der Executivgewalt sind auch nothwendigerweise einer andern sehr wirksamen Controle unterworfen. Da die gewöhnlichen Einkünfte der Krone nicht mehr für die Bedürfnisse des Staates ausreichen, sind häufige Verhandlungen über Geldbewilligungen mit dem Hause der Gemeinen nothwendig geworden. Bei diesen Gelegenheiten werden die Massregeln der Minister oft zum Gegenstande der Discussion gemacht, und die Mittel, sie auszuführen, können entweder verweigert oder, unter billigen Bedingungen, bewilligt werden. Es ist jedoch klar, dass die Macht, sie absolut zu verweigern, nur da in heilsamer Weise geltend gemacht werden kann, wo sie für das öffentliche Wohl nicht wesentlich nothwendig sind. So würde es widersinnig vom Hause der Gemeinen sein, eine Controle der Minister der Krone zu versuchen, indem es weigerte, die Staatsgläubiger zu bezahlen oder die bürger-

lichen und militärischen Einrichtungen des Reiches aufrecht zu erhalten.

(b.) *Localverwaltung.*—Was die Localverwaltung angeht, so ist das Land, für bürgerliche Zwecke, in Grafschaften, Städte, Flecken und Kirchspiele eingetheilt. Die ministeriellen und richterlichen Geschäfte der Grafschaft werden durch den Obersheriff, den Todtenbeschauer und die Friedensrichter besorgt. Die Militairverwaltung ist dem Lord Lieutenant anvertraut, der durch Deputy Lieutenants unterstützt wird. Der Lord Lieutenant führt den Befehl über die Miliz und ist häufig *custos rotulorum* oder Archivbewahrer der Grafschaft. Die Hauptzwecke der Localverwaltung sind: die Bewahrung der Ruhe und Ordnung; die Unterhaltung der Armen und der Polizei; die Herstellung und Instandhaltung von Wegen, Strassen und Brücken etc. Das für diese Zwecke erforderliche Geld wird beschafft durch eine auf das Eigenthum, Land, Häuser etc. in der Grafschaft erhobene Steuer.

Die Verwaltung von Municipalstädten und Flecken wird durch den Bürgermeister ('mayor') und den Gemeinderath ('corporation') und die von Kirchspielen durch verschiedene zum Kirchspiel gehörige Beamte besorgt. In manchen nicht incorporirten volkreichen Städten werden Commissaire und Regierungsbehörden, die localen Gesundheitsbehörden, Commissaire öffentlicher Verbesserungen etc. durch die steuerpflichtigen Bürger, unter der Autorität des Parlaments, gewählt, um nützliche Unternehmungen zu leiten und die localen Geschäfte zu verwalten.

(c.) *Religiöse Einrichtungen.*—Die Staatskirche von England ist die Protestantisch-bischöfliche, aber alle Religionen werden geduldet. Die Verwaltung der Staatsreligion ist der Geistlichkeit anvertraut, einer für diesen Zweck bestimmten Klasse, welche das ausmacht, was man unter der Kirche von England versteht. Sie bezieht ihren Unterhalt von Ländereien, Zehnten, Kirchensteuern, Kirchstuhlmiethen, Ostergaben und Tauf- und Begräbnissgebühren etc. Die geistliche Eintheilung von England und Wales besteht aus Provinzen oder Erzbisthümern, Diöcesen oder Bisthümern, Archidiaconaten, Dechaneien und Kirchspielen, die alle ihre Beamten haben, welche den Beamten der unteren Abtheilungen vorstehen, während die Königin, als Haupt der Kirche, allen vorsteht. Es giebt zwei Erzbisthümer, das von Canterbury und das von York, und fünf und zwanzig denselben untergebene Bischöfe. Zur Verwaltung der geistlichen Angelegenheiten hat jede Provinz einen Rath oder eine Convocation, wie derselbe genannt wird, welche aus den Bischöfen, Archidiaconen, und Decanen in Person und aus einer gewissen Anzahl von Deputirten ('proctors') als Repräsentanten der niedern Geistlichkeit gebildet wird. Diese Rathversammlungen werden durch die beiden Erzbischöfe, im Auftrage der Königin, zusammenberufen. Die Verwaltung der Angelegenheiten dissidentirender

Gemeinden ruht in deren eignen Händen. Die Schottische Kirche wird durch eine General-Versammlung ('general assembly') verwaltet, welche alljährlich tagt. Ein Vertreter des Monarchen, mit dem Titel eines Lord High Commissioner, ist bei den Verhandlungen zugegen. Die Irische Kirche ist, wie die von England, Protestantisch-bischöflich und wird auf ähnliche Weise verwaltet. Die Masse der Bevölkerung von Irland (ungefähr vier Fünftel) bekennen sich jedoch zum Römisch-katholischen Glauben.

(d.) *Hauptstädte.*—Die wichtigsten Städte in England sind London, Liverpool, Manchester und Salford, Birmingham, Leeds, Sheffield, Bristol, Wolverhampton, Newcastle an der Tyne, Stoke an der Trent und Hull. Die Bevölkerung jedes dieser Orte übersteigt 100,000 Seelen. Zwei und siebenzig andere Städte in England und Wales hatten bei der Aufnahme des Census im Jahre 1861 eine Bevölkerung von mehr als 20,000 Personen. Die hauptsächlichsten Städte in Schottland sind Edinburgh, Glasgow, Dundee, Aberdeen, Paisley, Greenock, Leith und Perth, und in Irland: Dublin, Belfast, Cork, Limerick, Waterford und Londonderry. Die Bevölkerung der drei Hauptstädte betrug im Jahre 1861: in London, 2,803,989, in Edinburgh, 170,444, und in Dublin, 314,409 Seelen.

FLÄCHENINHALT.—Gesamfter Flächeninhalt —Küstenlinie—Häfen.

(a.) *Gesamfter Flächeninhalt.*—Der gesammte Flächeninhalt des Vereinigten Königreichs beträgt 121,115 Quadratmeilen oder 77,513,000 Statut-Morgen, welche vertheilt sind wie folgt:—

Provinzen	Flächeninhalt		Landmasse, die im Jahre 1866 als im Anbau begriffen, als Brach- und als Grasland angegeben wurde
	In Quadratmeilen	In Statut-Morgen	
England . .	50,923	32,590,000	22,262,000
Wales . .	7,398	4,735,000	2,284,000
England und Wales .	58,321	37,325,000	24,546,000
Schottland . .	30,685	19,639,000	4,158,000
Irland . .	31,755	20,322,000	15,550,000
Inseln in den Britischen Gewässern .	354	227,000	115,000
Gesamtsumme für das Vereinigte Königreich	121,115	77,513,000	44,369,000*

* In den Berichten für Irland sind in der obigen Tabelle die *Hügelweiden* eingeschlossen, was den Anbau begriffenen Flächeninhalt dieser Provinz verhältnissmässig grösser erscheinen lässt, als in den andern Provinzen des Königreichs, wo die Hügelweiden nicht eingeschlossen sind.

(b.) *Küstenlinie.*—Die Ausdehnung der Küstenlinie von England und Wales wird auf ungefähr 2,000 und die von Schottland auf

2,500 Meilen veranschlagt. Irland hat eine Küstenlinie von ungefähr 750 Meilen, von der ein grosser Theil, besonders im Westen und Südwesten, tief von Meeresarmen durchschnitten ist.

(c.) *Häfen.*—Die besten Häfen, sowohl in Grossbritannien als in Irland, liegen an den Süd- und den Südwestküsten, während die an der Ostküste gelegenen dem Handel nur mässige Bequemlichkeiten darbieten.

Die grössten Häfen des Vereinigten Königreichs sind die von Portsmouth, Plymouth, Milford Haven und Cork, welche vielleicht nur von sehr wenigen der Welt übertroffen werden. Sie besitzen grosse Wassertiefe und können der grössten Flotte als Zufluchtsort dienen. Die Häfen von Holyhead und Dover, welche sich der Vollendung nähern, werden ebenfalls der Schifffahrt beträchtlichen Schutz gewähren. Grosse Geldsummen sind auf die verschiedenen Häfen des Königreichs verwandt worden. London steht an der Spitze der Flusshäfen von Grossbritannien. Die Mersey ist der zweite Handelsfluss des Landes; Newcastle, Hull, Bristol, Greenock, Sunderland, Leith, Dundee, Aberdeen, Port Patrick, Kingstown und zahlreiche andere Häfen nehmen Schiffe von mächtigem Tonnengehalt auf; und viele kleinere Häfen in allen Theilen des Königreichs sind zur Aufnahme von Küstenschiffen geeignet und erleichtern dadurch in hohem Masse den Binnenhandel des Königreichs.

VERKEHRSMITTEL. — Flüsse — Canäle — Landstrassen — Seen — Eisenbahnen — Electriche Telegraphen.

(a.) *Flüsse, Canäle, Landstrassen und Seen.*—Abgesehen von schiffbaren Flüssen, welche eine Gesamtlänge von etwa 2,500 Meilen erreichen, haben England und Wales ungefähr 2,800 Meilen Canäle, 24,000 Meilen Chausseen und 100,000 Meilen Landwege. Beinahe sämtliche grosse Städte, Seehäfen und Fabrikstädte sind sowohl durch Land- als durch Wasserstrassen mit einander verbunden. In Schottland sind die Hauptcanäle: der grosse Canal, welcher den Frith of Forth mit der Clyde verbindet, und der Union-, der Crinan- und der Caledonian-Canal. Der Letztere erstreckt sich, indem er eine Anzahl von Seen mit einander verbindet, durch das ganze Land und

bildet eine Wasserstrasse durch die Mitte der Insel. Die Chausseen und andere Landstrassen werden auf 3,700 Meilen Länge geschätzt. Die Länge der schiffbaren Flüsse in Irland beträgt ungefähr 210 Meilen, die der Canäle 300 Meilen. Berichte über die Meilenzahl der Landstrassen in Irland sind nicht vorhanden.

England besitzt sehr wenige Seen und keinen von grossem Umfang. Die Englischen Seen liegen hauptsächlich in Westmoreland und Cumberland; der grösste (Windermere) ist ungefähr zwölf Meilen lang und eine breit. Die Hauptseen von Schottland sind: Loch Lomond, zwischen den Grafschaften Dumbarton und Stirling; Loch Ness, in Invernesshire; Loch Awe, in Argyllshire; und Lochs Tay, Rannock und Erich, in Perthshire. Der grösste See in Irland ist Lough Neagh, in Ulster, der einen Flächeninhalt von etwa 98,000 Morgen Wasser hat. Die Loughs Erne, Corrib, Mask, Conn und Killarney liegen in demselben Lande.

(b.) *Eisenbahnen.*—Die Ausbildung des Eisenbahnsystems in dem Vereinigten Königreich hat während der letzten funfzehn Jahre sehr rasche Fortschritte gemacht; und ausser den weitverzweigten Verbindungswegen der Flüsse, Canäle und Landstrassen giebt es jetzt 13,289 Meilen Eisenbahnen, von denen man sagen kann, dass sie Verbindungsglieder bilden zwischen jeder Stadt und jedem Districte des Landes.

Die Meilenzahl von Eisenbahnen, welche am 31. December 1865 in den verschiedenen Provinzen des Königreichs dem Verkehr geöffnet waren, betrug:—

	Doppelte Linien	Einfache Linien	Gesamtsumma
	Meilen	Meilen	Meilen
In England und Wales .	6,081	3,170	9,251
Schottland . . .	946	1,254	2,200
Irland . . .	476	1,362	1,838
Vereinigtes Königreich . . .	7,503	5,786	13,289

Die Gesamtmasse des auf Actien, Anleihen etc. für Eisenbahnen in dem Vereinigten Königreich gezahlten Capitals betrug am 31. December 1865 455,478,000*l*.

Der Betrag des Passagierverkehrs während der Jahre 1864 und 1865 verhielt sich in jeder Provinz des Königreichs wie folgt:—

	Jahre	In England und Wales	In Schottland	In Irland	In dem Vereinigten Königreich
Passagiere:		Zahl	Zahl	Zahl	Zahl
Erster Klasse	{ 1864	23,467,020	2,691,301	1,543,094	29,701,415
	{ 1865	25,053,443	2,840,446	1,769,316	29,663,205
Zweiter Klasse	{ 1864	50,681,016	1,998,949	3,589,204	65,269,169
	{ 1865	64,520,007	2,349,500	3,913,734	70,783,241
Dritter Klasse (mit Einschluss parlamentarischer Passagiere)* . . .	{ 1864	114,016,625	15,515,205	6,769,751	136,301,581
	{ 1865	127,120,088	16,805,582	7,490,599	151,416,269
Summa	{ 1864	197,164,661	20,205,455	11,902,049	229,272,165
	{ 1865	216,693,538	21,995,528	13,173,649	251,862,715

* Parlamentarische Passagiere werden befördert nach einer Veranschlagung von nicht mehr als einem Penny per Meile. Ein Passagiere dieser Klasse befördernder Zug befährt jeden Tag im Jahre die ganze Länge jeder Bahn und hält an allen Stationen still.

	Jahre	In England und Wales	In Schottland	In Irland	In dem Vereinigten Königreich
		Zahl	Zahl	Zahl	Zahl

(c.) *Electrische Telegraphen.*—Die Statistik über die zum Gebrauch des Publicums bestimmten electrischen Telegraphen, soweit darüber im Jahre 1865 durch die verschiedenen

Telegraphen-Compagnien an das Handelsministerium Bericht erstattet wurde, verhält sich wie folgt:—

Name der Compagnie	Länge der Telegraphenlinien	Länge der gebrauchten Drähte	Zahl der dem Publicum geöffneten Stationen	Zahl der Instrumente	Zahl der öffentlichen Depeschen
	Meilen	Meilen			
Electric and International	9,306	45,044	1,022	5,778	nicht ermittelt
British and Irish Magnetic*	4,401	18,668	491	kein Bericht	1,251,265
Süd-Ost-Bahn†	323½	3,064½	104	159	88,711
London, Brighton, and South Coast Railway	240½	688	57	92	66,523
London-District‡	123	470	83	195	316,272
The United Kingdom	1,672	9,506	125	358	743,870
Summa	16,066½	77,440½	1,882	—	—
Submarine§	887 (im Jahre 1863)	—	—	—	—

* Die Zahl der von dieser Compagnie, in Gemeinschaft mit der Submarine Telegraph Company nach und von dem Festlande geschickten Depeschen und die Zahl der Depeschen für Eisenbahn-Compagnien, Zeitungen und Lesezimmer sind nicht in den Depeschen für das Publicum eingeschlossen, werden aber jährlich auf etwa 250,000 geschätzt.

† Die South-Eastern Railway Company hat keine Arbeitsverbindung mit irgend einer der electrischen Telegraphen-Compagnien.

‡ Mit Ausschluss von Privat-Telegraphen, welche von dieser Compagnie für Geschäftshäuser und Personen hergestellt werden, die zwei Geschäftslocale haben, und des Telegraphensystems der Londoner Löschmannschaft.

§ Der Telegraph nach Calais, 24 Meilen; nach Boulogne, 25 Meilen; nach Dieppe, 78 Meilen; nach Jersey, 30 Meilen; nach Ostende, 70 Meilen, nach Hannover, 80 Meilen; und nach Dänemark, 380 Meilen.

Den obigen Linien müssen hinzugefügt werden die beiden Kabel der Atlantischen Telegraphen-Compagnie zwischen Irland und Neufundland. Die Kabellänge, welche für die Linie von 1865 verschifft wurde, betrug 2,300 Seemeilen, und im Jahre 1866 wurden nicht weniger als 2,730 Seemeilen Kabel gebraucht, um ein neues Kabel zu legen und das im vorhergehenden Jahre beschädigte auszubessern.

BEVÖLKERUNG.—Gesamthe — Nationalitäten — Religiöse Confessionen — Beschäftigten — Hauptstädte — Zunahme seit 1855 — Auswanderung — Blinde — Taube — Stumme — Geburten — Todesfälle — Heirathen — Arme — Criminalverbrecher.

(a.) *Bevölkerung.* — Die Gesamtbevölkerung des Vereinigten Königreichs betrug bei dem letzten Census im Jahre 1861 in runden Zahlen 29,070,000 Personen und die Bevölkerung der verschiedenen Provinzen des Königreichs:—

Provinzen	Bevölkerung (mit Ausschluss der im Auslande stationirten Armee und Flotte)			Armee, Flotte und Matrosen der Handelsflotte im Auslande
	Männer	Frauen	Summa	
In England	9,224,000	9,730,000	18,954,000	162,723
Wales	552,000	560,000	1,112,000	
Schottland	1,450,000	1,612,000	3,062,000	
Irland	2,837,000	2,962,000	5,799,000	
Inseln in den Britischen Gewässern	66,000	77,000	143,000	
Vereinigtes Königreich	14,129,000	14,941,000	29,070,000	250,356

Das Verhältniss der Bevölkerung in den vier Provinzen des Königreichs war daher: In England und Wales 69·1, in Schottland 10·5, in Irland 19·9 und auf den Inseln 0·5; oder von zehn Theilen der Bevölkerung gehörten sieben zu England und Wales, zwei zu Irland, einer zu Schottland und $\frac{2}{20}$ zu den Inseln in den Britischen Gewässern.

Mit Einschluss der im Auslande in der Armee, der Flotte etc. befindlichen Männer, stand im Jahre 1861 einer männlichen Bevölkerung von 14,379,000 eine weibliche von 14,941,000 in dem Vereinigten Königreich gegenüber. Um die Mitte des Jahres 1866 wurde die Bevölkerung des Vereinigten Königreichs (mit Ein-

schluss der im Auslande befindlichen Armee und Flotte) auf 30,329,207 veranschlagt.

Die Dichtigkeit der Bevölkerung per Quadratmeile war im Jahre 1861:—

In England	372·2
„ Wales	150·3
„ Schottland	99·7
„ Irland	182·6
Auf den Inseln	403·9

Vereinigtes Königreich 240·0

(b.) *Nationalitäten.*—Die Nationalität der Bevölkerung in den verschiedenen Provinzen des Königreichs war um dieselbe Zeit:—

Nationalitäten	In England und Wales	In Schottland	In Irland	In den Inseln der Britischen Gewässer
Engländer	17,985,617	54,920	50,936	{ 19,525 290
Walliser	1,134,435	1,112		
Schotten	169,202	2,785,804		
Irländer	601,634	204,083	5,720,686	5,534
Geboren auf den Inseln der Britischen Gewässer	18,423	628	10,420	{ 111,354 1,262 4,184† 63
„ „ in den Colonien und in Ostindien	51,572	7,559		
„ „ in fremden Staaten	101,832*	8,188†		
„ „ auf dem Meere	3,509			
Summa	20,066,224	3,062,294	5,798,967	143,447

* Mit Einschluss von 84,090

† „ „ „ 3,695

‡ „ „ „ 3,923

Personen, welche die Unterthanen fremder Staaten waren.

(c.) *Religiöse Confessionen.*—Es sind keine Berichte vorhanden über die Zahl der den verschiedenen religiösen Confessionen in Grossbritannien angehörenden Personen. Die Zahl der verschiedenen Secten in Irland wurde im Jahre 1861 angegeben wie folgt:—

	Personen
Zur Staatskirche gehörend	693,357
Presbyterianer	523,291
Methodisten	45,399
Independenten	4,532

	Personen
Baptisten	4,237
Quäker	3,695
Alle andern Confessionen	14,695

Gesamtzahl der Protestanten	1,289,206
Römische Katholiken	4,505,265
Juden	393
Nicht specificirt	4,103
Summa	5,798,967

(d.) *Beschäftigungen*.—Wenn man die Beschäftigungen des Volkes in Grossbritannien im Jahre 1851, dem ersten Zeitpunkt, in welchem zuverlässige Berichte darüber erlangt wurden, mit ähnlichen Berichten aus dem Jahre 1861 vergleicht, so sind die folgenden Veränderungen in den drei grossen Branchen der Beschäftigung bemerkenswerth:—

1. Derjenige Theil der Bevölkerung, welcher mit dem Ackerbau beschäftigt war, war von 12 Procent auf 10 Procent gesunken.

2. Derjenige Theil der Bevölkerung, welcher mit dem Handel beschäftigt war, war von 21 Procent auf 27 Procent gestiegen.

3. In allen andern Beschäftigungen hatte eine Abnahme von 67 Procent auf 63 Procent stattgefunden.

Diese Thatsachen werden vielleicht noch deutlicher durch die folgenden Daten zur Anschauung gebracht:—

	Mit Ackerbau beschäftigt	Mit dem Handel beschäftigt	Alle andern Beschäftigun- gen
Im Jahre 1851	12	21	67
Im Jahre 1861	10	27	63

Der Erlangung genauer Berichte über die Beschäftigungen des Volkes stehen grosse Schwierigkeiten entgegen, und obgleich manche derselben bei der Aufnahme des Census im Jahre 1861 theilweise überwunden wurden, hielt man dennoch die erlangten Nachweise in manchen Beziehungen für unvollkommen. Für allgemeine Zwecke gewähren indess die sechs grossen Abtheilungen der Beschäftigung, unter welchen die Berichte des Census zusammengestellt waren, eine ziemlich befriedigende Annäherung an die Wahrheit. In England und Wales wurden, aus einer Bevölkerung von 20,066,224, Berichte über die Beschäftigungen von 19,915,334 gesammelt. In Schottland waren die Berichte vollständig, und in Irland wurden aus einer Gesamtzahl von 5,798,967 Personen Berichte über die Beschäftigungen von 5,416,806 erlangt.

Die nachstehende Tabelle giebt die Procente der Bevölkerungstheile, welche während des Jahres 1861 in jeder Provinz des Königreichs den sechs Klassen der Beschäftigung angehörten:—

Klassen der Beschäftigung	Procent-Theile		
	In England und Wales	In Schott- land	In Irland
(1) Professionelle	2·4	1·7	1·8
(2) Häusliche	57·4	57·0	56·8
(3) Commercialle	3·1	2·8	2·2
(4) Landbauende	10·1	12·5	18·3
(5) Industrielle	24·3	22·8	12·3
(6) Unbestimmte und unpro- ductive	2·7	3·2	8·6
	100·0	100·0	100·0

- (1) Personen einschliessend, welche mit der Regierung oder Vertheidigung des Landes und mit den gelehrten Professionen, den Künsten, Wissenschaften etc. beschäftigt sind.
- (2) Personen einschliessend, welche den häuslichen Beruf von Frauen, Müttern und Wittwen, Kindern und Verwandten, Schülern, Unternehmern von Logis- und Speisehäusern und Domestiken etc. erfüllen.
- (3) Personen einschliessend, welche kaufmännische Geschäfte betreiben, und andere allgemeine Händler, Güterbeförderer auf Eisenbahnen, Landstrassen, Canälen, Flüssen und Meeren, Boten und Lastträger.
- (4) Personen einschliessend, welche mit dem Ackerbau, der Baumzucht, der Gärtnerei und der Thierzucht beschäftigt sind.
- (5) Personen einschliessend, welche mit sämtlichen sonst nicht aufgezählten Manufacturarbeiten beschäftigt sind.
- (6) Personen einschliessend, welche im allgemeinen als Arbeiter beschäftigt sind, Personen von Rang und Vermögen, welche kein Amt und keine Beschäftigung haben. Personen ohne besondere Beschäftigung, welche auf Gemeindegeldern unterhalten werden, wie Pensionäre, Empfänger von Almosen, Arme, Wahnsinnige, Gefangene, Vagabunden etc., und alle anderen ohne bestimmte Beschäftigung.

Die nachstehende Tabelle zeigt die Gesamtzahl von Personen beider Geschlechts, welche während des Jahres 1861 in den verschiedenen Provinzen des Königreichs häusliche, landbauende und industrielle Geschäfte betrieben. Die Zahlen für landbauende und industrielle Beschäftigungen schliessen *alle*, mit dem Landbau oder mit den verschiedenen Geschäftszweigen in Verbindung stehende, Personen ein, wie Pächter, Fabricanten, Kaufleute, Arbeiter, Handwerker, etc. etc.

Anzahl von Personen beider Geschlechts, welche nach dem Census von 1861 als Diensthofen und mit der Landwirthschaft und den wichtigsten Industriezweigen in den verschiedenen Provinzen des Vereinigten Königreichs beschäftigt waren.

(e.) *Bevölkerung der wichtigsten Städte.*—Die folgende Tabelle zeigt die *gezählte* Bevölkerung der wichtigsten Städte in den verschiedenen Provinzen des Königreichs während der Jahre 1851 und 1861 und die *veranschlagte* Bevölkerung für das Jahr 1866, soweit dieselbe ermittelt ist:—

Städte	Gezählte Bevölkerung		Veranschlagte Bevölkerung, um die Mitte des Jahres 1866
	1851	1861	
In England:			
London	2,362,236	2,803,989	3,037,991
Liverpool	375,955	443,938	484,337
Manchester	303,382	338,722	358,855
Salford	85,108	102,449	112,904
Birmingham	292,841	296,076	335,798
Leeds	172,270	207,165	228,187
Sheffield	135,310	185,172	218,257
Bristol	137,328	154,093	163,680
Newcastle an der Tyne	87,784	109,108	122,277
Hull	84,690	97,661	105,233
In Schottland:			
Edinburg	161,648	170,444	175,128
Glasgow	329,097	395,503	432,265
Dundee	80,027	91,664	—
Aberdeen	71,973	73,900	—
Paisley	48,071	47,427	—
Greenock	37,436	43,894	—
Leith	32,219	56,029	—
Perth	24,670	26,094	—
In Irland:			
Dublin	—	314,409	318,437
Belfast	—	123,479	—
Cork	—	93,389	—
Limerick	—	50,068	—
Waterford	—	30,570	—
Londonderry	—	20,366	—

Anmerkung.—Im Jahre 1861 gab es zwei und siebenzig Städte in England und Wales, von denen jede eine Bevölkerung von mehr als 20,000 Einwohnern hatte.

Die folgende Tabelle zeigt die Zunahme der Bevölkerung in einigen der ansehnlichsten Städte Englands, zwischen den Jahren 1855 und 1865:

	Veranschlagung der gesammten Bevölkerung	
	1855	1865
London	2,548,382	2,993,513
Liverpool	403,547	476,386
Manchester	317,966	354,930
Salford	92,106	110,833
Birmingham	257,941	327,842
Leeds	186,356	224,025
Sheffield	154,662	211,529
Bristol	144,236	161,809
Newcastle an der Tyne	96,307	119,651

(f.) *Zunahme der Gesamtbevölkerung seit dem Jahre 1855.*—Die Zunahme der Gesamtbevölkerung von Grossbritannien zwischen den Jahren 1855 und 1865 (mit Ausschluss der Armee, der Flotte etc. im Auslande) kann auf etwa 12 Procent angesetzt werden, da die veranschlagte Bevölkerung sich von 21,807,000 im Jahre 1855 auf 24,363,000 im Jahre 1865 vermehrt hat. In Irland nahm sie während desselben Zeitraums, besonders durch die

massenhaft stattfindende Auswanderung, etwa 7 Procent ab.

(g.) *Auswanderung.*—Während der mit dem Jahre 1865 endenden zehn Jahre wanderten 1,607,745 Personen aus dem Vereinigten Königreiche aus. Von dieser Anzahl gingen 139,802 nach den Nordamerikanischen Colonien, 1,005,844 nach den Vereinigten Staaten, 397,302 nach den Australischen Colonien und 64,797 nach andern Theilen der Erde. Berichte über die Zahl der Einwanderer, welche aus fremden Ländern in dem Vereinigten Königreich ankamen, sind nicht vorhanden.

(h.) *Blinde.*—Die Gesamtzahl von Blinden, welche bei der Aufnahme des letzten Census (1861) im Vereinigten Königreich ermittelt wurde, betrug 439,248, und es befanden sich von dieser Zahl:—

In England und Wales	12,236 oder 1 in 1,640	} der Bevölkerung
Schottland	2,820 „ 1 „ 1,086	
Irland	6,879 „ 1 „ 843	
Inseln in den Britischen Gewässern	197 „ 1 „ 728	

Vereinigtes Königreich 29,248 oder 1 in 994

Es bestehen mehrere Anstalten für die Versorgung der Blinden in London und in vielen andern Städten Englands.

(i.) *Taubstumme.*—Die Gesamtzahl der Taubstummen betrug zu derselben Zeit 20,311 und sie waren vertheilt wie folgt:—

In England und Wales	12,236 oder 1 in 1,640	} der Bevölkerung
Schottland	2,335 „ 1 „ 1,311	
Irland	5,653 „ 1 „ 1,026	

Vereinigtes Königreich (mit Einschluss der Inseln) 20,311 oder 1 in 1,432

Die nördlichen Grafschaften Schottlands enthalten eine grössere Zahl von Taubstummen als irgend ein anderer Theil Grossbritanniens.

(j.) *Geburten, Todesfälle, Heirathen.*

Jahre	Veranschlagte Bevölkerung	Geburten	Todesfälle	Heirathen
England und Wales				
1863	20,554,137	727,417	473,837	173,510
1864	20,772,308	740,275	495,531	180,387
1865	20,990,946	747,870	491,360	182,470
Schottland				
1863	3,101,345	109,325	71,421	22,087
1864	3,118,701	112,445	74,303	22,675
1865	3,136,057	113,126	70,821	23,577
Irland				
1864	*5,798,967	136,640	94,000	27,370
1865		145,200	93,700	30,680

* Bevölkerung im Jahre 1861.

(k.) *Arme.*—Die Gesamtzahl der Armen, welche in und ausser dem Hause Unterstützung empfangen, betrug am 1. Januar 1866 in den verschiedenen Provinzen des Königreichs:—

In England und Wales	920,344
Schottland	121,394
Irland	65,057

(l.) *Criminalverbrecher im Jahre 1865.*

	In Eng- land und Wales	In Schott- land	In Irland
Zahl der gerichtlich Ver- hörten	19,614	2,567	4,657
„ „ Verurtheilten	14,740	2,360	2,663
„ „ Freigesprochenen (mit Ausschluss von Personen, welche als wah- nsinnig einge- perrt wurden)	4,842	207	1,966

PRODUCTION. — Ackerbau — Ernten — Wolle und Flachs — Viehstand — Grösse der Pachtgüter — Wälder — Fischereien — Steinkohlen — Metalle — Petroleum — Thon — Porcellanerde — Salz — Webefabricate — Andere Industriezweige.

(a.) *Ackerbau.*—Was die Bodenerzeugnisse angeht, so sind leider keine officiellen Berichte vorhanden über die Quantitäten von Korn, Fleisch, Wolle oder von Butter und Käse und andern Kuhweide-Producten, welche jährlich gewonnen werden. In dieser Hinsicht steht England weit hinter den meisten festländischen Nationen zurück, wo seit einer Reihe von Jahren ein vollständiges System der Landbau-Statistik zur Ausführung gekommen ist. Bis zum Jahre 1866 wurden selbst über die Menge des angebauten Landes und über die Zahl des Viehes keine vollständigen Berichte für das ganze Königreich erlangt.

Die nachstehende Tabelle zeigt den Umfang des in Anbau begriffenen Landes, in den verschiedenen Theilen des Königreichs, nach den Berichten vom Jahre 1866:—

Provinzen	Gesammter Flächeninhalt	Gesammtmasse des Acker-, Brach- und Wiesenlandes	Masse des zum Getreidebau benutzten Landes	Masse des zu Grünaasen be- nutzten Landes
	Morgen	Morgen	Morgen	Morgen
England	32,590,397	22,261,833	7,400,170	2,750,008
Wales	4,734,486	2,284,674	521,074	139,265
Schottland	19,639,377	4,158,360	1,366,540	663,257
Grossbritannien	56,964,260	28,704,867	9,287,784	3,552,530
Irland	20,322,641	*15,549,796	2,173,433	1,482,091
Insel Man	180,000	82,902	27,266	12,208
Normannische Inseln—Jersey	28,717	23,357	3,142	5,253
Guernsey	17,967	11,999	2,041	2,938
Vereinigtes Königreich	77,513,585	—	11,493,666	5,055,020

* Diese Zahlen schliessen die Hügelweiden ein, welche in den Berichten für die andern Provinzen des Königreichs ausgeschlossen sind.

(b.) *Ernten.*—Die Gesammtmasse des Landes, welches mit den wichtigsten Getreidearten angebaut wurde, war wie folgt:—

	Morgen
Unter Weizenbau	3,697,635
„ Gerstenbau	2,398,485
„ Haferbau	4,469,297
„ Roggenbau	67,879
„ Bohnenpflanzung	537,210
„ Erbsenpflanzung	323,160

11,493,666

Wenn man die Durchschnittsproduction von Weizen zu sieben und zwanzig Buschel per Morgen in Grossbritannien und zu fünf und zwanzig Buschel in Irland annimmt, so kann die Jahresproduction von Weizen in dem Vereinigten Königreich auf etwa 12,364,000 Malter ('quarters') veranschlagt werden. Die einheimische Weizenproduction reicht jedoch bei weitem nicht für den Bedarf aus, und es findet eine sehr ansehnliche Einfuhr von Weizen und andern Getreidearten statt, wie aus der Bezugnahme auf die Bemerkungen über das allgemeine Einfuhrgeschäft des Landes hervorgeht. Mr. Caird, eine wohlbekannte Autorität in Sachen des Landbaues, veranschlagt die Durchschnittsproduction der andern Getreidearten

in England wie folgt: Gerste, acht und dreissig Buschel per Morgen; Hafer und Roggen, vier und vierzig Buschel; und Bohnen und Erbsen, dreissig Buschel.

Während der letzten Jahre ist der Viehzucht in Grossbritannien eine weit grössere Aufmerksamkeit geschenkt worden, und in Folge davon hat man ansehnliche Landstrecken dem Anbau von Wurzelfrüchten übergeben. Die Gesammtmasse des im Vereinigten Königreich mit Grünsaaten bebauten Landes betrug im Jahre 1866 5,055,020 Morgen, wovon 1,555,609 Morgen mit Kartoffeln bebaut wurden, 2,468,564 mit Rüben (turnips) und Schwedischen Rüben, 279,987 mit Mangold, 22,061 mit Wurzeln, 216,610 mit Kohl, Kohlrabi und Raps und 512,189 mit Wicken, Schneckenklee und andern Grünsaaten, mit Ausnahme von Klee und Gras.

(c.) *Wolle und Flachs.*—Von den zu Webefabricaten benutzten Rohmaterialien werden nur zwei in dem Vereinigten Königreich producirt, nämlich Wolle und Flachs. Mr. Behrens schätzt, indem er die Menge einheimischer Schafe seiner Veranschlagung zu Grunde legt, die einheimische Production roher Wolle auf 152,000,000 Pfund. Flachs wird hauptsächlich in Irland gebaut, obschon kleine Quantitäten

auch in England und Schottland gewonnen werden. Der gesammte Flachsbaum in Irland während des Jahres 1866 erstreckte sich über 263,659 Morgen, und die Flachsproduction wurde auf 1,054,000 Centner veranschlagt.

(d.) *Viehstand.*—Die Gesamtzahl der verschiedenen Vieharten in allen Provinzen des Vereinigten Königreichs betrug während des Jahres 1866:—

Provinzen	Rindvieh			Schafe	Schweine
	Kühe	Anderes Rindvieh	Summa		
	Zahl	Zahl	Zahl	Zahl	Zahl
England	1,290,529	2,016,505	3,307,034	15,124,541	2,066,299
Wales	222,546	318,855	541,401	1,668,663	191,604
Schottland	370,447	566,954	937,401	5,255,077	219,716
Irland	1,481,446	2,261,486	3,742,932	4,270,027	1,493,000
Insel Man	7,755	10,932	18,687	55,954	10,956
Normannische Inseln—Jersey	5,815	6,222	12,037	517	6,332
Guernsey	3,030	3,946	6,976	1,214	5,599
Summa, Vereinigtes Königreich	3,381,568	5,184,900	8,566,468	26,375,993	3,993,506

In Folge der durch die Rinderpest erlittenen Verluste bleibt der obige Bericht über den Viehstand unter der Menge des Viehes, welche gewöhnlich im Lande gehalten wird. Wenn man die Verluste durch die Rinderpest der Zahl des Viehes hinzufügt, welche zur Zeit der Abfassung des obigen Berichts vorhanden war, so würde die Veranschlagung des Rindviehstandes sich auf 8,716,279 belaufen. Die Zahl der Schafe, sofern sie die nördlichen Grafschaften von England und Schottland angeht, schliesst wahrscheinlich eine grosse Zahl von Lämmern des Jahres 1866 aus, wegen des Zeitpunktes, in welchem der Bericht abgefasst wurde. Schweine, welche von Landbauern und in Städten gehalten werden, sind nicht in den obigen Berichten für die verschiedenen Provinzen Grossbritanniens einbegriffen.

Bei der Sammlung der obigen Berichte für Grossbritannien wurden keine Anstalten getroffen, die Zahl der Pferde zu ermitteln. Die Zahl der Pferde und Maulesel in Grossbritannien belief sich im Jahre 1864, nach den Steuerberichten, auf 1,071,095. In Irland wurde sie im Jahre 1866 auf 535,000 angegeben, woraus eine Gesamtzahl von etwa anderthalb Millionen für das ganze Königreich hervorgehen würde.

(e.) *Umfang der Pachtgüter.*—1. *Grossbritannien.*—Der letzte Bericht über den Umfang der Pachtgüter in Grossbritannien wurde im Jahre 1851 aufgenommen, und die Gesamtzahl von Pachtgütern in den verschiedenen Provinzen des Landes stand damals wie folgt:—

	Zahl von Pachtgütern
In England und Wales	225,318
Schottland	56,650
Inseln in den Britischen Gewässern	3,968
Summa	285,936

Der durchschnittliche Umfang jedes Pachtgutes in Grossbritannien betrug 102 Morgen; in England und Wales, 111 Morgen; in

Schottland, 74 Morgen, und in den Inseln weniger als 100 Morgen. Die Grössenverhältnisse von tausend Pachtgütern in Grossbritannien waren:—

Unter 100 Morgen	672 Pachtgüter
100 und unter 200 Morgen	187 „
200 und unter 1,000 Morgen	137 „
1,000 und darüber	4 „
	1,000

Die in England und Wales in den Händen von 2,038 Pächtern, mit Pachtgütern von 700 Morgen und mehr, befindliche Masse von Land übertraf zu derselben Zeit die in den Händen von 97,800 kleinen Pächtern befindliche Landmasse um 10,060 Morgen, wie die nachstehenden Daten zeigen:—

	Zahl der Pachtgüter	Morgen Land
Pächter mit Pachtgütern von 700 Morgen und mehr	2,038	2,152,050
Kleine Pächter	97,800	2,141,990

2. *Irland.*—Die Zahl der Pachtgüter in Irland betrug im Jahre 1864:—

Umfang der Pachtungen	Zahl der Pachtungen
Unter 5 Morgen	130,690
5 bis 15 „	176,368
15 bis 30 „	136,578
30 bis 50 „	71,961
50 bis 100 „	54,274
Gesamtsumme unter 100 Morgen	569,844
100 bis 200 Morgen	22,065
200 bis 500 „	8,303
Ueber 500 „	1,559
Gesamtsumme	601,771

(f.) *Wälder.*—Es sind keine Berichte vorhanden über die Masse des in dem Vereinigten Königreich gewonnenen Bauholzes, aber ihr jährlicher Werth wird auf etwa zwei Millionen Pfund Sterling geschätzt.

(g.) *Fischereien*.—Die Britischen Fischereien sind von grossem Umfang, und ein allgemeiner Bericht darüber wird gegeben werden in den statistischen Bemerkungen zu Klasse 70.

(h.) *Steinkohlen und Metalle*.—Die mineralischen Hilfsquellen des Vereinigten Königreichs sind sehr beträchtlich und bilden einen der Hauptzweige des Nationalreichthums. Seit dem Jahre 1854 sind sehr vollständige Berichte über die mineralischen Producte des

Landes erlangt worden, unter der Leitung des Herrn Robert Hunt, Bewahrsers der Bergbauarchive, welche dem Regierungsmuseum der Geologie beigegeben sind. Der Gesamtwert der während des Jahres 1865 in dem Vereinigten Königreich gewonnenen Steinkohlen und Metalle betrug 41,745,429*l.* Sterling. Die nachstehende Tabelle zeigt die Quantitäten und den Werth der mineralischen Erzeugnisse im Jahre 1865:—

		Quantitäten		Schätzung des Werthes am Orte der Production	
		Von gehobenen Mineralien	Von producirten Metallen	Von gehobenen Mineralien	Von producirten Metallen
				£	£
Steinkohlen	Tonnen	98,150,587	—	24,537,646	—
Eisen	"	3,910,045	4,819,254	3,324,804	11,774,220
Blei	"	90,451	67,181	1,153,134	1,433,161
Kupfer	"	198,298	11,888	927,938	1,134,664
Zinn	"	15,686	10,039	867,435	971,273
Zink	"	17,842	4,040	52,478	104,810
Kies	"	114,195	—	71,174	—
Gold (Quarz)	"	4,280	—	—	5,824
Silber	Unzen	—	Unzen 1,664	—	199,335
Erden (ermittelt)	"	—	724,856	774,496	—
„ (veranschlagt)	"	—	—	650,000	—
Metallhaltige Erze und vorher nicht erwähnte Metalle (veranschlagt)	"	—	—	—	150,000
Summa		—	—	32,359,105	15,773,287

Der Gesamtwert der Steinkohlen und Metalle war daher:—

	£
Steinkohlen	24,537,646
Metalle	15,773,287
Erden, mit Ausschluss von Thon und Bausteinen	1,434,496
Summa	41,745,429

Einen ausführlichen Bericht über die Production der verschiedenen Mineralien und Metalle wird man in den statistischen Bemerkungen zu Klasse 40 finden.

(i.) *Petroleum*.—Ueber den Umfang der Production von Petroleum sind noch keine Berichte erlangt worden; aber die Gewinnung dieses mineralischen Oels aus verschiedenen harzigen Erden, in mehreren Theilen des Landes, bildet jetzt ein Geschäft von einiger Bedeutung.

(j.) *Thon und Porcellanerde*.—Die Gesamtproduction von Porcellan, Feuerthon und Porcellanerde im Jahre 1865 wird auf

1,125,924 Tonnen, zu einem Werthe von 373,916*l.*, angegeben.

(k.) *Salz*.—Salz wird in Cheshire, in Worcestershire und in Irland gewonnen. Die Salzwerke in Cheshire können eine Million Tonnen Salz jährlich produciren; die Production der Werke in Worcestershire beläuft sich auf etwa 200,000 Tonnen jährlich. Die Salzproduction in Irland findet in verhältnissmässig geringem Umfange statt.

(l.) *Gewebte Fabricate*.—Die Fabrication gewebter Stoffe wird in dem Vereinigten Königreich in sehr beträchtlichem Umfange betrieben, und von ihrer Grossartigkeit mag die Thatsache eine Vorstellung geben, dass im Jahre 1865, ausser den für den einheimischen Bedarf fabricirten gewebten Stoffen, gewebte Stoffe zu einem Werthe von etwa *sieben und neunzig* Millionen Pfund Sterling aus dem Königreich exportirt wurden.

Die Zahl der Fabriken in dem Vereinigten Königreich wurde in dem letzten Berichte (1861) angegeben wie folgt:—

Arten der Fabriken	Zahl der Fabriken	Zahl der Spindeln	Zahl der Maschinen-Webestühle	Zahl der Arbeiter		Bewegende Pferdekraft	
				Männer	Frauen	Dampf	Wasser
Baumwolle	2,887	30,387,467	399,992	182,556	269,013	281,663	12,467
Flachs	399	1,216,674	14,792	24,616	62,813	31,727	4,354
Seide	771	1,338,544	10,709	15,530	36,899	6,186	864
Wolle	1,679	2,182,609	21,770	49,754	37,229	26,879	9,598
Worsted	532	1,289,172	43,048	31,501	54,562	26,234	1,970
Hanf	5	2,580	1	105	502	127	—
Indischer Hanf	36	32,982	554	2,049	3,918	2,048	60
Strumpfwirkerei	69	—	—	2,162	2,325	447	46
Summary	5,378	36,450,028	490,866	308,273	467,261	375,311	29,359

Einen Bericht über die Production der verschiedenen Branchen des einheimischen Geschäfts mit gewebten Stoffen wird man in den statistischen Bemerkungen zu Klassen 27 bis 31 finden.

(m.) *Andere Industriezweige.*—Eine Beschreibung der verschiedenen Geschäfte und Industriezweige des Königreichs ist in den statistischen Bemerkungen zu den respectiven Klassen gegeben, in welchen die Gegenstände ausgestellt werden.

HANDEL.—Allgemeiner — Handelskammern — Auswärtiger Handel — Einfuhr — Einfuhrzölle — Ausfuhrzölle — Kaufmännische Waaren — Ungemünztes Gold und Silber — Umladungen — Eingeführte Gegenstände — Zurückbehalten zur Consumption und exportirt — Hafenhandel.

(a.) *Handel.*—Mit Ausnahme des Handels mit geistigen Getränken, Malz und raffinirtem Zucker, welche, in Bezug auf die Erhebung der Steuern und die Bewilligung von Rabatt, einer gewissen Aufsicht seitens der Regierung unterworfen sind, ist der Handel in allen seinen Branchen vollkommen ungefesselt und frei; und Jedermann kann irgend ein Geschäft betreiben, wann und wo er will, vorausgesetzt, dass er nicht gegen die allgemeinen Landesgesetze verstösst.*

Die drei grossen, mit dem Handel in Verbindung stehenden, Volksklassen sind die Producenten und Fabricanten, die Kaufleute und Agenten und die Handelsleute, welche, als Gross- und Kleinhändler, die Consumenten mit Waaren versorgen. Der Regel nach befindet sich die Hauptmasse des auswärtigen Handels von England in den Händen der Kaufleute ('merchants'), welche entweder die Waaren der Fabricanten auf das Risiko der Letztern verkaufen oder die Waaren der Fabricanten kaufen und auf eigene Rechnung verkaufen. Im ersteren Falle wird dem Kaufmann eine Commission auf den Verkauf bewilligt, im letztern ein ansehnliches Disconto auf den Preis der Waaren.

(b.) *Handelskammern.* — Handelskammern bestehen in den meisten grossen Städten und Fabrikmittelpunkten Grossbritanniens. Sie sind zusammengesetzt aus den angesehensten Fabricanten und Kaufleuten des Ortes, wo sie ihren Sitz haben, und wachen nicht allein über die Interessen der Handels- und Fabrikzweige, mit welchen sie in besonderer Verbindung stehen, sondern betheiligen sich im allgemeinen an sämtlichen den Handel des Landes betreffenden Angelegenheiten. Eine Jahresversammlung der vereinigten Handelskammern findet im Frühling jedes Jahres in London statt.

(c.) *Auswärtiger Handel.*—Der auswärtige Handel des Vereinigten Königreichs, welcher mit allen Welttheilen betrieben wird, hat während der letzten zehn Jahre grosse Fortschritte

gemacht; denn der Werth der Einfuhr ist von ein hundert und zwei und siebenzig Millionen Pfund Sterling auf zwei hundert und siebenzig Millionen und die Gesamtausfuhr während desselben Zeitraums von ein hundert und neun und dreissig Millionen auf zwei hundert und achtzehn Millionen gestiegen. Es ist nicht der Zweck dieser Bemerkungen, die Einzelheiten jedes besondern Handelszweiges anzugeben, aber es mag von Interesse sein, im allgemeinen auf den Gesamtbetrag des Handels hinzuweisen, welcher zwischen dem Vereinigten Königreich und den bedeutendsten Staaten der Welt stattfindet.

(d.) *Einfuhr.*—Was die Einfuhr betrifft, so lieferten die folgenden Länder den Hauptbedarf während der Jahre 1861 und 1865:—

Länder	1861	1865
	£	£
Russland	12,822,000	17,383,000
Preussen	6,440,000	6,126,000
Hansestädte	6,058,000	8,837,000
Holland	7,692,000	12,413,000
Belgien	3,817,000	7,354,000
Frankreich	17,826,000	31,625,000
Spanien	4,458,000	4,769,000
Italien	2,478,000	2,486,000
Türkei	3,632,000	5,405,000
Egypten	8,398,000	21,773,000
China	8,608,000	10,499,000
Vereinigte Staaten	49,389,000	21,624,000
Peru	3,169,000	4,002,000
Chili	2,416,000	3,798,000
Brasilien	2,631,000	6,797,000
Britische Besitzungen	52,676,000	72,840,000

Die Abnahme, welche in den Zahlen für die Vereinigten Staaten bemerkbar ist, bedarf keiner Erklärung. Die Zunahme in der Einfuhr aus der Türkei, Egypten, China, Brasilien und den Britischen Besitzungen rührt grossentheils her von der vermehrten Einfuhr roher Baumwolle aus jenen Ländern, während der Abwesenheit der Zufuhr aus Amerika.

Die bemerkenswerthe Zunahme in der Einfuhr aus Frankreich ist dem vermehrten Handelsverkehr zuzuschreiben, welcher seit dem Abschluss des Handelsvertrags von 1860 zwischen beiden Ländern in's Leben getreten ist.

(e.) *Einfuhrzölle.*—Die nachstehende Tabelle zeigt die Einfuhrzölle, welche gegenwärtig auf alle Arten auswärtiger Erzeugnisse in dem Vereinigten Königreich erhoben werden:—

Liste der Gegenstände, welche in dem Vereinigten Königreich dem Einfuhrzoll unterworfen sind.

Gegenstände	Zollfuss £ s. d.
Bier und Ale, Mumme und Sprossenbier	} Fass 1 0 0
Spielkarten, ein Dutzend Packete	
Cichorien und Substitute dafür:	
Rohe oder gedarrte	Centner 1 6 6
Geröstete oder gemahlene	} Pfund 0 0 4
Chloroform	
Cacao	„ 0 0 1
Hülsen und Schalen	Centner 0 2 0
Teig oder Chocolate	Pfund 0 0 2

* Die Verfertiger und Verkäufer gewisser Artikel bedürfen dazu eines Erlaubnisscheines ('excise license'), den man ihnen ohne die geringste Schwierigkeit gestattet.

24 Grad und weniger als 42 Grad enthaltend . . .	"	0	2	6	
Und eine Steuervermehrung von 3d. per Gallone für jeden Stärkegrad über 41.					

(f.) *Ausfuhr*.—Die wichtigsten Länder, nach welchen in den Jahren 1861 und 1865 eine Ausfuhr stattfand, waren:—

Länder	1861	1865
	£	£
Russland . . .	5,765,000	6,180,000
Preussen . . .	4,057,000	4,010,000
Hansestädte . . .	13,046,000	22,984,000
Holland . . .	10,989,000	14,960,000
Belgien . . .	4,914,000	6,896,000
Frankreich . . .	17,427,000	25,355,000
Spanien . . .	3,386,000	3,015,000
Türkei . . .	3,104,000	5,847,000
Egypten . . .	2,398,000	6,168,000
China . . .	3,161,000	3,688,000
Vereinigte Staaten . . .	11,025,000	25,170,000
" im Jahre 1860	22,907,000	
Brasilien . . .	4,690,000	5,771,000
Britische Colonien . . .	45,139,000	51,546,000

(g.) *Ausfuhrsteuern.* — Alle Gegenstände sind frei von Steuern für die Ausfuhr aus dem Vereinigten Königreich.

(h.) *Handel im allgemeinen.* — Den allgemeinen Fortschritt des Englischen Handels stellen die folgenden Tabellen dar.

1. *Kaufmännische Waaren.* — Der Gesamtwert der Einfuhr zur Consumption und der Ausfuhr einheimischer Erzeugnisse stand während der letzten zehn Jahre wie folgt:—

Jahre	Einfuhr			Ausfuhr Britischer und Irischer Er- zeugnisse
	Gesamt- summe	Rück- exportirt	Zum Verbrauch geblieben	
	£	£	£	£
1856	172,544,000	23,393,000	149,151,000	115,827,000
1857	187,844,000	24,108,000	163,736,000	122,066,000
1858	164,584,000	23,174,000	141,410,000	116,608,000
1859	179,182,000	25,281,000	153,901,000	130,411,000
1860	210,531,000	28,630,000	181,901,000	135,891,000
1861	217,485,000	34,529,000	182,956,000	129,103,000
1862	225,717,000	42,176,000	183,541,000	128,992,000
1863	248,919,000	50,300,000	198,619,000	146,602,000
1864	274,952,000	52,139,000	222,813,000	160,449,000
1865	271,072,000	52,996,000	218,076,000	165,836,000

Die Abnahme in dem allgemeinen Handel des Jahres 1858 wurde durch die Handelskrise von 1857 verursacht und die Abnahme in dem Ausfuhrgeschäft der Jahre 1861–62 durch den Amerikanischen Krieg und die Baumwollentheuerung.

2. *Ungemünztes Gold und Silber.* — Der Gesamtwert der Einfuhr und der Ausfuhr ungemünzten Goldes und Silbers in dem Vereinigten Königreich seit dem Jahre 1858 (dem ersten, für welches die Einfuhr registrirt wurde) betrug:—

	Einfuhr £	Ausfuhr £
1858	29,493,000	19,628,000
1859	37,070,000	35,688,000
1860	22,978,000	25,534,000
1861	18,747,000	20,811,000
1862	31,656,000	29,326,000
1863	30,030,000	26,544,000
1864	27,728,000	23,132,000
1865	21,462,000	15,092,000

3. *Umladungen* ('Transhipments'). — Dieser Geschäftszweig, welcher in den obigen Berichten nicht einbegriffen ist, hat während der letzten zehn Jahre bedeutend zugenommen. Der Gesamtwert fremder Waaren, welche im Jahre 1856 in den Häfen des Vereinigten Königreichs umgeladen wurden, betrug nur 4,579,000*l.* und im Jahre 1865 6,469,000*l.*

Der Betrag des allgemeinen und des speciellen Handels des Landes kann aus den obigen Tabellen leicht ermittelt werden.

(i.) *Eingeführte Gegenstände.* — Die Hauptmasse der Einfuhr besteht aus Nahrungsmitteln und aus Rohmaterialien zur Fabrication. Die einzigen fabricirten Waaren welche, in grossem Massstabe eingeführt werden, sind Seiden, Leder und Wollenstoffe. Berichte über den Werth

der verschiedenen für den einheimischen Bedarf gekauften Gegenstände sind nicht vorhanden aber ihr Werth kann annähernd bestimmt werden, indem man den Werth der Rückausfuhr fremder Waaren von dem der Gesamteinfuhr abzieht. Die nachstehende Tabelle zeigt den Werth der Einfuhr, der Rückausfuhr und der wichtigsten Gegenstände, welche für den einheimischen Verbrauch übrig blieben, für das Jahr 1865:—

Hauptgegenstände	Gesamteinfuhr £	Rückexportirt £	Zum Verbrauch geblieben £
1. <i>Nahrungsmittel, Getränke u. s. w.</i>			
Thiere			
Ochsen	4,401,482	70	4,401,412

(j.) *Exportirte Gegenstände.*—Das Ausfuhrgeschäft des Königreichs umfasst die in der vorstehenden Tabelle aufgeführten und im Inlande producirtten Gegenstände. Die Ausfuhr Britischer Erzeugnisse besteht hauptsächlich in Fabrikwaaren, Mineralien und Metallen. Der Werth der Webfabricate allein machte etwa 60 Procent der Gesamtausfuhr des Jahres 1865 aus. Die nachstehende Tabelle zeigt den Werth der wichtigsten während dieses Jahres ausgefuhrten Gegenstände:—

Hauptgegenstände	Werth £
Landwirthschaftliche Geräthe . . .	210,300
Alkali, Soda	1,123,946
Schiffsgeräth und Matrosenkleidung . . .	2,639,012
Waffen und Munition	1,134,256

Summa	165,835,725

(k.) *Hafenhandel*.—Es sind keine Berichte über den Werth der Einfuhr in die wichtigsten Häfen des Königreichs vorhanden. Die Haupthäfen, in welchen Britische Waaren zur Ausfuhr verschifft werden, sind Liverpool, London, Hull, Grimsby, Southampton, Newcastle, Hartlepool, Folkestone, und Cardiff, in England und Wales; und Glasgow und Leith in Scotland. Die Irischen Fabricate werden meistens von Liverpool ausgeführt. Von der Gesamtausfuhr des Jahres 1865 gingen 66 Procent aus den Häfen von Liverpool und London.

BINNENHANDEL.—Die einzigen, über den Betrag des Binnenhandels vorhandenen, Berichte sind diejenigen, welche sich auf die Eisenbahnen und den Küstenhandel beziehen.

Der gesammte Tonnengehalt der Schiffe, welche während der fünf Jahre 1861–65 in dem Vereinigten Königreich beschäftigt waren, kaufmännische Waaren längs der Küste zu transportiren, betrug:—

	Britische Schiffe	Fremde Schiffe	Summa
	Tonnen	Tonnen	Tonnen
1861	17,261,779	93,456	17,355,235
1862	17,397,687	72,673	17,470,360
1863	17,465,635	81,897	17,547,532
1864	17,350,579	66,107	17,416,686
1865	18,150,649	77,705	18,228,354

Die nachstehende Tabelle zeigt den Betrag des Güterverkehrs auf den Eisenbahnen der drei Provinzen des Königreichs, während der Jahre 1864 und 1865:—

	In England und Wales	In Schottland	In Irland	Vereinigtes Königreich
	Tonnen	Tonnen	Tonnen	Tonnen
Allgemeiner Handel	{ 1864 28,802,262 1865 30,640,967	{ 4,577,483 4,487,135	{ 1,535,168 1,659,536	{ 34,914,913 36,787,638
Kohlen, Cokes und andere Mineralien	{ 1864 61,899,054 1865 63,892,007	{ 13,245,363 13,556,710	{ 310,364 357,069	{ 75,445,781 77,805,786
Viehstand:	Anzahl	Anzahl	Anzahl	Anzahl
Rindvieh:	{ 1864 2,083,254 1865 1,874,020	{ 482,656 488,762	{ 427,447 407,048	{ 2,993,357 2,769,830
Schafe	{ 1864 6,786,127 1865 7,001,654	{ 1,241,279 1,819,125	{ 428,275 515,632	{ 8,455,681 9,336,411
Schweine	{ 1864 1,426,264 1865 1,448,731	{ 65,329 88,388	{ 733,155 887,577	{ 2,224,748 2,424,696

SCHIFFFAHRT.—(a.) *Fremder Handel.*—Der gesammte Tonnengehalt der Schiffe, welche (mit Ladung und in Ballast) während der Jahre

1856, 1860 und 1865 in dem auswärtigen Handel des Vereinigten Königreichs beschäftigt waren, betrug:—

Jahre	Eingelaufen			Gelöscht			Summa		
	Britische	Fremde	Summa	Britische	Fremde	Summa	Britische	Fremde	Summa
	Tonnen	Tonnen	Tonnen	Tonnen	Tonnen	Tonnen	Tonnen	Tonnen	Tonnen
1856	6,390,715	4,162,419	10,553,134	6,555,056	4,480,859	11,035,915	12,945,771	8,643,278	21,589,049
1860	6,889,009	5,283,776	12,172,785	7,025,914	5,490,593	12,516,507	13,914,923	10,774,369	24,689,292
1865	9,623,432	4,694,454	14,317,886	9,735,523	4,843,683	14,579,206	19,358,955	9,538,137	28,897,092

(b.) *Küstenhandel.*—Eine sehr grosse Anzahl von Schiffen ist mit dem Küstenhandel des Landes beschäftigt. Fremde Schiffe sind seit dem Jahre 1854 zu dem Küstenhandel zugelassen worden, und die beigefügte Tabelle zeigt den Fortschritt des Handels seit dem Jahre 1856:

Tonnengehalt der Schiffe (mit Ladungen), welche mit dem Küstenhandel beschäftigt sind.

	Britische	Fremde	Summa
1856	15,164,000	53,000	15,217,000
1865	18,150,000	78,000	18,228,000

(c.) *Tonnengehalt der Schiffe des Vereinigten Königreichs.*—Der gesammte registrierte Tonnengehalt der zum Vereinigten Königreich gehörenden Schiffe betrug am 31. December 1865 4,936,776 Tonnen für Segelschiffe und 823,533 für Dampfschiffe. Die Gesamtzahl der Matrosen betrug 255,654.

POSTAMT.—In dem letzten Bericht des Generalpostmeisters wird erklärt, dass die stätige Zunahme der Geschäfte des Postamts während einer langen Reihe von Jahren uns allen Grund giebt, zu erwarten, dass, wenn der Wohlstand des Landes nicht abnimmt, das Postamt, ohne irgendwie in seinen Bemühungen nachzulassen, den gerechten Wünschen des Publicums genugzuthun, oder mit dem wachsenden Verlangen nach Verbesserungen Schritt zu halten, in wenigen Jahren ein reines Einkommen erzielen kann, welches dem gegenwärtigen Betrag der Einkommensteuer beinahe gleichkommt.

Die Zunahme in dem Einkommen der zehn Jahre von 1856 bis 1865 betrug:—

	Gesamt-Posteinnahme	Gesamt-Postamtausgabe	Netto-Einnahme
1856	£ 3,035,954	£ 2,438,732	£ 597,222
1865	4,423,608	2,941,086	1,482,522
Zunahme, 1865, im Vergleich mit 1856	1,387,654	502,354	885,300

Diese Zunahme war eine Folge der dem Volke durch die Herabsetzung der Brieftaxe, Vermehrung von Postämtern, Briefkasten und rascher Briefbeförderung gewährten Vortheile.

Die jetzigen Postpreise für's Inland sind folgende:—

Für Briefe, weniger als eine halbe Unze wiegend	1d.
Ueber $\frac{1}{2}$ oz. bis zu 1 oz.	2d.
„ 1 oz. bis zu $1\frac{1}{2}$ oz.	3d.
„ $1\frac{1}{2}$ oz. bis zu 2 oz.	4d.

und so fortsteigernd, allemal einen extra Penny für jede hinzugefügte halbe Unze oder einen Theil derselben.

Zu gleicher Zeit erleichterte man Postversendungen von Büchern, Drucksachen und Manuscripten, wie die folgenden Preise darthun:—

Unter 4 oz.	1d.
„ 8 oz.	2d.

Und 2d. für jede hinzugefügten 8 oz. Die Pakete dürfen nicht über 24 Zoll lang sein.

Muster oder Proben unter 24 oz. können gleichfalls, wenn frankirt, durch die Post befördert werden und zahlen: Unter 4 oz., 2d.; unter 8 oz., 4d.; unter 1 lb., 1d.; und unter 24 oz., 1s.

Die folgende Tabelle giebt die Anzahl von Briefen, Zeitungen, Bücherpacketen und Probenmustern an, welche im Jahre 1865 durch die Posten befördert wurden:—

Provinzen	Briefe	Zeitungen	Probenmuster
England und Wales	Zahl 597,277,616	Zahl 73,192,132	Zahl 940,771
Schottland	67,048,891	11,324,040	175,474
Irland	56,140,500	12,736,594	169,871
Das Vereinigte Königreich	720,467,007	97,252,766	1,286,116

Ein Hauptzweig der Postverwaltung bildet die für Geldversendungen bestimmte Abtheilung ('Money Order Department'). Für eine geringe Steuer kann nämlich der Sender sein Geld, ohne die geringste Gefahr, durch's ganze Königreich von einem Postamte zum andern versenden. Dies Geldsendungs-System besteht auch zwischen dem Vereinigten Königreich und verschiedenen Colonien; auch gedekt man dasselbe auf andere fremde Länder auszudehnen. Der Gesamtbetrag der im Jahre 1865 im Vereinigten Königreich ausgegebenen 'money orders' belief sich auf 17,829,290l. und der ausbezahlt auf 18,144,550l.

TELEGRAMME.—Es giebt keine vollständigen Angaben über die Anzahl der jährlich in den

verschiedenen Landestheilen versendeten Telegraphen. Die Statistiken von den electrischen Telegraphen finden sich, in so weit dies thunlich war, unter der Rubrik 'Electrische Telegraphen' angegeben.

DIE ARMEE. — Regelmässige und Hülfs-truppen.

(a.) *Die regelmässige Heeresmacht.* — Die Gesamtstärke der Britischen Armee auf Britischem Boden war, den Berichten von 1866–67 zu Folge, 137,195 jeden Ranges, und 65,287

jeden Ranges dienten in Indien und erhielten ihren Sold von der Indischen Regierung. Die Unterhaltungskosten für 178 in Lebuau dienende Indische eingeborne Truppen bestritt gleichfalls die Britische Regierung. Die folgende Tabelle giebt die Anzahl der in den verschiedenen Branchen der Armee dienenden Officiere und Soldaten so wie auch die der Pferde an. Nur darf man nicht vergessen, dass diese Truppen sich nicht alle im Vereinigten Königreich befinden; eine bedeutende Anzahl dient in den verschiedenen Colonien und Staatsbesitzungen.

<i>Auf Britischem Boden.</i>					Officiere	Unter-officiere	Mannschaft	Summa	Anzahl von Pferden
Regimenter :									
Königliche Reitende Artillerie	86	132	1,720	1,938	1,356

Summa					3,615	5,306	56,366	65,287	—

(b.) *Hülfsstruppen.* — Diese sind die Miliz ('militia'), die berittene Landmiliz ('yeomanry'), die Freiwilligen ('volunteers'), die angeworbenen Pensionäre und das Armee-Reservecorps.

Die Miliz besteht aus einem permanenten Stab von 5,070 Officieren und Unterofficieren. Das Corps wird alljährlich einberufen, um 27 Tage lang einexercirt zu werden; die etwaige Zahl schätzt man dieses Jahr auf 3,507 Officiere, 5,464 Unterofficiere und 120,000 Gefreite.

The Yeomanry-Cavallerie besteht aus einem permanenten Stabe von 390 Officieren und Unterofficieren. Das Corps thut jährlich acht Tage lang Dienst; seine Stärke, alle einberufen, giebt man dieses Jahr auf etwa 16,000 Mann an.

Die Freiwilligen bestehen aus Artillerie, leichter Reiterei, dem Genie- und Schützen-corps. Die Artilleristen erhalten von der Regierung 30s., die in der leichten Reiterei, dem Genie- und Schützen-corps dienenden 20s. per Kopf, vorausgesetzt, dass sie jedes Jahr die vorgeschriebenen Uebungen durchmachen. Die Gesamtzahl wird auf 130,000 bis 140,000 Mann geschätzt.

KÖNIGLICHE SEEMACHT ('ROYAL NAVY'). — Flotte — Küstenwache — Seesoldaten — Schiffe.

Der folgende Bericht über die Stärke der königlichen Seemacht ist dem Seemacht-Bericht ('Navy Estimates') von 1866–67 entlehnt.

(a.) Flotte—auf der See Dienende.

Flaggenofficiere (Commissionirte)	Zahl 210
Officiere in den Schiffswerften ('dock-yards') und andern Seeanstalten	57
Commissionirte and andere Officiere, höher stehend als die untergeordneten ('subordinates')	3,676
Untergeordnete Officiere	801
Vollmachts- ('warrant') Officiere (solche, die ohne Officiersrang eine gewisse Autorität ausüben)	1,110
Niedere Officiere ('petty officers') und Matrosen	31,446
Knaben, mit Einschluss der 2,750 auf den Bildungs-Schiffen ('training-ships') befindlichen	7,000
	44,300

(b.) Küstenwache-Dienst.

Auf der See—Officiere, Matrosen und Knaben.	Zahl 2,950
Nicht auf der See—Officiere und Soldaten	4,200

Civilisten	550
------------	-----

(c.) Marinetruppen ('Marines').

Stabsofficiere	120
Officiere, activ (Commissionirte)	420
Unterofficiere und Gefreite	15,860

Gesamtzahl (für den activen Seedienst, 8,000; nicht auf der See, 8,400)	16,400
---	--------

Gesamtmacht im Flotten- und Küstenwachdienste	68,400
---	--------

(d.) Schiffe etc., Königliche Seemacht.—Angaben über die Zahl der auf der See sich befindenden oder im Bau begriffenen Dampfschiffe, so wie der am 1. Februar 1866 auf der See befindlichen ausgerüsteten Segelschiffe:—

* Der Bau von 3 Linienschiffen, 2 Kanonenschiffen und einem Kanonenboote wurde eingestellt.

† Entmastete, zu gewissen Zwecken in den Dockyards bestimmte Schiffe.

‡ Transportschiffe für Indische Unterstützungszwecke.

HANDELS-SEEMACHT ('*MERCANTILE MARINE*').—(a.) *Matrosen*.—Die Gesamtzahl der Schiffsmannschaft in registrierten Schiffen, zur Britischen Handels-Seemacht gehörend, war am 31. December 1865 255,654.

(b.) *Kauffahrtschiffe*.—Zahl und Tonnengehalt von registrierten Schiffen, welche am 31. December 1865 zur Handels-Seemacht ('*mercantile navy*') gehörten:—

	Zahl	Tonnengehalt
Segelschiffe	26,069	4,936,776
Dampfschiffe	2,718	823,533
Summa	28,787	5,760,309

FINANZEN.—**Gesamt-Einnahme und Ausgabe—Zweige der Einnahme—Aufgehobene Taxen etc.—Zweige der Ausgabe—Budget, 1867—Staatsschuld.**

Das Staatseinkommen wird theils durch directe, theils durch indirecte Steuern gedeckt. Zu den Hauptzweigen der Ersten gehören die permanenten ('*assessed taxes*'), die Einkommen- und Besitzthumsteuer, zu den Letztern die Mauth-, Accise- und Stempelgebühren.

Das Gesamt-Haupteinkommen und die Ausgaben während der letzten drei Jahre beliefen sich auf:—

Jahresschluss am	Einnahme	Ausgabe
31. März	£	£
1864	70,208,964	67,056,286
1865	70,313,437	66,462,207
1866	67,812,292	65,914,357

Dies bekundet für jedes Jahr einen bedeutenden Ueberschuss. Zu den oben erwähnten Ausgaben gehören nicht die für Befestigungszwecke, welche sich in den respectiven Jahren auf 800,000£., 620,000£. und 560,000£. beliefen, und die durch eine besondere Anleihe ('*terminable annuities*') gedeckt wurden.

(a.) *Zweige des Einkommens*.—Es wird genügen, um die Hauptbezugsquellen der Staatseinnahmen anzugeben, die Zahlen für das mit dem 31. März 1866 schliessende Jahr hier zu wiederholen, zu welcher Zeit die Beträge folgende waren:—

Zweige	Haupteinnahme, die Kosten für Eintreibung nicht abgezogen
	£
Von Mauthgebühren	21,276,000
„ Accise	19,788,000
„ Stempel	9,560,000
„ Permanente Steuer (' <i>assessed taxes</i> ')	3,350,000
„ Einkommen- und Besitzthumsteuer*	6,390,000
„ Postamt	4,250,000
„ Kronländer	320,000
„ Verschiedene	2,878,292
Summa	67,812,292

* Der Ertrag der Einkommensteuer war bedeutend geringer als in den früheren Jahren, weil diese Taxe auf 4d. per Pfund Sterling herabgesetzt worden war.

Es dürfte interessant sein, die verschiedenen Klassen taxirter zu den Mauth- und Accise-zweigen gehörenden Gegenstände anzuführen, welche zur Staatseinnahme in dem oben erwähnten Jahre beitrugen.

Die folgenden sieben Artikel tragen fast ausschliesslich zur Mauth-einnahme bei:—

	Im Jahre 1866
	£
Zucker und Syrup	5,228,460
Thee	2,599,817
Caffee	371,495
Korn und Mehl	743,145
Geistige Getränke	3,505,176
Wein	1,407,021
Taback und Schnupftaback . .	6,274,298

Die Einnahme von Thee war in Folge der herabgesetzten Einfuhrsteuer von 6d. per Pfund bedeutend geringer.

Die verschiedenen Zweige der Accise-Einnahme waren im Jahre 1865:—

	£
Von geistigen Getränken	10,176,731
„ Malz	6,394,553
„ Lizenzen (Erlaubniss zum Verkauf geistiger Getränke)	2,144,402

Abgeschaffte ('*repealed*') *Taxen etc.*—Nachstehende Tabelle giebt den Betrag der abgeschafften, verminderten oder auferlegten Taxen, während der 15 Jahre 1851–65, an:—

Zweige	Abgeschafft oder vermindert	Auferlegt	Wirkliche Verminderung (–) oder Hinzufügung (+)
	£	£	£
Mauth	14,089,384	3,293,396	–10,795,988
Accise	5,161,000	6,380,000	+ 1,219,000
Eigenthum- und Einkommen-Steuer	18,865,000	14,764,000	– 4,101,000
Andere Steuern	2,608,000	600,000	– 2,008,000
Stempel, einschliesslich der Successions-Gebühren	1,428,000	2,411,200	+ 983,200
Summa	42,151,384	27,448,596	–14,702,788

(b.) *Zweige der Ausgabe*.—Die Hauptzweige der Ausgaben des am 31. März 1866 endenden Jahres waren:—

	£
Interessen der Staatsschuld-Verwaltung:	
Consolidirte Staatsschuld	25,904,488
Nicht consolidirte Staatsschuld	328,800
Gesamtschuld	26,233,288
Civil-Liste und Civil-Chargen jeder Art	10,250,065
Heeresmacht: Die Armee, Ordnonanz einbegriffen	14,569,279
Seemacht	19,259,788
Gesamtmacht	24,829,067
Steuereintreibungs-Kosten	4,601,937
Veranschlagte Gesamtausgabe	65,914,357

(c.) *Budget, 1866-67.*—Die Einnahme für das am 31. März 1867 endende Jahr wird auf 67,013,000*l.* und die Ausgabe auf 66,662,000*l.* geschätzt.

(d.) *Staatsschuld.*—Der Gesamtbetrag der Staatsschuld am 31. März 1866 war:—

Consolidirte Schuld:	£
Capital der unbezahlten consolidirten Schuld	773,313,229
Veranschlagtes Capital der erlöschenden Leibrenten ('terminable annuities')	21,342,020
Nicht consolidirte Schuld	8,187,700

LOCALTAXEN.—Den Betrag der Localtaxen für England und Wales giebt man hier nur bis zum Jahre 1862 an; von den andern Provinzen des Königreichs hat man keine Statistiken. Die verschiedenen Branchen der Localtaxen in England und Wales, ohne die Begräbniss-Verwaltung ('burial boards'), waren:—

Angabe der Steuern etc.	Betrag empfangen £
Kirchensteuer	241,960
Abzugskanal-Steuer	44,009
Abzugskanal - Commission der 'City of London'	17,242
Drainirung und Eindämmung (der Themse)	147,145
Beleuchtung etc.	42,194
Verbesserungs-Commission	332,983
Metropole: Local-Verwaltung	850,504
Haupt-Drainirung	150,881
Märkte und Jahrmärkte	44,547
Brücken und Fähren	108,773
Häfen	1,107,751
Local-Committees, mit Einschluss des Berichts über Districtfonds, Privatverbesserungen und Wasserversorgungs-Taxe	352,016
Armentaxe (mit Einschluss der County- und Polizeitaxe)	9,448,319
Polizeisteuer für die Stadt London	354,627
Die City of London (einschliesslich der Kohlen- und Weinsteuer, Polizei-, Bezirks- ('ward') und Abzugskanal-Steuern	421,625
Vorstadt- ('borough') Taxe	311,953
Chaussee-Steuer	1,416,629
Schlagbaumzölle	1,066,156
'Trinity House' (Piloten- und Leuchthurn-Gebühren)	374,115
Summa	16,833,429

BANKEN.—Die Gesamtzahl der verschiedenen selbstständigen ('separated') Banken in allen Provinzen des Vereinigten Königreichs war im Jahre 1864 wie folgt:—

	In England und Wales	In Schottland	In Irland	Im Vereinigten Königreich
Englische und Irische Banken nebst Zweigen	12	—	30	42
Privat-Banken und Zweige	553	—	4	557
Joint-Stock (Societät-) Banken und Zweige .	857	614	181	1,652
Summa .	1,422	614	215	2,251

Die Durchschnittszahl der Wechsel ('promissory notes') im Jahre 1864 durch die Kassenanweisungsbanken ('banks of issue') ausgegeben, betrug 3,112,725*l.*, die der Joint-Stock-Banken 33,286,921*l.*

Bericht über den durchschnittlichen Betrag der Wechsel, zahlbar nach Sicht, die in England, Wales, Schottland und Irland in dem letzten Monate der Jahre 1863, 1864 und 1865 im Umlaufe waren:—

	1863	1864	1865
In England und Wales:	£	£	£
Bank von England	21,355,000	20,330,000	21,294,000
Privat-Banken	3,220,036	3,058,931	2,977,264
Joint-Stock-Banken	2,899,560	2,754,068	2,789,654
In Schottland: Privilegirte ('chartered') Privat-&Joint-Stock-Banken .	4,639,664	4,626,796	4,903,980
Irland: Bank von Irland	2,528,500	2,491,000	2,744,950
Privat-&Joint-Stock-Banken	3,411,753	3,381,706	3,946,290
Summa .	58,054,513	56,642,501	58,656,138

LIMITED LIABILITY (beschränkte Zahlungsverantwortlichkeit).—Wir müssen hier kurz erwähnen, was für Veränderungen in neuerer Zeit in den Gesellschafts-Banken, Credit- und andern commerciellen Unternehmungen mit Bezug auf beschränkte Verantwortlichkeit stattgefunden haben. Einem Berichte über diesen Gegenstand, vor kurzem durch Herrn W. Hawes der 'Society of Arts' mitgetheilt, entnehmen wir Folgendes:—

'Noch vor wenigen Jahren gab es in England nur zwei Arten von commerciellen Verbindungen; die eine, aus Associationen oder Gesellschaften bestehend, deren zahlreiche Mitglieder vereint nach einem Ziele strebten und unter dem Schutze eines königlichen Regierungserlasses ('charter'), oder, wie dies in neuerer Zeit vorgekommen, in Folge eines besondern Parlamentsbeschlusses, welcher die Verantwortlichkeit der Theilhaber auf das Gründungscapital beschränkte, ruhig ihren Geschäften nachgehen konnten; die zweite ein Verein von Leuten, die als Theilhaber eines Unternehmens in ihrem eigenen Namen, oder vereint nach gewissen Regeln und Vorschriften, welche

ihnen zur Richtschnur dienten, ihre Geschäfte betrieben, ohne jedoch, einzeln oder vereint, der Verantwortlichkeit, mit ihrem ganzen Vermögen für die von den Theilhabern gemachten Schulden einzustehen, entbunden zu sein.

‘Die zweite Art, nämlich die Verbindung von zwei oder mehreren Personen für gemeinsame Zwecke und mit unbeschränkter Verantwortlichkeit ward indessen stets als das von der grossen Masse der Handelswelt im Vereinigten Königreiche befolgte System angesehen.

‘Die Aufhebung der Wuchergesetze, die Vermehrung von gewährten Privilegien (‘charters’) Parlamentsbeschlüsse, mit besonderer Rücksicht auf ‘limited liability,’ und unsere zunehmenden Handelsverbindungen mit Ländern, wo man letzterm Principe in Handelsangelegenheiten huldigte, trugen wesentlich dazu bei, Beschränkungen, welche der Geldeinfuhr zu Handelszwecken im Wege standen, wegzuräumen und jedem die vollste Freiheit zu gewähren, seinem eigenen Vortheil gemäss zu handeln. So entstanden die Parlamentsbeschlüsse von 1856, 1857, 1862 und zuletzt der von 1865, welcher, obgleich unvollständig, Vereine von Männern, was auch ihre Zahl sein mochte, in den Stand setzte, Geld zu borgen und den daraus gezogenen Nutzen auf eine für sie vortheilhafte Weise zu verwenden.’

Die Einführung dieses Limited-Liability-Systems hat viele neue Companien in's Leben gerufen; angesehene Fabrikbesitzer haben seit den letzten zwei Jahren dasselbe angenommen, sind nun ‘Limited-Liability’-Companien und haben die Aussicht, durch diese Neuerung grössere Resultate zu erzielen als früher.

ERZIEHUNG. — Allgemeine — Elementarerziehung in Grossbritannien und Irland — Wochen- und Sonntagsschulen — Wissenschaft und Kunst — Mittelklassprüfungen.

Das Erziehungs-System (wenn man es so nennen darf) ist im Vereinigten Königreich noch sehr verwickelt. Die Erziehung ist frei und unbeschränkt; ein Jeder kann nach Belieben Schulen errichten, Kinder darin aufnehmen und sie seinen eigenen Ansichten gemäss heranbilden. Bis zum Jahr 1833 nahm die Regierung keinen Antheil an der Volkserziehung; seit jener Zeit fing sie jedoch an, den Elementarschulen unter gewissen Bedingungen behülflich zu sein, und dies hat sie auch seitdem gethan. Die Abtheilung für Kunst und Wissenschaft (‘Department of Science and Art’), im Jahre 1853 gegründet, wird gleichfalls von der Regierung unterhalten; auch gewährt Letztere anderen Anstalten Geldbewilligungen zur Förderung wissenschaftlicher Zwecke.

Eine Uebersicht von den verschiedenen Schulklassen, Collegien und andern mit der Volkserziehung in Verbindung stehenden Anstalten wird vielleicht das beste Mittel sein, um hier das Erziehungswesen in Königreich näher zu beleuchten:—

1. Oeffentliche Elementarschulen, Wochen- und Sonntagsschulen.
2. Oeffentliche Normalschulen, um Lehrer für Elementarschulen heranzubilden.
3. Privatschulen.
4. Oeffentliche Lateinische (‘grammar’) und Stiftsschulen (‘foundation schools’).
5. Oeffentliche Schulen, wie Militair-, Marine-, Forst-, Corporations-, Arbeitshaus- und Gefängniss-Schulen etc. Lumpenschulen, Schulen für Waisenkinder, Blinde, Taubstumme, Blödsinnige und für Kinder, die in den Fabriken, Kohlengruben und chemischen Anstalten beschäftigt sind.
6. Universitäten und Collegien.
7. Haus-Unterricht, Privatklassen.
8. Mittelklass- oder Local-Prüfungen, gegründet im Jahre 1854 durch das ‘College of Preceptors,’ im Jahre 1856 durch die ‘Society of Arts’ und im Jahre 1858 durch die Universitäten von Oxford und Cambridge.
9. ‘Mechanics’ Institutes,’ Handwerker-Collegien, und Abendklassen.

Obige Anstalten gehören der allgemeinen Erziehung an. Die folgenden gewähren noch wichtigere Vortheile zum speciellen Unterrichte in den Künsten und Wissenschaften:—

Die Abtheilung für Kunst und Wissenschaft (‘Department of Science and Art’), mit Zweigschulen im ganzen Lande.

Die königliche Schule für Seebau- und Marine-Ingenieurkunst (‘Royal Schools of Naval Architecture and Marine Engineering’).

Die königliche Bergbau-Schule (‘School of Mines’).

Das Edinburger Museum für Kunst und Wissenschaft.

Museum für Irländische Industrie.

Die königliche Dubliner Gesellschaft, und viele andere.

Die königlichen Academien für Malerei und Tonkunst, die so wesentlich zur Veredlung des Nationalgeschmacks beitragen, verdienen hier besonders erwähnt zu werden.

Anwälte, Chirurgen, Apotheker etc. haben auch vorgeschriebene Prüfungen zu bestehen, ehe sie practiciren dürfen. Candidaten für die Armee, den See- und Civildienst haben gleichfalls in ihren respectiven Branchen ein Examen zu machen.

Es würde unmöglich sein, von den obenerwähnten Schulklassen hier in wenigen Zeilen einen Umriss zu geben. Sie lassen sich jedoch im allgemeinen in 2 Klassen eintheilen: 1. *Private* und 2. *Oeffentliche*. Die Erstern bestehen ausschliesslich durch das von den Schülern bezahlte Schulgeld und nehmen grösstentheils die Kinder auf, welche den mittlern und höhern Ständen angehören. Die zweite Klasse schliesst alle Schulen ein, die ihr Einkommen aus andern Quellen als aus den eben

erwähnten beziehen. Zu dieser Klasse gehört der wichtigste Zweig, nämlich die Erziehung der arbeitenden Bevölkerung, und es dürfte in interessant sein, hier die bei ihrer Erziehung angewandten Mittel anzuführen.

Elementar-Unterricht. 1. Grossbritannien.—

Es ist bereits erwähnt worden, dass die Regierung im Jahre 1833 anfang, die Elementarschulen im Königreiche zu unterstützen. Bis zu jener Zeit verdankte die Volkserziehung ihr Bestehen der Freigebigkeit des Publicums und dem Religionseifer, die sich durch die beiden grossen Gesellschaften, 'British' und 'National Societies,' aussprachen.

Vom Jahre 1839 an bis 1866 gab die Regierung die Summe von 1,724,000l. Sterling für die Volkserziehung in Grossbritannien aus. Die für Erziehungszwecke alljährlich vom Parlamente bewilligten Summen verwaltet das 'Department of Education.' Der Zweck dieser Geldbewilligungen ist, die Kindererziehung derjenigen Klassen zu fördern, welche sich durch Handarbeit ernähren. Die auf diese Geldbewilligungen sich beziehenden Bedingungen sind zu ausgedehnt, um hier erwähnt werden zu können; jedoch findet man sie in dem Berichte der Committee des Erziehungsraths ('Council of Education').

Dem letzten Berichte für das Jahr 1865 zu Folge besuchten die Erziehungs-Inspectoren 12,950 Schulen oder Abtheilungen solcher Schulen, unter besondern Lehrern stehend. Die Zahl der bei diesen Inspectionen anwesenden Kinder betrug 1,246,055, die der befugten ('certificated') Lehrer 11,266, der Hülflehrer 933 und der Lehrlinge 11,383. Unter der Gesamtzahl von Schulen bestanden 2,282 nur für Knaben, 1,888 nur für Mädchen; in 5,585 wurden Knaben und Mädchen zusammen unterrichtet; 1,707 waren für kleine Kinder (unter sieben Jahren) bestimmt und 1,215 für Abendschulen. Von der Gesamtzahl der in den Schulen anwesenden Kinder waren 698,221 Knaben und 547,834 Mädchen.

Man muss jedoch bedenken, dass es im Lande viele Elementarschulen giebt, welche nicht unter der Aufsicht der Erziehungs-Verwaltung stehen.

Die folgende Tabelle giebt die verschiedenen Zweige der Einnahmen und Ausgaben von 7,770 im Jahre 1865 inspectirten Schulen an:—

Zweige der Einnahme	Betrag	Zweige der Ausgabe	Betrag
	£		£
Stiftungen .	56,424	Lehrersalar .	980,056
Freiwillige Beiträge }	356,810	Bücher und Apparate }	53,389
Schulpence .	424,547	Verschiedene	256,956
Regierungszuschuss }	322,846		
Andere Einnahmen }	98,299		
Summa	1,258,926	Summa	1,290,401

Die Gesamt-Ein- und Ausgaben für jedes die Schule besuchende Kind waren:—

	In England und Wales	In Schottland
Einschliesslich des Regierungszuschusses:	£ s. d.	£ s. d.
Einnahme	1 5 8½	—*
Ausgabe	1 6 5½	—
Den Regierungszuschuss nicht einbegriffen:		
Einnahme	0 18 2½	0 18 1½
Ausgabe	0 18 11½	0 18 0½

* Die Regierungs-Geldzuschüsse werden in den Schottischen Schulen direct an die Lehrer und Lehrschüler ('pupil-teachers') bezahlt und bilden keinen Theil derjenigen Fonds, welche den Vorstehern zur Verfügung stehen.

Alter der Schüler.—Im Jahre 1865 waren 71 Procent der Gesamtzahl unter 10 Jahre alt, 27 Procent zwischen 10 und 14 und 2 Procent über 14.

Salar der Lehrer.—Das jährliche Durchschnittssalar der Lehrer in solchen Schulen, welche von der Regierung in Grossbritannien Geldzuschüsse erhalten, betrug im Jahre 1865:—

	Befugte ('certificated')	Unbefugte ('uncertificated')
	£ s. d.	£ s. d.
Lehrer	86 10 9	58 16 4
Lehrerinnen	55 2 1	38 8 5
Kleinkinder-Lehrerinnen .	52 3 3	3 1 1

2. National-Schulen, Irland.—Der Elementar-Unterricht in Irland steht unter der Leitung der Volkserziehungsbehörden ('Board of National Education'). In den Irischen Schulen wird der Religionsunterricht vom allgemeinen Unterrichte getrennt ertheilt. Die Zahl der Irischen Nationalschulen betrug am Ende des Jahres 1864 6,263, welche durchschnittlich 315,108 Kinder besuchten. Die Gesamt-Einnahmen betrugen 340,748l., von welcher Summe die Regierung 251,016l. bewilligte. Es gab auch 36 Muster- und 55 gewöhnliche Ackerbau- und zugleich Zeit 3 Gartenschulen. Die Saläre der Lehrer schwankten für Lehrer ersten Ranges zwischen 38l. und 52l. jährlich, für Lehrerinnen zwischen 30l. und 42l.; andere weniger befähigte Lehrer erhielten verschiedene geringere Saläre.

Allgemeine Statistiken.—Hier folgt der letzte Bericht von der Gesamtzahl der in den Klassschulen von England und Wales unterrichteten Personen:—

	Schulen	Schüler		
		Knaben	Mädchen	Summa
Wochentagschulen:				
Oeffentliche .	24,563	911,152	764,006	1,675,158
Privat- .	34,412	389,607	470,697	860,304
Summa .	58,975	1,300,759	1,234,703	2,535,462
Sonntagsschulen .	33,872	1,189,725	1,221,829	2,411,554

Obiger Bericht vom Jahre 1858 bezieht sich auf die Schulen aller Confessionen.

Nach dem Census vom Jahre 1861 war die Gesamtzahl von Schülern (so angegeben) jeden Geschlechts in jeder Provinz des Königreichs folgende:—

Provinzen	Schüler		
	Knaben	Mädchen	Summa
England und Wales	1,552,738	1,597,310	3,150,048
Schottland . .	241,803	225,253	467,056
Irland . . .	342,997	305,380	648,377
Im ganzen Vereinigten Königreiche . .	2,137,538	2,127,943	4,265,481

Erziehung in Wissenschaft und Kunst.—

Dem letzten Berichte des 'Department of Science and Art' zu Folge bestanden im Jahre 1865, 158 Wissenschafts-Schulen und Anstalten (ohne sechs Navigations-Schulen einzurechnen), in welchen wissenschaftlicher Unterricht von geprüften und befugten Lehrern erteilt wurde. Von diesen 158 Schulen waren 121 in England, 8 in Schottland und 29 in Irland. Die Klassenzahl betrug 484 und die der Schüler 6,835.

An Kunstschulen, welche 16,621 Schüler besuchten und den Unterricht in den Elementarschulen auf 89,267 Kinder erstreckten, gab es 92.

Ausser dem Beistande, welchen das Departement für Wissenschaft und Kunst den arbeitenden Klassen gewährt, um sie in denjenigen verschiedenen Zweigen der Kunst und Wissenschaft zu unterrichten, welche sich auf ihre respectiven Gewerbe beziehen, befasste sich jenes Departement noch mit der Verwaltung des South-Kensington-Museum, eine Central-Niederlage für wissenschaftliche und Kunstgegenstände, die, so weit dies möglich ist, im ganzen Königreiche practisch benutzt werden.

Mittelklass-Prüfungen.—Einen bedeutenden Aufschwung zur Förderung einer gediegenen Erziehung unter den mittleren Klassen gab die im Jahre 1854 gegründete Institution des Lehrercollegiums ('College of Preceptors') zur Prüfung von Schülern und Lehrern. Im Jahre 1856 wandte die Gesellschaft für Künste ('Society of Arts') ihr Prüfungssystem bei den die 'Mechanics' Institution' besuchenden Personen an. Die Universitäten von Oxford und Cambridge gründeten im Jahre 1858 die sogenannten Universitäts-Local-Prüfungen ('University Local Examinations'). Die Anzahl der von Letztern in den verschiedenen Landes-theilen geprüften Candidaten stieg von 587 im Jahre 1854 auf 5,438 am Schlusse des Jahres 1866. Die Prüfungen der Universität Cambridge, des Lehrercollegiums und der Gesellschaft für Künste stehen beiden Geschlechtern offen, die der Universität Oxford sind bis jetzt nur auf das männliche Geschlecht beschränkt.

Die Anzahl der im Jahre 1866 zu den Prü-

fungen sich meldenden Candidaten war folgende:—

Zu den Prüfungen der Universität Oxford	1,228
Zu den Prüfungen der Universität Cambridge	1,538
Zu den Prüfungen des Lehrercollegiums	1,575
Zu den Prüfungen der Gesellschaft für Künste	1,097

Es ist fast unmöglich, die Wichtigkeit jener Prüfungen, welche schon eine so grosse Verbesserung in der Erziehung der mittlern Klassen und namentlich der Privatschulen erzielt haben, zu unterschätzen.

VERSICHERUNGS-ANSTALTEN. — Leben — Marine — Feuer.

(a.) **Lebens- und Marine-Versicherung.**—Statistiken über die Zahl von Lebens- und Marine-Versicherungen sind nicht vorhanden, weil jene Anstalten von ihren Angelegenheiten keine Berichte abzugeben haben. Die Lebensversicherungen haben indessen in den letzten 15 Jahren sehr zugenommen.

(b.) **Feuerversicherung.**—Was die Versicherung von Eigenthum und Pachtbesitz anbetrifft, worauf den respectiven Angaben gemäss alljährlich die Taxen bezahlt werden, so geben die Statistiken über Stempelgebühren den Werth der versicherten Gegenstände an. Im Jahre 1864 war der Betrag des versicherten Eigenthums in jeder Provinz des Königreichs folgender:—

Provinzen	Veranschlagter Werth des versicherten Eigenthums	Veranschlagter Werth des versicherten Pachtbesitzthums
England und Wales	£ 1,101,444,000	£ 69,455,000
Schottland . . .	92,234,000	6,564,000
Irland	58,202,000	1,151,000
Summa	1,251,880,000	77,170,000

Für Vieh auf Pachthöfen wird keine Stempelsteuer bezahlt. Die Feuer-Versicherungstaxe beträgt 1s. 6d. für jedes 100l.

ANSTALTEN ZUM BESTEN DER ACKERBAUER UND HANDWERKER.—**Sparkassen** — **Postamtsparkassen** — **Leibrenten- und Lebensversicherungen** — **Freundschafts-, Vereins-, Leih-, Bau- und Landgesellschaften** — **Arbeiterclubs.**

(a.) **Sparkassen.**—Es giebt gegenwärtig zweierlei Sparkassen: 1. Diejenigen, welche seit dem Jahre 1817 existirten, und 2. Die Postamtssparkassen, im Jahre 1861 gegründet.

Unter der Leitung des 'Board of Trade' (Handelsministerium) hat man kürzlich auch zum Versuche eine Depositenbank für Matrosen ('Experimental Deposit Bank') in Liverpool errichtet. Man zahlt keine Interessen auf das Niedergelegte, aber ein Matrose kann dort zu jeder Zeit Geldsummen deponiren und wieder

ohne Kündigung zurückziehen. Matrosen, im Begriffe abzusegeln, können ihr Geld von dort in die Sparkassen schicken und erhalten dann 3 Procent per annum.

Die folgende Tabelle giebt, in Klassen eingetheilt, die Zahl der einzelnen Deponenten, Wohlthätigkeits-Anstalten und Unterstützungs-Vereine ('Friendly Societies') an, welche ihr Geld in die alten Sparkassen deponirten, auch den Betrag der niedergelegten Summen, einem Berichte nach, welchen die Banken am 20. November 1865 den Commissären der National-schuld erstatteten.

	Zahl der Deponenten	Betrag der deponirten Summe, mit Einschuss der Zinsen	Durchschnittsbetrag jeder einzelnen Rechnung
Am 20. November 1865			
		£	£ s. d.
Nicht über £1 . . .	251,820	69,058	0 5 5

Summa . . .	1,457,567	38,444,007	26 7 8

* Die hier angegebene Zahl und respective Beträge der Freundschafts-Vereine ('friendly societies') beziehen sich nur auf solche Gesellschaften, deren Geld in den Sparkassen angelegt ist, und schliessen nicht jene ein, die es direct den Regierungsbevollmächtigten ('Commissioners') anvertrauten.

Die Zahl der am 20. November 1865 mit den Regierungsbevollmächtigten in directer Rechnung stehenden Freundschafts-Vereine betrug 545, die niedergelegte Summe 1,915,703£., der Durchschnittsbetrag jeder einzelnen Rechnung 3,496£.

(b.) *Postamts-Sparkassen.*—Der Zustand der Postamts-Sparkassen am 31. December 1865 war folgender:—

Anzahl der Postamts-Sparkassen . . .	3,321
Zahl der bis zum 16. September 1861 eingetragenen Deponenten . . .	3,895,135
Gesammtbetrag der angelegten Summen . . .	11,834,979£.
Durchschnittsbetrag jeder einzelnen Summe . . .	3£. 0s. 9d.
Gesammtbetrag der Rückzahlungen seit dem 16. September 1861 . . .	5,619,250£.
Durchschnittsbetrag jeder zurückbezahlten Summe . . .	5£. 11s. 1d.
Verwaltungskosten . . .	141,375£.

Durchschnittskosten für jede deponirte oder zurückgeforderte Summe . . .	6 $\frac{2}{10}$ £.
Gesammtbetrag, Zinsen einbezogen, der den sämtlichen in Rechnung stehenden Deponenten schuldigen Summe am 31. December 1865 . . .	6,526,400£.
Durchschnittsbetrag der jedem einzelnen Deponenten am 31. December 1865 schuldigen Summe . . .	10£. 13s. 4d.

Es giebt Postamtssparkassen in allen Geldversendungs-Aemtern ('money order offices,') des Vereinigten Königreichs, die täglich sowohl für Ein- als Auszahlungen zu den für Geldversendungen bestimmten Geschäftsstunden dem Publicum geöffnet sind.

An diesen Kassen werden Geldniederlagen von einem oder mehren Schillingen angenommen; Niemand aber kann, die Zinsen ungeachtet, in einem Jahre mehr als 30£., oder im Ganzen über 150£., anlegen.

Man gestattet 2 $\frac{1}{2}$ Procent jährliche Zinsen, bis die deponirte Summe auf 200£. angewachsen ist; dann hören die Zinsen auf. Dieser Berechnung nach zahlt man jährlich auf jedes volle Pfund Sterling 6d. und monatlich $\frac{1}{2}$ Penny, und rechnet allemal vom ersten Tage desjenigen Monats an, der dem Tage, an welchem das Geld deponirt wurde, folgt, bis zum letzten Tage des Monats, welcher dem Tage, an dem das Geld zurückgezogen wird, vorangeht. Die Zinsen werden jedes Jahr am 31. December dem angelegten Capitale hinzugefügt.

(c.) *Leibrenten und Versicherungen* ('annuities and insurances').—Ein anderer Hauptzug in Verbindung mit Sparkassen sind die Leibrenten-Bewilligungen. Die alten Sparkassen gewähren den arbeitenden Klassen Leibrenten, welche die Summe von 30£. nicht übersteigen dürfen, jedoch, in Folge einer in neuerer Zeit mit den Postamts-Sparkassen getroffenen Uebereinkunft, bewilligt man jetzt auch Leibrenten und Lebensversicherungen. Hier folgen die vom 'Insurance and Annuity Office' durch die Regierung erlassenen Vorschriften.

Der Oberpostdirector ist dem Parlamentsbeschlusse, Königliche Gesetzsammlung, cap. 43, p. 27 & 28, gemäss ermächtigt, das Leben von Personen beiden Geschlechts vom 16. bis zum 60. Jahre, für eine Summe, die nicht weniger als 20£. und nicht mehr als 100£. betragen darf, zu versichern. Derselbe Beschluss ermächtigt ihn gleichfalls, Personen beiden Geschlechts, vom 10. Jahre an und darüber *sogleich* oder *später* stattfindende Leibrenten ('immediate or deferred annuities') im Betrage von nicht mehr als 20£. zu bewilligen. Personen, deren Leben auf diese Weise versichert ward, oder denen Leibrenten bewilligt wurden, geniessen, was pünktliche Bezahlung anbetrifft, der besondern Regierungsgarantie.

Bestimmte Postämter, deren Namen man auf jedem Postbureau erfragen kann, stehen für

solche Lebens-Versicherungszwecke dem Publicum offen, und gedruckte Formula, mit den nöthigen Erläuterungen, zum Ausfüllen und Einsenden, kann man sich auf den Postämtern verschaffen.

Gedruckte Tabellen mit Preisangaben für Lebensversicherungen, für Leibrenten, die unmittelbar oder später stattfinden, für monatliche Geldbewilligungen *ohne* Zurückerstattung der Einkaufssumme, auch Preisangaben für später eintretende Leibrenten oder monatliche Geldbewilligungen *mit* Zurückerstattung der Einkaufssumme, kann man sich auf den für solche Zwecke offen stehenden Postämtern verschaffen. Der Preis der für Lebensversicherungen und Leibrenten *ohne* Zurückerstattung der Einkaufssumme bestimmten Tabellen beträgt 3*sd.*, der für Leibrenten *mit* Zurückzahlung der Einkaufssumme 2*d.* Wenn sie mit der Post geschickt werden, so betragen die Kosten im einen Falle 5*d.*, im andern 3*d.*

Die für Lebensversicherungen geforderten Prämien schwanken mit dem Alter der Personen, deren Leben versichert wird, und mit der Art und Weise, in welcher sie gezahlt werden.

Die auf irgend ein Leben gewährte Leibrente oder monatliche Bewilligung darf nicht über 50*l.* jährlich oder 4*l.* 3*s.* 4*d.* monatlich hinausgehen; aber die Käufer brauchen den ganzen Betrag einer solchen Leibrente oder Bewilligung nicht zu derselben Zeit zu kaufen. Sie können damit anfangen einen Theil davon zu kaufen, der ihren Mitteln entspricht, und ihren Ankauf von Zeit zu Zeit vermehren, jenachdem ihre Umstände ihnen dies erlauben.

Mann und Frau können sich beide zu der vollen Summe von 100*l.* versichern und können beide eine Leibrente von 50*l.* oder eine monatliche Bewilligung von 4*l.* 3*s.* 4*d.* kaufen. Irgend welche zwei Personen können eine Leibrente auf ihr gemeinsames Leben kaufen, mit oder ohne Fortgang der Leibrente für den Ueberlebenden.

Personen, welche für ihre Lebensversicherung oder für den Ankauf von Leibrenten oder monatlichen Bewilligungen contrahiren, können ihre periodischen Prämien oder Abschlagszahlungen des Kaufgeldes an irgend ein Postbureau, welches für diesen Zweck entweder schon geöffnet ist oder noch geöffnet werden mag, entrichten, wie es ihnen am besten passt.

Personen, welche beabsichtigen, ihr Leben zu versichern oder aufgeschobene (*deferred*) monatliche Bewilligungen zu kaufen, müssen auf ihre eignen Kosten Geburts- oder Taufscheine oder diejenigen anderen Beweise für ihr Alter herbeischaffen, welche man von ihnen fordert; aber es wird nicht von ihnen verlangt, dass sie für die ärztliche Untersuchung oder für irgend eine Nachfrage bezahlen, welcher Generalpostmeister für nöthig hält, über ihre Gesundheit, ihre Gewohnheiten, ihr Alter, und ihre Beschäftigung anzustellen, oder für die Ausfertigung irgend welcher Contracte, welche in Folge ihrer Vorschläge gemacht werden, oder für die Uebersendung irgend welcher Correspondenz, welche aus ihren Anträgen

zwischen ihnen und dem Generalpostmeister entsteht, da alle diese Kosten in den Prämien eingeschlossen sind, welche sie, im Einklang mit den zu diesem Zwecke entworfenen Tabellen für die Versicherung ihres Lebens oder den Ankauf aufgeschobener monatlicher Bewilligungen zu zahlen haben.

Personen, welche sofortige oder aufgeschobene halbjährlich zahlbare Leibrenten zu kaufen wünschen, müssen auf ihre eigenen Kosten Geburts- oder Taufscheine, oder andere Beweise für ihr Alter, herbeischaffen, welche man von ihnen fordert; und da die Prämien, welche für die Bewilligung solcher Leibrenten in den zu diesem Zweck entworfenen Tabellen festgesetzt sind, keine Kosten und Auslagen einschliessen, müssen sie zur Zeit des Auslaes eine Gebühr von 1*s.* für jedes Pfund der gekauften Leibrente entrichten.

Die Zahl der am Ende des Jahres 1865 in Kraft stehenden Lebensversicherungen betrug 560 und die versicherte Gesamtsumme 41,734*l.*; 94 sofortige and 54 aufgeschobene Leibrenten wurden während desselben Zeitraums entweder gekauft, oder es wurde wegen des Ankaufs derselben verhandelt. Das Bestehen der Leibrenten- und Lebensversicherungs-Bureau's des Postamts ist den arbeitenden Klassen Englands noch nicht allgemein bekannt; aber es kann kaum ein Zweifel darüber bestehen, dass im Laufe einiger Jahre die industriellen Klassen sich in grossem Umfang der Vortheile bedienen werden, welche die beiden Branchen der Lebensversicherung und der Leibrenten darbieten.

(*d.*) *Gemeinnützige Gesellschaften* (*'friendly societies'*).—Der Registrator der gemeinnützigen Gesellschaften erklärt in seinem letzten Berichte, dass die Zwecke, für welche dieselben, unter den auf solche Gesellschaften Anwendung erleidenden Statuten, gegründet wurden, anfänglich auf die Versicherung einer Geldsumme beschränkt waren, welche bei der Geburt des Kindes eines Mitglieds, oder bei dem Tode eines Mitglieds, oder für die Begräbnisskosten der Frau oder des Kindes eines Mitglieds, ausbezahlt werden sollte; sowie für die Unterstützung oder Erhaltung der Mitglieder, ihrer Männer, Frauen, Kinder, Brüder, Schwestern, Neffen und Nichten, im Alter, in Krankheit oder Wittwenhum; oder für die Ausstattung von Mitgliedern, oder der von Mitgliedern Ernannten, in irgend einem Lebensalter und für irgend einen Zweck, welcher durch einen der Haupt-Staatssecreteire Ihrer Majestät, als den Vollmachten und den Privilegien der Acte entsprechend, autorisirt werden möchte. Unter diesen Bestimmungen sind die Zwecke, auf welche die Statuten ursprünglich anwendbar waren, bedeutend erweitert worden. Der Staatssecretair hat ihre Anwendung auf Hilfeleistungen an Mitglieder autorisirt, welche genöthigt sind, zu reisen, um Beschäftigung zu finden; auf die Bewilligung zeitweiser Unterstützung an Mitglieder in bedrängten Umständen; auf die

Gewährung von Unterstützung und Unterhalt an Mitglieder, in Fällen von Lahmheit, Blindheit, oder zufälliger körperlicher Verletzung; auf den Ankauf von Kohlen und andern den Mitgliedern zu verabreichenden Lebensbedürfnissen; auf die Anhäufung der Zinsen der überschüssigen Summe, welche nach Zahlung der Lebensversicherung restirt, zum Besten irgend eines Mitgliedes; auf die Beschaffung von Beistand im Falle eines Schiffbruchs, oder Verlust und Schaden an Böten oder Netzen, und auf die Versicherung von Mitgliedern gegen Verlust durch Krankheit oder Tod des beim Handel oder Landbau benutzten Viehes und auf die Einrichtung von Arbeiterclubs. Alle diese Zwecke sind adoptirt worden, und Gesellschaften zur Durchführung eines oder mehrerer derselben bestehen in allen Theilen des Landes. Im December des Jahres 1865 versandte der Registrator dieser Gesellschaften 22,834 Exemplare des Jahresberichts über den allgemeinen Stand der Finanzen und die Erfolge gemeinnütziger Gesellschaften und eine gleiche Zahl von Exemplaren des Berichts über Krankheit und Sterblichkeit, zu deren Ablegung die gemeinnützigen Gesellschaften, in Gemässheit mit c. 63 s. 45 des 18. und 19. Vict. verpflichtet sind. Von den Jahresberichten hatte man bis zum 1. Juli, 1866 nur 10,345 und von den fünfjährigen Berichten nur 7,706 zurückerhalten, und in 170 derselben fehlte die Angabe des Namens der Gesellschaft und des Ortes, an welchem sie bestand. Wenn der Bericht über den allgemeinen Sachbestand unterbleibt, setzen die Beamten sich einer Geldbusse von nicht mehr als 20s. aus; aber auf dem Versäumniss der Einsendung des fünfjährigen Berichts über Krankheit und Sterblichkeit steht keine Strafe oder Geldbusse. Aus den 10,345 Berichten erhellt, dass die Zahl der Mitglieder sich auf 1,374,425 und der Gesamt-Kassenbestand auf 5,362,028l. beläuft.

(e) *Co-operative Gesellschaften.*—Aus den Berichten, welche in Gemässheit mit cap. 87. des 25. und 26. Vict. von 417 dieser Gesellschaften für das mit dem 31. December 1865 endende Jahr an den Registrator eingesandt wurden, ergibt sich, dass:—

Die Zahl der Mitglieder sich belief auf	148,586
Die Zahl der im Laufe des Jahres aufgenommenen Mitglieder	29,182
Die Zahl der Ausgetretenen	11,815
Gesammtbetrag der auf Actien erhaltenen oder creditirten Summen seit der Gründung der Gesellschaft	£ 1,017,106
Betrag, empfangen auf Actien während des Jahres	307,356
Betrag der Summe, von Mitgliedern im Laufe des Jahres zurückgefordert	180,812
Betrag des Actien Capitals am 31. December 1865	761,313
Betrag des Anleihe Capitals am 31. December 1865	112,733

Betrag, erhalten auf Anleihen während des Jahres	£ 34,631
Anleihen, zurückbezahlt während des Jahres	19,101
Zinsbetrag für das laufende Jahr	33,686
Baarbetrag der während des Jahres eingekauften Waaren	3,063,088
Baarbetrag der im Jahr verkauften Waaren	3,337,837
Jahresgewinn	279,266
Gesammtbetrag der Jahresausgaben, einschliesslich der Löhne, Mithen, Taxen, Gebühren und sonstiger Arbeits- oder Herstellungskosten	190,538
Baarbetrag am 31. December, in den Händen der Banquiers, Kassenführer und Angestellten	136,923
Gesammtbetrag oder Werth des sämtlichen Besitzthums der Gesellschaften am 31. Dec. 1865	1,105,685
Gesammtbetrag der seitens der Gesellschaften am 31. Dec. 1865 schuldenden Summe	273,480

Aber nur eine sehr kleine Anzahl der obigen Gesellschaften fällt unter die Bezeichnung von co-operativen, sofern dieselbe auf Handwerke angewandt wird; die Mehrzahl besteht aus co-operativen Vorrathshäusern, zum Verkauf von Krämerwaaren etc. zu En-gros-Preisen. Dennoch gewähren sie den arbeitenden Klassen beträchtliche Vortheile, da sie dieselben in den Stand setzen, ihren Lebensbedarf in den Vorrathshäusern viel billiger einzukaufen, als dies in den Läden der Kleinhändler möglich ist, während die, in den Vorrathshäusern der Regel nach ausbedungene Zahlung in baarem Gelde bei den Käufern eine sparsame Lebensweise befördert.

(f.) *Leih-Gesellschaften.*—Aus den Berichten, welche, in Gemässheit mit c. 110 des 3. und 4. Vict., von 865 dieser Gesellschaften für das mit dem 31. December 1865 endende Jahr an den Registrator eingesandt wurden, ergibt sich, dass:—

Die von Depositoren und Actionären wirklich vorgeschossene und bezahlte Summe betrug	£ 253,523
Die am 31. December 1865 in den Händen von Borgern befindlichen Summen	518,866
Der im Laufe des Jahres circulirte Gesamtbetrag	857,844
Die Zahl von Gesuchen um Anleihen während des Jahres	184,171
Die Zahl von Borgern, denen während des Jahres Anleihen bewilligt wurden	170,318
Die für Gesuch- und Nachfrage-Formulare während des Jahres gezahlte Summe	10,435
Die von Borgern oder Bürgschaften während des Jahres bezahlten Zinsen	42,140

	£
Der Brutto-Ertrag für die von Borgern gezahlten und für Gesuch- und Nachfrage - Formulare erhaltenen Summen	58,509
Verwaltungsausgaben des Jahres	21,345
An Depositen oder Actionäre gezahlte Zinsen	32,859
Reinertrag, nach Abzug der an Depositen und Actionäre gezahlten Zinsen und der Verwaltungsausgaben	6,391
Zahl der gerichtlichen Citationen	13,208
Zahl der gerichtlichen Beschlagnahmen	2,101
Summe, zu deren Wiedererlangung die Citationen erlassen wurden	31,586
Wiedererlangte Summe	23,991
Betrag der von den Gesellschaften zu zahlenden Kosten	2,940
Betrag der von Borgern oder Bürgerschaften gezahlten Kosten	2,390

(g.) *Gemeinnützige Bau-Gesellschaften.* — Diese Gesellschaften bestehen in vielen Theilen des Königreichs; aber es fehlt an Berichten über die wirkliche Zahl ihrer Mitglieder, sowie über ihre Verwaltung. Man weiss jedoch, dass diese Gesellschaften viele Tausend Mitglieder zählen, und dass ihre Thätigkeit einen weiten Kreis umfasst.

(h.) *Land-Gesellschaften.* — Land-Gesellschaften wurden ursprünglich für einen politischen Zweck gebildet, den nämlich, Mitglieder aller Klassen, und besonders der niederen Klassen, in den Stand zu setzen, das Freigut-Wahlrecht ('freehold franchise') in den Grafschaften billig zu erwerben. Gegenwärtig ist der Hauptzweck dieser Gesellschaften, denselben Klassen die Mittel zu bieten, Besitzer von Freigütern zu werden und Häuser darauf zu bauen. Die Gesellschaften kaufen zuerst grosse Landstücke und verkaufen dieselben sodann an Mitglieder, denen sie ebenfalls Geldvorschüsse zu Bauten bewilligen. Sowohl das Kaufgeld für das Land als die Geldvorschüsse können den Gesellschaften von den Mitgliedern in Raten zurückgezahlt werden, welche sich gewöhnlich auf einen Zeitraum von etwa zehn Jahren vertheilen.

In einigen Gesellschaften müssen die Mitglieder Actionäre werden, und nehmen dann, ausser an den übrigen dargebotenen Vortheilen, an den gewöhnlichen Gewinnsten der Compagnie

Theil. Vollständige Berichte über die Geschäfte der Landgesellschaften sind nicht vorhanden; aber von ihrer Bedeutung mögen die folgenden, dem letzten Bericht einer der grössten Gesellschaften, der 'Conservative Land Society,' entlehnten Zahlen eine Vorstellung geben:—

Gesamtzahl der vom September 1852 bis Michaeli 1866 ausgegebenen Actien	Zahl 25,674
Werth des seit der Gründung der Gesellschaft, bis Michaeli 1866 verkauften Landes	£ 493,091

Die Wirksamkeit der 'National Freehold Land Society' und der 'British Land Company' ist sogar von noch grösserem Umfang als die der 'Conservative Society.'

Der Hauptpunkt jedoch, welcher Beachtung verdient, ist der, dass durch den Beistand dieser Gesellschaften fleissige Handwerker im Laufe weniger Jahre Besitzer kleiner Stücke zinsfreien Landes werden und in miethfreien Häusern darauf wohnen können.

(i.) *Arbeiter-Clubs.* — Durch die Bemühungen der 'Working Men's Club and Institute Company' sind während der letzten fünf Jahre ungefähr 300 Clubs mit 60,000 Mitgliedern gegründet worden. Ein und vierzig von diesen Clubs liegen in den hauptstädtischen Districten. Die 'Union' erklärt, dass dies nur die Erstlingsfrucht von dem ist, was sie, durch Veredlung der Arbeiter und Austrocknung der Quellen vieler Uebel, welche verschiedene andere wohlthätige Gesellschaften nur zu verdecken streben, zu erreichen hofft. Der Zweck der 'Union' ist, den Arbeitern bei der Gründung von Clubs und Instituten Hilfe zu leisten, wo sie sich, mit den Mitteln zur Erholung und Erfrischung, zu Conversation, zu Geschäften und geistiger Ausbildung versammeln können, ohne für diese Zwecke auf das Bierhaus angewiesen zu sein.

Wenn man den grossen Fortschritt bedenkt, welcher während des letzten halben Jahrhunderts in der Lebensweise der obren und mittleren Gesellschaftsklassen stattgefunden hat, so scheint die Hoffnung nicht ungegründet, dass ein entsprechender Fortschritt sich auch in den unteren Klassen der Gesellschaft offenbaren und dass die Clubs ein wirksames Mittel werden mögen, diesen so wünschenswerthen Zweck zu erreichen.

ZWEITER THEIL.—DIE BRITISCHEN COLONIEEN UND ABHÄNGIGEN STAATEN.

Statistischer Bericht über den Zustand der Britischen Colonien und abhängigen Staaten im Jahre 1864.

Colonien und abhängige Staaten	Flächen- inhalt	Gesamt- bevölkerung	Finanzen		Staats- schuld *	Handel

* In der obigen Tabelle ist die Bevölkerung von Malta und Gibraltar mit Ausschluss des Militärs angegeben. Die Zahlen für Finanzen, Staatsschuld, Einfuhr und Ausfuhr representiren Tausende von Pfund Sterling, und die für die Schifffahrt Tausende von Tonnen. Die Schifffahrt bezieht sich nur auf den auswärtigen Handel.

† Nur nach den Vereinigten Staaten.

Die vorliegende Skizze der Zustände des Vereinigten Königreichs würde unvollständig sein ohne einen Hinblick auf die zahlreichen, von der Britischen Krone abhängigen, Staaten. Der Vortheile, welche der Mutterstaat durch seine gewaltigen colonialen Besitzungen genießt, sind viele. Einerseits gewähren sie einen Abfluss für die überschüssige Bevölkerung des Mutterlandes und liefern grosse Vorräthe von Rohmaterialien, deren die einheimischen Fabricanten in hohem Grade bedürftig sind; andererseits sind sie bedeutende Consumenten Britischer Producte und Fabricate.

Ausserdem ist es kein geringer Vortheil für ein handeltreibendes Volk wie das Englische, in allen Welttheilen Häfen zu besitzen, wo seine Kauffahrer die vorüberziehenden Stürme in Sicherheit bestehen oder in Kriegszeiten vor feindlichen Kreuzern Zuflucht finden können.

Ein anderer und keineswegs der geringste Vortheil, welchen Grossbritannien seinen colonialen Besitzungen verdankt, ist die weltweite Verbreitung der Englischen Sprache, Religion und Regierungsform. Von Norden nach Süden und von Osten nach Westen beherrscht der Britische Scepter ein Reich, von dem man in Wahrheit behaupten kann, dass die Sonne nie darüber untergeht, und welches mehr als einhundert und funfzig Millionen Seelen zu

seinen Unterthanen zählt, die alle mehr oder weniger Britischen Gesetzen, Gewohnheiten und Einflüssen unterworfen sind.

Die hauptsächlichsten Handelsproducte der wichtigeren Colonien sind die folgenden:

Indien. Kaffee, rohe Baumwolle, Färbestoffe, Häute, indischer Hanf, Oele, Opium, Reis, Salpeter, Samen, Kaschmir-Shawle, rohe Seide, Gewürze, Bau- und Brennholz.—*Ceylon.* Zimmet, Kaffee, Cocosnussöl.—*Insel Mauritius.* Rum, Zucker.

Natal. Häute, Elfenbein und Wolle.—*Cap der guten Hoffnung.* Kupfererz, Häute, Wein, und Wolle.

Canada. Thiere, thierische Producte, Agri-culturproducte, Fische, Perl- und Pottasche und Bauholz.—*Prinz Edward's Insel.* Fische, Getreide und Rindvieh.—*Neufundland.* Kabeljau, Oele und Seehundsfelle.—*Jamaica.* Kaffee, Ingwer, Piment, Rum, Zucker und Blauholz.—*Barbadoes.* Fische, Melasse, Reis, Rum und Zucker.—*Trinidad.* Cacao, Melasse, Rum und Zucker.—*Britisch-Guiana.* Melasse, Rum und Zucker.

Neu-Süd-Wales. Gold, Häute, Talg und, Wolle.—*Victoria.* Gold, Talg und Wolle.—*Süd-Australien.* Kupfer, Korn, Gold und Wolle.—*Neu-Seeland.* Gold und Wolle.—*Queensland.* Gold, Häute, Talg und Wolle.

STATISTISCHE BEMERKUNGEN ÜBER DEN ZUSTAND DES HANDELS UND DER GEWERBE IM VEREINIGTEN KÖNIGREICH,

ALS EINLEITUNG ZU DEN VERSCHIEDENEN KLASSEN DER PARISER ALLGEMEINEN AUSSTELLUNG VOM JAHRE 1867.

GRUPPE II.

(KLASSEN VI. bis XIII.)

APPARATE UND ANWENDUNG DER INDUSTRIEWISSENSCHAFT.

Klasse VI.

BUCHDRUCKERKUNST UND BÜCHER.

Die Buchdruckerkunst ist in dem Vereinigten Königreich zu grosser Vollkommenheit gebracht worden, und einen der besten Beweise für ihre Entwicklung liefert vielleicht die tägliche Herstellung von Tagesblättern wie die 'Times' und anderer hervorragenden Zeitungen. Die blosse Thatsache, dass man die Mittel besitzt, viele Tausende von Exemplaren solcher Zeitungen in wenigen Stunden zu setzen und zu drucken, bezeichnet hinlänglich den hohen Stand des Buchdruckergeschäfts in England.

Unter den Ursachen, welche seit kurzem die Vervollkommnung der Buchdruckerkunst in England bewirkt haben, sind die Abschaffung der Stempelsteuer auf Zeitungen und der Accise-Steuer auf Papier die wichtigsten. Die Beseitigung dieser Steuern machte es möglich, dass Zeitungen, welche an Umfang den alten gleich kamen, für einen Penny hergestellt und verkauft werden konnten, und die Folge davon war, dass, während die Zeitungen der Masse der Bevölkerung zugänglich gemacht wurden, grosse Verbesserungen in den verschiedenen mit ihrer Herstellung verbundenen Processen stattfanden. Die zunehmende Bildung der verschiedenen Volksklassen hat ausserdem eine grosse Nachfrage nach gedruckten Büchern veranlasst, und der Einfluss der ungeheuren Production billiger, zum Zwecke der Belehrung und Unterhaltung während der letzten Jahre gedruckten Bücher kann, ohne Werke einer höhern Gattung herabzusetzen, kaum überschätzt werden. Auch die Gravirkunst und die Kunst des Farbendrucks haben gleichzeitig einen hohen Grad der Vervollkommnung erreicht, wie eine Ansicht der ausgestellten Proben beweisen wird.

Die Zahl der in den verschiedenen Zweigen

des Buchdrucks arbeitenden Personen war nach dem Census von 1861:—

In England und Wales	30,590
Schottland	4,470
Irland	2,815

Summa . . . 37,905

Von dieser Zahl arbeiteten 13,937 Personen in den Buchdruckereien in London.

In London ist der Arbeitslohn für Buchdrucker festgesetzt wie folgt:—

Setzer	36s. die
Drucker	Woche von
Maschinenmeister	60 Stunden,

mit drei 3d. extra per Stunde für Ueberzeit zwischen 9 Uhr Abends und 8 Uhr Morgens an Wochentagen. Keine Berechnung darf sich auf weniger als 1s. extra in den Stunden zwischen 10 Uhr Abends und 6 Uhr Morgens an Wochentagen belaufen. Sonntagsarbeit wird nach einer Veranschlagung von 6d. extra per Stunde berechnet, aber in keinem Falle soll der Arbeiter weniger erhalten als 2s. 6d. extra.

In vielen grossen Buchdruckereien wird der Satz von Büchern stückweise bezahlt und gewöhnlich nicht von Setzern gethan, welche in gewissem Gelde stehen. Setzer können auf diese Weise 20s. bis 50s. wöchentlich verdienen, je nach der Art der Arbeit und dem Geschick und Fleiss des Arbeiters.

Zeitarbeit wird stückweise und zu unregelmässigen Stunden ausgeführt.

Die in Edinburg gezahlten Durchschnittslöhne waren im Jahre 1866:—

	In der Woche von 57 Stunden
Setzer	20 bis 40
Drucker	26 „ 28
Lehrburschen	3 „ 20

Der Werth der in das Vereinigte Königreich importirten und aus demselben exportirten Bücher, sonstigen Abdrücke (prints), Kupferstiche etc. etc. war im Jahre 1865:—

	Importirt £	Exportirt £
Bücher	119,486	511,388
Sonstige Abdrücke, Kupferstiche etc. }	36,525	30,936

Berichte über die Zahl der jährlich gedruckten Bücher fehlen. Die Zahl registrirter Zeitungen und Journale in den verschiedenen Theilen des Vereinigten Königreichs war während des mit dem 30. Juni 1864 endenden Jahres:—

In England	1,307
Wales	60
Schottland	133
Irland	157
Summa	1,657

Die hauptsächlichsten Verbesserungen seit dem Jahre 1851, welche von der in Klasse 37 der Londoner Ausstellung von 1862 sitzenden Jury hervorgehoben wurden, waren: die Einführung von Maschinen zum Schriftgiessen, anstatt des frühern Giessens mit der Hand, wodurch viel Arbeit gespart wird, und die einer Setz- und Ablegmaschine; die Einführung horizontaler Druckpressen und die Anwendung des Stereotypens auf die rasche, sichere und öconomische Hervorbringung von Zeitungen, welche eine grosse Circulation haben. Die durchgängige Vortrefflichkeit der Typographie, selbst in den billigen Büchern, wurde ebenfalls empfohlen, indem man besonders die Klarheit der Schrift und die Reinlichkeit der Arbeit lobte. Im Farbendruck war ein grosser Fortschritt bemerkbar, und in der Lithographie, und vor allem der Chromolithographie, war die Verbesserung noch auffallender.

Von dem Fortschritt, welcher in der Herausgabe 'neuer Auflagen schon bekannter Bücher' gemacht worden ist, giebt die Thatsache der kürzlichen Veröffentlichung von Shakspeare's gesammelten Werken für 1s. und der 'Waverley-Romane' für 6d. per Band, eine Vorstellung.

Klasse VII.

PAPIER; PAPIERHANDEL; BUCHBINDEREI;
MATERIALIEN ZUR WASSERFARBEN-
MALEREI UND ZUM ZEICHNEN.

1. Die Hauptindustrie, auf welche diese Klasse sich bezieht, ist die des Papiers, und dies ist eine Industrie von grosser Bedeutung. Papier wird in verschiedenen Theilen Englands gemacht; die Papiermühlen in der Grafschaft Kent aber sind lange wegen der Production schöner Schreib- und Zeichnungspapiere berühmt

gewesen. Eine umfangreiche Verfertigung der gröberen Papierarten findet in Newcastle statt. Auch Schottland und Irland fabriciren Papier, obschon in geringern Quantitäten. Die Zahl der privilegierten Papierfabricanten in den verschiedenen Abtheilungen des Vereinigten Königreichs belief sich im Jahre 1865 auf:—

In England and Wales	316
Schottland	56
Irland	20
Summa	392

Von den anderen zu dieser Klasse gehörenden Gegenständen machen Tinte und Druckerschwärze, Siegellack, Federn und sonstige auf den Schreibtisch gehörende Gegenstände, Register und Wasserfarben, jeder einen besonders und wichtigen Handelszweig aus, obgleich es, mit Ausnahme des Stahlfedergeschäfts, keine genauen Angaben über die Zahl der Personen giebt, welche mit der Verfertigung der verschiedenen, oben erwähnten Gegenstände beschäftigt sind. Die Zahl der mit der Herstellung einiger dieser Gegenstände in London beschäftigten Personen beläuft sich (mit Ausschluss der Gesellen) auf:—

Fabricanten:	
von Druckerschwärze	21
„ Tinte	43
„ Siegellack	24
„ Federposen	9

Berichte über die Zahl der Arbeiter, welche in den obigen Industriezweigen beschäftigt sind, fehlen. Aus der ungeheuren jährlichen Bücherproduction in England ergibt sich als eine natürliche Consequenz, dass das Buchbindergeschäft, welches ebenfalls zu dieser Klasse gehört, eine grosse Ausdehnung hat und in Verbindung mit dem Buchhandel in den Hauptstädten des Königreichs betrieben wird.

Der Mittelpunkt des Englischen Stahlfederhandels ist in Birmingham, und nach einem Bericht von Mr. Timmins an die 'British Association,' welche im Jahre 1865 in dieser Stadt ihre Sitzung hielt, betrug die Zahl der damals bestehenden Stahlfederfabriken 12; die Zahl der darin beschäftigten Männer, 360; der Frauen und Mädchen, 2,050; der Pferdekraft, ungefähr 330; die wöchentliche Federfabrication, 98,000 Gross; die wöchentlich verbrauchte Masse von Stahl, von 9½ bis 10 Tonnen. Der Werth der gewöhnlichen Federn schwankt zwischen 1½d. und 1s. per Gross, der von Stiefledern zwischen 7d. und 12s. per Gross und andere Arten zu höheren Preisen, je nach der Grösse und Arbeit.

Die meisten Processen der Federmanufactur, das Schneiden der Platten, das Bohren der Löcher, das Bilden der Spitzen, das Bessiren der Muster und das Einprägen der Namen werden durch Handpressen ausgeführt, Dampfmaschinen hingegen nur für die gewöhnlichsten Arten von Federn angewandt.

Die Lage der Arbeiter ist befriedigend, da die Fabriken sehr gesund sind. Der Arbeitslohn von Mädchen schwankt zwischen 5s. und 12s., und bei einigen zwischen 2s. 6d. und 3s. 6d.; während geschickte, ältere Arbeitsfrauen zwischen 15s. und 20s. wöchentlich verdienen. Männer verdienen zwischen 18s. und 25s., Knaben 4s. 6d. bis 8s. und, wenn sie geschickt sind, von 8s. bis 16s. Geschickte erwachsene Männer verdienen von 30s. bis 80s., und sogar 90s. bis 100s., wöchentlich. Die Arbeitsstunden schwanken zwischen $52\frac{1}{2}$ und 57 per Woche.

2. Die grössere Masse des zu der Papierfabrication verwendeten Rohmaterials wird in England gewonnen, obgleich eine beträchtliche Masse von Lumpen und anderen Papiermaterialien alljährlich vom Auslande eingeführt wird. Während der letzten zehn Jahre hat man zahlreiche Substanzen als Substitute für Lumpen zur Papierfabrication in Vorschlag gebracht; aber von allen diesen sind nur Esparto und Stroh bis jetzt in grossen Quantitäten gebraucht worden.

Die nachstehende Tabelle zeigt die Quantität von Lumpen und anderer Arten von Papier producirenden Stoffen, welche während der letzten vier Jahre in das Vereinigte Königreich importirt wurden:—

	1862	1863	1864	1865
	Tonnen	Tonnen	Tonnen	Tonnen
Lumpen, Linen und Baumwolle .	21,966	25,287	23,732	18,273
Esparto und andere vegetabilische Fasern .	878	19,326	43,403	52,324
Alte Seile etc.	932	736	528	463
Ganzzeug .	166	233	156	94
Gesamteinfuhr	23,942	45,582	67,819	71,154
Rückexport .	3,513	1,510	243	1,505
Bleibt für Verbrauch .	20,429	44,072	67,576	69,649

Man wird bemerken, dass die grosse Zunahme in der obigen Tabelle der vermehrten Einfuhr von Esparto zuzuschreiben ist, welcher von Spanien kommt. Er wird benutzt zu der Fabrication von gewöhnlichen und Druckpapieren, nach welchen seit kurzem eine grosse Nachfrage statt gefunden hat.

3. Berichte über die Zahl der gegenwärtig im Papierhandel arbeitenden Personen fehlen. Nach dem Census von 1861 war die Zahl der so beschäftigten Arbeiter:—

	Männer	Frauen	Summa
In England und Wales .	7,746	5,611	13,357
Schottland .	1,648	2,773	4,421
Irland .	289	113	402
	9,683	8,497	18,180

Die Zahl der Buchbinder und Falzer zu derselben Zeit war:—

	Männer	Frauen	Summa
In England and Wales .	6,556	5,364	11,920
Schottland .	1,176	1,194	2,370
Irland .	448	686	1,134
	8,180	7,244	15,624

Ein grosser Theil des Buchbindergeschäfts wird in der Hauptstadt betrieben. Im Jahre 1861 waren 3,691 Männer und 4,063 Frauen so beschäftigt.

Man muss sich jedoch erinnern, dass diese beiden Geschäfte seit 1861 zugenommen haben.

Nach einem Berichte, welcher im Jahre 1866 dem Handelsministerium durch die Edinburger Handelskammer vorgelegt wurde, waren die in jenem District den mit der Papierindustrie beschäftigten Arbeitern gezahlten Durchschnittslöhne:—

	Per Woche	
	s.	d.
An Maschinisten .	20	bis 22 0
Mechaniker .	17	„ 20 0
Fertigmacher .	12	„ 18 0
Bleicher .	16	„ 20 0
Lumpenschneider	13	„ 16 0
Leimer .	17	„ 18 6
Trockner .	15	„ 16 6
Papierschnneider	15	„ 18 0
Mühlenbauer .	22	„ 28 0
Heizer .	15	„ 18 0
Arbeiter .	11	„ 17 0

Arbeitsstunden: zehn bis zwölf täglich.

Berichte über die in den Papiermühlen in der Nachbarschaft von London gezahlten Arbeitslöhne fehlen; sie sind sehr verschieden, werden aber, der Regel nach, für höher gehalten als die oben angegebenen.

5. Eine beträchtliche Zunahme in der Einfuhr von Papier hat seit 1860 stattgefunden, was vor allem der Abschaffung der Papiersteuer zu verdanken ist:—

		Fremdes Papier (mit Ausnahme von Tapeten)		
		Importirt	Exportirt	Zum Verbrauch gelassen
		Centner	Centner	Centner
Quantitäten	1860 .	42,446	9,217	33,229
	1865 .	239,707	24,537	215,170
Werth .	1860 .	£ 128,383	£ 25,995	£ 102,388
	1865 .	£ 494,222	£ 57,477	£ 436,745

6. Die Quantität und der Werth des während desselben Zeitraums exportirten Englischen Papiers (mit Ausnahme von Tapeten) war:—

Quantität	1860 .	Centner 112,514
	1865 .	„ 141,075
Werth .	1860 .	£ 450,589
	1865 .	„ 474,741

Eine Vergleichung der obigen Tabellen

ergiebt, dass die importirten Papierarten bedeutend billiger sind als die exportirten.

Die während des Jahres 1865 exportirte Quantität Englischer Lumpen und Papier producirender Stoffe betrug 6,704 Tonnen.

Der Werth der während der Jahre 1861–65 aus dem Vereinigten Königreich exportirten, zum Papierhandel gehörenden Artikel (abgesehen von Papier) war:—

	£
1861	287,000
1862	285,000
1863	342,000
1864	360,000
1865	405,000

7. Die Benutzung des Dampfes als einer bewegendenden Kraft ist in England beinahe allgemein geworden, und, obgleich der Preis der Arbeit in England höher steht als auf dem Festlande, ist es, bei der Sorgfalt und dem Geschick der Englischen Arbeiter und der grossen Ueberlegenheit der angewandten Maschinerie, dennoch zweifelhaft, ob die Papierfabrication in England nicht ebenso billig ist wie in andern Ländern.

8. Mr. Richardson; aus Newcastle, bemerkt, dass die hauptsächlichsten Verbesserungen, welche während der letzten Jahre in der Papierfabrication stattgefunden haben, in dem Detail und der allgemeinen Wirksamkeit der Maschinerie bestehen; wodurch eine bei weitem grössere Masse von Papier mit demselben Apparat gemacht wird als früher, und in der vollkommeneren Handhabung der chemischen Processe, wodurch ein früher völlig nutzloses Material zu gewöhnlichem Ladenpapier verarbeitet und schlechte Lumpen, die man früher zu grobem Papier verarbeitete, zu einem guten weissen Papier gereinigt und gebleicht werden. Beinahe sämtliches Zeitungspapier enthält einen Theil Esparto, und einiges enthält nicht mehr als ein Viertel Lumpenmaterial.

Nach der Abschaffung der Stempelsteuer auf Zeitungen trat eine grosse Anzahl billiger Journale in's Leben und es entstand eine grosse Nachfrage nach billigem Papier. Dieser Nachfrage ist man theils durch die Verfertigung von Papier aus Esparto etc. begegnet und theils durch die Einfuhr billigen Papiers vom Auslande. Die Jury der Londoner Ausstellung von 1862, welche die zunehmende Neigung zur Fabrication untergeordneter Papierarten bemerkte, erhob weislich ihre Stimme gegen die Benutzung derselben für Werke, welche Jahre lang zu dauern bestimmt waren; aber für die Zwecke des Tages ist die Versorgung mit billigem Papier ein unschätzbares Gut für die Masse der Nation.

Ein grosser Fortschritt hat während der letzten Jahre in allen Branchen der Buchbinderei stattgefunden, besonders in der Anwendung von Farben und Ornamenten auf die billigeren Arten. So' erstaunlich war die Erweiterung dieses Geschäfts, dass die Ein-

führung von Maschinerie zur Besorgung der Bossir- und Blindwerkarbeit ('blind-tooling') nothwendig wurde, damit der Buchbinder mit den an sein Geschäft gestellten Anforderungen Schritt halten könne.

Klasse VIII.

ANWENDUNGEN DES ZEICHNENS UND MODELIRENS AUF MANUFACTUR-GEGENSTÄNDE.

Obgleich Berichte über den actuellen Fortschritt, welcher während der letzten Jahre in den verschiedenen dieser Klasse angehörenden Geschäftszweigen gemacht wurde, fehlen, kann doch im Allgemeinen bemerkt werden, dass ebensowohl in dem Style der auf Manufacturen angewandten Zeichnungen eine beträchtliche Verbesserung stattgefunden hat, als ein grösserer Geschmack entwickelt wurde in den Künsten des Modellirens, Gravirens und Stempelschneidens.

Da die Zeichnungen für Manufacturgegenstände meistens privatim ausgeführt werden, liegt das einzige Mittel zur Erprobung ihres wirklichen Fortschritts in öffentlichen Ausstellungen; und es ist daher die Sache der Preisrichter bei den verschiedenen Manufactur-Klassen der gegenwärtigen Ausstellung, zu entscheiden, in welchem Masse von den Englischen Zeichnern seit der letzten Pariser Ausstellung von 1855 Fortschritte gemacht worden sind. Es steht zu hoffen, dass das Departement für Wissenschaft und Kunst in jenen Entscheidungen eine ausreichende Belohnung für die Arbeit finden möge, mit welcher es viele Jahre hindurch beschäftigt gewesen ist, der Arbeit nämlich der erweiterten Anwendung der Kunst auf alle Zweige der nationalen Industrie.

Klasse IX.

PHOTOGRAPHISCHE PROBEN UND APPARATE.

Die Photographie, als productiver Industriezweig und unabhängig von ihrer Bedeutung als Kunst betrachtet, giebt in ihren verschiedenen Branchen mehreren Tausend Arbeitern Beschäftigung.

Es liegt nicht innerhalb der Grenzen unserer Aufgabe, die Geschichte ihrer Erfindung und raschen Entwicklung darzustellen, sondern, wie von dem Berichterstatter über Photographie in der Londoner Ausstellung von 1862 bemerkt wurde, 'es genügt zu sagen, dass es kaum einen Zweig der Kunst, der Wissenschaft, der Oeconomia, ja der menschlichen Interessen in ihrem weitesten Umfange giebt, in

welchem die Anwendung dieser Kunst nicht von Nutzen gewesen ist.'

Statistische Angaben über die Zahl der Personen, welche gegenwärtig in den verschiedenen Branchen des Photographiegeschäfts arbeiten, fehlen; aber nach dem Census von 1861 waren damals 2,957 Personen als photographische Künstler beschäftigt. Die Zahl der in den verschiedenen Branchen des Geschäfts in London arbeitenden Personen ist (mit Ausschluss der Hilfsarbeiter) wie folgt:—

Photographische Künstler . . .	284
Apparatmacher	38
Albummacher	14
Fabricanten von photographischen	} 17
Chemicalien	
Photographische Zeichner und Ein-	} 6
fasser	
Fabricanten von Photographie-Papier	15
Photographien-Drucker	7
Photographien-Händler	16
Verkäufer photographischer Materia-	} 28
lien	

Obleich die Jury über Photographie bei der Londoner Ausstellung der Meinung war, dass seit der vorhergehenden Ausstellung von 1851 grosse Fortschritte gemacht worden seien, so hielt sie doch die Kunst für viel grösserer Vervollkommnung fähig und glaubte, dass die nächste internationale Ausstellung Resultate zeigen werde, mit welchen die damals beurtheilten 'an Schönheit, Umfang und Bedeutung keinen Vergleich würden aushalten können.'

Klasse X.

MUSIKALISCHE INSTRUMENTE.

Die Verfertigung musikalischer Instrumente bildet ein ausgedehntes Geschäft in dem Vereinigten Königreich. Die Hauptarten von Instrumenten, welche gemacht werden, sind Orgeln, Pianofortes, Harfen und Blechinstrumente; die wichtigste Stellung jedoch nehmen die Pianofortes ein. Die Pianofortes der Londoner Fabricanten sind lange wegen der Schönheit ihres Tones und der Vortrefflichkeit ihrer Ausarbeitung berühmt gewesen. Die verbesserten Methoden der Construction, welche in den letzten Jahren durch die Englischen Orgelbauer zur Anwendung gebracht sind, haben diesen Instrumenten im Inlande wie im Auslande einen hohen Ruf erworben.

Genauere statistische Angaben über die Gesamtzahl der in dem Vereinigten Königreich mit der Verfertigung der verschiedenen Arten musikalischer Instrumente beschäftigten Personen fehlen; aber die nachstehende Tabelle über den Werth der Einfuhr dieser Artikel während der fünf Jahre 1861–65 zeigt, dass die inländische Production der inländischen Nachfrage nicht gleichkommt.

Werth der verschiedenen Arten der in das Vereinigte Königreich eingeführten musikalischen Instrumente.

Jahre	Piano- fortes	Harmo- niums u. Seraphine	Spieldosen	Andere Arten	Summa
	£	£	£	£	£
1861	24,542	33,971	13,774	91,271	163,558
1862	43,343	53,681	13,494	80,388	190,906
1863	97,378	18,372	12,495	80,943	209,188
1864	111,234	15,548	17,015	80,452	224,249
1865	66,702	68,313	30,384	78,414	243,813

Die Einfuhr von Pianofortes und Harmoniums findet hauptsächlich von Frankreich statt. Die Zahl von Fabricanten musikalischer Instrumente ist in London (mit Ausschluss der Arbeiter) wie folgt:—

Arten der Instrumente	Zahl von Personen
Concertina	11
Trommel	9
Flöte und Oboe	14
Guitarre	4
Harmonicum	1
Harmonium	28
Harfe	4
Horn, Trompete und Pfeife	7
Militärische	10
Seraphine	3
Violine	8
Violinbogen	8
Violoncello	2
Spieldosen	5
Pianoforte	286
Orgel	43
Saitenfabricanten	17
Verschiedene	47

Der Werth der in England verfertigten und während der fünf Jahre 1861–65 exportirten musikalischen Instrumente war:—

Jahre	Pianofortes	Andere Arten	Summa
	£	£	
1861 . . .	nicht	angegeben	147,144
1862 . . .	82,615	69,155	151,770
1863 . . .	112,821	53,972	166,693
1864 . . .	107,871	59,980	167,851
1865 . . .	93,071	59,757	152,828

Klasse XI.

MEDICINISCHE UND WUNDÄRZTLICHE INSTRUMENTE UND APPARATE.

Obleich man von den in dieser Klasse begriffenen Gegenständen nicht sagen kann, dass sie eine umfangreiche Industrie in England ausmachen, besitzen sie dennoch einen Werth, der kaum nach einem Geldmassstabe gemessen werden kann. Es giebt keine edlere Kunst als die des Wundarztes, und die Instrumente, welche er in der Ausübung derselben anwendet, haben

mithin an der mit seinem Berufe verknüpften Ehre Antheil.

Fast alle in England gebrauchten wundärztlichen Instrumente sind von inländischer Manufactur; und wegen der in verschiedenen Ländern befolgten verschiedenen Behandlungsweisen, findet nur ein geringer Austausch dieser Klasse von Gegenständen zwischen dem Vereinigten Königreich und andern Ländern statt. Die Zahl von Fabricanten wundärztlicher Instrumente in London ist 95; die von Fabricanten wundärztlicher Instrumentkasten, 5; und die von Fabricanten wundärztlicher Bandagen, 25. Die Hauptmasse der Englischen wundärztlichen Instrumente wird in Sheffield gemacht; aber die Fabricate der Londoner Häuser haben den Ruhm, die aller andern Fabricanten der Welt zu übertreffen.

Der Werth der im Jahre 1865 eingeführten wundärztlichen oder anatomischen Instrumente war 566£., der ausgeführten 12,752£.

Klasse XII.

MATHEMATISCHE INSTRUMENTE UND APPARATE ZU WISSENSCHAFTLICHEM UNTERRICHT.

Die Verfertigung der zu dieser Klasse gehörenden Gegenstände ist ansehnlich; aber bei der Abwesenheit jeder industriellen Statistik giebt es kein Mittel, den Zustand der verschiedenen Branchen des Geschäfts genau zu bestimmen. Die Zahl von Personen, welche (mit Ausschluss von Arbeitern) in London in diesem Industriezweige beschäftigt sind, ist wie folgt:—

Fabricanten mathematischer Instrumente	} 72
Fabricanten mathematischer Instrument-Kasten	} 7
Fabricanten nautischer Instrumente	32
„ philosophischer „	78
„ optischer „	204

Ausser der inländischen Production existirt ein auswärtiger Handel mit wissenschaftlichen Instrumenten. Der Werth solcher in das Vereinigte Königreich eingeführten Instrumente

und Apparate und der ausgeführten Britishen Gegenstände derselben Gattung war während des Jahres 1865:—

	Einfuhr £	Ausfuhr £
1865	14,224	71,058

Klasse XIII.

LANDKARTEN UND GEOGRAPHISCHE UND COSMOGRAPHISCHE APPARATE.

Die bedeutendsten Arbeiten, welche in dieser Klasse Erwähnung verdienen, sind die aus dem Ordnanz- und geologischen Nivellements-Bureau hervorgegangenen Karten. Die ersten sind nach drei Massstäben angefertigt, und die nach dem Massstabe von einem Zoll auf die Meile ist eine vortreffliche Karte des Landes. Die geologische Karte des Vereinigten Königreichs, von der ein Theil in der Pariser Ausstellung von 1855 ausgestellt war, wird von allen competenten Richtern als einzig in ihrer Art gerühmt. Seit 1855 ist ein Nivellement der wichtigsten Bergbau-Districte unternommen worden, und die darauf bezüglichen Karten sind vollendet. Die Karten von den nördlichen Grafschaften Englands und Irlands werden nach dem Massstabe von sechs Zoll auf die Meile ausgeführt. Mehr als die Hälfte des Flächeninhalts von England und Irland ist schon gemessen worden, und wenn man die Art der Arbeit berücksichtigt, wird alljährlich ein grosser Fortschritt damit gemacht.

Es fehlt an Mitteln zur Schätzung des Werthes oder des Umfangs des allgemeinen Landkartengeschäfts in England; aber es ist von grosser Bedeutung, und die producirtten Gegenstände sind von hohem Werth. Die Zahl der in London mit diesem Industriezweige beschäftigten Personen beträgt gegenwärtig (mit Ausschluss der Arbeiter):—

Verkäufer und Herausgeber von Karten	} 24
Verfertiger, Colorirer und Einfasser von Karten	} 44
Kartenstecher	18

Der Werth der im Jahre 1865 exportirten Land- und Seekarten betrug 6,571£.

GRUPPE III.

(KLASSEN XIV. bis XXVI.)

MÖBEL UND ANDERE FÜR WOHNUNGEN BENUTZTE GEGENSTÄNDE.

Klasse XIV.

KUNSTMÖBEL.

KEIN Zweig der einheimischen Industrie hat von den internationalen Ausstellungen grösseren Nutzen gehabt als der des Kunstmöbelgeschäfts. Vom Beginn unseres Jahrhunderts bis zum Jahre 1851 wurde im der Verfertigung von Hausmöbeln im Vereinigten Königreich verhältnissmässig wenig Fortschritt gemacht; aber seit jenem Zeitpunkt hat sich eine entschiedene Verbesserung kund gethan, nicht allein in Bezug auf die Oeconomie der Arbeit, sondern auch in Zeichnung und Ornamentirung, und hinsichtlich der bessern Anpassung der Gegenstände an die Zwecke, für welche sie bestimmt sind. Es erfordert nur eine oberflächliche Bekanntschaft mit dem modernen häuslichen Leben in England, um zu bemerken, welche grosse Veränderungen innerhalb der letzten zehn oder funfzehn Jahre in der innern Ausschmückung der Wohnhäuser der obern und der mittleren Gesellschaftsklassen stattgefunden haben; und es kann kaum ein Zweifel darüber bestehen, dass die Zunahme der ästhetischen Erziehung eine noch vermehrte Production und Würdigung von Gegenständen herbeiführen wird, welche die drei zweckdienlichen Erfordernisse vereinigen: Schönheit der Zeichnung und Ornamentirung und Vortrefflichkeit der Arbeit.

Die Zahl der in London in den verschiedenen Branchen der Kunstmöbel-Industrie beschäftigten Personen ist (mit Ausschluss der Arbeiter) wie folgt:—

Kunsttischler	812
Tapezirer	486
Bilderschneider und Vergolder	342
Französische Polirer	142
Spiegelfabricanten	61
Versilberer von Spiegelglas	24
Schnitzer und Einleger von Kunst-	} 108	
möbeln		
Fabricanten von Bettstellen	43
Ditto von eisernen	44
Stuhl-, Sofa- und Schemelmacher	252

Der Werth der Holzmöbel und Kunstschlerwaaren, welche im Jahre 1865 in das Vereinigte Königreich importirt wurden, betrug

128,925*l.*, und der exportirten Englischen Möbel und Kunsttischlerwaaren 289,887*l.*

Klasse XV.

TAPEZIER- UND DECORATIONS-ARBEIT.

Der eben erwähnte Fortschritt in der Verfertigung der zu der vorhergehenden Klasse gehörenden Gegenstände hat sich nothwendigerweise auch auf die in dieser Klasse einbegriffenen erstreckt. Die zunehmende Wohlhabenheit der Mittelklassen hat besonders eine grössere Nachfrage nach decorativer Arbeit in der innern Einrichtung ihrer Wohnungen veranlasst. Auch in der Möblirung von Kirchen hat eine bemerkenswerthe Verbesserung stattgefunden, da die seit kurzem eingetretene Wiederbelebung der alten Architectur-Style ein höheres Mass von Verzierungen in der innern Ausschmückung der Gebäude beinahe nothwendig machte.

Die Hauptfabrication von modellirten Gegenständen ist die des Papier-mâché, welche besonders in Birmingham betrieben wird, zahlreiche decorative Mobiliarstücke hervorbringt und einigen Hundert Arbeitern Beschäftigung giebt. Die Durchschnittslöhne für gewöhnliche Arbeiter betragen von 10*s.* bis 16*s.* wöchentlich; und für Decorations-Artisten von 30*s.* bis 50*s.* Es heisst, dass diese letztere Klasse von dem in der lokalen Kunstschule in Birmingham ertheilten Unterricht bedeutenden Nutzen gehabt habe.

Klasse XVI.

CRYSTALL, KUNSTGLAS UND BUNTES GLAS.

1. Die Hauptarten des in dem Vereinigten Königreich gemachten Glases sind Spiegelglas, Kronglas, Tafelglas und Flintglaswaaren. Die Haupt-Glasfabriken sind in St. Helen's, in Lancashire; aber es giebt auch sehr grosse Glaswerke in andern Districten, besonders die der Messrs. Chance, in Birmingham, und der Messrs. Hartley, in Sunderland. Flintglas wird auch in London gemacht. Das Glasflaschengeschäft, welches hauptsächlich in der Nähe von Newcastle betrieben wird, hat

eine sehr grosse Ausdehnung. Buntes oder gemaltes Glas wird auch in London und in Sunderland und Birmingham fabricirt. Auch Glas für optische Zwecke, obgleich natürlicherweise kein bedeutender Geschäftszweig, wird in dem Vereinigten Königreiche gemacht; und das von Messrs. Chance in Birmingham zur Benutzung für Leuchthürme verfertigte ist wohlbekannt in der wissenschaftlichen Welt.

Obgleich die Fabrication dieses schönen Materials jetzt eine der Haupt-Industrien des Landes bildet, so hat sie doch erst innerhalb der letzten zwanzig Jahre rasche Fortschritte gemacht. Bis zum Jahre 1845 hielten die der Fabrication aufgelegten übermässigen Accise-steuern und die zur Eintreibung jener Steuern nothwendigen lästigen Verordnungen ihre Entwicklung völlig auf; in der That nahmen zwischen den Jahren 1789 und 1844 die Quantitäten von Glas, welche gemacht und zum Verbrauch behalten wurden, eher ab als zu, statt mit der Zunahme der Bevölkerung Schritt zu halten. Seit der Abschaffung der Glassteuer, jedoch, hat sich das Geschäft ausserordentlich erweitert, und die Beseitigung der Fenstertaxe im Jahre 1851 hatte einen noch grösseren Aufschwung der Glasindustrie des Landes zur Folge.

2. Die in dem Glasgeschäft gebrauchten Rohmaterialien verschafft beinahe ausschliesslich das Land, obgleich in einigen Branchen Sand von Fontainebleau benutzt wird.

3. Die officiellen statistischen Angaben über die Zahl der mit der Englischen Glasfabrication beschäftigten Personen reichen nicht über das Jahr 1861 hinaus; damals war die folgende Zahl von Personen damit beschäftigt:—

	Männer	Frauen	Summa
In England und Wales .	13,809	1,327	15,046
Schottland . . .	1,189	28	1,517
Irland . . .	231	31	262
Summa . . .	15,229	1,296	16,525

Die nachstehenden Auszüge aus einem Bericht von Mr. H. Chance an die 'British Association' in Birmingham im Jahre 1865 werden die Bedeutung einiger Zweige dieser Industrie in der Gegenwart darthun. Die wöchentliche Production von Spiegelglas beträgt ungefähr 100,000 Fuss. Es giebt sieben Fabricanten von Kron- und Tafelglas, von welchen drei fünf und siebenzig Procent der Gesamtmasse liefern. Die Zahl der in diesen drei Glaswerken beschäftigten Arbeiter wird zu 2,500 angegeben, die verfertigte Glasmasse zu 17,000 Tonnen. Ueber die Production von Flintglas giebt es keine vollständigen statistischen Angaben; die jährliche Production dieser Glasart in dem Tyne- und Wear-District allein wird auf 10 Millionen Pfund geschätzt. Birmingham liefert ungefähr 5 Millionen und Stourbridge 3½ Millionen Pfund jährlich. Die Fabrication von Glasflaschen in dem Tyne- und Wear-District während des Jahres 1862 wird von

Mr. Swinburne zu 4,230,000 Dutzend angegeben.

4. Die nachstehenden Durchschnittslöhne wurden im Jahre 1866 in Birmingham für die Fabrication von Flintglas und Artikel für den Hausbedarf gezahlt:—

An Männer.

Per Woche von 45 Stunden:	s. d.	s. d.
Erste Klasse . . .	48 0	bis 49 0
Zweite Klasse . . .	42 0	„ 44 6
Dritte Klasse . . .	30 0	„ 40 6
Vierte Klasse . . .	22 0	„ 34 0
Fünfte Klasse . . .	10 0	„ 31 0
Sechste Klasse . . .	21 8	

Per Woche von 55 bis 60

Stunden:

Glasschneider . . . 24 0 „ 32 0

Per Woche von 56 Stunden:

Aussonderer (teazers), Mischer, } 25 0
Packer etc. }

An Frauen.

Per Woche von 50 Stunden:

Beschäftigt als Mischer, Packer etc. 10 0

In einigen Zweigen des Glasgeschäfts sind die Beziehungen zwischen Arbeitgebern und Arbeitern und die Gewohnheiten der Arbeiter selbst grosser Verbesserung fähig. Mr. Swinburne bemerkt, dass die Beziehungen zwischen den Meistern und Arbeitern in den Blasglas- und Flaschengeschäften einer chronischen Arbeitseinstellung ('strike') gleichkommt. Ausserdem wird durch eine 'drink-money,' 'Trinkgeld,' genannte Bezahlung, welche über die Löhnung hinaus gegeben und täglich zum Ankauf berauschender Getränke verwandt wird, ein allgemeiner Mangel an Solidität in den Gewohnheiten der Arbeiter erzeugt, welcher in den meisten Fällen mit Trunksucht endet. Ueber andere Branchen wird bemerkt, dass die Arbeiter einen hohen Grad von Intelligenz und Erziehung besitzen und sich die verschiedenen für den intellectuellen Fortschritt der arbeitenden Klassen gegründeten Institute eifrig zu Nutzen machen.

5. Die nachstehende Tabelle giebt einen vollständigen Bericht über die während des Jahres 1865 in das Vereinigte Königreich eingeführten verschiedenen Glasarten:—

	Quantität	Werth
	Centner	£
Fensterglas (mit Ausnahme von Spiegelglas) . . .	264,056	211,246
Flintglas, geschnitten, geführt, oder ornamentirt . . .	32,961	172,405
Gewöhnliches Flintglas, mit Einschluss von Flaschen . . .	23,039	32,254
Spiegelglas . . .	28,631	133,613
Versilbertes Glas oder Spiegel . . .	1,699	10,700
Flaschen von grünem oder gewöhnlichem Glas . . .	17,113	8,984
Nicht aufgezählte Fabricate . . .	12,650	60,773
Summa . . .	380,149	629,975
	Pfunde	
Glasperlen	3,365,221	178,310

Die Einfuhr von Fenster- und Flintglas findet besonders von Belgien und Hamburg, die von Spiegel- und versilbertem Glas von Frankreich und Belgien statt.

Die Rückausfuhr von Fensterglas und Glasperlen während desselben Jahres war beträchtlich, da sie respective 37,842 Centner und 2,057,000 Pfund betrug.

6. Nur ein kleiner Theil des Englischen Export-Glasgeschäfts, Flaschen ausgenommen, wird mit Europäischen Staaten betrieben; die grosse Masse der Ausfuhr geht nach den Vereinigten Staaten und den Englischen Colonien. Bei der Kostspieligkeit der zur sichern Versendung von Glaswaaren erforderlichen Packkasten und dem beim Auspacken durch Zerschneiden verursachten Verluste, welche zu den Fracht- und sonstigen Transportkosten hinzukommen, hat jede Vermehrung ihres Kaufpreises in Gestalt einer Einfuhrsteuer die Wirkung eines völligen Verbotes des Handels mit diesem Gegenstande, und da die gegenwärtig in Europa erhobenen Einfuhrsteuern im Allgemeinen bedeutend sind, findet die Abwesenheit des Handels mit diesem Welttheile eine einfache Erklärung, besonders in denjenigen Staaten, welche grosse Producenten sind, und wo billige Arbeit die einheimischen Fabricanten in den Stand setzt, die einheimischen Märkte mit billigen Waaren zu versorgen.

Ogleich auf diese Weise viele Märkte den Englischen Glasfabricanten verschlossen waren und noch sind, geht trotzdem aus den nachstehenden Zahlen hervor, dass das Englische Ausfuhrgeschäft während der letzten funfzehn Jahre bedeutende Fortschritte gemacht hat:—

Jahre	Flintglas	Fensterglas	Gewöhnliche Flaschen	Spiegelglas
	Quantität			
	Centner	Centner	Centner	} siehe Werth
1851	25,900	16,459	329,025	
1855	39,295	21,537	513,140	
1860	79,544	33,408	629,511	
1865	99,314	50,955	622,496	
	Werth			
	£	£	£	£
1851	110,666	22,223	174,318	20,743
1855	141,890	33,659	279,471	52,312
1860	222,380	44,063	324,189	62,566
1865	302,105	60,857	310,245	71,387

7. Die grösste Masse von Glas wird durch Handarbeit mit Hülfe mechanischer Vorkehrungen hergestellt; die Fabrication von gegossenem Glas wird jedoch hauptsächlich durch Maschinerie betrieben. Dampf wird auch für die Arbeit des Schneidens, Schleifens etc. in dem Flintglasgeschäft sehr allgemein angewandt.

8. Mr. Swinburne bemerkt mit Bezug auf

die Processe der Glasfabrication im Allgemeinen, 'dass sie unzweifelhaft ein grosses Feld für Verbesserungen darbieten. Dennoch ist im manchen Branchen des Geschäfts ein bedeutender Fortschritt gemacht worden, worunter besonders die Zunahme in der Grösse der Platten und Tafeln etc. zu erwähnen ist, sowie die Vervollkommnung des bunten und der Fabrication gegossenen Glases. Die Einfuhrung von Waaren dieser letzteren Klasse hat das Flintglas so viel billiger gemacht, dass beinahe der ärmste Theil des Volkes mit eleganten Gegenständen zum Hausbedarf, welche noch vor wenigen Jahren weit über ihre Mittel hinauslagen, versorgt werden kann.

Der Fortschritt im Glasgeschäfte ist, wie bereits bemerkt wurde, vorzugsweise der Aufhebung der Steuern zuzuschreiben, welche früher die Entwicklung desselben hemmten. Nach der Beseitigung dieser Steuer trat ein grosser Fall in dem Preise des Glases ein, und eine gewaltige Zunahme des Verbrauchs war die Folge. Die nachstehenden von Mr. H. Chance notirten Preise der Hauptglasarten vor der Aufhebung der Steuer und heut zu Tage liefern einen merkwürdigen Beweis für die Wohlthaten, welche man der Abschaffung der Steuer verdanken muss, und bezeugen den Fortschritt der Glasindustrie überhaupt. Ein Spiegel von Plattenglas 50 x 40 Zoll kostete im Jahre 1844 ungefähr 10*l.*, im Jahre 1865 weniger als die Hälfte dieser Summe. Gutes Kron- glas kostete im Jahre 1844 ungefähr 12*l.* per Korb, im Jahre 1865 2*l.* 8*s.*; gewöhnliche Glastafeln im Jahre 1844 1*s.* 2*d.* per Fuss, im Jahre 1865 2*d.* Hätten die Glassteuern im Jahre 1851 bestanden, so würde ein Crystallpalast beinahe eine Unmöglichkeit gewesen sein; andererseits hat die Abschaffung der Fenstertaxe einen vermehrten Verbrauch von Glas in allen Gattungen von Gebäuden veranlasst und den Comfort und die Gesundheit des Volkes wesentlich gesteigert.

Was die Anwendung der Kunst auf die Englische Glasfabrication betrifft, so erklärte die Jury der internationalen Ausstellung von 1862, dass der grösste Fortschritt im gravirtem Glase bemerkbar sei. Sie wies auch besonders auf den Fortschritt hin, welcher in der Form der am allgemeinsten gebrauchten Artikel stattgefunden, und schrieb denselben im hohen Masse dem im ganzen Lande durch die Zeichenschulen genährten Geschmacke zu, den Bemühungen vieler Fabricanten, seitens der Käufer einen besseren Formsinn zu befördern, und dem allgemeinen Fortschritt des Publicums in Kunstenkenntniss, woran sie den nationalen und internationalen Ausstellungen einen grossen Antheil zuerkannten, und zwar besonders den letzteren, in welchen die Aussteller durch den Wettstreit in den Künsten des Friedens sich gegenseitig belehren.

Klasse XVII.

PORCELLAN, STEINGUT UND ANDERE
KUNST-TÖPFERWAAREN.

1. Die Steingut-Fabrication, welche jetzt eine der Haupt-Industrien des Landes bildet, ist seit mehr als zwei Jahrhunderten in Staffordshire betrieben worden. England, ungleich den meisten festländischen Nationen, besitzt keine Staatsfabriken zur Production und Entwicklung der ceramischen Künste, das Geschäft ist mithin den Bemühungen von Privatunternehmern überlassen. Der Hauptmittelpunkt der Steingut-Fabrication ist in Staffordshire, mit Zweiggeschäften in Glasgow, Worcester, Newcastle und Lambeth. Beinahe sämtliche Arten Steingut werden in den Töpfereien von Staffordshire gemacht; Worcester producirt besonders eine feinere Klasse von Waaren, Newcastle Artikel zweiten Ranges und Lambeth besonders Steinzeug, wie Flaschen, Krüge, Pfannen, Röhren etc. Es besteht auch eine grosse Fabrication von gebrannten Thonwaaren im Königreiche, welche in beträchtlichen Quantitäten in Newcastle und Stourbridge verfertigt werden.

2. Die bei der Fabrication benutzten Rohmaterialien werden hauptsächlich im Inlande gewonnen, in den Grafschaften Dorset, Devon und Cornwall. Nach den officiellen Berichten belief sich die Production von Thon- und Porcellanerde im Jahre 1865 auf 374,358 Tonnen. 751,566 Tonnen von Brennthon wurden auch in den Grafschaften Stafford, York, Derby etc. gewonnen. Die in den Töpfereien von Staffordshire jährlich verbrauchte Masse von präparirtem Thon wird auf ungefähr 160,000 Tonnen angegeben.

Abgesehen von dem Thon, giebt Mr. Coghill den nachstehenden Bericht über die andern in dem District von Staffordshire gebrauchten Rohmaterialien: 'Der Jahresverbrauch von Kohlen in dem Geschäft kann auf 450,000 Tonnen veranschlagt werden. Zum Färben des Thons und zum Bedrucken der Waare werden ungefähr 67,000 Tonnen Kobalt-Oxyd gebraucht, zum Glasiren ungefähr 1,100 Tonnen Borax und Boraxsäure und zum Vergolden und Ausschmücken 12,000 Unzen Goldlerz. Die zu der Porcellanfabrication verbrauchte Masse von verkalkten Knochen, welche hauptsächlich von Südamerika geliefert werden, beläuft sich auf 4,500 Tonnen jährlich.'

3. Dem Census zufolge betrug die Zahl der während des Jahres 1861 im Vereinigten Königreich mit der Steingut- und Porcellan-Fabrication beschäftigten Personen:—

	Männer	Frauen	Summa
In England and Wales .	26,138	11,934	38,072
Schottland . . .	1,922	595	2,517
Irland . . .	101	7	108
Summa . . .	28,161	12,536	40,697

3,471 Männer und 1,115 Frauen waren während desselben Jahres mit der Fabrication von Tabakspfeifen beschäftigt.

Die Zahl der in den Töpfereien von Staffordshire beschäftigten Arbeiter wird von Mr. Coghill, im Jahre 1864, zu 27,878 angegeben, darunter 10,598 Frauen.

4. Die an Arbeiter in dem District von Staffordshire gezahlten Durchschnittslöhne betrugen im Jahre 1866:—

	Per Tag		
	s. d.	s. d.	
An Männer . . .	1 6	bis 7 0	
An Frauen . . .	1 6	„ 1 8	
	Per Woche		
	s. d.	s. d.	
In Worcester:			
An Männer . . .	16 0	bis 50	
An Frauen . . .	10 6	„ 14	
In Newcastle:			
An Männer . . .	10 0	„ 30	
An Frauen . . .	10 0		

5. Die Einfuhr von Steingut in das Vereinigte Königreich ist sehr gering und die von Porcellanwaaren nicht gross, da sie im Jahre 1865 nur 18,705 Centner betrug, welche auf 166,098l. geschätzt wurden. Der grössere Theil dieser Einfuhr kam von Frankreich.

6. Der Werth Englischen aus dem Vereinigten Königreich während der fünf Jahre 1861-65 ausgeführten Steinguts und Porcellans betrug:—

	£
1861 . . .	1,070,000
1862 . . .	1,220,000
1863 . . .	1,341,000
1864 . . .	1,422,000
1865 . . .	1,442,000

7. In einigen Branchen des Geschäfts wird Machinery angewandt, aber nicht so allgemein, als man wünschen möchte.

8. Der während der letzten Jahre in der Fabrication von Steingut und Porcellan gemachte Fortschritt war beträchtlich, und die jetzt für den Hausgebrauch fabricirten gewöhnlichen Artikel sind ihrer Billigkeit, eleganten Form und vortrefflichen Arbeit wegen berühmt. Auch der Anwendung unschädlicher statt giftiger Stoffe zum Glasiren der Waaren hat man grosse Aufmerksamkeit geschenkt, und sehr befriedigende Resultate sind erlangt worden.

Die Vervollkommnung in der Zeichnung und Ausführung der feinern Gegenstände, welche jetzt producirt werden, sind den gemeinsamen Bemühungen einiger der hervorragendsten Fabricanten und der Unterweisung zuzuschreiben, welche den Arbeitern in den Fabrikdistricten durch die Kunstschulen zu Theil geworden ist. Eine allgemeinere Einführung von Machinery würde der Entwicklung der Steingutindustrie in England grosse Dienste leisten. Der in den gebrannten Thonarbeiten (fire clay) des Steingutgeschäfts gemachte Fortschritt war auch sehr bedeutend; 89 Millionen Backsteine werden jetzt alljährlich in dem District von Newcastle

allein fabricirt, und ungefähr 30 Millionen in Stourbridge, ausser Retorten und Röhren etc., welche auch in grossen Quantitäten gemacht werden.

Klasse XVIII.

TEPPICHE, GEWIRKTE UND ANDERE MÖBELSTOFFE.

Die in dieser Klasse einbegriffenen Hauptgegenstände, von welchen eine ansehnliche Fabrication in dem Vereinigten Königreiche stattfindet, sind Teppiche, Möbelstoffe, Wachsleinwand, Gummi-Mattenwerk und Gewebe von Pferdehaar. Die angesehensten Teppiche Englischer Fabrication sind die Jacquard-, 'Brüsseler' und die 'Tapestry'- oder gedruckten Teppiche, von welchen jene vorzugsweise in Kidderminster und auch in Halifax und Durham, diese in Halifax, gemacht werden. Von den übrigen Teppicharten werden die 'Axminster' in Wilton gemacht, die 'Kidderminster' und 'Patent-Axminster' in Glasgow und andern Theilen Schottlands, die durchwirkten 'twills' in Durham, und die billigeren Arten von 'superfeinsten' Teppichen und Holländischen und Filzwaren in dem West-Riding von Yorkshire. Die Fabrication von Indischen Hanf-Teppichen in Dundee ist jetzt ein Geschäft von einiger Bedeutung. Baumwollene Möbelstoffe werden in Manchester, Woll- und Worsted-Damaste in Halifax verfertigt.

Wachsleinwand für Fussböden und Tischdecken etc. werden in dem Vereinigten Königreich nicht allein in grossem Umfang zu häuslichen Zwecken benutzt, sondern auch in grossen Quantitäten exportirt. Ein ansehnlicher Theil des Geschäfts wird in der Nähe von London betrieben; aber die Fabrication findet auch in andern Theilen des Königreichs statt.

Gewebe von Pferdehaar für Stuhl- und Sophaüberzüge werden in ziemlicher Menge fabricirt, obgleich dieser Artikel nicht mehr so allgemein für Möbel gebraucht wird als ehemals. Die Fabrication von Gummi-Mattenwerk etc. hat in den letzten Jahren bedeutend zugenommen.

2. Von den Quellen, welche das in der Teppich-Fabrication gebrauchte Rohmaterial liefern, wird in den Bemerkungen zu den Klassen 27, 28 und 30 die Rede sein. Pferdehaar wird in beträchtlichen Quantitäten importirt, besonders aus Russland und Amerika. Die Einfuhr dieses Artikels im Jahre 1865 betrug 21,078 Centner, mit einem Werthe von 106,938*l*. Die hauptsächlichsten Rohmaterialien, welche zu der Fabrication von Gummi-Mattenwerk etc. gebraucht werden, sind Caoutchouc und Gutta-Percha. Der erstere wird viel von Südamerika eingeführt und die letztere von Singapore und dem Ostasiatischen Archipelagus. Die Gesamtmasse und der

Gesamtwertb dieser während des Jahres 1865 in das Vereinigte Königreich importirten Gegenstände betrug:—

	Centner	£
Roher Caoutchouc .	71,392	530,538
Gutta-Percha .	29,077	160,565

Eine grosse Quantität von Caoutchouc wird rückexportirt, und der Rest, sowie die Gutta-Percha bilden nicht allein das Rohmaterial für das Mattengeschäft, sondern werden zu unendlich vielen andern Zwecken benutzt.

3. Mit Ausnahme der Teppich-Industrie können keine Berichte über die Zahl der Arbeiter, welche in den andern zu dieser Klasse gehörenden Branchen des Geschäfts arbeiteten, geliefert werden. Die Jury in Klasse 22 der Londoner Ausstellung des Jahres 1862 schätzte die Zahl der in dem Teppichgeschäft des Vereinigten Königreichs arbeitenden Personen auf ungefähr 40,000.

4. Die Durchschnittslöhne der Arbeiter wurden für das Jahr 1851 auf 16*s*. bis 28*s*. per Woche angegeben; aber diese stehen wahrscheinlich weit unter den jetzigen Preisen. Die Veranschlagung des Gesamtwertbs der jährlich in England fabricirten Teppiche wird eine Vorstellung von der Bedeutung des Geschäfts geben, als eines Mittels zur Beschäftigung der arbeitenden Klassen. Die folgenden Zahlen wurden von der Jury der Londoner Ausstellung von 1862 als eine Veranschlagung der Teppich-Fabrication jenes Jahres angenommen:—

	£
In Yorkshire	980,000
Kidderminster und Umgegend .	630,000
Durham, Kendal und Umgegend .	120,000
Somersetshire und Wiltshire .	40,000
Schottland	340,000
Summa	2,110,000

5. Die folgende Tabelle zeigt die Quantität und den Werth wollener Teppiche und Decken, welche während der fünf Jahre 1861–65 in das Vereinigte Königreich importirt wurden:—

	Quadratellen	£
1861 .	61,869	27,538
1862 .	111,896	33,165
1863 .	83,696	30,743
1864 .	78,311	32,392
1865 .	98,936	39,247

6. Die Ausfuhr Englischer Teppiche und Kammwollstoffe oder Drogets ist sehr bedeutend, und während der vier Jahre 1862–65 betragen die Quantitäten und Werthe:—

Jahre	Quantitäten		
	Teppiche	Teppichdecken	Drogets oder Filzteppiche
	Ellen	No.	Ellen
1862	4,799,000	36,640	579,000
1863	5,582,000	45,907	676,000
1864	5,620,000	40,257	372,000
1865	5,284,000	60,991	459,000

Jahre	Werth		
	Teppiche	Teppich- decken	Drogets oder Filzteppiche
	£	£	£
1862	620,700	14,737	50,515
1863	747,521	17,578	63,262
1864	825,098	14,782	36,400
1865	818,847	17,904	42,600

Die Vereinigten Staaten sind die Hauptconsumenten Englischer Teppiche. Im Jahre 1865 wurden dorthin 2,164,000 Ellen versandt.

Die Ausfuhr Englischer Wachseleinwand für Tische und Wachseleinwand für Fussböden betrug im Jahre 1865:—

	Quadratellen	£
Wachseleinwand, gefirniss etc.	2,094,000	138,459
Fussboden-Wachseleinwand, mit Einschuss von Gummi - Fussbodenleinwand		
	320,000	40,448

7. Die Fabrication von Teppichen wird jetzt hauptsächlich durch Maschinerie betrieben und das Jacquard-Handstuhlweben ist beinahe völlig durch Dampfkraftweben verdrängt.

8. Dass die Teppich-Industrie des Vereinigten Königreichs seit dem Jahre 1851 grosse Fortschritte gemacht hat, wurde klar bewiesen durch die Ueberlegenheit des Geschmacks, der Farbe und der Zeichnung in den 1862 ausgestellten Proben, im Vergleich mit denjenigen, welche die frühere Londoner Ausstellung aufzuweisen hatte, während die erweiterte Anwendung von Dampfkraft auch wesentlich dazu beigetragen hat, die Fabrication dieser Klasse von Waaren zu vermehren. Die rasche Entwicklung der Wirktapeten- ('tapestry carpets') Fabrication der Messrs. Crossley, in Halifax, ist vielleicht einer der grössten Fortschritte des neuesten Englischen Teppichgeschäfts. Durham, Glasgow, Halifax und Kidderminster besitzen alle Kunstschulen, und es kann nicht bezweifelt werden, dass der Unterricht, welcher den arbeitenden Klassen in diesen Schulen ertheilt wird, eine höchst wohlthätige Wirkung auf die Fabrication der respectiven Districte ausüben muss.

Eine bedeutende Verbesserung in den Mustern zu Fussboden-Wachseleinwand hat ebenfalls seit dem Jahre 1855 stattgefunden.

Klasse XIX.

TAPETEN.

Die Fabrication von Tapeten besteht seit mehr als einem Jahrhundert in dem Vereinigten Königreich und wird in der Umgegend von London, in Manchester, Edinburg und andern Theilen des Landes betrieben. Diejenige Art von Tapeten, in welcher die Englischen Fabricanten sich am meisten auszeichnen, ist

die durch Maschinerie verfertigte, deren Preis so niedrig ist, dass die ärmsten Volksklassen ihn erschwingen und so den Wänden ihrer Wohnungen ein freundliches Aussehen ertheilen können.

2. Grosse Quantitäten von Papier, Farben, Wolle und Metall werden alljährlich durch die Tapetenfabrication consumirt, aber Berichte über den wirklichen Betrag dieser Quantitäten fehlen.

3. Nach dem Census von 1861 betrug die Zahl der Arbeiter, welche in den verschiedenen Theilen des Königreichs in dem Tapetengeschäft arbeiteten:—

	Männer	Frauen	Summa
In England and Wales	1,556	399	1,955
Schottland	77	38	115
Irland	96	9	105
Summa	1,729	446	2,175

4. Allgemeine Berichte über die in dem Tapetengeschäft gezahlten Arbeitslöhne sind nicht vorhanden. Ein Bericht der Edinburger Handelskammer an das Handelsministerium giebt die Arbeitslöhne, welche im Jahre 1866 in jener Gegend gezahlt wurden, wie folgt:—

	Per Woche von 57 Stunden	s.	s.
An Farbenmischer	12	
An Glasirer etc.	15	
An Blockdrucker u. Marmorirer 20 bis 40			

5. Die Masse und der Werth der während der fünf Jahre 1861–65 in das Vereinigte Königreich importirten Tapeten betragen:—

Jahre	Tapeten	
	Quantitäten	Werth
	Centner	£
1861	2,975	15,395
1862	4,210	17,680
1863	5,177	21,740
1864	5,979	25,110
1865	5,684	23,873

Der grössere Theil der in England eingeführten Tapeten kommt aus Frankreich.

6. Die Masse und der Werth Englischer Tapeten, welche während desselben Zeitraums exportirt wurden, betragen:—

Jahre	Englische Tapeten	
	Quantitäten	Werth
	Centner	£
1861	13,415	105,984
1862	19,874	64,505
1863	25,874	84,403
1864	25,163	82,819
1865	32,893	109,320

7. Die Hauptmasse der billigeren Arten von Tapeten wird durch Maschinerie fabricirt, welche während der letzten Jahre ausserordentlich verbessert worden ist. Die angewandten Maschinen können jede täglich von 1,000 bis 1,500 Stück drucken.

8. Bis zum Jahre 1846 hatte die auf fremde Tapeten erhobene Einfuhrsteuer die Wirkung, dieselben beinahe völlig vom Englischen Markte auszuschliessen, und die Abwesenheit der Concurrenz zog nur zu sicher eine Abwesenheit des Fortschritts seitens der Englischen Fabricanten nach sich. Seit jedoch der auswärtige Concurrent unter gleichen Bedingungen auf dem Englischen Markt zugelassen wurde, hat man, was Geschmack und Arbeit betrifft, an den Englischen Tapeten grosse Fortschritt wahrgenommen, während andererseits eine verbesserte Anwendung der beim Verfertigen benutzten Maschinerie die Hervorbringung schöner Tapeten zu sehr billigen Preisen veranlasst hat.

Klasse XX.

MESSERSCHMIEDEWAAREN.

1. England geniesst schon seit langer Zeit einen hohen Ruf wegen seiner verschiedenen Messerschmiedewaaren, deren Fabrication besonders in Sheffield betrieben wird. In geringem Umfange werden Messerschmiedewaaren auch in London und andern Theilen des Königreichs verfertigt.

2. Der zu der Fabrication benutzte Stahl wird in Sheffield hergestellt, hauptsächlich aus fremdem Eisen. Im Jahre 1862 betrug die Zahl der mit dieser Umwandlung beschäftigten Oefen in Sheffield 205, welche alljährlich ungefähr 78,000 Tonnen Blasenstahl lieferten. Die Zahl der Schmelzöfen, welche jährlich ungefähr 51,000 Tonnen Gussstahl lieferten, betrug 2,437. Nur ein Theil dieser Masse wird in dem Messerschmiedegeschäft benutzt.

3. Die Jury über Messerschmiedewaaren in der Londoner Ausstellung von 1862 erklärte, dass die Zunahme der Arbeiterzahl in den Tischmesser-, Rasir-, Feder- und Taschenmesser- und Scheren-Branchen des Sheffielder Geschäfts, zwischen jenem Zeitpunkt und der vorhergehenden Ausstellung von 1851, nicht so beträchtlich gewesen sei als früher; dass aber wegen der ausgedehnteren Anwendung von Maschinerie eine grössere Menge von Tischmessern fabricirt worden sei als in früheren Jahren. Die Zahl der Personen, welche, während des Jahres 1864, innerhalb des Stadtgebiets von Sheffield, in den Hauptbranchen des Messerschmiedegeschäfts arbeiteten, betrug:—

Geschäftszweige	Männer	Frauen	Summa
Scherenmacher	1,089	331	1,420
Feilenmacher	4,345	589	4,934
Sägensmiede	1,232	—	1,232
Messerschmiede	3,294	184	3,478
Klingenschmiede	1,797	—	1,797
Tischmesser-smiede	4,944	—	4,944
Rasirmesser-smiede	817	—	817
Summa.	17,518	1,104	18,622

4. Die während des Jahres 1866 in den Hauptbranchen des Geschäfts in Sheffield gezahlten durchschnittlichen Wochenlöhne waren:—

Tischmesserfabrication			
Beschäftigungen		Löhne	Arbeitsstunden
		s.	
Schmiede	28	60
Zuschläger	24	60
Hefter	21	60
Schleifer	30	60
Federmesserfabrication			
Beschäftigungen		Löhne	Arbeitsstunden
Beste Arbeit		s.	
Schleifer	30	60
Schmiede	30	60
Messerschmiede	25	60
Schalen- und Springfeder-Macher	25	60
Scherenfabrication			
Beschäftigungen		Löhne	Arbeitsstunden
		s. s.	
Schmiede	20 bis 30	60
Feiler	20 „ 30	60
Schleifer	27 „ 35	54
Polirer	22 „ 32	54

5. Der Werth der während der vier Jahre 1862–65 aus dem Vereinigten Königreich exportirten Englischen Messerschmiedewaaren war:—

	£
1862	291,244
1863	304,119
1864	386,859
1865	402,294

6. Maschinerie wird in einigen Branchen des Messerschmiedegeschäfts angewandt, aber viele der wichtigsten Operationen werden durch Handarbeit ausgeführt.

7. Obgleich in neuerer Zeit keine bemerkenswerthen Verbesserungen in dem Messerschmiedegeschäft stattgefunden haben, bewahren die Erzeugnisse von Sheffield dennoch ihren Ruf für Vortrefflichkeit der Qualität und Arbeit, und Schönheit der Zeichnung und Ausführung. Es besteht seit dem Jahre 1843 eine Kunstschule in Sheffield, und die Zahl der Schüler, welche darin Unterricht erhielten, betrug im Jahre 1865 1,763.

Klasse XXI.

GOLD- UND SILBERGESCHIRR.

Die Verfertigung von Gegenständen aus kostbaren Metallen wird in den Hauptstädten des Königreichs betrieben, und die grossen Geschäftshäuser Londons liefern alljährlich

lich grosse Quantitäten von Silbergeschirr. Der während der letzten Jahre so beträchtlich erweiterte Gebrauch von plattirten Waaren hat eine Beschränkung der Operationen des Geschäfts mit kostbaren Metallen veranlasst; trotzdem aber wird der Werth des in England jährlich fabricirten und gebrauchten Gold- und Silbergeschirrs auf mehr als eine Million Pfund Sterling geschätzt. Es besteht auch ein Ausfuhrgeschäft in diesen Gegenständen, dessen Werth im Jahre 1865 62,532*l.* betrug.

Statistische Angaben über die Gesamtzahl der Arbeiter, welche mit der Verfertigung der gegenwärtig zu dieser Klasse gerechneten Gegenstände beschäftigt sind, sind nicht vorhanden. Die Zahl der Goldschmiede und Juweliere in London ist 159 und die der Cissellirer 41.

In der Anwendung der Kunst auf die Verarbeitung von Gegenständen aus kostbaren Metallen ist während der letzten zehn Jahre ein bedeutender Fortschritt gemacht worden; aber in Bezug auf Umrisse und Ornamentirung bedürfen die Englischen Zeichner von Gold- und Silbergeschirr noch gar sehr der weitern Ausbildung eines reinen Styls.

Klasse XXII.

BRONZEN UND ANDERE ARTEN VON GUSS-ARBEIT UND REPOUSSÉ-ARBEIT.

Die Fabrication von Bronzen ist in dem Vereinigten Königreich von sehr geringem Umfang. Die Seltenheit guter Englischer Cissellirer ist der in den Zeichenschulen befolgten Methode zugeschrieben worden, welche mehr die Ausbildung von Künstlern und Bildhauern als von guten Metallarbeitern befördert.

Frankreich liefert den grössten Theil der nach England eingeführten Bronzen, und während des Jahres 1865 kam aus einer Gesamteinfuhr von 61,307*l.* 55,168*l.* Werth von dort.

Klasse XXIII.

UHREN.

Die Uhrenfabrication wird besonders in London, Coventry, Liverpool und Manchester betrieben. Die Uhren, für welche die Englischen Fabricanten besonders berühmt sind, sind Chronometer und andere höhere Arten von Uhren, obgleich auch grosse Massen von billigen Uhren in England gemacht werden. Die besten Uhrwerke werden in Lancashire gemacht, und eine beträchtliche Ausfuhr von Uhrwerken findet alljährlich nach den Vereinigten Staaten statt, wo sie mit Gehäusen versehen und vollendet werden. Nach dem Census von 1861 war die folgende Anzahl von Personen in den ver-

schiedenen Theilen des Landes mit der Uhrenindustrie beschäftigt:—

	Männer	Frauen	Summa
In England und Wales . .	20,221	536	20,787
Schottland	1,699	8	1,707
Irland	951	8	963
Summa	22,871	556	56,427

Die Zahl der Personen, welche (mit Ausschluss von Gehülfen) gegenwärtig in den verschiedenen Branchen des Geschäfts in London arbeiten, beträgt:—

Uhrmacher	412
Uhrgehäusemacher	55
Uhrjuweliere	31
Uhrmacher (Theile)	277
Wanduhrmacher	162
Wanduhrgehäusemacher . . .	14

Der Werth von importirten Uhren ist während der letzten fünf Jahre beinahe unverändert geblieben; im Jahre 1865 wurden 216,677*l.* Werth Stutz- und Wanduhren und 257,076*l.* Werth Taschenuhren in das Vereinigte Königreich eingeführt. Der Werth der während desselben Jahres ausgeführten Englischen Waaren betrug: Stutz- und Wanduhren 24,695*l.* und Taschenuhren 69,179*l.*

Klasse XXIV.

APPARATE UND VORKEHRUNGEN FÜR HEIZUNG UND ERLEUCHTUNG.

Die Fabrication der besten Arten von Eisen- und Stahl-Kamingittern, Feuerschirmen und Schüreisen wird in Sheffield betrieben, wo dieser Industriezweig seit 60 bis 70 Jahren bestanden hat; vor diesem Zeitpunkt wurden die besten Kamingitter in London und Edinburgh gemacht. Die gewöhnlicheren Arten von Wärmöfen werden hauptsächlich in der Carron und andern Fabriken in Schottland verfertigt; in den Coalbrookdale-Fabriken und in den Schmelzhütten in London, Northampton, Dudley, Rotherham, Birmingham, Mansfield, Nottingham und Derby. Die Kunst des Stahlschmiedens, Schleifens und Polirens beschränkt sich beinahe auf Sheffield und dessen Umgegend. Districte, wo Eisen geschmolzen wird, bieten dem Eisengiesser den grossen Vortheil billigen Eisens und billiger Steinkohlen, und in diesen wird die grosse Masse des Wärmofengeschäfts betrieben. Man kann kaum zugeben, dass der Apparat zum Heizen mittelst der Circulation heisser Luft und der Ventilations-Apparat schon zu einem hohen Grade von Vollkommenheit gebracht worden sind; der Mangel an Erfolg ist vielleicht in gewissem Masse der Constructionsort der Gebäude zuzuschreiben, in welchen man solche Apparate anwandte.

Was das Lampengeschäft betrifft, so hat der

vermehrte Gebrauch von Gas während der letzten Jahre den Gebrauch von Oel zu Zwecken der Erleuchtung in grosser Masse beseitigt, und ein bedeutender Theil der Fabrication der älteren Art von Lampen ist jetzt durch die Fabrication von Gasapparaten verdrängt worden. Obgleich der Gebrauch von Fischöl und vegetabilischem Oel abgenommen hat, so hat der des kürzlich entdeckten Paraffinöls ausserordentlich zugenommen und die Fabrication einer neuen Art von Lampen in's Leben gerufen, welche in grosser Menge, zu Preisen von 4d. bis 50s. per Stück, in Birmingham gemacht werden. Die rasche Entwicklung der Dampfverbindung zu Land und zu Wasser hat auch eine grosse Nachfrage nach Signal- und andern Lampen veranlasst und den Fabricanten, welche früher das Oellampengeschäft betrieben, Beschäftigung gegeben.

Klasse XXV.

PARFÜMERIEN.

Der Hauptmittelpunkt des Parfümeriegeschäfts ist in London, obgleich die Fabrication wohlriechender Essenzen, Pomaden, Schönheitsmittel etc. in geringerem Umfange in den meisten grossen Städten von England betrieben wird. Wenige der zur Fabrication von Parfümerien gebrauchten Rohmaterialien werden in England gewonnen; meistens werden sie aus den Südstaaten Europas und aus Asien eingeführt. Die Fabrication von Toilettenseife im Vereinigten Königreich ist sehr beträchtlich. Die berühmteste ist vielleicht die unter dem Namen der 'Windsor-Seife' bekannte, welche nicht allein viel im Inland gebraucht, sondern auch nach allen Welttheilen exportirt wird. Englisch Lavenderwasser hat ebenfalls viele Jahre hindurch eines grossen Rufes genossen.

Es fehlt an statistischen Berichten über die Gesamtzahl der Personen, welche in der Parfümerie- und Seifen-Fabrication beschäftigt sind. Bei der umfassenden Ausdehnung dieser Geschäfte haben sie jedoch vielen Händen Beschäftigung gegeben, und die Einführung weiblicher Arbeit in die feineren Branchen hat der Beschäftigung dieses Volkstheils einen neuen Spielraum eröffnet. Die Zahl der Personen, welche (mit Ausschluss der Arbeiter) gegenwärtig in London das Parfümeriegeschäft betreiben, beläuft sich auf:—

Parfümeure, en gros	151
„ en detail	849
Fabricanten von Stoffen zum	} 16
Haarfärben	

Der im Jahre 1865 exportirte Werth Engländer Parfümerien (mit Ausschluss von Toilettenseife) betrug 94,351l. Die Ausfuhr von Toilettenseife in demselben Jahre erreichte 7,628 Centner, zu einem Werthe von 32,361l.

Während der letzten zehn Jahre ist in den verschiedenen Branchen des Parfümeriegeschäfts ein grosser Fortschritt gemacht worden; auch hat die Abschaffung der Accisesteuer auf Seife, im Jahre 1853, eine höchst wohlthätige Wirkung auf die Fabrication dieses so bedeutenden und allgemein unentbehrlichen Gegenstandes ausgeübt.

Klasse XXVI.

LEDERARBEIT, MODE- UND KORBWAAREN.

Es fehlt an Mitteln, den Betrag der Fabrication der verschiedenen, zu dieser Klasse gehörenden, Gegenstände zu bestimmen. Vielleicht die wichtigste Industrie innerhalb ihrer Grenzen ist die der Bürstenmacherei. Bei dem allgemeinen Gebrauch von Bürsten für Haus- und Geschäftszwecke, ist die Fabrication nothwendigerweise sehr gross, obgleich keine Berichte über ihren Umfang existiren. Nach dem Census von 1861 befand sich die folgende Zahl von Bürsten- und Besenmachern in den verschiedenen Theilen des Königreichs:—

In England und Wales	11,178
Schottland	535
Irland	617
	12,330

Die Einfuhr von Bürsten und Besen ist von geringem Werth, und die Ausfuhr Engländer Bürsten und Besen im Jahre 1865 belief sich auf nur 52,000l., wovon der grösste Theil nach Australien geschickt wurde. Andererseits findet eine grosse jährliche Einfuhr von Schweineborsten statt; im Jahre 1865 wurden 2,566,000 Pfund eingeführt, hauptsächlich von Russland. Grosse Quantitäten von Bürsten werden auch von Cocosnussfasern gemacht.

Das Korbgeschäft des Vereinigten Königreichs ist auf die Fabrication von gröberen Gegenständen, wie Tragkörben und Packkörben, beschränkt, obgleich auch verschiedene Modegegenstände für den Hausgebrauch gemacht werden.

Englische Toilettentischkasten geniessen eines hohen Rufes wegen der Vortrefflichkeit ihrer Arbeit und der Vollständigkeit ihrer Ausstattung; sie können zu allen Preisen gekauft werden, von wenigen Schillingen bis zu tausend Guineen das Stück. Grosse Fortschritte sind seit 1851 in der Fabrication dieser Artikel gemacht worden.

GRUPPE IV.

(KLASSEN XXVII. bis XXXIX.)

KLEIDUNGSSTOFFE (FABRICATE EINBEGRIFFEN) UND ANDERE AM KÖRPER GETRAGENE GEGENSTÄNDE.

Klasse XXVII.

BAUMWOLLEN-GARN UND ZEUGE.

Die Baumwollen-Fabrication bildet noch immer den Hauptzweig der einheimischen Industrie des Vereinigten Königreichs, trotz der schweren Crise, welche der Englische Baumwollenhandel, so wie der von ganz Europa, kürzlich bestanden hat.

1. Die Hauptsitze dieser Industrie sind Lancashire, in England, und Lanarkshire, in Schottland. Die Grafschaften York, Chester, Derby und Nottingham enthalten auch eine grosse Anzahl von Baumwollenfabriken.

Nach dem letzten Bericht (1861) belief sich die Gesamtzahl der Baumwollenfabriken in dem Vereinigten Königreich auf 2,887, wovon 2,715 auf England und Wales, 163 auf Schottland und 9 auf Irland kamen. Eine kurze Tabelle wird vielleicht eine bessere Vorstellung geben von dem Umfange dieser Industrie in den drei Provinzen des Königreichs:—

Abtheilungen und Grafschaften	Zahl von Fabriken	Zahl von Spindeln	Zahl von Webmaschinen
England und Wales:			
Lancashire . . .	1,979	21,530,532	306,423
Yorkshire . . .	369	2,414,898	17,393
Cheshire . . .	212	3,373,113	32,926
Derby . . .	79	682,008	7,581
Nottingham . .	26	36,000	—
Andere Graf-schaften . }	50	315,574	3,802
Summa . . .	2,715	28,352,125	368,125
Schottland:			
Lanarkshire . .	96	1,138,602	24,149
Renfrew . . .	44	408,742	2,968
Andere Graf-schaften . }	23	368,054	2,993
Summa . . .	163	1,915,398	30,110
Irland . . .	9	119,944	1,757
Vereinigtes Königreich . }	2,887	30,387,467	339,922

Die obigen Zahlen können als eine richtige Darstellung der Baumwollen-Industrie in einer Zeit gewöhnlicher Thätigkeit angenommen werden. Eine grosse Menge neuer Maschinerie

ist seit 1861 hinzugefügt worden; aber mehrere Fabriken sind noch ausser Arbeit.

In den Districten von Lancashire und Cheshire, als deren Mittelpunkt Manchester betrachtet werden kann, werden alle Arten von Garn und leichten und schweren Zeugen, Kattun, Sammet etc., producirt, während in Glasgow, welches der Mittelpunkt der Schottischen Baumwollenindustrie ist, hauptsächlich die leichteren Arten von Zeugen, wie Batist, Jaconet etc., gemacht werden.

Was die gemischten Zeuge angeht, welche zu dieser Klasse gehören, so ist es kaum möglich, die beinahe zahllosen Artikel zu nennen, wovon Baumwolle einen Theil ausmacht. Die wichtigsten jedoch werden in Bradford und andern Theilen von Yorkshire fabricirt, nämlich die aus Baumwolle und Wolle gemachten Stoffe, welche ganz den Anschein reiner Wollenstoffe haben, obschon sie natürlich viel billiger sind. Eine fernere Bemerkung über diese Waaren wird in Klasse 39 beigefügt werden.

2. Vor dem Bürgerkriege in den Vereinigten Staaten bezog England den grössten Theil des zu der Baumwollenfabrication benutzten Rohmaterials aus Nordamerika. Die gesammte Durchschnittseinfuhr roher Baumwolle belief sich während der fünf Jahre 1856–1860 auf 1,129 Millionen Pfund jährlich, wovon 869 Millionen Pfund jährlich aus den Vereinigten Staaten bezogen wurden.

Während desselben Zeitraums wurden 171 Millionen Pfund jährlich exportirt, was 958 Millionen Pfund für den jährlichen Durchschnittsverbrauch übrig liess.

Bei dem Ausbruch des Amerikanischen Krieges that die Handelskammer von Manchester energische Schritte, um den Anbau von Baumwolle in verschiedenen Welttheilen zu befördern, und viele Länder, vor allem das Englische Indien, Egypten, Brasilien und andere Südamerikanische Staaten, ja sogar China und Japan, gaben ihrer Baumwollencultur eine beträchtliche Ausdehnung und trugen während der Jahre 1861–1865 zur Versorgung der Englischen Märkte bei. Während des letzteren Jahres nahm jedoch die Zufuhr aus einigen dieser Länder ab, und man darf kaum bezweifeln, dass sie nicht im Stande sind, in Zeiten des

Friedens und der Ruhe den Amerikanischen Producenten Concurrenz zu machen.

Die drei Länder, welche während des Amerikanischen Krieges die grösste Baumwollenzufuhr lieferten, waren das Englische Indien, Egypten und Brasilien. Die Einfuhr roher Baumwolle im Jahre 1865 betrug:—

Aus dem Englischen Indien	Pfund 446,000,000
„ den Vereinigten Staaten, mit Einschluss der Bahama- inseln und Mexicos	190,000,000
„ Egypten	177,000,000
„ Brasilien	55,000,000
„ China	36,000,000
„ den Mittelmeerstaaten (mit Ausschluss Egyptens)	27,000,000
„ andern Ländern	47,000,000
Summa	978,000,000

Von dieser Quantität wurden 303 Millionen Pfund rückexportirt, wonach 675 Millionen Pfund zur Consumption übrig blieben.

Die Einfuhr roher Baumwolle während der ersten elf Monate des Jahres 1866 belief sich auf 1,260 Millionen Pfund, oder 482 Millionen Pfund mehr als die entsprechende Einfuhr des vorhergehenden Jahres. Aus diesem Gesamtbetrage wurden 474 Millionen Pfund durch die Vereinigten Staaten geliefert und 586 Millionen Pfund durch das Englische Indien. 361 Millionen Pfund wurden während der elf Monate rückexportirt, was 899 Millionen Pfund zur Consumption übrig liess.

Die Preise der Baumwolle seit dem Jahre 1860 bis zur Gegenwart waren wie folgt:—

Im December	Gute Amerikanische per Pfund
1860	d. 7 $\frac{1}{4}$
1861	11
1862	23 $\frac{5}{8}$
1863	27 $\frac{1}{2}$
1864	27 $\frac{1}{2}$
1865	22

Im Juli und August 1864 erreichten die Preise die Höhe von 31 $\frac{1}{2}$ d. per Pfund. Auch Indische Baumwolle brachte hohe Preise von 1862 bis 1865. Die gegenwärtigen Preise (December 1866) sind 16d. für gute Amerikanische und 12 $\frac{3}{4}$ d. für gute Dhollehah (Indische).

Man darf nicht vergessen, dass während der Crise der Preis der Baumwollenfabricate nicht in demselben Verhältniss stieg, wie der Preis des Rohmaterials, weil die Kosten der Fabrication seit mehreren Jahren dieselben geblieben waren oder vielmehr, in Folge der angewandten bessern Maschinerie, ein wenig abgenommen hatten; und um den Preis der Fabricate noch mehr niederzuhalten, wurden sie an Qualität leichter gemacht und enthielten demnach weniger von dem theuern Rohmaterial. Die Abnahme der Baumwollenpreise und die Rückkehr einer regelmässigen Nachfrage nach Fabricaten hat jetzt glücklicherweise die Fabricanten in den Stand gesetzt, zu ihren früheren Qualitäten

zurückzukehren und den Credit ihrer Fabricate wieder herzustellen.

3. Von 451,000 Personen, die während des Jahres 1861 in den Baumwollenfabriken des Vereinigten Königreichs beschäftigt waren, kamen 315,000, oder 70 Procent, auf den District von Lancashire. Die nachstehende Tabelle zeigt das Geschlecht und Alter der Gesamtzahl der Arbeiter:—

	In Eng- land und Wales	In Schott- land	In Irland	In dem Vereinigten Königreich
Männliche:	Zahl	Zahl	Zahl	Zahl
Unter 13	21,774	307	—	22,081
13 bis 18	38,210	2,661	336	41,207
Ueber 18	113,720	5,060	488	119,268
Summa	173,704	8,028	824	182,556
Weibliche:				
Unter 13	17,382	325	—	17,707
Ueber 13	216,512	32,884	1,910	251,306
Summa	233,894	33,209	1,910	269,013
Summa	407,598	41,237	2,734	451,569

Die Geschichte der Baumwollentheuerung und ihres Einflusses auf die Baumwollensarbeiter braucht hier nicht wiederholt zu werden. Das Resultat jenes Ereignisses war, mehrere Jahre lang alle diejenigen, welche Beschäftigung finden konnten, zu veranlassen, sie in anderen Branchen der Industrie zu suchen, und bei der Wiedereröffnung der Baumwollenfabriken fand man es daher einigermassen schwer, gute Arbeiter aufzutreiben. Wenn man nach dem gegenwärtigen Betrage der Production und der wahrscheinlich anhaltenden Nachfrage im In- und Auslande urtheilt, so scheint die Annahme gerechtfertigt, dass die Baumwollenfabrication jetzt wieder eben so vielen Personen ihren Lebensunterhalt verschafft als im Jahre 1861. Guten Autoritäten zufolge ist die gegenwärtig (December) verbrauchte Quantität Baumwolle der Consumption von 1860 beinahe gleich.

4. Die Durchschnittslöhne in den Hauptdistricten der Baumwollendindustrie in Lancashire betrugen im Jahre 1860:—

	Per Woche von 60 Stunden	
Spinnen:	s. s. d.	
Spinner an selbstspinnenden Mulemaschinen	20 bis 22 0	
Weben:		
Maschinenweber (besonders Frauen) an zwei Maschinen	10 „ 10 9	
„ drei „	15 „ 16 0	
„ vier „	16 „ 20 0	

Die gegenwärtigen Arbeitslöhne stehen, wegen des Mangels an Arbeitern, ungefähr 10 Procent über denjenigen, welche im Jahre 1860 gezahlt wurden.

Wenn man die schwere Prüfung in Anschlag bringt, welche die Fabrikbevölkerung in den Baumwollendistricten vor kurzem bestanden hat, so ist die allgemeine Lage der Arbeiter

sehr zufriedenstellend. Es fehlt nicht an Beschäftigung mit gutem Lohn, und da viele Mitglieder derselben Familie Arbeit in den Fabriken finden, genügt die Gesamtsumme ihrer Verdienste, sie in bequemen Umständen zu erhalten.

Mr. H. Ashworth bemerkte in einem vor der 'Social Science Association' in Manchester gehaltenen Vortrage (October 1866), 'dass die Zunahme der Werktag-, Sonntag- und Fabrik-schulen während der letzten Jahre höchlich zu der Vermehrung der Intelligenz, der Verbesserung des Characters und der Sitten der arbeitenden Klassen beigetragen habe.

'Es existirt eine grosse Anzahl von Handwerker-Instituten, Arbeiter-Clubs und Bildungs-Anstalten, freien Bibliotheken und ähnlichen Instituten, welche die Mittel geistiger Cultur darbieten und von der Arbeiterklasse viel benutzt und hoch geschätzt werden. Ausserdem hat eine billige freie Presse dem Englischen Arbeiter ein Erziehungsmittel gegeben, dessen sich bis jetzt kaum ein anderes Land der Welt erfreut.

'Mässigkeit und Klugheit zeigen sich in dem Verlangen vieler, den Besitz von Hülfquellen zu erreichen, welche sie vor wirklichem Mangel schützen oder zum Wohlstand führen würden.' 'Die Einrichtung von co-operativen Gesellschaften und Fabrications- und Handels-Compagnien unter den Arbeitern, welche aus ihren eigenen Reservefonds geschaffen und ausschliesslich durch die tüchtigsten und ehrbarsten ihrer Mitglieder geleitet werden, ist ein Zeichen ihrer weisen Vorsicht und öconomischen Gewohnheiten.' Am 31. December 1865 waren in Lancashire allein 139 dieser Gesellschaften in Thätigkeit.

5. Der Werth der in das Vereinigte Königreich eingeführten Baumwollenfabricate ist gering im Vergleich mit dem der Ausfuhr, denn er beträgt nicht ganz eine Million Pfund Sterling jährlich. Die importirten Waaren bestehen hauptsächlich aus Französischen Mousselines, Indischen und anderen Zeugen (von welchen ein grosser Theil rückexportirt wird) und Strumpfwirkereiwaaen, besonders aus Deutschland.

6. Baumwollengarn und Zeuge bilden dagegen die grösste Klasse von Waaren, welche aus dem Vereinigten Königreich exportirt werden, wie die nachstehende Tabelle zeigt:—

Jahre	In Millionen von £ Sterling					Werth der gesammten Ausfuhr
	Garn	Zeuge		Andere Arten	Gesamm- masse von Garn und Fabri- caten	
		Weisse oder schlichte	Gedruckte gestreifte oder gefärbte			
1860	10	23	17	2	52	136
1861	9	22	14	1	46	125
1862	6	16	12	2	36	124
1863	8	23	14	2	47	146
1864	9	27	17	2	55	160
1865	10	28	17	2	57	166

Die folgende Tabelle der Quantitäten und des Werthes der Zeuge und des Garns, welche

in den Jahren 1860 und 1865 exportirt wurden, wird eine allgemeine Ansicht von dem vermehrten Werthe der Baumwollenfabricate geben:—

Baumwollengarn :	Quantitäten		Werth
	Pfund	£	
1860 .	197,343,000	9,870,000	
1865 .	103,533,000	10,343,000	
Nähgarn :			
1860 .	6,297,000	741,000	
1865 .	4,626,000	753,000	
Allerlei Zeuge :			
	Yard		
1860 .	2,776,000,000	40,346,000	
1865 .	2,015,000,000	44,860,000	

7. Die Baumwollenfabrication wird beinahe ausschliesslich durch Maschinerie betrieben. Die bewegende Kraft betrug im Jahre 1861 281,663 Dampf-Pferdekraft und 12,467 Wasser-Pferdekraft. Eine grosse Vermehrung der Maschinerie hat jedoch seit dem Jahre 1861 stattgefunden.

8. Die hohe Ausbildung, welche die Baumwollenfabrication seit einer Reihe von Jahren in dem Vereinigten Königreich erreicht hat, macht es schwierig, die zahlreichen Verbesserungen anzuführen, welche in der Maschinerie und dem bei der Baumwollenfabrication angewandten Verfahren stattgefunden haben. Die gemachten Fortschritte bestehen mehr in der Vereinfachung und Vervollkommnung der vorhandenen Maschinerie, als in der Einführung neuer Fabrications-Methoden.

Die Jury, welche über die Maschinerie in der Londoner Ausstellung von 1862 Bericht zu erstatten hatte, erklärte, 'dass die Englische Maschinerie zum Baumwollenspinnen nicht zu höchlich gerühmt werden könne, sowohl was allgemeine Construction der Maschinen, geschickte Anordnung, Anpassung der verschiedenen Theile an einander und die durch neue Verbesserungen erlangte Vollkommenheit an betrifft, als auch wegen der Vortreflichkeit und tadellosen Vollendung der Arbeit.

'Durch die eingeführten Verbesserungen hatten die Aussteller sich bemüht, ihre Maschinen in deren verschiedenen complicirten Bewegungen so sicher, so automatisch und vollkommen zu machen als möglich. Diese Bemühungen, waren in hohem Grade erfolgreich gewesen und haben zur Herstellung von Maschinen geführt, welche nicht allein in Rücksicht auf Production, sondern auch auf Qualität, eine grössere, bisher unerreichte Arbeitsfähigkeit besitzen.'

Was die Maschinerie zum Weben betrifft, so wurde erklärt, 'dass in Hinsicht auf Anordnung und Arbeit das den Spinn-Maschinen ertheilte Lob in gleichem Masse den Webemaschinen gebühre.'

Auch in den Winde-, Schlichte- und Haspel-Maschinen war, im Vergleich mit den 1851 ausgestellten, ein grosser Fortschritt bemerkbar.

Die wichtigste seit 1862 gemachte Verände-

rung besteht in der Anpassung der vorhandenen Maschinerie zur Bearbeitung der kurzen Fasern Ostindischer und anderer Baumwollenarten, welche vor dem Amerikanischen Kriege nur in geringem Umfang gebraucht wurden. Vermehrung der Schnelligkeit der Maschinerie wird überall versucht, wo sie ausführbar ist; aber die untergeordneten Baumwollenarten können nicht mit grosser Schnelligkeit bearbeitet werden und erfordern eine grössere Masse von Maschinerie als die bessern Qualitäten.

9. Neben dem in den mechanischen Branchen der Baumwollenindustrie stattgefundenen Fortschritte müssen die Mittel, welche die Regierung angewandt hat, um die Erziehung und den Geschmack der Arbeiter zu heben, nicht übersehen werden. Es bestehen jetzt, wissenschaftliche und Kunstschulen in Verbindung mit dem Departement für Wissenschaft und Kunst, sowohl in den Mittelpunkten der Fabrikdistricte als in anderen Theilen des Landes, und viele Tausende von Schülern empfangen alljährlich Unterweisung in den Elementen der Wissenschaft und den Grundsätzen der Kunst. Ausser diesen Schulen sind 'umherreisende Sammlungen' von Kunstgegenständen organisiert worden, welche die Runde durch die Provinzen machen, und manchem Arbeiter, der nicht im Stande sein würde, eine Reise nach London, zur Ansicht der dortigen Kunstsammlungen, zu unternehmen, werden auf diese Weise gute Modelle an die eigene Thüre gebracht.

Der so ertheilte Unterricht hat eine höchst wohlthätige Wirkung auf die Englischen Fabriken ausgeübt. Ein grosser Fortschritt in dieser Hinsicht war allen denen bemerkbar, welche die Ausstellungen von 1851 und 1862 gesehen; und man ist der Meinung, dass die in der gegenwärtigen Ausstellung in dieser Klasse der Britischen Section ausgestellten Gegenstände, im Vergleich mit den im Jahre 1855 nach Paris gesandten, in der Würdigung der schönen Kunst, sowohl in Bezug auf Farbe als auf Form, grosse Fortschritte bethätigen werden.

[Ueber *Strumpfwirkerwaaren* und *Unterzeug* siehe Klasse 34.]

Klasse XXVIII.

GARNE, FLACHS- UND HANF-FABRICATE ETC.

1. Zu dieser Klasse gehören Garne und Fabricate, die aus andern Pflanzenfasern als aus Baumwolle verfertigt werden. Die Leinwand-Industrie, oder Flachs- und Hanfverarbeitung, erstreckt sich über das ganze Königreich, am ausgebreitetsten jedoch ist sie in den Irischen Grafschaften Antrim und Down.

In England befinden sich die Hauptzweige dieses Handels in den Grafschaften York und Lancaster, in Schottland in den Grafschaften Forfar und Fife. Die Verarbeitung von Jute (Ostindischem Hanf, in andern fremden

Ländern, Frankreich und Holland ausgenommen, kaum bekannt) nimmt jetzt in Schottland eine so wichtige Stellung ein, dass wir davon besonders reden müssen.

Dundee ist der Hauptsitz dieses Handelszweiges. Jute ist ein dem Hanf ähnlicher Faserstoff, woraus hauptsächlich grobe Leinwand, Sack- und Packtuch, so wie auch Fuss- teppiche gemacht werden. Die Zahl der im Jahre 1861 im Vereinigten Königreiche bestehenden Flachs-, Hanf- und Jute-Fabriken war wie folgt:—

Abtheilungen und Grafschaften	Fabriken	Spindeln	Dampf- webe- stühle
FLACHSFABRIKEN			
England und Wales:			
Lancashire . . .	13	117,412	489
Yorkshire . . .	70	172,272	1,403
Andere Grafschaften	53	54,624	268
Summa .	136	344,308	2,160
Schottland:			
Forfar . . .	85	160,090	5,108
Fife . . .	46	54,383	1,823
Andere Grafschaften	32	64,912	1,035
Summa .	163	279,385	7,966
Irland:			
Antrim . . .	47	360,592	2,854
Down . . .	15	103,630	128
Andere Grafschaften	38	128,759	1,684
Summa .	100	592,981	4,666
Gesamtzahl im Ver- einigten Königreiche }	399	1,216,674	14,792
HANF-FABRIKEN			
England und Wales .	3	264	1
Schottland . . .	2	2,816	—
Irland . . .	—	—	—
Summa .	5	2,580	1
JUTE-FABRIKEN			
England und Wales .	4	620	—
Schottland . . .	27	30,538	554
Irland . . .	5	1,824	—
Summa .	36	32,982	554

Seit dem Jahre 1861 jedoch hat der Leinwand- und Jute-Handel, wie aus folgendem amtlichen Berichte erhellt, bedeutend zugenommen. Hier folgt eine Schilderung von dem Zustande der Irischen Leinwand-Industrie am 1. Januar 1866, veröffentlicht durch Herrn Mellyrath, Secretair des 'Belfast Linen Committee.'

Flachsspinnmühlen.

Anzahl, 86; beschäftigte Spindeln, 759,452; ditto, unbeschäftigt, 11,362. Summa 770,814, deren Anzahl man um 103,792 zu vermehren gedachte.

Dampfwebereien.

Fabriken, 44; Webestühle, beschäftigt, 10,538; ditto, unbeschäftigt 266. Summa

10,804, deren Anzahl man um 6,484 zu vermehren gedachte. Ausserdem gab es noch 17,786 Spindeln zum Fadenzwirnen, die man auch um 4,656 zu vermehren beabsichtigte. Neue Mühlen und im Bau begriffene Fabriken waren zur fernern Aufnahme von 62,000 Spindeln und 1,400 Webestühlen bestimmt.

Gewöhnliche Leinwand, Damaste, Cambries, Taschentücher und leichte Linnenwaaren verfertigt man in den Districten von Belfast, Forfar, Brechin, Dunfermline, Barnsley und Manchester, während die Bezirke von Dundee, Hull, Greenock und Arbroath die gröbern Sorten, Segel- und Sacktuch einbringen, liefern. Leeds producirt gleichfalls Leingarne in grosser Menge.

Mr. R. Sturrock, Secretair der Handelskammer zu Dundee, berichtet, dass die Jute-Verarbeitung dort zuerst im Jahre 1830 bekannt geworden sei, und man im Jahre 1865 fast fünf und siebenzig tausend Tonnen roher Jute in jene Stadt eingeführt habe. Er schätzt die gegenwärtige Zahl der Jute-Spinnereien und Webereien auf etwa sechszig, die 100,000 Spindeln und 5,000 Webestühle beschäftigen.

2. Ein grosser Theil des zur Leinwandverarbeitung im Vereinigten Königreich erforderlichen Rohmaterials bringt das Land hervor. Folgende Tabelle zeigt den respectiven Betrag des im Jahre 1866 veranschlagten einheimischen Ertrages und was in diesem Artikel während der fünf Jahre 1861-65 vom Auslande eingeführt wurde.

EINHEIMISCHES ERZEUGNISS.

	Acker
Der mit Flachs angepflanzte Flächenraum in Irland betrug im Jahre 1866	263,649
	Centner
Der etwaige Ertrag im Jahre 1866	1,054,000

AUSLÄNDISCHES ERZEUGNISS ZUM VERBRAUCH EINGEFÜHRT

Jahre	Flachs	Hanf	Jute
	Centner	Centner	Centner
1861	1,286,000	738,000	817,000
1862	1,778,000	908,000	849,000
1863	1,416,000	956,000	1,057,000
1864	1,774,000	943,000	1,754,000
1865	1,816,000	913,000	1,691,000

Sehr viel Hanf wird auch zur Anfertigung von Seilen und Schnüren verwendet. Im Jahre 1861 bestand der mit Flachs angepflanzte Flächenraum in Irland nur aus 148,000 Acker, und der Durchschnittsertrag betrug 451,000 Centner. Ueber den Flachsertrag in Schottland fehlen die genauern Angaben; auch ist dort der Flachsbaues keineswegs ausgedehnt und soll noch in den letzten zehn Jahren sehr abgenommen haben. Die Ausfuhr von Britischem Flachs ist unbedeutend und belief sich im Jahre 1865 auf 35,000 Centner. Der Gesamtbetrag des in der Leinwand und Jute-Industrie verbrauchten Rohmaterials mag annähernd auf vier bis fünf Millionen Centner geschätzt werden.

Von dem im Jahre 1865 eingeführten Flachs

und Rohhanf lieferte Russland, vom erstern 76 Procent, vom letztern 60 Procent.

Oestreich und die Philippinischen Inseln sandten gleichfalls grosse Beiträge. British-Indien liefert allein die Jute.

3. Die Anzahl der in den Flachs-, Hanf- und Jutefabriken Beschäftigten beiderlei Geschlechts und verschiedenen Alters war nach dem letzten im Jahre 1861 veröffentlichten Berichte folgende:—

	England und Wales	Schott- land	Irland	Verein- igtes König- reich
Arbeiter:				
Unter 13 Jahren . .	886	328	236	1,450
13 bis 18	1,422	3,461	3,771	8,654
Ueber 18	3,682	6,842	6,142	16,666
Summa	5,990	10,631	10,149	26,770
Arbeiterinnen:				
Unter 13	1,108	627	459	2,194
Ueber 13	13,376	28,304	23,359	65,039
Summa	14,484	28,931	23,818	67,233
Gesammtzahl der Arbeiter und Ar- beiterinnen . . .	20,474	39,562	33,967	94,003

Die Anzahl der jetzt in der Leinwand- und Jute-Industrie Beschäftigten ist bedeutend grösser als die oben angegebene. Von dem während der letzten fünf oder sechs Jahrestatistiken gefundenen vermehrten Gebrauche des Rohmaterials haben wir bereits gesprochen; die unvermeidliche Folge davon war denn auch eine vermehrte Anzahl von Arbeitern. Die in den Jutefabriken zu Dundee Beschäftigten belaufen sich jetzt auf etwa 28,000, von denen ein Drittel dem männlichen, zwei Drittel dem weiblichen Geschlechte angehören.

4. Die im Leinwandhandel im Jahre 1865 zu Dundee gezahlten Durchschnittslöhne waren:—

	Per Tag von 10 Stunden
In Belfast	s. d.
(Leinwand) { An Spinnerinnen	1 4½
{ „ Weberinnen (Junge)	1 8
{ Mädchen)	

	Per Woche von 60 Stunden
In Dundee	s. d. s. d.
(Leinwand) { An Spinnerinnen 8 6 bis 14 6	
{ Weberinnen	8 0 „ 15 0

Die Lage der in der Leinwand-Industrie Beschäftigten hat sich, zugleich mit den vermehrten Bestellungen, wesentlich verbessert.

Die im Jahre 1866 im Jute-Handel gezahlten Durchschnittslöhne waren:—

	Per Woche von 60 Stunden
	s. d. s. d.
An Spinnerinnen	10 0
„ Weberinnen	12 6 bis 13 4

Die Jute-Factoreien sind gut gebaut und gut gelüftet; auch berücksichtigt man alles, was

zur Annehmlichkeit der Arbeiter beitragen kann. Letztere sind gesund, mässig, fleissig und sparsam.

5. Im Vergleich zum Export führt man nur wenig Leinwandgarne und gewebte Stoffe ein. Im Jahre 1865 wurden 1,216,480 Centner Leinwand und gewebte Stoffe, im Werthe von 153,104 $\frac{1}{2}$., in's Vereinigte Königreich eingeführt. 1,958,000 Centner Jutegarn kam fast ausschliesslich von Frankreich. Der Gesamtwerth desselben betrug 278,000 $\frac{1}{2}$.

6. Andererseits ward in diesem Artikel bedeutend ausgeführt. Die folgende Tabelle giebt den Werth der während der sechs Jahre 1860-65 in's Ausland versendeten Artikel an:—

Jahre	Leinene		Jute *	
	Garne	Stoffe etc.	Garne	Stoffe etc.
	£	£	£	£
1860	1,801,000	4,804,000	nicht	angegeben
1861	1,622,000	3,852,000	85,126	127,031
1862	1,852,000	5,133,000	96,152	123,149
1863	2,530,000	6,508,000	154,618	243,379
1864	2,991,000	8,172,000	114,503	356,764
1865	2,535,000	9,156,000	82,141	3.1,540

* Diese Zahlen sind indessen keineswegs massgebend für den Gesamt-Jute-Export, der grossentheils in die Klasse der Leinwaaren einbegriffen ist.

Der Werth weisser, einfacher und damastener Stoffe belief sich im Jahre 1865 auf achtzehn Millionen, bei einem Gesamtwerthe von neun Millionen. Der des in demselben Jahre ausgeführten zum Nähen bestimmten Leinfadens betrug 558,000 $\frac{1}{2}$. Von 1851 bis 1860 litt der Leinwaaren-Export aus dem Vereinigten Königreiche keine Veränderung und belief sich jährlich auf etwas über vier Millionen.

Das gegenseitige Verhältniss, was die Quantität und den Werth der verschiedenen von 1860-1865 ausgeführten Leinwaaren anbetrifft, zeigt folgende Uebersicht:—

		Quantitäten	
		1860	1865
Leingarne . . . Pfund		31,210,000	36,796,000
Leinene Stoffe:			
Weisse, einfache und damastene	Yard	136,936,000	222,790,000
Gedruckte, gefärbte oder carrirte	„	3,203,000	16,965,000
Segeltuch . . . „		3,857,000	7,250,000
Zwirn . . . „		3,229,000	3,935,000
		Werth (£ Sterling)	
Leingarne . . . Pfund		1,801,000	2,535,000
Leinene Stoffe:			
Weisse, einfache und damastene	Yard	4,161,000	7,537,000
Gedruckte, gefärbte oder carrirte	„	98,000	606,000
Segeltuch . . . „		175,000	333,000
Zwirn . . . „		360,000	558,000

7. Beim Verfertigen der Leinwand bedient man sich fast ausschliesslich der Maschinen; zwar benutzt man hier und da noch Handwebestühle in Irland, jedoch verschwindet der Gebrauch derselben von Tag zu Tag. Dr. Watts berichtet in seiner Schrift, *The Facts of the Cotton Famine*, dass man, was Arbeitersparen bei Verfertigung der Leingarne anbetrifft, während der letzten zehn Jahre grosse Fortschritte gemacht habe. Vor zehn Jahren hielt man noch 9 oder 10 'Leas' (zu 7 Gebinden) per Spindel vom Garne No. 30 für eine hübsche Wochenarbeit, aber im Jahre 1865 verfertigte ein Arbeiter wöchentlich 18 'Leas' von derselben Nummer. Bei der Jute-Verarbeitung bedient man sich auch nur der Maschinen.

8. Die bei der Londoner Ausstellung im Jahre 1862 zur Prüfung der Leinwaaren ernannten Preisrichter erklärten, dass England und Irland im Anbau sowohl als in der Behandlungsweise beim Vollenden des Flachses grosse Fortschritte gemacht hätten. Irland, sagte man damals, verdiene besonderes Lob, denn es verrathe bei der Wahl gedruckter Cambrics und leinener Waaren viel Geschmack. Gedruckte Leinzeuge gehen meistens in's Ausland. Man belobte auch die guten Eigenschaften der gebleichten Irischen Leinwand, deren Güte theils dem für Bleichzwecke günstigen Klima, theils der Behandlungsweise in freier Luft und der Anwendung chemischer Mittel zuzuschreiben ist. Man erkannte auch die im Verfertigen der Taugarne gemachten grossen Fortschritte, sowie die allgemeinere Einführung der Dampfwebestühle an.

Der unveränderte Zustand, worin sich der Export-Leinwandhandel vor dem Jahre 1861 befand, ist bereits erwähnt worden.

Mr. Alcan, Berichterstatter für Klasse 19 während der Ausstellung im Jahre 1862, machte einige sehr interessante Bemerkungen, worin er den Mangel an Fortschritt den Schwierigkeiten zuschrieb, welche die Verarbeitung des Rohmaterials, im Vergleich mit der Leichtigkeit, rohe Baumwolle zu spinnen, darbietet. Er sagte, dass Maschinen-Flachsgarne von gleicher Länge und demselben Fasergewicht kostspieliger seien als Baumwollgarne. Die zum Flachsspinnen erforderlichen Maschinen sind viel stärker und erheischen mehr Dampfkraft als die beim Baumwollspinnen benutzten. Dies liegt an der noch immer mangelhaften Methode des Flachsröstens, wobei viel Gummi in der Faser zurückbleibt und daher das Spinnen bedeutend erschwert.

Eine von den Folgen der Stockung des Baumwollhandels während des Amerikaner Krieges war die vermehrte Nachfrage nach Leinwandfabricaten, was dieser Industrie natürlich einen grossen Aufschwung verlieh. Die während der Baumwoll-Crise bezahlten hohen Preise für Leinwand veranlassten die Grundbesitzer, mehr Flachs anzubauen, und feuerten fremde Flachsbebauer an, ihren Ertrag nach den Englischen Märkten zu senden, ein Umstand, der den Leinwandhandel nur heben

konnte. Es lässt sich mit gutem Grunde annehmen, dass, falls man die während der letzten zehn Jahre gemachten Bestrebungen fortsetzt, der Leinwand-Industrie eine grosse Glanzperiode bevorsteht und die vorübergehende Baumwoll-Crise später zum höhern Wohlstande des Landes beitragen wird.

Was die Jute-Industrie anbetrifft, so schreiten darin die Verbesserungen im Maschinenwesen immer vorwärts; auch wendet man in Folge neuerer Entdeckungen in weit höhern Grade die Jute zu verschiedenen Fabrikzwecken an. Die Zahl der die Kunstschule zu Dundee Besuchenden betrug im Jahre 1865 1,922, und die bei der Juten-Industrie beteiligten Arbeiter sollen aus dem dort genossenen Unterrichte grossen Nutzen gezogen haben.

[*Strumpfwaren und Unterzeug* findet man unter Klasse 34 angegeben.]

Klasse XXIX.

KAMMWOLLE UND WOLLSTOFF-FABRICATE.

1. Das Wort 'Worsted,' worunter man alle aus Kammwolle verfertigten Stoffe versteht, soll von einem Dorfe gleichen Namens in Norfolk, wo dieses Fabricat zuerst gemacht wurde, abstammen. Die Wollen-Industrie, eine sehr alte, hat erst in neuerer Zeit ihre hohe Stellung eingenommen. Vom Jahre 1825 an machte man grosse Fortschritte darin, jedoch wurden bis zu jener Zeit nur 'Worsted's' aus ungemischter Wolle bereitet. Einige Jahre später, nach Einführung der Baumwollkette, gewann diese Industrie einen bedeutenden Aufschwung. 'Worsted's' macht man jetzt sowohl aus ungemischter als gemischter Wolle, Baumwolle, Seide, Alpaca, Mohair etc., und der jährliche Ertrag des Wollhandels ist jetzt an Werth der Wollindustrie fast gleich, wenn nicht grösser. Zu den Reinwoll-'Worsted's' gehören einfache und geköpte Merinos, feine und gewöhnliche Sarsche, Lastings etc., auch Damaste, zu Vorhängen bestimmt. Unter den gemischten Fabricaten haben die aus Wolle und Baumwolle verfertigten, wie zum Beispiel die sogenannten 'Coburgs' und 'Orleans,' einen grossen Absatz; andere Mischungen jedweder Qualität werden gleichfalls in grosser Anzahl gemacht.

Bradford geniesst wegen seiner einfach geköpten Merinos und gemischten Fabricate, Halifax wegen seiner schweren Kammwollstoffe und Damaste eines hohen Rufes.

Bradford, in der Grafschaft York, ist der Hauptsitz dieser 'Worsted'-Industrie. Die Zahl der Wollfabriken in den verschiedenen Provinzen des Königreichs war im Jahre 1861 folgende:—

Provinzen	Anzahl der Fabriken	Anzahl der Spindeln	Anzahl der Dampfwehstühle
England und Wales:			
Yorkshire	443	1,149,072	40,577
Andere Grafschaften	69	96,454	2,391
Summa . .	512	1,245,526	42,968
Schottland . .	17	38,946	80
Irland . . .	3	4,700	—
Summa, Vereinigtes Königreich .	532	1,289,172	43,048

Obleich keine weitere amtliche Berichte über die Anzahl der bei der Wollfabrication angewandten Spindeln und Webestühle vorliegen, so nimmt man doch allgemein an, dass dieselbe seit 1861 sich sehr vergrössert habe.

2. Die Quellen, woraus die Wollfabriken die zu dieser Industrie erforderliche Rohwolle, Baumwolle und Seide beziehen, finden sich unter den in den Klassen 27, 30 und 31 gemachten Bemerkungen. Was die Mohairlieferungen anbetrifft, so zeigt folgende Tabelle die seit den fünf Jahren 1861–65 stattgefundenen Einfuhren:—

Ziegenhaar oder Wolle.

	Pfund
1861	3,335,000
1862	4,048,000
1863	3,434,000
1864	4,737,000
1865	5,402,000

Herr Behrens schätzt das Gesamt-Rohmaterial (Wolle, Mohair, Baumwolle etc.), welches im Jahre 1864 im Wollhandel verbraucht wurde, auf ungefähr 150 Millionen Pfund, und den Werth davon nach der Verarbeitung auf 33,600,000£ Sterling.

3. Von der Gesamtanzahl der in den Wollfabriken des Vereinigten Königreichs im Jahre 1861 angestellten Personen, befanden sich 76,000, oder 88 Procent, in den Fabriken der Grafschaft York. Das Alter und Geschlecht sämtlicher Arbeiter zeigt folgende Tabelle:—

	In England und Wales	In Schottland	In Irland	In Vereinigten Königreiche
Arbeiter:				
Unter 13	6,268	—	—	6,268
13 bis 18	6,424	178	12	6,614
Ueber 18	17,700	895	24	18,619
Summa .	30,392	1,073	36	31,501
Arbeiterinnen:				
Unter 13	6,906	4	—	6,910
Ueber 13	45,674	1,839	139	47,652
Summa .	52,580	1,843	139	54,652
Summa .	82,972	2,916	175	86,063

Dies ist der letzte amtliche Bericht über die Arbeiteranzahl; man glaubt aber, dass die bei

der Wollindustrie Beschäftigten jetzt noch viel grösser sei.

4. Die in den Hauptzweigen der Wollindustrie im Jahre 1866 gezahlten Durchschnittslöhne waren:—

In Bradford.

	s. d.	s. d.	
Spinnerinnen .	7 0	bis 10 0	55 Stunden
Weber .	18 6	.	60 „
Weberinnen .	12 0	.	55 „

In Halifax.

	s. d.	s. d.	
Spinner .	30 0	.	60 „
Spinnerinnen .	7 6	bis 8 6	60 „
Weber .	16 0	„ 24 0	60 „
Weberinnen .	8 0	„ 21 0	60 „

5. Von den eingeführten Wollgarnen haben wir in den unter Klasse 30 gemachten Bemerkungen geredet. Die Einfuhr von Wollstoffen ist unbedeutend. Im Jahre 1865 wurden 154,000 Stücke, auf 334,000l. geschätzt, und meistens aus Frankreich kommend, eingeführt.

6. Die folgende Tabelle zeigt, wie sehr die Ausfuhr der 'Worsted'-Fabricate in den letzten sechs Jahren zugenommen hat:—

Gegenstände	1860	1865
Wollgarne . { Pfund	26,455,000	30,221,000
	£ 3,578,000	5,074,000
Wollstoffe . { Yard	148,685,000	233,078,000
	£ 7,013,000	13,361,000

Seit dem Abschlusse des Handelsvertrags hat der Wollstoffhandel mit Frankreich sehr zugenommen. Der Betrag dieses Exports war im Jahre 1865 auf 1,332,000l. gestiegen.

7. Bei der Wollfabrication bedient man sich der Maschinen. Die in den Wollfabriken im Jahre 1861 angewandte Bewegkraft betrug 25,426 Dampf-Pferdekraft und 1,667 Wasser-Pferdekraft.

8. Den Erfolg der Wollindustrie in England schreibt man der Beharrlichkeit, Geschicklichkeit und dem Schöpfungsgeiste zu, die es verstanden, Thier- und Pflanzenfasern gemeinsam zu benutzen und auf diese Weise der Bevölkerung billige, gute und unentbehrliche Kleidungsstoffe und Hausgeräthe zu verschaffen.

Die chemischen Processe, welche erforderlich sind, um die aus Thier- und Pflanzenfasern zusammengesetzten Stoffe für gleich- und regelmässige Färbung empfänglich zu machen, sind natürlich mannigfaltig und verwickelt, aber die in der Färbekunst gemachten Fortschritte sind so gross, dass jetzt weisse Baumwollkettenzeuge mit Wollenschlag eben so schön gefärbt werden können wie Französische Merinos aus ungefärbter Wolle. Hinsichtlich der in diesem Zweige gemachten Fortschritte sagt die im Jahre 1862 ernannte Jury für gemischte Stoffe:—

‘Ein grosser Fortschritt zeigt sich im Färben der Baumwollkettenzeuge, in der Art und Weise, helle Wolle und Mohair zu behandeln,

und namentlich in der Kenntniss und dem Geschmacke beim Färben derjenigen Modewaaren, welche jetzt einen so bedeutenden Theil dieses Handelszweiges ausmachen.’

Eine im Jahre 1865 zu Bradford gegründete Kunstschule wird gewiss den Geschmack aller bei der Wollindustrie dieses Districtes Beschäftigten noch mehr veredeln.

[Strumpfwaaren und Unterzeug findet man unter Klasse 34 angegeben.]

Klasse XXX.

TUCHWOLLE UND WOLLENZEUGE.

1. Obgleich die Wollenindustrie in sehr früher Zeit in England existirte, so kann doch kaum bezweifelt werden, dass sie ihre dauernde Begründung in hohem Masse der Verordnung König Edwards III. verdankt, welcher die Flämischen Fabricanten im Jahre 1331 einlud, sich in England niederzulassen. Vor diesem Ereigniss wurde Englische Wolle nach Flandern exportirt und in fabricirter Gestalt zurückgebracht; seit jener Zeit jedoch hat die Baumwollenindustrie stätig zugenommen und wird als einer der wichtigsten Industriezweige des Staates betrachtet.

Die Wollenfabriken des West-Riding von Yorkshire und die in West-England, welche während der Regierung Edwards III. gegründet wurden, sind bis heut zu Tage die Hauptsitze dieser umfangreichen Industrie geblieben. Leeds ist der wichtigste Mittelpunkt des West-Riding-Districts und kann als die Metropole des Wollhandels betrachtet werden. Huddersfield, nebst Umgegend, steht an Bedeutung in zweiter Reihe und ist, ausser seiner Production von feinem Tuch, wegen seines grossen Geschäfts in Modebekleiderstoffen etc. berühmt. In West-England ist Trowbridge, in Wiltshire, der Mittelpunkt eines grossen Districts, welcher Modestoffe und viele Arten von leichtem Tuch producirt; und Stroud, in Gloucestershire, ist wegen seiner Scharlach- und anderer hellfarbigen Tuchstoffe berühmt, und diesen Ruf verdankt es dem Umstande, dass das Wasser dort sich zu Färbeprocessen eignet. Die Schottischen Stoffe, Tweeds, Tartans etc., sind gewöhnlich von schöner weicher Art und dauernder Farbe. Wollene Decken, die ebenfalls zu dieser Klasse gehören, werden besonders in Witney, in Oxfordshire, und in Dewsbury, in Yorkshire, gemacht. Flanell wird in Wales verfertigt, hauptsächlich durch Handarbeit, und Rochdale, nebst Umgegend, ist jetzt der Mittelpunkt der Englischen Branche dieses Geschäfts. Filzteppiche werden in dem District von Yorkshire gemacht und in England als ein billiges Substitut für Teppiche viel gebraucht.

Ein sehr wichtiger Theil des Wollgeschäfts, der mehr als eine vorübergehende Beachtung verdient, ist der des 'Shoddy'-Handels. Die folgenden interessanten Bemerkungen wurden von der Jury über Wollstoffe in der Ausstel-

lung von 1862 gemacht: 'Es giebt dreierlei Shoddy: 1. Shoddy, aus weichen wollenen Lumpen, wie Flanell, Decken, Strümpfen, Teppichen etc.; 2. Mungo, aus harten und weichen wollenen Lumpen und Abfall von neuem Tuch etc. gemacht; 3. Wolleextract, d. h. Wolle aus gemischten Baumwollen- und Wollenlumpen, durch einen chemischen Process gewonnen, welcher die Baumwolle verzehrt und die Wolle unberührt lässt. Die Mischung von Shoddy und Wolle, nebst der Benutzung von Garnenden der Baumwolle, ist die werthvollste Anwendung von Materialien in der Geschichte des Baumwollengeschäfts, welche der erfinderische Geist des Menschen entdeckt hat. Durch sie wird eine grosse Menge der untern Gesellschaftsklassen in den Stand gesetzt, sich nützliche und bequeme Kleidungsstücke, welche ehemals ihre Mittel überstiegen, zu verschaffen. Dewsbury, Batley und die umliegenden Städte des West-Riding von Yorkshire sind die Mittelpunkte dieser Fabrication.'

Die Statistik der Wollenindustrie des Vereinigten Königreichs für das Jahr 1861 ist wie folgt:—

Provinzen und Grafschaften	Zahl von Wollenfabriken	Zahl von Spindeln	Zahl von Webemaschinen
England und Wales:			
Yorkshire . . .	924	1,296,190	11,405
Devonshire . . .	16	12,585	255
Gloucestershire . . .	49	59,986	618
Lancashire . . .	101	277,655	6,377
Montgomery . . .	43	20,920	262
Somersetshire . . .	26	31,401	401
Wiltshire . . .	32	44,825	549
Andere Grafschaften	265	103,288	477
Summa . . .	1,456	1,846,850	20,344
Schottland:			
Aberdeen . . .	25	17,510	93
Clackmannau . . .	15	38,311	214
Peebles . . .	7	51,142	101
Perth . . .	16	16,353	—
Roxburgh . . .	21	60,747	300
Selkirk . . .	16	46,368	158
Sterling . . .	23	32,950	64
Andere Grafschaften	61	53,804	378
Summa . . .	184	317,185	1,303
Irland . . .	39	18,574	123
Summa für das Vereinigte Königreich . . .	1,679	2,182,609	21,770

Die für das Jahr 1861 angegebene Zahl von Webemaschinen ist jedoch viel geringer als die der jetzt gebrauchten, da das Steigen der Baumwollenpreise während der Baumwollentheuerung der Wollindustrie einen grossen Aufschwung gegeben hat.

2. Das Rohmaterial der Wollindustrie wird in beträchtlichem Umfang im Inlande producirt, aber da keine genauen Daten über den Betrag der einheimischen Production vorhanden sind, kann nur eine Veranschlagung gegeben werden. Wenn man diese Veranschlagung auf die Zahl

der einheimischen Schafe gründet, so beläuft sich die einheimische Production wahrscheinlich auf 152,000,000 Pfund jährlich.

Die jährliche Durchschnittsausfuhr Britischer Wolle während der letzten fünf Jahre betrug 10,000,000 Pfund.

Von der fremden Zufuhr werden durchschnittlich mehr als 70 Procent von den Englischen Colonien geliefert, unter welchen Australien und die Südafrikanischen Besitzungen voranstehen. Deutschland liefert einige der feineren Wollarten, und eine grosse Quantität wird auch aus Süd-Amerika importirt. Der rasche Fortschritt des Wollgeschäfts während der letzten Jahre erhellt aus der nachstehenden Tabelle über die Einfuhr aller Arten roher Wolle (Schaf- und Lamms-, Alpaca-, Llama- und Vicuna-Wolle) während der Jahre 1855, 1860 und 1865:—

Länder, woher importirt	1855	1860	1865
	Pfund	Pfund	Pfund
Englische Colonien:			
Australien . . .	49,142,000	59,166,000	109,734,000
Indien . . .	14,383,000	20,214,000	17,105,000
Cap der guten Hoffnung etc. . .	11,075,000	16,574,000	29,220,000
Fremde Länder:			
Spanien . . .	68,000	1,000,000	115,000
Deutschland . . .	6,128,000	9,292,000	6,858,000
Andere Europäische Staaten . . .	8,119,000	28,570,000	27,693,000
Südamerika . . .	7,106,000	8,950,000	17,867,000
Andere Länder . . .	3,379,000	4,630,000	3,614,000
Gesamteinfuhr . . .	99,300,000	148,396,000	212,206,000
Gesamtausfuhr . . .	29,453,000	30,761,000	82,445,000
Blieb für Consumption übrig . . .	69,847,000	117,635,000	129,761,000

Man darf nicht vergessen, dass die obigen statistischen Angaben sich auf die rohe Wolle, etc. beziehen, welche sowohl in der Wollgarn- als in der Wollenstoff-Industrie benutzt wurde. Von der Gesamteinfuhr von 212 Millionen Pfund kamen beinahe drei Millionen Pfund auf Alpaca-, Llama- und Vicuna-Wolle.

Ausser dem obigen wurden die folgenden Quantitäten wollener Lumpen etc. für das Shoddy-Geschäft importirt:—

	Wollene Lumpen	Wollene Lumpen, zerissen um als Wolle gebraucht zu werden
	Tonnen	Tonnen
1861 . . .	3,290	7,602
1862 . . .	4,311	8,972
1863 . . .	5,766	9,866
1864 . . .	5,909	10,037
1865 . . .	5,462	9,316

Mr. Behrens schätzt die jährliche Production von Shoddy-Wolle in England auf 52 Millionen Pfund und von Wolleextract auf 5 Millionen Pfund.

Die Gesamtveranschlagung der in dem

Wollenstoff- und Wollgarngeschäft Englands gebrauchten Rohmaterialien war im Jahre 1865 wie folgt:—

	Millionen Pfund
Englische Wolle (mit Abzug der Ausfuhr)	142
Fremde Wolle	130
Shoddy-Wolle, einheimische Fabrication	52
„ „ importirt	22
Wollextract	5
Wollgarn	4½
Ziegenhaar oder Wolle	5

360½

Mr. Behrens schätzte die Gesamtmasse der in der Wollen- und Worsted-Industrie im Jahre 1864 benutzten Rohmaterialien auf 384 Millionen Pfund und vertheilte diese Masse zwischen die beiden Industrien wie folgt: In der Wollen-Industrie 234 Millionen Pfund, die als Fabricate einem Werthe von 30,800,000£. Sterling gleichkamen, und in der Worsted-Industrie 150 Millionen Pfund, in fabricirtem Zustande 33,600,000£. Sterling werth. Die Einfuhr fremder Wolle im Jahre 1865 war bedeutend geringer als die im Jahre 1864 stattgefunden.

3. Die während des Jahres 1861 in den Wollfabriken beschäftigte Zahl von Arbeitern jedes Geschlechts und Alters war:—

	England und Wales	Schott- land	Irland	Vereinigtes Königreich
Abeiter:				
Unter 13 .	3,933	29	—	3,362
13 bis 18 .	9,811	1,327	75	11,213
Ueber 18 .	30,954	3,855	370	35,179
Summa .	44,098	5,211	445	49,754
Arbeiterinnen:				
Unter 13 .	2,598	9	—	2,607
Ueber 13 .	29,613	4,592	417	34,622
Summa	32,211	4,601	417	37,229
Arbeiter und Arbeiterinnen zusammen	76,309	9,812	862	86,983

Bei der raschen Ausdehnung der Wollindustrie seit dem Jahre 1861 sind die obigen Zahlen beträchtlich niedriger als die der jetzt wirklich beschäftigten Arbeiter.

4. Die Durchschnittslöhne in den zwei Hauptdistricten des Wollgeschäfts waren im Jahre 1866 wie folgt:—

Männer.

		Per Woche von 60 Stunden s. s. d.
In Huddersfield	Spinner .	18 bis 30 0
	Weber .	18 „ 23 6
	Muster-Weber	16 „ 30 0
	„ Zeichner	30 „ 50 0
In Dewsbury	Spinner .	34
	Weber .	20
	Muster-Weber	22
	„ Zeichner	36

5. Die Englischen Geschäftsberichte unterscheiden nicht die Einfuhr von Wollgarn von der von Worsted-Garn. Die seit kurzem stattgehabte Zunahme der Quantität importirten Garns, welches in den officiellen Berichten als Woll- und Worsted-Garn angegeben wird, ist wahrscheinlich mehr der Nachfrage in der Worsted- als in der Woll-Branche des Geschäfts zuzuschreiben. Die folgenden Massen beider Arten von Garn wurden zwischen den Jahren 1861 und 1865 importirt:—

	Pfund
1861	1,577,000
1862	2,244,000
1863	4,526,000
1864	4,654,000
1865	4,392,000

Die obigen Zahlen schliessen auch Berliner Wolle und Garn für Modeszwecke ein, welche sich im Jahre 1865 auf 211,000 Pfund beliefen.

Der Werth der während desselben Zeitraums importirten Wollenzeuge war:—

	£
1861	119,654
1862	124,245
1863	147,757
1864	177,922
1865	190,221

6. Die Berichte über die Ausfuhr der in diese Klasse gehörenden Hauptwaaren bezeugen einen blühenden Zustand dieses Geschäftszweigs, wie die nachstehende vergleichende Tabelle beweist:—

	Quantitäten		Werth	
	1860	1865	1860	1865
Wollgarne {	Pfund nicht angegeben	Pfund	£	£
	203,929		nicht-angegeben	35,694
Wollenzeuge: Verschiedene Tucharten	Ellen	Ellen		
	23,968,000	25,616,000	2,996,000	4,024,000
Flanell, Decken und Boy ('baize')	12,641,000	14,769,000	848,000	1,203,000

7. Der grössere Theil der Wollfabrication findet durch Maschinerie statt, aber obgleich ein beträchtlicher Fortschritt in der Vervollkommnung der dazu angewandten Maschinerie gemacht worden ist, steht die Wollindustrie in dieser Hinsicht doch weit hinter der Baumwollenindustrie zurück. Weben mit dem Handwebestuhl wird noch in einigen ländlichen Districten von Yorkshire betrieben, aber der Gebrauch von Handwebestühlen nimmt allmählig ab. Die während des Jahres 1861 in den Wollfabriken angewandte Maschinenkraft war 26,879 Dampf-Pferdekraft und 9,598 Wasser-Pferdekraft.

8. Der Fortschritt der Wollindustrie in allen ihren Branchen war während der letzten zehn Jahre sehr bedeutend. Die vermehrte Zufuhr von Rohmaterial, die Einführung neuer Com-

binationen von Wolle mit anderen Materialien, verbesserter Maschinerie und neuer Färbeprozesse mögen als Beweise des Fortschritts erwähnt werden. Der erweiterte Gebrauch von Webemaschinen, besonders mit Bezug auf die Einrichtung derselben zum Weben von Mustern in allen möglichen Farben, hat wesentlich zu dem verbesserten Stande des Wollgeschäfts beigetragen. Grosse Verbesserungen sind auch in fast allen Maschinen angebracht worden, welche zur Fabrication benutzt werden. Das wichtige Element vermehrter Schnelligkeit im Maschinengange ist ebenfalls sorgfältig berücksichtigt worden.

Die Production von Shoddy-Zeugen, welche im Vergleich mit den Preisen wirklichen Tuchs gering sind, während die erstern, mit Ausnahme der Güte der Arbeit und der Dauerhaftigkeit der Farbe, dieselbe Qualität haben wie reine Wollenstoffe, hat sich für viele Volksklassen als eine grosse Wohlthat erwiesen, nicht allein indem die ärmeren Klassen dadurch mit guten Kleidungsstücken versehen wurden, sondern auch indem man dadurch ein Material verwerthete, welches man früher als nutzlos betrachtet hatte, und dessen Fabrication mehreren Tausend Arbeitern Beschäftigung gewährte.

Die grosse Nachfrage nach wollenen Modewaaren hat während der letzten Jahre sowohl Musterzeichnern als Färbern vollauf zu thun gegeben. Leeds, Huddersfield, Stroud und Trowbridge besitzen sämmtlich Kunstschulen, und mehr als 8,000 Schüler empfangen während des Jahres 1865 in diesen Schulen Unterricht. Die Entdeckung des Anilins hat mächtige Verbesserungen sowohl in den Mustern als in den Farben der besseren Arten von Wollenzeugen veranlasst.

Die rasche Zunahme co-operativer Gesellschaften, die Versorgung der Arbeiter mit Lebensmitteln und Kleidungsstücken zu En-gros-Preisen bezweckend, wird hoffentlich zur Ausbreitung öconomischer Gewohnheiten unter der arbeitenden Bevölkerung in den Woll-districten mitwirken.

Klasse XXXI.

SEIDE UND SEIDENSTOFFE.

1. Die Seidenindustrie des Vereinigten Königreichs, obgleich von geringerem Umfang als die der anderen gewebten Fabricate, ist nichtsdestoweniger von beträchtlicher Bedeutung. Die Ausbildung derselben wurde viele Jahre hindurch verzögert durch ein System von Verböten und Beschränkungen der Einfuhr fremder Seidenstoffe, und da die Concurrenz, welche unter allen Umständen für eine grosse Production nothwendig ist, auf diese Weise ausgeschlossen wurde, blieb die einheimische Seidenindustrie lange Zeit in einem höchst unbefriedigenden Zustande. Die Sicherheit vor fremder Eifersucht und das Monopol des beschränkten einheimi-

schen Markts, deren das Geschäft sich so lange erfreute, wurden theuer erkauft. Während in England die Mehrzahl der Fabricanten sich damit begnügte, den geschlossenen einheimischen Markt zu versorgen, ohne in ihren Fabricaten wesentliche Verbesserungen zu bewirken, wurden in fremden Ländern in den verschiedenen Processen der Fabrication grosse Fortschritte gemacht, und bei der Einführung des Freihandelsystems fanden die Britischen Fabricanten sich daher in einer sehr unvortheilhaften Stellung. Seit dem Jahre 1851 ist das Englische Seidengeschäft jedoch sehr vorgeschritten, trotz der vielen Schwierigkeiten, mit welchen es zu kämpfen hatte.

Zwischen den Jahren 1850 und 1861 vermehrte sich die Zahl der Seidenfabriken in dem Vereinigten Königreich von 277, im erstern Jahre, auf 771, im letzteren, die von Spindeln von 1,225,000 auf 1,338,000 und die Zahl von Webemaschinen von 6,092 auf 10,709. Die Vertheilung der Seidenfabriken in den drei Provinzen des Königreichs war im Jahre 1861 folgende:—

	Zahl von Fabriken	Zahl von Spindeln	Zahl von Webemaschinen
England und Wales:			
Cheshire . . .	175	409,470	1,509
Derbyshire . . .	42	98,210	449
Essex . . .	9	155,681	591
Lancashire . . .	48	128,109	4,201
Warwickshire . . .	331	6,732	2,065
Yorkshire . . .	27	122,952	8
Andere Grafschaften	129	384,756	1,812
Summa . . .	761	1,305,910	10,635
Schottland . . .	8	31,452	60
Irland . . .	2	1,182	14
Gesamtsumme für das Vereinigte Königreich . . .	771	1,338,544	10,709

Seidenzeuge werden hauptsächlich in Manchester, Bänder in Coventry und Modeseidenwaaren in Macclesfield fabricirt.

2. Das in der Seidenindustrie benutzte Rohmaterial wird besonders aus Italien, China, Indien und Japan bezogen, und die Hauptmasse liefern die drei letztgenannten Länder.

Die Masse des Rohmaterials, welches während der sechs Jahre 1860–65 zum eignen Verbrauche behalten wurde, betrug:—

	Rohe Seide Pfund	Knäuel, Schalen und Abfall Pfund
1860 . . .	6,024,000	1,784,000
1861 . . .	4,613,000	3,225,000
1862 . . .	5,166,000	2,678,000
1863 . . .	5,368,000	3,455,000
1864 . . .	1,733,000	2,091,000
1864 . . .	4,595,000	3,608,000

Durchschnitt 4,583,000 2,907,000

Eine kleine Quantität flirte Seide wird

ebenfalls importirt, aber die Einfuhr hat seit 1860 bedeutend abgenommen. Im Jahre 1865 betrug sie 60,130 Pfund.

Die obigen Zahlen beziehen sich auf die Gesamtzufuhr roher Seide, von der ein Theil zur Fabrication gemischter Stoffe, Strumpfwirkerwaaren, Spitzen etc. verwandt wird.

3. Die Zahl von Personen jeden Geschlechts und Alters, welche während des Jahres 1861 in England und Wales mit der Seidenfabrication beschäftigt waren, belief sich auf:—

	Zahl
Arbeiter . { Unter 13 .	2,120
13 bis 18 .	3,185
Ueber 18 .	9,996

Summa . 15,301

Arbeiterinnen { Unter 13 .	4,673
Ueber 13 .	31,217

Summa . 35,890

Gesamtsumme der Arbeiter und Arbeiterinnen . 51,191

Ueber die Zahl der gegenwärtig beschäftigten Arbeiter sind keine Berichte vorhanden.

4. Die Arbeitslöhne in dem Seidengeschäft von Manchester haben zwischen den Jahren 1849 und 1859 um 10 Procent zugenommen; während des letzteren Jahres betrugen die den Hauptarbeitern gezahlten Durchschnittslöhne:—

	Per Woche von 60 Stunden
Mühlenleute und Fadendreher .	17 0
Spinner (junge Burschen und Knaben) .	10 0
Doublirer (Frauen) .	8 9
Werfer (Männer) .	24 0
Weber „ .	20 0

In dem Bericht eines Local-Comités an die 'British Association' im Jahre 1865 wurde erklärt, dass die Zahl der mit dem Bandgeschäft von Coventry beschäftigten Personen im Jahre 1864 auf 2,000 Männer und 4,000 Frauen veranschlagt wurde, obgleich man die Veranschlagung, besonders der Frauen, für zu gering hielt. Die in dem Bandgeschäft angestellte Arbeiter gezahlten Durchschnittslöhne schwankten zwischen 25s. und 28s. per Woche. Die von Frauen verdienten Wochenlöhne betrugen von 7s. bis zu 10s.

5. Der Werth der in das Vereinigte Königreich importirten Seidenfabricate hat seit dem Jahre 1860 rasch zugenommen. Diese Zunahme rührt her von der Ausdehnung des Handels zwischen England und Frankreich, in Folge des Handelsvertrages mit diesem Lande. Die Haupteinfuhr von Frankreich besteht in einfachen Seide- und Atlas-Breitstoffen ('broadstuffs') und Bändern.

Der Gesamtwerth der während der sechs Jahre 1860–65 importirten Seidenfabricate betrug:—

	£
1860	3,344,000
1861	5,906,000
1862	6,618,000
1863	6,639,000
1864	7,620,000
1865	8,496,000

6. Der Werth der während derselben Jahre exportirten Englischen Seidenfabricate betrug:—

	£
1860	1,587,000
1861	1,395,000
1862	1,264,000
1863	1,421,000
1864	1,460,000
1865	1,404,000

7. Ein Theil des Seidenbandgeschäfts wird noch in den Wohnungen der Arbeiter betrieben, aber die allgemeine Richtung der Zeit geht auf Vereinigung der Arbeiter in den Fabriken.

Aus manchen Ursachen ist die Seidenindustrie, von sämmtlichen Webeindustrien, vielleicht den grössten Schwankungen unterworfen. Der Englische Seidenhandel hat, in Gemeinschaft mit dem anderer Länder, während der letzten Jahre wesentlich gelitten durch eine Krankheit des Seidenwurms und einen Modewechsel, welcher die Bandbranche des Geschäfts stark beeinflusst hat. Wenn man diese Thatsachen berücksichtigt, so darf die Statistik des Ausfuhrgeschäfts Britisher Seidenstoffe als ein befriedigenderer Beweis für den Geschäftszustand gelten, als ein solcher unter den Umständen hätte erwartet werden können.

Grosse Verbesserungen haben in der Ausarbeitung und Farbe der Englischen Seidenbänder stattgefunden, und man ist der Ansicht, dass die Proben von diesen und andern Fabricaten in der gegenwärtigen Ausstellung ein Zeugniß ablegen werden für die bedeutenden Fortschritte, welche seit der Pariser Ausstellung von 1855 in dem Englischen Seidengeschäft im Grossen und Ganzen gemacht worden sind.

[Ueber *Strumpfwirkerwaaren* und *Unterzeug* siehe Klasse 34.]

Klasse XXXII.

SHAWLE.

Die Fabrication von Shawlen hat während der letzten funfzehn Jahre in dem Vereinigten Königreich grosse Fortschritte gemacht. Wollenshawle werden besonders in Schottland und in Yorkshire fabricirt. Paisley, in Schottland, ist viele Jahre hindurch für die vortreffliche Qualität von Fabricaten dieser Gattung berühmt gewesen, und Bradford fabricirt jetzt viele Arten von Worsted-Shawlen. Seidenshawle werden hauptsächlich in Norwich gemacht.

Die vorzüglichsten importirten Shawle kommen aus Cashmere, in Indien, Seidencrepp aus

China etc. und Wollenshawle besonders aus Frankreich.

Nachstehend folgt die Statistik des Englischen Exportgeschäfts in dieser Klasse von Fabricaten während des Jahres 1865:—

	No.	£
Wollen- und Worsted-Shawle	431,350	145,570
Taschentücher, Halstücher und Shawle von reiner Seide	Dutzend 129,560	235,825
Ditto von Seide mit anderen Stoffen gemischt	15,513	16,461

Grosse Verbesserungen in den für Shawle benutzten Zeichnungen haben seit 1851 besonders in den Schottischen Fabricaten stattgefunden. Paisley besitzt seit 1848 eine Kunstschule, in welcher während des Jahres 1865 1,063 Schüler Unterricht erhielten.

Klasse XXXIII.

SPITZEN-, NETZ-, STICKEREI- UND KURZWAAREN-FABRICATE.

1. Der Hauptsitz der Spitzenfabrication mit Maschinen ist in Nottingham und dessen Nachbarschaft. Spitzen werden auch in Derbyshire, Tiverton, Barnstaple und Chard fabricirt. Die anderen Spitzengattungen werden in den Grafschaften Buckingham, Bedford, Oxford, in Northampton, Honiton und Limerick gemacht. Das Mousselin-Stickereigeschäft wird in Irland und Schottland betrieben.

Die nachstehenden statistischen Angaben über das Maschinen-Spitzengeschäft von Nottingham und anderen Districten, während des Jahres 1866, sind einem Bericht der Handelskammer in Nottingham an das Handelsministerium entnommen:—

	No.
Circulär-Maschinen zur Anfertigung von Spitzengrund	1,797
Lever's Maschinen zur Anfertigung von Modespitzenwaaren	1,589
Verschiedene Maschinen	166

Von den oben angegebenen 1,797 Circulär-Maschinen waren 700 in Nottingham und dessen Nachbarschaft, 500 in Derbyshire, 200 in Tiverton, 100 in Barnstaple und 300 in Chard beschäftigt. Sämmtliche 'Lever's' und 'verschiedene' Maschinen arbeiteten in Nottingham.

2. Die Quellen, aus welchen die Zufuhr des in diesen Industriezweigen benutzten Rohmaterials stattfindet, wird man in den Bemerkungen zu Klassen 27 bis 31 angegeben finden.

3. Die Zahl der mit dieser Industrie in dem District von Nottingham beschäftigten Personen (mit Ausschluss von Mädchen, die von früher Jugend an in den Häusern von Herinnen, oft ihrer eigenen Mütter, mit Arbeit

verschiedener Art aus den Waarenhäusern etc. beschäftigt werden) beträgt etwa 38,000.

Nach dem Bericht der Jury, in Klasse 24 der Londoner Ausstellung von 1862, giebt die Klöppelspitzen-Industrie ungefähr 25,000 Frauen und Kindern Beschäftigung, die ihre Arbeit zu Hause betreiben; und das Mousselin-Stickereigeschäft, wenn es in vollem Gange ist, nicht weniger als 200,000 Personen in Irland und 25,000 in Schottland, welche ebenfalls zu Hause arbeiten.

4. Die den Hauptklassen von Arbeitern in dem District von Nottingham gezahlten Durchschnittslöhne waren im Jahre 1866:—

An Spitzengrund-Maschinen, mit der Fabrication aller Arten von einfachen und Modespitzen beschäftigt.

Arbeiter:	Wochenlohn s. s.	Arbeitsstunden per Tag
Knaben	5	10½
Junge Leute	16	Jede Maschine beschäftigt der Regel nach zwei Männer, die abwechselnd von 9 bis 10 Stunden täglich arbeiten
Männer	25	
„ geschickteste Arbeiter	35 bis 50	
Aufseher der Maschinerie	35	
Arbeiterinnen:		
Von sieben Jahren an, Ausbesserer und Einfädler	4 bis 8	Wechselnde Stunden
Weissausbesserer und Falter	9 „ 12	In Fabriken: 10½; in Waarenhäusern: von 8 Uhr Morg. bis 7 Uhr Abends
Ausstatter	10	
Aufseher und geschickte Waarenhaus-Frauen	13 „ 15	

Die als Ausbesserer arbeitenden Mädchen, von sieben Jahren an, sind vorzugsweise zu Hause beschäftigt. Gelegentliche Ueberzeit wird gewöhnlich extra bezahlt.

5. Die nachstehende Tabelle zeigt den Werth der Spitzen und Stickereien, welche im Jahre 1865 in das Vereinigte Königreich importirt wurden:—

Spitzen:	£
Mohair oder Worsted	256
Klöppelspitzen von Garn oder Baumwolle	78,861
Klöppelspitzen von Seide	18,855
Maschinen- oder nachgeahmte (falsche) Spitzen, nicht mit der Hand gemacht	69,734
Stickereien und Nadelarbeit:	
Vorhänge auf Mousselin oder Tüll gestickt	16,115
Andere Arten	41,970

Klöpfelspitzen werden hauptsächlich aus Belgien und Maschinenspitzen aus Frankreich importirt.

6. Die Ausfuhr der zu dieser Klasse gehörenden Englischen Fabricate betrug während desselben Jahres:—

	£
Baumwollenspitzen und Patent- Tüll	465,611
Leinwandspitzen	322
Seidenspitzen, aus reiner Seide	63,351
„ mit anderen Mate- rialien gemischt	84,314
Stickereien und Nadelarbeit von allen Arten	174,670

7. Die Branchen des Geschäfts, welche mit der Hand und mit Maschinerie betrieben werden, sind bereits angeführt worden.

8. Mr. Birkin sagt in einem Bericht über den Fortschritt in der Fabrication von Maschinenspitzen im Jahre 1862, 'dass der Styl der Arbeit und der Zeichnungen im Allgemeinen sehr verbessert ist und kunstreichere Muster producirt werden als früher. Diese Ausbildung wurde ohne Zweifel befördert durch die grössere Vervollkommnung, welche die Anwendung des Jacquard der Spitzenmaschinerie ertheilt, und durch den besseren Geschmack, welchen die Kunstschulen unter den Musterzeichnern verbreitet haben.' Seit dem Jahre 1843 besteht in Nottingham eine Kunstschule.

Auch in der Fabrication von Spitzengardinen hat ein bedeutender Fortschritt stattgefunden.

Klasse XXXIV.

STRUMPFWIRKERWAAREN UND UNTERZEUG,
NEBST DEN DAZU GEBÖRIGEN GEGEN-
STÄNDEN.

1. Das Strumpfwirkergeschäft wird hauptsächlich in den Grafschaften Nottingham, Leicester und Derby und in einigen Städten anderer Englischer Grafschaften; in Balbriggan, in Irland, und in Hawick, Galashiels etc., in Schottland, betrieben. Nottingham producirt Baumwollen- und Seidenfabricate, Derby besonders Seiden- und Leicester Wollfabricate.

Die Statistik des Geschäfts von Nottingham war, nach einem Berichte der Handelskammer dieser Stadt an das Handelsministerium, im Jahre 1866 wie folgt:—

	No.
Enge Handrahmen	11,000
Weite Handrahmen	4,250
Drehrahmen	1,000
Circulärrahmen	1,200
Abscherrahmen	400

Es fehlt an neuern Berichten über die verschiedenen Arten der in Leicester benutzten Maschinerie; aber die Handelskammer bemerkt, dass die altmodischen engen Rahmen allmählig durch weite Rahmen ersetzt werden, und die Zahl der, hauptsächlich zu bil-

ligen Fabricaten gebrauchten, Circulärrahmen rasch zunimmt. Die Zunahme der Gesamtbevölkerung in dem District von Leicester, von 67,000 Personen im Jahre 1861, auf 80,000 Personen im Jahre 1866, wird den Fortschritt, welcher in dem Geschäft des Districts stattfindet, einigermassen andeuten.

Die letzten Berichte für Derby und Schottland sind die im Jahre 1861 veröffentlichten, zu welcher Zeit vier Strumpfwirkerfabriken in Derby und vier in Schottland bestanden.

Die Handschuh- und Regenschirmgeschäfte sind beide von grosser Bedeutung, obgleich keine Berichte über den wirklichen Retrag der Production dieser Fabricate vorhanden sind. Handschuhe werden hauptsächlich in Worcester, Leicester, Nottingham and London gemacht. Ansehnliche Branchen des Regenschirmgeschäfts befinden sich in Lancashire und in London, und die Fabrication von Regenschirmgestellen wird in grossem Umfang in Birmingham betrieben.

2. Die Quellen, aus welchen die in dem Strumpfwirker-Geschäft gebrauchten Rohmaterialien bezogen werden, wird man in den Bemerkungen zu Klassen 27 bis 31 angegeben finden.

3. Die Zahl der in dem Strumpfwirkergeschäft in Nottingham und dessen Umgegend beschäftigten Personen beträgt ungefähr 64,000. Berichte über die Zahl der in der Leicester-Branche dieser Fabrication gegenwärtig beschäftigten Personen sind nicht vorhanden; aber in dem Census von 1861 wurde dieselbe auf 22,000 angegeben.

Die Durchschnittslöhne, welche den Arbeitern der Strumpfwirkergeschäfte in Nottingham und Leicester während des Jahres 1866 gezahlt wurden, betrugen:—

In Nottingham.

Beschäftigt an:	Per Woche s. d.
Engen Hand- rahmen { Männer, Frauen { und Burschen }	10 6
Weiten Hand- rahmen { Männer	15 0
{ Mädchen und	4 0
{ Frauen	
Drehrahmen . { Männer	20 bis 32
{ Mädchen und	5
{ Frauen	
Circulärrah- men { Männer	20 „ 35
{ Burschen und	12 „ 20
{ Frauen	
{ Mädchen und	
{ Frauen (Aus- besserer	7 „ 12
Abscherrahmen { Männer	16 „ 35
{ Burschen	12 „ 20

Die engen und weiten Rahmen waren in Thätigkeit in 4,700 Werkstätten (in jeder durchschnittlich drei bis vier Rahmen), welche gewöhnlich einen Theil der Wohnhäuser der Arbeiter bildeten. Die Arbeiter an den anderen Maschinen werden während der gewöhnlichen Zahl von Fabrikstunden beschäftigt.

In Leicester.

Einfache Strumpfwirkerarbeit und Unterzeug:	Per Woche von 60 Stunden	s.
An engen Rahmen beschäftigt (Männer)	9 bis 15	
An weiten Rahmen beschäftigt (Männer)	20 „ 30	
An Circulärrahmen (Frauen)	12 „ 20	
Mode-Strumpfwirkerarbeit und Unterzeug:		
Gewöhnliche Arbeiter (Männer)	14 „ 28	
Geschickte Arbeiter (Männer)	20 „ 35	

Die allgemeine Lage der Arbeiter in diesen Geschäften hat sich während der letzten Jahre sehr verbessert.

5. Der Werth der zu dieser Klasse gehörenden Fabricate, welche im Jahre 1865 in das Vereinigte Königreich eingeführt wurden, betrug:—

Strumpfwirkerarbeit, Baumwolle	70,502
„ „ Wolle	18,480
Corsets	8,890
Regen- und Sonnenschirme (Seide)	4,722
Stöcke	85,200

6. Der Werth der Britischen Hauptfabricate derselben Gattung, welche im Jahre 1865 exportirt wurden, betrug:—

Strumpfwirkerarbeit, Unterzeug, Handschuhe etc.:	£
Von Baumwolle	453,837
„ Leinwand	20,091
„ Seide	26,698
„ Wolle	307,782
Regen- und Sonnenschirme	160,177

7. Ein beträchtlicher Theil des Strumpfwirkergeschäfts wird durch Handarbeit ausgeführt, aber die Maschinenfabricate nehmen jährlich an Quantität, Qualität und Billigkeit zu.

Die Erweiterung der einheimischen Nachfrage nach den zu dieser Klasse gehörenden Fabricaten, sowie die Nachfrage in den Colonien, hat grosse Fortschritte und Verbesserungen in diesen Branchen der nationalen Industrie veranlasst. Eine der wichtigsten Errungenschaften in Nottingham ist vielleicht die Herstellung von vollkommen fertigen Strümpfen und Unterzeug durch Maschinerie. Auch in den Farben der Mode-Strumpfwirkerarbeit hat eine grosse Verbesserung stattgefunden.

Klasse XXXV.**KLEIDUNGSSTÜCKE FÜR BEIDE GESCHLECHTER.**

Es ist kaum nöthig zu bemerken, dass Kleidungsstücke aller Art, in grösserem oder geringerem Umfange, in jeder Stadt und jedem Dorfe des Landes producirt werden. Drei wichtige Industriezweige sind jedoch in dieser Klasse einbegriffen, nämlich die der Hut-, Stiefel- und Schuh Fabrication, welche, da sie an besonderen Orten betrieben werden, kurz erwähnt werden mögen. Was die den verschiedenen Professionen und Geschäften eigenthümliche Kleidung betrifft, so ist der Costümunterschied,

welcher bestimmte Klassen des Volkes kennzeichnet, mit wenigen Ausnahmen in England verschwunden. Die Nationaltrachten von Wales, Schottland und Irland werden bis zu einem gewissen Grade aufrecht erhalten, aber die allgemeine Neigung der mittleren und niederen Gesellschaftsklassen geht dahin, in Kleidungsstücken den Styl der höhern Klassen nachzuahmen, und der Hauptunterschied der Kleidung besteht in der Eleganz der Arbeit und Qualität der verarbeiteten Stoffe. In keinem andern Lande der Welt, Amerika vielleicht ausgenommen, kleiden die arbeitenden Klassen sich so gut und so kostspielig wie in dem Vereinigten Königreiche.

Hüte werden in London, in Manchester und dessen Umgegend und in andern Theilen von Lancashire, Cheshire, Edinburg, Glasgow etc. gemacht. Die Industrie des Strohflechtens, welche das Rohmaterial für Strohhüte liefert, wird hauptsächlich in St. Alban's, Dunstable, Tring und einigen andern Orten in England betrieben. Die Fabrication von Stiefeln und Schuhen findet in sehr grossem Umfange in Northampton, Norwich und Leicester statt. Sie umfasst ein specielles En-gros-Geschäft von genagelten statt genähten Fabricaten und giebt einigen Tausend Arbeitern Beschäftigung.

Die folgende Zahl von Personen war während des Jahres 1861 in einigen der Hauptbranchen der Fabrication von Kleidungsstücken beschäftigt:—

Geschäftszweige		In England und Wales	In Schottland	Irland
Schneider	{ Arbeiter	109,004	17,276	22,523
	{ Arbeiterinnen	27,386	473	932
	Summa	136,390	17,749	23,455
Putzmacher	{ Arbeiter	803	31	—
	{ Arbeiterinnen	286,298	33,066	50,854
	Summa	287,101	33,097	50,854
Hut- und Mützenmacher	{ Arbeiter	11,502	707	886
	{ Arbeiterinnen	7,911	1,697	719
	Summa	19,413	2,404	1,605
Strohhut- und Damenhutmacher	{ Arbeiter	1,740	313	15
	{ Arbeiterinnen	22,245	1,336	1,343
	Summa	23,985	1,649	1,358
Strohgeflechtmacher	{ Arbeiter	2,128	1	6
	{ Arbeiterinnen	27,739	30	162
	Summa	29,867	31	168
Stiefel- und Schuhmacher	{ Arbeiter	211,233	26,786	41,297
	{ Arbeiterinnen	39,358	2,093	5,329
	Summa	250,591	28,879	46,623

Die Zahl der mit der Fabrication von Stiefeln und Schuhen beschäftigten Arbeiterinnen schliesst die Frauen der Schuhmacher aus, welche in manchen Fällen ihren Männern bei einigen Arbeitsverrichtungen Hülfe leisten. Die Gesamtzahl von Schuhmacherfrauen wurde in Grossbritannien auf 90,790 veranschlagt.

Die Durchschnittslöhne, welche in dem Schuh- und Stiefelgeschäft in Leicester während des Jahres 1866 gezahlt wurden, betragen :—

	Per Woche von 60 Stunden	
	s.	d.
An Maschinenarbeiter (Frauen) .	12	0
Anpasser "	11	0
Nagler (Männer) .	22	0
Fertigmacher "	30	0
Zuschneider "	23	0

Fünzig Procent der Arbeit wird von weiblichen Arbeitern ausgeführt.

Neuere statistische Angaben über das Geschäft von Northampton sind nicht vorhanden, aber nach dem Census von 1861 waren in jenem Jahre ungefähr 20,000 Personen in dem Stiefel- und Schuhgeschäft beschäftigt.

Die an den unten erwähnten Orten in dem Hutgeschäft gezahlten Durchschnittslöhne betrugen im Jahre 1866 :—

Seidenhutmacher	In Bristol	In Edin- burg	In Glasgow
	Per Woche s.	Per Woche s.	Per Woche s.
Formmacher	25	33	34
Seidenfertigmacher .	25	30	36
Krämpenverfertiger (tippers off)	30	39	40
Arbeitsstunden per Tag .	8	12 bis 15	10

Der Werth der Einfuhr und Ausfuhr von Herren- und Damenhüten und von Stiefeln und Schuhen betrug im Jahre 1865 :—

Einfuhr.	
Hüte:	£
Von Stroh	556,065
„ Filz	35,812
Flechtstroh zu Hüten . .	102,886
Anderer Arten von Flechtwerk .	30,225
Stiefeln und Schuhe . . .	104,693
Ausfuhr (Englische Fabrication).	
Hüte:	£
Von Filz	280,851
„ Seide	25,909
„ Stroh	166,599
„ anderen Arten	10,235
Hutmacher-Waaren . . .	70,343
Flechtstroh etc.	49,996
Stiefeln und Schuhe . . .	1,462,105

Frankreich liefert den grössten Theil der eingeführten, und die Australischen Colonien sind die Hauptconsumenten der von England ausgeführten, Waaren.

Es besteht auch ein grosses Ausfuhrge- schäft von Kleidungsstücken und Schifferhosen aus dem Vereinigten Königreich, welches sich im Jahre 1865 belief auf :—

Kleidungsstücke, alte und neue	£ 1,933,000
Schifferhosen und Negerkleidung	706,000
	2,639,000

Etwa die Hälfte dieser Ausfuhr ging nach den Australischen Colonien.

Klasse XXXVI.

JUWELIERWAAREN UND KOSTBARE STEINE.

Die Fabrication von echten und falschen Juwelierwaaren im Vereinigten Königreich ist von grosser Bedeutung; der Sitz der ersteren ist hauptsächlich in London, der der letzteren in Birmingham. Bei der zunehmenden Wohlhabenheit der Bevölkerung war die Nachfrage nach dieser Klasse von Waaren während der letzten Jahre sehr gross. Berichte über die Production der höhern Arten von Juwelierwaaren sind nicht vorhanden. Der Werth des in dem Geschäft von Birmingham jährlich gebrauchten Goldes, Silbers und der kostbaren Steine wird auf etwa eine und eine Viertel Million Pfund Sterling veranschlagt. Die Zahl der Personen, welche in der Birming- hamer Branche des Geschäfts arbeiten, ist un- gefähr 7,500 und die Durchschnittslöhne von Juwelieren zwischen 25s. und 50s. wöchentlich und in einigen Fällen mehr. Emaillirer verdienen von 3l. bis zu 5l. wöchentlich; Knaben von 4s. bis 11s.

Die Zahl der gegenwärtig in dem Juwelier- geschäft von London beschäftigten Personen beträgt (mit Ausschluss der Gehülfen) :—

Juweliere	484
„ und Goldschmiede . .	159
Cisellirer	41
Juwelenkastenmacher . . .	36

Der Werth der im Jahre 1865 hauptsächlich von Frankreich und Belgien importirten Ju- welierwaaren betrug 87,981l. und der der kost- baren Steine (mit Ausschluss von Diamanten) 32,000l. Der Werth der während desselben Jahres exportirten Juwelierwaaren Britischer Fabrication betrug :—

	£
Juwelierwaaren etc. von Gold und Silber }	94,313
„ anderer Art	69,918
	164,231

Ein beträchtliches Steigen hat in dem Werthe kostbarer Steine während der letzten zwanzig Jahre stattgefunden.

Die in einigen Branchen des Juweliergeschäfts angewandte Maschinerie und Dampfkraft haben die Fabricanten in den Stand gesetzt, eine grosse Ermässigung in dem Preise der Waaren ein- treten zu lassen.

Mr. J. S. Wright, in einem Berichte über das Juweliengeschäft von Birmingham, sagt, es würde nicht recht sein, die Erwähnung der Thatsache zu vergessen, dass die in jener Stadt gegründete Kunstschule in hohem Masse zur Entwicklung des artistischen Talents unter den dortigen Juwelieren beigetragen habe. Viele Hundert Arbeiter sind daselbst gebildet worden. Die Wirkungen des empfangenen Unterrichts werden sich noch entschiedener in der Zukunft offenbaren.

Klasse XXXVII.

TRAGBARE WAFFEN.

1. Die Fabrication der kleineren Waffenarten wird in Enfield (der Regierungsfabrik), in Birmingham und in London betrieben. Bajonette, Flintenschlösser und Degen werden hauptsächlich in Birmingham gemacht, die Letzteren aus Stücken von Stahl, Degenklingenzaine oder Degenklingenschienen (sword-moulds) genannt, die in Sheffield fabricirt werden. Die grosse Masse der zur Ausfuhr bestimmten Feuerwaffen wird in Birmingham gemacht. Die Londoner Fabricanten sind berühmt für die vorzügliche Ausarbeitung von Büchsen und Jagdgewehren ersten Ranges. Sowohl die 'Birmingham Small Arms Association' als die 'London Armoury Company' machen Feuerwaffen für die Regierung.

2. Das für Flintenschnitte gebrauchte Holz ist Buchenholz, besonders aus Gloucestershire und Herefordshire, und Wallnussholz, welches aus Italien und Deutschland eingeführt wird. Die Zubereitung des zu der Fabrication der Flintenläufe gebrauchten Eisens erfordert ausserordentliche Sorgfalt, und die Arbeiter von Birmingham besitzen einen hohen Grad von Geschicklichkeit in der Fabrication desselben.

3. Die Zahl der Arbeiter, welche in der Regierungsfabrik beschäftigt werden, beträgt, wenn in voller Thätigkeit, etwa 2,000. Die Zahl der in Birmingham beschäftigten Arbeiter wird auf 7,000 veranschlagt. Das Londoner Geschäft gab im Jahre 1861 ungefähr 2,000 Personen Beschäftigung.

Die Gesamtzahl von Personen, welche als Flintenschmiede oder als Flintenfabricanten beschäftigt waren, betrug im Jahre 1861, nach den Angaben des Census:—

In England und Wales	11,873
Schottland	204
Irland	256
Summa	12,333

4. Nach einem Bericht der Handelskammer von Birmingham an das Handelsministerium standen die Durchschnittslöhne in dem Geschäft der Flintenfabrication im Jahre 1866 wie folgt:—

	Per Woche von 60 Stunden
	s. d.
Arbeiter, erwachsene	12 bis 60 0
„ Knaben	3 „ 15 0
Arbeiterinnen, erwachsene	6 „ 12 0
„ Mädchen	3 „ 4 6

Mr. Goodman, Vorsitzender der 'Birmingham Small Arms Company,' erklärte in einem Bericht an die 'British Association,' im Jahre 1865, man dürfe kaum bezweifeln, dass während der letzten zehn Jahre die in dem Flintengeschäft verdienten Löhne diejenigen sämtlicher andern Geschäfte übertroffen hätten, und dass die Arbeiter in einigen grosse Geschicklichkeit erfordernden Zweigen dieses Geschäfts, wenn sie in voller Thätigkeit sind, wöchentlich zwischen 5*l.* und 6*l.* verdienen.

5. Der Werth der Feuer- und Seitenwaffen aller Arten, welche im Jahre 1865 in das Vereinigte Königreich importirt wurden, betrug 243,699*l.*, wovon 192,000*l.* auf Belgien kamen. Die Gesamteinfuhr von Wallnussholz betrug 5,689 Tonnen und die von unpolirten Flintenschnitten 5,204 Centner. Mehr als acht und dreissig Millionen Zündhütchen wurden ebenfalls importirt.

6. Das Nachstehende ist der officiële Bericht über die Zahl und den Werth der kleineren Waffenarten Englischer Fabrication, welche während der fünf Jahre 1861–65 aus dem Vereinigten Königreich exportirt wurden:—

	Zahl	Werth £
1861	315,000	515,000
1862	702,000	1,573,000
1863	439,000	856,000
1864	254,000	348,000
1865	291,000	424,000

Die grosse Ausfuhr zu Anfang des obigen Zeitraums wurde durch die Nachfrage in den Vereinigten Staaten veranlasst. Mr. Goodman ist der Ansicht, dass die obigen Berichte den wahren Werth des Britischen Exportgeschäfts unterschätzen, da eine grosse Anzahl besonders kostspieliger Jagdflinten in's Ausland versandt wird, ohne dass man sie im Zollamte notirt.

Die Hauptarten der während des Jahres 1865 exportirten Feuerwaffen etc. waren:—

	No.
Musketen	173,153
Büchsen	85,322
Vogelflinten	15,505
Revolver	8,061
Pistolen	8,994
Degen, Säbel, Bajonette etc.	4,538
Zündhütchen	284,895

7. Maschinerie wird jetzt in der Fabrication aller Theile von Feuerwaffen angewandt und dadurch der Englische Fabricant in den Stand gesetzt, mit den Fabricanten fremder Länder erfolgreich zu concurriren, da sonst Letztere, wegen der ihnen zu Gebote stehenden billigen

Arbeit, im Stande sein würden, ihn von den verschiedenen Märkten der Welt zu verdrängen.

8. Die Verbesserungen, welche während der letzten Jahre in der Fabrication der kleineren Waffenarten stattgefunden haben, sind so allgemein bekannt, dass eine Hinweisung darauf an diesem Orte kaum nöthig ist. Die wichtigste neuere Verbesserung beim Laden ist die allgemeine Annahme des Schwanzschraubensystems (breech-loading).

Es giebt manche Branchen dieses Geschäfts, in welchen der Kunstarbeiter einen weiten Spielraum für seine Talente finden könnte, und in welchen die Englischen Fabricanten bereits einen beträchtlichen Grad von Geschmack entwickeln. Die Englischen Arbeiter, welche die gegenwärtige Ausstellung besuchen, werden jedoch wohl daran thun, sich durch die von den Pariser Flintenfabricanten ausgestellten Waaren, so berühmt wegen der künstlerischen Schönheit ihrer Verzierungen, belehren zu lassen.

Klasse XXXVIII.

REISE-APPARATE UND LAGERGERÄTH.

Die Fabrication von Koffern, Reisesäcken und andern in diese Klasse gehörenden Gegenständen bildet einen sehr wichtigen Industriezweig, über es fehlt an Mitteln, ihren wirklichen Umfang zu bestimmen. Neue Arten von Mantelsäcken, bestimmt, den Bedürfnissen der zahlreichen Klasse von Reisenden in unsern Tagen Genüge zu thun, erscheinen beinahe

täglich. Auch in der Ausarbeitung von Reisesäcken haben während der letzten zehn Jahre grosse Verbesserungen stattgefunden. Die Fabrication von Reise- oder Eisenbahndecken wird in Dewsbury und Huddersfield betrieben und ist gegenwärtig eine Hauptbranche des Wollgeschäfts geworden. Der Gebrauch von Zelten, mit Ausnahme der für die Zwecke des Ackerbaus benutzten, ist in dem Vereinigten Königreich sehr gering, und die Hauptfabrication beschränkt sich auf die Bedürfnisse der in fremden Ländern stationirten Heerestheile.

Klasse XXXIX.

SPIELWAAREN.

Viele Arten von Spielsachen (besonders Wachspuppen) werden in grosser Menge im Vereinigten Königreich producirt; aber wegen der Eigenthümlichkeiten des Spielwaarengeschäfts ist es unmöglich, den Werth der jährlichen Fabrication dieser Waaren zu bestimmen.

Die Zahl der Fabricanten, welche in London das Spielwaarengeschäft betreiben, ist:—

Spielwaarenmacher . . .	44
Spielwaarenhändler . . .	153
Puppenmacher . . .	19
Schaukelpferdmacher . . .	8

Das Einfuhrgeschäft mit fremden Spielwaaren hat seit dem Jahre 1850 sehr zugenommen, da es von 46,130*l.* in diesem Jahre auf 163,024*l.* im Jahre 1865 gestiegen war.

GRUPPE V.

(KLASSEN XL. bis XLVI.)

ROHE UND VERARBEITETE ERZEUGNISSE DER BERGBAU-
INDUSTRIE, WALDCULTUR ETC.

Klasse XL.

BERGBAU UND METALLURGIE.

1. DIESE Klasse umfasst die wichtigste Branche der einheimischen Production des Landes. Denn dass England eine so hervorragende Stellung als Fabrik-Staat erlangt hat, ist vor allem der Fülle seines Metallreichthums und dem glücklichen Umstände zuzuschreiben, dass Steinkohlen und Eisen in denselben Gegenden gewonnen werden. Auch die schnelle Entwicklung der Eisenbahnen und der Dampfschiffahrt lassen sich auf diese Ursache zurückführen. Die folgenden Daten über die Production von Mineralien und Metallen in dem Vereinigten Königreich während des Jahres 1865 sind den officiellen Berichten des Herrn Robert Hunt, Aufseher des Bergbau-Archivs, entlehnt:—

Steinkohlen-Production im Jahre 1865.

Wo gewonnen	Masse der Production
	Tonnen
Durham und Northumberland	25,032,694
Cumberland	1,431,047
Yorkshire	9,355,100
Derbyshire	4,595,750
Nottinghamshire	1,095,500
Leicestershire	965,500
Warwickshire	859,000
Stafford und Worcestershire	12,200,989
Lancashire	11,962,000
Cheshire	850,000
Shropshire	1,135,000
Gloucester, Somerset und Devon- shire	1,875,000
Monmouthshire	4,125,000
Süd-Wales	7,911,507
Nord-Wales	1,983,000
Schottland	12,650,000
Irland	123,500
Summa	98,150,587

Nach Abzug einer Ausfuhr von 9,000,000 Tonnen und von beinahe 29,000,000 Tonnen, die zur Fabrication von Roheisen und Eisenstangen gebraucht wurden, blieben ungefähr 60,000,000 Tonnen für einheimische Consumption, zu Haushalts- und andern Zwecken,

oder eine Durchschnittsmenge von mehr als 2 Tonnen auf jeden Bewohner des Landes. Die jährliche Durchschnittsmenge von Steinkohlen, welche in den mit dem Jahre 1865 endenden zehn Jahren producirt wurden, betrug 84,900,000 Tonnen.

EISENERZ.—Die Gesamtproduction dieses Erzes im Jahre 1865 betrug 9,910,000 Tonnen. Es wurde gewonnen in zwanzig Englischen Grafschaften, unter denen der North-Riding von Yorkshire, Cumberland und Staffordshire die grössten Quantitäten lieferten; und in Wales, Schottland und Irland.

ROHEISEN-FABRICATION.—Die Gesamtfabrication von Roheisen im Jahre 1865 betrug 4,819,000 Tonnen. Die nachstehende Tabelle zeigt die Hauptgegenden, wo die Fabrication stattfindet:—

Provinzen und Grafschaften	Zahl von Eisenwerken	Zahl von gebauten Oefen	Zahl von Hoch-oefen	Tönnen von producirtem Roheisen
England:				
S. Staffordshire	64	172	114	692,627
York: N. Riding	14	65	53	486,421
Durham	19	65	47	476,767
N. Staffordshire	8	35	27	206,268
Lancashire	6	24	16	204,925
Derbyshire	15	41	34	189,364
York: W. Riding	14	38	29	123,233
Shropshire	11	29	23	117,343
Cumberland	4	16	9	107,430
Andere Graf-schaften	21	42	24	134,489
Summa	176	527	376	2,738,867
Wales:				
Glamorganshire	18	81	64	408,416
Monmouthshire	10	68	45	357,656
Andere Graf-schaften	21	63	31	150,837
Summa	49	212	140	916,909
Schottland:				
Lanarkshire	15	101	84	1,163,478
Andere Graf-schaften	17	79	57	
Summa	32	180	141	

Die nachstehende Zahl von Eisenhämmern

und Schweissöfen war im Jahre 1865 mit der Herstellung fertigen Eisens beschäftigt:—

Provinzen und Grafschaften	Zahl von Werken	Zahl von Flammöfen	Zahl von Streckwerken
England:			
Süd-Staffordshire . .	118	2,116	224
Durham	16	688	61
Yorkshire	30	922	115
Andere Grafschaften .	34	903	113
Summa	189	4,629	513
Wales	39	1,395	170
Schottland	15	383	47
Summa	252	6,407	730

Berichte über die Gesamtproduction von *fertigem Eisen* in dem Vereinigten Königreich sind nicht vorhanden. Mr. J. Jones schätzte in einem Bericht an die 'British Association' in Birmingham, im Jahre 1865, die jährliche Production des Districts von Staffordshire auf 855,000 Tonnen, und die Production der mit den Kohlenlagern von Northumberland und Durham verbundenen Eisenwerke wird jährlich auf ungefähr 300,000 Tonnen veranschlagt.

Die Stahlfabrication wird in bedeutendem Umfang im Inlande betrieben, vorzugsweise in Sheffield und in Staffordshire und Northumberland; aber es fehlt an statistischen Angaben über den Gesamtbetrag der Production.

Nach einer allgemeinen Veranschlagung betrug während des Jahres 1862 in Sheffield die Production von Blasenstahl 79,000 Tonnen und die von Gusstahl 52,000 Tonnen.

BLEI.—Die Masse des zu Tage geförderten Erzes betrug 90,452 Tonnen und die Production von Blei 67,181 Tonnen. Blei wird in allen Theilen des Königreichs gewonnen; die grösste Masse wurde im Jahre 1865 aus den Minen in Durham und Northumberland zu Tage gefördert.

KUPFER.—198,298 Tonnen Erz wurden, hauptsächlich in den Grafschaften Cornwall, Devonshire und Cheshire, gewonnen; und 11,888 Tonnen Kupfer wurden während des Jahres 1865 in dem Vereinigten Königreich producirt.

ZINN.—Dieses Metall wird in Cornwall und Devonshire gefunden und die im Jahre 1865 gewonnene Masse von Zinnerz betrug 15,686 Tonnen. 10,039 Tonnen metallisches Zinn wurden in demselben Jahre producirt.

Auch Zink, Strahlenkies, kleine Quantitäten von Silber und Gold und verschiedene Arten mineralischer Erden producirt das Vereinigte Königreich, sowie Bausteine und Thon in grossen Quantitäten.

Salz wird gewonnen in Cheshire, in Worcestershire und in Irland. Die Salzwerke in Cheshire können jährlich 1,000,000 Tonnen produciren; die Production der Werke in Worcestershire beträgt ungefähr 200,000 Tonnen jährlich. In Irland findet die Salzproduction in verhältnissmässig geringem Masse statt.

Der Gesamtwerth der mineralischen Producte des Vereinigten Königreichs im Jahre 1865 wird angegeben wie folgt:—

	£
Metalle	15,773,000
Steinkohlen	24,538,000
Mineralische Erden	1,434,000
	41,745,000

Der Werth von Salz, Thon und Bausteinen ist in den obigen Zahlen nicht einbegriffen.

Es würde unmöglich sein, in dem beschränkten Raume, welcher diesen Bemerkungen gestattet ist, einen Umriss von den ebenso zahlreichen als wichtigen mit dieser Klasse verbundenen Geschäften zu geben. Wir können nur kurz erwähnen, dass die Eisenwaarengeschäfte hauptsächlich in Birmingham, Wolverhampton, Walsall und Sheffield ihre Mittelpunkte haben, die Bronze- und Kupfer-Fabrication in Birmingham und Bristol, plattirte Waaren in Sheffield und Birmingham, Nähnadeln und Angelhaken in Redditch, Stecknadeln in Birmingham, Drähte in Birmingham, Sheffield und Manchester und Schneidewaaren in Sheffield.

2. Die in der Britischen Metall-Fabrication benutzten Rohmaterialien werden hauptsächlich aus einheimischen Quellen bezogen. Ansehnliche Massen von Mineralien und Metallen werden jedoch jährlich importirt. Die beigefügte Tabelle zeigt die Massen der Hauptarten, welche im Jahre 1865 importirt wurden:—

Gegenstände	Quantitäten
	Tonnen
Kupfererz	82,562
Kupfer-Regulus	39,686
Kupfer, unverarbeitet und theilweise verarbeitet	21,717
Eisenerz	76,977
Roheisen	11,380
Stangeneisen	51,464
Stahl	6,777
Bleierz	5,584
Rohblei und Plattenblei	34,903
Silbererz	6,587
Zinnerz	639
Zinnblöcke, Stangen etc.	5,698
Zink, in Kuchen	22,193
„ gerollt	8,492

Chili lieferte den grössten Theil von Kupfererz und Regulus, Spanien, Frankreich und Schweden das Eisenerz, Schweden Roheisen, Stangeneisen und Stahl, Italien Bleierz, Spanien Rohblei und Plattenblei, die Holländischen Colonien in dem Ostasiatischen Archipelagus Zinn. Zink wurde hauptsächlich aus Belgien, Holland, Hamburg und Preussen importirt.

3. Die Zahl der Arbeiter, welche während des Jahres 1865 in den Kohlenbergwerken des Vereinigten Königreichs beschäftigt waren, wird auf 315,000 veranschlagt. Die an erwachsene Bergleute und Kohlenhauer ('hewers') gezahlten Durchschnittslöhne betrugen im Jahre 1866 in Newcastle 5s. 9d. per Tag von 7 Stunden. Die

Arbeiterlöhne in andern mit dem Kohlenbergbau verbundenen Beschäftigungen schwankten zwischen 3s. und 5s. per Tag, für Knaben zwischen 1s. und 3s. per Tag. Der Reinverdienst in dem Eisengeschäft von Staffordshire wird im Grossen und Ganzen zu 28s. bis 30s. per Kopf wöchentlich veranschlagt, obschon einige Arbeiter von 2l. bis 4l. verdienen. In Glasgow erhielten erwachsene Eisengiesser im Jahre 1866 29s. per Woche von 60 Stunden; Knaben, 4s. bis 16s.; für andere Beschäftigungen in Eisenhütten, 15s. bis 25s. In dem Schmiedegeschäft von Birmingham: Grobschmiede und Weisschmiede, 24s.; Modellverfertiger, 33s., und Ingenieur-Tischler, 30s. per Woche von 58 Stunden. Schlosser für Kunstschlechterarbeit, 40s. In dem Schneidewaarengeschäft von Sheffield, im Jahre 1866: Schmiede, 31s. bis 36s.; Hämmerer, 21s. bis 24s.; Schleifer, 45s. bis 50s., und Metallhärter, 24s. bis 28s., per Woche von 42 Stunden. Officielle Berichte über die Zahl der in den obigen Geschäften arbeitenden Personen sind nicht vorhanden, und bei der Verschiedenheit der damit verknüpften Beschäftigungen ist es kaum möglich, eine genaue Veranschlagung zu machen. Die Gesamtzahl der Personen, welche in Verbindung mit der Bergbau- und Metallarbeit während des Jahres 1861 in dem Vereinigten Königreich beschäftigt waren, betrug ungefähr $1\frac{1}{4}$ Million. Die Lage der Bergleute erfreut sich gegenwärtig eines weit lebhafteren Interesses seitens der Arbeitgeber, als früher der Fall war, und die grosse Menge der Grubenbesitzer und Metallfabricanten ist bemüht, nicht allein den Gesundheitszustand ihrer Arbeiter zu bessern, sondern thut auch viel, die Erziehung ihrer Kinder und die Wohlfahrt ihrer Familien im Allgemeinen zu befördern.

4. Der Gesamtwert der während des Jahres 1865 in das Vereinigte Königreich importirten Metallfabricate betrug weniger als eine halbe Million Pfund Sterling. Die Hauptmasse der Einfuhr bestand aus Eisenwaaren, hauptsächlich aus Belgien und Holland.

5. Die nachstehende Tabelle zeigt die Quantität der in diese Klasse gehörenden Hauptgegenstände Britischer Production, welche im Jahre 1865 aus dem Vereinigten Königreich exportirt wurden:—

Gegenstände	Quantitäten
Steinkohlen und Coke . . Tonnen	9,170,000
Kupfer und Fabricate . . Centner	632,000
Messing "	44,000
Eisenwaaren £	3,924,000
Eisen—Roheisen . . . Tonnen	547,000
„ Stangen Eisen "	254,000
„ Eisenbahn- "	434,000
„ Andere Arten und Waaren }	357,000
Stahl "	24,000
Blei "	27,000
Plattirte Waaren £	112,000
Salz Tonnen	579,000
Zinn Centner	104,000
Zinnplatten £	1,481,000
Zink Centner	89,000

Der Gesamtwert der obigen Gegenstände überstieg 28 Millionen Pfund Sterling.

6. Es ist nicht möglich, die Abtheilungen der obigen Geschäfte, welche durch Handarbeit, und die, welche durch Maschinen betrieben werden, zu unterscheiden. Die allgemeine Tendenz ist jedoch, Maschinen an die Stelle der Handarbeit zu setzen, wo dies irgend ausführbar ist.

7. Von dem Fortschritt in der Bergbauindustrie des Vereinigten Königreichs seit der letzten Pariser Ausstellung mag die vermehrte Production von Mineralien und Metallen während des Jahres 1865, im Vergleich mit derjenigen des Jahres 1855, eine Vorstellung geben. Die Steinkohlenproduction nahm während des genannten Zeitraums 59 Procent zu; die von Roheisen, 50 Procent; die von Zinn, 66 Procent; die von Blei, 3 Procent, während die von Kupfer 44 Procent abnahm.

Grosse Verbesserungen haben seit dem Jahre 1851 in der Britischen Eisenwaarenfabrication stattgefunden, von denen die meisten, wenn nicht alle, direct oder indirect auf die Industrie-Ausstellung zurückgeführt werden können, welche während jenes Jahres in London gehalten wurde. Das durch die Ausstellung, begonnene Werk wurde von dem Departement für Wissenschaft und Kunst fortgeführt, und in Folge localer Ausstellungen und des Unterrichts localer Kunstschulen, welche in den Mittelpunkten der Fabrikdistricte gegründet wurden, hat sich in Zeichnung und Styl der Englischen Waaren ein gewaltiger Fortschritt geltend gemacht.

Die Jury über Eisenwaaren in der Ausstellung von 1862 berichtete: 'Es ist erfreulich, erklären zu können, dass in einer oder der andern Beziehung eine Verbesserung in beinahe sämtlichen ausgestellten Gegenständen bemerkbar ist. Die billigen Fabricate zeigen eine grössere Nettigkeit und Regelmässigkeit der Form. Diejenigen Gegenstände, welche zugleich nützlich und ornamental sind, bekunden grössere Angemessenheit der Verzierungen, und ein höherer Massstab der Kunst ist in der ornamentalen Metallarbeit für Decorationen in Häusern und Kirchen erreicht worden.'

Klasse XLI.

PRODUCTE DER WALDCULTUR UND DER DAZU GEHÖRENDE GEFÄHRTSZWEIGE.

Im Vergleich mit den Wäldern anderer Länder sind die des Vereinigten Königreichs von geringem Umfang. Der jährliche Werth der Production von Bauholz und anderen Holzarten wird auf zwei Millionen Pfund Sterling geschätzt. Die Eiche, obgleich nicht am reichlichsten vorhanden, ist der wichtigste und werthvollste der Englischen Bäume und wird in bedeutendem Umfang in den königlichen Forsten cultivirt.

Die einheimische Production von Bauholz

ist weit unter der Nachfrage, und eine grosse Einfuhr findet jährlich vom Auslande statt. Auch viele andere nicht in England gewonnene Producte der Waldcultur werden in ungeheurer Menge verbraucht. Die folgende Tabelle zeigt die hauptsächlichsten Artikel dieser Art, welche im Jahre 1865 importirt wurden:—

Gegenstände	Quantitäten
Perl- und Pottasche . . . Centner	144,000
Baumrinde zum Gerben oder Färben }	431,000
Kork	122,000
Korke, fertig geschnitten . . . Pfund	2,012,000
Galläpfel Centner	16,000
Sumach Tonnen	13,000
Terra Japonica	16,000
Valonia	20,000
Brennholz und Bauholz: Nicht gesägt oder gespalten, mit Einschluss von Teak . . . Ladng.	1,686,000
Balken, Latten etc., gesägt oder gespalten }	2,136,000
Stäbe	67,000
Brennholz	180,000
Reifen	8,000
Lattenholz	105,000
Färbeholz Tonnen	44,000
Hartholz	68,000

Der Gesammtwerth der obigen Artikel betrug 15,888,000/. Sterling. Eine kleine Quantität fremden Bauholzes wird rückexportirt; aber dieselbe ist nicht von hinreichender Bedeutung, um erwähnt zu werden.

Perl- und Pottasche werden hauptsächlich von den Englischen Colonien in Nord-Amerika geliefert, Baumrinde von Belgien und Holland, Kork von Portugal, fertig geschnittene Korke von Frankreich, Spanien und Portugal, Galläpfel von China, Indien und der Türkei, Brennholz und Bauholz von dem Englischen Nord-Amerika und den Ostseeländern, Teak von Indien und Singapore, Cedern von Cuba, und Mahagoni von Central-Amerika und den Vereinigten Staaten.

Klasse XLII.

PRODUCTE DER JAGD, DES FISCHFANGS UND DES EINSAMMELNS VON FRÜCHTEN, WELCHE OHNE BODENCULTUR GEWONNEN WERDEN.

Verschiedene in diese Klasse gehörende Gegenstände, wie Hasen-, Kaninchen- und andere Felle, Federn, Horn, Knochen, Wachs etc., werden in dem Vereinigten Königreich producirt; aber es fehlt an Mitteln, den Umfang ihrer Production zu bestimmen. Die Zufuhr von Fischöl und Fischbein hat in den letzten Jahren abgenommen, grossentheils wegen der Entdeckung von Materialien, welche man besser geeignet fand für die Zwecke, zu welchen die älteren Gegenstände angewandt wurden.

Ogbleich viele der wichtigsten in diese Klasse gehörenden Gegenstände nicht im Inlande pro-

ducirt werden, werden sie doch stark consumirt. Die folgenden Zahlen zeigen die Quantitäten der hauptsächlichsten fremden Producte der Jagd, des Fischfangs etc., welche im Jahre 1865 in das Vereinigte Königreich eingeführt wurden:—

Baumrinde, gelbe Ameri- kanische Eichen- } Centner	24,954
Baumrinde, für Gerber }	405,856
Knochen für Fabrikzwecke . . . Tonnen	8,666
Borsten Pfund	2,566,000
Kork, ungeschnitten . . . Tonnen	6,103
Federn, zu Betten . . . Centner	13,493
„ zur Verzierung . . . Pfund	54,211
Nüsse, Cocos- . . . Anzahl	2,545,000
„ gemahlene . . . Tonnen	1,939
Gummi Centner	182,000
Caoutchouc	71,392
Gutta-Percha	29,077
Haar, Kuh-, Ochsen-, } Pferde- etc. }	74,851
Hörner Tonnen	3,678
Hausenblase Centner	2,764
Oel, Thran- Tonnen	10,005
„ Wallrath-	2,438
Gänsefedern Anzahl	10,949,000
Colophonium Centner	459,000
Häute, Kaninchen- . . . Anzahl	1,059,000
„ Hirsch-	92,000
„ Ziegen-	2,797,000
„ Zicklein-	330,000
„ Lamm-	708,000
„ Schaf-	4,300,000
„ Seehund-	529,000
Elfenbein, Elefanten- } zähne }	Centner 10,268
Elfenbein, vegetabilisches . . .	22,313
Schildpatt Pfund	39,288
Wachs, Bienen- Centner	10,600

Die obigen Zahlen beziehen sich auf das ganze Einfuhrgeschäft; in einigen Fällen findet eine ansehnliche Rückausfuhr statt.

Klasse XLIII.

PRODUCTE DES ACKERBAUES, WELCHE NICHT ALS NAHRUNGSMITTEL GEBRAUCHT WERDEN UND SICH LEICHT AUFBEWAHREN LASSEN.

Die hauptsächlichsten, in dem Vereinigten Königreich producirt Gegenstände, welche in diese Klasse gehören, sind roher Flachs und Wolle, Samenöl und Eichenrinde. Die Production der beiden ersten Gegenstände ist in den Klassen 28 und 30 erwähnt; aber es fehlt an Mitteln, den Umfang der Production von Eichenrinde in England zu bestimmen. Was die von Samenöl betrifft, so sind keine Berichte über seine Zubereitung für häusliche und andere Zwecke vorhanden. Eine bedeutende Masse wird jedoch aus dem Vereinigten König-

reich exportirt. Im Jahre 1865 wurden nicht weniger als elf Millionen Gallonen, zu einem Werthe von etwa 1,547,000*l.*, von England versandt; aber diese Quantität wurde nicht aus Britischen Samen allein verfertigt, da alljährlich grosse Massen von Samen eingeführt werden, um Oel daraus zu gewinnen. Im Jahre 1865 wurden 1,697,000 Quart Leinsamen, Rapssamen und andere Arten von Oelsamen importirt. Ausser der einheimischen Production von Eichenrinde etc. werden grosse Massen von Gerbematerialien importirt. Im Jahre 1865 waren die Hauptgegenstände dieses Einfuhrgeschäfts:—

	Tonnen
Baumrinde, für Färber oder Gerber	20,292
Cutch	2,120
Gambier	13,588
Valonia	19,702
Dividivi	3,711
Sumach	13,045

Die Einfuhr von Samenöl, hauptsächlich von Frankreich, Holland und Hamburg, belief sich während desselben Jahres auf 12,811 Tonnen, zu einem Werthe von 695,000*l.*

Klasse XLIV.

CHEMISCHE UND PHARMACEUTISCHE PRODUCTE.

Die Fabrication chemischer Producte macht einen der Hauptindustriestämme des Landes aus und ist von Wichtigkeit nicht bloss, weil sie ein unabhängiges Geschäft von beträchtlichem Umfang bildet, sondern auch in Zusammenhang mit den verschiedenen einheimischen Fabricationsmethoden, bei welchen eine so grosse Menge chemischer Producte angewandt wird. Die Hauptsitze dieser Industrie sind in der Umgegend von Newcastle, Liverpool, Glasgow, Bristol und Birmingham. Chemicalien werden ebenfalls in andern Theilen von Lancashire und in den mittleren und südlichen Grafschaften von England producirt. Die Fabrication der andern in diese Klasse gehörenden Gegenstände ist so weit verbreitet, dass es schwer ist, besondere Orte als Mittelpunkte anzuführen. Was die Fabrication von Seife und Lichtern betrifft, so werden die gewöhnlichen Arten in beinahe sämtlichen grossen Städten des Königreichs gemacht. Seife wird in grosser Menge producirt; während des Jahres 1862, ein Jahr vor der Abschaffung der Accisesteuer auf Seife, wurde jene Steuer auf circa 203 Millionen Pfund harter und 21 Millionen Pfund weicher Seife in dem Vereinigten Königreich erhoben. Seit der Abschaffung der Steuer hat man sich keine zuverlässigen Berichte über die Production verschaffen können, obgleich man weiss, dass sie beträchtlich zugenommen hat. So lange die Accisesteuer auf der Seifen-Production lastete, geschah wenig, sie zu verbessern und billiger zu machen, aber seit der

Abschaffung der Steuer ist ein hoher Grad chemischer Kenntniss diesem Gegenstande zugewandt worden, und Seife, welche früher eine Steuer von 3*d.* auf das Pfund würde zu zahlen gehabt haben, wird jetzt für 2*d.* das Pfund verkauft. Grosse Verbesserungen haben in der Production verschiedener Arten von parfümirten und Modeseifen stattgefunden, und die Consumption derselben ist beträchtlich. Diese Modeseifen werden in grosser Menge in London und einigen andern grossen Städten Englands fabricirt.

Was die Lichterfabrication angeht, so wird das Talglichtgeschäft in fast sämtlichen Städten des Landes betrieben und giebt vielen Hundert Arbeitern Beschäftigung. Die Fabrication anderer Lichterarten, wie Wachs- und Sperm-, findet hauptsächlich in grossen Städten statt; und die von Stearin-, Paraffin- und Composite-Lichtern etc. ist, mit Ausnahme zweier Fabriken in Schottland und einer in Irland, ganz auf London und dessen Umgegend beschränkt. Berichte über die Zahl der gegenwärtig mit der Lichterfabrication beschäftigten Personen sind nicht vorhanden. Nach dem Census von 1861 war die folgende Anzahl in den verschiedenen Theilen Grossbritanniens damit beschäftigt:—

Talglichtzicher.

	Arbeiter	Arbeiterinnen	Gesamtsumme
In England und Wales	4,467	219	4,686
Schottland	298	25	323
	4,765	244	5,009

Seit der Einführung von Paraffinlichtern hat sich das Geschäft bedeutend verbessert und erweitert. Messrs. Field, welche Aussteller in dieser Klasse sind, führten diese Art Lichter zuerst, im Jahre 1857, ein und haben seitdem grosse Verbesserungen in ihrer Fabrication bewirkt, von welchen die neueste in einer Methode zum Selbstanpassen der Lichter besteht. Die Hauptvorzüge von Paraffinlichtern sind: Völlige Freiheit von Fett, die Production eines reinen und schönen Lichtes, von hoher Leuchtkraft, und Billigkeit des Preises, wenn man ihre guten Eigenschaften in Anschlag bringt. Paraffin ist seiner Natur nach im Stande, alle Arten von Farben anzunehmen, ohne dadurch etwas von seiner Leuchtkraft einzubüssen.

Die Fabrication von Gummi und Gutta-Percha hat während der letzten zehn Jahre bedeutend zugenommen und wird in vielen Theilen des Königreichs in grossem Umfang betrieben. Auch in der Production von Farbstoffen und Farben ist während desselben Zeitraums ein grosser Fortschritt gemacht worden. Alaun, welches einen ziemlich wichtigen Handelsartikel bildet, wird reichlich producirt in Whitley, in Yorkshire. Phosphor wird in grossen Quantitäten von Messrs. Albright und Wilson, in Oldbury, gemacht. Die Production von mineralischen und andern Wasserarten wird in vielen Theilen von England betrieben

und gab im Jahre 1866 1,501 Arbeitern und 98 Arbeiterinnen Beschäftigung.

Da officiële statistische Angaben über die Industrieproducte von England nicht vorhanden sind, ist es unmöglich, die Gesamtzahl der Personen zu bestimmen, welche in den verschiedenen, zu dieser Klasse gehörenden, Geschäften arbeiteten. Die Gesamtzahl chemischer Fabricanten in Grossbritannien betrug nach dem Census von 1861:—

	Arbeiter	Arbeiterinnen	Summa
In England und Wales	7,505	243	7,748
Schottland . . .	1,253	50	1,303
Summa . . .	8,758	293	9,051

Die wichtigste Industrie in dieser Klasse ist die des Alkaligeschäfts, welche die vereinten Industrien von kohlenisaurem Natrium, Schwefelsäure, Wasserchlorsäure und Bleiche-Agentien umfasst; und da diese Industrie jetzt unter der Aufsicht der Regierung betrieben wird, so geben die Berichte über die Masse von zersetztem Salz einen Massstab für den Umfang und die Zunahme des Geschäfts. Zur Zeit des Englisch-Französischen Handelsvertrags von 1860 wurde die zur Fabrication von Alkali in England verbrauchte Quantität von Salz durch die Vertreter des Geschäfts auf ungefähr 250 Tonnen jährlich veranschlagt. Der erste Bericht des Alkali-Inspectors schätzt die im Jahre 1864 verbrauchte Quantität auf ungefähr 300,000 Tonnen, und der zweite Bericht, vom Jahre 1865, auf 350,000 Tonnen, oder eine Zunahme von dreissig Procent in fünf Jahren. Genaue Berichte über die aus dieser Zersetzung gewonnenen Producte sind nicht vorhanden, aber Veranschlagungen sind häufig gemacht worden.

So veröffentlichte die Jury in Klasse 2 der Ausstellung von 1862 einige von Mr. C. Allhusen mitgetheilte interessante Thatsachen über das Alkaligeschäft des Vereinigten Königreichs, woraus sich ergab, dass sich die Production desselben bereits im Jahre 1852 belief auf:—

	Tonnen	Werth £
Alkali	71,193	711,930
Crystallisirte Soda . . .	61,044	305,220
Bicarbonat von Natrium . .	5,762	86,430
Bleichpulver	13,100	131,000
	151,099	1,234,580

Die Zunahme des Geschäftszwischen den Jahren 1852 und 1861 wird angegeben wie folgt:—

	1852 (Herr Allhusen's Bericht)	1861 (Herr Gossage's Bericht)
	Tonnen	Tonnen
Alkali	71,193	56,000
Crystallisirte Soda . . .	61,044	104,000
Bicarbonat von Natrium . .	5,762	113,000
Bleichpulver	13,100	20,000

Herr Gossage veranschlagte den Gesamtwert der Producte im Jahre 1861 auf mehr als zwei Millionen Pfund Sterling und die Zahl der Arbeiter, welche in ungefähr fünfzig Etablissements beschäftigt wurden, auf 10,000.

Die folgende Tabelle zeigt die Production der beiden Haupt-Alkali-Districte im Jahre 1861:—

	Newcastle-upon-Tyne	Lancashire (nach dem Bericht der Herren Shunk, Smith und Roscoe)
	Tonnen	Tonnen
Alkali	35,000	93,600
Crystallisirte Soda . . .	82,000	8,840
Bicarbonat von Natrium . .	12,000	11,700
Bleichpulver	11,400	8,060

Mr. E. K. Muspratt, der Ehrensecretair des Lancashire-Zweiges der 'Alkali Manufacturers Association,' erklärt, dass, nach den Berichten der Fabricanten in jenem District, die gegenwärtige Masse des jährlich zersetzten Salzes ungefähr 170,000 Tonnen beträgt, oder mehr als fünfzig Procent von dem gesammten Geschäfte des Königreichs.

Die Quantitäten der nachstehenden, im Jahre 1866 in dem westlichen oder Lancashire-District gewonnenen, Fabricate betragen:—

	Tonnen
Aschensalz	81,800
Aetzsoda	11,500
Crystallisirte Soda . . .	23,000
Doppelt-kohlensaure Soda . .	6,400
Schwefelsäure Soda, verkauft } als schwefelsaures Salz	24,600
Bleichpulver	17,500

Der veranschlagte Werth der obigen Fabricate war nach den laufenden Preisen 1,726,200£.

Ausser den in diesem District fabricirten Alkalien wurden auch grosse Quantitäten von Schwefelsäure (18,000 Tonnen) und Hydrochlorsäure (14,000 Tonnen) im Jahre 1866 producirt. Die Quantitäten vieler andern Producte sind nicht ermittelt worden, aber der Gesamtwert der chemischen Production des Districts kann auf ungefähr zwei Millionen Pfund Sterling geschätzt werden.

Der Ertrag der Tyne-Branche des Alkaligeschäfts wird gegenwärtig (Februar 1867) von Herrn Cail angegeben wie folgt:—

	Quantitäten	Werth £
	Tonnen	£
Crystallisirte Soda . . .	86,000	473,000
Sodaasche	74,000	814,000
Doppeltkohlensaure Soda . .	11,000	198,000
Schwefelsäure Soda . . .	2,400	10,200
Bleichpulver	27,000	278,000
Epsom-Salz	590	4,720
Aetzsoda, 70 %	3,720	96,720
Glaubersalz	20	135
Vitriolöl, zum Verkauf . .	9,000	36,000
Schwefelsaures Kupfer . .	200	5,200
Salzsäure	700	2,100
Unterschwefelsäure Soda . .	400	7,200
Salzsaure Braunstein . . .	300	4,550
Summa	216,330	1,929,825

Die zwei grössten Verbesserungen in der Alkali-Industrie waren während der letzten Jahre die vermehrte Production von Aetzsoda und die von Bleichpulver, welche in grossem Umfange von Papierfabricanten, für die Zubereitung von Esparto-Gras, als eines Substituts für Lumpen, gebraucht werden.

Der Abschaffung der Accisesteuer auf Salz, Glas, Seife und Papier verdankt das Alkali-geschäft von England seine grosse Entwicklung und Vervollkommenng.

Ueber die Fabrication anderer Arten chemischer Producte sind keine Berichte vorhanden; aber sie werden in verschiedenen Theilen des Landes in grossem Umfange hergestellt.

Neben der einheimischen Production von Rohmaterialien, welche zu der Fabrication der in diese Klasse gehörenden Gegenstände benutzt werden, findet eine beträchtliche Einfuhr vom Auslande statt, wie aus der nachstehenden Tabelle erhellen wird, welche die Einfuhr in das Vereinigte Königreich während des Jahres 1865 angiebt:—

Gegenstände	Quantitäten
Alkali:	
Barilla	Centner 15,762
Perl- und Pottasche	„ 143,779
Flüssiges Ammoniak	Pfund 11,334
Andere Arten	Centner 19,352
Alaun	„ 10,890
Annatto, Brasilisch und }	„ 3,647
Cayenne	„ 20,004
Weinstein	„ 20,004
Balsam:	
Capivi	Pfund 230,508
Peru	„ 17,626
Nicht aufgezählt	„ 46,240
Baumrinde:	
Peruvianische	Centner 15,510
Gelbe Amerikanische	„ 24,954
Beeren, gelbe	„ 5,184
Boraxsäure	„ 20,627
Borax	„ 6,209
Schwefel	„ 981,106
Kampfer:	
Nicht raffiniert	„ 10,430
Caoutchouc	„ 71,392
Cochenille	„ 24,260
Weinsteinrahm	„ 49,165
Schwanzpfeffer	Pfund 53,443
Dividivi	Tonnen 3,711
Gambier	„ 13,588
Harz:	
Copal	Centner 8,607
Benzoin	„ 1,883
Gummi-Arabicum	„ 46,032
Färbelack (lac-dye)	„ 11,673
Shellac	„ 46,032
Mastix	„ 1,860
Gutta-Percha	„ 29,077
Indigo	„ 66,506
Salap	Pfund 166,761
Grapp	Centner 88,033
Wurzel	„ 147,482
Munjeet	„ 1,837
Garancine	„ 33,571

Gegenstände	Quantitäten
Braunstein	Tonnen 46,478
Naphtha	Gallonen 238,360
Natron	Centner 1,020,383
Oel:	
Thran	Tonnen 10,005
Spermaceti	„ 2,438
Cocosnuss	Centner 190,228
Palm	„ 798,724
Terpentin	„ 112,129
Felsöl oder Petroleum:	
Nicht raffiniert	Fässer 5,662
Raffinirt	Gallonen 2,112,831
Orchal	Centner 34,298
Paraffin	„ 8,556
Pottasche:	
von blausaurem Salz	Pfund 936,298
von schwefelsaurem Kali	„ 1,421,102
von doppelt-chromsaurem Salz	„ 183,352
von salzsaurem Salz	Centner 49,567
Strahlenkies von Eisen oder Kupfer (pyrites) }	Tonnen 193,626
Chinin, schwefelsaures	Unzen 364,089
Salpeter	Centner 311,390
Sarsaparilla	Pfund 472,968
Senna	„ 749,389
Schmalte	Centner 1,300
Stearin	„ 9,298
Talg	„ 1,361,248
Weinsteinsäure	Pfund 299,810
Terpentin	Centner 44,428
Ultramarin	„ 27,512
Mineralische Wasser	Gallonen 83,580
Bienenwachs	Centner 10,678
Vegetabilisches Wachs	„ 3,079

Est ist jedoch in Anschlag zu bringen, dass in einigen Fällen ein grosser Theil dieser Gegenstände zurück exportirt wird.

Die Durchschnittslöhne, welche den Arbeitern in mehreren der Hauptbranchen der chemischen Fabricate des Landes gezahlt werden, betragen, nach den Berichten der Handelskammern von Newcastle und Bristol an das Handelsministerium, im Jahre 1866:—

	In Newcastle per Tag von 10 Stunden	In Bristol per Tag von 10½ Stunden
	s. d.	s. d.
Verfertiger von Schwefelsäure	4 6	3 6
„ „ schwefelsaurer Soda	4 8	4 8
„ „ roher Soda	4 6	4 0*
„ „ kohlsaurer Soda	4 6	4 8
„ „ crystallisirter Soda	3 8	3 0
„ „ doppelt-kohlensaurer Soda	3 8	—
„ „ Bleichpulver	5 2	4 0*
„ „ Aetzsoda	—	4 0
„ „ Chlorcalcium	—	3 0
„ „ Salmiac	—	4 0

* Acht Stunden per Tag.

Die in dem Seifensiedergeschäft gezahlten wöchentlichen Durchschnittslöhne betragen

während des Jahres 1866 an den drei nachstehenden Orten:—

	In Bristol	In Edinburgh	In Glasgow
Seifensieder	40s.	25s.	36s.
Gehülfen	16s. 6d.	15s. bis 19s.	18s.
Küfer	18s. bis 20s.	15s.	12s. bis 18s.

In dem Paraffinlichtergeschäft beträgt der Durchschnittslohn der Hauptarbeiter ungefähr 30s. bis 42s. per Woche, zehn und eine halbe Arbeitsstunden per Tag.

Die Ausfuhr der hauptsächlichsten Arten von Englischen chemischen Producten, Seife, Lichtern etc. betrug im Jahre 1865:—

		Quantitäten	Werth
Alkali:			
Aetzsoda, Soda- asche und raffi- nirtes Alkali	Centner	1,799,637	£ 842,170
Crystallisirte Soda	„	641,442	199,376
Doppelt-kohlen- saure Soda	„	131,715	82,400
Alaun	„	75,166	26,885
Anilin, Färbestoffe	Pfund	41,165	1,914
Schuhschwärze	„	—	20,674
Bleiche-Materialien	Centner	220,140	117,148
Borax, im Ver- einigten Königreich raffinirt	„	16,897	46,440
Schwefel	„	57,795	31,783
Lichter:

Andere Arten	„	403,833	12,973
Caoutchouc-Fabricate	£	—	475,700
Kupferose	Centner	79,420	47,721
Apothekerwaaren und chemische Producte:			
Arzneien	£	—	477,026
Unaufgezählte, gebraucht zum Färben und andern der Indu- strie und Kunst dienenden Pro- cessen	„	—	442,239
Epsom- und Glau- bersalze und Salz- kuchen	Centner	153,648	33,986
Blei, rothes	„	68,452	78,890
„ weisses	„	66,763	91,267
Holz- und Wachs- feuerzeug	£	—	104,755
Naphtha, Paraf- finöl, Petroleum etc.	Gallonen	1,907,032	236,624
Malerfarben und sonst nicht auf- gezählte Materia- lien	£	—	473,051
Parfümerien	„	—	94,351
Steinsalz und weisses Salz	Tonnen	579,050	274,631
Salpeter	Centner	59,938	93,547
Seife	„	140,241	184,279
Stärke	„	16,445	26,261
Terpentinöl oder Spiritus und Sub- stitute für Ter- pentin	Gallonen	88,713	22,105

Die Ausfuhr von Alkali und Soda hat während der letzten zehn Jahre beträchtlich zugenommen. Im Jahre 1866 wurden nur 1,405,000 Centner exportirt, im Jahre 1865 2,572,000 Centner.

Der Fortschritt in der Production chemischer Fabricate hat während der letzten Jahre Schritt gehalten mit der vermehrten Nachfrage, und, wie eben mit Bezug auf die wichtige Klasse der Alkalien bemerkt wurde, ist auch der auswärtige Handel, abgesehen von der Befriedigung der vermehrten Bedürfnisse der einheimischen Fabricanten, bedeutend erweitert worden. Grosse Verbesserungen haben in den zur Fabrication von Schwefelsäure und anderer Chemicalien angewandten Processen, und vorzugsweise in der Verdichtung von chlorwasserstoffsäurem Gas, in den Alkali-Fabriken stattgefunden. Auch in dem Phosphorgeschäft ist ein bedeutender Aufschwung bemerkbar geworden; statt Phosphor zu importiren, wie noch vor wenigen Jahren der Fall war, concurriren die Englischen Fabricanten jetzt erfolgreich mit den fremden Fabricanten in den meisten festländischen Märkten. Die Verbesserungen in der Seifen- und Lichter-Fabrication sind, in Folge vieler neuen Entdeckungen, sehr bedeutend gewesen, und die Entdeckung von Anilin und ähnlichen Färbestoffen hat einen sehr ausgedehnten Handel mit diesen Gegenständen veranlasst. Die Anwendung von Gummi zu unzähligen Zwecken des Geschäfts und des Haushalts hat auch einer ausnehmlichen Klasse von Arbeitern zu Beschäftigung verholfen. Die Betrachtung der in dieser Klasse ausgestellten Gegenstände wird jedoch eine bessere Vorstellung geben von der Bedeutung der verschiedenen mit ihr verknüpften Industriezweige, als dies in dem beschränkten Raume, welcher diesen einleitenden Bemerkungen gestattet ist, möglich sein würde.

Klasse XLV.

PROBEN DER CHEMISCHEN PROCESSE FÜR BLEICHEN, FÄRZEN, DRUCKEN UND APPRETIREN.

Eine Angabe aller wichtigen Verbesserungen in den zu dieser Klasse gehörenden Processen wird man in der Einleitung zu den Klassen über Gewebe, Teppiche etc. finden.

Klasse XLVI.

LEDER UND HÄUTE.

Die Lederfabrication ist unter den nationalen Industriezweigen Grossbritanniens als in vierter Reihe stehend geschätzt worden. Sie wird in bedeutendem Umfang in Bermondsey, bei London und in geringerem Umfang in mehreren Theilen des Landes betrieben. Der jährliche Gesamtwert der Lederfabrication wurde im Jahre 1851 auf vierzehn Millionen Pfund Sterling veranschlagt. Dies ist jedoch wahrscheinlich weit unter dem gegenwärtigen Werth, da das Geschäft seit jenem Zeitraum

stättig zugenommen hat. Berichte über die Quantitäten der in das Vereinigte Königreich importirten Häute sind nicht vorhanden; aber ausser der einheimischen Production, welche sehr bedeutend sein muss, findet alljährlich eine grosse Einfuhr von rohen Häuten aus Indien, Südamerika und andern Welttheilen statt. Es besteht auch eine grosse Einfuhr von gegerbtem, weissgarem und zubereitetem Leder.

Die folgende Table zeigt die Quantitäten und den Werth der Häute und des Leders, welche während der fünf Jahre 1861–65 importirt wurden:—

Jahre	Häute, rohe	Häute, gegerbte	Gesamtwert
	Centner	Pfund	£
1861	830,000	5,219,000	2,903,000
1862	943,000	5,212,000	3,204,000
1863	1,023,300	5,202,000	3,230,000
1864	954,000	6,446,000	3,152,000
1865	968,000	7,325,000	3,073,000

Ein grosser Theil der fremden rohen Häute wird zurück exportirt. Die Ausfuhr von Britischem gegerbten Leder (unbearbeitet) betrug während der fünf Jahre 1861–65:—

	Centner	£
1861 . .	40,000	361,000
1862 . .	43,000	406,000
1863 . .	47,000	441,000
1864 . .	38,000	382,000
1865 . .	43,000	409,000

Die Ausfuhr von Lederwaaren wird man in andern Klassen, in welchen sie zusammengeordnet sind, bemerkt finden.

Die Arbeitslöhne der Lohgerber sind ungefähr 25s. per Woche und die der Ledergerber und Zubereiter 34s.

Verschiedene neue Rohmaterialien zur Zubereitung von Häuten wurden in der Londoner Ausstellung von 1862 ausgestellt, von welchen viele durch die Jury für gleich gut, wenn nicht für besser erklärt wurden als die gemeinhin angewandte gewöhnliche Eichenrinde; aber die alte Methode des Gerbens ist noch in weit verbreiteter Geltung.

Die Fabrication von Leder für Handschuhe, Pergament, Goldschlägerhaut und Saiten für musikalische Instrumente wird ebenfalls in dem Vereinigten Königreich betrieben; aber es fehlt an Berichten über den Umfang der verschiedenen Zweige dieser Industrie.

GRUPPE VI.

(KLASSEN XXVII. bis LXVI.)

APPARATE NEBST DEN IN DEN ALLGEMEINEN GEWERBEN ANGEWANDTEN VERFAHRUNGSWEISEN.

Klasse XLVII.

APPARATE UND VERFAHRUNGSWEISEN DER BERGBAUKUNST UND METALLURGIE.

Es würde einen grösseren Raum erfordern als den, welcher hier zur Benutzung offen steht, um die beinahe zahllosen Arten von Apparaten und Maschinerie aufzuzählen, welche in den verschiedenen, zu dieser Klasse gehörigen, Industriezweigen benutzt werden. Die Entwicklung des Bergbaues und der metallurgischen Hilfsquellen des Landes ist hauptsächlich der Anwendung von Maschinerie zuzuschreiben; in der That, manche Minen könnten nie bearbeitet und manche metallurgische Processe nie ausgeführt worden sein, ohne die Hülfe der Dampfkraft. Es fehlt an Berichten über die Zahl der Dampfmaschinen und die Grösse der Dampfkraft, welche in den Metallfabriken des Vereinigten Königreichs benutzt werden. Maschinerie wird jedoch in grossem Umfange gebraucht, um die Mineralien in den Schächten zu heben, die Minen auszutrocknen und, in einigen Fällen, um sie zu ventiliren, obgleich die meisten Englischen Minen durch Oefen ventilirt werden. Bedeutende Verbesserungen sind während der letzten Jahre in der Windemaschinerie, in der Vorkehrung der Oefen zum Zwecke der Ventilation und auch in der Herstellung mechanischer Ventilatoren, gemacht worden. Bohren durch Dampfkraft ist eine der wichtigsten neueren Erfindungen. Maschinen zum Kohlenbrechen und ein vollständiges Modell des Apparats und der Maschinerie welche bei der 'Bessemers'-Methode der Stahlfabrication angewandt werden, sind in dieser Klasse ausgestellt.

Was die sogenannten 'safety-cages' oder Fallschirme angeht, so hat keine der gegenwärtig in Vorschlag gebrachten Methoden allgemeine Befriedigung gegeben, obschon verschiedene Arten angewandt werden.

Die in den Englischen Kohlenbergwerken gebrauchten Sicherheitslampen sind besonders

die altmodische 'Davy-' und die 'Stephenson- oder 'Geordie'-Lampen, welche beide durch Gaze geschützt sind, obgleich Mueseler's Lampen in einige Englische Kohlenbergwerke mit Erfolg eingeführt worden sind.

Klasse XLVIII.

LANDWIRTSCHAFTLICHE APPARATE UND VERFAHRUNGSWEISEN, WELCHE IN DER FELD- UND WALDCULTUR ZUR ANWEN- DUNG KOMMEN.

Die Fabrication von Maschinen und Geräthen zu landwirthschaftlichen Zwecken hat in dem Vereinigten Königreich einen hohen Grad der Vervollkommenung erreicht; und abgesehen von einer ansehnlichen Production für einheimischen Gebrauch, werden landwirthschaftliche Maschinen und Geräthe alljährlich in bedeutender Masse exportirt. Die Anwendung von Dampfkraft für viele landwirthschaftliche Arbeiten ist jetzt sehr allgemein. Die Landwirthschaft hat während der letzten Jahre eine lebhafte Beachtung gefunden, und mittelst verbesserten Drainirens und der Anwendung künstlichen Düngers und verbesserter Apparate ist die Fruchtbarkeit des Bodens ausserordentlich vermehrt worden. Die in dem Vereinigten Königreich zu landwirthschaftlichen Zwecken benutzten Karren und Wagen sind der Regel nach denjenigen, welche im Auslande zu ähnlichen Zwecken gebraucht werden, weit überlegen.

In ihren Bemerkungen über die jüngsten Verbesserungen der zu dieser Klasse gehörenden Gegenstände machte die Jury über landwirthschaftliche Geräthe in der Londoner Ausstellung von 1862 besonders aufmerksam auf die vermehrte Anwendung beweglicher Dampfmaschinen zum Korndreschen, des Dampfpfluges und Pflanzers, der Schneide- und Mäh-

maschinen und auf die Anwendung von Maschinerie für das Zerstampfen von Viehfutter.

Die Fabrication landwirthschaftlicher Geräthe und Maschinen wird in grossem Umfang in Lincoln, Peterborough, Grantham, Bedford, Ipswich, Leiston, Stowmarket und vielen andern Theilen des Landes betrieben.

Statistische Angaben über die Production der in diese Branche der einheimischen Industrie gehörigen Gegenstände sind nicht vorhanden, aber von ihrer Bedeutung mag die Zahl der Aussteller in dieser Klasse eine Vorstellung geben.

Der Werth der landwirthschaftlichen Geräte, welche im Jahre 1865 aus dem Vereinigten Königreich ausgeführt wurden, betrug 210,000£, der landwirthschaftlichen Maschinerie (mit Ausschluss von Dampf) 282,000£, und der ganz aus Eisen bestehenden Geräte 13,000£. Ein besonderer Bericht über den Export von Locomotiven für landwirthschaftliche Zwecke ist nicht vorhanden, aber mehrere Hundert werden jährlich nach fremden Ländern versandt.

Die während des Jahres 1865 zu Zwecken des Düngens importirten Hauptgegenstände waren:—

	Quantitäten	Werth
	Tonnen	£
Knochen . . .	65,642	362,000
Guano . . .	237,393	2,676,000
Düngmittel: Unaufgezählt . .	8,025	49,000

Klasse XLIX.

APPARATE ZUR JAGD UND ZUM FISCHFANG, UND GERÄTHE ZUM EINSAMMELN VON FRÜCHTEN, WELCHE OHNE BODENCULTUR GEWONNEN WERDEN.

Die Fabrication von Jagdflinten wird hauptsächlich in Birmingham und London betrieben. Angaben über die Industrie wird man unter Klasse 37 finden.

Geräthe zum Fischfang werden in ziemlicher Menge in England fabricirt. Angelhaken, Aalspeere, Harpunen und Köder und andere Geräte werden in grossem Umfang in Redditch gemacht, und eine ansehnliche Branche des Geschäfts in Angelruthen, künstlichen Fliegen, Leinen, Angelkorken, Netzen etc. wird in London betrieben.

Ungefähr 600 Personen sind in Redditch mit der Fabrication von Angelhaken beschäftigt, und nach dem Census von 1861 waren in England und Wales 700, und in Irland 60 Personen mit der Fabrication von Angelruthen und Takel beschäftigt. Künstliche Fliegen und Köder werden in Redditch, besonders von Mädchen und Frauen, gemacht. Die Arbeitslöhne in Redditch werden auf ungefähr 8s. bis 15s. per Woche für Frauen und

12s. bis 40s. für Männer veranschlagt. In London sind die Löhne höher, da die besten Arbeiter in dem Geschäft, wenn sie von acht bis zehn Stunden täglich arbeiten, 40s. bis 80s. per Woche verdienen.

Der Werth des im Jahre 1865 aus dem Vereinigten Königreich exportirten Fischgeräths betrug 81,000£.

Klasse L.

APPARATE UND VERFAHRUNGSWEISEN, WELCHE BEI LANDWIRTSCHAFTLICHEN ARBEITEN UND BEI ARBEITEN FÜR DIE ZUBEREITUNG VON NAHRUNGSMITTELN ANGEWANDT WERDEN.

Maschinerie wird in dem Vereinigten Königreich in grossem Umfang für die Fabrication von Drainir-Röhren, für Zermahlung von Knochen, für das Mahlen von Korn, für Brotbacken und viele andere in diese Klasse gehörende Processe angewandt. Es ist unmöglich, an dieser Stelle auf die zahlreichen Verbesserungen in den verschiedenen Theilen der Maschinerie hinzuweisen, welche in den obigen Industriezweigen benutzt wird; aber die zunehmende Concurrenz der Fabricanten in den einheimischen und auswärtigen Märkten reicht an sich hin, die Producenten zu veranlassen, von jeder Verbesserung Gebrauch zu machen, welche zum Zwecke der Vermehrung der Produktionskraft entdeckt wird, da sie so in den Stand gesetzt werden, entweder ihre Nebenbuhler zu verdrängen, oder grössere Profite zu machen als diese.

Berichte über die Zahl oder die Dampfkraft der Maschinen, welche in den zu dieser Klasse gehörenden Geschäften arbeiten, sind nicht vorhanden.

Klasse LI.

APPARATE, WELCHE IN DER CHEMIE, PHARMACOPIE UND IN LONGERBEREITEN ANGEWANDT WERDEN.

Die Mannigfaltigkeit der Verfahrensweisen, welche in den mit dieser Klasse verknüpften Geschäftszweigen angewandt werden, macht es, bei der Kürze des Raumes, welcher diesen Bemerkungen zugemessen ist, schwer, auch nur auf die wichtigeren der jetzt gebrauchten Apparate hinzuweisen. Der rasche Fortschritt der Wissenschaft während der letzten Jahre hat jedoch in hohem Masse dazu beigetragen, sowohl manche alte Processe zu vervollkommen als manche neue, mit den chemischen Productionen von England verknüpfte, einzuführen. Einige der neuen Verbesserungen sind in dieser Klasse ausgestellt.

Klasse LII.

HAUPTBEWEGUNGSKRÄFTE, DAMPFKESSEL
UND MASCHINEN, WELCHE BESONDERS
DEN ERFORDERNISSEN DER AUSSTELLUNG
ANGEMESSEN SIND.

Da die in dieser Klasse ausgestellten Gegenstände für einen besondern Zweck ausgewählt worden sind, so bleibt es der Entscheidung der Behörden überlassen, zu erklären, inwiefern die von Englischen Ausstellern ausgestellten Gegenstände zweckentsprechend befunden wurden. Bemerkungen über das Britische Maschinengeschäft im Allgemeinen wird man in Klasse 53 finden.

Klasse LIII.

MASCHINEN UND APPARATE IM ALLGE-
MEINEN.

Der commercielle Wohlstand des Vereinigten Königreichs ist in sehr hohem Grade dem Besitz eines reichen Vorraths an denjenigen Rohmaterialien zuzuschreiben, welche für die Herstellung von Maschinerie erforderlich sind, und an Kohlen, welche die Maschinen in Thätigkeit setzen, wenn sie vollendet sind, sowie dem hohen Grade von Vollkommenheit, welchen die Fabrication, in ihrer Anwendung auf die beinahe zahllosen, mit der National-industrie von England verknüpften Processe, erreicht hat. Gäbe es keinen andern Beweis von der Bedeutung dieses Geschäftszweigs, so würde die blosse Thatsache der jährlich zunehmenden Nachfrage nach Britischer Maschinerie in fremden Ländern genügend sein, die hohe Stellung darzuthun, welche sie in der Industrie Englands einnimmt.

Maschinen und Maschinerie werden in grossem Umfang in Manchester, Leeds, Birmingham, Sheffield, Newcastle, Glasgow und vielen andern Englischen Städten verfertigt. Die für den Seedienst bestimmten Maschinen werden hauptsächlich in den Werken an den Ufern der Themse und der Clyde gemacht, obgleich sie in geringerem Masse auch in Newcastle und in andern Theilen des Königreichs producirt werden.

Die Fabrication von hydraulischer Maschinerie, von Flaschenzügen, Nähmaschinen und Nägel machender Maschinerie, nebst der von Messing- und Kupferrohren für Maschinen, wird in beträchtlichem Umfang in Birmingham betrieben; doch die letztgenannten Gegenstände werden auch in Manchester, Liverpool und Newcastle producirt. Landwirthschaftliche Maschinerie bildet ebenfalls eine bedeutende Branche des Maschinengeschäfts, aber da sie in Klasse 74 eingeschlossen ist, ist an dieser Stelle keine weitere Hinweisung nöthig.

Die Zahl der mit der Maschinen-Fabrication beschäftigten Arbeiter war nach dem Census

von 1861 in den verschiedenen Provinzen des Vereinigten Königreichs:—

In England und Wales, ungefähr	72,000
Schottland	10,500
Irland	900
	<hr/>
	83,400

Bei den zahlreichen Unterabtheilungen des Maschinengeschäfts ist es schwer, die wirkliche Zahl der darin arbeitenden Personen zu ermitteln. Die obigen Zahlen werden jedoch für ziemlich genau gehalten.

Vollständige Berichte über die Durchschnittslöhne, welche in dem allgemeinen Maschinengeschäft des Landes gezahlt werden, sind nicht vorhanden; allein in den meisten Branchen findet die geschickte Arbeit einen hohen Lohn, und da es nie an Beschäftigung fehlt, erfreuen die Arbeiter in diesem Geschäft sich eines verhältnissmässigen Wohlstands. Der letzte Bericht über die den Maschinenarbeitern in Manchester gezahlten Durchschnittslöhne ist vom Jahre 1859, und sie standen damals wie folgt: Modellmacher, Schmiede, Kesselmacher und Mühlenbauer, 32s.; Tischler, 28s.; Planirer, 22s.; Bohrer, 20s.; und Hauer, Schrauber und Stosser, 80s., per Woche von 58 Stunden. Die Durchschnittslöhne in Glasgow im Jahre 1866 werden auf 25s. für Kesselmacher und 24s. für Schmiede, per Woche von 60 Stunden, angegeben. Die Durchschnittslöhne für die Fabrication hydraulischer Maschinerie in Birmingham sind, für geschickte Arbeiter, ungefähr 55s., und für Arbeiter zweiten Ranges von 30s. bis 40s. per Woche.

Der Werth sämmtlicher Arten aus dem Vereinigten Königreich exportirter Britischer Maschinerie stieg von 2,243,000l. im Jahre 1855 auf 5,222,000l. im Jahre 1865. Die nachstehende Tabelle zeigt die Hauptgattungen von Maschinerie, welche in dem letztgenannten Jahre exportirt wurden:—

Maschinerie und Mühlenwerk:

Dampfmaschinen	Locomotiven	945,451
oder Theile von	Andere als	
Dampfmaschinen	Locomotiven	1,013,082
Andere als Dampf-	Landwirth-	
maschinen	schaftliche	282,019
	Andere Arten	2,982,081
	Summa	5,222,633

In einer Klasse, welche eine so unendliche Mannigfaltigkeit von Gegenständen einschliesst, und in der täglich Verbesserungen stattfinden, ist es schwer, in wenigen Worten den Umfang der Fortschritte zu beschreiben, welche während der letzten Jahre gemacht worden sind. Die Jury in Klasse 8 der Ausstellung von 1862 erklärte, indem sie die in der vorhergehenden Ausstellung von 1851 ausgestellten Gegenstände als vergleichenden Massstab anlegte, 'dass man mit Bezug auf Dampfmaschinen bemerken könne, dass sie eine vermehrte Anwendung hohen Druckes, grosse

Ausdehnung und Ueberheizung, eine vermehrte Benutzung von Oberflächen-Condensation (welche gewöhnlich durch eine grosse Zahl kleiner horizontaler Röhren bewirkt wird), eine Richtung auf Einfachheit in der Gestalt und den Hauptbewegungstheilen, ein allgemeines Aufgeben von Veranstaltungen, welche mehr merkwürdig als nützlich sind, und eine höhere Vollkommenheit der Ausarbeitung erkennen lassen, Verbesserungen, die sämmtlich eine grössere Ersparniss von Brennstoffen, Kraft und Instandhaltung erzielen.' 'Die allgemeinen Bemerkungen über den Fortschritt der Landmaschinen sind auch auf die Seemaschinen anwendbar. Die Vervollkommnung der Arbeit ist sogar noch auffallender.' Ein bedeutender Fortschritt wurde auch in den schweren Gussarbeiten, dem rohen Schmiedewerk und in vielen besonderen Maschinentheilen und verschiedenartigen Mechanismen bemerkt. Alle wichtigen Verbesserungen, welche seit 1862 stattgefunden haben, wird man ohne Zweifel unter den in dieser Klasse ausgestellten Gegenständen finden.

Klasse LIV.

MASCHINENWERKZEUGE.

Die Fabrication von Maschinenwerkzeugen ist in dem Vereinigten Königreich bereits zu einem hohen Grade von Vervollkommnung gediehen, obgleich in Bezug auf die Einfachheit der Construction der Werkzeuge, wie auf ihre Anpassung zu verschiedenartigen Zwecken, noch Raum für grössere Verbesserungen vorhanden ist.

Maschinenwerkzeuge werden in beträchtlicher Menge in Manchester, Sheffield, Leeds und vielen andern Ortschaften des Königreichs gemacht. Seit der Einführung des Dampfs als einer bewegenden Kraft hat die Anwendung von Maschinenwerkzeugen reissend zugenommen, und es giebt jetzt wenige Arbeitsmethoden, in Verbindung mit den Hauptindustriestämmen des Landes, welche nicht durch Maschinerie und Maschinenwerkzeuge ausgeführt werden.

Die wichtigsten Vortheile, welche der Gebrauch von Maschinenwerkzeugen, im Vergleich mit der durch die Hand verrichteten Arbeit, gewährt, sind: Vermehrte Produktionskraft, Gleichheit der Qualität und Regelmässigkeit in der Menge der Arbeit; während die grössere Produktionskraft, welche die Anwendung solcher Geräthschaften sichert, den Fabricanten in den Stand setzt, geschickten Arbeitern hohe Löhne zu zahlen und so die Lage der Arbeiter zu verbessern.

Es sind keine Berichte vorhanden über die Zahl der in diesem Industriezweig beschäftigten Arbeiter, oder über den jährlichen Werth der Production des Geschäfts. Doch diese Gegenstände werden nicht bloss für einheimischen Gebrauch gemacht, sondern auch in grosser Menge exportirt. Im Jahre 1865 be-

trug der Export der mehr oder weniger zu dieser Klasse gehörigen Maschinerie:—

Dampfmaschinen und Theile von	£
Dampfmaschinen (andere als locomotive)	1,013,000
Maschinerie und Mühlenwerk (andere als Dampfmaschinen)	2,982,000
Werkzeuge und Geräthschaften für industrielle Zwecke, die nicht als Maschinerie classificirt sind	87,000

Die Einrichtung von Regierungs-Schulen für Wissenschaft und Kunst in den verschiedenen Fabrikstädten ist von höchst wohlthätigem Einfluss gewesen auf die Arbeiterklasse, welche mit der Fabrication von Maschinerie und Maschinenwerkzeugen beschäftigt ist; denn der ihnen ertheilte Unterricht macht sie nicht allein zu bessern Arbeitern, sondern auch zu Verbesserern alter und zu Erfindern neuer Maschinerie und erhebt sie so, während er die Fabricationskraft des Landes steigert, zugleich zu einer höhern gesellschaftlichen Stellung.

Klasse LV.

APPARATE UND METHODEN, WELCHE BEIM SPINNEN UND SEILDREHEN ANGEWANDT WERDEN.

Die Fabrication von Seilen, Tauwerk etc. ist weit durch das Land verbreitet, aber die Hauptsitze der Seiler-Industrie sind in Liverpool, Newcastle und andern Häfen an der Tyne, in London und in einigen Schottischen Häfen. Taus für den Gebrauch der Kriegsflotte werden auch in den königlichen Werften gemacht. Die rasche Verbreitung des Gebrauchs von Drahtseilen für das Takelwerk von Schiffen, für Kohlengruben und andere Zwecke hat grosse Verbesserungen in der Seilfabrication veranlasst.

Die beiden unterseeischen Telegraphenkabel, welche gegenwärtig das Vereinigte Königreich mit Amerika verbinden, sind an sich genügend, die hohe Entwicklung zu bezeichnen, welche die Drahtseil-Fabrication in England erlangt hat. Was die zum Spinnen benutzte Maschinerie angeht, so wird man einen Bericht darüber in den verschiedenen Klassen der Webefabricate finden; mehrere Maschinen sind jedoch in dieser Klasse ausgestellt, welche die neusten Verbesserungen zeigen, die in dieser Gattung von Maschinen stattgefunden haben.

Die Zahl der Seil- und Taufabricanten betrug nach dem Census von 1861:—

	Männer	Frauen	Summa
In England und Wales .	11,762	1,724	13,486
Schottland . . .	2,313	267	2,580
Irland . . .	1,132	33	1,165
Summa . . .	15,207	2,024	17,231

Die zu der Fabrication von Seilen gebrauchten Materialien werden hauptsächlich aus Russland, Italien und Ostindien eingeführt. Im Jahre 1865 war die Einfuhr der hierher gehörenden wichtigsten Gegenstände wie folgt:—

	Quantitäten	Werth
Taugarn oder Hanf etc., mit Aus- schluss von Sei- lerrollen . . .	Pfd. 11,082,747	163,932
Taurollen . . .	Centner 97,647	177,609
Präparirter und un- präparirter Hanf }	„ 1,065,705	1,704,187

Die obigen Zahlen geben die Gesamtmasse des eingeführten Hanfs, von welcher indessen nur ein Theil zu der Fabrication von Seilen verwandt wird.

Drahttaue werden hauptsächlich in Gateshead und Birmingham gemacht, während die Fabrication des dazu benutzten Drahts hauptsächlich an dem letzteren Orte stattfindet.

Die Masse und der Werth der Britischen Seilerarbeit im Jahre 1865 betragen:—

	Quantitäten	Werth
Taue und Seile:		£
Von Hanf . . .	Centner 130,715	268,677
Andere Arten . . .	„ 14,009	27,692
Bindfaden . . .	„ 23,449	117,844

Drahtseile werden bei der Ausfuhr nicht von andern Drahtfabricaten unterschieden.

Klasse LVI.

APPARATE UND METHODEN, WELCHE BEIM WEBEN ANGEWANDT WERDEN.

Die Hauptsitze der Fabrication von Maschinerie zum Weben und auch zum Spinnen sind Manchester, Oldham, Bury und viele andere Theile von Lancashire, Leeds, Halifax, Bradford in Yorkshire und Glasgow und Dundee in Schottland. Obgleich diese Klasse von Maschinerie einen hohen Grad von Vortrefflichkeit erricht hat, werden dennoch in den verschiedenen Theilen der Maschinerie fortwährend neue Verbesserungen angebracht, welche sie vollständiger und selbstthätiger machen und ihre Produktionskraft vermehren. Eine Betrachtung der vollständigen Reihe von Zubereitungs-, Spinn- und Webe-Maschinen für Baumwolle, Wolle und Worsted, ausgestellt von der wohlbekannten Firma der Messrs. Platt & Co., in Klasse 55, wird eine bessere Vorstellung von den Vorzügen dieser, gegenwärtig in den Englischen Fabriken gebrauchten Klasse von Maschinen geben, als irgend eine kurze Beschreibung zu gewähren vermag.

Statistische Angaben über die Zahl der in dieser Branche der Englischen Maschinenfabrication beschäftigten Arbeiter sind nicht vorhanden. Eine beträchtliche Masse in-

dustrieller Maschinerie wird jährlich aus England exportirt, wie aus den Bemerkungen zu Klasse 35 erhellt.

Klasse LVII.

APPARATE UND METHODEN ZUM NÄHEN UND ZUR VERFERTIGUNG VON KLEIDUNGSSTÜCKEN.

Die wichtigsten, in diese Klasse gehörenden Apparate sind diejenigen zum Nähen und zur Stiefelfabrication durch Maschinerie. Nähmaschinen wurden zuerst im Jahre 1845 oder 1846 von Amerika in England eingeführt; seit jener Zeit haben zahlreiche Verbesserungen in ihrer Construction stattgefunden, und sie werden jetzt beinahe allgemein sowohl für einfache als ornamentale Arbeit angewandt. Die Jury der Londoner Ausstellung von 1862 erklärte, dass während der zehn Jahre seit 1851 ein beträchtlicher Fortschritt in der Fabrication von Stiefeln und Schuhen durch Maschinerie gemacht worden sei. Ein sehr bedeutendes En-gros-Geschäft mit genagelten Stiefeln und Schuhen, hauptsächlich für Frauen und Kinder, ist während der letztverflossenen Jahre in Leicester in's Leben getreten. Die Schuhpflock- und Pflockschneidemaschinen der Messrs. Greenwood und Batley wurden von der Jury im Jahre 1862 höchlich belobt und erlangten die Preismedaille. Da die Stiefelfabrication durch Maschinerie, im Vergleich mit der durch Handarbeit, eine grosse Ersparniss in den Kosten der Herstellung bewirkt, so ist zu hoffen, dass die gegenwärtige Ausstellung noch weitere Verbesserungen der in diesem wichtigen Industriezweige bereits angewandten Maschinerie zur Kenntniss bringen wird.

Klasse LVIII.

APPARATE UND METHODEN, WELCHE IN DER FABRICATION VON MÖBELN UND WOHNUNGS-GEGENSTÄNDEN ANGEWANDT WERDEN.

Mehrere Apparate, welche in das Gebiet dieser Klasse gehören, wie Holzschneide-, Hobel- und Forme-Maschinen etc., wird man in Klasse 54 als Maschinenwerkzeuge ausgestellt finden. Maschinerie wird jetzt so allgemein in sämtlichen Industriezweigen innerhalb des Vereinigten Königreichs angewandt, dass selbst eine kurze Andeutung der im Gebrauch befindlichen verschiedenen Arten die Grenzen dieser Bemerkungen überschreiten würde. Die zunehmende Tendenz des Geschäfts auf eine Vereinigung der Hauptindustrien des Landes in den Händen grosser Firmen und Compagnien, welche ansehnliche Capitalien verwenden, hat einen vermehrten Gebrauch von Maschinerie

veranlasst, um grosse Unternehmungen zu erleichtern und die Ausgaben für Arbeit zu beschränken. Eine Angabe der hauptsächlichsten Fabricate wird man in Klasse 53 finden.

Klasse LIX.

APPARATE UND METHODEN, WELCHE ZUR PAPIERFABRICATION, ZUM FÄRBen UND ZUM DRUCKEN ANGEWANDT WERDEN.

Von der Wichtigkeit des Papiergeschäfts ist bereits in den Bemerkungen zu Klasse 7 die Rede gewesen. Aber obgleich die Papierfabrication während der letzten Jahre so ungeheuer zugenommen hat, sind doch nur geringe Verbesserungen in der 'beständigen' (continuous) Papiermaschine gemacht worden, welche zu Anfang unseres Jahrhunderts in Gebrauch kam. Proben der jetzt zur Papierfabrication angewandten Maschinerie wird man in dieser Klasse ausgestellt finden. Die wichtigsten Verbesserungen, welche in der Methode der Buchdruckerkunst seit 1851 stattgefunden haben, sind: die Einführung von Maschinerie zum Giessen der Lettern und von Apparaten zum Setzen und Vertheilen der Lettern. Viele Verbesserungen in den Druckmaschinen sind auch während der letzten zehn Jahre gemacht worden, um der gewaltig vermehrten Nachfrage nach Zeitungen, Büchern und Journalen zu begegnen, welche während desselben Zeitraums stattgefunden hat. Die Ausfuhr der verschiedenen, in diese Klasse gehörenden, Maschinen wird nicht abgesondert registrirt, sondern ist in die allgemeinen Berichte eingeschlossen, welche in Klasse 53 mitgetheilt sind. Der Werth von Lettern und Druck-Materialien Britischer Fabrication, welche im Jahre 1865 aus dem Vereinigten Königreich exportirt wurden, betrug 68,930l.

Klasse LX.

MASCHINEN, INSTRUMENTE UND METHODEN, WELCHE IN VERSCHIEDENEN INDUSTRIEZWEIGEN ANGEWANDT WERDEN.

Ogleich während der letzten Jahre keine grosse Veränderungen in der Maschinerie stattgefunden haben, welche zu der Fabrication der meisten in diese Klasse gehörenden Gegenstände angewandt wird, sind doch manche wichtige Verbesserungen gemacht worden, um die bereits vorhandenen Maschinen zu vervollkommen. Die Fabrication von Knöpfen, Stecknadeln und Nähadeln bildet einen ansehnlichen Zweig der einheimischen Industrie. Der Hauptsitz derselben ist in Birmingham und dessen Nachbarschaft. Das Knopfgeschäft beschäftigt ungefähr 6,000 Personen, und die in demselben an männliche Arbeiter gezahlten Durchschnitts-

löhne werden auf 25s., die an Frauen auf 7s. bis 9s. und die an Mädchen und kleine Kinder auf 1s. bis 1s. 6d. per Woche veranschlagt. Statistische Angaben über die Zahl der gegenwärtig in dem Stecknadelgeschäft arbeitenden Personen sind nicht vorhanden; aber nach den Berichten des Census von 1861 betrug die Gesamtzahl der Arbeiter, welche in diesem Industriezweige in England und Wales beschäftigt waren, 322, die der Arbeiterinnen 407. Stecknadeln werden jetzt beinahe ausschliesslich mit Maschinerie gemacht, und die angewandte Maschine producirt, durch die Umdrehung eines einzigen Rades, eine vollständige Nadel. Nähadeln werden hauptsächlich in Redditch gemacht, wo dieser Industriezweig ungefähr 8,000 Arbeiter beschäftigt. Die Durchschnittslöhne für Männer sind 12s. bis 40s., die für Frauen 8s. bis 15s. und die für Kinder 1s. 6d. bis 5s. per Woche. Messrs. Bartlett und Woodward erklären in ihrem Berichte über das Nähadelgeschäft in Redditch, dass in Beziehung auf Reinlichkeit und Nettigkeit die sociale Lage der Arbeiter gemeinhin die des Durchschnittszustandes übertrifft. Eine Nähadel muss durch siebenzig Paar Hände gehen, bevor sie als vollendet und zur Benutzung geeignet angesehen wird. Die Fabrication von Stahlfedern findet hauptsächlich in Birmingham statt und giebt etwa 360 Männern und 2,000 Frauen und Kindern Beschäftigung. Die Zahl der wöchentlich fabricirten Federn beträgt 98,000 Gross. Die Hauptmasse des zu der Fabrication gebrauchten Stahls wird in Sheffield gemacht. Die obigen Zahlen sind einem Berichte Mr. Timmins' entlehnt, der auch erklärt, dass die Lage der Arbeiter in dem Federgeschäft sehr befriedigend sei. Die Löhne von Mädchen schwanken zwischen 5s. und 12s. wöchentlich, während einige von den jüngeren nur 2s. 6d. bis 3s. 6d. verdienen. Einige geschickte Arbeiterinnen machen von 15s. bis 20s. Männer verdienen von 18s. bis 20s., Knaben, je nach ihrer Geschicklichkeit, 4s. 6d. bis 16s. und geschickte erwachsene Arbeiter von 30s. bis 80s. wöchentlich. Arbeitsstunden 52½ bis 57 per Woche. Die Methode der Federfabrication sowohl als die der Steck- und Nähadel-Fabrication wird man in den Beiträgen von Birmingham, Studley und Redditch erläutert finden, welche in dieser Klasse ausgestellt sind.

Klasse LXI.

WAGEN- UND RADMACHER-ARBEIT.

Der Hauptsitz der Wagenfabrication ist in London, obgleich dieselbe auch in Edinburg, Dublin, Liverpool, Derby, Manchester, Nottingham, Glasgow, Southampton, Newcastle und andern Städten des Königreichs betrieben wird.

Die Zahl der Personen, welche während des Jahres 1861 in den verschiedenen Theilen des

Vereinigten Königreichs in diesem Industriezweige arbeiteten, betrug:—

	Wagenmacher	Radmacher
In England und Wales . .	18,870	30,070
Schottland	1,550	1,282
Irland	3,000	591
Summa	23,420	31,943

Allgemeine Berichte über die Löhne, welche den mit dem Wagenbau beschäftigten Arbeitern gezahlt werden, sind nicht vorhanden, aber die Löhne, welche in diesem Geschäftszweige im Jahre 1866 in Edinburg gezahlt wurden, betragen:—

	Per Woche von 57 Stunden	
	Erste Klasse	Zweite Klasse
Arbeiter:	£ s. d.	£ s. d.
Schmiede	1 7 0	1 2 0
Kastenmacher . .	1 10 0	1 2 0
Wagenmacher . .	1 3 0	—
Anstreicher . . .	1 2 0	1 0 0
Ausstaffierer . .	1 5 0	1 0 0
Radmacher	1 2 0	0 18 0
Springfedermacher	1 6 0	—

Der Bericht über Wagen in der Londoner Ausstellung von 1862 erklärt, dass die Lage der mit dem Wagenbau beschäftigten Arbeiter sich während der letzten Jahre sehr verbessert hat; schlechte Gewohnheiten haben sich unter ihnen vermindert, und ihre Bildung hat zugenommen. Da der Erfolg des Wagenbauens in hohem Masse von einer Kenntniss gesunder mechanischer Grundsätze, von Geschick im Entwerfen und von der harmonischen Verbindung der Farben abhängt, ist es wesentlich, dass die Arbeiter in diesem Industriezweig eine gründliche Kunsterziehung empfangen.

Der Werth der im Jahre 1865 in das Vereinigte Königreich importirten Kutschen betrug nur 5,800£. Der Werth der während desselben Jahres exportirten Britischen Kutschen betrug 175,000£. und der Karren und Lastwagen 8,400£. Ein grosser Theil der Kutschen wurde nach dem Englischen Indien versandt.

Unter den Verbesserungen, welche in der Wagenfabrication stattgefunden haben, verdient die Anwendung von Maschinerie in einigen Branchen des Geschäfts hervorgehoben zu werden. Bei der Eigenthümlichkeit des Geschäfts ist es jedoch zweifelhaft, ob Maschinerie je mit Nutzen für die Herstellung von Privatwagen wird angewandt werden, da diese Letzteren nothwendigerweise in jeder Beziehung ebenso von einander abweichen als der Geschmack der Personen, auf deren Bestellung die Arbeit unternommen wird. Sowohl in der Zeichnung, der Farbe und der Leichtigkeit der Privatwagen, als in den zu ihrer Construction gebrauchten Arbeitsgeräthen, hat seit 1851 ein beträchtlicher Fortschritt stattgefunden.

Eine grosse Vermehrung der Nachfrage nach

Güterwagen, Lastwagen und Karren ist durch die Ausdehnung des Eisenbahnsystems in England veranlasst worden, und viele neue Arten von Fuhrwerk sind, zum Zwecke der Gütervertheilung von den verschiedenen Eisenbahnstationen aus, in Gebrauch gekommen. Beträchtliche Verbesserungen sind auch seit 1851 in den Londoner Omnibussen und in den zum Möbeltransport bestimmten Lastwagen gemacht worden. Eisenbahnwagen werden in Klasse 63 besprochen.

Klasse LXII.

PFERDEGESCHIRR UND SATTLERARBEIT.

1. Englische Sattlerarbeit und Pferdegeschirr sind lange für die Vortrefflichkeit ihrer Qualität und Ausarbeitung berühmt gewesen. Die Hauptmittelpunkte der Industrie sind in Walsall, Birmingham, London und Glasgow; doch wird sie auch in vielen andern Städten des Königreichs betrieben. Mehrere kleinere mit dieser Industrie verknüpfte Geschäftszweige, wie die Fabrication von Gebissen, Steigbügeln, Ketten und anderm Geschirr und Verzierungen, haben ebenfalls an denselben Orten ihre Hauptsitze.

2. Das in dem Geschäft benutzte Leder ist vorzugsweise von einheimischer Fabrication.

3. Nach dem Census von 1861 war die folgende Zahl von Personen in diesem Industriezweige beschäftigt:—

In England und Wales . .	18,229
Schottland	1,822
Irland	2,968
	23,019

Und wahrscheinlich 500 bis 600 Personen waren beschäftigt als Sattelbaummacher und als Eisenarbeiter für Sattler.

4. Die Arbeitslöhne in dem Sattler- und Pferdegeschirrgeschäft von Walsall stehen etwas höher als die Durchschnittslöhne. Die Verdienste der Arbeiter schwanken zwischen 20s. und 45s. wöchentlich. Mädchen und Frauen können von 8s. bis 13s. per Woche verdienen. Der Lohn von Lehrlingen beträgt für das erste Jahr 3s.; während der letzten Jahre der Lehrlingschaft erhalten sie von 12s. bis 14s. per Woche. Arbeitsstunden von 7 oder 8 Uhr Morgens bis 7 Uhr Abends.

Die Sattel- und Pferdegeschirr-Fabriken in Walsall sind sehr hübsch und gut gebaut.

Es wird behauptet, dass ungefähr 60 Procent der Arbeit in Walsall von Arbeiterinnen gethan wird, von denen viele in ihren eigenen Häusern arbeiten. Die Anwendung der Nähmaschine, zum Nähen des Pferdegeschirrs, hat eine grosse Arbeitersparniss in diesem Geschäftszweige veranlasst.

5. Eine Einfuhr von Sattlerarbeit und Pferdegeschirr, nach England ist kaum vorhanden.

6. Der Werth Britischer Sattlerarbeit und

Pferdegeschirrs, welche während der fünf Jahre 1861-65 aus dem Vereinigten Königreich exportirt wurden, betrug:—

1861	• • • •	£ 307,700
1862	• • • •	343,600
1863	• • • •	341,600
1864	• • • •	345,900
1865	• • • •	350,500

Der grössere Theil dieser Ausfuhr ging nach den Englischen Colonien und besonders nach Australien.

7. Mr. Franklin erklärt in einem Bericht über die Geschäfte in Walsall im Jahre 1865, es sei der Bemerkung werth, dass seit dem Jahre 1849 wenig Erfindungsgeist an den Tag gelegt und wenige Veränderungen in Form und Ansehen von Pferdegeschirr und Sattlerarbeit gemacht worden seien, mit Ausnahme des 'Nolan'-Sattels, welcher während des Krimkriegs erfunden wurde und jetzt allgemein in der Armee gebraucht wird, aber nur für militärische Zwecke geeignet ist. Ein bedeutender Fortschritt hat jedoch in der Verzierung von Sätteln und Pferdegeschirr stattgefunden, und viele Sattler, welche dieser Branche des Geschäfts ihre besondere Aufmerksamkeit zuwenden, haben einen regelmässigen Unterrichtscursus in den Zeichenschulen durchgemacht.

Klasse LXIII.

EISENBAHNGERÄTHSCHAFTEN.

Es kann kaum geläugnet werden, dass der Wohlstand des Landes grossentheils den vermehrten Verbindungsmitteln zu verdanken ist, welche zwischen allen Theilen des Königreichs bestehen, und die Eisenbahnen darunter den ersten Rang einnehmen. Zeit ist gleichsam, in unseren Tagen, Geld, rasche Beförderungsmittel sind deswegen zur unumgänglichen Nothwendigkeit geworden, und England darf billigerweise die Ehre in Anspruch nehmen, das gegenwärtige Eisenbahnsystem eingeführt zu haben, wodurch gleichsam Zeit und Entfernung überwunden worden sind.

Eisenbahngeräthschaften werden in verschiedenen Theilen des Landes verfertigt; Schienen und Schienenlager hauptsächlich in den Fabriken der Eisendistricte und Stahlschienen in Sheffield. Locomotiven macht man in grosser Anzahl in Newcastle, Manchester, Leeds, Glasgow und andern Städten, sowie auch in den Privatwerkstätten einiger bedeutenden Eisenbahngesellschaften. Birmingham besitzt grosse Fabriken für Personen- und Güterwagen und anderes Eisenbahn-Material.

Ueber die Schaffungsfähigkeit von Eisenbahngeräthschaften im Vereinigten Königreiche giebt es keine allgemeinen amtlichen Berichte, indem viele derselben in den Eisenwarengeschäften des Landes einbegriffen sind. Nach einem im Jahre 1864 über die Hilfsquellen der Districte an der Tyne, Wear und Tees veröffentlichten Werke sollen seit Beginn

des Locomotivbaues aus den Fabriken in Newcastle allein gegen 2,400 Locomotiven hervorgegangen sein; von diesen gingen 900 in's Ausland.

Den Durchschnittspreis zu 2,000£ angenommen, beläuft sich der Werth der exportirten Locomotiven auf 1,800,000£. Hierzu kommen noch diejenigen, welche zur Verwendung in Grossbritannien und Irland angefertigt wurden, zu einem Preis von 1,500£, 2,700,000£ betragend, welches einen Gesamtwert von 4,500,000£ ergibt. Mr. Timmins führt in seinem Bericht über die Verfertigung von Eisenbahnmateriale in Birmingham an, dass der Bau von Eisenbahnwagen etc. auf diesem Platze schon im Jahre 1838 angefangen habe; seitdem ist Birmingham durch seine centrale Lage der Hauptsitz dieser Fabriken geworden. Die hohe Wichtigkeit dieses Geschäftszweiges erhellt aus dem Umstande, dass mehr als 12,000 Englische Meilen Eisenbahnen im Königreiche befahren werden, wozu 15,000 Personen- und 200,000 Güterwagen erforderlich sind. Mr. Timmins schätzt den Werth des Eisenbahn-Betriebsmaterials im Königreiche auf circa 17,000,000£, und davon beträgt die jährliche Abnutzung etwa 1,250,000£. Die Zahl der auf den Eisenbahnen des Vereinigten Königreichs im Jahre 1865 benutzten Locomotiven betrug 7,414.

Ausser dem, was England an Eisenbahnmateriale für den einheimischen Bedarf erzeugt, führt es noch in diesem Zweige bedeutend aus. Im Jahre 1865 wurden die folgenden hauptsächlich zu dieser Klasse gehörenden Artikel aus dem Vereinigten Königreiche ausgeführt:—

	Quantitäten	Werth
	Anzahl	£
Personenwagen	2,261	177,000
Güterwagen, Kohlenwagen	580	22,000
etc.		
Schienen, Spannstangen	330,588	2,627,000
Schienenlager und Schwellen	76,098	393,000
Räder und Achsen	4,872	118,000
Andere Arten von Eisenmaterial	23,000	412,000
Maschinerie: Dampfmaschinen und deren Theile	—	945,000
Locomotiven		

Den allgemeinen Fortschritt des Eisenbahnverkehrs im Vereinigten Königreiche während der letzten elf Jahre zeigt die folgende Zusammenstellung:—

	1855	1865
	Engl. Meilen	Engl. Meilen
Länge der dem Verkehr übergebenen Linien	8,280	13,289
Eingezahltes Gesamt-Capital, Actien, Anleihen etc.	297,584,000	455,478,000
Anzahl der beförderten Passagiere	118,595,000	251,960,000
Anzahl der Reisenden per Englische Meile	14,323	18,960
Total-Verkehrs-Einnahmen	21,507,000	35,731,000
„ Betriebs-Ausgaben	10,299,000	17,149,000
„ Netto-Einnahmen	11,208,000	18,582,000

Unter den neueren Verbesserungen verdienend erwähnt zu werden: die Anwendung von Stahl für Schienen, Felgen (Radschienen) etc. und die Erfindung einer Central-Schienen-Vorrichtung zum Gebrauch auf abschüssigen Flächen.

Im Locomotivenbau wurden auch bedeutende Verbesserungen gemacht. Mr. Humber, in seinem jüngsten Werke über modernes Maschinenwesen, führt folgende an: Einrichtung der Locomotiven zum Feuern mit Steinkohlen statt des Cokes und zum Verbrennen ihres eigenen Rauchs; Erhitzen des Wassers durch überflüssigen Dampf (Dampfauslassung); Ausgleichung der wechselseitig sich drehenden Theile der Maschine, wodurch das Abnutzen der Bahn und Maschine bedeutend verringert und sicher fortdauernde grosse Geschwindigkeit möglich gemacht werden; Ueberhitzung des Dampfes auf seinem Wege nach den Cylindern, um dessen normale Hitze zu erhalten und die durch Condensation verursachte Kraftabnahme zu verhindern.

Klasse LXIV.

TELEGRAPHISCHE APPARATE UND VERFAHRUNGSWEISE.

Die Jury für Klasse 13 in der Londoner Ausstellung im Jahre 1862 erklärte, dass seit der Ausstellung von 1851 weder grosse Entdeckungen in der Wissenschaft der Electricität stattgefunden, noch irgend welche allgemeine Grundsätze eine practische Anwendung gehabt hätten. Dahingegen hatte eine grosse Ausdehnung des Telegraphensystems sowohl, als die Einführung der unterseeischen Kabel stattgefunden. Das grösste Werk seit 1862 ist unzweifelhaft die erfolgreiche Vollendung des unterseeischen Telegraphen zwischen der alten und neuen Welt. Der dritte im Jahre 1866 gemachte Versuch, eine telegraphische Verbindung zwischen Irland und Newfoundland, eine Entfernung von 1,670 Englischen Seemeilen, herzustellen, gelang vollkommen, denn nicht allein wurde ein unterseeisches Kabel gelegt, sondern das im vorhergehenden Jahre verunglückte ward den Tiefen des Oceans entwunden und mit den Küsten der neuen Welt verbunden, auf diese Weise eine doppelte Verbindungslinie bildend. Die grösste aufgefundene Wassertiefe war 2,400 Klafter, oder weniger als 2½ Seemeilen. Das erste im Jahre 1858 gelegte Kabel arbeitete ungefähr drei Wochen lang vollkommen fort, als es plötzlich den Dienst versagte. Das im Jahre 1865 zum Theil gelegte zweite brach in Mitten des Oceans entzwei. Das im Jahre 1858 gemachte war von viel leichter Arbeit als die nachfolgenden; die Bruchwiderstandskraft desselben betrug nur 3 Tonnen 5 Centner oder, per Knoten, 485 Mal dessen Wassergewicht, während die des 1865-Kabels 7 Tonnen 15 Centner und die

des im Jahre 1866 gelegten 8 Tonnen 2 Centner betrug, das heisst, elfmal deren eigenes Wassergewicht per Knoten. Die Eigengeschwindigkeit des Kabels von 1866 mit den jetzigen verbesserten Instrumenten ist, der Angabe der 'Atlantic Telegraph Company' zufolge, nicht weniger als acht Worte per Minute.

Nach einem durch das 'Board of Trade' (Handelsministerium) ausgegebenen Berichte bestanden (die Eisenbahn- und Privatlinien ausgeschlossen) im Jahr 1865 16,953 Meilen Telegraphenlinien im Vereinigten Königreiche, mit 80,123 Meilen Drähten und ungefähr 8,000 Instrumenten. Die Zunahme von Privat-Telegraphen in London und andern grossen Städten war während der letzten Jahre sehr bedeutend. Grosse Verbesserungen wurden auch in allen telegraphischen Apparaten gemacht.

Klasse LXV.

CIVIL-INGENIEURKUNST, ÖFFENTLICHE ARBEITEN UND ARCHITECTUR.

Die Fortschritte, welche man im Vereinigten Königreiche in der Civil-Ingenieurkunst, in den öffentlichen Arbeiten und der Baukunst seit der letzten Pariser Ausstellung gemacht, sind so umfassend, dass es keine leichte Aufgabe ist, davon in wenigen Zeilen eine entsprechende Ansicht zu geben. Die rasche Ausdehnung der Eisenbahnverbindungen, die so wesentlich den Handel und Personenverkehr befördern, ist eine der Hauptursachen dieses Fortschritts.

Man könnte hier viele bedeutende Ingenieur-Arbeiten in allen Theilen des Landes anführen. In London allein wurden fünf neue Eisenbahn- und zwei neue Fussgängerbrücken, über die Themse führend, errichtet, und eine dritte in Blackfriars ist gegenwärtig im Bau begriffen. Die neue Brücke in Westminster für Fussgänger und viele andere zum grossen Theil aus Eisen gebaute Brücken zeichnen sich durch Kühnheit des Entwurfs und Neuheit der Construction aus. Ein bemerkenswerther Umstand bei einigen neuen Eisenbahnbrücken ist, dass sie ganz auf Pfeilern ruhen, die durch hohle eiserne in den Fluss gesenkte Caissons gebildet werden, ohne Beihülfe von äusserem Mauerwerk irgend einer Art. Diese Caissons werden nachher mit sogenanntem 'Concrete' oder Mauerwerk ausgefüllt und bilden dann zusammen gigantische die Brücke stützende Säulen. Die Wichtigkeit, Zierde mit Nützlichkeit zu verbinden, ist dabei nicht unberücksichtigt geblieben; an vielen Stellen zeigt das zu den Oberbauten verwendete Eisenwerk ungewöhnlichen Geschmack und bekundet daher einen sehr entschiedenen Fortschritt in der Brückenbaukunst. Drei andere wichtige Werke, nämlich: die unterirdische Eisenbahn, die Eindämmung der Themse und das grosse

Kloakensystem, sollten auch als Fortschrittsbeweise erwähnt werden. Die unterirdische Eisenbahn befindet sich zum grossen Theil unter den Hauptverkehrsstrassen der Stadt und wird, wann zu Ende geführt, den innern Kreis des Eisenbahnnetzes Londons bilden. Der Theil, welcher dem Verkehr zwischen dem Ost- und Westende der Stadt bereits geöffnet ist, hat alle Erwartungen, was öffentliche Nützlichkeit und Gewinn für die Unternehmer betrifft, bei weitem übertroffen. Die Eindämmung der Themse, welche auf der Nordseite des Flusses schon ziemlich vorgerückt ist, wird eine imposante Fahrstrasse von Westminster nach der City bilden, und der Haupt-Abzugs-Canal, wann einst zu Ende geführt, die Reinheit des Themsewassers hoffentlich wieder herstellen. Man arbeitet fortwährend an der Erweiterung von Docks und Häfen, und das Parlament bewilligt jährlich grosse Summen für den Bau von Zufluchtschiffen und Dämmen. Unter den bereits vollendeten oder im Bau begriffenen mögen die Werke in Portland, Dover und Holyhead erwähnt werden. Die Gesamtzahl der Leuchttürme an den Küsten des Vereinigten Königreichs, ohne die Privat-Hafenleuchten, ist 212, ausser 42 schwimmenden Leuchtschiffen.

Was Baukunst betrifft, so wurden bei öffentlichen Bauten aller Art grosse Verbesserungen angebracht, so dass die neuen Gebäude Londons mit den in andern Theilen der Welt errichteten füglich den Vergleich bestehen können. Die neuen Eisenbahnhöfe der Hauptstadt verrathen einen hohen Grad von Ingenieur-talent; während die in Verbindung mit denselben errichteten grossen Hotels den betreffenden Architekten sehr zur Ehre gereichen. Die neuen Regierungsgebäude, Kirchen, Banken, Versicherungs-Comptoire, Clubhäuser, Wohngebäude, Concert-Säle und Modell-Wohnhäuser, die man während der letzten zehn Jahre errichtete, verdienen ebenfalls Erwähnung als Beweise des Fortschritts. Diese Gebäude, welche in Beziehung auf Grösse die früheren bei weitem übertreffen, zeichnen sich auch dadurch aus, dass, was Entwurf und Verzierungsart im Allgemeinen betrifft, die Principien der Kunst dabei mehr zur Geltung gebracht worden sind. Farbiger Marmor und gebrannte Erde wurden mit grossen Erfolg zu Verzierungs-zwecken an vielen Gebäuden angewendet. Die neuen Museums-Gebäude, zu Kensington gegenwärtig im Bau begriffen, welche nach Vollendung eine der Hauptzierden Londons ausmachen werden, zeugen von der nützlichen Anwendung der gebrannten Erde and des farbigen Marmors.

In genauer Verbindung mit den Werken dieser Klasse steht das vor kurzem gebildete 'Metropolitan and Local Board of Works and of Health,' eine Behörde, die es sich zur Aufgabe gemacht, über den allgemeinen und gesundheitlichen Zustand der ihr anvertrauten Districte zu wachen, Schritte zu thun, den Uebelstand des Rauchs zu vermindern, Verbesserungen in den öffentlichen Parks und Gärten anzuordnen

und andere allgemeine Massregeln zum Wohl der Bevölkerung durchzuführen.

Die Fabrication von Schlössern, welche in dieser Klasse ausgestellt sind, ist ein Geschäft von grosser Wichtigkeit und wird hauptsächlich in Wolverhampton und andern Städten des südlichen Staffordshire betrieben.

Die folgenden Auszüge aus einem Bericht des Herrn J. C. Tiddesley an die 'British Association,' vom Jahre 1865, liefern eine sehr vollständige Uebersicht über die Hauptzweige der Schlösser-Fabrication im Vereinigten Königreich:—

Fabricationsplätze und Beschreibung der Schlösser	Zahl der Meister	Etwaige Zahl der Arbeiter	Durchschnittlicher Wochenlohn
Wolverhampton:			s. s.
Beste Schubladen- und Schrankschlösser . . .	20	400	25 bis 40
Band- und Hebel-schlösser, Platten . . .	50	800	25 „ 40
Willenhall (Short Heath etc. eingeschlossen):			
Band-, Einsteck-, Schieb-, Anhäng- u. Schubladenschlösser	275	3,000	18 „ 30
Walsall (Blowich eingeschlossen):			
Eiserne Anhäng- und Schrankschlösser . . .	25	400	18 „ 30
Wednesfield:			
Eiserne Kistchen-schlösser und Schlüsselschlösser . . .	50	200	15 „ 25
Brewood:			
Platten . . .	30	150	18 „ 28
Summa . . .	460	4,950	

‘Der wöchentliche Gesamttertrag von Schlössern in diesem District wird folgendermassen geschätzt: Anhängschlösser, 24,000 Dutzend; Kistchen-, Schubladen- und Kastenschlösser, 3,000 Dutzend; Band-, Einsteck- und Schieb-schlösser, 3,000 Dutzend; Platten, 1,000 Dutzend, und sichere Hebelschlösser und andere Sorten, 500 Dutzend; eine Gesamtproduction von 31,500 Dutzend Schlössern per Woche.

‘Vielleicht sind in keinem Zweige localer Industrie die Vortheile der neuen Erfindungen in der Mechanik weniger benutzt worden, als in der Schlösserfabrication. In den meisten Fällen werden dieselben gerade so angefertigt, wie vor zwanzig Jahren. Dem Umstande, dass dieses Geschäft hauptsächlich in den Händen kleiner Capitalisten liegt, muss der Mangel an Unternehmungsgeist und Fortschritt, welche andere Zweige localer Industrie auszeichnen, grossentheils zugeschrieben werden. Die seit Kurzem stattgefundenere Verbreitung des Schlössergeschäfts in Lancashire, London und andern Districten wird jedoch ohne Zweifel dort eine Reform in der Fabricationsweise hervorbringen. Die Lage der mit diesem Industriezweig beschäftigten Arbeiter hat sich in den letzten Jahren sehr gebessert, aber dennoch muss in dieser Beziehung noch Manches geschehen.’

Was die Anwendung der Kunst auf Schlös-

serfabrication betrifft, so ist auch da noch Raum zu grosser Verbesserung in Zeichnung sowohl als Verzierung, wenn auch andererseits die nützlichen Eigenschaften dieser wichtigen Gegenstände anerkannt werden müssen. Was vorzüglich Schlösser anbetrifft, so sind die von den Herren Chubb & Hobbs verfertigten zu bekannt, um einer weitem Beschreibung zu bedürfen.

An Baumaterialien liefert das Vereinigte Königreich ausser Steinen, Schiefer, Kalk etc. jährlich grosse Quantitäten von Backsteinen und Ziegeln. Bauholz wird hauptsächlich von Nord-Amerika und der Ostsee eingeführt. Die Importation von fremden Baumaterialien im Jahr 1865 war wie folgt:—

Einfuhr.

	Quantitäten	Werth
Marmor, roh . . . Tonnen	9,994	£ 74,085
„ gesägt etc. Centner	40,572	29,043
Holz und Bauholz, nicht gesägt und gespalten, mit Einschluss des Ostindischen Eichenholzes ('teak') . . Lasten	1,685,000	5,570,000
Do. Dielen, Latten etc., gesägt und gespalten . . . „	2,136,000	6,559,000
Do. Lattenholz . . . „	105,000	206,000

Ausfuhr (Britisches Erzeugniss).

	Quantitäten	Werth
Backsteine . . . Tausend	33,221	£ 86,245
Cement . . . Centner	2,257,000	285,898
Steine :		
Schiefer, der Anzahl nach . . . Tausend	7,134	49,664
Schiefer, dem Gewicht nach . . . Tonnen	2,544	11,061
Andere Sorten . . . Werth	—	91,016
Kreide und Kalk . . . Tonnen	14,425	8,683
Ziegel für Dächer und Pflaster . . . Tausend	1,167	8,347
Abzugsröhren etc. . . Anzahl	454,000	27,066

Klasse LXVI.

SCHIFFFAHRT; RETTUNGSBÖTE.

Die Umwälzung im Bau von Kriegsschiffen während der letzten zehn oder funfzehn Jahre ist so bekannt, dass eine Bezugnahme darauf hier unnöthig erscheint; es mag, jedoch, erwähnt werden, dass die neue Methode, Kriegsschiffe zu bauen, ein grosses Geschäft in Panzerschiffen im Vereinigten Königreiche hervorgerufen hat.

Die folgende Tabelle zeigt die Anzahl der Panzerschiffe, welche zur königlichen Flotte gehören und auf der See oder im Bau begriffen sind, nach einem im Jahre 1866 dem Parla- mente erstatteten Berichte:—

	No.	Tonnen- gehalt	Kanonen
Auf der See			
Panzerschiffe:			
Ganz mit Eisen be- kleidet . . . }	13	49,782	219
Theilweise mit Eisen bekleidet . }	17	59,485	258
Schwimmende Batte- rien:			
Ganz mit Eisen bekleidet . . . }	4	7,367	62
Im Bau begriffen			
Panzerschiffe:			
Ganz mit Eisen bekleidet . . . }	2	9,732	12
Theilweise mit Eisen bekleidet . }	2	8,223	22

Ein Schiff nach Captain Coles' Cupolaplan ist in der Zahl der Schiffe 'auf der See' eingeschlossen; zwei nach demselben Principe sind im Bau begriffen, alle drei ganz mit Eisen bekleidet.

Abgesehen, jedoch, von der Berücksichtigung der Kriegsschiffe, zu Vertheidigungs- und Handelsschutzzwecken bestimmt, muss ein Land, welches in seinem einheimischen und fremden Handel jährlich nahe an 50 Millionen Tonnen verladet, ein lebhaftes Interesse am Schiffbaugeschäfte nehmen. Die Hauptplätze für den Schiffbau sind an der Themse, an der Humber, Tyne, Wear, Tees, Severn, Mersey und Clyde, und zu Dundee, Belfast und in andern Häfen des Königreichs.

Der Tonnengehalt der Handelsschiffe, welche zum Vereinigten Königreich und zu den Inseln in den Britischen Meeren gehören, war am 31. December 1865 :—

	Gesamt- Tonnengehalt
Segelschiffe . . .	4,937,000
Dampfschiffe . . .	824,000
Summa . . .	5,761,000

Von der Wichtigkeit des Schiffbaues als Industrie kann man sich einen Begriff machen, wenn man bedenkt, wie viele neue Schiffe jährlich im Lande gebaut werden. Die folgende Zusammenstellung zeigt die Anzahl der im Vereinigten Königreich gebauten und während der letzten drei Jahre registrirten Schiffe :—

Jahre	Segelschiffe		Dampfschiffe	
	Schiffe	Tonnen	Schiffe	Tonnen
1863 . . .	883	255,000	280	110,000
1864 . . .	873	272,000	376	161,000
1865 . . .	922	236,000	382	180,000

Unter den im Jahre 1865 gebauten Schiffen wurden 844 von 153,000 Tonnen aus Holz gebaut, und 460 von 262,000 Tonnen aus Eisen. Das zum Bauen eiserner Schiffe benutzte Holz bringt das Land hervor, für die hölzernen Schiffe bedient man sich gewöhnlich des ausländischen. Grosse Quantitäten von Hanf, Werk

etc. für Seile und Tauwerk werden auch eingeführt, worüber eine Nachweisung unter Klasse 55 zu finden ist.

Man hat keine neueren Tabellen über die Anzahl der im Schiffbau etc. im Vereinigten Königreich beschäftigten Personen. Nach dem Census von 1861 war die ganze Anzahl der in dem Schiff-, Boot-, Barkenbau und der Masten- und Segelfabrication beschäftigten Personen wie folgt:—

Provinzen	Männer	Frauen	Summa
In England und Wales	43,704	75	43,779
Schottland	9,148	6	9,154
Irland	2,220	9	2,299
Summa	55,072	90	55,232

Die folgende Tabelle über die Durchschnitts-Wochenlöhne der Arbeiter im Schiffbau ist den Berichten entnommen, welche die respectiven Handelskammern im Jahre 1866 dem 'Board of Trade' (Handelsministerium) erstatteten:—

Beschreibung der Beschäftigung	Per Woche	
	s.	s.

Indem wir den Fortschritt erwähnen, der während der letzten Jahre im Schiffbau gemacht worden ist, dürfen wir nicht vergessen, dass ausser der Construction einer Panzerflotte die Regierung beinahe alle zur königlichen Marine gehörenden Segelschiffe in Schraubendampfschiffe umgewandelt und so eine mächtige Dampfflotte für das Land geschaffen hat.

In der allgemeinen Construction ist das durch Mr. Scott Russell eingeführte Wellenliniensystem von den Schiffbauern allgemein eingeführt worden; die Anwendung von Eisen macht es möglich, dass Schiffe jetzt viellänger und in schöneren Linien gebaut werden können, daher die Segel-, Dampf- und Tragkraft erhöht und zugleich ein günstigeres commercielles Resultat erzielt wird. Unter den neuesten Erfindungen und Verbesserungen verdienen Erwähnung: die Zwillingsschrauben-Schiffe, das Cigar-Schiff, die Anwendung von Stahl- statt der Eisenplatten zum Bekleiden der Schiffe und die neue Methode hydraulischer Propellation. Das königliche Schiff 'Waterwitch,' nach letzterem Principe gebaut, hat vor kurzem einige erfolgreiche Excursionsversuche gemacht; die Maschinerie besteht aus einer Turbine, der 'Ruthven propeller' genannt, welcher das Wasser durch den Boden des Schiffes einzieht und durch Oeffnungen an beiden Seiten desselben etwas über der Wasserlinie wieder auswirft.

Unter den Auspicien des Französischen Marine-Ministers, M. le Marquis de Chasseloup-Laubat, und unter der Präsidentschaft des Admirals La Roucière le Noury, hat vor kurzem in Paris eine internationale Commission über See-Signale berathen. Mr. W. Larkins, vom 'Board of Trade,' und M. Sallandrouze de Lamornaix, von der Französischen kaiserlichen Marine, waren durch die Commission mit der Revision und Verbesserung des Signalbuches beauftragt worden. Der 'International Commercial Code of Signals,' zum Austausch von Mittheilungen zur See oder mit den Küstenstationen und Semaphoren, ist seitdem an Bord der Kriegs- und Handelsschiffe aller Nationen eingeführt worden.

Dieser Code unterscheidet sich von anderen bisher benutzten Coden dadurch, dass die Code-Flaggen mit Buchstaben B, C, D etc. anstatt mit Zahlen 1, 2, 3 etc. bezeichnet sind.

Der Vortheil der Buchstaben besteht darin, dass 18 bestimmte Zeichen erhalten werden können, vermittelt welcher (2, 3 und 4 zusammen genommen) 78,642 verschiedene Combina-

tionen, Signale zu geben, möglich werden, jedes Signal vollständig bleibt und keins mehr als vier Flaggen zum Aufziehen bedarf.

Durch den ganzen Code ist das Princip aufrecht gehalten, dass die Form des Aufzugs ('hoist') die Bedeutung des Signals enthalten soll, gleichviel ob der Aufzug aus 2, 3 oder 4 Flaggen besteht. Zum Beispiel, ein Signal, durch zwei der Code-Flaggen gegeben, sollte immer besonders beachtet werden, weil alle Zwei-Flaggen-Signale die wichtigsten sind.

Und weiter, in Aufzügen von 4 Flaggen, wenn die Flagge B (den Namen des Schiffs tragend, Englisch 'burgee') am höchsten weht, wird das Signal immer ein *geographisches* sein.

Wenn eine der 13 Quadrat-Code-Flaggen in einem Aufzug von vier Flaggen am höchsten weht, so wird das Signal immer einen *Schiffsnamen* anzeigen.

Eine Code-Liste von Schiffen, als Anhang zum Signalbuche veröffentlicht, giebt den Namen jeden Schiffes, seinen Tonnengehalt und, wenn ein Dampfschiff, die Pferdekraft an. Der Code ist umfassend genug, um für Schiffsnamen *ausschliesslich* die Anwendung von mehr als 40,000 verschiedenen Signalen zuzulassen.

Die Regierungen von Frankreich und Grossbritannien haben (wie dies vor einigen Jahren, hinsichtlich der Dampfschiffalaternen, geschehen war) eine gemeinschaftliche Note an die Regierungen der grösseren Seestaaten gerichtet, in welcher sie die allgemeine Einführung des Commercialen Code, zur Feststellung eines gleichförmigen internationalen Seesignal-Systems, anempfehlen.

Frankreich hat zuerst diesen Code (unter Ausschluss aller andern) an Bord der Französischen Schiffe und bei allen Semaphor-Stationen angenommen, und Spanien, Portugal und Italien haben ihre Absicht schon kundgegeben, das Beispiel Frankreichs zu befolgen.

Noch eine andere Neuerung im Commercialen Code muss erwähnt werden. Wenn es unmöglich ist, die *Farben* der Flaggen zu erkennen, so bestimmt ein anderer Code hinsichtlich der Entfernung-Signale. Dies wird bewerkstelligt durch das Aufziehen von 1 oder 2 schwarzen Kugeln in Verbindung mit zwei der Code-Wimpeln oder Flaggen; und diese Signale können, zugleich mit den an den Küsten Frankreichs schon bestehenden Semaphoren, benutzt werden, indem man den im Signalbuch erklärten Code Entfernung-Signalen einfach anpasst.

Den 'Commercial Code' drucken und verlegen Herr W. Mitchell, 54 Gracechurch-street, London, und die Herren Galignani, in Paris.

Eine sehr wichtige Klasse von Gegenständen, welche in dieser Section der Ausstellung erscheinen, ist die der Rettungsböte und Apparate, um Menschenleben auf der See zu retten.

Für ein Land, welches ausser seinen weit verbreiteten Fischereien an allen Theilen der Küste einen grossen Küsten- und ausländischen Handel besitzt, muss die Beschaffung hinreichender Mittel, hilfsbedürftigen Schiffen

Beistand zu leisten, ein Gegenstand von hoher Wichtigkeit sein. Ein einziger Blick in die jährliche Liste der Schiffbrüche wird genügen, um sich von dem Werke, welches die Rettungsböte zu vollbringen haben, eine Vorstellung zu machen.

Die Gesamtzahl der im Jahre 1865 verlorenen und beschädigten Schiffe war 2,012, und die der Verluste an Menschenleben 698. Von letzteren kamen 275 um in gescheiterten Schiffen, 53 an Bord von Schiffen, die gegen andere anrannten, 335 in gestrandeten oder an die Küste geworfenen und 35 auf andere Weise. Wenn wir bedenken, dass dieser Verlust an Menschenleben zu einer Zeit möglich war, in welcher unser Rettungsboot-System sich im höchsten Zustand der Kraftentwicklung befand, so erscheint es klar, dass noch viel geschehen muss, um unsere Mitmenschen in der Erfüllung ihres mühseligen Berufs gegen einen vorzeitigen Wellentod zu schützen.

Die Unterhaltung der Rettungsböte an den Küsten des Vereinigten Königreichs steht unter der Aufsicht des Königlichen Nationalen Rettungsboot-Instituts, welches durch freiwillige Beiträge erhalten wird. Während der letzten zehn Jahre sind grosse Verbesserungen in der Construction der Rettungsböte gemacht worden, und die Gesellschaft hat viele neue Böte an gefährlichen Stellen der Küste aufgestellt, wo bis jetzt nach keine Mittel vorhanden waren, Schiffen in der Noth Hülfe zu leisten. Die Gesamtzahl der dem Institut gehörenden Böte an den verschiedenen Theilen der Küsten des Vereinigten Königreichs belief sich (November 1866) auf 172, von welchen 125 auf England und Wales, 19 auf Schottland und 28 auf Irland kamen. Zwanzig andere Rettungsböte existirten zur selben Zeit in den verschiedenen Theilen des Königreichs, welche durch Privatmittel angeschafft worden waren. Ausser diesen Rettungsböten unterhält der 'Board of Trade' 249 Raketen-Apparat-Stationen, welche unter der Leitung der Küstenwachmannschaft stehen. Modelle verbesserter Rettungsböte, auch Raketen- und andere Apparate zur Rettung von Menschenleben auf der See, sind unter dieser Klasse ausgestellt.

Die Anzahl der durch Rettungsböte des Instituts im Jahre 1865 Geretteten war 532, durch Küstenböte 182 und durch Raketen-Apparate 180.

Die Kosten für Errichtung einer Rettungsboot-Station betragen 620£, welche sich in folgender Weise vertheilen:—

Rettungsboot und dessen Ausrüstung, einschliesslich der Rettungsgürtel für die Mannschaft und Transportwagen für das Rettungsboot	£ 420
Boothaus (Durchschnittspreis)	200
	£620

Die jährlichen Durchschnittsausgaben für Unterhaltung einer Rettungsboot-Station betragen 50£.

GRUPPE VII.

(KLASSEN LXVII. bis LXXIII.)

FRISCHE ODER AUFBEWAHRTE NAHRUNGSMITTEL IN IHREN
VERSCHIEDENEN AUFBEWAHRUNGSZUSTÄNDEN.

Klasse LXVII.

GETREIDE UND ANDERE ESSBARE MEHL-
HALTIGE, SOWIE DIE AUS DENSELBEN
ERHALTENEN PRODUCTE.

Die in dieser Klasse ausgestellten Gegenstände nehmen grosses Interesse in Anspruch, indem dieselben in genauer Verbindung mit der Fähigkeit des Landes stehen, eines der Hauptnahrungsmittel der Bevölkerung zu produciren; denn obgleich das Erzeugniss der Getreideernten im Vereinigten Königreich den Bedarf der Bevölkerung nicht deckt, so ist dennoch ein grosser Flächenraum des Landes deren Cultur vorbehalten. Bis zum Jahr 1866 waren keine vollständigen Berichte über das im ganzen Königreich angebaute Ackerland ('acreage') erschienen. Die folgende Tabelle zeigt den mit den verschiedenen Getreidearten in jenem Jahre angebauten Flächenraum in den verschiedenen Provinzen des Vereinigten Königreichs an:—

Provinzen	Bebautes Ackerland (Statutenacker)			
	England	Wales	Schottland	
Weizen .	3,161,431	113,862	110,101	
Gerste .	1,877,387	146,323	213,619	
Hafer .	1,503,990	251,893	1,004,040	
Korn .	50,570	2,452	7,055	
Bohnen .	492,586	3,534	28,537	
Erbsen .	314,206	3,010	3,188	
Summa .	7,400,170	521,074	1,366,540	
	Irland	Insel Man	Jersey	Guernsey etc.
Weizen .	300,474	8,075	2,702	990
Gerste .	152,777	7,736	111	532
Hafer .	1,697,648	11,010	288	428
Korn .	7,753	9	13	27
Bohnen .	12,175	320	15	43
Erbsen .	2,606	116	13	21
Summa .	2,173,433	27,266	3,142	2,041

Es giebt keine Zusammenstellungen über die Quantitäten der im Lande erzeugten

verschiedenen Getreidearten; aber für Weizen wird der Ertrag in England, Wales und Schottland auf 27 Buschel and in Irland auf 25 Buschel per Acker geschätzt.

Dies würde einen annähernden Ertrag von etwa 12,320,000 Quarter für das Vereinigte Königreich, ausschliesslich der Insel Man und der Canal-Inseln, abgeben.

Die folgende Tabelle zeigt das Verhältniss der Getreideernten zu dem Gesamt-Flächenraum des Landes unter Anbau und des Weidelandes:—

	Gesamt- Flächenraum unter verschiede- nem Anbau, nacktes, Brach- und Grasland	Procente des Total- Flächenraums unter Getreideanbau
England . . .	Acker 22,262,000	33·3
Wales . . .	2,284,000	22·8
Schottland . . .	4,158,000	32·9
Insel Man . . .	83,000	32·9
Canal-Inseln:		
Jersey . . .	20,900	15·4
Guernsey . . .	12,000	17·0
Irland . . .	*15,549,000	14·0

* Dieser Flächenraum schliesst die in den andern Berichten nicht angegebenen Hügelscheiden ein und lässt daher den Procentertrag geringer erscheinen, als er wirklich sein würde, hätte man ihn nach der in den andern Provinzen des Königreichs angenommenen Basis berechnet.

Die Haupt-Getreidedistricte Englands liegen in den östlichen und südöstlichen Theilen des Landes; die Midland- und westlichen Grafschaften bringen auch Korn hervor, jedoch bildet Wiesenland einen grossen Theil ihres Flächenraums. In Schottland besteht dieselbe Abtheilung; Getreide wird hauptsächlich in den östlichen Grafschaften angebaut, Gras wächst in den südlichen und südwestlichen Theilen. In Irland liegen die Getreidedistricte in den nördlichen und südlichen Theilen der Insel.

Die folgenden Auszüge aus Mr. Caird's Werk über Englische Landwirtschaft bieten eine vollständige Uebersicht über die Veränderungen, welche das Landwirtschaftswesen

im Laufe dieses Jahrhunderts erfahren hat. Beim Vergleichen der von ihm 1850–51 und durch Herrn A. Young im Jahre 1772 aus 26 Grafschaften Englands gesammelten Berichte ist folgender Fortschritt bemerkbar:—

		1770	1850
Pacht von angebautem Land } per Acker	s. d.	s. d.	
	13 4	26 10	
		Bushels	Bushels
Ertrag an Weizen	23 0	26½	
Arbeitslohn im Durchschnitt } per Woche	s. d.	s. d.	
	7 3	9 7	
Hausmiethe	0 8	1 5	
Preis von Brod per Pfund	0 1½	0 1½	
„ Fleisch	0 3¼	0 5	
„ Butter	0 6	1 0	

‘Es geht hieraus hervor, dass in einem Zeitraum von 80 Jahren der Durchschnitts-Pachtzins von Ackerland um 100 Procent gestiegen ist, der Durchschnittsertrag von Weizen per Acker um 14 Procent zugenommen hat, der Arbeitslohn um 34 Procent und die Hausmiethe um 100 Procent, während der Preis des Brotes, das Hauptnahrungsmittel des Englischen Tagelöhners, ungefähr derselbe geblieben ist, wie im Jahre 1770. Der Preis der Butter ist um 100 Procent in die Höhe gegangen, des Fleisches um etwa 70 Procent und der Wolle um mehr als 100 Procent. Seit 1850 haben die Butter-, Fleisch- und Wollpreise eine weitere bedeutende Steigerung erlitten.

‘Die Zunahme um 14 Procent im Durchschnittsertrag von Weizen per Acker zeigt nicht die ganze erhöhte Production an. Die Ausdehnung des angebauten Landes im Jahre 1770 war ohne Zweifel viel geringer als jetzt; und der Ertrag, selbst damals, der durchschnittliche aus viel besserem Boden, da das beste Land natürlich zuerst angebaut wurde. Die Zunahme des Getreideertrags ist daher durch bessere Bodenzucht bewirkt worden, trotz dem entgegenwirkenden Einfluss durch das Bebauen unfruchtbarerern Bodens. Die erhöhte Ausdehnung des jetzt mit Weizen angepflanzten Bodens, verbunden mit dem grösseren Durchschnittsertrage, steht jedoch nicht im Verhältniss zu der Pachterhöhung in derselben Periode; und der Weizenpreis ist jetzt ziemlich derselbe wie damals. Wir müssen daher einen Blick in die Berichte über Viehzucht werfen, um diesen Widerspruch aufzuklären.

‘Während Weizen im Preise nicht gestiegen ist, haben sich die Preise für Fleisch, Butter und Wolle beinahe verdoppelt. Die producirte Quantität hat auch bedeutend zugenommen, da dasselbe Land grössere Kühe, schneller ausgewachsenes Vieh und Schafe von grösserem Gewicht, besserer Qualität und grösserem Wollertrage hervorbringt. Auf Milch-Pachthöfen oder solchen, welche mehr für Vieh- und besonders für Schafzucht geeignet sind, hat der Werth der jährlichen Production mit dem Pachtzins eher gleichen Schritt gehalten. In Betreff der Getreidepächter ist der Fall an-

ders. In früheren Zeiten wurde kräftiger Lehmboden als echtes Weizenland angesehen. Derselbe zahlte die höchste Pacht, den schwersten Zehnten und beschäftigte die grösste Anzahl von Arbeitern. Aber moderne Verbesserungen haben die Lage gänzlich verändert. Die Ausdehnung der Getreideernten sowie die Viehzucht haben die Productionseigenschaften des leichten Bodens dermassen gehoben, dass er jetzt Getreide bei geringeren Kosten als Lehmboden liefert, ausser dem Vortheile, dass der auf demselben unterhaltene Viehstand noch grossen Nutzen abwirft.

Der erste vollständige im Jahre 1866 ausgegebene Bericht zeigt, dass der im Vereinigten Königreiche mit Getreide angebaute Gesamt-Flächenraum 5,055,220 Acres war, von welchen 2,750,000 auf England, 139,265 auf Wales, 663,257 auf Schottland, 1,482,091 auf Irland, 12,208 auf die Insel Man, 5,253 auf Jersey und 2,938 auf Guernsey kamen.

Die Durchschnittspreise von Britischem Weizen, von Gerste und Hafer per ‘Imperial-Quarter,’ während der fünf Jahre 1861–65, waren:—

	Weizen	Gerste	Hafer
	s. d.	s. d.	s. d.
1861	55 4	36 1	23 9
1862	55 5	35 1	22 7
1863	44 9	33 11	21 2
1864	40 2	29 11	20 1
1865	41 10	29 9	21 10

Es ist schon erwähnt worden, dass die einheimische Production von Getreide im Vereinigten Königreich für den Bedarf der Bevölkerung nicht ausreicht und grosse Quantitäten daher eingeführt werden. Der jährliche Durchschnittswerth des in das Vereinigte Königreich importirten Getreides betrug, während der zwölf Jahre 1854 bis 1865, nicht weniger als 24,000,000/.

Die im Jahre 1865 eingeführten verschiedenen Sorten von Getreide und die Bezugsquellen sind in der folgenden Tabelle angegeben:—

Export-Länder	Für den Verbrauch eingeführte Quantitäten Centner
Weizen:	
Russland	8,160,000
Dänemark	647,000
Preussen	5,426,000
Frankreich	2,266,000

Summa . 7,087,000

Die in der obigen Tabelle angeführten Länder, Egypten ausgenommen, welches viele Jahre lang die grössten Quantitäten Weizen, Gerste und Mais lieferte, waren in den letzten funfzehn Jahre die Hauptquellen. Der Bürgerkrieg in den Vereinigten Staaten war die Ursache, dass die Getreideausfuhr von dort im Jahre 1865 bedeutend geringer war. Korn und Getreide ist einer Taxe von 3d., Mehl von 4d., per Centner unterworfen. Viel Reis, Sago, Tapioca, Semolina, Maccaroni und Vermicelli, welche keine Producte unseres Landes sind, werden ebenfalls importirt. Im Jahr 1865 wurden eingeführt:—

Artikel	Quantitäten	Werth
Reis, roh in der Hülse . Qr.	6,478	15,310
„ nicht in der Hülse. Ctr.	1,938,816	1,330,941
Sago	148,582	121,285
Tapioca	22,363	37,025
Semolina	2,453	2,773
Maccaroni und Vermicelli	7,786	18,012
Summa	—	1,525,346

Die Gesamtzahl der mit Landbau, d. h. im Anbau von Feldern und Wiesen, beschäftigten Personen war im Jahre 1861:—

Provinzen	Männer	Frauen	Summa
In England und Wales	1,457,075	376,577	1,833,652
Schottland . . .	215,716	120,773	336,489
Irland . . .	850,121	81,714	931,835
Summa . . .	2,522,912	579,064	3,101,976

Die Lage der Ackerbauarbeiter in allen Theilen des Landes war lange der Gegenstand ernster Erwägung. Als Nahrungszweig bietet der Landbau geringern Lohn als irgend eine andere Beschäftigung. Die Wochenlöhne in den verschiedenen Theilen des Landes schwanken sehr; aber selbst in denjenigen Districten, in welchen die höchsten bezahlt werden, ist die Lage des Arbeiters unbefriedigend.

Nach Berichten, welche im Jahre 1861 dem Parlamente vorgelegt wurden, bezahlte man folgende Löhne an die Ackerbauarbeiter der drei Provinzen:—

Höchste und niedrigste Durchschnittswochenlöhne, ohne Kost und Logis.

Provinzen und Districte	Männer		Frauen		Kinder unter 16	
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
Südöstl. District	10 0 bis	13 6	3 6 bis	6 0	2 6 bis	6 0
Süd - Midland - District	10 0	13 0	3 6	5 0	2 0	8 0
Oestlicher District	10 0	13 0	3 6	5 0	1 6	8 0
Südwestl. District	8 0	10 0	3 0	5 0	1 6	7 0
Westlicher Midland - District	9 0	12 0	3 0	5 0	2 0	6 0
Nördlicher Midland - District	12 0	15 0	4 0	6 0	1 6	8 0
Nordwestl. District	10 0	15 0	3 6	11 0	2 0	6 0
Nördlicher District	12 0	16 6	4 2	8 0	3 0	7 6
Welsh District	10 0	13 0	2 6	6 0	1 6	9 0
Wales	8 0	15 0	3 0	6 0	3 0	9 0
Schottland (ungefähr)	10 0	16 0	4 0	8 0	2 0	7 0
Irland (ungefähr)	5 7	10 2	2 9	5 0	1 7	4 0

Die wöchentlichen Verdienste für Extraarbeit sind zwischen 2s. und 5s. höher als obige Löhne. In der Ackerbauwissenschaft wurden im Vereinigten Königreich und namentlich in England und Schottland in den letzten Jahren grosse Fortschritte gemacht.

Die Einführung verbesserter Methoden, das Land zu bebauen, besonders in England und Schottland, ein abwechselndes Saatsystem, ausgedehntes Drainiren, die Anwendung künstlichen Düngers und die der Maschinen zu landwirthschaftlichen Zwecken, haben zusammengewirkt, den Ackerbau des Landes in eine viel günstigere Lage zu bringen, als dies früher der Fall war. Die vermehrte Viehzucht auf Pachthöfen hatte ebenfalls nutzbringende Resultate, und die vor kurzem gemachten Versuche, Lehm Boden vermittelst Dampfkraft zu cultiviren, soll der beste Erfolg gekrönt haben. Eine Notiz über landwirthschaftliche Maschinen, welche jetzt in grosser Anzahl überall im Lande angewandt werden, ist unter Klasse 48 zu finden. Die jährlichen Ausstellungen der Königlichen Landwirthschaftlichen

Gesellschaft, verschiedene internationale und andere Ausstellungen, welche seit 1851 stattgefunden, haben die Anwendung der besten Maschinen befördert und verbreitet, während die Forschungen bedeutender Chemiker und wissenschaftlicher Männer zu einem besseren Verständniss der Natur des Bodens geführt und dadurch sehr zum Gedeihen der Landwirtschaft im Königreiche beigetragen haben.

Klasse LXVIII.

BROT UND BACKWERK.

Während der letzten Jahre hat die Brotbäckerei mittelst Maschinerie rasch zugenommen. Unter den in der Londoner Ausstellung vom Jahre 1862 ausgestellten Brotmaschinen waren die zum Teigkneten bestimmten sehr gut representirt. Durch diese Maschinen soll an Mehl allein eine Ersparniss von 3 Procent erzielt werden. Ein Reiseofen zum Biscuitbacken wurde durch die Jury für Klasse 7 ebenfalls sehr empfohlen. Letztere sprach die Hoffnung aus, dass im Interesse der Gesundheit und Reinlichkeit sowohl, als auch zum Besten der in dem Geschäft angestellten Arbeiter, die Anwendung von Maschinerie zum Brotbacken allgemein angenommen werden möge. Die jährliche Consumption von Weizen und Weizenmehl zu Nahrungszwecken im Vereinigten Königreich wird auf etwa 20 Millionen Quarters, oder circa $5\frac{1}{2}$ Buschel per Kopf, geschätzt.

Die Anzahl der Bäcker und Zuckerbäcker in jeder Provinz des Königreichs war in 1861:—

	Bäcker	Zuckerbäcker
In England und Wales .	54,140	14,526
Schottland . . .	10,894	1,924
Irland . . .	9,293	1,547
Summa . . .	74,327	17,997

Ueber die Brotpreise bestehen keine officiellen Berichte. Der Durchschnittspreis von Weizen in England und Wales während der fünf Jahre 1861–65, per Quarter, war:—

	s.	d.
1861	55	4
1862	55	5
1863	44	9
1864	40	2
1865	41	10

Klasse LXIX.

FETTE SUBSTANZEN, ALS NAHRUNG GEBRAUCHT; MILCH UND EIER.

Essbare Oele werden im Vereinigten Königreich nicht producirt, und was die andern in diese Klasse eingeschlossenen Artikel betrifft, so ist der einheimische Ertrag derselben nicht ausreichend, den Bedarf der Bevölkerung zu

decken. Grosse Quantitäten von Butter, Käse und Eiern werden jährlich importirt. Die folgende Tabelle zeigt die importirten Quantitäten:—

Quantitäten und Werth der zum Verbrauch importirten Gegenstände.

Jahre	Olivenöl	Butter	Käse	Eier
	Quantitäten			
	Tonnen	Centner	Centner	Handert
1861	15,981	987,000	698,000	1,694,000
1862	20,077	1,024,000	695,000	1,936,000
1863	18,949	957,000	747,000	2,224,000
1864	15,726	1,038,000	826,000	2,794,000
1865	30,716	1,068,000	842,000	3,033,000
	Werth			
	£	£	£	£
	Handert	Handert	Handert	Handert
1861	908,600	4,874,000	1,618,000	550,000
1862	1,152,800	4,860,000	1,530,000	594,000
1863	1,085,800	4,402,000	1,863,000	673,000
1864	902,200	5,569,000	2,151,000	835,000
1865	1,616,900	5,871,000	2,432,000	928,000

Olivenöl wird hauptsächlich von Italien und Spanien, Butter von Holland, Belgien, Frankreich, Hamburg und Dänemark, Käse von Holland und den Vereinigten Staaten und Eier von Frankreich importirt.

Der Werth von exportirter Britischer Butter und von Käse während der fünf Jahre 1861–65 war:—

	Butter	Käse
	£	£
1861	466,000	130,000
1862	374,000	127,000
1863	472,000	157,000
1864	327,000	147,000
1865	333,000	111,000

Klasse LXX.

FLEISCH UND FISCH.

Obleich der Fleischverbrauch im Vereinigten Königreich sehr gross ist, so lässt sich doch die jährliche Consumption nicht mit Gewissheit angeben. Die hohen Fleischpreise in den letzten Jahren haben verschiedene Pläne, preservirtes Fleisch von Süd-Amerika einzuführen, in's Leben gerufen, sind aber bis jetzt ohne erhebliche Resultate geblieben.

Das Meer, welches die Küsten der Britischen Inseln umspült, liefert eine reiche Ausbeute von Fischen. Die Hauptarten sind: Kabeljau, Steinbutte, Seezungen, Mackrelen, Weissfisch, Häringe, Sprotten, Garnellen, Austern und Hummern. Dem Berichte einer vorkurzem ernannten Commission zufolge, um den Zustand der Britischen Fischereien zu untersuchen, soll die Ausbeute an Fischen an den Küsten von Grossbritannien in jährlichem Zunehmen begriffen sein. Die Abnahme im Austernfang während der letzten drei Jahre wird einer Reihenfolge von schlechten Zucht-

saisons zugeschrieben, für welche keine bestimmte Ursache angegeben werden kann.

Der Schottische und Irische Salmenfang ist auch von grosser Wichtigkeit; es bestehen aber keine Berichte über den jährlichen Ertrag desselben; grosse Quantitäten von Salmen gehen in's Ausland.

Die Hauptzweige des Britischen Fischhandels sind die Häring- und Pilscher-Fischereien; von diesen Fischen werden viele im Lande selbst consumirt und viele exportirt.

Seit der Ausdehnung der Eisenbahnverbindungen hat die Fisch-Consumtion sehr zugenommen, und die meisten grösseren Städte im ganzen Lande werden jetzt täglich mit frischen Fischen versorgt. Es bestehen keine Statistiken über die Englischen Fischereien, obgleich der Häringfang in Yarmouth und an andern Plätzen der Küste, sowie der Pilscherfang an den Küsten von Devon und Cornwall einer grossen Anzahl von Bötten und Fischern Beschäftigung gewähren. Ausser diesen beiden Zweigen des Fischfangs finden die Fischerböte Beschäftigung; denn man fängt auch Mackrelen, Steinbutten, Seezungen, Kabeljau u. s. w. zu andern Jahreszeiten. Die Zahl der mit der Versorgung des Londoner Marktes beschäftigten Fischerböte wird auf 800 bis 900 geschätzt; den jährlichen Durchschnittsfang zu 90 Tonnen angenommen, giebt dies einen Gesamtertrag von etwa 80,000 Tonnen Fischen, ohne die grossen Quantitäten von Häringen, Sprotten, Schalthieren und sonstigen in's Gebiet der Fischereien gehörigen Fische.

Die folgende Tabelle giebt die Anzahl und den Tonnengehalt der Böte, sowie die Zahl der mit dem Schottischen, Irischen und Insel-Man-Fischfange beschäftigten Männer und Knaben an.

	Fischereien		
	Schottische	Insel Man	Irische
Anzahl der Schiffe.	12,703	628	9,300
Tonnengehalt der Schiffe	52,887	5,635	—
Anzahl der Männer und Knaben	40,934	2,550	40,946

Das Ergebniss dieser Fischereien in demselben Jahre war:—

	Schottland	Insel Man
Kabeljau und Langfisch:		
Gefangen oder gekauft	Centner 161,000	19,600
Fässer	7,900	—
Eingesalzen	Centner 107,600	138
Fässer	7,900	—
Häringe:		
Gefangen	691,000	44,000
Eingesalzen	609,000	34,000

Ueber den Irischen Fischfang, der in der letzten Zeit abgenommen hat, bestehen keine Berichte. Die Mehrzahl der kleinen Fischerböte in diesem Lande soll den an der Küste wohnenden Pächtern gehören und nur dann

und wann benutzt werden; die gefangenen Fische werden nicht zu Markt geschickt, sondern unmittelbar in der Nachbarschaft des Fangs verkauft und consumirt.

Ueber die Durchschnittspreise von Fleisch in den verschiedenen Theilen des Landes hat man keine Berichte. Auf dem Londoner Fleischmarkte waren sie während der drei Jahre von 1862–65 wie folgt.

Per Stein von 8 Pfund (den Abfall weggelassen).

	1863	1864	1865
Ochsenfleisch:	s. d.	s. d.	s. d.
Geringe Qualität	3 7 $\frac{3}{4}$	3 9	3 10
2. Klasse	4 2	4 4 $\frac{1}{2}$	4 4 $\frac{3}{4}$
3. Klasse (Hauptqualität)	4 8	4 9 $\frac{1}{2}$	4 9 $\frac{3}{4}$
4. Klasse (Schottisch)	4 11 $\frac{1}{2}$	5 1	5 2
Schafffleisch:			
Geringe Qualität	4 0	4 2 $\frac{1}{2}$	4 8
2. Klasse	4 7 $\frac{1}{2}$	4 9 $\frac{3}{4}$	5 4
3. Klasse (lang- und grobwollig)	5 1	5 3	5 11
4. Klasse (South-Downs)	5 5 $\frac{1}{2}$	5 8	6 4 $\frac{1}{2}$

Obleich die obige Tabelle nicht im Allgemeinen die von den Consumenten bezahlten Detail-Fleischpreise angiebt, so bietet sie doch eine Uebersicht von den En-gros-Preisen dieses wichtigen Nahrungsartikels. In Betreff der Fischpreise erhielten die Fischerei-Commissäre zwei Berichte, welche den in einer Seehafen- und Inlandstadt in den Jahren 1856 und 1865 bestehenden Fischpreis-Unterschied angeben.

Newcastle-on-Tyne	1856	1865
	s. d. s. d.	s. d. s. d.
Steinbutte . per Stein	2 0 bis 2 6	4 6 bis 6 6

Heilbutte . „ „	0 4 „ 0 6	0 6 —

Der Preis von gesalznen Häringen im Jahre 1865 schwankte, in Leith, zwischen 28s. und 34s.; in Greenock, zwischen 26s. und 40s. per Fass.

Es giebt keine officiellen Berichte über die Preise der im Londoner Markt verkauften Fische.

Die Quantitäten und der Werth von importirten ausländischen Fischen waren im Jahr 1865:—

	Quantitäten	Werth
	Centner	£
Frische Fische	118,502	130,570
Eingepökelt oder eingesalzen	366,958	384,142
	485,460	514,712

Frische Fische werden hauptsächlich von Holland und Norwegen und gesalzene von British Nord-Amerika, Frankreich, Holland, Norwegen und Island importirt.

Die Exportationen von Britishen frischen Fischen waren im Jahre 1865:—

		Quantitäten	Werth
			£
Häringe	Fässer	352,250	500,233
Kabeljau und Lang- fisch	Centner	36,433	40,361
Salmen	"	4,311	23,388
Pilscher	Hundert	11,783	38,342
Austern	Buschel	97,030	63,130
Andere Arten	"	—	23,784
Summa	—	—	689,238

Häringe werden hauptsächlich nach Deutschland, Italien und Oestreich verschickt, Salmen und Austern nach Frankreich und Belgien und Pilscher nach Italien und Oestreich.

Klasse LXXI.

GEMÜSE UND OBST.

Die Cultur von Gemüse und Obst hat im Vereinigten Königreich einen hohen Grad der Vollkommenheit erreicht; auch werden beide in grossen Quantitäten von allen Klassen der Gesellschaft consumirt. Es bestehen keine Berichte über die jährliche Gartenproduction. Der mit Kartoffeln im Vereinigten Königreich angepflanzte Flächenraum, die Gärten ausgeschlossen, war im Jahr 1866 1,554,000 Acker.

Ausser dem einheimischen Erzeugnisse wrden jährlich bedeutende Quantitäten von Obst und Gemüse importirt. Im Jahr 1865 bestanden die hauptsächlichlichen Importationen in:—

Rohen Aepfeln	Buschel	516,000
Trauben	"	58,000
Orangen und Citronen	"	1,567,000
Rohen Birnen	"	41,000
Anderem rohen Obst	"	226,000
Zwiebeln	"	529,000
Kartoffeln	"	807,000

Klasse LXXII.

ZUTHATEN, SAUCEN, GEWÜRZE UND STIMULIRENDE GETRÄNKE; ZUCKER UND ZUCKERWERK.

Die in dieser Klasse eingeschlossenen im Vereinigten Königreich producirtten Hauptartikel sind: Tischsalz, Essig, Senf, Saucen, eingemachte Früchte und Marmeladen.

Die Fabrication von Tischsalz wird hauptsächlich in den Grafschaften Cheshire und

Worcester betrieben, wo man es in grossen Quantitäten zubereitet, obgleich einige der feinsten in London aus den roheren in den genannten Districten producirtten Sorten bereitet werden. Englischer Senf und Englische Saucen werden in hinreichender Quantität fabricirt, um den einheimischen Bedarf zu decken, und geniessen ausserdem in den meisten Continentalstädten und Colonien, wo grosse Mengen davon consumirt werden, eines hohen Rufes. Der Verbrauch einiger in dieser Klasse einbegriffenen Artikel, welche nicht im Lande erzeugt werden, ist sehr gross. Die folgende Tabelle giebt die Quantitäten der Hauptartikel fremder Production an, welche im Jahre 1865 zum Verbrauch eingeführt wurden:—

Pfeffer	Pfund	4,713,000
Cacao	"	3,826,000
Kaffee	"	30,511,000
Thee	"	97,834,000
Zucker, roh	Centner	9,876,000
" raffinirt	"	724,000

Pfeffer kommt hauptsächlich von Holländisch-Ostindien, viâ Singapore, Cacao von dem Britischen Westindien und Mittel-Amerika, Kaffee von Ceylon, Indien und Brasilien, Thee von China, roher Zucker von British-Westindien, Cuba und Brasilien, und raffinirter Zucker von Holland, Frankreich und Belgien. Zimmt, Gewürznelken, Piment etc. werden auch importirt, aber nicht in so grossen Quantitäten consumirt, wie die eben erwähnten Artikel.

Die Consumption von Thee und rohem Zucker hat während der letzten zehn Jahre bedeutend zugenommen. Im Jahre 1856 wurden nur 63,000,000 Pfund Thee und 6,813,000 Centner roher Zucker zur Consumption eingeführt. Beim Vergleichen der im Jahre 1865 in gleicher Weise importirten Quantitäten ergibt sich eine Zunahme von 55 Procent für Thee und von 44 Procent für rohen Zucker. Die vor Kurzem stattgefunden Herabsetzung des Theezolls auf 6d. per Pfund hat eine bedeutende Zunahme in der Thee-Consumption zur Folge gehabt und ist für die ärmeren Klassen der Gesellschaft ein wahrer Segen.

Die Durchschnitts-Consumption von Thee in Jahre 1865 war ungefähr $3\frac{1}{4}$ Pfund und von Zucker 39 Pfund per Kopf.

Die Cacao-Consumption bleibt beinahe unverändert, während die von Kaffee etwas abgenommen hat.

Der Werth der im Jahre 1865 aus dem Vereinigten Königreich exportirten Quantitäten von Salz, mit Essig eingemachten Sachen (Pickles,) Saucen, Essig und Zuckerwerk war:—

		Quantitäten	Werth
			£
Salz, Stein- und weisses	Tonnen	579,050	274,631
Pickles und Saucen	Werth	—	328,381
Essig	Gallonen	345,123	33,149
Zuckerwerk	Pfund	1,041,348	85,465

Klasse LXXIII.**GEISTIGE GETRÄNKE.**

Es giebt keine Berichte über die Production Britischer Weine, welche meistens aus fremden Früchten, wie Orangen, Rosinen, Ingwer etc. und einheimischen Johannisbeeren, Stachelbeeren und Himbeeren zubereitet werden. Apfelwein macht man in grossen Quantitäten in Devonshire, Herefordshire und anderen Grafschaften des Südwestens von England, wo derselbe, als Getränk der arbeitenden Klassen, beinahe die Stelle des Biers vertritt. Die besseren Sorten von Apfelwein und Birnwein werden gelegentlich auch von den höheren Klassen getrunken. Bier ist das gewöhnliche Getränk der Mehrheit der Bevölkerung und wird in grossen Quantitäten gebraut, nicht allein für die einheimische Consumption, sondern auch für den Export. Das Brennen von Branntweinen wird ebenfalls im Grossen betrieben. Schottischer und Irischer Whisky sind die berühmtesten Englischen Branntweine, obgleich vielleicht weniger getrunken als Gin, Cognac und Rum; Letzterer wird nicht im Lande fabricirt. Die Quantität von Malz, welche durch Branntweinbrenner im Vereinigten Königreich während der drei Jahre 1863–1865 verbraucht wurde, war:—

	Buschel
1862–3 . . .	4,133,000
1863–4 . . .	4,986,000
1864–5 . . .	4,408,000

Die Anzahl der Personen, berechtigt in jeder Provinz des Vereinigten Königreichs Bier zu brauen, war im Jahre 1865:—

In England und Wales . . .	34,218
Schottland . . .	220
Irland . . .	90
Summa . . .	34,528

Die Anzahl der Branntweinbrenner im selben Jahre war:—

In England und Wales . . .	8
Schottland . . .	116
Irland . . .	25
Summa . . .	149

Die Zahl der Destillateure nimmt mit jedem Jahre ab, weil das Geschäft grösseren Unternehmern in die Hände fällt, die durch Anwendung aller neuen Entfindungen im Stande sind, den kleineren Producenten die Wage zu halten.

Die folgende Tabelle zeigt die Quantitäten von Bier, Britischen Branntweinen, fremden Weinen und Branntweinen, welche im Jahre 1865 im Vereinigten Königreiche consumirt wurden:—

	Gallonen
Bier (geschätzt auf) . . .	684,000,000
Britische Branntweine . . .	21,005,000
Fremde Weine . . .	11,994,000
Fremde Branntweine . . .	6,732,000

Was die Consumption obiger Getränke während der letzten zehn Jahre betrifft, so hat im Bier eine Zunahme, in Britischen Branntweinen eine Abnahme, in fremden Branntweinen eine Zunahme und im Wein eine grosse Zunahme stattgefunden.

Die vermehrte Wein-Consumtion ist hauptsächlich der Zollherabsetzung auf diesen Artikel zuzuschreiben, welche in Folge des Handelsvertrags mit Frankreich im Jahre 1860 eintrat.

Die zur Consumption importirten Weine waren in den Jahren 1859 und 1865:—

Productionsländer	1859	1860
	Gallonen	Gallonen
Frankreich { Rother Wein . . .	423,000	182,000
{ Weisser „ . . .	272,000	329,000
Portugal { Rother „ . . .	1,971,000	2,851,000
{ Weisser „ . . .	49,000	38,000
Spanien { Rother „ . . .	47,000	506,000
{ Weisser „ . . .	2,829,000	4,685,000

Die Hauptsorten der importirten Branntweine sind Rum und Cognac. Die Hauptbezugsquellen zeigt die folgende Tabelle:—

Einfuhr für den Verbrauch, 1865.

	Gallonen
Rum { Von Britisch-Westindien . . .	1,499,000
{ „ „ Guiana . . .	1,870,000
Cognac { Von Frankreich . . .	2,581,000
{ „ andern Ländern . . .	85,000

Die exportirten Quantitäten von Britischem Bier, Ale und Branntweinen aus dem Vereinigten Königreich während der fünf Jahre von 1861 bis 1865 waren:—

	Bier und Ale	Branntweine
	Fässer	Gallonen
1861 . . .	378,000	4,085,000
1862 . . .	465,000	3,752,000
1863 . . .	491,000	4,076,000
1864 . . .	499,000	7,194,000
1865 . . .	562,000	1,987,000

Der Gesamtwert der obigen Exportationen im Jahre 1865 belief sich auf 2,305,000£.

GRUPPE VIII.

(KLASSEN LXXIV. bis LXXXII.)

Viehstand, Nebst Mustern von Landwirthschaftlichen Gebäuden.

Klasse LXXIV.

Landwirthschaftliche Gebäude und Arbeiten.

Der Stand des Ackerbaues in einem Lande von grosser Bevölkerung muss zu jeder Zeit tiefes Interesse erregen. In den letzten Jahren wurde der Cultur des Bodens viel mehr Aufmerksamkeit geschenkt, als dies früher der Fall war, und in Folge der Bemühungen vieler wissenschaftlichen Männer wird jetzt der Landbau im Vereinigten Königreich grossentheils nach wissenschaftlichen Grundsätzen betrieben. Auch hat die Einführung der Dampfkraft bei vielen landwirthschaftlichen Arbeiten, sowie die Anwendung besserer Geräthschaften und Maschinen, welche zu Ackerbauzwecken in England gemacht werden, viel zur Verbesserung in den Methoden der Landwirthschaft beigetragen. Ein grosser Fortschritt zeigt sich auch in den jetzt errichteten landwirthschaftlichen Gebäuden und in den dort angewandten Werkzeugen und Apparaten.

Die Fabrication landwirthschaftlicher Maschinen und Geräthschaften bildet einen sehr wichtigen Zweig der Landes-Industrie, wenn auch keine Berichte über die wirkliche Anzahl der darin beschäftigten Personen vorliegen. Die betreffenden Fabriken sind hauptsächlich in Lincoln, Bedford, in vielen Theilen von Suffolc, in Peterborough, Banbury und Manchester.

Die Englischen Fabricanten dieser Art von Maschinerie arbeiten nicht nur für den einheimischen Bedarf, sondern auch sehr viel für das Ausland; und es unterliegt keinem Zweifel, dass die Ausstellung ihrer Maschinen in den internationalen Ausstellungen ihnen grossen Nutzen gebracht hat.

Der Werth der aus dem Vereinigten Königreich im Jahre 1865 exportirten landwirthschaftlichen Maschinen und Geräthschaften war:—

	£
Landwirthschaftliche Geräthschaften, nicht genau angegeben	210,300
Landwirthschaftliche Geräthschaften, ganz von Eisen	13,177
Landwirthschaftliche Maschinerie (ausgenommen Dampfmaschinen)	282,019

Dampfmaschinen zu landwirthschaftlichen Zwecken sind in den Handelsberichten nicht besonders angeführt; dieser Handelszweig ist aber nichtsdestoweniger von grosser Wichtigkeit.

Ein Bericht über den mit den Hauptgetreidearten im Jahre 1866 angebauten Flächenraum im Vereinigten Königreich findet sich unter Klasse 67 und über den Viehstand unter den Klassen 75 bis 77.

Klasse LXXV.

Pferde, Esel und Mauthiere.

Ueber die Anzahl der Pferde in Grossbritannien giebt es, ausser der mit einer Taxe belegten und von derselben ausgenommenen Zahl, keine Berichte. Die Zahl der mit Taxe belegten und von derselben befreiten Pferde in jeder Provinz des Königreichs war im Jahre 1864:—

	Pferde und Mauthiere Anzahl
In England und Wales, steuerpflichtig	537,639
In England und Wales, steuerfrei	330,584
In Schottland, steuerpflichtig	55,428
„ „ steuerfrei	147,444
Summa für Grossbritannien	1,071,095
Nach den Berichten für Irland im Jahre 1866	535,000
Summa für das Vereinigte Königreich	1,606,095

Man hat keine Berichte über die Esel-Anzahl im Königreich.

Die folgende Tabelle giebt die Anzahl und den Werth der in das Vereinigte Königreich importirten und aus demselben exportirten Pferde während der fünf Jahre 1861–65 an:—

Jahre	Importirt		Exportirt (Britische)	
	Anzahl	Werth	Anzahl	Werth
		£		£
1861	1,595	37,693	2,954	237,813
1862	1,978	40,581	4,288	267,956
1863	1,441	39,264	5,204	269,825
1864	1,357	34,319	4,664	230,931
1865	1,332	39,658	4,400	185,367

Nur 4 Esel, auf 20 $\frac{1}{2}$ geschätzt, wurden im Jahre 1865 importirt, und 130 Esel und Maulthiere, auf 1,291 $\frac{1}{2}$ geschätzt, in demselben Jahre exportirt.

Klasse LXXVI.

STIERE, BÜFFEL ETC.

Ueber den Viehstand in jeder Provinz des Vereinigten Königreichs im Jahre 1866 giebt die folgende Zusammenstellung Auskunft:—

Provinzen	Kühe	Anderes Vieh	Summa
England . .	1,290,529	2,016,505	3,307,034
Wales . .	222,546	318,855	541,401
Schottland . .	370,447	566,954	937,401
Irland . .	1,481,446	2,261,486	3,742,932
Insel Man . .	7,755	10,932	18,687
Canal-Inseln:			
Jersey . .	5,815	6,222	12,037
Guernsey . .	3,030	3,946	6,976
Summa . .	3,381,568	5,184,900	8,566,468

Ausser dem im Lande zu Nahrungszwecken gezogenen Vieh wird jährlich eine grosse Anzahl, hauptsächlich von den Nordstaaten Europas, importirt. In den Jahren 1864 und 1865 fand eine bedeutende Zunahme in der Importation statt, was grossentheils der Rinderpest zuzuschreiben ist, welche unter dem einheimischen Vieh grassirte. Die Zahl und den Werth aller in den fünf Jahren 1861–65 in das Vereinigte Königreich eingeführten Viehgattungen zeigt folgende Tabelle:—

	Anzahl	Werth £
1861 . .	107,096	1,558,065
1862 . .	97,887	1,301,602
1863 . .	150,898	1,931,814
1864 . .	231,733	3,208,851
1865 . .	283,271	4,401,482

Die Viehausefuhr ist sehr gering.

Nach amtlichen Berichten beläuft sich die Gesamt-Anzahl des seit Beginn der Epidemie bis zum 10 November 1866 an der Rinderpest in Grossbritannien erkrankten Viehs auf 253,730. Von dieser Zahl wurden getödtet 85,018, starben 124,305, genasen 33,413, und über 10,994 wurde keine Rechenschaft gegeben. In derselben Periode wurden 52,415 gesunde Thiere geschlachtet, um die Ausbreitung der Seuche zu verhindern. Der bis zum 10. November 1866 geschätzte Procentsatz auf das von der Seuche befallene Vieh war 5,141.

Klasse LXXVII.

SCHAFE UND ZIEGEN.

Die Gesamtzahl der Schafe in jeder Provinz des Vereinigten Königreichs war im Jahre 1866:—

	Anzahl
In England . .	15,124,000
Wales . .	1,668,000
Schottland . .	5,255,000
Irland . .	4,270,000
Insel Man . .	55,954
Canal-Inseln:	
Jersey . .	517
Guernsey . .	1,214

Summa . 26,374,685

Die Zeit, jedoch, in welcher dieser Bericht gemacht wurde, lässt vermuthen, dass die Anzahl der Lämmer zu gering angegeben ist. Berichte über die Anzahl der Ziegen im Vereinigten Königreich, deren es nicht viele giebt, fehlen.

Es finden jährlich bedeutende Importationen von Schafen und Lämmern statt, beinahe ausschliesslich von Europa und hauptsächlich von Hamburg, Holland und Belgien. Die Importationen während der fünf Jahre 1861 bis 1865 waren:—

	Anzahl	Werth £
1861 . .	312,923	616,020
1862 . .	299,472	569,315
1863 . .	430,788	669,573
1864 . .	496,243	873,905
1865 . .	914,170	1,787,866

Die grosse Zunahme im Jahre 1865 ist dem durch die Rinderpest verursachten Mangel an Fleisch auf dem einheimischen Markte zuzuschreiben.

Die Zahl der exportirten Schafe ist sehr gering; im Jahre 1865 wurden nur 2,477, auf 22,134 $\frac{1}{2}$ geschätzt, fortgeschickt.

Klasse LXXVIII.

SCHWEINE UND KANINCHEN.

Der Bericht über die Anzahl von Schweinen im Vereinigten Königreich ist unvollständig, weil die von Ackerbauarbeitern und in Städten gehaltenen Schweine nicht darin aufgenommen sind. Ausschliesslich der so gehaltenen Schweine wurde übrigens die Gesamtzahl im Vereinigten Königreich im Jahre 1866 immer noch auf 3,800,000 geschätzt. An Kaninchen ist das Land reich genug; es giebt aber keine Berichte über die wahrscheinliche Anzahl derselben.

Die Importationen von Schweinen und Ebern während der fünf Jahre 1861–65 waren:—

	Anzahl	Werth £
1861 . .	30,308	37,884
1862 . .	18,162	17,319
1863 . .	27,137	53,685
1864 . .	85,362	192,566
1865 . .	132,943	359,065

Eine grosse Anzahl von Kaninchen wird vom Continente importirt, aber die officiellen Berichte geben sie nicht an. Sehr wenige

Schweine werden exportirt; im Jahre 1865 war die Anzahl 148, auf 559% geschätzt.

Klasse LXXIX.

GEFLÜGEL.

Statistiken über die Anzahl von Geflügel im Lande giebt es nicht, aber die Production muss den Bedarf der Bevölkerung decken, da die Importationen vergleichsweise von so geringem Werthe sind. Eier sind in dieser Klasse nicht einbegriffen und finden unter Klasse 69 Erwähnung.

Der Werth des während der fünf Jahre 1861–65 in das Vereinigte Königreich eingeführten Geflügels, Wildprets, mit Einschluss der Kaninchen, war:—

	£
1861	74,000
1862	86,000
1863	109,000
1864	131,000
1865	148,000

Klasse LXXX.

JAGD- UND WACHHUNDE.

Man hat keine Berichte über die Anzahl der Hunde im Vereinigten Königreich; denn obgleich sie einer Taxe unterliegen, so wird diese doch so allgemein umgangen, dass officiële Berichte über die Zahl der im Lande gehaltenen Hunde beinahe nutzlos geworden sind.

Klasse LXXXI.

NÜTZLICHE INSECTEN.

Die einzigen im Vereinigten Königreich gezogenen Insecten, dieser Klasse angehörend sind die in vielen Theilen des Landes gepflegten Bienen. Während der letzten zehn Jahre wurden verschiedene Verbesserungen in den Bienenstöcken eingeführt, aber in der Regel blieb der alte Stroh-Bienenkorb die gewöhnliche Form des Korbes, welcher zur Pflege der Bienen im Lande gebraucht wird. Die Quantitäten des im Jahre 1865 in's Vereinigte Königreich eingeführten Honigs und Bienenwachses waren:—

	Centner
Honig	4,519
Wachs	10,678

Angaben über den einheimischen Ertrag dieser Erzeugnisse fehlen.

Klasse LXXXII.

FISCHE, SCHALTHIERE UND MOLLUSKEN.

Der wichtigste Apparat in dieser Klasse ist der für künstliche Fischzucht in vielen Theilen des Landes mit Erfolg angewandte. Jedoch ist derselbe jetzt so allgemein bekannt, dass eine genauere Erwähnung hier überflüssig erscheint. Eine Notiz über den Ertrag der Britischen Fischereien findet sich unter Klasse 70.

GRUPPE IX.

(KLASSEN LXXXIII. bis LXXXVIII.)

ERZEUGNISSE DES BODENS UND DER GARTENCULTUR.

Klasse LXXXIII.

TREIBHAUS- UND GARTEN-GERÄTHSCHAFTEN.

WÄHREND der letzten Jahre sind verschiedene Neuerungen in der Construction von Treibhäusern und Conservatorien, besonders was den Bauplan der letztern anbetrifft, gemacht worden. In Geräthschaften ist die Erfindung und Einführung der Mähmaschine für Ziergrasplätze am wichtigsten; sie schneidet das Gras zu allen Zeiten des Tages und Jahres, während die Sichel nur, wenn Thau auf dem Grase liegt, benutzt werden kann. Viele andere Verbesserungen fanden auch zu gleicher Zeit in Gartengeräthschaften statt, in Folge der grösseren Aufmerksamkeit, die man, was Cultur und Zierde betrifft, heut zu Tage sowohl den Gärten wie auch den Conservatorien und andern zur Kunstcultur bestimmten Gebäuden jeder Grösse widmet.

Klasse LXXXIV.

BLUMEN UND ZIERPFLANZEN.

Ausser dem natürlichen Geschmack des Volkes für Blumen-Cultur, haben die verschiedenen Gartenbau- und botanischen Gesellschaften durch Anlage von Gärten und durch öffentliche Blumen- und Pflanzenausstellungen wesentlich dazu beigetragen, den Nationalgeschmack in dieser Hinsicht zu fördern. Die Blumengärten der oberen und Mittelklassen werden von allen Nationen als unübertroffen anerkannt, während Englands Verbindungen mit allen Theilen der Welt es den Blumenfreunden des Landes möglich machen, ihre Gärten mit den Gewächsen aller Climate zu bereichern. Unter den kürzlich eingeführten verdienen eine Anzahl schöner und bis jetzt seltener Japanischer Blumen und Pflanzen Erwähnung. Der erhöhte Wohlstand der Mittelklassen hat hauptsächlich mitgewirkt, die Gartenbaukunst in England bedeutend und allgemein zu entwickeln.

Klasse LXXXV.

GEMÜSE.

Man zieht sehr viel Gemüse aller Arten im Vereinigten Königreich, aber mit Ausnahme der Kartoffeln hat man keine Berichte über die Ausdehnung dieser Cultur.

Der mit Kartoffeln angepflanzte Flächenraum (mit Ausschluss der Gärten) war im Jahre 1866:—

	Acker
In England und Wales . . .	355,000
Schottland . . .	143,000
Irland . . .	1,050,000
Insel Man . . .	4,000
Canal-Inseln . . .	2,000
Summa . . .	1,554,000

Kartoffeln und Zwiebeln werden in grossen Quantitäten hauptsächlich von Frankreich, Holland, Belgien und Portugal eingeführt. Die Kartoffel-Einfuhr in das Vereinigte Königreich betrug im Jahre 1865 807,000 Centner, Werth 162,000*l.*, und die von Zwiebeln 529,000 Buschel, Werth 121,000*l.*

Klasse LXXXVI.

OBSTBÄUME.

Viele Obst-Gattungen, besonders Aepfel, Birnen und Kirschen, zieht man in verschiedenen Theilen des Königreichs. In Devonshire, Somerset und Herefordshire werden Aepfel zur Apfelwein-Fabrication in grossem Massstabe cultivirt. Kirschen aus Kent geniessen ihrer guten Qualität wegen eines grossen Rufes. Viele andere Obstsorten zieht man in Privat- und sogenannten Marktgärten; der jährliche Ertrag ist sehr bedeutend, aber lässt sich nicht leicht schätzen. Grosse Aufmerksamkeit widmete man der Obstbaum-Cultur, und jedes Jahr giebt neue Beweise von der Einführung verschiedener verbesserter Obstarten.

Ausser dem einheimischen Erzeugniss werden jährlich grosse Quantitäten gewöhnlicher Obstarten importirt, von welchen die hauptsächlichsten im Jahre 1865 aus folgenden bestanden:—

	Buschel
Aepfel, roh	516,000
Birnen	41,000
Nüsse	143,000
Haselnüsse	251,000
Kastanien	72,000
Trauben	58,000

Die Letzteren sind kein naturwüchsiges Product des Landes, werden aber sehr viel in Treibhäusern gezogen. Getrocknete Rosinen, Mandeln, Datteln und Feigen werden nicht im Lande producirt, sondern eingeführt.

Im Jahre 1865 betrugen die importirten Quantitäten:—

	Centner
Rosinen	368,000
Mandeln, süsse	32,000
Feigen, getrocknete	78,000
Datteln	16,000

Klasse LXXXVII.

SAMEN UND JUNGE WALDBÄUMCHEN.

Obgleich der Waldanbau im Vereinigten Königreich vergleichsweise von geringer Ausdehnung ist, indem sich derselbe nur auf die Kron- und einige grosse Gutsbesitzerwaldungen beschränkt, so widmet man doch der Baumzucht für Holzgewinnung und Pflanzungen grosse Aufmerksamkeit. Die die Landsitze

der Landeigenthümer umgebenden Parke sind voller Waldbäume jeder Art; diese werden aber nur der Zierde wegen cultivirt. Es giebt wahrscheinlich nur wenige Länder, worin man eine so grosse Mannigfaltigkeit von Laub-Gruppierung antrifft wie in den Wäldern und Pflanzungen vieler Grafschaften Englands.

Klasse LXXXVIII.

TREIBHAUSPFLANZEN.

Es ist unmöglich, innerhalb der Grenzen dieser Darstellung auf alle verschiedenen Methoden der Treibhauspflanzen-Cultur im Vereinigten Königreich aufmerksam zu machen; es ist aber anzunehmen, dass man die neueren Methoden in der Ausstellung antreffen werde. Für Heizungszwecke gebraucht man noch immer das Backstein-Kamin; aber Heiss-Wasser- und Gasapparate finden fast allgemeine Anwendung. In den letzten Jahren fanden in der Construction von Treibhäusern viele Verbesserungen statt, worunter die wichtigeren dem verstorbenen Sir J. Paxton zu verdanken sind; auch hat die Herabsetzung der Glaspreise den Zeichnern von Ziergebäuden bei Errichtung derselben grössern Spielraum gelassen. Die Cultur von Treibhauspflanzen, abgesehen von deren Pflege zu Vergnügungszwecken, ist durch die Ausstellungen, welche von Garten- und anderen Gesellschaften des Königreichs regelmässig abgehalten und in welchen Preise für die besten Exemplare von bekannten Blumen, sowie für erfolgreiche Neuerungen im Heizapparat ertheilt werden, sehr gefördert worden.

GRUPPE X.

(KLASSEN LXXXIX. bis XCIII.)

BESONDERE GEGENSTÄNDE, AUSGESTELLT IN DER ABSICHT, DEN
PHYSISCHEN UND MORALISCHEN ZUSTAND DES VOLKES ZU
VERBESSERN.

Klasse LXXXIX.

APPARATE UND METHODEN BEIM UNTER- RICHT DER KINDER.

OBGLEICH England in dieser Klasse nicht ausstellt, so muss doch erwähnt werden, dass in dem Vereinigten Königreich zahlreiche durch Privat-Subscription unterhaltene Gesellschaften bestehen, welche den Zweck haben, den Elementarschulen sowohl als dem Publicum im Allgemeinen bei der Anschaffung guter und billiger Erziehungsbücher behülflich zu sein. Mit Bezug auf Schulgebäude hält das Departement für Wissenschaft und Kunst eine permanente Ausstellung von anerkannt guten Modellen, Schulgeräthen und Apparaten für öffentliche Schulen. Grosse Aufmerksamkeit wird auch der Erziehung der Blinden in England gewidmet; in besonderen Schulen lehrt man sie nicht nur lesen, sondern sie werden auch in der Musik und den verschiedenen Handwerken unterrichtet. Es bestehen in London sowohl, als auch in andern grossen Städten, Institute zur Aufnahme dieser Klasse der Bevölkerung, worin mehrere Hundert Personen untergebracht und erhalten werden können. Es ist bekannt, dass aus dem wohlbekannten Institute für bedürftige Blinde in Southwark jährlich zwölf bis funfzehn junge in religiösen und weltlichen Kenntnissen gut unterrichtete Personen hervorgehen, so wie auch andere, die ein Handwerk verstehen, zum Beispiel, Schuhmacher, Mattenmacher, Weber, Bürstenbinder, Korbmacher, während andere die Orgel spielen können oder sonst musikalisch sind. Aehnliche Resultate hat man in den meisten andern Anstalten dieser Art erzielt.

Die Gesamtzahl der Blinden im Vereinigten Königreich im Jahre 1861 war:—

In England und Wales	19,352	{ oder 1 auf jede }	1,037 Personen
Schottland	2,320	„	1,086 „
Irland	6,879	„	843 „
Inseln der Britischen Meere	197	„	728 „
	29,248	„	944 „

Die Ausstellung von Erziehungsbüchern und Karten etc. wird genügen, um das grosse Interesse zu zeigen, welches man an der Verbesserung des moralischen und socialen Zustandes der Bevölkerung nimmt.

Klasse XC.

BIBLIOTHEKEN UND APPARATE ZUM GEBRAUCH BEIM UNTERRICHT ERWACHSENER PERSONEN, ZU HAUSE, IN DER WERKSTATT ODER IN SCHULEN UND COLLEGIEN.

Bibliotheken und Lesezimmer zur Benutzung der Arbeiterklassen bestehen schon seit vielen Jahren in Verbindung mit Arbeitervereinen und litterarischen Instituten und werden nun in beinahe jeder Stadt und in jedem Marktflecken des Landes angetroffen. Die Errichtung von Frei-Bibliotheken in grossen Städten zur Benutzung für alle Klassen stammt aus der letzten Zeit.

Arbeitervereine und andere Institute sorgen durch Abendunterricht für die Ausbildung erwachsener Personen der niedern Klassen; auch werden die Bemühungen derer, welche sich für die Fortdauer dieser Anstalten interessieren, in verschiedenen Theilen des Landes, von vielen Verlegern, denen das Wohl der arbeitenden Klassen am Herzen liegt, freigebig unterstützt. Das Veröffentlichen von billigen Erziehungsbüchern und besonders solchen, welche sich zum Selbstunterricht eignen, ist jetzt so ausgedehnt, dass die Schwierigkeit nicht mehr im Anschaffen der Bücher, sondern in der Auswahl der wirklich guten besteht. Die ungeheure Circulation billiger Zeitschriften, neuer Ausgaben classischer Werke und besonders wohlfeiler Zeitungen muss jedenfalls als Beleg für die erhöhte Bildungsstufe eines grossen Theils der Gesellschaft angesehen werden.

Klasse XCI.

MÖBEL, KLEIDUNG UND NÄHRUNG AUS ALLEN QUELLEN, IHRER NÜTZLICHEN EIGENSCHAFTEN, UND WOHLFELIHEIT, WEGEN BEMERKENSWERTH.

In einem Lande wie das Vereinigte Königreich, wo ein so grosser Theil der Manufacte für die Volksmassen geschaffen wird, ist es nicht leicht, die speciellen Artikel zu bezeichnen, welche dieser Klasse angehören. Der grosse Verbrauch und die Anwendung von Maschinerie in der Fabrication derselben machen es möglich, dass die gewöhnlichen Möbel, Kleidungs- und Nahrungs-Artikel zu Preisen verkauft werden können, welche jedes gesunde und arbeitsame Mitglied der Gesellschaft zu erschwingen im Stande ist. Die Preise der meisten von den ärmern Volksklassen gebrauchten Artikel werden auch niedrig gehalten durch die grosse Concurrenz, indem dieser Handelszweig (meistens Baargeschäft) ein sehr einträglicher, wenn auch der Profit auf die einzelnen Artikel nur gering ist.

Die Bildung und rasche Zunahme von co-operativen und Versorgungs-Gesellschaften, welche ihre Mitglieder (hauptsächlich Arbeiter) mit Nahrungsmitteln und Kleidungsstücken zum Kostpreise versorgen und ausserdem noch einen Gewinn auf die Lagereinkäufe haben, dürfen hier nicht unerwähnt bleiben.

Klasse XCII.

MUSTER VON KLEIDUNGSSTÜCKEN, WELCHE VON DEN BEVÖLKERUNGEN VERSCHIEDENER LÄNDER GETRAGEN WERDEN.

Unter Klasse 35 finden sich einige Notizen über die verschiedenen Kleidungen, welche in dem Vereinigten Königreich getragen werden.

Klasse XCIII.

MODELLE VON WOHNHÄUSERN, BEMERKENSWERTH WEGEN IHRER WOHLFELIHEIT, NEBST DEN ZUR GESUNDHEIT UND BEQUEMLICHKEIT NOTHWENDIGEN BEDINGUNGEN.

Die Verbesserung der Arbeiterwohnungen hat seit langer Zeit die Aufmerksamkeit der Menschenfreunde in England beansprucht. Die welche die Londoner Ausstellung im Jahre 1851 besuchten, werden sich ohne Zweifel noch der Modell-Wohnhäuser erinnern, welche man unter der Leitung des Prinzgemahls für die Ausstellung errichtet hatte und, die damals so allgemeine Aufmerksamkeit auf sich zogen. Seit jener Zeit haben die 'Society of Arts,' sowie andere Gesellschaften und Privatpersonen diesen Gegenstand lebhaft aufgegriffen, und man hat eine grosse Anzahl von Häusern zu Arbeiterwohnungen in den verschiedenen Theilen der Stadt errichten lassen; jedoch, obgleich Manches in dieser Richtung geschehen, muss die Mehrzahl der ärmeren Klassen immer noch in den elendesten Baracken wohnen. Die Ausdehnung der Eisenbahnen und die öffentlichen Verbesserungen steigern den Werth der Häuser in London von Jahr zu Jahr. Einige Erleichterung gewähren die Concessionen seitens mehrerer Eisenbahn-Gesellschaften, die Arbeiter zu ermässigten Preisen von und nach den Vorstädten zu führen, und, sollten alle Eisenbahn-Companien diesem Beispiele folgen, so möchte allerdings manchem Uebelstand in dieser Beziehung abzuhelpen sein. Es darf aber nicht übersehen werden, dass die Arbeiter sehr früh Morgens an die Arbeit gehen müssen und deshalb unmöglich entfernt von ihrem Arbeitslocale wohnen können. Der Mangel an Arbeiterwohnungen beschränkt sich aber leider nicht nur auf London, er macht sich jetzt in beinahe allen grossen Städten, auch in den Ackerbaudistricten, fühlbar und hat in letzter Zeit so zugenommen, dass nur Unternehmungen von grossartigem Umfang einiger-massen werden dem Uebel steuern können.

STATISTICHE DELLA GRANDE ESPOSIZIONE DI TUTTE LE NAZIONI NEL 1851, DELL' ESPOSIZIONE UNIVERSALE DI PARIGI NEL 1855, E DELL' ESPOSIZIONE INTERNAZIONALE DEL 1862.

PER WILLIAM MATCHWICK, F.L.S.

GRANDE ESPOSIZIONE DI TUTTE LE NAZIONI NEL 1851.

L' EDIFICIO dell' Esposizione, costruito principalmente di ferro e cristallo, fu eretto nell' Hyde Park, Londra, in una località ordinariamente non molto frequentata ma specialissimamente adattata pel fine desiderato. Vi è al lato meridionale del parco uno spazio aprico di considerevole estensione, parallelo e contiguo alla strada maestra che mena a Kensington e Hammersmith, ed è il gran cammino occidentale verso la metropoli. Esisteva a mezzavia circa fra la caserna della cavalleria a Knightsbridge e il nuovo ingresso al parco, detto Queen's Gate, che è da due a trecento yarde a levante dell' antica barriera di Kensington. Venti jugeri circa di questa località, originalmente suggerita dal fu Principe Consorte per tale oggetto, furono scelti pel proposto edificio dai Reali Commissari dell' Esposizione.

Ma era necessario prima di tutto ottenere il consenso della Corona a tale appropriazione di una parte del più importante dei parchi di Londra. Il consenso fu graziosamente concesso; ma accompagnato dalla condizione che, finita l' Esposizione, il terreno fosse restituito allo stato primitivo e reso in condizione da servire alla ricreazione e godimento del pubblico. E sebbene i più grandi sforzi fossero fatti per conservar l' edificio, questa condizione fu fedelmente osservata ed ogni traccia dell' Esposizione completamente cancellata pel 1° giugno 1852 o poco più che venti mesi dopo l' erezione della prima colonna il 25 settembre 1850. Sul sito stesso non rimane nulla che ne indichi l' ubicazione se non due olmi diligentemente difesi dai guasti con ringhiere di ferro. Ambedue questi alberi stettero (con alcuni altri) inchiusi nella navata trasversale, l' uno all' estremo meridionale l' altro al settentrionale. Stanno a indicare il centro dell' edificio, e benché molto danneggiati nello sviluppo dalla lunga non naturale reclusione, essi danno idea presso a poco dell' altezza e lunghezza della navata trasversale centrale, essendo alberi d' età matura e belli esemplari forestali della loro specie.

All' occidente del sito, però, e sulla stessa linea, è adesso in costruzione il monumento nazionale commemorativo eretto in onore del fu Principe Consorte che tanto completamente si identificò colla Grand' Esposizione del 1851. Questo monumento quando sarà compito marcherà certamente il sito della Grand' Esposizione del 1851, benché situato a circa 500 yarde dall' estremità orientale dello spazio occupato già dall' edificio. Il Palazzo di Cristallo a Sydenham è principalmente costruito coi materiali stessi che costituivano la Grand' Esposizione del 1851.

L' architetto dell' edificio fu l' ora defunto Sir Joseph Paxton, e gli accollatori della costruzione i Signori Fox (ora Sir Charles) e Henderson.

Cambiamenti molto considerabili furono però fatti al progetto originale di Sir J. Paxton (che era in principio quello da lui adottato nell' erezione della gran serra a Chatsworth, residenza del Duca di Devonshire), e gran parte del merito dell' edificio si deve attribuire a Sir Charles Barry, Sir William Cubitt, Signor Robert Stephenson e Signor Brunel.

DIMENSIONI DELLO SPAZIO.

L' intero spazio coperto o totale area superficiale dell' edificio fu fissata originalmente a 800,000 piedi quadrati, ma fu poi accresciuta fino a circa un milione di piedi quadrati, o più che venti jugeri. Di questo spazio fu giudicato che una metà (500,000 piedi quadrati) si richiedeva per la mostra degli oggetti, l'altra metà per la circolazione, ecc. Nell' aggiudicare questo spazio, i Reali Commissari stabilirono come principio, che metà sarebbe dato alla Gran Bretagna e sue colonie, e metà a paesi esteri. (*Vedasi la tavola nel testo inglese.*)

Alle estremità orientale ed occidentale dell' edificio, uno spazio di 30,712 piedi quadrati fu

inchiuso per usi attenenti all' Esposizione, che non è incluso di sopra.

NUMERO DEGLI ESPOSITORI.

Il numero totale degli espositori fu 13,937, dei quali 7,381 appartenevano alla Gran Bretagna e le sue colonie e 6,556 ai paesi esteri. Alcuni paesi, però, come l' India, la Turchia, l' Egitto e Tunis e gl' individui che si unirono insieme nel mandare le loro contribuzioni sono annoverati come un espositore; cosicchè includendo quelli, il numero totale degli espositori si può calcolare fra i 15 e i 14,000.

Il rendiconto seguente dà il numero degli espositori di ciascun paese e lo spazio che occupano:—

	Numero di Espositori	Spazio occupato
Gran Bretagna	6,861	Piedi quadrati 503,424
Colonie Britanniche	520	40,896
Totale	7,381	544,320
America, Stati Uniti	499	44,352
Austria	731	43,384
Belgio	506	37,440
China	30	5,184
Danimarca	39	1,152
Egitto	„	2,304
Francia	1,710	119,808
Prussia e Stati della Lega Dogana (Zollverein)	1,402	77,184
Grecia	36	576
Germania (Nord)	134	2,880
Paesi Bassi	113	4,608
Persia	12	576
Portogallo	157	3,456
Roma	52	3,456
Russia	263	13,824
Sardegna (Regno di)	95	4,032
Spagna	286	4,032
Svezia e Norvegia	117	1,728
Svizzera	263	12,096
Tunis	„	4,608
Turchia	„	6,912
Toscana	99	4,608
Sud America (Stati del)	12	576
Totale stati esteri	6,556	403,776
Totale	13,937	4,033,344

SPESE DELL' ESPOSIZIONE.

Dall' analisi delle spese pubblicata dai Reali Commissari risulta che i pagamenti per conto di costruzione e addobbiamenti furono 170,000£. Prendendo l' area superficiale netta dello spazio coperto a un milione di piedi quadrati, ciò darebbe una spesa di circa 3 scellini e 5 pence per piede quadrato.

I capi principali di spesa furono i seguenti:—

Servizi personali, incluso il personale della Reale Commissione, comitato esecutivo, assistenza tecnica e giurati, amministrazione, ecc. . .	£71,975
Polizia	19,648
Spese generali di ufficio come affitto, mobilia, cartoleria, stampati, francature, annunzi, ecc.	8,869
Mantenimento generale dell' Esposizione incluso carbon fossile pelle caldaie, illuminazione, acqua, annaffiamento delle strade, attrazzi e arnesi, risarcimenti, danni imprevisi, ecc.	4,878
Dipartimento dei giurati—costo delle medaglie, buste, certificati, fotografie, rapporti di presentazione, esperimenti di meccanismi agrari e d' altro	6,917
Spese legali, interesse sulle anticipazioni e contingenze	10,508

Totale £122,795

Che, inclusa la costruzione, fa ammontare il costo totale dell' Esposizione a circa 292,795£.

E pur necessario rammentare che il contratto coi Signori Fox e Henderson non includeva la vendita assoluta dell' edificio alla Real Commissione, essendo *pell' uso e consumo soltanto*, rimanendo l' edificio stesso proprietà degli accolatari. Se ciò fosse stato altrimenti, la spesa effettiva dell' Esposizione avrebbe dovuto accrescersi di almeno 100,000£.

L' Esposizione fu aperta al pubblico il giovedì 1° maggio e chiusa finalmente il sabato 11 ottobre, essendo rimasta aperta giusto 141 giorni. Tuttavia il lunedì e martedì seguenti furono ammessi gratis gli espositori e i loro amici, e il mercoledì 16 ottobre ebbe luogo la cerimonia finale della chiusura, in presenza degli espositori, dei giurati, dei commissari esteri e locali, rappresentanti dei comitati ed altri.

L' ammissione del pubblico all' Esposizione si faceva per abbonamento, o per pagamento di denaro alla porta. L' abbonamento era per gli uomini tre ghinee, per le donne due, a testa. Dopo il 31 luglio queste tasse furono ridotte a 1£. 10s. e 1£. rispettivamente. Il giorno dell' apertura non fu ricevuto pagamento alla porta, non essendo ammessi che gli abbonati. Pei due primi giorni dopo l' apertura il prezzo di ammissione fu 1£. Dal 5 al 24 maggio (inclusive) l' ammissione fu 5 scellini. Dal 26 maggio al 2 agosto (inclusive) l' ammissione fu come appresso: —I lunedì, martedì, mercoledì, e giovedì 1 scellino, i venerdì 2½ scellini, i sabati 5 scellini; e dalla data ultimo menzionata fino alla chiusura dell' Esposizione niun' altra mutazione fu fatta salvo la riduzione della tassa del sabato a 2½ scellini.

Dapprimo le porte d' ammissione si aprivano alle 10 a.m. e si chiudevano alle 6 p.m. eccetto

i sabati, in cui non si aprivano fino alle dodici. Dal lunedì 18 agosto le porte furono aperte alle 9 invece delle 10, e ciò continuò fino al termine dell'Esposizione.

Alcune modificazioni furono fatte sussaguientemente nell'ora della chiusura secondo la stagione. Nel cuor dell'estate l'Esposizione rimase aperta fino alle 7, e secondo che la stagione avanzava le campane furono poi suonate alle 6, e più tardi 10 minuti innanzi il tramonto.

INCASSI.

Gli incassi lordi e netti da qualsiasi sorgente furono come appresso:—

Soscrizioni	£67,897
Catalogo (appalto)	3,200
Rinfreschi (appalto)	5,500
Abbonamenti	67,504
Alle porte	356,278
Camerini, ombrelli, medaglie battute nell'edifizio e carte del buono o cattivo tempo	4,580
Interesse e premio su buoni del tesoro	898
Miscellanee	233

Totale £506,100

Il numero degli abbonamenti fu 25,605, dei quali 13,454 furono per uomini, e 12,111 per donne. Di questo numero 135 per uomo e 184 per donna furono presi dopo il 31 luglio al prezzo ridotto di 30 e 20 scellini rispettivamente.

La media degli incassi quotidiani alle porte (escluso il giorno dell'apertura in cui non si ricevè denaro) ammontò a 2,548 $\frac{1}{2}$ per tutto il tempo della durata dell'Esposizione. Durante le prime tre settimane, mentre il prezzo d'ammissione fu 5 scellini la media quotidiana fu 2,546 $\frac{1}{2}$, cioè molto prossima all'altra testè accennata. Il massimo incasso fatto in un giorno fu il mercoledì 8 ottobre, in cui (giorno d'ammissione a 1 scellino) furono pagate alle porte 5,283 $\frac{1}{2}$; ed il minimo il lunedì 26 maggio, che ammontò a 920 $\frac{1}{2}$. Quello fu il primo giorno in cui l'ammissione fu ridotta ad 1 scellino; e la somma comparativamente piccola che si ebbe è da attribuirsi all'apprensione per parte del pubblico che un'ammissione così modica attrarrebbe una folla così enorme da rendere una visita all'Esposizione non solo incomodissima, ma soggetta a possibile pericolo.

La tavola seguente mostra gli incassi totali alle porte ai diversi prezzi di ammissione:—

Numero di Giorni	Prezzo di Ammissione	Incasso	Media quotidiana
	£ s. d.	£ s. d.	£ s. d.
2	1 0 0	1,042 0 0	521 0 0
28	0 5 0	61,347 7 0	2,191 0 0
30	0 2 6	72,447 11 0	2,414 17 0
80	0 1 0	221,971 3 0	2,774 12 0
140		356,808 1 0	

La perdita sull'oro calante, svisato, spurio, ed estero fu considerabile e ascese a più che 530 $\frac{1}{2}$ %, che dedotte dal totale che sopra spiega la differenza apparente fra l'ammontare dato anteriormente e quello nella tavola qui sopra.

NUMERO DI PERSONE AMMESSE.

Il numero totale delle ammissioni in tutto il tempo dell'Esposizione fu di 6,039,196. Durante i 141 giorni 773,776 entrarono come abbonati. Nei due giorni quando l'ammissione era 1 $\frac{1}{2}$ %, 1,042 persone pagarono. Nei 28 giorni quando l'ammissione era 5 scellini 245,389 pagarono. Nei 30 giorni quando l'ammissione era 2 $\frac{1}{2}$ scellini 579,579 pagarono; e negli 80 giorni quando l'ammissione era 1 scellino 4,439,419 pagarono. Prendendo una media quotidiana, i risultati sono come appresso:—

Abbonati	5,473	quotidiana-mente
Paganti ammissione 1 0 0	521	„
„ „ 0 5 0	8,763	„
„ „ 0 2 6	19,319	„
„ „ 0 1 0	55,493	„

Ogni facilità fu offerta dalla Real Commissione e dal Comitato Esecutivo per la libera ammissione di tutti coloro la cui ammissione nell'edifizio era assolutamente necessaria, ma non vi fu mai in attività alcuna lista di libere ammissioni. Tutti gli impiegati della Real Commissione, polizia, militari, commissari esteri, espositori, certi agenti e attenenti agli espositori, membri della stampa provinciale e metropolitana, i giurati e molti altri non specificati, erano ammessi gratis durante tutto il periodo dell'Esposizione; aggiunta considerevole al numero sempre presente nell'edifizio. La maggior parte di questi entrava avanti l'apertura delle porte, e non era contata dalla polizia, e per regola generale, se conosciuti per avere occupazione nell'edifizio non erano mai contati a qualunque ora venissero.

Il maggior numero di persone che mai di fatto fossero ad uno stesso tempo nell'edifizio, fu il 7 ottobre, martedì (quattro giorni avanti la chiusura. Il numero totale degli ammessi fu in quel giorno 109,915 (numero maggiore che in qualunque altro giorno di tutta l'Esposizione), ed alle 2 p.m. quel giorno fu computato che circa 100,000 persone si trovavano nell'edifizio. Il lunedì 6 ottobre il numero totale fu 107,815, il mercoledì 8 ottobre fu 109,760, e il giovedì 9 ottobre 90,813. I quattro giorni notati furono gli ultimi giorni da uno scellino dell'Esposizione, di cui il totale ammessi fu 418,303, o una media di 104,576 per ciascuno di quei giorni.

GIURATI.

Il numero effettivo dei giurati nominati per l'Esposizione fu 318 — 161 britannici e 157

esteri, e il numero nominato per ciascun paese fu come appresso:—

Austria	17
Belgio	14
Danimarca	1
Egitto	2
Francia	38
Gran Bretagna	161
Grecia	1
Germania (Nord)	2
Olanda	2
Italia	6
Portogallo	2
Russia	7
Sicilia	1
Spagna	4
Svizzera	7
Stati Uniti	24
Svezia	1
Turchia	5
Zollferein	23

Totale . 318

Addetti ai giurati vi erano degli associati giurati in numero di 100, nominati specialmente dai giurati per assisterli nelle loro decisioni, ma senza potere di votare. Settanta dei giurati e giurati associati erano anche espositori. La tavola che segue mostra il numero dei giurati e giurati associati in ciascuna classe:—

Classe		Giurati	Giurati associati
18	Tessitura, filatura, infeltritura e preparazione dei tessuti per saggi di stampatura o tintura	10	2
19	Tappezzeria, tappeti, trine, ricami e lavori di lusso	10	0
20	Panni per uso personale e domestico	8	8
21	Coltellineria e arnesi taglienti	6	4
22	Ferro e chincaglieria in generale	12	7
23	Lavori in metalli preziosi, gioie, ecc.	10	5
24	Cristallami	8	12
25	Ceramica, porcellane, terraglie, ecc.	8	2
26	Mobili, tappezzeria, carte da parati, cartapesta e cose verniciate	12	4
27	Oggetti in sostanze minerali usati nelle costruzioni e decoramenti	8	8
28	Manifatture di sostanze animali e vegetabili non tessute nè infeltrite nè incluse nelle altre classi	8	1
29	Miscellanee e mercerie	8	8
BELLE ARTI			
30	Scultura, modelli e plastica	15	0
Totale		318	100

Le 30 classi sopra enumerate furono poi praticamente accresciute fino a 34 per l'aggiunta di una sotto-classe alla 5ª, e tre sotto-classi alla 10ª, così facendo il numero dei giurati in attività anche 34.

AGGIUDICAZIONI.

Due specie di medaglie in bronzo furono aggiudicate dai giurati, cioè, la medaglia del consiglio, e la medaglia premio. Certificati anche d'onorevole menzione furono dati come una terza aggiudicazione. La medaglia del consiglio fu quasi esclusivamente riservata come una ricompensa per invenzioni rimarcabili, e non fu considerata applicabile ai casi in cui eccellenza di esecuzione era il solo merito da ricompensarsi.

In pochi casi doni pecuniari furono aggiunti alla distinzione onorevole della medaglia o dell'onorevole menzione, cioè quando artigiani avevano incorsa una spesa considerabile nel produrre un oggetto interessante, senza possibilità di esser remunerati per la spesa.

Il numero totale delle aggiudicazioni fatte dai giurati fu:—

Medaglie del consiglio . . .	171
Medaglie premio . . .	2,954
Menzioni onorevoli . . .	2,123

Totale . 5,248

Classe		No. di Giurati	Giurati associati
SOSTANZI NATURALI			
1	Miniere, cave, opere metallurgiche, e prodotti minerali	8	1
2	Processi chimici e farmaceutici e prodotti in generale	8	8
3	Sostanze alimentari	6	0
4	Sostanze animali e vegetabili usate principalmente nelle industrie	8	1
MECCANISMI			
5	Macchine per uso diretto, carrozze e meccanismi ferroviari e navali inclusi	18	2
6	Macchine fabbricatrici, e arnesi	12	6
7	Cose attenenti al genio civile, architettura e costruzioni	8	0
8	Architettura navale, genio militare, artiglieria, armature e buffetterie	8	7
9	Macchine ed attrazzi agrari ed orticoli	15	1
10	Strumenti e processi fisici; strumenti musicali d'orologeria e chirurgici	32	7
MANIFATTURE			
11	Cotone	10	8
12	Tessuti di lane e stami	12	9
13	Sete e velluti	10	0
14	Manifatture di lino e di canapa	10	0
15	Tessuti misti	12	2
16	Cuoio, pelli, pellicce, penne e pelo	10	1
17	Carta, cartoleria, stampa, e rilegatura	8	1

RIASSUNTO DELLE AGGIUDICAZIONI.

Totale . . .	5,248

ESPOSIZIONE UNIVERSALE A PARIGI NEL 1855.

È ALQUANTO difficile determinare esattamente le località e posizioni relative dei diversi edifici che furono eretti per l'Esposizione Universale a Parigi del 1855. L'edificio principale era un fabbricato rettangolare quasi di forma quadrata situato nel gran viale dei Campi Elisi e ben conosciuto come il 'Palazzo dell' Industria.' Questo edificio fu costruito solidamente e destinato ad esser permanente. In quello furono esposti i prodotti delle 27 classi industriali principalmente. Al sud di questo principal edificio, e connesso per mezzo di gallerie coperte e passaggi stava un lungo e stretto edificio chiamato l' annesso o la Galleria du Quai, che era in prossimità e si estendeva lungo la sponda nord della Senna. Questo annesso lungo 4,000 piedi era principalmente dedicato alla esposizione di meccanismi. Il terzo edificio destinato alle tre classi formanti la divisione delle Belle Arti (Palazzo delle Belle Arti) era situato a qualche distanza considerevole dagli altri due, essendo all' estremo sud-ovest, presso il fiume, del viale Montaigne. Era affatto separato dai due menzionati edifici; essendo impraticabile qualunque passaggio di congiunzione a causa della distanza e località.

Fra il Palazzo dell' Industria e l' annesso stava un edificio circolare conosciuto come il Panorama o la Rotonda del Panorama in cui erano in mostra legioie della corona di Francia e una gran varietà di tappeti, tappezzerie, ecc. Esternamente e intorno a questa Rotonda, era uno spazio considerevole in parte coperto e in parte aperto in cui erano esposte carrozze di ogni genere e meccanismi e attrazzi agrari. Ivi era provvisto anche ampio spazio pei rinfreschi. La sola struttura che ora rimane ad indicare è l' Esposizione cinese unita al Palazzo delle Belle Arti ma non connessa con quello in alcun altro modo. Difatto l' Esposizione cinese non fu mai considerata parte della mostra internazionale, e qui se ne fa solo menzione per complemento, e perchè lo spazio che occupava era realmente parte (benchè separata) dell' edificio delle Belle Arti.

Vi erano dunque tre edifici separati e distinti indipendentemente dalla Rotonda del Panorama, che servivano all' Esposizione Internazionale Francese del 1855 — il Palazzo dell' Industria ossia l' edificio principale centrale, l' annesso pei Meccanismi, e il Palazzo delle Belle Arti. Per ciò che riguarda l' edi-

zio ultimo menzionato il governo francese aveva studiata la possibilità di dedicare una porzione del nuovo palazzo del Louvre all'esposizione delle opere artistiche contribuite all' Esposizione, e senza dubbio tale intenzione avrebbe avuto effetto se ciò fosse stato possibile senza impedire gli urgenti ed importanti lavori interni ed esterni ivi in corso.

Sebbene la preparazione e l' erezione di questi edifici per l'Esposizione Universale di Parigi del 1855 fosse iniziata e generalmente eseguita coi capitali di una società commerciale organizzata in Parigi, pure era il governo francese che aveva la totale e sola direzione dell' Esposizione, addossandosi ogni rischio della impresa, e garantendo alla società un certo per cento di profitto sulle anticipazioni. Conseguentemente l' Imperatore nominò Commissari Imperiali col Principe Napoleone alla testa per la direzione dell' Esposizione, e sebbene la società avesse certi privilegi e diritti di stabilire alcuni regolamenti, fu difatto surrogata ed il governo ne prese l'intero controllo.

I Signori Viel e Desjardins furono gli autori architetti dell' edificio principale, e i Sig. York e Co. furono gli accollatori per l'esecuzione dei lavori.

Tutti gli edifici erano di carattere provvisorio eccetto il principale centrale; e tutti con quella eccezione furono rimossi in breve tempo dopo la chiusura dell' Esposizione. La struttura principale (il Palazzo dell' Industria) nei Campi Elisi fu conservato ed esiste tuttora. Appartiene al governo, e serve per l' esposizione di opere artistiche ed altri oggetti affini.

DIMENSIONI DI SPAZIO.

Lo spazio totale orizzontale occupato da tutti i paesi che esposero nelle divisioni industriali, circolazione e tutti gl' ingressi inclusi, non meno che gli uffici e stanze di ricevimento, era 152,052 metri quadri o 1,770,000 piedi di superficie inglesi. Nell' edificio delle Belle Arti lo spazio totale occupato dai lavori artistici nelle classi di pittura, incisione, litografia, scultura, o architettura erano 17,639 metri quadri, ossia 15,603 metri quadri spazio superficiale verticale per quadri, incisioni, ecc., e 2,036 metri quadri orizzontali per lavori di scultura, facendo insieme

un totale di 169,691 metri quadri (circa 1,866,000 piedi quadrati) spazio occupato di fatto dagli espositori nelle varie classi nella Esposizione tutt'alta quanta e dalla circolazione, uffici e quanto altro fu provveduto pel servizio generale del pubblico. In questo estimo, gl'ingressi, gli uffici, e spazio nel piano non occupato da lavori artistici nell'edifizio delle Belle Arti non sono inclusi nè lo sono le dimensioni di tale spazio date nel rapporto della Commissione Imperiale.

Le divisioni dello spazio per esposizione nell'edifizio principale, o Palazzo dell'Industria, Rotonda del Panorama, e annesso dei meccanismi, era come segue:—

	Metri quadri
Francia	55,669
Paesi esteri	46,097
Circolazione, ecc.	17,021
Totale	118,786

Nella divisione delle Belle Arti, si computa che la Francia occupasse 2,400 metri quadri di spazio murale per quadri, ecc.; la Gran Bretagna 938 metri quadri; il resto dello spazio era diviso fra dieci altri paesi. Realmente lo spazio occupato dal Regno Unito con lavori artistici era circa 14,184 piedi.

Per quanto fu possibile accertarlo lo spazio totale orizzontale occupato dalla Gran Bretagna e dalle sue Colonie nell'Esposizione Universale di Parigi del 1855 nell'interno dei vari edifizii fu 183.000 piedi quadrati, dei quali 14,148 piedi quadrati furono dedicati ad opere nelle tre classi delle Belle Arti.

Sebbene lo spazio occupato di fatto da ciascun paese nella divisione delle Belle Arti non era dato nel rapporto della Commissione Imperiale, tuttavia vi è notato il numero degli Espositori in ciascuna delle tre classi.

Nel rapporto presentato al Parlamento sulla divisione Britannica dell'Esposizione, il numero di artisti inglesi che esposero nella sezione delle Belle Arti e il numero dei loro lavori, è dato come appresso:—

Lavori a olio	234	contribuiti da 99 artisti
Acquarelli	145	„ 52 „
Incisioni e litografie	197	„ 62 „
Lavori architettonici	127	„ 51 „
Statue	51	„
Busti e bassirilievi	24	„ 35 „
Totale	778	299

E la stima del valore delle opere Britanniche mandate fu come appresso:—

Quadri a olio	£96,130
Acquarelli	15,653
Incisioni e litografie	1,676
Opere architettoniche	5,765
Sculture	18,336
Totale	£137,560

Ciocchè dà una media del valore di 4117. per ciascun quadro a olio; circa 1087. ciascuno degli acquarelli; e circa 2447. per ciascuna opera in scultura. Incisioni, litografie e disegni architettonici non sono inclusi in questo calcolo per ragioni varie.

In aggiunta ai dati statistici di sopra, relativi allo spazio orizzontale o superficiale dell'Esposizione di Parigi, potrà forse essere interessante notare l'ammontare di superficie verticale occupata da oggetti esposti, e la misurazione lineare o progressiva di tutte le 27 classi industriali.

	Misura lineare Metri	Superficie verticale o murale Metri quadrati
Francia, Algeria e Colonie	18,949	33,421
Austria	2,335	3,512
Belgio	1,509	2,350
Gran Bretagna e Colonie	4,404	6,373
Prussia	1,828	2,796
Svezia	464	442
Svizzera	409	584
Altri paesi	3,871	4,131
Totale	33,769	53,609

NUMERO DEGLI ESPOSITORI.

Il numero totale degli espositori all'Esposizione Universale di Parigi del 1855 fu 23,954. Di questo numero 21,779 erano espositori nelle 27 classi industriali, e 2,175 erano espositori nelle tre classi appartenenti alle Belle Arti.

Il numero degli espositori appartenenti a ciascun paese nelle classi industriali era come appresso:—

	Espositori
Francia	10,003
Algeria	728
Colonie francesi	183
— 10,914	
America (Stati Uniti)	131
America (Sud)	38
Austria	1,298
Baden	88
Baviera	172
Belgio	687
Danimarca	90
Spagna	569
Stati Pontifici	72
Gran Bretagna	1,598
Canada	348
Australia e Van Diemen's Land	405
India	599
Guiana britannica	95
Colonie minori	233
— 3,269	
Grecia	131
Asia	88

Espositori

Nassau	59
Norvegia	121
Paesi Bassi	411
Portogallo	443
Prussia	1,319
Sardegna (Regno di)	204
Sassonia	96
Svezia	418
Swizzera	408
Toscana	197
Città anseatiche	89
Wurtemberg	207

Altri paesi, cioè Anhalt-Dessau e Coethen, 15; Brunswick, 16; Conf. Germ. 20; Egitto, 6; Frankfort-s.-M. 24; Annover, 18; Hawaii, 5; Luxemburg, 23; Sassonia (5 ducati), 23; Tunis, 1; Turchia, 2 . . .	153
---	-----

Totale . 21,779

Il numero degli espositori di ciascun paese nella divisione delle Belle Arti è stato già notato.

Cinquantatré stati e ventidue colonie straniere furono rappresentati nell' Esposizione non inclusi la Francia, le tre provincie dell' Algeria e le otto colonie francesi.

Dividendo il numero totale degli espositori, inclusi quelli nelle classi delle Belle Arti, in francesi e esteri i numeri saranno così:—

Impero francese	11,986
Stati esteri	11,968

Totale . 23,954

La grande approssimazione di questi due numeri costituenti il totale non può non esser notata come un fatto molto straordinario.

COSTO DELL' ESPOSIZIONE.

Secondo il rapporto della Commissione Imperiale sull' Esposizione Universale di Parigi del 1855 il costo dell' Esposizione fu come appresso:—

	Franchi	Lire sterline
Divisione industriale	8,961,620 =	358,464 16s.
Divisione delle Belle Arti	2,302,900 =	92,116 0s.
	11,264,520 =	450,580 16s.

Questa somma non include il costo dell' edificio principale o 'Palazzo dell' Industria' posteriormente comprato dal governo francese; per conseguenza la spesa totale per conto dell' Esposizione si deve calcolare a quasi altrettanto, e anche più, ed ammontò ben probabilmente a meglio che un milione di sterline.

Prendendo dunque il costo del Palazzo dell' Industria a 500,000*l.* e dei vari altri edifici

come sono dati nel rapporto della Commissione Imperiale cioè:—

L' annesso	£104,080
Galleria di congiunzione della Rotonda del Panorama	24,280
Edificio delle Belle Arti	42,068
Costruzioni supplementari	4,232

sarà pressochè corretto il dire i soli edifici costarono 674,660*l.*

Calcolando che il totale ammontare dello spazio orizzontale fosse 169,691*l.* metri quadri o circa 1,866,000 piedi quadrati, ed il costo totale indipendentemente dall' acquisto del Palazzo dell' Industria che fosse come di sopra si è detto ne segue che il costo fu 7½*s.* per piede quadrato.

Affinchè la Gran Bretagna potesse essere convenientemente ed adeguatamente rappresentata all' Esposizione Universale di Parigi del 1855 era necessario che il governo britannico porgesse l' assistenza necessaria. Un preventivo fu quindi preparato e sommerso al Parlamento, ed il risultato fu che una somma di 50,000*l.* fu votata da amministrarsi sotto la responsabilità del Ministero del Commercio.

La spesa netta dietro questa elargizione fu 39,259*l.* cioè più che 10,000*l.* meno che il voto parlamentare; prova della rigida economia esercitata nello sborso del denaro.

I pagamenti totali della divisione britannica sotto vari capi del servizio furono come appresso:—

Assesamenti preliminari	£3,171
Noleggi, trasporto di oggetti, spese doganali ecc.	7,588
Uffici e amministrazione a Parigi	3,282
Complemento e decoramento della divisione britannica	3,985
Manutenzione, nettezza e vigilanza	3,446
Remozione e magazzinaggio di casse	943
Stampe, annunzi, francature, cartoleria, ecc.	1,383
Impiegati idonei alla rappresentazione delle materie prime ed apparati scientifici	2,067
Divisione delle Belle Arti	6,477
Giurati e loro rapporti	4,165
Sborsi contingenti	2,752

Totale . £39,259

Uno dei capi principali delle spese inerenti alla divisione britannica delle Belle Arti fu quello di assicurare contro i pericoli delle ferrovie e del mare i vari oggetti contribuiti, all' raidare e tornare come pure contro gl' incendi, perente il transito e mentre esposti. La tassa pagò fu 2*l.* 10*s.* a 3*l.* per cento, e l' ammontare pagato agli agenti del Lloyd e altrove ascese alla somma di 2,715*l.*

ENTRATE.

L' Esposizione Universale a Parigi del 1855 fu aperta al pubblico dall' Imperatore in per-

sona il martedì 15 maggio, ma a quell'epoca l'ordinamento generale era così incompleto e arretrato, che soltanto l'edifizio delle Belle Arti e una porzione delle divisioni industriali erano sufficientemente avanzate per essere visitate. L'annesso dei meccanismi, la rotonda del panorama e gli edifizi esterni non furono aperti fino ad epoca molto posteriore.* Si voleva dapprima aprire l'Esposizione il primo maggio e fu pubblicato un decreto imperiale che annunziava tal giorno, ma fu inevitabile una proroga a causa dello stato incompleto di quasi tutte le divisioni. Il giovedì 15 novembre ebbe luogo la cerimonia della chiusura in presenza dell'Imperatore con grande successo e puntualità. Il venerdì 30 novembre l'Esposizione fu finalmente chiusa, sebbene l'operazione dello sgombrò incominciase difatto il giorno dopo la chiusura e continuasse giornalmente senza interruzione.

Il numero totale dei giorni in cui l'Esposizione rimase aperta, cioè dal 15 maggio al 30 novembre (inclusive) fu esattamente 200, domeniche incluse.

L'entrata era per abbonamento e per pagamenti alle porte. Un giorno, la domenica 27 maggio, l'intera Esposizione fu aperta al pubblico gratuitamente.

Gli abbonamenti erano a 50 franchi (2*l.*) pella divisione industriale, e lo stesso prezzo per quella delle Belle Arti; cosicchè l'abbonamento per l'intera Esposizione costava 100 franchi (4*l.*) Si dettero anche abbonamenti con privilegio limitato a 25 fr. ciascuno (1*l.*) Le tasse di ammissione alla porta erano 5 fr. (4*s.*); 2 fr. (1*3*/₄*s.*); 1 fr. (10*d.*) e 20 centesimi (2*d.*) I lunedì, martedì, mercoledì, giovedì, e sabato l'ammissione era ad 1 fr.; i venerdì a 5 fr. e le domeniche a 20 centesimi (2*d.*) Le stesse tasse di ammissione si fissavano anche per l'edifizio delle Belle Arti. Dopo il 1° agosto l'entrata dei venerdì fu ridotta a 2 fr. e dopo l'11 dello stesso mese fu permesso alle compagnie di strade ferrate ed altre di organizzare treni per l'Esposizione, i passeggeri dei quali (nelle domeniche o lunedì di ciascuna settimana) non solo viaggiavano ad una riduzione del 40 per cento sulla tassa ordinaria, ma avevano libera entrata alle divisioni industriali e delle Belle Arti, o potevano visitarne una sola due volte. Durante il mese di agosto, grandi quantità di operai da tutte le parti della Francia furono ammesse al pagamento di soli 20 centesimi. Tutti i soldati e militari invalidi furono privilegiati di libera quotidiana ammissione in certe quantità fra o le 9 e le 11. Gli alunni delle scuole militari ebbero anche l'entrata libera soggetta ad alcuni regolamenti, ed i membri della stampa si francesi che stranieri godono dello stesso privilegio. Il giorno della cerimonia di apertura solo gli abbonati furono ammessi, come pure il giorno in cui la Regina

Vittoria visitò l'Esposizione, cioè il 24 di agosto.

INCASSI.

Gli incassi totali raggiunsero la somma, di 3,202,485*fr.* o 128,099*l.* 8*s.* Il numero degli abbonamenti fu 4,843, dei quali 4,663 furono pelle porzioni Industriali dell'Esposizione e 180 pelle Belle Arti, che produssero nell'insieme una somma di 200,450*fr.* o 8,018*l.* Deducendo il giorno dell'apertura in cui i soli abbonati furono ammessi, e il giorno in cui l'Esposizione fu aperta gratis al pubblico la media degli incassi giornalieri ammontò a 16,174*fr.* o 646*l.* 19*s.* 2*d.* sterline. Gli incassi pella divisione industriale furono 2,566,195*fr.* (102,647*l.* 16*s.*) e pelle Belle Arti 636,290*fr.* (o 25,451*l.* 12*s.*)—media giornaliera pella divisione industriale 12,960*fr.* (518*l.* 8*s.*) e 3,213*fr.* (128*l.* 10*s.* 5*d.*) pelle Belle Arti.

NUMERO DI PERSONE CHE VISITARONO L'ESPOSIZIONE.

Il numero totale degli ammessi all'Esposizione Universale di Parigi del 1855 fu 5,162,330. Di questo totale 4,180,117 entrarono nelle varie divisioni industriali e 982,213 visitarono le Belle Arti. Nel numero totale però di quelli che passarono alle Belle Arti sono incluse 46,612 persone che andarono alla Esposizione cinese di cui si è fatta menzione. Il numero delle visite fatte dagli abbonati alla divisione industriale si computa a 94,000, e alle Belle Arti 3,800. Il totale di quelli che entrarono alle divisioni industriali nei giorni a 5*fr.* fu 22,747, e alle Belle Arti 11,179, insieme 33,926. Nei giorni a 2*fr.* i totali furono, alla divisione industriale 73,816, e alle Belle Arti 21,872—insieme 95,688. Il numero degli ammessi nei giorni ad un franco fu 2,103,535, dei quali 1,683,798 entrarono alla divisione industriale e 419,737 alle Belle Arti. Il numero totale degli ammessi a soli 20*ci.* (2 pence) ammontò a 2,196,795, di cui 1,752,518 visitarono le divisioni industriali e 444,277 quelle delle Belle Arti. A questi numeri si devono aggiungere 26,322 persone che visitarono la collezione cinese nei giorni in cui il prezzo d'entrata, era mezzo franco.

Il numero approssimativo o calcolato di quelli che entrarono all'Esposizione con biglietto d'espositore fu 445,000, di cui 420,000 passarono all'Esposizione Industriale e 25,000 alle Belle Arti. Di soldati ed invalidi che profittarono del privilegio di visitare le sezioni industriali dell'Esposizione senza pagamento fra le 9 e le 11 il numero totale fu 80,118. E il numero degli studenti delle scuole militari che si valsero del il privilegio d'entrata libera a tutta l'Esposizione fu 797. Il numero totale delle visite che vennero colle escursioni privilegiate le domeniche e lunedì fu 24,455. Bisogna avvertire che questi sono numeri approssimativi del numero di visite fatte all'Esposizione dalle persone delle varie categorie, e che non rappresentano individui separati.

* Macchine agrarie 5 giugno. Annesso 10 giugno. Panorama e Galleria di congiunzione 30 giugno.

Per esempio se un invalido andò all' Esposizione 10 volte fu naturalmente contato come dieci persone e così via.

La domenica 27 maggio quando l' intera Esposizione fu aperta al pubblico gratis il numero totale fu 105,022, dei quali 80,118 passarono alle divisioni industriali e 24,904 alle Belle Arti.

Il maggior numero di ammissioni in un sol giorno in tutto il tempo dell' Esposizione fu nella domenica 9 settembre in cui fu notato che entrarono 123,017 persone. Grandissimo numero di persone vi concorsero in ciascuna delle 24 domeniche dal 3 giugno all' 11 novembre, la media essendone 89,223 ciascuna domenica, e in 8 di quei giorni il numero eccedè considerabilmente 100,000.

È detto che circa 160,000 stranieri visitarono Parigi durante l' Esposizione, più che 40,000 dei quali sudditi britannici; o più che due terzi del numero di tutti gli stranieri che visitarono Londra per l' Esposizione del 1851. E secondo i resoconti della pulizia francese, i vari dipartimenti della Francia mandarono più che 350,000 persone a Parigi durante l' Esposizione del 1855.

GIURATI.

La classificazione dell' Esposizione di Parigi del 1855 fu come appresso:—

- Classe
1. Miniere e prodotti metallurgici.
 2. Foresteria, caccia a corsa e a schioppo, pesca, e prodotti ottenuti senza coltura.
 3. Agricoltura.
 4. Meccanismi in generale, applicati all' industria.
 5. Meccanismi speciali e apparati per ferrovie ed altri modi di trasporto.
 6. Meccanismi speciali e apparati per le fabbriche.
 7. Meccanismi speciali e apparati per la manifattura dei tessuti.
 8. Arti relative alle scienze esatte e all' istruzione.
 9. Oggetti relativi alla produzione economica e l' impiego del calorico, della luce e dell' elettricità.
 10. Operazioni chimiche, tintoria, stampa, carta, cuoio, pelli, gommelastica, ecc.
 11. Preparazione e conservazione di sostanze alimentari.
 12. Igiene, farmacia, chirurgia e medicina.
 13. Arti navali e militari.
 14. Genio civile e costruzioni.
 15. Acciaio e sue produzioni.
 16. Lavori metallici in generale.
 17. Oreficeria, gioiellieria, e bronzi.
 18. Cristallami e vasellami.
 19. Manifatture di cotone.
 20. Manifatture di lana e stame.
 21. Manifatture di seta.
 22. Manifatture di lino e canapa.
 23. Calzetteria, tappeti, ricami, trine d' ogni specie, frange d' oro, argento, ecc.

Classe

24. Mobilia e decoramenti.
25. Oggetti d' abbigliamento; oggetti di moda e di lusso.
26. Disegno e modellatura applicati all' industria, tipografia, stampa in rame, e fotografia.
27. Fabbricazione di strumenti musicali.
28. Pittura, incisione e litografia.
29. Scultura e incisione a conio.
30. Architettura.

Le tre ultime classi costituivano la divisione delle Belle Arti.

Un' altra classe fu aggiunta dopo l' apertura dell' Esposizione, cioè Classe 31, oggetti di economia domestica, consistente in oggetti di notevole utilità ed economia, e per lo più scelti fra gli oggetti esposti nelle altre classi.

AGGIUDICAZIONI.

Per decreto imperiale datato 10 maggio 1855, le ricompense da aggiudicarsi dai giurati internazionali erano come appresso:—

Per le 27 classi industriali—1° Una medaglia d' oro (d' honneur); 2° Medaglia d' argento; 3° Medaglia di bronzo; e 4° Attestato di menzione onorevole.

Per la divisione delle Belle Arti—1° Medaglia d' oro di 1° classe; 2° Medaglia d' oro di 2° classe; 3° Medaglia d' oro di 3° classe; 4° Attestato di menzione onorevole.

Ed in aggiunta a quanto sopra l' aggiudicazione speciale della gran medaglia d' onore.

Aggiudicazioni anche di denaro furono fatte in occasioni particolari. La decorazione della legione d' onore fu largamente distribuita dall' Imperatore a quelli che presero parte nella Esposizione e si può quasi considerare una aggiudicazione addizionale a quelle già menzionate.

Secondo il rapporto della commissione imperiale il valore di ciascuna delle medaglie di oro era come appresso. La gran medaglia di onore 5,000fr. (200%); medaglia d' oro di 1° classe 750fr. (30%); medaglia d' oro di 2° classe 650fr. (26%); medaglia d' oro di 3° classe 550fr. (22%).

Con decreto imperiale posteriore a quello già menzionato la denominazione delle medaglie aggiudicate alle divisioni industriali fu cambiata così: la medaglia d' oro fu chiamata la gran medaglia d' onore; la medaglia d' argento medaglia di 1° classe; e la medaglia di bronzo medaglia di 2° classe.

Nessuna distinta apparisce nel rapporto della commissione imperiale che mostri il numero delle aggiudicazioni in ciascuna classe ed a ciascun paese. Tale informazione è però fornita del rapporto dei giurati, ma in modo che non serve all' oggetto di questa relazione. Ciò è da lamentarsi. L' informazione statistica che una tal tavola avrebbe fornita sarebbe preziosa e interessante.

Furono fatte anche delle aggiudicazioni a

quei cooperatori ed operai britannici (colonie incluse) che sebbene non espositori erano stati partecipi all' invenzione, produzione e ordinamento degli oggetti e sostanze mandati alla Esposizione. Una gran medaglia d' onore, una medaglia d' onore, 27 medaglie di 1^a classe, 56 medaglie di 2^a classe e 42 menzioni onorevoli furono date in tal modo, facendo una totale

aggiunta di 130 aggiudicazioni dai giurati a quelle già enumerate.

Nelle 3 classi delle Belle Arti, il numero totale delle aggiudicazioni fatte agli Espositori britannici furono 64, cioè: 2 grandi medaglie d' onore; 9 medaglie di 1^a classe; 8 medaglie di 2^a classe; 11 medaglie di 3^a classe; e 34 attestati di menzione onorevole.

ESPOSIZIONE INTERNAZIONALE DEL 1862.

I VARI edifici che costituirono l'Esposizione Internazionale del 1862 furono eretti sur un pezzo di terreno immediatamente annesso alla estremità meridionale dei Reali Giardini di Orticoltura al Sud di Kensington, ottenuto a tal fine dai Reali Commissari della Grande Esposizione del 1851. Questo terreno era porzione dei beni che la Real Commissione aveva acquistati, comprandoli col sopravanzo dei redditi dell' Esposizione del 1851 ed un sussidio parlamentare.

La quantità totale della terra così comprata nella vicinanza (anzi contiguità) immediata di questo sito fu di 88 jugeri, e il prezzo 280,000*l.* ossia in media 3,250*l.* per jugero. Dapprimo fu creduto che 300,000*l.* basterebbero a comprare tutta la terra che si desiderava. I Reali Commissari convennero di dedicare 150,000*l.* del loro sopravanzo (170,000*l.* circa) e il Parlamento provvide lo stesso ammontare per assicurar a sè il possesso di quel non caro appezzamento di terreno nella vicinanza immediata della metropoli, onde erigervi sopra istituzioni educative pell' avanzamento delle scienze, arti e industrie.

I beni comprati furono i seguenti.—La proprietà della Gore House quasi in faccia al sito della Grand' Esposizione del 1851; comprende 21 jugeri e costò 60,000; la proprietà De Villars comprata dai fide-commissari del Baron de Villars che comprende 48 jugeri e costò 153,500*l.* Contigui a questi beni vi erano 17 jugeri di proprietà dell' Earl (conte) di Harrington, che furono comprati per circa 66,500*l.*

Nel 1858 il Parlamento sciolse la società che esisteva fra sè e i Reali Commissari; e per conseguenza il totale delle terre acquistate fu devoluto ai Commissari soltanto, ad eccezione di 12 jugeri sui quali gli edifici del Dipartimento delle Scienze ed Arti, meglio conosciuti col nome di Museo South Kensington, adesso stanno, il prezzo di cui (60,000*l.*) il Governo consentì che fosse dedotto dalle 150,000*l.* del già votato sussidio che i Commissari Reali dovevano ora rifondere.

L'edificio principale dell' Esposizione Internazionale del 1862 copriva circa 17 jugeri di terreno, esclusi i due annessi a levante e ponente dei Giardini d' Orticoltura, che si

possono calcolare 7 jugeri più, cosicchè tutta la portata degli edifici copriva un area di buoni 24 jugeri. Nella forma il terreno era quasi rettangolare, misurando circa 1,200 piedi da est ad ovest e 560 da nord a sud. La facciata principale era in Cromwell Road, mentre l'ingresso occidentale era in Prince Albert's Road, e l'orientale in Exhibition Road.

Sebbene la maggior parte della struttura del 1862 fosse solida e di carattere sostanziale, e fabbricata con evidente intenzione di permanenza, fu tuttavia condannata a sparire distrutta, ed il terreno su cui stava ad esser restituito alla condizione anteriore. Grandissimi sforzi furono fatti per salvar l' edificio, particolarmente la lunga estensione delle gallerie dei quadri. Ma il Parlamento comprò il terreno dai Reali Commissari per usi nazionali (con votazione di 120,000*l.* per 17½ jugeri passata il 13 giugno 1862), ma ricusò di conservare gli edifici, che furono quindi rimossi e il terreno interamente sgombrato. Il sito è tuttora disoccupato e nulla rimane ora dell' Esposizione eccetto le sale dei rinfreschi e le gallerie sulle arcate meridionali dei Giardini di Orticoltura, comprate anche esse dal Governo. Queste gallerie sono adesso occupate dal dipartimento delle Scienze ed Arti, dietro un accordo fatto col Ministero dei Lavori Pubblici.

L' edificio o piuttosto gli edifici erano stati eseguiti sui progetti del fu Capitano Fowke del Genio Militare, architetto ed ingegnere del Dipartimento Governativo delle Scienze ed Arti. Gli accollatori pella costruzione furono il Signor Kelk ed i Signori Fratelli Lucas.

DIMENSIONI DI SPAZIO.

L' area totale dello spazio coperto ammontava a 1,291,800 piedi quadrati, dei quali 147,700 piedi quadrati erano occupati dalle sale dei rinfreschi, uffici, ingressi e scale, lasciando 1,144,100 piedi quadrati utilizzabili per l' uso dell' Esposizione. Nel dividere lo spazio i Reali Commissari osservarono la regola ora generalmente accettata, di darne una metà al paese che contiene l' esposizione e l' altra metà ai paesi esteri.

NUMERO DEGLI ESPOSITORI.

Il numero totale degli espositori all' Esposizione Internazionale del 1862 fu 28,653, incluso 2,305 artisti, le cui opere furono esposte in 4 classi del dipartimento delle Belle Arti. Nelle 36 classi industriali il numero degli espositori fu 26,348:—di questo numero 8,487 furono espositori britannici (colonie incluse), e 17,861 furono espositori di paesi esteri. Nella divisione delle Belle Arti il numero rappresentato dagli artisti britannici fu 990, e dagli esteri 1,315; e il numero totale delle opere esposte fu 6,529, delle quali 3,651 erano britanniche 2,878 straniere.

SPESA.

La spesa totale dell' intrapresa si può stabilire in numeri tondi 460,000*l*. Prima di menzionare i vari titoli che compongono la spesa totale giova premettere che il contratto pella intera costruzione, incluso il jugero centrale per gallerie di quadri e l' annesso occidentale, fu per l' uso e consumo, con diritto di compra, a condizioni specificate, alla chiusura dell' Esposizione. Pella condizioni del contratto era convenuto che i costruttori ricevessero 200,000*l*. in modo assoluto, a 100,000*l*. addizionali se gl' incassi si elevarono a mezzo milione. Se però essi ricevessero le 300,000*l*. il jugero centrale delle gallerie dei quadri diverrebbe proprietà dei Commissari dell' Esposizione.

Si deve anche far menzione che per far fronte ad ogni possibile perdita pecuniaria in così vasta impresa, la Società delle Arti aveva raccomandato ai Reali Commissari dell' Esposizione del 1861, lo stabilimento di un fondo di garanzia di non meno di 250,000*l*. Quindi fu fatto perciò appello al pubblico e riuscì oltre l' aspettativa, giungendo l' ammontare sottoscritto a più che 450,000*l*. A termini dell' atto di garanzia, la responsabilità di ciascun garante era limitata alla proporzione *pro rata* dell' intera somma che si dovesse chiamare. Il numero dei garanti che firmarono l' atto fu 1,252 e il limite della responsabilità fu fissato a 250,000*l*.

I titoli principali delle spese sono i seguenti:—

	£
Accollatori pella costruzione, incluse 86,833 <i>l</i> . pell' annesso orientale . . .	320,680
Progetti, disegni e soprintendenza tecnica	8,323
Strade e approcci	13,359
Pulizia	19,436
Assicurazione e pompieri	4,088
Onorari e salari	45,778
Affitto, tasse, risarcimenti, mobilia, stampa, cartoleria, annunci e spese incidentalì	11,749

Manutenzione, inclusa cerimonia di apertura, dichiarazione delle ag- giudicazioni, gas, combustibile, acqua, ecc.	£9,690
Trasporto di quadri, ecc.	4,202
Medaglie	6,410
Spese preliminari e legali	3,668
Computazione dello spazio e distri- buzione generale	3,676
Interesse sull' imprestito dalla Banca d' Inghilterra, meno in- teresse sugl' investimenti	7,331
Altre spese non enumerate	1,247
Totale	£459,637

Prendendo dunque il costo totale dello edificio dell' Esposizione a 321,000*l*. e il totale ammontare dello spazio coperto a 1,292,000 piedi quadrati il costo per piede quadrato fu circa cinque scellini.

AMMISSIONI.

L' Esposizione Internazionale del 1862 fu aperta al pubblico il primo maggio e fu chiusa il sabato 15 novembre, ciò dà un totale di 171 giorni in cui il pubblico fu ammesso.

Le disposizioni che regolarono le ammissioni del pubblico furono:—

- 1° per abbonamento;
- 2° per pagamento alle porte.

Il giorno dell' apertura non furono ammessi che gli abbonati. Nei due seguenti giorni l' ammissione fu 1*l*.; dal 5 al 17 maggio (inclusive) 5 scellini a testa; dal 19 al 31 maggio (inclusive) 2½ scellini, eccetto i sabati di ciascuna settimana in cui era 5 scellini; dal 2 al 14 giugno l' ammissione fu pei primi quattro giorni in ciascuna settimana 1*s*.; i venerdì 2½*s*.; e i sabati 5*s*. Dal 16 giugno al primo novembre (inclusive) l' ammissione fu 1*s*. pei primi quattro giorni in ciascuna settimana e 2½*s*. i venerdì e sabati, eccettuato il venerdì 11 luglio (giorno della dichiarazione delle aggiudicazioni fatte dai giurati), in cui fu di 10*s*. a testa; e dal 3 al 15 novembre (inclusive) l' ammissione in ciascun giorno fu 2½*s*.

Gli abbonamenti furono di due specie—abbonamento ordinario a tre ghinee e abbonamento speciale a 5 ghinee a testa. I biglietti di abbonamento speciale davano diritto allo abbonato di libera ammissione alle esposizioni di fiori, feste e passeggiate di gala, date nei giardini della Società Reale d' Orticoltura durante il tempo in cui l' Esposizione rimarrebbe aperta, porzione di tale aumento essendo passata a quelle Società in considerazione dei privilegi accordati a tali abbonati. Nel mese di luglio i prezzi di abbonamento furono ridotti a metà, e si dettero abbonamenti (pei

soli giorni ad uno scellino) per 10s. a testa. Inoltre fu permesso l'acquisto di mazzi di 25 biglietti d'ammissione giornaliera per 20s. tosto dopo che fu aperta l'Esposizione.

INCASSI.

Gli incassi lordi o netti da qualsiasi sorgente furono come appresso:—

	£	s.	d.
Abbonamenti . . .	79,672	1	3
Pagamenti alle porte . . .	328,858	0	5
Appalti per rinfreschi . . .	29,285	4	11

Miscellanee . . .	262	1	5
Contribuzione dagli ac- collatori della costru- zione, per convenzione)	11,000	0	0
	459,631	12	2

La seguente è la distinta del numero degli abbonamenti presi:—

	£	s.	d.
A 5 ghinee . . .	5,773	= 30,308	5 0
A 3 „ . . .	17,719	= 55,814	17 0
A 50s.	26	= 65	0 0
A 30s.	919	= 1,378	10 0
A 10s.	3,363	= 1,681	10 0
	89,248	2	0

Meno 8,672l. 5s. pagati alla Società Reale d'Or- ticoltura secondo con- venzione accennata, e 903l. 15s. 9d. per com- missione agli agenti . . . }	9,576	0	9
---	-------	---	---

Totale . 79,672 1 3

La maggior somma presa alle porte in qualunque giorno fu 2,935l. 13s. 4d. il lunedì 30 ottobre, cioè l'ultimo giorno ad uno scellino; e la minor somma presa in alcun giorno fu 241l. il sabato 3 maggio, in cui l'ammissione era 1l. a testa. La media degl' incassi quotidiani alle porte per tutto il periodo dell'Esposizione, eccettuato il primo giorno, in cui i soli abbonati furono ammessi, ascende a circa 1,934l.

I seguenti sono i vari totali presi alle porte secondo ciascun tasso di ammissione:—

Incasso totale di due giorni		£	s.	d.
	a 20s.	506	0	0
„	„ uno „ 10s.	1,052	8	4
„	„ 16 „ 5s.	17,823	8	5
„	„ 63 „ 2½s.	96,066	14	3
„	„ 88 „ 1s.	213,409	9	5
170 giorni £328,858 0 5				

Cosicchè gl' incassi quotidiani alle porte raggiunsero in media nei giorni a 5s. 1,114l., nei giorni a 2½s. a 1,525l., e nei giorno a 1s. a 2,425l.

NUMERO DEGLI AMMESSI.

Il numero totale degli ammessi all'Esposizione Internazionale del 1862 ascese a circa sei milioni e un quarto, il numero esatto dato nel rapporto ufficiale essendo 6,211,103. La media quotidiana fu di 36,328, ed il massimo numero in qualunque giorno, cioè il giovedì 30 ottobre (giorno ad 1s.) fu di 67,891. Il minor numero ammesso fu il mercoledì 5 novembre (ammissione 2½s.), cioè 5,615, ma siccome l'Esposizione era allora virtualmente terminata, è appena giusto di prender quel numero come del minor concorso in qualunque giorno. Sarebbe quindi più giusto prendere il minor numero in qualunque giorno fra il primo maggio e il primo novembre, cioè 7,367 il giovedì 15 maggio, giorno a 5 scellini.

Sebbene gli espositori non avessero diritto all'ammissione gratuita dopo l'apertura della Esposizione, pure fu data ogni facilità all'ammissione di coloro la cui presenza fosse assolutamente necessaria.

Il rendiconto seguente mostra i totali degli ammessi per abbonamento, per permessi gratuiti, e pagamenti alle porte:—

Abbonamenti ordinari . . .	770,704
Abbonamenti pei giorni ad 1s. . .	58,536
Permessi gratuiti ad espositori, addetti e personale . . . }	257,246
Pagamenti alle porte, biglietti pel giorno, e di ritorno dai giardini d'Orticoltura . . . }	5,124,617
	6,211,103

La media quotidiana delle ammissioni per abbonamento e alle porte alle diverse tasse di pagamento è come appresso:—

	Medie degli ammessi quotidianamente
Abbonati . . .	4,507
Abbonati pei giorni a 1s. . .	829
A tasso d'ingresso 5s. . .	12,352
„ „ 2½s. . .	19,610
„ „ 1s. . .	44,904

Da un resoconto ufficiale dimostrante il numero degli ammessi negli stessi giorni di ciascuna settimana, apparisce che nei

<i>Lunedì</i> , il totale in massa era	1,240,615
<i>Martedì</i> , „ „	1,286,213
<i>Mercoledì</i> , „ „	1,203,658
<i>Giovedì</i> , „ „	1,270,388
<i>Venerdì</i> , „ „	641,996
<i>Sabati</i> , „ „	568,233

La media del concorso diurno nei lunedì era 44,307; nei martedì 45,936; nei mercoledì 43,988; nei giovedì 44,806; nei venerdì 22,138; e nei sabati 19,594. L' approssimazione nelle medie dei quattro primi giorni è molto notevole.

Tutti coloro che diurnamente si presentarono con permessi di qualunque sorte sono inclusi nella Tavola qui sopra, come pure nei precedenti dati statistici relativi al numero degli ammessi. Il numero totale delle persone così privilegiate è stato già dato.

Classe		Giurati	Giurati associati
1	Miniere, cave, metallurgia e prodotti minerali	16	3
2	Sostanze e prodotti chimici e processi farmaceutici	24	3
3	Sostanze alimentari	45	3
4	Sostanze animali e vegetabili usate nelle industrie	45	6

35	Vasellami	9	0
36	Toilette, scrivanie e cassette da viaggio	7	1
	Totale	582	68

Nella tavola qui sopra sono inclusi 15 Giurati specialmente nominati per le pompe da incendio nella classe 8.

AGGIUDICAZIONI.

Nell' Esposizione Internazionale del 1862 non vi furono gradazioni di Medaglie; una sola specie di medaglie fu aggiudicata dai giurati; anche Certificati di Menzioni Onorevoli furono aggiudicati. Il numero totale delle Medaglie aggiudicate fu 8,141 e Menzioni Onorevoli 5,282: di queste aggiudicazioni 2,382 Medaglie, e 1,697 Certificati di Menzioni furono date alla Gran Bretagna e sue colonie; e 5,759 Medaglie e 3,585 Certificati ai paesi esteri che esposero.

Nessun' aggiudicazione fu fatta nelle quattro classi di Belle Arti.

INTRODUZIONE GENERALE.

PARTE I.—IL REGNO BRITANNICO.

IL seguente sommario statistico della Gran Bretagna è stato redatto secondo il desiderio espresso ai delegati di Sua Maestà dai delegati imperiali francesi per l'Esposizione Universale del 1867, in una lettera del 15 settembre 1866, chiedendo informazioni assai dettagliate sulle diverse categorie di territorio, popolazione, prodotti, commercio nostrale ed estero, marina mercantile, armata, marina reale, finanza, ecc. ecc.

TERRITORIO.—Posizione Geografica—Mari—Montagne—Fiumi—Aspetto del Paese—Clima.

(a.) *Posizione Geografica.*—Il Regno Unito, il quale comprende l'Inghilterra ed il Principato di Galles, la Scozia, l'Irlanda, l'Isola di Man, e le isole della Manica, è situato al nord-ovest del continente europeo, tra 50° e 58° 41' nord di latitudine, e 1° 46' est e 10° 26' ovest di longitudine.

(b.) *Mari.*—Il regno è circondato al nord ed all'ovest dall'oceano atlantico, al sud dalla Manica, ed all'est dal mare del Nord. L'Irlanda è separata dall'Inghilterra dal mare irlandese. La costa marittima del regno, in proporzione colla sua grandezza, è dunque assai considerabile.

(c.) *Montagne.*—Varie sono le catene di montagne esistenti nel regno britannico, ma la loro elevatezza è d'assai inferiore a quelle degli stati europei continentali. Le quattro catene principali sono: 1° Le Pennine, che si stendono verso il mezzogiorno delle Cheviots, sui confini della Scozia presso Derby, e le di cui cime principali percorrono uno spazio di 3,000 piedi. 2° La giogaja di Cumbria, situata la maggior parte in Cumberland e Westmoreland, possiede le più alte cime in Inghilterra, cioè, Helvellyn, 3,055 piedi; Scafell, 3,166, e Skidaw, 3,022 piedi. 3° La giogaja di Cambria, stendendosi quasi su tutta la provincia di Galles, la di cui cima più alta è Snowdon, cioè, 3,571 piedi; e 4° La giogaja di Devon, che si stende attraverso le contee di Somerset, Devon e Cornwall; le cui cime più alte non trepassano 1,800 piedi.

Nella Scozia la catena principale di molti è quella delle Grampians. La montagna più alta

nella Scozia, ed anche nel regno britannico, è Ben Nevis, dell'altezza di 4,406 piedi sopra il livello del mare. I monti di Cheviot situati in parte nella Scozia ed in parte nell'Inghilterra si stendono attraverso un gran tratto di paese.

In Irlanda, le montagne principali sono la Mourne, e le giogaje di Wicklow. La cima più alta è Carran Tual nella contea di Kerry, che ha un'elevazione di 3,414 piedi.

(d.) *Fiumi.*—Il fiume più importante in Inghilterra, benchè non sia il più lungo, è il Tamigi, sul quale è situata la metropoli. Ha origine dalle acque dei monti di Gloucestershire che colano sotto il nome dell'Isis e si congiungono al medesimo conservando quindi il suo nome ordinario di Tamigi. Sorge verso il levante, e sbocca nel mare tedesco, dopo un corso di quasi 215 miglia.

Gli altri fiumi importanti sono il Severn, che percorre uno spazio di 240 miglia e sbocca nella manica di Bristol, il Trent, Tyne, Wear, Tees, Ouse, Humber, Mersey, Dee, Wye, Medway, ed il Avon. Diversi porti del paese sono situati sulle rive di questi fiumi—come Newcastle e Shields sono sul Tyne; Hartlepool, Stockton e Middlesborough sul Tees; Hull sul Humber; e Liverpool sul Mersey. I principali fiumi scozzesi sono il Tweed, Forth, Tay, Spey ed il Clyde. Leith è situato sul Forth, Dundee sul Tay e Greenock ed il porto di Glasgow sul Clyde.

I fiumi principali d'Irlanda sono il Shannon di 159 miglia di lunghezza, il Suir, Barrow, Slaney, Boyne, Bandon, Bann, ed il Liffey.

(e.) *Superficie del paese.*—Vi sono pochi paesi che presentano una varietà più grande dell'Inghilterra, ed in forza della dolcezza del clima e della giusta abbondanza di pioggia, il terreno è eccessivamente fecondo, ed ammirabilmente prestante alla coltivazione del grano et delle radici, come della pastura. All'esclusione del terreno incolto e delle pasture sui monti, due terzi dell'area del regno erano in coltivazione nel anno 1866. La provincia di Galles è la più montuosa d'Inghilterra, e ad eccezione delle pasture dei monti, solamente circa una metà dell'area della provincia di Galles, e la quinta parte di quella della Scozia erano conosciute in coltivazione nell'anno sopradetto.

L' Irlanda è comparativamente un paese piano e possiede una grand' estensione di terreno marese; ed abbenchè non così ben coltivato come le altre parti del regno, e minore sia la produzione dei raccolti, a cagione della umidità del clima, ha però mollissimi prati d' una grand' estensione, e pasture di monti. Nell' anno 1866, la metà circa dell' area totale del regno era rapportata come in coltivazione permanente, incluso le pasture sumonti.

(f.) *Clima.*—Il clima d'Inghilterra è salubre e dolce, pero in alcune località è più umido e variante che quello d' ogni altro paese, situato alla stessa distanza dell' equatore. Per la sua posizione geografica, l' Inghilterra va soggetta all' influenza delle correnti d' arie calde che vengono dal sud e sud-est dell' Atlantico, e dai freddi portati dai venti del nord. I vapori provenienti dall' Atlantico e le colonne d' aria glaciale alternandosi troppo frequentemente,

costituiscono le cause principali della volubilità ed incostanza della temperatura.

La temperatura di Scozia, comparata con quella d' Inghilterra, è molto più fredda: però le numerose baje e bracci di mare che s' internano lungo le coste mitigano in parte l' estremo rigore, ed il freddo (ove si voglia tener calcolo della posizione settentrionale di questo paese) non è tanto sensibile.

Il clima d' Irlanda è più dolce ed umido che quello d' Inghilterra e Scozia, e molto più adattato alla pastura che per altri raccolti. Le piante che abbisognan di caldo artificiale in Inghilterra, prosperano all' aria aperta in Irlanda.

La tavola seguente compilata sui rapporti forniti dal Professore Airy, astronomo reale, mostra gli *estremi* della temperatura e della pioggia verificatisi nelle tre divisioni del regno nei passati venticinque anni.

* Elevazione della misura da pioggia.

† Le cifre indicanti la temperatura dal 1853 al 1865 e la quantità di pioggia dal 1853 al 1860 sono estratte dalle statistiche intabellate dal Capitano Wilkinson del Genio Militare a Dublino.

AMMINISTRAZIONE.—Generale—Governò locale — Stabilimenti Religiosi — Capoluoghi.

(a.) *In Generale.*—In Inghilterra il governo

costituzionale è chiamato comunemente 'mixed form,' il potere legislativo è tenuto distinto dal potere esecutivo, l' ultimo è investito dal re o dalla regina solamente, che anche essi rappresentano lo stato in tutte le transa-

zioni internazionali e trattati, mentre il potere legislativo è riservato al gran consiglio nazionale, chiamato il parlamento, composto dei tre capi del regno, cioè, della regina, dei nobili spirituali e temporali, e dei deputati. La Regina è suprema; da lei sono decretate le nuove leggi col consenso delle due camere legislative; il suo ufficio è ereditario. I nobili spirituali e temporali sono i prelati e pari del regno. I deputati o rappresentanti scelti dal popolo, sono parte eletti nelle contee, e parte nella città e borghi, e la loro elezione ha luogo poco prima dell'apertura del parlamento, conservando il loro seggio e qualità per la sola durata di quella sessione parlamentare.

I nobili (lords) formano una camera; i deputati un'altra. La Regina siede in mezzo ai nobili, ma tiene il suo posto solamente nelle occasioni formali, come allorchando ella apre la tornata del parlamento, od approva i *bills* passati alle due camere. In rapporto colla vigente costituzione ella non può essere presente qualunque deliberazione; nè tampoco essere edotta su quanto succede, sia nella camera dei pari o in quella dei deputati, che dietro comunicazione ufficiale. Non si posson far leggi, nè imporre una tassa, senza il permesso del Parlamento, della Regina, e delle due camere dei nobili e dei deputati; e questo assenso deve risultare dal scrutinio segreto. La Regina però ha voce negativa solamente; e nessuna misura può originare da lei, a meno che non si tratti di un atto di grazia. Le due camere hanno il potere di decretare ogni misura senza restituzione, eccettuato quella dei *bills* relativi ai diritti dei pari o contenenti concessioni di denaro, le quali debbono passarsi alla camera dei nobili, o dei deputati rispettivamente; nè nell'un o l'altro caso il *bill* presentato così ad una camera può subire alcun cambiamento dall'altra. Il parlamento è convocato dalla Regina, ed è prorogato o disciolto da lei quando lo trova conveniente. Essa è però obbligata di convocarlo almeno una volta per anno e più volte se necessario.

Una proroga è una continuazione del parlamento da una sessione ad un'altra; una dissoluzione è la sua morte civile. La durata legale è fissata a sette anni, a meno che sia sciolto antecedentemente da una proclamazione reale. Tutti i doveri, siano amministrativi ed esecutivi del governo, sono effettuati in nome della Regina. Con un sistema che risponde a tale intento, ella sorveglia l'amministrazione della giustizia, ed osserva che la legge abbiano il loro effetto. Tutte le aule dei giudici, e loro concomitanti, cioè ufficiali, giudici, sceriffi, giudici di pace, guardie civiche, ecc. sono nominati ed hanno investitura direttamente da lei. È dovere ed ufficio della Regina di reprimere disturbi e conservare la pace del regno; ogni violazione della quale è chiamata infrazione di pace. Nelle relazioni estere, essa stabilisce la pace o la guerra, negozia trattati, manda ambasciatori negli altri stati, e riceve gli esteri al di lei palazzo. In aggiunta al carico di questi

onerosi doveri la regina dispone della intera forza nazionale, tanto militare che civica, e nomina gli ufficiali. La paga dell'esercito è provveduta dall'autorità del parlamento intero. Nell'esercizio delle sue prerogative, i di cui limiti sono confirmati dalla legge, non è responsabile verso alcuno; ed ancorchè emettesse un atto fuori della sua giurisdizione e non conforme al potere riconosciuto dal regno, ella è esente da tutta responsabilità personale. Per i motivi suesposti la regina in tutti i suoi atti adopra l'azione degli ufficiali o persone non protette da tale esenzione legale, e uniformemente lascia le redini degli affari dello stato a suoi ministri, dei quali un certo numero formano parte del consiglio de' ministri.

Gli atti del potere esecutivo sono anche di necessità assoggettati ad un altro freno efficacissimo. Le rendite ordinarie del regno non essendo proporzionate ai bisogni dello stato è divenuto necessario di ricorrere frequentemente ai deputati per sussidii pecuniarii. In tale occasione i disegni de' ministri sono spesso volte materia di discussione tra i deputati, ed i mezzi per effettuarli posson essere o rifiutati o concessi a giuste condizioni. E chiaro, però, che il potere di rifiutarli totalmente non può esser esercitato vantaggiosamente se non quando sono essenzialmente necessari alla comune prosperità; per esempio sarebbe ridicolo per i deputati volendo tener in soggezione i ministri, di ricusare il pagamento al creditore pubblico, o il mantenimento delle istituzioni civili e militari.

(b.) *Governo locale.*—In quanto al governo locale, il paese è diviso per proposti civili nelle contee, città, borghi e parrochi. Gli affari ministeriali e giudiziali della contea sono trattati dal capo sceriffo, il coroner, ed i giudici di pace. Il governo militare è affidato al governatore della contea ed ajutato dal sotto governatore. Il governatore della contea ha il comando della milizia, ed è spesso volte i *custos rotulorum* o guardiano dei registri della contea. I soggetti principali del governo locale sono la conservazione di pace e dell'ordine; il mantenimento dei poveri e della polizia; costruire e tenere in ordine le strade, i ponti, i rivi, ecc. ecc. Il denaro necessario per arrivare a questo fino è ottenuto per mezzo d'una imposta sulla proprietà, cioè terre, case, ecc. nella contea.

Il governo municipale della città e borghi è costituito del podestà e corpo municipale e quello dei parrochi ed alcuni parrochiani. In molti borghi popolosi non uniti in corporazione, Commissari e Comitati come Comitati locali di Salute, Commissari per miglioramenti o intraprese di lavori utili e sistemazione degli affari locali, sono eletti da quelli che pagano tasse municipali, sotto l'autorità del parlamento.

(c.) *Stabilimenti Religiosi.*—La religione dominante in Inghilterra è la Protestante Episcopale, benchè tutte le religioni siano tollerate.

L'amministrazione della religione dello stato è affidata agli ecclesiastici, una casta destinata a questo proposito, e costituita secondi i riti della chiesa anglicana. Il loro mantenimento è tirato da rendite provenienti da terre, decime, imposte ecclesiastiche, affitto dei banchi, offerte di Pasqua, e dai tributi pagati per i battesimi e sepoltura ecc. Le divisioni ecclesiastiche d'Inghilterra e di Galles sono provincie o arcivescovati, arcidiaconati, diocesi o vescovati, decanati, e parrocchie, ognuno dei quali ha i suoi funzionari, ed a questi sono sottomessi funzionari delle divisioni inferiori — la Regina come capo della Chiesa reggendo tutto. Vi sono due arcivescovi, quelli di Canterbury e York, e venticinque vescovi. Per la gestione degli affari ecclesiastici ogni provincia havvi un consiglio, chiamato convocazione, il quale comprende i vescovi, arcidiaconi, e decani in persona, con un certo numero di procuratori, rappresentanti del clero inferiore. Questi consigli sono radunati dai rispettivi arcivescovi in ubbidienza al mandato della regina. Le quistioni degli affari del clero dissidente vengono definite frà loro. La chiesa scozzese è governata da una assemblea generale che si raduna annualmente. Un rappresentante del sovrano, chiamato 'Lord High Commissioner' interviene alla radunanza. La chiesa d'Irlanda, come quella d'Inghilterra, è protestante episcopale, ed è governata similmente. Però, la più gran parte della popolazione irlandese segue la fede cattolica romana.

(d.) *Città Principali.*—Le città, ed i borghi i più importanti d'Inghilterra sono Londra, Liverpool, Manchester e Salford, Birmingham, Leeds, Sheffield, Bristol, Wolverhampton, Newcastle-sopra-il-Tyne, Stoke-sopra-il-Trent, e Hull. La popolazione di ogni città soprannominata, oltrepassa 100,000 anime. Vi sono anche settantadue borghi in Inghilterra e Galles dei quali la popolazione oltrepassava 20,000 anime, secondo il censo del 1861. Le città principali della Scozia sono Edimburgo, Glasgow, Dundee, Aberdeen, Paisley, Greenock, Leith e Perth; e nell'Irlanda, Dublino, Belfast, Cork, Limerick, Waterford e Londonderry. La popolazione delle tre città metropolitane nel 1861 fu: in Londra, 2,803,989 persone; in Edimburgo, 170,444, ed in Dublino, 314,409.

AREA.—Totale—Costiera—Porti.

(a.) *Totale.*—L'area totale del Regno Unito è di 121,115 miglia quadrati, ossia 77,513,000 jugeri di statuto, che sono divisi come segue.

(b.) *Costiere.*—L'estensione dell'Inghilterra e di Galles è stimata d'essere circa 2,000 miglia, e quella della Scozia 2,500 miglia. L'Irlanda ha circa 750 miglia di circuito, gran parte del quale, particolarmente dall'ovest e dal sud-ovest, è profondamente solcato dall'oceano atlantico.

Divisione, ecc.	Area		Estensione rapportata in 1866 d'essere sotto Coltivazione, Nudo, Fulvo, ed in Erba
	In Miglia quadrati	In Jugeri di Statuto	
Inghilterra	50,923	32,590,000	Jugeri 22,262,000
Galles.	7,398	4,735,000	2,284,000
Inghilterra e Galles.	58,321	37,325,000	24,546,000
Scozia	30,685	19,639,000	4,158,000
Irlanda	31,755	20,322,000	15,550,000*
Isole nei Mari Britanniche	354	227,000	115,000
Totale nel Regno Unito	121,115	77,513,000	44,369,000

* Il numero di jugeri in erba si comprende in questa cifra; l'area dell'Irlanda coltivata pare perciò proporzionalmente più grande che quella delle altre divisioni del regno per le quali non si fa conto del terreno in erba.

(c.) *Porti.*—I migliori porti, sia nella Gran Bretagna, sia nell'Irlanda, sono situati sulle coste del sud e del sud-ovest, quelli dell'est non offrendo che poca comodità per i bastimenti.

I porti più grandi del Regno Unito sono quelli di Portsmouth, Plymouth, Milford Haven e Cork, e sono superiori alla maggior parte, se non a tutti altri nel mondo. Godono di una gran profondità, e sono capaci di dar asilo alla più numerosa flotta che esiste. I porti di Holyhead e Dover ora in via di costruzione, daranno anche un rifugio considerabile alle navi. Spese grandissime sono state fatte a diversi altri porti del regno. Il porto di Londra è il principale trà quelli di fiume nella Gran Bretagna. Il secondo fiume commerciale del regno è il Mersey. Newcastle, Hull, Bristol, Grenock, Sunderland, Leith, Dundee, Aberdeen, Port Patrick, Kingstown, ed altri porti numerosi ricevono bastimenti di gran portata; ed altri porti inferiori in diversi parti del regno ricettano bastimenti di picciola mole, ed in questo modo facilitano di molto il commercio interno del regno.

MEZZI DI COMUNICAZIONE.—(a.) *Fiumi, Canali, Strade e Laghi.*—In addizione ai fiumi navigabili dei quali si contano circa 2,500 miglia, vi sono in Inghilterra e Galles circa 2,800 miglia di canali, 24,000 miglia di strade postali, e 100,000 miglia di strade carrozzabili. In quasi tutte le città grandi, paesi e borghi commerciali, esistono comunicazioni per acqua e per terra. Nella Scozia, i canali principali sono, il canale grande che misce i golfi dei Forth e del Clyde ed i canali d'Unione Crinan e Caledonian. L'ultimo, congiungendosi a diversi laghi, si stende interamente attraverso al paese, e forma una comunicazione navigabile col centro dell'isola. Le strade postali ed altre sono stimate a 3,700 miglia di lunghezza. L'estensione dei fiumi navigabili in Irlanda è circa 210 miglia, ed i canali 300

miglia. Non v' hanno rapporti sul numero delle miglia che percorrono le strade d'Irlanda.

L'Inghilterra ha pochissimi laghi, e nessuna di grand' estensione. I laghi inglesi sono situati principalmente in Westmorland e Cumberland:

(b.) *Le Strade Ferrate.*—Lo sviluppo del sistema delle strade ferrate nella Gran Bretagna durante i cinque ultimi anni è stato molto rapido; ed oltre ai mezzi estesi di comunicazioni per le riviére, i canali, e le strade ordinarie, c'è ora 13,289 miglia di strada ferrata che forma una linea di connessione con ogni città e territorio del regno.

Il numero delle miglia aperte al commercio in ciascuna divisione del regno a tutto il 31 dicembre 1865 ascendeva a:—

	Linee Doppie	Linee Singole	Totale
	Miglia	Miglia	Miglia
In Inghilterra e Galles .	6,081	3,170	9,251
Scozia	946	1,254	2,200
Irlanda	476	1,362	1,838
Gran Bretagna .	7,503	5,786	13,289

L'ammontare totale del capitale pagato in azioni e in prestiti, ecc. per le strade ferrate della Gran Bretagna alla fine di dicembre 1865 fu 455,478,000^l.

La cifra dei passeggeri trasportati durante gli anni 1864 e 1865 in ogni divisione del regno ascese a:—

	Anni	In Inghilterra e Galles	In Scozia	Irlanda	Nella Gran Bretagna
Viaggiatori:		No.	No.	No.	No.

* Compresi i viaggiatori per il treno parlamentare.

(c.) *Telegrafo Elettrico*.—Le statistiche dei telegrafi elettrici per uso pubblico, depositate al Board of Trade dalle rispettive compagnie

telegrafiche nell' anno 1865 presentavano le cifre seguenti :—

Società	Lunghezza di Linee Telegrafiche	Lunghezza di Linee in uso	Numero di Stazioni aperte al Pubblico	Numero degli istrumenti	Numero di Ambasciate Pubbliche
	Miglia	Miglia			
Elettro e Internazionale	9,306	45,044	1,022	5,778	non si sa
Inglese ed Irlandese Magnetico*	4,401	18,668	491	manca il dato	1,251,265
Strada ferrata South Eastern†	323½	3,064½	104	159	88,711
Strada ferrata Londra, Brighton e South Coast	240¾	688	57	92	66,523
Territorio di Londra	123	470	83	195	316,272
La Gran Bretagna‡	1,672	9,506	125	358	743,870
Totale	16,066¼	77,440½	1,882	—	—
Submarino§	887(nel 1863)	—	—	—	—

* Il numero dei dispacci mandati sul continente e relative risposte dal suddetto da questa compagnia e quella del Telegrafo Submarino, ed il numero dei dispacci staccati dalle compagnie delle strade ferrate, dei giornali e degli uffici di pubblicità non sono comprese nel servizio pubblico, ma sono stimati a circa 250,000 dispacci per anno.

† La compagnia della strada ferrata South Eastern non ha connessione con alcune delle compagnie Elettro-Telegrafiche.

‡ Eccezzuati i telegrafi privati provveduti da questa compagnia a persone che hanno due luoghi di negozio, e anche del sistema di telegrafi del Fire Brigade.

§ Telegrafo per Calais, 24 miglia; Boulogne, 25 miglia; Dieppe, 78 miglia; Jersey, 30 miglia; Ostende, 70 miglia; Hannover, 80 miglia; Danimarca, 380 miglia.

Oltre il soprascritto, v'hanno due gomene della compagnia telegrafica fra l'Irlanda ed il Nuovo mondo. La lunghezza della gomema imbarcata per la linea nel 1865 fù miglia nautiche 2,300, e nel 1866 per porre una gomema nuova, e rinnovellare quella che fu danneggiata nell' anno antecedente furono impiegate non meno di 2,730 miglia nautiche.

POPOLAZIONE.—Totale — Nazionalità — Dinominazioni Religiose — Occupazioni — Dei Capo-Luoghi — Aumentazione dopo 1855 — Emigrazione — Ciechi — Sordi — Muti — Nascite — Morti — Sposalizii — Poveri — Malfattori Criminali.

(a.) *Popolazione*.—La popolazione totale della Gran Bretagna, dal censo ultimo 1861 risultava essere di 29,070,000 persone, ed in ogni divisione del regno :—

Divisione	Popolazione (eccettuati l'Esercito e l'Armata Navale)			Esercito e Armata Navale, in altri paesi
	Uomini	Donne	Totale	
In Inghilterra	9,224,000	9,730,000	18,954,000	162,273
Provincia di Galles	552,000	560,000	1,112,000	
Scozia	1,450,000	1,612,000	3,062,000	
Irlanda	2,837,000	2,962,000	5,799,000	
Isole su Mari Inglesi	66,000	77,000	143,000	2,227
Gran Bretagna	14,129,000	14,941,000	29,070,000	250,356

La proporzione della popolazione nelle quattro divisioni del regno fu :—In Inghilterra e la provincia di Galles 69·1, in scozia 10·5, in Irlanda 19·9 e nelle Isole ½; delle dieci parti della popolazione del regno, sette appartengono all' Inghilterra e la provincia di Galles, due all' Irlanda, una alla Scozia, $\frac{1}{10}$ alle Isole su mari inglesi.

Comprendendo gl' uomini all' estero appartenenti all' esercito, l' armata navale, ecc. risultavano nell' anno 1861, 14,379,000 uomini contro a 14,941,000 donne. La popolazione stimata della Gran Bretagna (comprendendo l' esercito e l' armata navale in paesi forestieri) alla metà dell' anno 1866 fu 30,329,207.

La quantità della popolazione calcolata per miglio quadrato nel 1861 era :—

In Inghilterra	372·2
Nella provincia di Galles	150·3
In Scozia	99·7
In Irlanda	182·6
Nelle Isole	403·9
Regno Unito	240·0

(b.) *Nazionalità*.—La nazionalità della popolazione nelle diverse divisioni del regno nell' anno suddetto era così distinta :—

Nazionalità	In Inghilterra e Galles	In Scozia	In Irlanda	Nelle Isole su Mari Inglesi
Inglese	17,985,617	54,920		19,525
Gallese	1,134,435	1,112	50,936	290
Scozzesi	169,202	2,785,804	16,925	1,235
Irlandesi	601,634	204,083	5,720,686	5,534
Nati nelle Isole su Mare Inglese	18,423	628		111,354
„ „ Colonie e Indie Inglese	51,572	7,559		1,262
„ „ in istati forestieri	101,832*		10,420	4,184†
„ „ in mare	3,509	8,188†		63
Totale	20,066,224	3,062,294	5,798,967	143,447

* Comprese 84,090
† „ „ 3,969 } persone che furono cittadini di stati forestieri.
‡ „ „ 3,923

(c.) *Denominazioni Religiose.*—Non vi sono rapporti delle persone in ogni denominazione religiosa nella Gran Bretagna. Il numero delle diverse sette in Irlanda nel 1861 fu calcolato come segue:—

	Persone
Appartenenti alla chiesa dominante	693,357
Presbiteriani	523,291
Metodisti	45,399
Indipendenti	4,532
Anabattisti	4,237
Quaccheri	3,695
Altre religioni	14,695

Totale dei Protestanti	1,289,206
Cattolici	4,505,265
Ebrei	393
Non specificati	4,103
Totale	5,798,967

(d.) *Occupazione.*—Comparando le occupazioni del popolo britannico nel 1851, la prima data nella quale furono ottenuti rapporti fedeli sulle occupazioni, colle statistiche del 1861, i cambiamenti seguenti nelle tre grandi divisioni del lavoro, si osservano:—

1°. La quantità della popolazione impiegata nel mestiere d'agricoltura ha scemato dal 12 al 10 per cento.

2°. Quella impiegata nel commercio ha aumentato dal 21 al 27 per cento.

3°. E quella occupata in altre maniere aveva scemato dal 67 al 63 per cento.

Questi fatti si discerneranno con più facilità dal rapporto seguente:—

	Impiegati in Agricoltura	Impiegati in Commercio	Impiegati in altre maniere
In 1851	12	21	67
In 1861	10	27	63

Gran difficoltà fu trovata nel procurare rapporti fedeli sulle occupazioni del popolo, e benché molte di queste difficoltà fossero in parte sormontate rivedendo il censo del 1861, le informazioni ottenute allora furono considerate imperfette sotto molti riguardi. In forza però del buon volere generale le sei gran divisioni delle occupazioni sulle quali i rapporti del censo furono redatti, danno una

approssimazione passabilmente giusta della verità. In Inghilterra e la provincia di Galles sopra una popolazione di 20,066,224, rapporti delle occupazioni di 19,915,334 persone furono ottenuti. In Scozia i rapporti furono completi, ed in Irlanda presentavano la cifra di 5,416,806 persone occupate sopra un totale di 5,798,967.

La tavola seguente dimostrerà il per cento della popolazione nelle sei classi d'occupazioni in ogni divisione del regno nel 1861:—

Classe d'Occupazione	Rapporti per Cento		
	In Inghilterra e Galles	In Scozia	In Irlanda
(1) Di Professione	2·4	1·7	1·8
(2) Domestica	57·4	57·0	56·8
(3) Commerciale	3·1	2·8	2·2
(4) Agricolturale	10·1	12·5	18·3
(5) Industriale	24·3	22·8	12·3
(6) Indefinita e non-produttiva]	2·7	3·2	8·6
	100·0	100·0	100·0

- (1) Compresa le persone occupate nel governo o nella difesa del paese, e nelle professioni di belle arti, di scienza, ecc.
- (2) Compresa le persone occupate nelle funzioni di moglie, madre, e vedove, bambini e relativi non indicati altrimenti, scolari, e persone occupate in dozzina, alloggio e domestici.
- (3) Contemplata la gente occupata in affari commerciali e mercanti di roba comune, messaggeri sulle strade ferrate, strade, canali, riviere e mari, persone impiegate in magazzino, portinai e facchini.
- (4) Calcolate le persone impiegate nell' agricoltura e orticoltura, e nella cura degli animali.
- (5) Considerate le persone occupate in manifatture d' ogni specie, non specificate altrimenti.
- (6) Compresa le persone occupate come lavoratori, persone nobili e aventi ricchezze, non rapportati avere nessun ufficio o occupazione. Persone mantenute dal comunetà, cioè pensionati, indigenti, accattoni, matti, prigionieri, vagabondi o senza alcuna occupazione.

La tavola seguente mostra il numero totale di persone d' ogni sesso occupati in faccende domestiche, agricoltura, ed industria in ciascuna divisione del regno nel 1861. Il numero di coloro occupati nell' agricoltura, e nell' industria, comprende tutte le persone aventi connessione col ramo agricolo, cioè fattori, mercanti, lavoratori, operai, manifattori, ecc. ecc.

Numero di Persone di ambo i sessi impiegate in faccende domestiche, agricoltura ed industria (rami principali) in ciascuna divisione del Regno Unito alla fide del censo del 1861.

Ramificazioni di negozj, Manifatture nelle quali sono impiegati	In Inghilterra e Galles			In Scozia			In Irlanda

Leith	32,219	36,029	—
Perth	24,670	26,094	—
In Irlanda :			
Dubino (città) .	258,369	314,409	318,437
Belfast	100,301	123,479	—
Cork	85,732	93,389	—
Limerick	53,446	50,068	—
Waterford	25,297	30,570	—
Londonderry	20,187	20,366	—

Nota.—Nell' anno 1861 vi erano settantadue città in Inghilterra, compreso il Principato di Galles, le quali avevano una popolazione ciascheduna di più di 20,000 abitanti.

L' aumento della popolazione in alcune delle principali città e borghi in Inghilterra negli anni 1855 e 1865, è mostrata nella prossima tavola.

	Stima Totale della Popolazione	
	Nel 1855	Nel 1865
Londra (capitale)	2,548,382	2,993,513
Liverpool	403,547	476,368
Manchester	317,966	354,930
Salford	92,106	110,833
Birmingham	257,941	327,842
Leeds	186,356	224,025
Sheffield	154,662	211,529
Bristol	144,236	161,809
Newcastle-upon-Tyne	96,307	119,651

(f.) *Aumento della Totale Popolazione dopo il 1855.*—L' aumento della popolazione nella

Gran Bretagna fra gli anni 1855 e 1866 (meno l' esercito, l' armata navale, ecc. fuori del regno) può essere valutato a 12 per cento, la stimata popolazione essendo aumentata da 21,807,000 nel 1855 a 24,363,000 nel 1866. In Irlanda durante lo stesso tempo la popolazione diminuì

circa 7 per cento principalmente a causa della grand' emigrazione d' Irlandesi.

(g.) *Emigrazione.*—Durante i dieci anni che ebber fine col 1865, 1,607,745 persone emigrarono dalla Gran Bretagna. Di questo numero 139,802 partirono per le colonie dell' America Settentrionale, 1,005,844 agli Stati Uniti, 397,302 alle colonie d' Australia, e 64,797 in altre parti. Non vi sono rapporti del numero degli emigranti che arrivano dai paesi esteri nella Gran Bretagna.

(h.) *Popolazione di ciechi.*—Il numero totale delle persone cieche enumerato alla compilazione dell' ultimo censo nella Gran Bretagna (1861) era 29,248, del qual numero vi erano—

In Inghilterra e Galles .	19,352	ossia 1 in 1,037
Scozia	2,820	„ 1 „ 1,086
Irlanda	6,879	„ 1 „ 843
Isole in mari inglesi .	197	„ 1 „ 728
Regno Unito	29,248	ossia 1 in 994

della popolazione

Vi sono diverse istituzioni per la cura dei ciechi in Londra e in molte altre città di tutto il regno.

(i.) *Sordo-Muti.*—La quantità totale di sordo-muti alla stessa data era 20,311, distribuita come segue:—

In Inghilterra e Galles .	12,236	ossia 1 in 1,640
Scozia	2,335	„ 1 „ 1,311
Irlanda	5,653	„ 1 „ 1,026

PRODUZIONE.—Agricoltura—Raccolte—Lana—Lino—Bestiame—Grandezza dei Poderi—Foreste—Pescherie—Carbone—Metalli—Petrolio—Argilla—Materiale di Terra—Sale—Fabbriche—Tessute—Altre Fabbriche.

(a.) *Agricoltura.* — Riguardando la produ-

zione del terreno nel nostro paese non vi sono, sfortunatamente, alcuni rapporti ufficiali della quantità di grano, di carne, e lana, o del burro, cacio, ed altri prodotti della cascine, consumati annualmente. Sotto questo rispetto l'Inghilterra non è così avanzata come le altre nazioni forestieri, le quali hanno con molta cura e studio fondato un sistema perfetto statistico d' agricoltura. Insino all' anno 1866 nessun rapporto esatto fu ottenuto nella Gran Bretagna, nè sul numero dei jugeri in produzione, nè della quantità di bestiame.

La tavola seguente farà vedere l' estensione di terreno ridotto a coltivazione in ogni divisione del regno, come da rapporto:—

Divisione	Area Totale in jugeri	Totale Quantità di jugeri in raccolta d'ogni specie, Scarsa, Maggese, ed Erba	Quantità di jugeri in raccolta di Grano	Quantità di jugeri in raccolta d' Erba
Inghilterra	32,590,397	22,261,833	7,400,170	2,750,008
Galles	4,734,486	2,284,674	521,074	139,265
Scozia	19,639,377	4,158,360	1,366,540	663,257
Gran Bretagna	56,964,260	28,704,867	9,287,784	3,552,530
Irlanda	20,322,641	*15,549,796	2,173,433	1,482,091
Isola di Man	180,000	82,902	27,266	12,208
Isole della Manica { Jersey	28,717	20,357	3,142	5,253
Guernsey	17,967	11,999	2,041	2,938
Regno Unito	77,513,585	—	11,493,666	5,055,020

* Queste cifre comprendono le pasture delle montagne, le quali sono escluse nei rapporti sulle altre divisioni del regno.

(b.) *Raccolte.* — Il numero totale dei jugeri di erba in coltivazione di grano tera come segue:—

	Jugeri
In Frumento	3,697,635
„ Orzo	2,398,485
„ Avena	4,469,297
„ Segala	67,879
„ Fave	537,210
„ Piselli	323,160
	11,493,666

Stimando la media produzione di frumento essere ventisette staja per jugero nella Gran Bretagna, e venticinque nell' Irlanda, la produzione annuale di frumento può essere calcolata a circa 12,364,000 quarti. La produzione nostrale di frumento è, però, assai minore della quantità richiesta dai consumatori, e grandissime quantità di frumento ed altre qualità di grano sono importate, come può rilevarsi da una relazione sul commercio generale degli imposti del regno. Il Signor Caird, di riputazione ben conosciuta in affari d' agricoltura, stima la media produzione delle altre specie di raccolte di grano essere: orzo, trentotto staja per jugero; avena e segala quarantatré staja per jugero, e fave e piselli trenta staja.

Negli ultimi anni una assai più grand' attenzione è stata data all' allevamento del bestiame nella Gran Bretagna, e in conseguenza una grand' area del paese è stata destinata alla coltura di raccolta di radici. La totale quantità di jugeri in coltivazione d' erbacei nella Gran Bretagna nel 1866 era 5,055,020, dei quali 1,555,609 jugeri coltivati a patate; 2,468,564 seminati a rape e 'swedes'; 279,987 producevano 'mangold,' una specie di barbabietola; 22,061 carote; 216,610 cavolo, 'kohl-rabi,' e radici, e 512,189 vecchie, cedrangola ed altre raccolte erbacee meno trifoglio o erba.

(c.) *Lana e Lino.* — Dei materiali greggi adoperati nella fabbrica di tessuti, due soltanto sono prodotti nel Regno Unito, vale a dire, lana e lino. Il Signor Behrens basa la di lui stima sulla quantità di pecore esistenti nel regno e fa ammontare la produzione nostrale di lana greggia a circa 152,000,000 libbre. Il lino è coltivato principalmente in Irlanda, ma allo stesso tempo, minori quantità sono prodotte in Inghilterra e Scozia. Il numero totale dei jugeri coltivati a lino in Irlanda nel 1866 era 263,659 jugeri, e la produzione di lino era 1,051,000 quintali.

(d.) *Bestiame.* — Il numero totale di ogni specie di bestiame nelle differenti divisioni del Regno Unito nel 1866 era:—

Divisione	Bestiame			Pecore	Porci
	Vacche	Altro Bestiame	Totale		
	No.	No.	No.	No.	No.
Inghilterra	1,290,529	2,016,505	3,307,034	15,124,541	2,066,299
Galles	222,546	318,855	541,401	1,668,663	191,604
Scozia	370,447	566,954	937,401	5,255,077	219,716
Irlanda	1,481,446	2,261,486	3,742,932	4,270,027	1,493,000
Isola di Man	7,755	10,932	18,687	55,954	10,956
Isole della Manica {	Jersey	5,815	6,222	12,037	517
	Guernsey	3,030	3,946	6,976	1,214
Totale, Regno Unito	3,381,568	5,184,900	8,566,468	26,375,993	3,993,506

A causa delle perdite cagionate dalla peste il sopracitato rapporto del bestiame è minore della quantità ordinaria tenuta nel regno. Sommando la cifra del bestiame ucciso dalla epidemia col numero di quello esistente all'epoca del soprascritto rapporto, si avrebbe un totale di 8,716,279. Il numero delle pecore secondo le relazioni avute dalle provincie del nord dell' Inghilterra e della Scozia è probabilmente minore al numero di agnelli esistenti nell' anno 1866, in conseguenza del tempo nel quale i rapporti furono redatti. I porci tenuti dai contadini, ed anche nelle città, non sono inclusi nei rapporti che sopra e riguardanti le differenti divisioni della Gran Bretagna.

Nella collezione dei sopradetti rapporti si osserva che niuna ricerca fu fatta per assicurarsi sul numero dei cavalli. Il numero dei cavalli e muli nella Gran Bretagna nel 1864 stando al rapporto sulle tasse era 1,071,095; in Irlanda nel 1866 era 535,000, formanti un totale di un milione e mezzo per tutto il regno.

(e.) *Grandezza dei Poderi.*—1. *Gran Bretagna.*—L'ultimo rapporto della grandezza dei poderi nella Gran Bretagna fu compilato nell'anno 1851, ed in allora il numero totale dei poderi su tutte le divisioni del regno, era come segue:—

	Numero dei Poderi.
In Inghilterra e Galles	225,318
Scozia	56,650
Isole in mari inglesi	3,968
Totale	285,936

La media grandezza di ogni podere era 102 jugeri nella Gran Bretagna; 111 jugeri in Inghilterra e Galles; 74 in Scozia; e meno di cento nelle isole. Le proporzioni per scala dei poderi nella Gran Bretagna erano:

Meno di 100 jugeri	672 poderi
100, e meno di 200 jugeri . .	187 „
200, e meno di 1,000 jugeri .	137 „
1,000, e più	4 „
	1,000

La quantità media del terreno nelle mani di 2,033 affittaiuoli, i quali coltivavano poderi di 700 e più jugeri, in Inghilterra e Galles allo stesso tempo, oltrepassava la quantità coltivata

da 97,800 piccoli affittaiuoli, da 10,060 jugeri, come si vede nella seguente tavola:—

	Numero dei Poderi.	Jugeri di terreno.
Affittaiuoli coltivando poderi di 700 e più jugeri	2,038	2,152,050
Piccoli	97,800	2,141,990

2. *Irlanda.*—La grandezza dei poderi coltivati in Irlanda nell'anno 1864 era—

Grandezza dei Poderi.	
Meno di 5 jugeri	130,690
5 a 15 „	176,368
15 a 30 „	136,578
30 a 50 „	71,961
50 a 100 „	54,247

Totale meno di 100 jugeri	569,844
100 a 200 jugeri	22,065
200 a 500 „	8,303
Più di 500 „	1,559
Totale	601,771

(f.) *Foreste.*—Non vi sono rapporti sulla quantità di legname prodotto nel Regno Unito, ma il valore annuale è calcolato a circa due milioni di lire sterline.

(g.) *Pesche.*—Le pesche inglesi sono molto estese, e un resoconto generale di esse sarà trovato nelle note statistiche alla classe 70.

(h.) *Carbon fossile e Metalli.*—Le risorse minerali sono assai estese, e formano una delle ramificazioni più importanti della ricchezza nazionale. Dopo l'anno 1854, più precisi rapporti delle produzioni minerali del paese sono stati ottenuti sotto la direzione del signor Roberto Hunt, archivista delle miniere attaccato al Real museo di Geologia. Il valore totale del carbone e dei metalli prodotti nel Regno Unito nell'anno 1865 montava a 41,745,429 lire sterline. La sottoscritta tavola rappresenta le quantità ed il valore delle produzioni minerali nel 1865.

Il valore totale, dunque, di carbone e di metalli era—

Carbone	£ 24,537,646
Metalli	15,773,287
Minerali terruginosi meno argilla e pietre da costrurre edifici	1,434,496
Totale	41,745,429

		Quantità		Valore Stimato sul posto di Produzione	
		Minerali cavati	Metalli prodotti	Minerali cavati	Metalli prodotti
				£	£
Carbone	Tonnellate	98,150,587	—	24,537,646	—
Ferro	”	9,910,045	4,819,254	3,324,804	11,773,220
Piombo	”	90,451	67,181	1,153,134	1,433,161
Rame	”	198,298	11,888	927,938	1,134,664

Oro	”	4,280	once 1,664	—	5,824
Argento	Once	—	724,856	—	199,335
Minerali terruginosi (rapportati)	”	—	—	774,496	—
” (stimati)	”	—	—	650,000	—
Altri Minerali e Metalli Metalliferi (stimati)	”	—	—	—	150,000
Totale		—	—	32,359,105	15,773,287

Un resoconto più dettagliato della produzione delle differenti specie di minerali e metalli sarà trovata nelle note statistiche alla classe 40.

(i.) *Petrolio*.—I rapporti della quantità prodotta di petrolio non sono stati ancora ottenuti; ma l'estrazione di quest'olio minerale dagli differenti schisti bituminosi in diverse parti del regno, forma ora un commercio di assai grande importanza.

(j.) *Argilla e Creta*.—La produzione totale di porcellana e di argilla da resistere al fuoco nell'anno 1865 fu considerata essere 1,125,924 tonnellate, del valore di 373,916£.

(k.) *Sale*.—Il sale è prodotto in Cheshire, in Worcestershire, ed in Irlanda. Le fabbriche di sale di Cheshire sono capaci di produrre un

milione di tonnellate di sale per anno; la produzione delle fabbriche di sale in Worcestershire è circa 200,000 tonnellate per anno. La produzione di sale in Irlanda a paragona delle sopradetti è sì piccola scala.

(l.) *Fabbriche di Tessuti*.—La manifattura dei tessuti è esercitata ampiamente nel Regno Unito, ed una piccola idea della sua grandezza si ha nel fatto che in aggiunta ai tessuti fabbricati per la consumazione nostrale nell'anno 1865, furono esportate stoffe del complessivo valore di circa novantasette milioni di lire sterline.

Il numero delle fabbriche nella Gran Bretagna, secondo l'ultimo rapporto del 1861, ascendeva—

Fattorie diverse	No. delle Fattorie	No. dei Fusi	No. di Telaj a Macchina	No. degli Operaj		Forza motiva a 'Cavalli'	
				Uomini	Donne	Vapore	Acqua
Cotone	2,887	30,387,467	399,992	182,556	269,013	281,663	12,467
Lino	399	1,216,674	14,792	24,616	62,813	31,727	4,354
Seta	771	1,338,544	10,709	15,530	36,899	6,186	864
Lana	1,679	2,182,609	21,770	49,754	37,229	26,879	9,598
„ filata	532	1,289,172	43,048	31,501	54,562	26,234	1,970
Canapa	5	2,580	1	105	502	127	—
Jute	36	32,982	554	2,049	3,918	2,048	60
Calzetteria	69	—	—	2,162	2,325	447	46
Totale	5,378	36,450,028	490,866	308,273	467,261	375,311	29,359

Un resoconto della produzione delle varie fabbriche di tessute nazionali sarà trovato nelle relazioni statistiche alle classi 27 a 31.

(m.) *Altre Fabbriche*.—Una descrizione delle diverse fabbriche e manifatture del regno è data nelle osservazioni statistiche alle rispettive classi sotto le quali gli articoli si trovano esposti.

COMMERCIO.—Generale—Camere di Commercio—Commercio Estero—Importati—Dazi d'Importo—Esportati—Dazi d'Esporto—Mercanzie—Oro ed Argento—Trasporti da nave ad altra—Articoli Importati—Ritenuti pel Consumo e Esportati—Commercio di Porto.

(a.) *Commercio*.—Il commercio di spiriti, e la raffinazione di zucchero e 'malt,' orzo mace-

rato ed asciugato per far la birra, sono soggetti ad una certa rivista dalla parte del governo, a causa dell'imposta delle tasse, e delle 'drawbacks,' la quale è la restituzione d'una parte del diritto d'introduzione, quando si riestrae la stessa merce, ma, ad eccezione dei soprascritti, il commercio in tutte le sue ramificazioni è perfettamente libero, e chiunque può esercitare quel commercio che più le piace ed in ogni posto purchè non trasgredisce alle leggi dello stato.

Le tre maggiori classi in rapporto con qualunque commercio sono, i produttori e fabbricanti, i mercanti ed agenti, ed i bottegai ossia venditori all'ingrosso ed al minuto.

Generalmente le operazioni commerciali più rilevanti sono nelle mani dei mercanti, i quali vendono le merci dei produttori al rischio degli stessi; o, altrimenti, comprano le merci

dai produttori, e le vendono per conto suo. Nel primo caso il mercante riceve una commissione sulla vendita, e nel secondo, uno sconto considerabile sul prezzo delle merci.

(b.) *Camere di Commercio.*—Le Camere di Commercio esistono nella più gran part e delle città principali e nei posti centrali di fabbriche nella Gran Bretagna. Esse sono composte dei fabbricante e mercanti principali della località ove esse sono stabilite, e non soltanto sorvegliano gl' interessi dei negozi e delle fabbriche colle quali sono in rapporto intrinseco, ma ancora prendono un grand impegno a tutto quanto riguarda il commercio del paese. Una conferenza annuale delle camere associate di commercio si tiene a Londra nella primavera di ogni anno.

(c.) *Commercio Estero.*—Il commercio estero del Regno Unito, che è in rapporto con ogni parte del mondo, ha fatto gran progresso durante i passati dieci anni, il valore degli imposti essendo montati da cento settantadue milioni di lire sterline, a duecento settantuno milioni: gli esporti totali durante lo stesso tempo, avendo avanzato da, cento trentanove milioni, a duecento diciotto milioni. Non entra nello scopo di queste osservazioni il dettagliare le varie specialità di commercio, ma non tornerà inutile lo alludere generalmente ai prodotti numerici delle diverse transazioni commerciali effettuate fra il Regno Unito e gli stati più importanti del mondo.

(d.) *Importazioni.*—Riguardando le importazioni, i paesi seguenti forniscono le provvisioni principali nel 1861 e 1865:—

Paesi	Nel 1861	Nel 1865
	£	£
Russia	12,822,000	17,383,000
Prussia	6,440,000	6,126,000
Città anseatiche	6,058,000	8,837,000
Olanda	7,692,000	12,419,300
Belgia	3,817,000	7,354,000
Francia	17,826,000	31,625,000
Spagna	4,458,000	4,769,000
Italia	2,478,000	2,486,000
Turchia	3,632,000	5,405,000
Egitto	8,398,000	21,773,000
China	8,608,000	10,499,000
Stati Uniti	49,389,000	21,624,000
Perù	3,169,000	4,002,000
Chili	2,416,000	3,798,000
Brasile	2,631,000	6,797,000
Stati appartenenti all' } Inghilterra . . . }	52,676,000	72,840,000

La diminuzione visibile sulla cifra delle importazioni dagli Stati Uniti non ha uopo di commenti. L'aumento negli importi dalla Turchia, Egitto, China, Brasile, e gli stati appartenenti all' Inghilterra, è dovuta, in gran parte, all' importazione aumentata del cotone greggio durante la mancanza della provvista americana.

L'aumento vistoso negli importi dalla Francia è dovuta allo sviluppo commerciale fra i due paesi dopo la conclusione del trattato commerciale del 1860.

(e.) *Dazj d' importazione.*—La tavola soggiunta indica i dazj d' importazione in forza ora nel Regno Unito sopra produzioni estere di ogni descrizione:—

Lista di articoli soggetti a dazio d' importazione nel Regno Unito.

Articoli	Per	Dazio £ s. d.

(g.) *Dazi di esportazione.*—Articoli di ogni e qualunque genere sono esenti da dazio di esportazione sortendo dal Regno Unito.

(h.) *Commercio generale.*—Le tavole seguenti presentano il progresso generale del commercio del paese.

1. *Merci.*—Il valore totale delle importazioni pel consumo, e dei prodotti domestici nei dieci anni scorsi fu come è mostrato qui sotto.

Anni	Importazioni			Esportazione di prodotti inglesi e irlandesi
	Totale	Esportati di nuovo	Ritenuto pel consumo	
	£	£	£	£
1856	172,544,000	23,393,000	149,151,000	115,827,000
1857	187,844,000	24,108,000	163,736,000	122,066,000
1858	164,584,000	23,174,000	141,410,000	116,608,000
1859	179,182,000	25,281,000	153,901,000	130,411,000
1860	210,531,000	28,630,000	181,901,000	135,891,000
1861	217,485,000	34,529,000	182,956,000	125,103,000
1862	225,717,000	42,176,000	183,541,000	123,992,000
1863	248,919,000	50,300,000	198,619,000	146,602,000
1864	274,952,000	52,139,000	222,813,000	160,449,000
1865	271,072,000	52,996,000	218,076,000	165,836,000

La diminuzione nel commercio generale nel 1858 era dovuta al panico commerciale del 1857 e nelle esportazioni nel 1861-2, alla guerra americana e alla carestia del cotone.

2. *Metalli preziosi.*—Il valore totale dell'oro e dell'argento in verghe importato nel, ed esportato dal Regno Unito dal 1858 (essendo questo il primo anno in cui l'importazione fu registrata) era—

	Importazione	Esportazione
1858	29,493,000	19,623,000
1859	37,070,000	35,688,000
1860	22,978,000	25,534,000
1861	18,747,000	20,811,000
1862	31,656,000	29,326,000
1863	30,030,000	26,544,000
1864	27,728,000	23,132,000
1865	21,462,000	15,092,000

3. *Strabordo.*—Questo ramo di commercio che non è compreso nelle suaccennate tavole ha fatti grandi progressi durante gli ultimi dieci anni. Il valore totale delle merci straniere strabordinate nei diversi porti del Regno Unito era di 4,579,000£. nel 1856 e di 6,469,000£. nel 1865.

L'ammontare del commercio generale è speciale del paese può facilmente fissarsi mediante le tavole suindicate.

(i.) *Articoli Importati.*—Le principali importazioni consistono di articoli di nutrimento ecc., e di materie crude da impiegarsi nelle manifatture. I soli articoli manifatturati che si importano in considerabile quantità sono manifatture di sete, pelli, e lane. Non abbiamo dati certi sul valore dei singoli articoli presi pel consumo del paese, ma si può ottenerne una cognizione approssimata, deducendo il valor della riesportazione degli articoli esteri dalla importazione totale. La tavola seguente denota il valore delle importazioni, delle riesportazioni, e dei principali articoli ritenuti pel consumo interno nell'anno 1865:—

Articoli principali	Importazione totale	Riesportazione	Ritenuti per consumo

(j.) *Articoli esportati.*—Il commercio di esportazioni dal regno si compone degli articoli di provenienza estera già indicati nella tavola precedente e d' altri di produzione indigena. Questi consistono principalmente di articoli manifatturati, di minerali e di metalli. Sessanta per cento del valore totale delle importazioni dal regno del 1865 fu rappresentato da tessuti. La seguente tavola indica il valore dei principali articoli esportati in quell' anno:—

Articoli principali	Valore £
Istromenti di agricoltura	210,300
Alcali e soda	1,123,906
Vestiti e calzoni	2,639,012
Armi e munizioni	1,134,256
Lardo e prosciutti	118,159
Sacchi vuoti	696,291
Bue e porco	39,774
Birra e cervogia	2,060,976
Libri stampati	511,388
Ottone d' ogni sorte	232,309
Burro	333,228
Candele di stearine	110,575
Carrozze	352,787
Smalto	285,898
Caccio	111,102
Carbone, carbone-coke, e ceneri	4,427,177
Rame non lavorato	496,148
„ „ lavorato	2,434,062
Corde e funicelle	414,213
Grano e fior di farina	274,636
Cottone filato	10,342,737
Manifatture di cotone:	
In pezzo, bianco e unito	27,791,035
„ „ stampato, tinto, o a colori	17,085,328
Merletti e reti	465,611
Calze	240,534
Filo per cucire	753,326
Calze corte, ecc.	587,550
Droghe e prodotti chimici non classificati	919,256
Terre cotte e majolica	1,442,197
Pesce, aringhe	500,233
„ altri pesci	189,005
Oggetti di addobbo e mobilia	289,887
Vetro cristallo	71,387
di rocca	302,105
da finestra	60,857
bottiglie ordinarie	310,245

Articoli principali	Valore £
Cadicierie, e generi di momma	5,030,740
Coltelli, temperini, ecc.	4,326,741
Cappelli d' ogni genere	483,594

Zinco, lavorato e non lavorato .	94,659
Altri articoli presi insieme . .	6,700,238
Totale	165,835,725

(k.) *Commercio dei Porti.*—Mancano i dati sul valore delle importazioni nei porti principali del regno. Quelli da cui vengono fatte le esportazioni sono Liverpool, London, Hull, Grimsby, Southampton, Newcastle, Hartlepool, Folkestone in Inghilterra e Cardiff nel Galles; e Glasgow Leith in Scozia. Le manifatture d' Irlanda sono generalmente imbarcate nel

porto di Liverpool. Delle intere esportazioni dal regno nel 1865 non meno del 66 per cento parti dai porti di Londra e di Liverpool.

Commercio Interno.—I soli rapporti che esistono intorno questo commercio riguardano quello delle coste ed il traffico delle ferrovie.

Il numero totale di navi impiegate nel trasportare merci di costa a costa nel regno, espresso in misura di tonnellate dal 1861 al 1865 fu :—

	Navi inglesi	Navi estere	Totale
	Tonnellate	Tonnellate	Tonnellate
1861	17,261,779	93,456	17,355,235
1862	17,397,687	72,673	17,470,360
1863	17,465,635	81,897	17,547,532
1864	17,350,579	66,107	17,416,686
1865	18,150,649	77,705	18,228,354

La tavola seguente indica l' intero traffico delle merci trasportate dalle ferrovie nelle tre divisioni del regno nel 1864 e nel 1865 :—

Traffico di merci nelle ferrovie	Inghilterra e Galles	Scozia	Irlanda	Regno Unito
	Tonnellate	Tonnellate	Tonnellate	Tonnellate
Merci in generale	1864 28,802,262 1865 30,640,967	1864 4,577,483 1865 4,487,135	1864 1,535,168 1865 1,659,536	1864 34,914,913 1865 36,787,638

Porci	1864 1,426,264 1865 1,448,731	1864 65,329 1865 88,388	1864 733,155 1865 887,577	1864 2,224,748 1865 2,424,696

NAVIGAZIONE.—(a.) *Commercio Estero.*—La misura totale in tonnellate dei navigli dichiarati e spediti (con carico e zavorra) nel com-

mercio estero del Regno Unito negli anni 1856, 1860 e 1865 sommò a :—

Anni	Dichiarati			Spediti			Totale		
	Inglese	Stranieri	Totale	Inglese	Stranieri	Totale	Inglese	Stranieri	Totale
	Tonnellate	Tonnellate	Tonnellate	Tonnellate	Tonnellate	Tonnellate	Tonnellate	Tonnellate	Tonnellate
1856	6,390,715	4,162,419	10,553,134	6,555,056	4,480,859	11,035,915	12,945,771	8,643,278	21,589,049
1860	6,889,009	5,283,776	12,172,785	7,025,914	5,490,593	12,516,507	13,914,923	10,774,369	24,689,292
1866	9,623,432	4,694,454	14,317,886	9,735,523	4,843,683	14,579,206	19,358,955	9,538,137	28,897,092

(b.) *Commercio da Costa a Costa.*—Una assai grande quantità di navi è impiegata in questo commercio. E solo dal 1854 che i navigli esteri possono essere impiegati in questo commercio. Dalla tavola annessa si può conoscere il progresso fatto dal 1856 in poi.

Numero di Tonnellate caricate con Navi pel Commercio di Costa a Costa.

Anni	Inglese	Stranieri	Totale
Nel 1856 . .	15,164,000	53,900	15,217,900
Nel 1865 . .	18,150,000	78,000	18,228,000

(c.) *Capacità del Naviglio appartenente al Regno Unito.*—La intera capacità dei bastimenti del regno registrati nel 31 dicembre 1865 era di 4,936,776 per legni a vela e di 823,533 per legni a vapore. La ciurma impiegata costava di 255,654 uomini.

Uffizio delle Poste.—Leggesi nell' ultimo rapporto del Direttore Generale delle poste: ' Il costante accrescimento durante una lunga serie di anni negli affari dell' Uffizio delle Poste ci da ogni ragione di credere che se la prosperità del paese non venisse a diminuire, le poste possano produrre un' entrata quasi uguale a quella ottenuta attualmente dalla tasse sulle proprietà; e questo senza sottrarre ai continui

sforzi fatti onde servire ai giusti bisogni e desideri del pubblico, ed anzi cercando effettuare tutti i possibili miglioramenti.'

L' aumento delle entrate di questo ramo nei dieci anni decorsi dal 1856 al 1865 fu:—

	Introito totale delle Poste	Spese totali negli uffici delle Poste	Entrata assoluta
	£	£	£
1856 . . .	3,035,954	2,438,732	597,222
1865 . . .	4,423,608	2,941,086	1,482,522
Aumento nel 1865 confrontato col 1856	1,387,654	502,354	885,300

Questo aumento è dovuto alla maggiore facilità offerta al pubblico di servirsi di questo mezzo di comunicazione, diminuendo la spesa sui bolli, aumentando il numero degli uffizj e delle buche postali, e col render più frequente la distribuzione delle lettere.

La spesa dei bolli per lettere spedite nello interno del regno è ora fissata:—

In lettere pesanti meno che $\frac{1}{2}$ oncia	1 soldo
Da $\frac{1}{2}$ oncia a 1 oncia . . .	2 soldi
„ 1 oncia a $1\frac{1}{2}$ oncia . . .	3
„ $1\frac{1}{2}$ oncia a 2 oncia . . .	4 „

E così via via aumentando un soldo per ogni peso aumentato di mezz' oncia o di una sua frazione. Libri, carte stampate e manoscritti possono pure esser trasmessi col mezzo della posta coi pagamenti qui indicati:—

Pesanti meno di 4 oncie . .	1 soldo
„ meno di 8 oncie . .	2 soldi

Campioni e mostre non oltrepassanti il peso di 24 oncie possono inviarsi collo stesso mezzo con pagamento anticipato di:—

Al di sotto di 4 oncie . .	2 soldi
„ „ 8 oncie . .	4 soldi
„ „ 16 oncie . .	8 soldi e
„ „ 24 oncie . .	1 scellino

La seguente tavola rappresenta il numero di lettere, giornali, libri o carte e campioni spediti per la posta in ciascuna divisione del regno nell' anno 1865:—

Divisioni	Lettere	Giornali, Libri, ecc.	Campioni
	No.	No.	No.
Inghilterra e Galles	597,277,616	73,192,132	940,771
Scotia . .	67,048,891	11,324,040	175,474
Irlanda . .	56,140,500	12,736,594	169,871
Regno Unito.	720,467,007	97,252,766	1,286,116

Un ramo importante delle poste è quello delle vaglie postali. Pagando una piccola quota si può mandare denaro da un uffizio di posta ad un altro in tutto il Regno Unito senza alcun rischio. Questo sistema di vaglie postali è pure in attività fra il Regno Unito ed alcune delle Colonie, e pendono pure negoziazioni onde

estenderlo a paesi esteri. Il valore totale delle vaglie emesse nel Regno Unito nel 1865 fu di 17,829,290 $\frac{1}{2}$, e di vaglie pagate di 18,144,550 $\frac{1}{2}$.

DISPACCI TELEGRAFICI.—Mancano dati completi a conoscere il numero esatto dei dispacci telegrafici spediti annualmente nel regno. Le statistiche dei telegrafi elettrici sono per quanto si può notare sotto la rubrica dei telegrafi elettrici.

ESERCITO.—Forze Regolari ed Ausiliari.

(a.) *Forze Regolari.*—La forza completa dell' esercito britannico, secondo i ragguagli dell' anno 1866-67, era di 137,195 uomini d' ogni grado, sullo stabilimento britannico, e di 65,287, d' ogni grado, di servizio in India, e pagati dal governo indiano. Il governo britannico paga altresì un corpo di 178 Indiani di servizio in Labuan. La tavola sottoposta dimostra il numero degli ufficiali, de' soldati, e de' cavalli appartenenti ai diversi rami di servizio. Si noti che queste truppe non sono già tutte raccolte nel Regno Unito; gran parte delle medesime è di servizio nelle molte colonie e dipendenze dello stato.

(b.) *Forze ausiliari.*—Le forze ausiliari appartenenti al regno sono la *milizia* (fanteria) la cavalleria campagnuola (*yeomanry*), i volontari, i pensionati arruolati e la forza di riserva.

La milizia si compone d' uno stato maggiore permanente di 5,070 ufficiali e sotto-ufficiali. Questa forza vien chiamata sotto le armi ogni anno per ventisette giorni d' esercizi e d' istruzione, e il numero anticipato per l' anno che corre sarà di ufficiali 3,507, sotto-ufficiali, 5,464, e soldati 120,000.

La cavalleria campagnuola consta d' uno stato maggiore permanente di 390 ufficiali e sotto-ufficiali. Questa forza è in attività otto giorni per anno, e quest' anno si crede raggiunga ai 16,000 d' ogni grado.

I volontari si compongono d' artiglieria, cavalleggeri, genio e bersaglieri. Il governo concede trenta scellini a testaa quei volontari artiglieri, e venti scellini ai cavalleggeri, ingegneri, e bersaglieri che assistono agli esercizi ed all' istruzione un dato numero di volte nello anno. Questa forza conta da 130,000 a 140,000 uomini.

MARINA REALE.—Flotta — Guardacoste — Truppa Marittima—Navi.

Il seguente ragguaglio della forza marina reale è tolto dai 'Computi Ministeriali' del 1866-67:—

(a.) Flotta—Servizio attivo.

	Numero
Ufficiali di bandiera in commissione . .	210
Ufficiali d' arsenali e di stabilimenti della marina . . .	57
Ufficiali in carica ed altri superiori al grado di bassi ufficiali . . .	3,676
Ufficiali inferiori . . .	801
Ufficiali subalterni . . .	1,110

Stabilitimenti Britannici.

	Ufficiali	Sotto-ufficiali	Soldati	Totale	Cavalli

A bordo—ufficiali, marinai e ragazzi 2,950
 In terra—ufficiali ed uomini 4,200
 7,150
 Impiegati civili 550

(c.) Soldati di mare.

Ufficiali di stato maggiore 120
 Ufficiali 420
 Bassi ufficiali e soldati 15,860
 Totale (di servizio a bordo, 8,000; in terra, 8,400) 16,400
 Forza totale di servizio sulla flotta e di guardacoste 68,400

(d.) Navi, ecc., Marina Reale—Esposizione del numero di navi a vapore in attività e in corso di costruzione, e di quelle a vela in attività il primo febbraio 1866:—

NAVIGLIO MERCANTILE.—*(a.) Marinai.*—Il numero totale delle ciurme dei vascelli registrati appartenenti al naviglio mercantile inglese ai 31 dicembre 1865, era di 255,654 uomini.

(b.) Vascelli.—Il numero e la misura di carico dei vascelli registrati appartenenti al naviglio mercantile del Regno Unito ai 31 dicembre 1865:—

	Numero	Misura di carico a Tonnellate
Vascelli a vela	26,069	4,936,776
„ a vapore	2,718	823,533
Totale	28,787	5,760,309

FINANZE.—**Rendita totale dello Stato e Spesa—Rami e Rendita—Tasse revocate, ecc.—Rami di Spesa—Bilancio 1867—Debito Nazionale.**

La rendita del Regno Unito ricavasi in parte mediante tasse dirette, e in parte indirette. Principali fra le prime sono quelle sulle case, ecc., sull' entrate e sulla proprietà; dell' altre, la dogana, il dazio consumo, e i bolli.

L' intera rendita e spesa degli ultimi tre anni ammontò a:—

Anno finito ai 31 marzo	Rendita £	Spesa £
1864	70,208,964	67,056,286
1865	70,313,437	66,462,207
1866	67,812,292	65,914,357

Il che mostra un vistoso accrescimento della entrata per ciascun anno. Dal rendiconto qui sopra si esclude la spesa per le fortificazioni, che toccarono le 800,000£, 620,000£, e 560,000£. nei rispettivi anni e alla quale si provvede con rate annue.

Classi di Navi	Navi a Vapore			Navi a vela in attività	Totali

" "					

(a.) *Rami di Rendita*.—Col fine d' indicare le principali sorgenti della rendita basterà il dar qui sotto la somma raccolta nell' anno che finiva ai 31 marzo 1866, nel quale si ebbero:—

Rami	Rendita totale, senza sottrarne le spese di collezione
	£
Diritti di dogana	21,276,000
Dazio consumo	19,788,000
Bolli	9,560,000
Tasse sulle case, ecc.	3,350,000
Tassa sull' entrate o sulla proprietà*. }	6,390,000
Ufficio della posta	4,250,000
Terre della corona	320,000
Miscellanee	2,878,292
Totale	67,812,292

* La somma ricavata dalla tassa sull' entrate patì un forte ribasso a fronte di quello che raccoglievasi da tal sorgente negli anni decorsi, perchè tal tassa venne ridotta a 4d. la lira sterlina.

Gioverà forse l' indicare quali generi tassati e spettanti alla dogana ed al dazio consumo fornissero la rendita del detto anno.

La rendita della dogana si ricava quasi per intero da sette articoli, cioè:—

	1866
	£
Da zucchero e molasso	5,228,460
„ tè	2,599,817
„ caffè	371,495
„ grano e fior di farina	743,145
„ spiriti	3,505,176
„ vino	1,407,021
„ tabacco da fumare e in polvere	6,274,298

Dal tè si ricavò molto meno degli anni anteriori, essendosi ribassata la tassa su d' esso a 6*d.* la libbra.

I principali rami del dazio consumo furono nel 1865:—

	£
Da spiriti	10,176,731
„ orzo cotto (per birra) . .	6,394,553
„ licenze ossia privative . .	2,144,402

Tasse revocati, ecc.—La tavola qui sotto mostra il montante delle tasse revocate o ribasate, ed imposte nel corso d'anni quindici, 1851 al 1865:—

Rami	Rivocate o Ritassate	Imposte	Ribasso (—) Aumento (+)
	£	£	£
Dogana . .	14,089,384	3,293,396	-10,795,988
Dazio con- sumo	5,161,000	6,380,000	+ 1,219,000
Entrate proprietà Altre tasse	18,865,000	14,764,000	- 4,101,000
Bolli (inclu- sa la gabel- la sulle suc- cessioni) . .	2,608,000	600,000	- 2,008,000
	1,428,000	2,411,200	+ 983,200
Totale . .	42,151,384	27,448,596	-14,702,788

(b.) *Rami di Spesa*.—I principali rami di spesa per l'anno spirato ai 31 marzo 1866, furono:—

Interesse ed Esercizio del Debito Nazionale:—	£
Debito iscritto	25,904,488
Debito non iscritto . . .	328,800
Debito totale	26,233,288
Lista civile e spesa civile d'ogni genere	10,250,065
Forze: Esercito, inclusa l'artigli- eria	14,569,279
Marina	10,259,788
Forze totali	24,829,067
Spese per l'esazione della Rendita	4,601,937
Totale	69,914,357

(c.) *Bilancio, 1866-1867*.—L'anticipata rendita dell'anno che spira ai 31 marzo 1867, è di 67,013,000*l.*, e la spesa di 66,662,000*l.*

(d.) *Debito Nazionale*.—L'intero Debito Nazionale ai 31 marzo 1866, era:—

Debito Iscritto:	
Capitale di debito iscritto non redimibile	£ 773,313,229
Capitale approssimativo di rate annue	21,342,020
Debito non iscritto	8,187,700

TASSAZIONE LOCALE O MUNICIPALE.—Soltanto dal 1862 in poi si è potuto verificare per l'Inghilterra e il Principato di Galles il montante della tassazione locale, e non esistono ragguagli d'essa per le altre divisioni del regno. I vari rami di tasse locali in Inghilterra e nel Principato di Galles nel 1864 (senza contare la Direzione de' Cimiteri) erano:—

Descrizione delle Imposte, ecc.	Somma ricevuta £
Imposte di Chiesa	241,960
Imposte di Chiaviche	44,009
Commissione delle Chiaviche per la città di Londra	17,242
Condotti di scolo sotterranei ed Argini	147,145
Illuminazione, ecc.	42,194
Ai Commissari di Miglioramenti . .	332,983
Metropoli: Maneggio locale . . .	850,504
Condotti e Scolì prin- cipali	150,881
Mercati e Fiere	44,547

Descrizione delle Imposte, ecc.	Somma ricevuta £
Ponti e Chiatte	108,773
Porti	1,107,751
Amministrazioni o Consigli locali (incluse le imposte per mi- glioramenti e per fornire le acque	352,016
Imposta de' Poveri (che include le guardie di pubblica sicurezza e della contea)	9,448,319
Imposta per la guardie di Polizia della Metropoli	354,627
Città di Londra (che include le gabelle sul carbone, sul vino, la tassa di polizia, e delle chi- aviche)	421,625
Imposte sul borgo	311,953
Imposte sulle strade maestra . .	1,416,629
Barriere	1,066,156
Diritti del 'Trinity House' di navigazione, ecc.	374,115
Totale	16,833,429

BANCHE.—Nell'anno 1864 l'intero numero degli stabilimenti bancari nelle divisioni del Regno Unito era:—

	In Inghilterra e Galles	Scotia	Irlanda	Regno Unito
Banche d'Inghilterra e d'Irlanda e loro rami	12	—	30	42
Banche e loro rami	553	—	4	557
Associazioni bancarie e loro rami	857	614	181	1,652
Totale	1,422	614	215	2,251

Il numero medio di cedole emesse dai banchi privati aventine il privilegio nel 1864 fu di 3,112,725*l.*; e dalle associazioni bancarie di 33,286,921*l.* Resoconto del quantitativo complesso medio delle cedole al portatore pagabili a piacere in circolazione nel Regno Unito nell'ultimo mese degli anni 1863, 1864, e 1865:

	1863	1864	1865
In Inghilterra e Galles:			
Banco d'Inghil- terra	£ 21,355,000	£ 20,330,000	£ 21,294,000
Banchi d'Indi- vidui	3,220,036	3,058,931	2,977,264
Associazioni bancarie	2,899,560	2,754,068	2,789,654
In Iscozia:			
Banchi privile- giati, d'Indi- vidui, e di Associazioni	4,639,664	4,626,796	4,903,980
In Irlanda:			
Banco d'Irlanda	2,528,500	2,491,000	2,744,950
Banchi d'Indi- vidui e di Associazioni	3,411,753	3,381,706	3,946,290
Totale	38,054,513	36,642,501	38,656,138

SOCIETÀ IN COMMANDITE.—Noteremo qui brevemente le recenti alterazioni introdotte sulla responsabilità dei soci nei banchi, nelle società di credito e in tutte le grandi intraprese commerciali. Una memoria fu recentemente letta su questo soggetto dal Sigr. W. Hawes avanti la società delle Arti da cui togliamo i seguenti estratti:—

Due sole forme di società erano adottate in questo paese fino agli ultimi anni per intraprese commerciali, l'una consistente nell'unione o compagnia di molti individui che si univano per uno scopo comune mercanteggiando sotto la protezione di privilegi reali, o come più recentemente legati da leggi speciali del parlamento, ognuno dei quali individui intendeva limitare la responsabilità dei soci al montare delle loro sottoscrizioni. L'altra formata di individui dichiaratisi soci, mercanteggiando col nome di uno o di tutti, e guidati da regole e forme convenute fra loro, che non potevano mai esentarli individualmente e collettivamente da una responsabilità che comprendeva tutta intera la loro proprietà e fortuna pei debiti contratti nelle loro operazioni. Questa seconda classe, di due o più individui legati a mercanteggiare con responsabilità senza limite ha sempre prevalso in questo paese ed ha formato il tipo delle società da cui sono stati condotti gli affari nella loro grande maggioranza. La revocazione della così detta legge di usura, i frequenti privilegi accordati, e le numerose leggi parlamentarie passate, sempre tendenti a limitare la responsabilità individuale, come l'accrescimento del commercio estero con paesi ove la limitazione di responsabilità era adottata nelle società commerciali hanno influito a tor via gli impedimenti che esistevano all'introduzione di capitali per uso di commercio, e gli inciampi che negavano ai privati la libertà di far quei patti per l'amministrazione dei loro affari che più credessero vantaggiosi. Queste cause consigliarono al parlamento le leggi passate nel 1856, 1857 e 1862, e poi a quella del 1865, le quali, quantunque in una maniera non ancora abbastanza lucida, hanno permesso a uomini di affari associati in piccolo o gran numero di prendere capitali ad prestito e dividerne i profitti nella maniera che paresse a loro più vantaggiosa.

Coll'introduzione di questo principio abbiamo veduto formarsi un gran numero di nuove compagnie; e nel corso dei due ultimi anni molte grandi manifatture appartenenti ad individui sono state convertite in commandite con ragionevoli prospetti di trarne risultati assai migliori di quelli che fossero ottenibili col vecchio sistema.

EDUCAZIONE.—Generale—Elementare nella Gran Bretagna e nell'Irlanda—Scuole diurne e della domenica—Scienza ed arte—Esami di media classe.

Il sistema d'educazione (se pur tale potrebbe dirsi) del Regno Unito è cosa complessa in

sommo grado. L'educazione è in tutto libera, ed è lecito ad ognuno di stabilir scuole, raccogliere fanciulli ed ammaestrarli nelle proprie dottrine. Fino all'anno 1833 lo stato non ebbe parte veruna nell'educazione del popolo, ne ma d'allora in poi incominciò a prestar aiuto, sotto certe condizioni, alle scuole elementari che oggi pure ne godono. Il dipartimento della Scienza ed Arte (stabilito nel 1853) è altresì sostenuto dal Governo, e si danno sovvenzioni ad altri istituti esistenti per lo sviluppo ed avanzamento delle scienze.

Un elenco delle diverse classi di scuole, licei, collegi, ecc., che spettano all'educazione gioverà ad illustrare il macchinismo educatore del paese:—

1. Scuole elementari pubbliche, diurne e della domenica.
2. Scuole normali-pubbliche per l'insegnamento de' maestri delle scuole elementari.
3. Scuole private.
4. Scuole pubbliche di grammatica e dotate.
5. Scuole pubbliche, quali militari, di marina, demaniali, di corporazioni, de' poveri, di prigioni, ecc.; e del pari,
Scuole (dette de' cenciosi, degli orfanelli, de' ciechi, de' sordi e muti, degl' idioti, delle fabbriche, delle carbonaie, ecc.
6. Università e collegi.
7. Istruzione domestica e classi private.
8. Media classe, ossia esami locali, istituiti dal collegio de' Precettori nell'anno 1854, dalla società delle Arti nel 1856, e dalle Università d'Oxford e di Cambridge nel 1858.
9. Istituti d'artigiani, collegi d'operai, e classi serali.

Le suddette scuole, ecc., si possono considerare siccome spettanti all'ordinaria educazione. Le seguenti offrono i mezzi più importanti per estendere l'insegnamento speciale nell'arte e nella scienza:—

Dipartimento della scienza e dell'arte, con scuole succursali per tutto il paese.
Regia scuola d'Architettura Navale e d'Ingegneri marittimi.
Regia scuola delle Miniere.
Museo di Scienza e d'Arte d'Edinburgo.
Museo d'Industria irlandese.
Regia società di Dublino. E molte altre.

Le accademie reali di Pittura e di Musica meritano pure d'essere menzionate specialmente come contribuenti in non piccola parte ad elevare il gusto nazionale.

Gli avvocati, i Procuratori, i Chirurghi, gli Speciali debbono passare esami indicati da leggi prima di essere ammessi all'esercizio delle loro professioni, e simili regolamenti sono imposti agli aspiranti all'esercito, alla marina e al servizio governamentale. Poche linee non sono adeguate a descrivere ciascuna delle sindacate

classi di scuole ecc., ecc. Queste però possono esser divise generalmente in due classi. 1° *Private*, 2° *Pubbliche*. Le prime sono interamente mantenute dai pagamenti fatti dagli studenti, e comprendono la maggioranza dei fanciulli appartenenti alle classi superiori e medie della società; le seconde sono quelle che derivano una parte delle loro entrate da altre sorgenti oltre i pagamenti dagli scolari. A questa classe appartiene l'educazione della classe degli operai, e crediamo interessante il fare alcune osservazioni sui mezzi impiegati alla loro istruzione.

Educazione Elementare.—1. *Gran Bretagna*.—Abbiamo già detto che solo nel 1833 lo stato cominciò a sussidiare le scuole elementari del regno. Fino a quell'epoca l'educazione popolare non era sorretta che dalla generosità degli individui animata principalmente da zelo religioso e fidando interamente nella direzione delle due grandi società *British* e *National*.

Il governo ha speso dal 1839 al 1866 nella educazione popolare della Gran Bretagna 8,724,000^l. Le somme destinate annualmente dal Parlamento a questo scopo sono amministrate dal dipartimento di Educazione. Le condizioni imposte nel voto parlamentario sono troppo estese per poter essere annoverate in questo luogo, ma saranno inserite nel rapporto del consiglio di educazione.

Secondo l'ultima relazione per l'anno 1865 gli ispettori hanno visitate 12,950 scuole, o divisioni di tali scuole, sotto la direzione di vari maestri. Il numero di fanciulli presenti alle visite era di 1,246,055, di maestri con diploma 11,266; di maestri assistenti 933; e di apprendisti 11,383. Dell'intero numero delle scuole, 2,282 erano esclusive per maschi; 1,888 per sole femmine; e 5,858 promiscue; 1,707 per bimbi di età al di sotto di 7 anni; e 1,215 per allievi serali. Del numero totale di fanciulli presenti 698,221 erano maschi, 547,834 femmine.

Esistono però diverse scuole elementari che non dipendono dalla sorveglianza del decastrero di educazione.

La tavola seguente denota l'entrata e la uscita di 7,770 delle scuole visitate nel 1865:—

Entrate	Montante	Spese	Montante
	£		£
Dotazioni	56,424	Salario ai maestri	980,056
Contribuzioni volontarie	356,810	Libri e istrumenti	53,389
Paghe fatte dagli allievi	424,547	Miscelanee	256,956
Sussidii di governo	322,846		
Altre risorse	98,299		
Totale	1,258,926	Totale	1,290,401

Il coacervo di entrata e spesa per ogni alunno era:—

	In Inghilterra e Galles §			In Iscozia

Spesa	0	18	11 ³ / ₄	0	18	1 ³ / ₄

* In Iscozia i sussidii governamentali sono pagati direttamente ai maestri e non fanno parte dei fondi posti a disposizione dei direttori.

Età degli Alunni.—Nel 1865, 71% del numero totale non aveva compiuto il decimo anno; 27% erano fra il decimo ed il quattordicesimo; e 2% erano di là dei 14 anni.

Stipendi dei Maestri.—Il coacervo degli stipendi annui dei maestri nelle scuole sussidiate dal governo in Inghilterra nel 1865 era:—

	Con diploma			Senza diploma		
	£	s.	d.	£	s.	d.
Insegnanti	86	10	9	58	16	
Maestre	55	2	1	38	8	5
Maestre per alunni non sorpassanti i 7 anni	52	3	3	30	1	1

2. Scuole Nazionali in Irlanda.—L'educazione elementare in Irlanda dipende dal consiglio di Educazione nazionale. In Irlanda la istruzione religiosa è disgiunta dal corso regolare degli studi. Le scuole nazionali in Irlanda al finire del 1864 montavano a 6,263, con un medio giornaliero di fanciulli presenti di 315,108. L'incasso totale era di 340,758^l, di cui i sussidii di governo contavano per 251,016^l. Esistevano in oltre 36 scuole-modello, 55 comune di agricoltura, e 3 di giardinaggio. Gli stipendi variavano da 38^l a 52 pei maestri di prima classe e da 30 a 40 per le maestre, con gradazioni inferiori per maestre meno valenti.

Statistiche Generale.—Diamo qui sotto la statistica degli ultimi rapporti mostrandoti il numero complesso degli individui riceventi istruzione nelle scuole di ogni classe in Inghilterra e in Galles.

	Scuole	Alunni		
		Maschi	Femmine	Totale
Scuole diurne:				
	Pubbliche	24,563	911,152	764,006
	Private	34,412	389,607	470,697
Totale		58,975	1,300,759	1,234,703
Scuole domestiche		33,872	1,189,725	1,221,829
				2,411,554

L' accennato ragguaglio fu compilato nel 1858 e comprende le scuole di ogni credenza religiosa.

Secondo il censo del 1861 il numero totale

degli alunni d' ambo i sessi nelle divisioni del regno era:—

Divisioni	Alunni		
	Maschi	Femmine	Totale
Inghilterra e Galles	1,552,738	1,597,310	3,150,048
Scozia . . .	211,803	225,253	467,056
Irlanda . . .	342,997	305,380	648,377
Totale nel regno	2,137,538	2,127,943	4,265,481

Educazione di scienze ed arti.—L' ultimo rapporto del decastero delle scienze ed arti per l' anno 1865 dà 158 istituzioni e scuole (non comprese 6 di navigazione) in cui istruzione scientifica veniva impartita da maestri laureati. Di queste 121 erano in Inghilterra, 8 in Scozia e 29 in Irlanda. Le classi montavano a 484 e il numero degli studenti a 6,835.

Il numero delle Scuole d' Arti montava nello stesso anno a 92, frequentate da 16,621 studenti, e da 89,967 fanciulli nelle scuole elementari.

Il decastero delle scienze ed arti, oltre allo assistere le classi operaie ad ottenere istruzione in quei rami di scienze ed arti che più direttamente hanno affinità colle loro occupazioni, è incaricato dell' amministrazione del Museo di South Kensington che è il gran deposito centrale dei modelli di scienze ed arti, che per quanto è possibile sono impiegati a beneficio di tutto il regno.

Esami per le Medie classi.—Nel 1854, colla istituzione di esami agli allievi delle diverse scuole dal collegio dei Precettori, venne dato un grand' incoraggiamento alla promozione di una solida educazione per le medie classi. La Società delle Arti nel 1856 cominciò il suo piano di esami per gli individui che assistevano alle classi delle istituzioni meccaniche.

Nell' anno 1858 le Università di Oxford e di Cambridge istituirono i così detti Esami locali universitari. Il numero dei candidati esaminati da queste corporazioni nelle diverse parti del paese è montato da 587 nel 1854 a 5,438 nel 1866. Gli esami all' Università di Cambridge, al collegio dei Precettori, e alla società delle Arti sono aperti agli individui d' ambo i sessi; quelli dell' Università di Oxford sono fino ad ora privilegio del sesso maschile.

Il numero dei candidati che si presentarono agli esami nell' anno 1866 fu:—

All' Università di Oxford . . .	1,228
All' Università di Cambridge . . .	1,538
Al Collegio dei Precettori . . .	1,575
Alla Società delle Arti . . .	1,097

È quasi impossibile esagerarsi l' importanza di un tale movimento che ha già dimostrati miglioramenti reali nell' educazione delle classi medie e più particolarmente nelle scuole private.

ASSICURAZIONE.—Di Vita—Contra il Fuoco—Maritima.

(a.) *Di Vita et Maritima.*—Non ci sono rapporti della somma delle assicurazioni di Vita e Maritime, siccome le compagnie non sono tenute a dar rendiconto dei loro affari. L' assicurazione di Vita è, però, di molto accresciuta negli ultimi quindici anni.

(b.) *Contro il Fuoco.*—In quanto alle assicurazioni de' beni Stabili e Mobili, e de' prodotti locali, e attrezzi Agricoli, l' imposta sulle polizze delle quali si raccoglie ogni anno, si può avverare la somma assicurata dalla statistica de' bolli emessi. Nel 1864, vennero assicurate le seguenti somme in ciascuna delle tre divisioni del regno:—

Divisioni	Supposto Valore de' beni Assicurati	Supposto Valore de' prodotti ecc. Agricoli Assicurati
Inghilterra e Galles . . .	£ 1,101,444,000	£ 69,455,000
Scozia . . .	92,234,000	6,564,000
Irlanda . . .	58,202,000	1,151,000
Totale . . .	1,251,880,000	77,170,000

I prodotti ecc. agricoli non sono soggetti alla imposta del bollo. La tassa sulle assicurazioni contro il Fuoco è di 1s. 6d. per ogni 100l. assicurate.

ISTITUZIONI CHE TENDONO AL BENESSERE DELLE CLASSI OPERAIE.—*Casse di Risparmio Postali—Rendite annuali ed Assicurazione—Società Amichevoli, Co-operanti, di Pres-titi, di Casamenti, e di Terreni—Fratellanze Artigiane.*

(a) *Casse di Risparmio.*—Esistono attualmente due classi di Casse di Risparmio. 1° Quelle attivate dal 1817 in poi; e 2° Le Casse di Risparmio postali stabilite nel 1861.

Una Cassa di Deposito sperimentale pei marinai è stata aperta in Liverpool sotto la soprintendenza del Consiglio di Commercio. Alle somme depositate non si accordano frutti, ma un marinaio può depositarvi e ritirarne denari a piacere. I marinai che partono possono trasferire il loro danaro ad una cassa di risparmio che concede frutto a ragione del tre per cento all' anno.

La tavola che segue mostra il numero dei singuli depositanti, e delle Società amichevoli e degli stabilimenti caritatevoli che depositarono i loro fondi nelle antiche casse, e delle somme depositate, divise in classi, siccome fu redatto dalle suddette casse ad uso de' Commissari del Debito Nazionale, ai 20 novembre 1865.

Società amiche- voli* .	11,619	1,869,970	161 0 0
Totale .	1,457,567	38,444,007	26 7 8

* Il numero ed il montante qui sopra de' depositi delle società amichevoli si riferisce soltanto a quelle che avean fondi nelle casse di risparmio; escluse quelle società i cui fondi sono depositati presso i commissari.

Il numero delle società depositanti presso i commissari ai 20 novembre, giungeva a 545; la somma depositata, 1,915,703 $\frac{1}{2}$; somma media d'ogni conto 3,496 $\frac{1}{2}$.

(b.) *Casse di Risparmio Postali.*—La posizione delle Casse di Risparmio Postali ai 31 dicembre 1865, era come segue:—

Numero di Casse di Risparmio Postali	3,321
Numero di depositi ricevuti dal 16 settembre 1861 in poi	3,895,135
Somma totale de' depositi	£ 11,834,979
Somma media d' ogni deposito	3 $\frac{1}{2}$ 0. 9d.
Somma totale ritirata dal 16 settembre 1861 in poi	£ 5,619,250
Media somma d' ogni ripagamento	5 $\frac{1}{2}$ 11s. 1d.
Spese d' amministrazione	£ 141,375
Costo medio d' ogni deposito o ritiro	6 $\frac{9}{10}$ d.
Somma totale esistente a credito di tutti i conti aperti, incluso l' interesse, ai 31 dicembre 1865	£ 6,526,400
Somma media a credito di ogni singolo conto aperto alla stessa data	10 $\frac{1}{2}$ 13s. 4d.

Le Casse di Risparmio Postali sono stabilite in tutti gli uffizi per vaglie postali nel Regno Unito, e sono aperte per ricevere e pagare danari ogni giorno nelle ore fissate per transazioni delle vaglie.

In dette casse si ricevono depositi d' uno scellino, o di qualsivoglia numero di scellini;

ma a nessuno è lecito depositare più di 30 $\frac{1}{2}$ l. in un anno, o più d' un insieme di 150 $\frac{1}{2}$ l., esclusi i frutti.

L' interesse, a ragione di 2 $\frac{1}{2}$ l. 10s. per cento l' anno (che equivale a 6d. per lira sterlina, o a mezzo-penny per ogni lira sterlina ogni mese, contando dal primo giorno del prossimo mese che segue il giorno nel quale si sia depositata una lira sterlina intera, sino all' ultimo giorno del mese che preceda il giorno nel quale si sia ritirato il danaro) viene accordato fino a che la somma a credito del depositante arrivi a 200 $\frac{1}{2}$ l., dopo di che cessa ogni frutto. L' interesse dovuto a ciascun depositante si aggiunge al di lui capitale ai 31 dicembre d' ogni anno.

(c.) *Rendite annuali ed Assicurazioni.*—Le casse di risparmio emettono altresì rendite annuali. Le antiche casse ne emettono, non maggiori di 30 $\frac{1}{2}$ l., alle classi operaie; ma in seguito di più recenti ordinamenti spettanti alle casse postali si emettono dalle medesime non solo rendite annuali ma bensì assicurazioni. I seguenti sono gli ordinamenti principali della assicurazione governamentale e dell' ufficio delle rendite annuali:—

Dall' atto 27 e 28 Victoria, cap. 43, al capo delle poste si danno poteri d' assicurare la vita di persone d' ambo i sessi, tra l' età d' anni 16 e 60, per non meno di 20 $\frac{1}{2}$ l. nè più di 100 $\frac{1}{2}$ l. In forza dello stesso atto può concedere rendite annuali immediate o differite non maggiori di 50 $\frac{1}{2}$ l., sulle vite di persone d' ambo i sessi, d' anni 10 e in su. Quelli a cui si assicura la vita, o a cui si accordano rendite annuali del Capo delle Poste, hanno l' immediata garanzia del governo per il pagamento a tempo debito del danaro.

Alcuni uffizzi della posta (i nomi dei quali si possono sapere in qualunque uffizio postale) sono stati aperti onde ricevervi le richieste d' assicurazioni sulla vita, e per l' acquisto di rendite annuali; e i prospetti, con ampie spiegazioni sul modo di riempire e consegnare i suddetti, si procacciano presso cotesti tali uffizi della posta.

Esistono tavole stampate dei premi o pagamenti imposti per le assicurazioni della vita; per la concessione di annuità immediate; per la concessione di annuità differite, o di sussidi differiti mensili con o senza restituzione del valore intrinseco, e sono ostensibili agli uffizi postali che ricevono le proposte. Il prezzo delle tavole per assicurazione della vita e concessioni di annuità senza restituzione del valore intrinseco è di tre soldi e mezzo; quello per le tavole con restituzione del valore intrinseco di due soldi. E se inviate per la posta le prime costano cinque soldi, le seconde tre.

I premi per le assicurazioni della vita cangiano a seconda dell' età delle persone la cui vita si assicura e del modo in cui i pagamenti debbono esser fatti.

Le annuità o sussidi mensili accordati sulla vita di un individuo non debbono eccedere le 50 $\frac{1}{2}$ l. annue o 4 $\frac{1}{2}$ l. 3s. 4d. per mese; non è però necessario che il valore delle compre di tali

annuità o sussidi sia sborsato ad un tratto. Il compratore può pagarne tal parte che gli accomoda e crescerne l'acquisto di mano in mano che le sue circostanze glielo permettono.

Marito e moglie possono assicurarsi ognuno per l'intera somma di 100 L. , e comperare ognuno d'essi un' annuità di 50 L. , o un sussidio mensile di 4 L. 3s. 4d. Due individui qualsivoglia possono comperare un' annuità sulle loro vite con o senza continuazione dell' annuità al sopravvivente.

I pagamenti per le assicurazione della vita, o le rate di compe per i sussidi possono farsi in qualunque ufficio postale aperto, o che possa aprirsi in futuro a tal uopo a scelta dell' individuo secondo gli paresse più di suo vantaggio.

Le persone desiderose di assicurarsi la vita, o di comperare sussidi mensili differiti debbono munirsi a loro spese di certificati di nascita, di battesimo o d'altre prove di età che venissero loro richieste, ma non saranno tenuti a pagare nè per esame medico, nè per spese di inchieste sulla loro salute, abitudini, età od occupazione che piacesse al Direttore-Generale di fare sul conto loro. E nemmeno saranno incaricati di alcuna spesa per la forma di contratto che possa esser necessaria per la loro domanda, per la trasmissione per posta di questa loro domanda nè per alcuna corrispondenza fosse passata fra loro ed il Direttore-Generale derivante da questa transazione, poichè tali spese tutte sono computate nei premi da pagarsi da loro secondo le tavole stabilite per tali oggetti.

Gli individui che vogliano comperare annuità immediate o differite pagabili ogni semestre debbono procurarsi a loro spese le fedì di nascita o di battesimo, o qualunque altra prova di età che venga loro richiesta, e come le tavole compilate per la concessione di tali annuità non alludono a coteste spese debbono inoltre pagare all' epoca della compra un' imposta di 1s. per ogni 1 L. di annuità comperata.

Sul fine del 1865 il numero delle assicurazioni in forza era di 560, e le somme assicurate montavano a 41,734 L. Alla stessa epoca 94 annuità immediate, e 54 differite erano comperate, o si stavano comperando. L' esistenza delle annuità e assicurazioni postali non è ancora estesamente conosciuta dalle classe operaie nel paese, ma non v'è luovo a dubitare che quando lo sarà fra pochi anni le classi industrie non si dispongano in gran numero a fruire dei vantaggi offerti loro da questi due rami di annuità e di assicurazione.

(d.) *Società Amichevoli.*—Il capo dei Registri delle società Amichevoli nell' ultimo suo rapporto asserisce che gli oggetti per cui società amichevoli potevano esser stabilite secondo gli statuti riferibili a tali società, erano circoscritti, in primo luogo, ad assicurare una somma da pagarsi alla nascita di un figlio di un membro, o alla morte di un membro, o per le spese funerali della moglie o di un figlio di un membro;

al soccorso o mantenimento dei membri, loro mogli o mariti, loro figli, fratelli, sorelle, nipoti in età avanzata o pendente malattie, in vedovanza, o per sussidio a membri o ad individui nominati dai membri di ogni età; e per qualunque oggetto che venisse permesso da uno dei principali Secretari di Stato di Sua Maestà e a cui pro credesse dover estendere i favori ed i poteri degli statuti. In conseguenza di questa provvisione gli oggetti a cui gli statuti riferivano da prima furono estesi di molto. Il Secretario di Stato ha autorizzata la loro estensione all' assistenza di membri obbligati a viaggiare in cerca di lavoro; ad accordare soccorso a membri in grandi bisogni, o soccorso e mantenimento in casi di storpiatura, cecità od altre disgrazie causate da accidenti; alla compra di carboni od altri articoli di necessità; ad accumulare a interesse pel vantaggio di un membro dell' eccesso di denaro rimasto dopo aver provveduto alla sua assicurazione; a concedere soccorsi in casi di naufragio, o di perdita o d'avarie sofferte da battelli, reti, ecc., e ad assicurare i membri contro le perdite incorse per malattie o morte di bestiame impiegato in commercio od agricoltura, e per formare dei club di operai. Tutti questi oggetti sono stati adottati, ed ora delle società sono in esistenza in diverse parti del regno per attivarne uno o più. Nel dicembre 1865 il Registratore di queste società distribuì 22,834 modelli di statistiche annuali dello stato generale dei fondi ed effetti delle società amichevoli, come pure un equal numero di statistiche di malattie e mortalità voluti dalle dette società secondo gli atti 18 e 19 Vittoria, c. 63, s. 45. Di queste relazioni annuali, 10,345 soltanto gli vennero rimandate fino al primo luglio 1866, e delle quinquennali solo 7,706; e di queste 170 non indicavano il nome della società, nè del luogo a cui apparteneva. Una penale non più grave che di 20s. è imposta agli impiegati che mancassero di rinviare i prospetti generali; ma per l' omissione del rinvio dei prospetti quinquennali di malattie e mortalità non v'è penale imposta. I 10,345 formulari rinviati portano il numero dei membri a 1,374,425 e il totale dei fondi a 5,362,028 L.

Società Co-operative.—Dalle statistiche compilate da 417 di queste società per uso del Registratore, secondo gli atti 25 e 26 Vittoria c. 87, per tutto l' anno 1865 risulta che—

Il numero dei membri era di	148,586
Numero di membri ammessi nell' anno	29,182
Numero di membri ritirati nell' anno	11,815
Somma ricevuta per azioni o creditate alle medesime dal principio della società	£ 1,017,106
Denaro ricevuto per azioni nell' anno	307,356
Somme ritirate da membri durante l' anno	180,812
Montare del capitale in azioni nel 31 dicembre 1865	761,313

Montare del capitale a prestanza . . .	112,733
Montare ricevuto in prestiti nell' anno . . .	34,631
Prestiti ripagati nell' anno . . .	19,101
Montare pagato come frutti durante l' anno . . .	33,686
Denaro pagato per compra di articoli nell' anno . . .	3,063,088
Denaro ricevuto per articoli venduti nell' anno . . .	3,337,837
Profitti realizzati durante l'anno . . .	279,226
Spese nell' anno in salari, affitti, tasse, in lavori, e miglioramenti accidentali . . .	190,538
Denaro depositato presso banchieri, tesorieri, e uffiziali in dicembre 1865 . . .	136,923
Valore totale dell' asse e proprietà delle società al 31 dicembre 1865 . . .	1,105,685
Totale de' debiti delle società ai 31 dicembre 1865 . . .	273,480

Delle indicate società assai poche però sono comprese sotto il nome di società co-operative applicate a lavori manuali, la maggiorità essendo in fatto co-operative depositi di drogherie ecc., onde distribuirle a prezzi di commercio all' ingrosso. Esse però presentano gran beneficio alle classi operaje, abilitandole ad ottenere a prezzi miti ciò che dovrebbero pagare molto più se obbligati venissero a comperare nei magazzini di dettaglio. Di più i pagamenti istantanei che sono richiesti da questi depositi educa ad abitudini di frugalità i compratori.

(f.) *Società di Prestiti*.—Dai resoconti che 856 di queste società fornirono al capo de' Registri, dietro l' atto 3 e 4 Vict. c. 110, per l' anno spirante ai 31 dicembre 1865, si riscontrava che—

La somma attualmente anticipata e pagata dai depositanti o azionisti era . . .	£ 253,523
Somme fuori in prestito ai 31 dicembre 1865 . . .	518,866
Circolazione dell' anno . . .	857,844
Domande di prestito dell' anno . . .	184,171
Numero di persone a cui si condettero prestiti . . .	170,318
Somma pagata per moduli di domande, e per ricerche nell' anno . . .	10,435
Somma sborsata per interessi dai debitori a mallevadori . . .	42,140
Guadagno complessivo da somme ricevute dai debitori, e da danaro incassata per moduli di domande e per richieste nell' anno . . .	58,509
Spese d' uffizio dell' anno . . .	21,345
Interessi pagati agli azionisti nello anno . . .	32,859
Netto profitto, dopo dedotti gl' interessi pagati agli azionisti, e le spese d' uffizio nell' anno . . .	6,391
Numero di citazioni emanate nello anno . . .	13,208

Numero di sequestri emanate nello anno . . .	2,101
Somma onde riavere la quale si emanarono le citazioni nell' anno . . .	31,586
Somma recuperata nell' anno . . .	23,991
Spese legali delle società nell' anno . . .	2,940
Spese legali sborsate dai debitori o mallevadori nell' anno . . .	2,390

(g.) *Società di beneficio per casamenti*.—Esistono queste società in molti luoghi del regno, ma non ci sono dati precisi di quanti membri ne facciano parte, nè ragguagli del loro operato; per altro si sa che esse contano molte migliaia di membri, e che i loro affari sono estesissimi.

(h.) *Società di terreni*.—Queste dapprima si stabilirono principalmente per un fine politico, quello, cioè, di far sì che i membri di tutte le classi, ed in ispecie del basso ceto, potessero senza eccessiva spesa procacciarsi la franchigia di possidenti per le contee. In oggi però lo scopo principale di queste società è quello di fornire alle dette classi i mezzi per l' acquisto assoluto di terreni, e per la fabbrica di casamenti su d' essi. Le società in primo luogo, comprano grandi tenute, che indi rivendono agl' individui membri e ben anche anticipano ai medesimi il denaro per fabbricarvi su. I valori anticipati e per le terre e per le fabbriche si rimborsano dai membri alle società, a rate fisse che s' estendono per lo più sino ad anni dieci.

In alcune di queste società, delle quali i membri debbono pur esserne azionisti, oltre agli altri vantaggi già accennati, essi dividono l' ordinario guadagno della compagnia. Non vi sono ragguagli esatti delle operazioni compiute da queste società, ma si può formare un' idea della loro importanza dalle cifre qui aggiunte tolte dall' ultima relazione emanata da una fra le maggiori, 'La società Conservativa de' Terreni':—

Numero totale d' azioni emesse dal settembre 1852 al settembre 1866 . . .	25,674
Valore de' terreni venduti dalla formazione della società sino al settembre 1866 . . .	£ 493,091

Le operazioni della 'Società nazionale di Possessioni' e della 'Compagnia Britannica de' Terreni' sono anche maggiori di quelle della 'Conservativa'.

Quello che più importa osservare si è che coll' aiuto di queste associazioni gli operai industriosi, in pochi anni, diventano, volendo, possidenti di pezzetti di terra con case di loro proprietà.

(i.) *Club (fratellanze) assemblee d' Operai*.—Si deve alla 'Unione dei Club ed Istituti degli Operai' lo stabilimento di circa 300, che contengono 60,000 membri, negli ultimi cinque anni. Quarant' uno di questi Club esistono nei distretti della capitale. L' Unione annua esser questo soltanto la primizia di quanto

* La popolazione di Malta e di Gibilterra nella tavola antecedente non comprende i militari. Le cifre per finanza, debito, importazioni, ed esportazioni sono indicate in migliaia di lire sterline, e per navigazione in migliaia di tonnellate.

† Agli Stati Uniti soltanto.

essa spera d'operare in bene dell' operaio, ed asciugando le sorgenti di molti fra quei mali che molte altre benevoli società soltanto si sforzano di mitigare. L' oggetto dell' Unione è quello d' assistere gli operai nello stabilire de' Club e Istituti, ov' essi possano raccogliersi onde discorrere, trattar d' affari, istruirsi, e ad una volta trovar divertimenti e rinfreschi senza dipendere per questi dall' osteria.

Visto il gran progresso seguito nei costumi dell' alto e medio ceto nell' ultimo mezzo secolo, non pare irragionevole lo sperare che un corrispondente miglioramento abbia da svilupparsi nelle classi inferiori della società, e che questi Club sianò un cospicuo mezzo d' effettuare un tanto oggetto.

Di troppo difetterebbe questo abbozzo sulla condizione del Regno Unito se si passassero sotto silenzio le molteplici possessioni dipendenti dalla corona britannica. Molti sono i benefizi e gli utili che la terra madre ritrae dalle sue vaste colonie. Da un canto le aprono queste uno sfogo per la soprabbondante sua popolazione, e le somministrano materiali greggi tanto richiesti dalle fabbriche indigeni; dall' altro esse consumano infinite manifatture e prodotti inglesi.

In oltre di gran vantaggio si è per un popolo dedito tanto al commercio, siccome è l'inglese, il possesso in ogni punto del mondo, di porti ove il suo naviglio mercantile possa ricoverarsi in sicurtà dalle insorte burrasche, o trovar asilo e difesa contro il nemico in tempo di guerra.

Un altro, e non minimo bene che la Gran Bretagna ricava dalle sue possessioni coloniali è la diffusione mondiale della sua lingua, della sua religione o forma di governo. Da settentrione a mezzodì e da levante a ponente, lo scettro inglese domina un impero nel quale ben può dirsi che il sole non tramonti mai, e che annovera cento cinquanta milioni di sudditi, tutti più o meno sottoposti alle leggi, ai costumi e all' influsso inglese.

I primari prodotti coloniali delle più importanti colonie sono:—

India. Caffè, cotone greggio, tinte, cuoi, giutta, olii, opio, riso, salnitro, semenze, scialli di cashmere, seta greggia, spezierie, legnami da fabbrica.—*Ceylan.* Cannella, caffè, olio di coco.—*Maurizio.* Rum, zucchero.

Natal. Cuoia, avorio e lana.—*Capo di buona speranza.* Minerale di rame, pelli, vino e lana.—*Canada.* Animali, prodotti animali, prodotti agricoli, pesce, potasse e legname.—*Isola Principe Eduardo.* Pesce, grano, e bestiame grosso.—*Terranuova.* Baccalà, olii, e pelli di foca.—*Giammaica.* Caffè, zenzero, pepe garofanato, rum, zucchero e legno indico.—*Barbado.* Pesce, melasso, riso, rum e zucchero.—*Trinità.* Cacao, melasso, rum e zucchero.—*Giamaica inglese.* Melasso, rum e zucchero.

Nuova Galles meridionale. Oro, cuoia, sego, lana.—*Vittoria.* Oro, sego e lana.—*Australia meridionale.* Rame, grano, oro e lana.—*Nuova Zelanda.* Oro e lana.—*Queensland.* Oro, cuoia, sego e lana.

NOTE STATISTICHE SULLE INDUSTRIE ED IL COMMERCIO DEL REGNO UNITO.

POSTI IN ORDINE SECONDO I GRUPPI E LE CLASSI ADOTTATE PER L' ESPOSIZIONE UNIVERSALE DI PARIGI NEL 1867.

GRUPPO II.

(CLASSI VI.-XIII.)

APPARATO ED APPLICAZIONE DELLE ARTI LIBERALI.

Classe VI.

LA TIPOGRAFIA ED I LIBRI.

L'ARTE della tipografia è stata portata a gran perfezione in Inghilterra, e forse una delle migliori prove del suo sviluppo si trova nella produzione quotidiana di giornali, come il 'Times' ed altri principali. Il fatto semplice di poter comporre e stampare molte migliaia d' esemplari di tali giornali in poche ore, basta per mostrare la posizione avanzata del negozio della stampa in Inghilterra.

Tra le cause che hanno condotto recentemente alla perfezione della tipografia in questo paese, le più conspicue sono, l' annullamento del diritto del bollo sui giornali ed anche del diritto d' imposta sulla carta. L' abolizione di questi dazi permetteva ai nuovi giornali, già stabiliti, d' essere prodotti e venduti per un penny, e da ciò la conseguenza che mentre i giornali sono stati messi a portata della massa della popolazione, grandi miglioramenti s' introdussero nei diversi processi necessarj alla loro produzione. L' educazione migliorata nelle diverse classi della società ha anche cagionata una richiesta grande di libri stampati; e senza sprezzare le opere d' una classe superiore, la produzione immensa negli anni recenti di libri stampati a buon mercato, ad oggetto d' educazione e di divertimento è superiore ad ogni elogio. Le arti dell' intaglio e della cromolitografia hanno anche attenuato una straordinaria perfezione, come si può vedere nell' esaminare i saggi esposti.

Il numero delle persone impiegate nelle diverse ramificazioni del commercio tipografico, secondo il censo del 1861, è:—

In Inghilterra e la provincia di Galles .	30,590
Scozia	4,470
Irlanda	2,845
Totale	37,905

Devonsi dedurre da questo numero 13,937 persone impiegate in Londra.

In Londra la graduazione della paga dei stampatori è fissata come segue:—

Compositori . . .	} 36s. per la settimana di 60 ore.
Torcolieri . . .	
Macchinisti . . .	

Con una rata di 3d. di più per ora di lavoro dopo il tempo stabilito, fra le ore 9 p.m. sino alle 8 p.m. per ogni giorno di lavoro. Il lavoro della domenica è pagato a ragione di 6d. di più per ora, ma in nessun caso il lavorante deve ricevere meno di 2s. 6d. di più.

In molte grandi stamperie, il lavoro dei libri è pagato a tanto per pezzo, e non è generalmente eseguito al salario ordinario dello stabilimento. I compositori impiegati in questa maniera possono guadagnare da 20s. a 30s. per settimana, secondo il lavoro, l' abilità, e l' industria del lavorante.

Il lavoro di giornali si fa a un tanto per pezzo nelle ore irregolari.

La quantità media dei salari pagati in Edimburgo nell' anno 1866 era:—

	s.	s.	} Per settimana di 57 ore.
Compositori . . .	20	a 40	
Torcolieri . . .	26	„ 28	
Apprendisti . . .	3	„ 20	

Il valore dei libri e delle stampe, ecc., importati nella Gran Bretagna nell' anno che finiva il 30 giugno 1864 era:—

	Esportati £	Importati £
Libri	119,486	511,388
Stampe, intagli, ecc. .	36,525	30,936

Non esiste rapporto del numero dei libri prodotti ogni anno. Il numero dei giornali registrati ed anche scritti periodici in ogni divisione del regno Britannico nell' anno che finì il 30 giugno 1864 fu:—

In Inghilterra colla provincia di Galles	1,367
Scozia	133
Irlanda	157
Totale	1,657

	1862	1863	1864	1865
	Tons	Tons	Tons	Tons
Stracci, tela, e } cotone	21,966	25,287	23,732	18,273
Esparto e altre } fibre vegetali . .	878	19,326	43,430	52,324
Funi vecchie, ecc.	932	736	528	463
Polpa	166	233	156	94
Totale importati	23,942	45,528	67,819	71,154
Esportati dopo .	3,513	1,510	243	1,505
Resta per il con- } sumo	20,429	44,072	67,576	69,649

Da questa tavola si rileva, che l' aumento sensibile è stato cagionato dai maggiori arrivi di esparto, proveniente dalla Spagna. Si usa per fabbricare la carta ordinaria e quella da stampare, per la quale c' è stata recentemente una richiesta grande.

3. Non esiste ragguaglio del numero degli impiegati nel mestiere della carta a questo tempo. Secondo il censo di 1861 era:—

	Uomini	Donne	Totale
Nell' Inghilterra e la provincia di Galles	7,746	5,611	13,357
Nella Scozia . . .	1,648	2,773	4,421
Nell' Irlanda . . .	289	113	402
Totale . . .	9,683	8,497	15,424

Il numero di legatori e piegatori di libri all' epoca suddetta fu:—

	Uomini	Donne	Totale
Nell' Inghilterra e la provincia di Galles	6,556	5,611	11,920
Nella Scozia . . .	1,176	1,194	2,370
Nell' Irlanda . . .	448	686	1,134
Totale . . .	8,180	7,244	15,424

Una grande proporzione del mestiere di legatura è esercitata in Londra. Nel 1861, 3,691 uomini e 4,063 donne erano impiegati così in Londra. Bisogna rammentarsi che ambedue questi mestieri sono aumentati da allora in qua.

Secondo un rapporto fornito al Board of Trade nel 1866 dalla Camera Commerciale di Edimburgo, la somma media dei salary pagati ai braccianti nella manifattura di carta in quel distretto fu:—

	Per settimana	
	s.	d.
Macchinatori . . .	20	à 22 0
Macchinisti . . .	17	„ 20 0
Compitori . . .	12	„ 18 0
Imbiancatori . . .	16	„ 20 0
Tagliatori di cenci . .	13	„ 16 0
Incollatori . . .	17	„ 18 6
Seccatori . . .	15	„ 16 6
Tagliatori di carta . .	15	„ 18 0
Costruttori di macchina .	22	„ 28 0
Direttori dei fuochi . .	15	„ 18 0
Lavoranti . . .	11	„ 17 0

Le ore di lavoro 10 a 12 per giorno.

Non esiste rapporto della ragione dei salary pagati nelle fabbriche di carta nei contorni di Londra; la proporzione dei salary varia considerabilmente, ma quasi sempre i prezzi sono più alti che quelli citati di sopra.

5. Un grande aumento nella quantità di carta importata ha avuto luogo dall' anno 1860 in poi, il quale è stato cagionato in gran parte dall' annullamento del dazio sulla carta:—

		Carta forestiera (eccetto paramenti da muro)		
		Importati	Esportati	Restante
Quantità	1860 .	cwts. 42,446	cwts. 9,217	cwts. 33,229
	1865 .	239,707	24,537	215,170
Valore	1860 .	£ 128,383	£ 25,995	£ 102,388
	1865 .	494,222	57,447	436,745

La quantità e il valore della carta inglese (eccetto paramenti da muro) esportata, al stesso tempo fu:—

			cwts.
Quantità	1860 .	„	112,514
	1865 .	„	141,075
Valore .	1860 .	£	450,589
	1865 .	„	447,741

Confrontando questi rapporti, si vede che la qualità della carta importata è molto più ordinaria che quella esportata.

La quantità dei stracci inglesi, e altra roba per fabbricare la carta, esportata nell' anno 1865, montò a 6,704 tons.

Il valore della cartoleria inglese (altra che carta) esportata dall' Inghilterra, durante i cinque anni 1860 a 1865 fu:—

	£
1861	287,000
1862	285,000
1863	342,000
1864	260,000
1865	405,000

7. L' uso del vapore per forza motrice è divenuto quasi universale in Inghilterra; e benché il prezzo del lavoro sia più alto in Inghilterra che nei paesi forestieri, nondimeno a causa dell' abilità e della cura dei lavoranti inglesi, ed anche della grande superiorità delle macchine usate, è indeciso se il costo della fabbrica di carta nell' Inghilterra non sia tanto basso quanto negli altri paesi.

8. Il Sig. Richardson, di Newcastle, dice che i miglioramenti principali nella manifattura di carta, in quest' ultimi anni sono le particolarità e l'efficienza delle macchine, per il quale si fa una quantità di carta molto più grande colla medesima macchina che se ne faceva prima; e nel maneggio superiore dei processi chimici, pel qual mezzo un materiale che prima era intieramente inutile, è ora fabbricato in carta ordinaria per le botteghe, ed i stracci inferiori sono ripuliti e bianchiti e trasformati in buona carta bianca, che prima furono fabbricati in carta ordinaria. Quasi tutta la carta per i giornali contiene una porzione d' esparto; alcune avendo solamente la quarta parte di stracci.

Quando fu abolito il diritto del bollo sui giornali, una grande classe di giornali di buon mercato sorgeva e vi succedeva un grande richiesta per carta a buon mercato. Questa richiesta fu fornita in parte per fabbricare la carta coll' esparto come già dette, ed in parte per importare carta a buon mercato dagli altri

paesi. Il giuri all'Esposizione di Londra nel 1862 osservando una tendenza per fabbricare carta di qualità inferiore, con saggezza alzava la voce contra quell' uso per lavori che dovevano durare per vari anni; ma solamente per bisogni presenti la provvista di carta a buon mercato è un vantaggio inestimabile alla comunità generale.

Un grande miglioramento è stato fatto in questi ultimi anni nella legatura, specialmente nell'applicazione di colore ed ornamento alla legatura a buon mercato. Tanto grande è stata l'estensione di questo negozio, che l'introduzione del meccanismo per lavori in rilievo e per ornamenti senza doratura fu necessitata finchè il legatore poteva fornire ai bisogni aumentati del mestiere.

Classe VIII.

**APPLICAZIONE DEL DISEGNO E DEL MODEL-
LARE ALL' ARTE ORDINARIE.**

Benchè non esista rapporto del progresso ottenuto negl' ultimi anni nelle diverse ramificazioni di mestieri che sono compresi in questa classe, si può asserire generalmente, che un miglioramento considerevole si è fatto osservare nello stile dei disegni adattati alle manifatture, ed anche un più buon gusto nell' arte di formare, di stampare, ed intagliare i sigilli.

Siccome i disegni per le manifatture sono per la più gran parte fatti segretamente, i soli mezzi per verificare un miglioramento attuale, sono le esposizioni pubbliche; sarà dunque dovere dei giurati nelle diverse classi di manifatture all' Esposizione attuale di decidere quanto è l' avanzamento che è stato fatto dai disegnatori inglesi, dall' ultima Esposizione di Parigi in 1855 in poi. Speriamo che in quelle decisioni il Dipartimento delle Scienze e delle Arti, si troverà ricompensata per le fatiche che per tanti anni si è dato, cioè nell' applicazione estesa delle belle arti a tutte le ramificazioni di manifatture nazionali.

Classe IX.

PROVE DI FOTOGRAFIA, E APPARATO.

Considerata come un' industria produttiva, e senza riguardare la sua importanza come arte, la fotografia nelle diverse divisioni del negozio impiega qualche migliaio di persone.

Non accade nello scopo di queste notizie di dare una narrazione dell' invenzione, e del suo sviluppo rapido, ma come fu narrato dal relatore della fotografia, ecc. all' Esposizione di Londra nel 1862, 'sarà sufficiente di dire che non c' è quasi nessuna divisione d' arte, della scienza, dell' economica, in somma, degli interessi umani nella loro più grande estensione nella quale le applicazioni di questa arte non siano state utilizzate.'

Non esistono statistiche del numero delle persone ora impiegate nelle diverse classi del mestiere della fotografia; ma secondo il censo di 1861, 2,957 erano impiegati come artisti di fotografia in quell' epoca.

Il numero delle persone impiegate nelle diverse classi di questo mestiere (eccetto i braccianti) è il seguente :—

Artisti di fotografia	284
Fabbricanti d' apparato	38
Fabbricanti d' album	14
Fabbricanti di chimici fotografici	17
Disegnatori, montatori	6
Fabbricanti di carta	15
Stampatori	7
Pubblicatori	16
Negozianti in materiale fotografico	28

Benchè i giurati sulla fotografia all' Esposizione di Londra credevano che un progresso grande fu fatto dall'Esposizione del 1851 in poi, nondimeno consideravano l'arte come capace d'arrivare ad un grado assai più elevato, e pensavano che alla prossima Esposizione Internazionale si vedrebbero risultati tali che quelli ora nominati 'mostrebbero una povera proporzione di bellezza, grandezza, o d' importanza.'

Classe X.

ISTRUMENTI DI MUSICA.

La fabbricazione d'istrumenti di musica forma un mestiere estensivo nella Gran Bretagna. Le specialità principali d' istrumenti sono, organi, pianoforti, arpe ed istrumenti per banda militare, fra i quali i pianoforti hanno la più gran importanza. I pianoforti fabbricati in Londra sono stati celebri da lungo tempo per la loro eccellenza di suono, ed anche per la superiorità del lavoro. I metodi migliorati della costruzione addottati recentemente dai fabbricanti d'organi inglesi hanno assicurato per questi istrumenti una riputazione grande in Inghilterra ed anche in paesi forestieri.

Non esistono statistiche precise del numero totale degl' impiegati nella manifattura delle diverse specie di strumenti musicali nella Gran Bretagna. Nella tavola seguente, mostrando il valore di questi articoli importati fra gli anni 1861 e 1865, si vede che la produzione nostrale non basta per soddisfare alle domande :—

Valore degl' Istrumenti musicali, di diverse specie, importati nell' Inghilterra.

Anni	Pianoforti	Armoniche e Serafine	Cassettine da Musica	Altre Specie	Totale
	£	£	£	£	£
1861	24,542	33,791	13,774	91,271	163,558
1862	43,343	53,681	13,494	80,388	190,906
1863	97,378	18,372	12,495	80,943	209,188
1864	111,234	15,545	17,017	80,452	224,249
1865	66,702	68,313	30,384	78,414	243,813

I pianoforti e armonium importati vengono quasi sempre dalla Francia.

Il numero dei fabbricanti d'istrumenti musicali (eccettuato lavoranti) è come segue:—

Specie d' Istrumenti	No. dei Fabbricanti
Fabbricanti di concertine	11
Tamburri	9
Flauti e flageoletti	14
Chitarre	4
Armoniche	1
Armonium	28
Arpe	4
Corne, trombe, corni da caccia	7
Militari	10
Serafine	3
Violini	8
Archì	8
Violoncelli	2
Cassettini musicali	5
Pianoforti, ecc.	285
Organi	43
Fabbricanti di corde	17
Istrumenti varj	47

Il valore degl' istrumenti musicali di manifattura inglese esportati fra gli anni 1861 e 1865 fu:—

Anni	Pianoforti	Altre Specie	Totale
	£	£	£
1861	non rapportati	non rapportati	147,144
1862	82,615	69,155	151,770
1863	112,821	53,972	166,793
1864	107,871	58,980	167,851
1865	93,071	59,757	152,828

Classe XI.

ISTRUMENTI ED APPARATI DI CHIRURGIA E DI MEDICINA.

Benchè gli articoli compresi in questa classe non rappresentino un lavoro estensivo, nondimeno hanno un valore che non può essere stimato a ragione di danaro. Fra le arti non ve n' è una più nobile di quella del chirurgo, conseguentemente gli istrumenti appartenenti alla sua professione hanno la loro parte d'onore.

Quasi tutti gli istrumenti di chirurgia sono di manifattura nostrale, ed a cagione della differenza di cura c' è pochissimo cambio negl' articoli di questa classe fra la Gran Brettagna ed altri paesi. La più gran parte degli istrumenti chirurgici inglesi si fanno a Sheffield, ma le produzioni delle fabbriche di Londra sono considerate come superiori a qualunq' altra fabbricazione del mondo. Il numero dei fabbricanti d'istrumenti di chirurgia in Londra è 95, fabbricanti di scatole per gl'istrumenti di chirurgia 5, fabbricanti di fascie di chirurgia 25. Il valore degl'istrumenti di chirurgia, ed anatomia, importati nell' anno 1865 fu 566£., e di quelli esportati 12,752£.

Classe XII.

ISTRUMENTI DI MATEMATICA ED APPARATI PER AMMAESTRARE LA SCIENZA.

La manifattura degli articoli compresi in questa classe è grandissima, ma nella mancanza di statistiche industriali è impossibile di sapere lo stato preciso delle differenti divisioni di questo negozio nel Regno della Gran Brettagna.

Il numero degli impiegati nel suddetto negozio in Londra (escludendo gli operanti) è come segue:—

Lavoratori d'istrumenti di matematica	72
Manifattori di scatole	7
„ d'istrumenti nautici	32
„ „ matematica-fisici }	78
Ottici	204

Aggiunto al commercio inglese vi è un negozio forestiero d'istrumenti scientifici. Il valore di cotesti istrumenti ed apparati importati, e d' articoli inglesi esportati dal Regno durante l' anno 1865 era:—

	Importati	Esportati
	£	£
1865	14,224	71,058

Classe XIII.

CARTE ED APPARATI DI GEOGRAFIA E COSMOGRAFIA.

La opere della più grande importanza in questa classe sono le carte topografiche e geologiche fatte dal Genio Militare. Le prime sono costrutte a tre scale, quella disegnata alla scala di un dito (1 inch) per miglio essendo una buonissima carta del paese. Una porzione della carta di geologia del Regno, quando fu esposta a Parigi nel 1855, fu dichiarata dai conoscenti capaci essere senza paragone. Dopo il 1855 alcuni dei distretti minerali più importanti sono stati misurati, e le carte appartenendoli finite. Le carte per le provincie settentrionali dell' Inghilterra e per l' Irlanda sono disegnate alla scala di sei dita (6 inches) per miglio; più della metà della superficie dell' Inghilterra è già stata misurata, onde riguardando la natura dell' opera, si sta facendo ogni anno gran progresso.

Non vi sono mezzi di sapere il valore e l' ampiezza del sopradetto negozio, ma è di grandissima importanza e le opere prodotte sono della prima qualità.

Il numero degl' impiegati nel suddetto negozio (meno i braccianti) in Londra ascende ora a:—

Venditori e pubblicatori di carte di geografia	24
Disegnatori, coloritori, e montatori	44
Intagliatori	18

Il valore delle carte esportate nell' anno 1865 montò a lire sterline 6,571.

GRUPPO III.

(CLASSI XIV.-XXVI.)

MOBIGLIA ED ALTRI OGGETTI PER USO NELLE ABITAZIONI.

Classe XIV.

MOBIGLIA DI FANTASIA.

Nessun negozio ha più profitato delle esposizioni internazionali come quello della mobiglia di fantasia. Dal principio del secolo insino all'anno 1851 pochissimo progresso fu fatto nella fabbricazione del mobigliar di casa nella Gran Bretagna, ma dopo quel tempo una gran miglioramento s'è osservata, non soltanto circa all'economia della produzione, ma anche nel disegno e nell'ornamento, e nella più rigorosa adattamento degli articoli agli usi per i quali sono destinati. Non bisogna che una piccola occhiata alla maniera domestica di vivere al presente, per vedere il gran cambiamento ch'è stato fatto durante dieci o quindici anni nell'abbellimento interno delle dimore d'ordine nobile e di mezzo grado, ed il progredimento dell'educazione artistica, menerà a una più grande produzione e stimolazione degli articoli combinando le tre qualità necessarie di adattamento all'uso, bellezza di disegno e d'ornamento, e perfezione di lavoro.

Il numero dei fabbricanti impiegati in Londra nelle differenti ramificazioni del negozio di mobiglia di fantasia (meno i braccianti), è come segue:—

Ebanisti	812
Tapezzieri	486
Intagliatori e doratori	342
Lustratori	142
Specchiaj	61
Stagnatori di specchj	24
Intagliatori, intarsiatori e lineatori	108
Fabbricanti di letti di legno	43
Fabbricanti di letti di ferro	44
Fabbricanti di seggiole, canapé, e sgabelli	252

Il valore di legname da mobiglia e mercanzia d'ebanista importati nella Gran Bretagna nell'anno 1865 montò a 128,925£., e la mobiglia inglese, e mercanzia d'ebanista esportata a 289,887£.

Classe XV.

TAPEZZERIA E LAVORO DECORATIVO.

Il progresso di cui abbiamo parlato nella manifattura degli articoli nell'antecedente classe si è esteso necessariamente agli oggetti compresi in questa classe. La ricchezza aumentata del mezzo ceto della comunità è stata occasione che sia fatta una più grande chiesta per ogni specie di lavoro decorativo negli apparecchi di casa. In quanto alla mobiglia di chiesa, si è notato una gran miglioramento, il rinascimento, negli anni recenti, del antico stile d'architettura necessitando una più grande quantità d'abbellimento interno negli edifizj. La fabbrica principale di oggetti formati è quella di carta- pesta ed è condotta principalmente a Birmingham, la quale produce molti articoli di mobiglia decorativa e da impiego a qualche centinaie di persone. Il prezzo medio del salario guadagnato, è, per il bracciante ordinario, da 10s. a 16s. per settimana; e per artisti decorativi, da 30s. a 50s. Si dice che questi artisti hanno ottenuti grandissimo vantaggio dall'istruzione fornita dalla scuola locale artistica di Birmingham.

Classe XVI.

CRISTALLO, VETRO DI FANTASIA, E VETRO COLORITO.

1. Le qualità principali di vetro fabbricato nella Gran Bretagna sono, cristallo, cristallo di Boemia, vetro ordinario, e vetro inglese. Le fabbriche principali di vetro, sono a St. Helens in Lancashire; ma ci sono anche delle fabbriche grandissime in altre provincie, specialmente quelle dei Signori Chance di Birmingham e dei Signori Hartley di Sunderland. Il cristallo inglese si fa anche in Londra. Il negozio del vetro da bottiglia, condotto principalmente nei contorni di Newcastle, è grandissimo. Il vetro colorito o dipinto è anche fabbricato in

Londra, a Sunderland ed a Birmingham. Il vetro per gli ottici, benchè necessariamente non forma una ramificazione grande del negozio, è fabbricato nella Gran Bretagna; e le produzioni dei Signori Chance di Birmingham per il vetro da fanali, sono ben conosciute per tutto il mondo scientifico.

Benchè la fabbricazione di questo bel materiale costituisca ora uno dei prodotti principali di questo paese, è solamente nei venti anni passati che ha fatto un tale sviluppo. Fino all'anno 1845, la tassa eccessiva imposta sulla fabbrica, e le regolazioni seccanti necessitate per la raccolta di questi dazi, ritardò interamente il progresso, in fatto, fra gli anni 1789 e 1844 la quantità di vetro fabbricato e ritenuto per la consumazione in vece di avanzare a pari passo coll' aumento della popolazione, piuttosto retrocedeva. Dopo l' annullamento del dazio sul vetro l' estensione del mestiere è stato grandissimo, e l' abolizione della tassa sulle finestre nel 1851 ha anche più vantaggiato l' arte vetraria in questo paese.

2. I materiali greggi usati nel mestiere della vetraria sono quasi tutti ottenuti in questo paese, sebbene in qualche parte la sabbia di Fontainebleau è usata.

3. Non esistono statistiche ufficiali del numero degli impiegati nel negozio di vetraria inglese d' una data più recente che 1861, nel quale anno il numero degl' impiegati fu come segue:—

	Uomini	Donne	Totale
In Inghilterra e la provincia di Galles . . .	13,809	1,237	15,046
In Scozia . . .	1,189	28	1,217
In Irlanda . . .	231	31	262
Totale . . .	15,229	1,296	16,525

L' estratto seguente, tolto da uno rapporto del Signor Chance all' Associazione Britannica a Birmingham nel 1865, farà vedere l' importanza delle diverse divisioni di questo lavoro presentemente. Il prodotto d' ogni settimana è di circa 100,000 piedi. Ci sono 7 fabbricanti di cristallo di Boemia e vetro ordinario, 3 di questi fabbricanti fanno 75 per cento della quantità in vendita. Il numero dei lavoratori in queste 3 fabbriche è 2,500, e la quantità di cristallo prodotto 17,000 tons. Non esistono statistiche perfette della produzione di cristallo inglese, la produzione annuale di questa qualità di vetro, nei territori del Tyne e del Wear è stimata a 10,000,000 libbre. La produzione di Birmingham è circa 5,000,000, e quella di Stourbridge circa 3,500,000 libbre ogni anno. La fabbrica di bottiglie nel distretto del Tyne e Wear, nell' anno 1862 il Signor Swinburne dice essere stata di circa 4,230,000 dozzine.

4. La quantità media del soldo pagato a Birmingham nel 1866 nella fabbrica di cristallo inglese, e articoli per uso domestico, fu:—

Agli Uomini.

Per settimana di 45 ore:—

1 ^{ma} classe . . .	s. 48	d. 0 a 49	0
2 ^{da} classe . . .	42	0 „	44 6
3 ^{za} classe . . .	30	0 „	40 6
4 ^{ta} classe . . .	22	0 „	34 0
5 ^{ta} classe . . .	10	0 „	31 0
6 ^{ta} classe . . .	21	8	

Per settimana di 55 a 60 ore:

Tagliatori di cristallo . . .	24	0 „	32 0
-------------------------------	----	-----	------

Per settimana di 56 ore:

Cardatori, mischiatori, imballatori, ecc. . .	25	0	
---	----	---	--

Le donne impiegate come imballatrici, mischiatrici, ecc., 10s. per settimana di 50 ore.

In alcune ramificazioni del negozio della vetraria le relazioni fra i padroni ed i lavoratori, come anche le abitudini dei lavoratori stessi, hanno bisogno di grande ammiiglioramento. Il Signor Swinburne ci fa sapere che le relazioni tra padroni e lavoratori nelle fabbriche di cristallo inglese, cristallo soffiato e vetro di bottiglia non sono altre che una guerra continua. Oltrechè per motivo d' un buonamano eccesso della paga, chiamato 'denaro per bere' (il quale in fatto è ordinariamente dissipato nel comprare bevande spiritose), una irregolarità generale si fa osservare nelle abitudini dei lavoratori, la quale, per la più gran parte, termina nell' ubbriachezza stabilita. In altre parti si dice che i lavoratori hanno gran intelligenza ed educazione e si giovano liberamente delle diverse istituzioni stabilite pel miglioramento delle classi dei lavoratori.

5. La tavola seguente fa vedere le differenti specie di vetro importato nella Gran Bretagna nell' anno 1865:—

	Quantità	Valore
	Quintali	£
Vetro da finestra (eccettuato cristallo)	264,056	211,246
Cristallo inglese, rotato, colorato, adornato	32,961	172,405
Cristallo inglese, semplice, (comprese bottiglie)	23,039	32,254
Cristallo	28,631	133,613
Vetro argentato, e da specchio	1,699	10,700
Bottiglie, vetro ordinario	17,113	8,984
Manifatture non ancor notate	12,650	60,773
	380,149	629,975
	Libbre	
Margheritine, e cannellini di vetro	3,365,221	178,310

Il vetro da finestra, ed il cristallo inglese importati vengono principalmente dal Belgio, e da Amburgo; ma il cristallo ed il vetro argentato di Francia, e di Belgio. La ri-esportazione di vetro da finestra e margheritine nel medesimo anno fu considerabile, essendo 37,842 cwts., e 2,057,000 lbs. relativamente.

6. Una piccola proporzione solamente dell' esportazione di vetro Britannico (eccetto bottiglie) si fa cogli Stati Europei, la più gran parte dell' esportazione essendo fatta per gli Stati Uniti e le colonie Britanniche. Per

causa della qualità costosa di casse necessarie alla sicurezza nel viaggio, per i danni nella sballatura, di più il trasporto ed altre spese di viaggio, qualunque addizione fatta al prezzo come una tassa d' importazione diviene un vero ostacolo al negozio di questi oggetti; e come i dritti d' entrata imposti nell' Europa sono considerabili, la mancanza di negozio in questa parte del mondo si spiega tanto più facilmente in quei paesi dove la paga è bassa, e per questa ragione i fabbricanti nostrali possono vendere a buon mercato.

Nondimeno che diversi mercati sono per questa ragione chiusi ai fabbricanti di vetro inglesi, si vedrà in esaminando il rapporto seguente, che l' esportazione inglese ha fatto gran progresso nei 15 anni passati:—

L'Anno	Cristallo Inglese	Cristallo da finestra	Bottiglie Ordinarie	Cristallo
Quantità				
	cwts.	cwts.	cwts.	cwts.
1851	25,902	16,459	329,025	
1855	39,295	21,537	513,140	
1860	79,544	33,408	629,511	
1865	99,314	50,955	622,496	
Valore				
	£	£	£	£
1851	110,666	22,223	174,318	20,743
1855	141,890	33,659	279,471	52,312
1860	222,380	44,063	324,189	62,566
1865	302,105	60,857	310,245	71,387

7. La porzione più grande del cristallo è fatto a mano coll' assistenza di macchine; il vetro pressato si fa principalmente a macchina. I processi di rotare ed affilare, ecc., nella fabbrica del cristallo inglese, si fa generalmente per mezzo di vapore.

8. Il Sig. Swinburne rapporta che 'in quanto ai processi della vetraria generalmente, non si può negare che vi è gran bisogno di miglioramento.' Nondimeno molto progresso è stato fatto nelle diverse ramificazioni del negozio; specialmente fra le quali si osserva l' accrescimento nella grandezza dei cristalli ed anche del vetro ordinario, ecc., il miglioramento nel colore del vetro, ed anche il progresso nella fabbrica di vetro pressato. L' introduzione di oggetti di quest' ultima specie ha abbassato talmente il prezzo del cristallo inglese, che le persone le più povere possono avere belli articoli per uso domestico, che, pochi anni fa, gli sarebbe stato impossibile di possedere.

Il progresso del commercio della vetreria deve essere attribuito, come già detto, all' annullamento dei dazj che in passato impedirono il suo progresso. Dopo l' annullamento di queste tasse, il vetro abbassò in prezzo immensamente, e si verificò un grande aumento nello smercio. I prezzi seguenti delle specie principali di vetro, avanti e dopo il levare la tassa (che furono forniti dal Sig. Chance) dimostrano il vantaggio che ha prodotto l' annullamento sull' industria del vetro in generale. Un specchio di cristallo 50 × 40 inches nel 1844

costava 10*l.*, nel 1865 meno che la metà. Cristallo di Boemia di buona qualità nel 1844 costava 12*l.*, per cesto, nel 1865 2*l.* 8*s.* Il vetro ordinario nel 1844 1*s.* 2*d.*, per piede nel 1865 2*d.* Se la tassa sul vetro esisteva nel 1851, un Palazzo di Cristallo sarebbe stato quasi una impossibilità; d' altra parte l' abrogazione del dazio sulle finestre ha menato ad un uso più esteso di vetro negli edifizj di ogni specie, e ha materialmente congiunto al conforto e alla salute della popolazione.

In quanto all' applicazione delle belle arti alle manifatture di vetro, il giuri all' Esposizione Internazionale del 1862 rapportò che l' avanzamento principale fu nel vetro intagliato. Osservarono anche particolarmente il progresso fatto nella forma degl' articoli di uso generale, che riferivano in gran parte al gusto nutrito per le scuole di disegno per tutto il paese, alle energie di molti fabbricanti nel incoraggiare una migliore apprezzazione di buona forma nei compratori, ed anche all' avanzamento generale della conoscenza d' arte nel popolo, una gran parte dei quale hanno attribuito all' influenza dell' esposizione nazionali e internazionali, e specialmente all' ultima, nella quale gli espositori imparano per la loro emulazione nell' arti di pace.

Classe XVII.

PORCELLANA, TERRAGLIA, ED ALTRI VASELLAMI DI FANTASIA.

1. La manifattura di terraglia, che ora è uno dei prodotti principali del paese, è stata continuata in Staffordshire per più di due secoli. L' Inghilterra, al contrario di molte altre nazioni, non ha manifatture appartenendo al governo per la produzione e sviluppo dell' arte ceramica, ed il commercio è per conseguenza abbandonato interamente allo sforzo dell' interpresia particolare. La più gran manifattura di porcellana è in Staffordshire, con ramificazioni a Glasgow, Worcester, Newcastle e Lambeth. In Staffordshire fanno quasi tutte le qualità di terraglia; i prodotti di Worcester sono generalmente di una gran finezza; quelle di Newcastle di seconda qualità; e in Lambeth si vendono principalmente vasellami grossi, bottiglie e vasi di terra, tegghie, tubi, ecc. Vi è anche una gran manifattura di vasellami di argilla che resiste al fuoco che si fabbrica in gran quantità a Newcastle e Stourbridge.

2. Le materie grezze adoperate nella manifattura di porcellana si trovano principalmente nelle provincie di Dorset, Devon, e Cornwall. I rapporti ufficiali del 1865 attestano che la produzione d' argilla e terra da far porcellana ammontò in quell' anno a 374,358 tons. 751,566 tons d' argilla da resistere al fuoco furono scavate nelle provincie di Stafford; York, Derby, ecc. Si dice che la quantità d' argilla prepa-

rata, consumata annualmente nelle fabbriche di Staffordshire, è circa 160,000 tonnellate (tons).

In aggiunto al già detto sull' argilla, il Sig. Coghill ci dà il rapporto seguente degli altri materiali usati nella provincia di Staffordshire. 'La consumazione annuale di carbone nella fabbrica di terraglia può essere fissata a 450,000 tonnellate. Per colorire l' argilla e stampare la mercanzia, usano circa 67,000 libbre di ossido di cobalto, e circa 1,100 tons di borace e ossido boraceo per la lustratura, e 12,000 oncie d' oro sono necessarie per dorare ed abbellire la medesima. La quantità d' osso calcinato consumata nella fabbrica di terraglia è circa 4,500 tonnellate, e viene principalmente dall' America Meridionale.

3. Il numero delle persone segnati nel censo come impiegati nelle fabbriche di terraglia e porcellana della Gran Bretagna nell' anno 1861 era:—

	Uomini	Donne	Totale
In Inghilterra e la Galles	26,138	11,934	38,072
Scozia	1,922	595	2,517
Irlanda	101	7	108
Totale	28,161	12,536	40,697

Vi sono anche 3,471 uomini e 1,115 donne impiegati nella fabbrica da pipe da fumare nello stesso anno.

Il numero degli impiegati nelle fabbriche di terraglia in Staffordshire, come da resoconto del Signor Coghill, fu nell' anno 1864, 27,878, del quale 10,598 donne.

4. Il valore medio dei salary pagati ai braccianti nella provincia di Staffordshire estendevansi nel 1866:—

	Per giorno			
	s.	d.	s.	d.
Per uomini	1	6	a	7
„ donne	1	6	„	1
Per settimana				
A Worcester:	s.	d.	s.	d.
Per uomini	16	0	a	50
„ donne	10	6	„	14
A Newcastle:	s.	d.	s.	d.
Per uomini	10	0	„	30
„ donne	10	0		

5. L' importazione di terraglia nella Gran Bretagna è molto piccola, e la quantità di mercanzia di terraglia e porcellana non è grande, ammontando soltanto a 18,705 quintali (hundredweight), il valore del quale è 166,098£. nell' anno 1865. La parte principale di queste importazioni venne dalla Francia.

6. Il valore della terraglia e porcellana esportata dalla Gran Bretagna durante gli anni cinque dal 1861 insino al 1865 era:—

	£
1861	1,070,000
1862	1,220,000
1863	1,341,000
1864	1,422,000
1865	1,422,000

7. Il meccanismo è usato in alcune divisioni del negozio, ma non tanto generalmente quanto si desiderebbe.

8. Un progresso considerevole è stato fatto negli anni scorsi nella fabbrica di terraglia e porcellana; e gli articoli comuni per l' uso di casa ora fabbricati sono celebri per il prezzo basso, la leggerezza di manifattura, ed eccellenza di finitura. Molta attenzione è anche stata osservata nella sostituzione degli ingredienti innocui invece di quelli velenosi per la lustratura della terraglia e dei risultati molto soddisfacenti sono stati ottenuti.

La migrazione nel disegno e nell' esecuzione degli articoli di qualità fine ora prodotti è dovuta agli sforzi reciproci di alcuni dei principali manifattori, e all' istruzione data dalle scuole d' arti ai braccianti dei distretti industriali. Un maggior uso di macchine sarebbe di gran servizio per sviluppare la fabbrica di terraglia del paese. Il progresso nella divisione dell' argilla da resistere al fuoco nella manifattura di terraglia è stato considerabile; 80 milioni di mattoni a prova di fuoco sono consumati ogn' anno solamente nel distretto di Newcastle, e circa 30 milioni in Stourbridge, in soprappiù alle storte, tubi, ecc., che si fanno in gran quantità.

Classe XVIII.

TAPPETI, TAPPEZZERIA ED ALTRE STOFFE DI MOBIGLIA.

1. Gli articoli principali compresi in questa classe, che sono fabbricati in gran quantità nella Gran Bretagna, sono tappeti, stoffe da tappezzeri, tela cerata, stoffe di caoutchouc e oggetti tessuti di crino. Le migliori qualità di tappeti inglesi sono i tappeti detti di 'Brussels' fatti alla macchina Jacquard e quelli detti 'Arazzi' ossia tappeti stampati, i primi essendo fabbricati a Kidderminster, Halifax, e Durham, e gli ultimi a Halifax. Delle altre specie di tappeti, vi sono quelle fabbricate a Wilton, e chiamate 'Axminster'; le 'Kidderminster' e 'Axminster' patentate a Glasgow e nelle altre parti delle Scozia; 'figure twills' a Durham; e le qualità meno costose di tappeto dette 'super' e quelle di feltro e d' olanda sono fabbricate nella divisione occidentale di Yorkshire. La manifattura di tappeti di 'jute' a Dundee è divenuta un negozio di qualche importanza. Le stoffe di cotone sono fatte a Manchester, e gl' articoli damascati, di lana, e di lana filata, si fabbricano a Halifax.

Tele cerate, per pavimento, e per coprire tavole sono comprate estensivamente nella Gran Bretagna, per uso di casa, ed anche sono esportate in gran quantità. Una proporzione considerabile di tale manifattura è condotta nelle vicinanze di Londra, ma le fabbriche sono poste in differenti parti del regno.

Tessuti di crino per fondi di sedie e di canapé sono ancora fabbricati, benchè questa mercanzia non è usata così generalmente per mobigliare come era prima. La fabbrica di stoje di caoutchouc, ecc., è aumentata maggiormente negli anni recenti.

2. Le sostanze che forniscono le materie greggie usate nelle fabbriche di tappeti sono state notate nelle osservazioni appartenenti alle Classe 27, 28 e 30. Il crino è importato in quantità considerabile, principalmente dalla Russia e dall' America. Le importazioni di questa mercanzia nell' anno 1865 ammontavano a centupli (cwts.) 21,078, del valore di 106,938£. I materiali greggi principali usati nella manifattura di stoje di caoutchouc, ecc., sono il caoutchouc e la gutta percha. Il primo è importato in gran quantità dall' America Meridionale e l' ultimo dall' Arcipelago Orientale e Singapore. La quantità totale ed il valore di quest' articoli importati nella Gran Bretagna nell' anno 1865 era :—

	Centuple (cwts.)	Valore £
Caoutchouc . . .	71,392	530,538
Gutta percha . . .	29,077	160,565

Una gran quantità di caoutchouc è riesportata, ed il resto, siccome la gutta percha, forma non soltanto la materia grezza del negozio di stoje di caoutchouc, ma è anche usata per una diversità infinita di lavori.

3. Eccezzuando il lavoro dei tappeti, non vi sono rapporti del numero dei braccianti impiegati nelle altre divisioni dei negozj compresi in questa classe. Il giuri della Classe 22 nell' Esposizione di Londra nel 1862 calcolò, che il numero delle persone impiegate nel negozio dei tappeti era circa 40,000.

4. Il salario medio dei braccianti impiegati fu detto essere nel 1851, da 16s. a 28s. per settimana, ma queste paghe sono probabilmente molto più basse di quelle presentemente in uso. Il valore totale dei tappeti fabbricati annualmente in paese può dare qualche idea dell' importanza di questo negozio, come mezzo per fornire un impiego ai braccianti. I numeri seguenti furono dati dal giuri all' Esposizione di Londra nel 1862 come una stima della produzione di tappeti nel medesimo anno :—

	£
In Yorkshire	980,000
„ Kidderminster e la vicinanza	630,000
„ Durham, Kendal, e locali vicini	120,000
„ Somersetshire e Wiltshire . .	40,000
„ Scozia	340,000
Totale	2,110,000

5. La tavola seguente fa vedere la quantità ed il valore di tappeti di lana e tappeti da camminetto importati nella Gran Bretagna dal 1861 al 1865 :—

	Canne quadrate (square yards)	Valore £
1861	61,869	27,538
1862	111,896	33,165
1863	83,696	30,743
1864	78,311	32,392
1865	98,936	39,247

6. L' esportazione di tappeti e bigelli inglesi è molto grande, la quantità ed il valore dei medesimi dal 1862 a 1865 ammontò a :—

Anni	Tappeti	Tappeti da Camminetto	Bigelli o Tappeti di Feltro
	Quantità		
	Canne (yds.)	No.	Canne (yds.)
1862	4,799,000	36,640	579,000
1863	5,582,000	45,907	676,000
1864	5,620,000	40,257	372,000
1865	5,284,000	60,991	459,000
	Valore		
	£	£	£
1862	620,700	14,737	50,515
1863	747,521	17,578	63,262
1864	825,098	14,782	36,400
1865	818,847	17,904	42,600

Gli Stati Uniti dell' America sono i consumatori principali di tappeti inglesi; nel 1865 2,164,000 canne (yards) furono mandate colà.

L' esportazione di tela cerata nell' anno 1865 era :—

	Quantità Canne quadrate	Valore £
Telacerata verniciata	2,094,000	138,459
Tela cerata, e tela di caoutchouc	320,000	40,448

7. La manifattura di tappeti è ora principalmente fabbricata a macchina; la tessitura fatta a mano con il telajo 'Jacquard' è stata abbandonata quasi interamente per la tessitura a forza di vapore.

8. Che la mercanzia di tappeti nel regno avesse fatto gran progresso dopo l' anno 1851 fu visto chiaramente nella miglioramento del gusto, colorito, e disegno degli articoli esposti nel 1862 a paragone di quelli presentati alla prima Esposizione di Londra, dacchè l' uso più esteso delle macchine a vapore ha migliorato importantemente la produzione di questo genere di mercanzia. Lo sviluppo vistoso della fabbrica di tappeti d' arazzo del Signor Crossley di Halifax, e forse una delle migliorazioni recenti la più importante nella fabbrica di tappeti nostrali. Durham, Glasgow, Halifax e Kidderminster posseggono ciascheduna scuole d' arti, e non è a dubitarsi che l' istruzione data ai braccianti in queste scuole abbia ottenuto un effetto eccellente sopra ogni fabbrica nei distretti.

Una miglioramento considerevole nel disegno su tela cerata è stata fatta dopo l' anno 1865.

Classe XIX.

CARTA DA PARAR MURI.

1. La fabbricazione di paramenti da muri è stata stabilita nella Gran Bretagna da più di un secolo, ed esercitata nella vicinanza di Londra,

a Manchester, a Edimburgo, ed altri locali del paese. La specie di carta da parar muri nella quale i manifattori inglesi si mostrano superiori è quella fatta a macchina, venduta a prezzi tanto bassi da permettere al più povero della società il lusso di abbellire e dar lieto aspetto alle mura delle loro stanze.

2. Una gran quantità di carta, colori, lana, e metallo è consumata annualmente nella fabbrica di tappezzeria, ma non esistono rapporti della quantità precisa così adoprata.

3. Secondo il censo del 1861, il numero dei braccianti impiegati nel negozio di paramenti da muri in ogni divisione del regno era :—

	Uomini	Donne	Totale
Nell' Inghilterra e } prov. di Galles }	1,556	399	1,955
Scozia	77	38	115
Irlanda	96	9	105
Totale	1,729	446	2,175

4. Non vi sono rapporti generali in ragione dei salarij pagati nel negozio di carta da parar muri. Un rapporto fatto dalla Camera di Commercio d' Edimburgo al Consiglio della stessa stima le mercedi pagate in quella località in 1866 di essere come segue :—

	Per settimana di 57 ore	
	s.	s.
Mischiatori di colori	12	
Vetraj, ecc.	15	
Stampatori e marmorizzatori	20 a 40	

5. La quantità ed il valore della carta da parar muri importata nella Gran Bretagna durante gli anni cinque dal 1861 a 1865 era :—

Anni	Carta da parar Muri	
	Quantità	Valore
	Centupli (cwts.)	£
1861	2,975	15,395
1862	4,210	17,680
1863	5,177	21,740
1864	5,979	25,110
1865	5,684	23,873

La Francia fornisce la più grande quantità di carta da parar muri importata nel paese.

6. La quantità ed il valore della carta inglese esportata durante il medesimo tempo era :—

Anni	Carta Inglese da parar Muri	
	Quantità	Valore
	Centupli (cwts.)	£
1861	13,415	105,984
1862	19,874	64,505
1863	25,874	84,403
1864	25,163	82,819
1865	32,893	109,320

7. La parte principale delle specie meno costose di carta da parar muri è fatta a macchina, le quali sono state assai migliorate

durante gli anni recenti. Le macchine usate sono capaci di stampare da 1,000 a 1,500 pezzi di carta ogni giorno.

8. Insino all' anno 1846 il gran diritto d' importazione imposto sulla carta forestiera ebbe l'effetto di escluderla quasi intieramente dal mercato inglese, e la mancanza di concorso fu certamente seguita dalla mancanza di miglioramento dalla parte dei fabbricanti inglesi. Nondimeno, dopo che il rivale forestiero è stato ammesso a concorso uguale nel commercio inglese un progresso vistoso è stato osservato nello stile e nella lavorazione delle carte inglesi, ed il miglioramento delle macchine ha offerto il mezzo di fabbricare belle carte ed a vilissimo prezzo.

Classe XX.

OGGETTI DA COLTELLINAJ.

1. L' Inghilterra è stata rinommata da lungo tempo per ogni specie d' oggetti da coltellinaj, il luogo principale della manifattura essendo a Sheffield. Oggetti da coltellinaj si fanno anchè in meno quantità in Londra ed in altre parti del regno.

2. L' acciaio usato nella manifattura d' oggetti da coltellinajo è prodotto a Sheffield principalmente da ferro forestiero. Nel 1862 il numero di fornaci per temprare in quella città fu 205 che facevano ogni anno 78,000 tons d'acciaio temprato; e il numero di fornaci per fondere 2,437, che facevano circa 51,000 tons d' acciaio fuso annualmente. Una porzione solamente di questa produzione è usata nel negozio d' oggetti da coltellinaj.

3. Dal rapporto dei giurj sugli oggetti da coltellinajo presentati all' Esposizione di Londra in 1862 si rileva che l' aumento nel numero dei lavoranti nel negozio della coltelleria da tavola, rasoj, temperini, coltelli da tasca, e di cisoje, ramificazioni del commercio di Sheffield, non era stato molto accresciuto dall' epoca dell' Esposizione del 1851 a quella del 1862; ma che a motivo dell' uso più esteso di meccanismo una maggior quantità di coltelli da tavola fu fabbricata degl' anni precedenti.

Il numero di persone impiegate nel borgo di Sheffield nelle ramificazione principali del negozio d' oggetti da coltellinajo in 1864 fu come segue :—

Ramificazioni del Negozio	Uomini	Donne	Totale
Fabbricanti di cisoje . .	1,089	331	1,420
„ lime	4,345	589	4,934
„ seghe	1,232	—	1,232
Coltellaj	3,294	184	3,478
Fabbricanti di lame . .	1,797	—	1,797
„ coltelli	4,944	—	4,944
„ rasoj	817	—	817
Totale	17,518	1,104	18,622

4. La quantità media dei salari pagati nelle ramificazioni principali del negozio a Sheffield in 1866 fu :—

Fabbrikanti di Coltelli da Tavola			
Occupazioni	Paga	Ore di Lavoro	
	s.		
Fabbri	28	60	
Battitori	24	60	
Fabbrikanti di manichi	21	60	
Arrotini	30	60	
Fabbrikanti di Coltelli			
Occupazioni	Paga	Ore di Lavoro	
	s.		
Arrotini	30	60	
Fabbri	30	60	
Coltellaj	25	60	
Fabbrikanti di molle e bilancie	25	60	
Fabbrikanti di Cesoje			
Occupazioni	Paga	Ore di Lavoro	
	s. s.		
Fabbri	20 a 30	60	
Limatori	20 „ 30	60	
Arrotini	27 „ 35	54	
Finitori	22 „ 32	54	

5. Il valore d' oggetti da coltellajo inglesi esportati dalla Gran Brettagna durante i quattro anni 1862 a 1865 fu :—

	£
1862	291,244
1863	304,119
1864	386,859
1865	402,294

6. Il meccanismo si usa in alcune ramificazioni del commercio d' oggetti da coltellajo, ma diverse delle opere più importanti si fanno a mano.

7. Benchè veruni miglioramenti d' importanza siano stati prodigati recentemente al commercio d' oggetti da coltellinajo, i prodotti di Sheffield mantengono la loro riputazione per eccellenza di qualità e di lavoro, ed anche per la bellezza di finitura e di disegno. Una scuola d' arte è stata stabilita a Sheffield nell' anno 1843, ed il numero degli studenti che frequentarono quella scuola nell' anno 1865 fu di 1,763.

Classe XXI.

VASELLAME D' ORO E D' ARGENTO.

La manifattura d' oggetti nei metalli preziosi è condotta nelle città principali del regno, ed i gran stabilimenti della capitale fanno ogni anno una grandissima quantità di vasellame d' argento. L' uso esteso negl' anni recenti d' oggetti laminati d' argento ha contribuito a limitare le operazioni del negozio nei metalli preziosi; il valore dei vasellami fatti ogni anno in Inghilterra è stimato d' essere più di un milione di lire sterline. C' è anche una esportazione di questi articoli, il valore della quale montò nel 1865 sino a 62,532/.

Non esistono statistiche del numero totale degl' artigiani impiegati nella produzione degl' articoli compresi in questa classe al presente. Il numero d' orrefej e di giojellierj in Londra è 159 e di cesellatori 41.

C' è stato progresso considerabile nell' applicazione delle arti negli 10 anni passati; ma in quanto al disegnare in contorno, e all' abbellimento, la coltivazione assidua della semplicità nello stile è molto necessario per i disegnatori inglesi di vasellame.

Classe XXII.

BRONZI, ED ALTRE FORME DI ARTI, ED OGGETTI DI LAVORO 'REPOUSSÉ.'

La manifattura di bronzi nella Gran Brettagna è molto ristretta, la scarsità di buoni cesellatori inglesi è attribuita alla maniera dell' ammaestramento adottata nelle scuole di disegno, che è calcolata piuttosto per produrre artisti e scultori che per buoni lavoratori in metallo.

La Francia fornisce la parte principale dei bronzi importati in questo paese; avendo mandato un valore di 55,168/ nel 1865, benchè l' importazione totale fu solamente 61,307/.

Classe XXIII.

LE PENDOLE, E GLI ORIUOLI.

La costruzione di pendole e oriuoli è condotta più specialmente in Londra, a Coventry, Liverpool, e Manchester. Gli oriuoli per li quali i fabbricanti inglesi sono più rinomati sono i cronometri, ed altre specie superiori di orologi, benchè un numero vasto d' oriuoli a buon mercato è fatto in questo paese. Le migliori macchine si fanno in Lancashire, ed una esportazione considerabile di macchine d' oriuoli è fatta ogni anno agli Stati Uniti dove sono incassati e finiti. Secondo il censo del 1861, il numero seguente di persone furono impiegate nel negozio di pendole ed oriuoli, nelle diverse divisioni del paese :—

	Uomini	Donne	Totale
In Inghilterra	20,221	536	20,757
Scozia	1,639	8	1,707
Irlanda	951	12	963
	22,871	556	23,247

Il numero degli impiegati nelle diverse ramificazioni del negozio in Londra ora (ecce- tuando lavoranti) è come segue :—

Fabbrikanti di oriuoli	412
Fabbrikanti di cassette da oriuoli	55
Giojellieri da oriuolo	31
Fabbrikanti di diverse parti d' oriuolo	277
Fabbrikanti di pendole	162
Fabbrikanti di cassette da pendole	14

Il valore delle pendole e oriuoli importati è restato quasi sempre al stesso punto nei cinque ultimi anni; nel 1865, pendole di un valore di 216,677*l.*, e oriuoli di un valore di 257,076*l.* furono importati nella Gran Bretagna. Il valore delle mercanzie inglesi esportate nel medesimo anno montò a 24,695*l.* di pendole, e 69,179*l.* d'oriuoli.

Classe XXIV.

APPARATI E PROCESSI PER ILLUMINARE E RISCALDARE.

La fabbrica delle migliori qualità di griglie da camminetto, paraceneri e ferri da camminetto è condotta a Sheffield, dove quella industria è stata stabilita per 60 o 70 anni. Avanti quel tempo le migliori grate furono fatte in Londra ed in Edimburgo. Le qualità più ordinarie sono fatte principalmente a Carron ed in altre fabbriche scozzesi, alle fabbriche di Coalbrookdale, ed anche nelle fonderie di Londra, Northampton, Dudley, Rotherham, Birmingham, Mansfield, Nottingham, e di Derby. L'arte di lavorare, arrotare, e di bruniere l'acciajo appartiene particolarmente a Sheffield ed ai suoi contorni. I territori dove si fonde il ferro presentano al fonditore il gran vantaggio di aver ferro e carbone a buon mercato, ed in queste località è quindi esercitato la maggior parte del negozio delle ferrate. Non si può ammettere che l'apparato per riscaldare colla circolazione d'aria calda e gli apparati per ventilazione abbiano toccata la loro massima perfezione: il difetto di successo è attribuito in parte alla costruzione degli edifizj nei quali sono stati messi questi apparati.

In quanto alle lampade, l'uso aumentato del gas negli anni recenti ha fatto scapitare l'olio come mezzo d'illuminazione, e una gran parte della manifattura della specie di lampade più antiche ha ceduto posto alla fabbricazione di quelle per il gas. Se la consumazione d'olio vegetale e olio di pesce ha diminuita, l'uso d'olio paraffino, scoperto recentemente, ha aumentato moltissimo, e ha dato origine alla fabbrica d'una nuova specie di lampade che si fanno in gran quantità a Birmingham a prezzi che variano da 4*l.* a 50*s.* ciascheduna. Lo sviluppo rapido della comunicazione a vapore per terra e per mare, ha anche prodotto una gran richiesta per segnali ed altre lampade, e ha dato impiego a quei braccianti che finora erano impiegati nell'antica manifattura di quest'articolo.

Classe XXV.

PROFUMERIA.

La principale manifattura di profumeria è in Londra, però quella degli odori, delle pomate, dei cosmetici, ecc., si esercita in minor

estensione nella maggior parte delle città principali d'Inghilterra. Pochissimi dei materiali grezzi usati nella manifattura dei profumi sono prodotti in questo paese, ma sono importati principalmente dagli Stati Meridionali dell'Europa e dell'Asia. La fabbricazione di sapone da toeletta nella Gran Bretagna è considerabile; il più celebre forse è quello detto 'Windsor soap,' il quale non solamente è usato in grande quantità in Inghilterra, ma è anche esportato in ogni parte del mondo. L'acqua di lavanda inglese ha anche avuto una grande riputazione per lungo tempo.

Non esistono statistiche ufficiali del numero totale degl'impiegati nella produzione dei profumi e dei saponi. Però, a motivo della gran aumento di cotesto traffico, ora trovano occupazione un gran numero di uomini; mentre le donne vengono occupate nei lavori di minor fatica.

Il numero dei manifattori occupati in rapporto col negozio dei profumi in Londra (eccettuato lavoranti) ora monta a—

Profumieri :—

Al ingrosso	151
A minuto	849
Fabbricanti di tinta da capelli . .	16

Il valore della profumeria inglese (eccettuato sapone da toeletta) esportata nell'anno 1865 montò a 94,351*l.* Gli esporti di saponi da toeletta nel stesso anno montò a 7,628 cwts., stimati al valore di 32,361*l.*

Durante i passati 10 anni, grande avanzamento è stato fatto nelle diverse ramificazioni del negozio di profumeria, e l'annullamento dell'imposta sul sapone nell'anno 1853 ha fatto buon effetto sulla fabbricazione di quest'articolo di prima importanza e necessità.

Classe XXVI.

LAVORI DI PELLE, ARTICOLI DI FANTASIA, E LAVORI DI CESTAJUOLO.

Non è possibile di verificare la somma totale della produzione degl'articoli diversi compresi in questa classe. Forse una delle mercanzie di più grande importanza è la fabbricazione delle spazzole, scope, ecc. A causa dell'uso generale di spazzole per bisogni domestici, la fabbricazione è di necessità grandissima, benché non esiste rapporto della sua estensione. Secondo il censo del 1861, il seguente fu il numero dei fabbricanti di spazzole e scope in ogni divisione della Gran Bretagna:—

In Inghilterra e la provincia di Galles	11,178
Scozia	535
Irlanda	617
Totale	12,330

L'importazione di spazzole e scope è di poco valore, e l'esportazione di questi oggetti di

manifattura inglese nell'anno 1865 montò solamente a 52,000£, la maggior parte delle quali fu mandata in Australia. D'altra parte una grande importazione di setole si fa ogni anno; nell'anno 1865, 2,566,000 libbre furono importate, principalmente dalla Russia. Una gran quantità di spazzole è anche fatta colle fibre del frutto cocco.

Il lavoro dei panieri nella Gran Bretagna è limitato principalmente alla fabbrica d'articoli

di qualità ordinaria; cioè, panieri, ceste, zane, ecc., benchè si fa anche diversi articoli di fantasia.

Le scatole da viaggio inglesi hanno gran riputazione per l'eccellenza della loro manifattura; si possono comprare a tutti i prezzi, variando da pochi shillings sino a mille ghinee l'una. Un avanzamento grande è stato fatto nella manifattura di questi articoli dall'anno 1851 in poi.

GRUPPO IV.

(CLASSI XXVII-XXXIX.)

VESTIARIO (COMPRESSE STOFFE) ED ALTRI ARTICOLI PORTATE SULLA PERSONA.

Classe XXVII.

FILI E STOFFE DI COTONE.

LA manifattura di cotone forma sempre la più grande ramificazione del lavoro nostrale nella Gran Bretagna, nonostante la crisi terribile che ha subito il commercio del cotone in questo paese, come in tutta l'Europa.

1. I luoghi principali di questa industria sono nel Lancashire in Inghilterra, e Lanarkshire nella Scozia. Le provincie di York, Chester, Derby, e Nottingham contengono anch' esse un gran numero di fabbriche di cotone.

Secondo l'ultimo rapporto, il numero totale delle fabbriche di cotone nella Gran Bretagna fu 2,887, del qual numero 2,715 furono in Inghilterra e la provincia di Galles, 163 in Scozia, e 9 in Irlanda. Un breve rapporto darà probabilmente un' idea migliore della distribuzione di questa industria nelle tre divisioni del regno :—

Divisioni e Provincie	Numero delle Fabbriche	Numero di Fusi	Numero di Telai a Vapore
In Inghilterra e la provincia di Galles :			
Lancashire . . .	1,979	21,530,532	306,423
Yorkshire . . .	369	2,414,898	17,393
Derby . . .	79	682,008	7,581
Cheshire . . .	212	3,373,113	32,926
Nottingham . . .	26	36,000	—
Altre provincie . .	50	315,574	3,802
Totale . . .	2,715	28,352,125	368,125
In Scozia :			
Lanarkshire . . .	96	1,138,602	24,149
Renfrew . . .	44	408,742	2,968
Altre provincie . .	23	368,054	2,993
Totale . . .	163	1,915,398	30,110
In Irlanda . . .	9	119,944	1,757
Nella Gran Bretagna	2,887	30,387,467	399,992

Si può considerare le cifre di sopra quale rappresentanza giusta dell' industria di cotone nei tempi di attività ordinaria. Una grande quantità di meccanismo nuovo è stato aggiunto

dopo l'anno 1861. Ma anche ora diverse fabbriche stanno senza lavoro.

Nei territorj di Lancashire e Cheshire, dei quali si può tenere Manchester qual centro, ogni specie di fili di cotone, pezzi di tela di qualità fine o ordinaria, tela stampata, velluti, ecc. ecc. sono fabbricati; mentre che a Glasgow che è il centro dell' industria di cotone in Scozia, sono fatte le qualità più sottili, come tela battista, giaconetta, ecc.

In quanto alle stoffe miste, che sono comprese in questa classe, è quasi impossibile di descrivere gl' articoli innumerabili nei quali il cotone costituisce la parte principale. Una delle fabbricazioni di più grande importanza è quella condotta a Bradford ed in altre parti di Yorkshire, cioè quella delle stoffe fatte con cotone e lana, che hanno l' apparenza d' essere tutta lana, benchè sono naturalmente di molto più buon mercato. Altri schiarimenti su questi oggetti si daranno nella Classe 29.

2. Antecedentemente alla guerra civile degli Stati Uniti, l' Inghilterra otteneva la più gran quantità del materiale grezzo usato nella fabbrica del cotone da quel paese. La quantità media dell' importazione totale del cotone grezzo nei cinque anni dal 1856 al 1860 montò a 1,129 milioni di libbre per anno, della quale 869 milioni furono ottenuti dagli Stati Uniti.

Durante il medesimo tempo 171 milioni di libbre furono esportati, lasciando 958 milioni per la consumazione annuale.

All' eruzione della guerra americana, la Camera di Commercio di Manchester prendeva misure attive per stimolare la coltivazione del cotone in diverse parti del mondo: e molti paesi, notabilmente l'India Britannica, Egitto, il Brasile, ed altre provincie dell' America Meridionale, ed anche la China ed il Giappone, aumentarono immensamente la coltivazione del cotone e contribuirono a fornire i mercati inglesi durante gl' anni 1861 a 1865. Sebbene nell' ultimo anno la provvista da questi paesi cominciò a diminuire, non potendo sicuramente lottare col produttore americano nei tempi di pace e tranquillità.

I tre paesi che hanno fornito maggior prov-

vista di cotone durante la guerra americana furono l' India Britannica, l' Egitto, ed il Brasile. L' importazione di cotone grezzo durante l' anno 1865 fu :—

	Libbre
Dell' India Britannica . . .	446,000,000
I Stati, Uniti, l' isole di Baama e il Messico compresi . . .	190,000,000
L' Egitto	177,000,000
Il Brasile	55,000,000
La China	36,000,000
Il Mediterraneo	27,000,000
Altri paesi	47,000,000
Totale	978,000,000

Di questa quantità 303 milioni di libbre furono ri-esportate, lasciando 675 milioni di libbre per la consumazione nostrale.

Le importazioni di cotone grezzo nei primi undici mesi di 1866 montavano a 1,260 milioni di libbre, o 482 milioni di libbre in più dell' importazione corrispondente nell' anno antecedente. Della concorrenza totale, 474 milioni di libbre furono forniti dall' India Inglese; 361 milioni di libbre furono ri-esportati durante gli undici mesi, lasciando 899 milioni di libbre per la consumazione nostrale.

Le variazioni nel prezzo di cotone da 1860 infino al tempo presente furono come segue :—

In Dicembre	Cotone Americano buono da terreno elevato, per libbra d.
1860	7 $\frac{1}{4}$
1861	11
1862	23 $\frac{5}{8}$
1863	27 $\frac{1}{2}$
1864	27 $\frac{1}{2}$
1865	22

Nel luglio ed agosto 1864 le contrattazioni montavano sino all' altezza di 31 $\frac{1}{2}$ d. per lb. Il cotone indiano ha anch' ottenuto prezzi alti da 1862 a 1865. I prezzi attuali sono (dicembre 1866) 16d. per cotone buono americano, e 12 $\frac{1}{2}$ d. per cotone buono di Dollerah (India).

Bisogna rammentarsi che durante la crisi, il prezzo di mercanzie di cotone non ascese nella medesima proporzione che il materiale grezzo: il costo della fabbricazione essendo restato allo stesso punto per vari anni, a motivo dell' applicazione estesa del meccanismo, e volendo mantenere a prezzo basso le mercanzie fabbricate, esse furono fatte più sottili, e conseguentemente contennero minore quantità del costoso materiale grezzo.

L' abbassamento nel prezzo del cotone, e la fiducia d' una richiesta sicura di mercanzie, ha fortunatamente messo i fabbricanti in posizione di tornare alle qualità prime, e ristabilire la riputazione delle loro fabbriche.

3. Di 451,000 persone impiegate nelle fattorie di cotone della Gran Bretagna in 1861, 315,000, 0-70 per cento, erano così occupate, nel territorio di Lancashire. Il rapporto

seguito farà vedere il sesso e l' età del numero totale degli artigiani :—

	In Inghilterra e la Galles	In Scozia	In Irlanda	Nella Gran Bretagna
Maschi :				
Avendo meno di 13 anni	21,774	307	—	20,081
13 anni a 18	38,210	2,661	336	41,207
18 e di più	111,720	5,060	488	119,268
Totale	173,704	8,028	824	182,556
Femmine :				
Avendo meno di 13 anni	17,382	325	—	17,707
13 e di più	206,512	32,884	1,910	251,306
Totale	223,894	33,209	1,910	269,013
Totale	407,598	41,237	2,734	451,569

Non è necessario di narrare qui l' istoria della carestia cagionata dal cotone e l' effetto che ne hanno risentito gl' artigiani. Il risultamento di quell' evento fu di persuadere ognuno che poteva ottenere impiego, di cercarlo in altre ramificazioni dell' industria, e conseguentemente al riaprire dei mulini a cotone ci fu difficoltà di ottenere gli operaj abili. A giudicare dalla molteplicità attuale della produzione e dalla richiesta probabile e continuata per uso nostrale e forestiero, v' ha luogo a sperare che la manifattura del cotone fornirà i mezzi da vivere al medesimo numero di operai come nel 1861. Stando al detto dei periti in tale materia, la quantità di cotone consumato presentemente (dicembre) è quasi uguale alla consumazione di 1860.

4. La ragione media dei salary guadagnati nelle diverse divisioni dell' industria di cotone nella provincia di Lancashire nel 1860 fu :—

	Per settimana di 60 ore	s.	s. d.
Filare :			
Filatori colla macchina da filare .	20 a 22	0	0
Tessere :			
Tessitori coi telaj a macchina (quasi sempre donne) con	2 telaj	10	10 9
	3	15	16 0
	4	16	20 0

La ragione dei salari pagati nel tempo presente è circa 10 per cento di più che quelli pagati nel 1860, per motivo della scarsità dei lavoratori.

Considerando il patimento crudele a cui ha dovuto sottostare ultimamente la popolazione industriale nei territorj del cotone, lo stato generale degl' artigiani è molto soddisfacente. Si può trovare ora impiego a salary buoni, e siccome diverse persone della stessa famiglia trovano occupazione nelle fattorie, l' unione dei loro guadagni basta per mantenerle in buon stato.

Il Sig. Ashworth narra, in un rapporto letto innanzi all' Associazione della Scienza Sociale a Manchester nell' ottobre 1866 che l' aumento

negl'anni recenti di scuole giornaliere, scuole di domenica, e scuole di fattoria ha servito molto al miglioramento dell'intelligenza, del carattere e delle abitudini della classe operaia.

‘Un numero grande d'istituti meccanici, circoli e collegi dei lavoratori, librerie franche ed istituzioni simili, stabiliti allo scopo di coltivare la mente e formare l'ingegno dell'operaio, sono ora assai stimate e frequentate dalla classe degl'artigiani. Aggiunto a questo, la stampa libera ed a buon mercato ha fornito all'artigiano inglese i mezzi d'educazione che non si godono quasi in nessun altro paese del mondo.

‘L'economia e la prudenza si vedono nel desiderio di molti di impadronirsi di tali mezzi che li metterebbero fuori del pericolo della scarsità attuale o li condurrebbero alla ricchezza.’ ‘Lo stabilimento tra loro di società co-operanti, compagnie di commercio e manifattura, stabilite coi fondi riserbati del popolo, e rappresentate esclusivamente dai più abili e fedeli de' loro confratelli, è un indizio di loro prudenza ed economia.’ Al 31 dicembre 1865 c'erano 139 società di questa specie in Lancashire solamente.

5. Il valore delle mercanzie di cotone importate nella Gran Bretagna, confrontato con quello degli esporti, è molto piccolo, essendo meno di un milione di lire sterline per anno. Gli articoli importati consistono principalmente in mussoline francesi, mercanzie in pezze dall'India ed altri paesi (delle quali una proporzione grande è ri-esportata), e calzetteria principalmente dalla Germania.

6. Dall'altra parte il filo di cotone e le manifatture formano la classe la più grande degli esporti del paese, come si vedrà dal seguente rapporto:—

Anni	Milloni di £					Valore della Esportazione totale
	Fili	Bianchi o Sem-plici	Imprimiti o Tinti	Altre Specie	Totale dei Fili, ecc.	
1860	10	23	17	2	52	136
1861	9	22	14	1	46	125
1862	6	16	12	2	36	124
1863	8	23	14	2	47	146
1864	9	27	17	2	55	160
1865	10	28	17	2	57	166

Il rapporto seguente della quantità e del valore delle mercanzie esportate nel 1860 e 1865 darà una indicazione generale del valore aumentato dei prodotti di cotone.

Fili di cotone:	Quantità Libbre	Valore (£ Lire sterline)
1860	197,343,000	9,870,000
1865	103,533,000	10,343,000

Filo da cucire:	Quantità	Valore
1860	6,297,000	741,000
1865	4,626,000	753,000

Mercanzie in pezze di tutta specie:

	Yards	£
1860	2,776,000,000	40,346,000
1865	2,015,000,000	44,860,000

7. La manifattura del cotone è condotta quasi interamente per mezzo di macchine. Il totale della forza motrice nel 1861 fu: macchine a vapore delle forze 281,663 cavalli, e forza idraulica di 12,467 cavalli. Sebbene c'è stato una grande aggiunta di meccanismo dall'anno 1861 in poi.

8. Lo stato di straordinario sviluppo al quale la manifattura del cotone è arrivata nella Gran Bretagna negl'anni recenti, rende difficile di poter mostrare i miglioramenti innumerevoli che son stati fatti nel meccanismo e nei processi usati nel fabbricar il cotone. Il progresso fatto è stato piuttosto nella direzione di semplificare e perfezionare il meccanismo già adoprato, che nel introdurre metodi nuovi per la fabbricazione.

Il giurì nominato per rapportare sul meccanismo all'Esposizione di Londra nel 1862, annunciò che il meccanismo inglese per filare il cotone non poteva essere maggiormente degno di lode, sia per la costruzione delle macchine, l'ordine e l'aggiustamento mutuo delle diverse parti, la perfezione ottenuta per l'introduzione dei miglioramenti nuovi, come per l'eccellenza della finitezza del lavoro.

‘Per i miglioramenti adottati, gli espositori hanno procurato di rendere le loro macchine tanto positive quanto automatiche nelle loro diverse variazioni, e perfezionate quant'è possibile. Questi sforzi sono stati fortunati in alto grado, ed hanno resultato nella perfezione delle macchine di più grande capacità, sia in quanto alla produzione come alla qualità del lavoro che fin ora fu stato ottenuto.’

In quanto al meccanismo per tessere, fu anche narrato ‘che in quanto al aggiustamento ed il lavoro, l'elogio accordato alle macchine da filare fu anche dovuto a quelle da tessere.

Grande progresso fu anche visibile nelle macchine da involtare, da incollare, e da ordire, in paragone con quelle esposte nel 1851.

Il cambiamento il più importante dopo 1862 è stato quello dell'adattare una gran porzione del meccanismo in usanza di agire col fiocco corto del cotone dell'India Orientale ed altro cotone, che prima della guerra d'America non fu usato in quantità considerevole. L'acceleramento di velocità nelle macchine è sempre continuato quando è possibile, ma le qualità inferiori di cotone non possono essere lavorate con grande velocità, e hanno bisogno d'una quantità più grande di meccanismo, che ne richiedono le qualità superiori.

9. In addizione al progresso che è stato fatto nelle diverse ramificazioni meccaniche dell'industria di cotone, i mezzi adottati dal governo pel miglioramento dell'educazione e del gusto degl'artigiani non devono esser trascurati. Scuole di scienza e d'arte sono adesso stabilite in rapporto col Dipartimento di Scienza ed Arte nei centri dei territorj industriali, come anche in altre parti del paese, e molte migliaia di studenti sono instruiti ogni anno negli elementi di scienza e nei buoni principj d'arte. In addi-

zione a queste scuole, 'raccolte circolanti' d'oggetti d'arte sono state stabilite, e sono mandate di provincia a provincia; e in questa maniera il lavorante che non ha il mezzo di viaggiare per vedere le collezioni d'arte nella metropoli ha adesso modelli buoni messi alla sua portata.

L'istruzione ha così prodotto un effetto buonissimo alle manifatture del paese. Un gran miglioramento a questo riguardo fu manifesto a tutti quelli che hanno visto le due Esposizioni di 1851 e 1862; e si crede che gli oggetti esposti in questa classe della divisione inglese nell'Esposizione attuale, mostrerà un avanzamento considerevole che onorerà l'arte, tanto al colore quanto al disegno, a paragone di quelli presentati all'ultima Esposizione di Parigi nel 1855.—(Per Calzetteria e Sottovesti vide Classe 34.)

Classe XXVIII.

FILI E FABBRICAZIONE DI LINO E DI CANAPA, ECC.

1. In questa classe sono compresi fili ed altre manifatture fatte di fibra vegetale, eccettuati quelli di cotone.

L'industria della tela, ossia manifatture di lino e di canapa, si stende largamente per tutto il regno, benchè è esercitata in più grande scala in Irlanda, nelle provincie di Antrim e di Down. Le ramificazioni più grandi del mestiere in Inghilterra sono situate nelle provincie di York e di Lancaster, e in Scozia nelle provincie di Forfar e di Fife.

La manifattura di *jute* (che è quasi sconosciuta in ogni paese forestiere eccettuato la Francia e l'Olanda) è ora arrivata a una posizione tanto importante nella Scozia che richiede più particolari schiarimenti. Il centro della manifattura è a Dundee. Il *jute* è un materiale fibroso, rassomigliando di molto alla canapa, e se ne serve principalmente nella fabbrica di tele grosse, sia da sacco, da imballaggio o da tappeto.

Il numero delle fattorie di canapa e di *jute* e di lino nelle tre divisioni della Gran Bretagna nel 1861 fu:—

Divisione e Provincie	Fattorie	Fusi	Telaj a Macchina
FATTORIE DI LINO			
In Inghilterra e la provincia di Galles:			
Lancashire . . .	13	117,412	489
Yorkshire . . .	70	172,272	1,403
Altre provincie . .	53	54,624	268
Totale . . .	136	344,308	2,160
In Scozia:			
Forfar . . .	85	160,090	5,108
Fife . . .	46	54,383	1,823
Altre provincie . .	32	64,912	1,035
Totale . . .	163	279,385	7,966

Divisione e Provincie	Fattorie	Fusi	Telaj a Macchina
FATTORIE DI LINO			
In Irlanda:			
Antrim . . .	47	360,592	2,854
Down . . .	15	103,630	128
Altre provincie . .	38	128,759	1,684
Totale . . .	100	592,981	4,666
Numero totale nella Gran Bretagna }	399	1,216,674	14,792
FATTORIE DI CANAPA			
In Inghilterra e Galles.	3	264	1
Scozia . . .	2	2,316	—
Irlanda . . .	—	—	—
Totale . . .	5	2,580	1
FATTORIE DI JUTE			
In Inghilterra e Galles.	4	620	—
Scozia . . .	27	30,538	554
Irlanda . . .	5	1,824	—
Totale . . .	36	32,982	554

Però, dopo l'anno 1861 i negozj della tela e del *jute* hanno fatto gran progresso, come si vedrà dalle statistiche seguenti.

Il rapporto seguente della posizione del lavoro della tela d'Irlanda al 1^{mo} gennaio 1866 fu pubblicato dal Sig. McIlwrath, segretario del comitato pel lino a Belfast:—

Mulini da filare il Lino.

Numero dei mulini, 86; fusi usati, 759,452; detti non usati, 11,362: totale, 770,814, con aumento proposto di 103,792 fusi.

Fattorie di Telaj a Macchina.

Numero delle fattorie, 44; telaj usati, 10,538; non in uso, 266: totale, 10,804, con aumento proposto di 6,484 telaj.

Ci furono anche 17,786 fusi, ed un aumento proposto di 4,656 fusi, usati nel torcere il filo. Si costruiva anche delle fattorie e dei mulini nuovi capaci di contenere un aumento proposto di 62,000 fusi, e 1,400 telaj.

Tele semplici, tele damascate, tele battista, pezzuole, ed altre qualità di tela sottile sono fatte nelle località di Belfast, Forfar, Brechin, Dunfermline, Barnsley, e Manchester, mentre che le qualità grosse, come tela da vele, tela da saccone, ecc., sono fatte nei distretti di Dundee, Hull, Greenock, e Arbroath. Il refe è anche fabbricato in gran quantità a Leeds.

Il Sig. R. Sturrock, il segretario della Camera di Commercio a Dundee, rapportò che la manifattura del *jute* cominciava a Dundee nell'anno 1830, e che nel 1865 quasi 72,000 tons di *jute* grezzo furono importati in quella città.

Egli stima il numero attuale di fattorie di *jute* per filare e tessere a 60, che contengono 100,000 fusi, e 5,000 telaj a macchina.

2. Una grande porzione del materiale grezzo usata nel lavoro della tela nella Gran Bretagna

Il valore delle stoffe tessute, bianche, semplici e damascate, nel 1865, montò a sette milioni e mezzo di lire sterline, dà un valore totale di nove milioni. Il valore del filo di lino da cucire esportato nel medesimo anno fu 558,000.

Durante i dieci anni 1851 a 1860, il commercio dell'esportazione di mercanzie di tela dalla Gran Bretagna è restato quasi sempre allo stesso punto, e montò un poco di più di quattro milioni di lire sterline ogni anno.

Le proporzioni relative della quantità e del valore delle qualità principali delle mercanzie di tela esportate in 1860 e 1865 furono:—

		Quantità	
		1860	1865
Refe di lino . . libbre		31,210,000	36,796,000
Tessuti di lino :			
Bianchi, semplici, } yds.		136,936,000	222,790,000
e damascati			
Stampati, tinti, } „		3,203,000	16,965,000
quadrati			
Tela da vela . . „		3,857,000	7,250,000
Refe da cucire . libbre		3,229,000	3,935,000
		Valore	
		£	£
Refe di lino . . libbre		1,801,000	2,535,000
Tessuti di lino :			
Bianchi, semplici, } yds.		4,161,000	7,537,000
damascati			
Stampati, tinti, } „		98,000	606,000
quadrati			
Tela da vela . . „		175,000	383,000
Refe da cucire . libbre		340,000	558,000

7. Il commercio della tela è condotto quasi interamente per mezzo di macchine; è vero che i telaj a mano sono anche ora adoperati in Irlanda, ma l'uso di queste macchine abbassa rapidamente. Dr. Watts rapporta nel suo libro, 'Fatti della Carestia pel Cotone,' che l'economia del lavoro nella produzione di refi da tela ha fatto grande progresso durante l'ultima decade, Dieci anni fa, nove e dieci *leas* per fuso per settimana di fili No. 11-30 fu considerato lavoro buono; ma in 1865 diciotto *leas* per settimana di medesima qualità di refe furono fatti.

Il negozio del *jute* si fa quasi interamente col meccanismo.

8. Il giuri nominato per esaminare le mercanzie di tela mandate all'Esposizione di Londra nel 1862, riferì 'che l'Inghilterra e l'Irlanda mostrano d'avere fatto miglioramenti considerevoli nella coltivazione ed il maneggio del lino. L'Irlanda è detto meritare notificazione speciale pel gusto buono che si vede nella coltivazione di tele e di 'cambric' stampati. Le tele stampate sono principalmente per uso forestiere. Laude fu anche data per la qualità fine delle tele imbianchite d'Irlanda che è attribuita alla acconcezza della clima per lo scopo del bianchimento e alla combinazione fortunata del processo fatto all'aria aperta coll'uso dei mezzi chimici. Gran progresso fu anche osservato nella fabbrica di corde di

stoppa, e nell'aumento dell'uso di telaj a macchina.

La posizione fissa del commercio dell'esportazione di tela nei dieci anni prima del 1861 è stata già osservata. Il Sig. Aclan, il relatore della Classe 19 all'Esposizione di 1862, ha dato certe notificazioni interessanti su questo soggetto, alle quali ha attribuito la mancanza del progresso alle difficoltà che ricontravano nel lavorare il materiale grezzo in paragone della facilità di filare il cotone grezzo. Egli rapportò che i fili di lino fatti a macchina costavano più che i fili di cotone, lunghezza e peso di fibra essendo uguali.

Il meccanismo necessario per filare il lino è molto più forte, e ha bisogno di forza di vapore più grande che quello che si usa per filare il cotone. Questo è dovuto alla maniera difettosa attuale di macerare il lino, che lascia una gran quantità di gomma nella fibra, e così lo rende più difficile a filare.

Uno dei risultati della fermata del commercio di cotone durante la guerra d'America fu di aumentare la richiesta per merce di lino, e così fu dato un impeto straordinario all'industria del lino nel paese. I prezzi alti del lino che reggevano durante la carestia di cotone incoraggiarono i proprietari di terre a coltivare il lino più estesamente, e anche stimolarono i produttori stranieri di mandare i loro prodotti ai mercati inglesi; la conseguenza del quale fu un gran risuscitamento del commercio di lino. C'è ogni ragione per sperare che, se gli sforzi fatti in quest'ultimi anni sieno mantenuti, l'industria di lino prenderà un nuovo slancio dalla sospensione passeggera del commercio di cotone, e aumenterà materialmente le ricchezze del paese.

A riguardo dell'industria di *jute*, miglioramenti nel meccanismo si fanno costantemente, ed a cagione di scoperte recenti, l'applicazione del *jute* ai diversi proponimenti di manifattura se stende largemente. Il numero degli studenti nella Scuola d'Arte di Dundee nell'anno 1865 fu 1,922, e si dice che i meccanici ed operaj occupati nel negozio di *jute* hanno avuto gran vantaggio dell'istruzione che a loro fu data.—(Per *Calzetteria* e *Sottovesti* vide Classe 34.)

Classe XXIX.

LANA CARDATA E STOFFE DI STAME.

1. L'appellazione di 'worsted' (stame) data alle fabbriche di lana filata si dice avere il suo principio da un piccolo villaggio di Norfolk del medesimo nome, dove la fabbrica fu primieramente proseguita. L'industria di lana è di una data antichissima, ma è soltanto comparativamente agli anni recenti, che ha attinta la sua presente importanza. Dall'anno 1825 fece grandissimo progresso, ma insino a quell'anno stami di lana pura soltanto furono fabbricati. Alcuni anni più tardi, l'introduzione degli orditi di cotone fu fatta, e per questo una grande impulsi-
sione fu data alla fabbrica. Stami sono fab-

bricate ora di lana pura, e di lana mista col cotone, seta, paco, mohair (pelo di una specie di capra di Turchia fina come la seta), ecc., e il valore annuale della fabbrica di stame è ora uguale se non più grande di quello della industria di lana.

Stame di lana pura comprende merinos, stoffe increspate semplici e doppie, rascie, saje (lastings), ecc., e damasco per tappezzeria. Delle fabbriche miste, quelle composte di lana e cotone, come 'coburgs' e 'orleans' sono consumate immensamente, le altre misture sono anche fabbricate a una grande scala, e di ogni specie di qualità. Bradford è rinomata per la produzione di merinos all'increspazione semplice, e fabbriche miste, Halifax per stame grossa e damaschi, ecc.

Bradford, nella provincia di York, è il centro principale della mercanzia di stame. Il numero delle fabbriche in ogni divisione del Regno nel 1861 era:—

Divisione	Numero di Fabbriche	Numero di Fusi	Numero di Telaj
Inghilterra e provincia di Galles:			
Provincia di York .	443	1,149,072	40,577
Altre provincie .	69	96,454	2,301
Totale . . .	512	1,245,526	42,968
Scozia	17	38,946	80
Irlanda	3	4,700	—
Totale, Gran Bretagna	532	1,289,172	43,048

Benchè non vi sono statistiche pubbliche più recenti della quantità dei fusi e dei telaj impiegati nella fabbrica di stame, è generalmente saputo che il numero di questi è stato aumentato considerabilmente dopo l'anno 1861.

2. Le fonti delle provvisioni del materiale grezzo, di lana, cotone e seta usate nella fabbrica di stame saranno trovate nelle osservazioni alle Classe 27, 30, e 31. Riguardando la provvisione di mohair, la tavola seguente farà vedere le importazioni durante i cinque anni dall' anno 1861 al 1865:—

	Crino, ossia Lana di Capre
1861 . . .	libbre 3,335,000
1862 . . .	4,048,000
1863 . . .	3,434,000
1864 . . .	4,737,000
1865 . . .	5,402,000

Il Signor Behrens stimava che la totale quantità di merci greggie (lana, mohair e cotone) consumata nella fabbrica di stame nell' anno 1864 era circa 150 milioni di libbre, le quali dovrebbero valere in uno stato perfezionato circa 33,600,000%.

3. Del numero completo dei braccianti impiegati nelle fabbriche di stame nella Gran Bretagna nell' anno 1861, 76,000 o 88 per cento erano impiegati nelle fabbriche di York-

shire. Le età e il sesso del numero totale degli impiegati sono esposte nella tavola seguente:—

	In Inghilterra e Provincia di Galles	In Scozia	In Irlanda	Nella Gran Bretagna
Uomini:				
Avendo meno di 13 anni .	6,268	—	—	6,268
13 a 18 anni .	6,424	178	12	6,614
Avendo più di 18 anni .	17,700	895	24	18,619
Totale .	30,392	1,073	36	31,501
Donne:				
Meno di 13 anni .	6,906	4	—	6,910
Più di 13 anni .	45,674	1,839	139	47,652
Totale .	52,580	1,843	139	54,562
Totale .	82,972	2,916	175	86,063

Il soprascritto è l' ultimo rapporto pubblico del numero della gente impiegata, ma è creduta essere molto al di meno del numero attuale ora impiegato nella fabbrica di stame del paese.

4. Il prezzo medio pagato nelle ramificazioni principali del negozio di stame nel anno 1866 era—

A BRADFORD.

Filatori:

Donne 7s. 6d. a 10s. per settimana di 55 ore

Tessitori:

Uomini .	18s. 6d.	60	„
Donne .	12s.	55	„

A HALIFAX.

Filatori:

Uomini .	30s.	60	„
Donne 7s. 6d. a 8s. 6d.		60	„

Tessitori:

Uomini 16s. a 24s.	„	„	„
Donne 8s. a 12s.	„	„	„

5. Le importazioni di fili di stame sono state osservate nelle note alla Classe 30. Le importazioni di stoffe di stame non sono molto grandi. Nell' anno 1865, 154,000 pezzi di stoffe furono importate, e stimate a 334,000%. Queste mercanzie vennero principalmente dalla Francia.

6. Una aumentazione immensa è stata fatta nell' esportazione di fabbriche di stame, dopo l'anno 1860, e questa si vede nella tavola seguente:—

Articoli		1860	1865
Stame filata .	{ libbre £	26,455,000 3,578,000	30,221,000 5,074,000
Stame fabbricata	{ libbre £	148,685,000 7,013,000	233,078,000 13,361,000

Un grandissimo negozio in merce di stame è stato proseguito colla Francia dopo la conclusione del Trattato di Commercio (Commercial Treaty) convenuto col sudetto paese, il valore di questi esporti toccò la somma di 1,332,000 lire sterline nell'anno 1865.

7. La fabbrica di stame è condotta intieramente per mezzo di macchine. La forza motrice usata nelle fabbriche di stame nel 1861 fu stimata a forza di macchine a vapore di 26,234 cavalli e di macchine idrauliche di 1,970 cavalli.

8. Il successo della industria di stame nell'Inghilterra è dovuto alla perseveranza ed al ingegno manifestati nella produzione di una varietà infinita di merci fabbricate per la combinazione di fibre animali e vegetali, le quali, dalla grande estensione delle loro qualità, ed i loro prezzi, sono causa che siano largamente usate per provvedere ai bisogni della popolazione, sia per vestiario sia per mobiglia.

I processi chimichi necessarj affinchè una tessitura composta di sostanze animali e vegetali può essere adattata a ricevere una tinta uguale e regolare, sono necessariamente varj e difficili, ma gli sforzi dei tintori hanno riuscito così bene che si può tingere le merci fabbricate di ordito di cotone bianco, e che le trame di stame possono essere tinte di colore buono come il merino di Francia, fatto di lana pura.

Riguardando il progresso recente del negozio, il giuri delle fabbriche miste nel 1862 diede conto di un 'grande miglioramento nella tinta delle merce di ordito di cotone, nella perfezione delle fabbriche diverse di lane fine e mohair, e più specialmente nel genio e nella conoscenza dei colori osservabili negli oggetti di fantasia che formano al presente una sì grande porzione del negozio.

Una scuola d'arte fu stabilita a Bradford nell'anno 1865, e senza dubbio sarà il mezzo di migliorare ancor più il genio di tutte le classi che sono in rapporto col negozio importante di stame di quel distretto.

Classe XXX.

LANA CARDATA E TESSUTI DI LANA.

1. Benchè l'industria di lana esistesse in Inghilterra in un tempo molto remoto, è indubitato però dover essa il suo stabilimento permanente in gran parte al decreto del Re Edoardo III, il quale diede invito ai fabbricanti di Fiandra, di stabilirsi in cotoesto paese nell'anno 1331. Avanti quel tempo la lana inglese fu esportata in Fiandra e rimandata in una forma lavorata; dopo quel tempo, nondimeno, la fabbrica di lana cresce costantemente, e di più è riguardata come una delle industrie le più importanti dello Stato.

Le fabbriche di lana della provincia occidentale di Yorkshire e quelle nell'occidente d'Inghilterra, le quali furono stabilite nel regno d'Edoardo III, sono rimaste insino al presente i siti principali di questa ampia industria. Leeds è il centro il più importante del distretto della provincia occidentale, e può

essere considerata il capitale del negozio di lana. Huddersfield e dintorni è la seconda in importanza, essendo anche rinomata, in aggiunta alla produzione di panno di lana, per un gran negozio in stoffe di fantasia per pantaloni, ecc. Nell'occidente dell'Inghilterra, Trowbridge in Wiltshire è il centro di un grande distretto che produce roba di fantasia e panni leggieri di diverse qualità, e Stroud in Gloucestershire è celebre per i suoi panni rossi, ed altri colori brillanti, una celebrità che ella deve alla grande bontà delle sue acque ai processi di tintura.

Le merci scozzesi, sciarpe, ecc., sono generalmente di tessuto assai molle e di una tintura stabile. Le coltre, che sono comprese in questa classe, sono fatte principalmente a Witney in Oxfordshire, ed a Dewsbury in Yorkshire. Le flanelle sono prodotte in Galles per la più parte da lavoro fatto a mano e Rochdale e il suo distretto è ora il centro della ramificazione inglese di cotoesto negozio. I tappeti di feltro sono fabbricati nel distretto di Yorkshire, ed anche usati grandemente in Inghilterra, essendo uno sostituto poco costoso per tappeti.

Una ramificazione molto importante del negozio di lana, e una che merita più che una osservazione fuggitiva, è quella del negozio chiamato 'shoddy.' Le interessanti osservazioni seguenti su cotoesto negozio furono fatte dal giuri sulle lane all'Esposizione del 1862. 'Il shoddy è di tre sorta. 1. "Shoddy" fabbricato da stracci di lana dolce, cioè flanella, coltre, calze, tappeti, ecc. 2. "Mungo" fabbricato con stracci dolci e duri, con una mistura di pezzetti di panno nuovo, ecc. 3. Estratto di lana, ossia lana estratta dalla mistura di stracci di lana e di cotone per un processo chimico, che consuma il cotone, e lascia la lana intatta. La combinazione di 'shoddy' colla lana, insieme coll'uso dell'ordito di cotone è la più preziosa adattazione di mercanzie nella istoria del negozio di lana che l'ingegno umano abbia scoperto. Per suo mezzo, una gran parte del ceto medio può procurarsi articoli di vestiario utili e convenienti, i quali erano prima al di là dei loro mezzi pecuniarj. Dewsbury, Batley, e le città circostanti nella provincia occidentale di Yorkshire sono i centri della sua fabbrica.

Le statistiche della industria di lana del Regno nell'anno 1865 sono le seguenti.

Divisione e Provincie	Numero delle Fabbriche	Numero dei Fusi	Numero del Telaio a Macchina
Inghilterra e Galles :			
Yorkshire . .	924	1,296,190	11,405
Devonshire . .	16	12,585	255
Gloucestershire . .	49	59,986	618
Lancashire . .	101	277,655	6,377
Montgomery . .	43	20,920	262
Somersetshire . .	26	31,401	401
Wiltshire . .	32	44,825	549
Altre provincie .	265	103,288	477
Totale .	1,456	1,846,850	20,344

Divisione e Provincie	Numero delle Fabbriche	Numero dei Fusi	Numero dei Telai a Macchina
Scozia :			
Aberdeen . . .	25	17,510	93
Clackmannan . .	15	38,311	214
Peebles . . .	7	51,142	101
Perth . . .	16	16,353	—
Roxburgh . . .	21	60,747	300
Stirling . . .	16	46,368	158
Stirling . . .	23	32,950	64
Altre provincie .	61	53,804	373
Totale . . .	184	317,185	1,303
Irlanda . . .	39	18,574	123
Totale nel Regno .	1,679	2,182,609	21,770

Il numero dei fusi e telai rapportati nel 1861 è però assai minore della quantità adoprata al presente, una grande impulsione essendo stata data alla fabbrica di lana, dopo il rincarimento nel prezzo del cotone durante la carestia del medesimo.

2. Il materiale greggio per l'industria di lana è prodotto in estensione considerabile nel paese, ma come non vi esistono rapporti della quantità della produzione nostrale, una stima soltanto può essere data. Cominciando la stima sul numero delle pecore nel paese, la produzione nostrale monta probabilmente a libbre 152,000,000 annualmente.

Il medio d' esportazione annuale di lana inglese durante gli anni cinque passati, era libbre 10,000,000.

Della provvisione forestiera, più di 70 per cento è fornita dalle colonie della Gran Bretagna, Australia e i dominj in Africa Meridionale avendo la precedenza. La Germania fornisce alcune qualità più fine di lana, e una gran quantità è anche importata dall' America Meridionale. Il progresso rapido nel negozio di lana durante gli anni recenti è visto nella tavola seguente delle importazioni di lana greggia di ogni specie (quella di pecore, agnelli, paco, lama e vigogna) nel 1855, 1860 e 1865:—

Paesi dalle quali importati	1855	In 1860	In 1865
	Libbre	Libbre	Libbre
Colonie della Gran Bretagna :			
Anustralia . . .	49,142,000	59,166,000	109,734,000
India . . .	14,283,000	20,214,000	17,105,000
Capo di Buona Speranza	11,075,000	16,574,000	29,220,000
Paesi forestieri :			
Spagna . . .	68,000	1,000,000	115,000
Germania . . .	6,128,000	9,292,000	6,858,000
Altri Stati Europei	8,119,000	28,570,000	27,693,000
America Meridionale . .	7,106,000	8,950,000	17,867,000
Altri paesi . . .	3,379,000	4,630,000	3,614,000
Importi totali . . .	99,300,000	148,390,000	212,206,000
Esportati . . .	29,453,000	30,761,000	82,445,000
Lasciato per consumazione nostrale . . .	69,847,000	117,635,000	129,761,000

Bisogna aver in mente che le sopradette statistiche appartengono alla lana greggia, ecc.,

usata nella fabbrica di stame, siccome in quella di lana. Del totale di 212 milioni di libbre di lana importate nel 1865, quasi tre milioni di libbre furono di paco, lama e vigogna.

Aggiunto al sopradetto, le quantità seguenti di stracci di lana adoprati nel negozio di shoddy furono importate:—

	Stracci di lana	Stracci di lana strappati per essere usati come lana
	Tonnellate (tons)	Tonnellate (tons)
1861 . . .	3,290	7,602
1862 . . .	4,311	8,972
1863 . . .	5,766	9,866
1864 . . .	5,909	10,037
1865 . . .	5,462	9,316

Il Signor Behrens stima la produzione annuale di lana da 'shoddy' nel paese a 52 milioni di libbre, e dell' estratto di lana a 5 milioni di libbre.

La stimata provvisione totale di materiali greggio usato nel negozio di lana e stame del paese nell' anno 1865 può essere calcolata come segue:—

	Milioni di libbra
Lana inglese (meno gli esporti) . . .	142
„ forestiera „ . . .	130
' Shoddy,' fabbrica nostrale . . .	52
„ importata . . .	22
Estratto di lana . . .	5
Fili di lana e di stame . . .	4½
Crino o lana di capra . . .	5
	360½

Il Signor Behrens stima la totale quantità di materiali greggio adoprato nel negozio di lana e stame, nel 1864, a 384,000,000 libbre, il qual montante egli divide fra le due industrie, cioè:—Nel negozio di lana 234,000,000 libbre, rappresentando un valore di 30,800,000 lire sterline nel stato lavorato; e nel negozio di stame, 150,000,000 libbre, rappresentando un valore di 33,600,000 lire sterline nel stato lavorato. Gli importi di lana forestiera nel 1865 erano considerabilmente minori di quelli importati nel 1864.

3. Il numero dei braccianti d' ogni sesso impiegati nelle fabbriche di lana nel 1861 era—

	In Inghilterra e Galles	Scozia	Irlanda	Gran Bretagna
Uomini avendo } meno di 13 anni } 13 a 18 anni . } Avendo più di 18 anni . }	3,333 9,811 30,954	29 1,327 3,855	— 75 370	3,362 11,213 35,179
	44,098	5,211	445	49,754
Donne : Avendo meno di } 13 anni . } Avendo più di 13 anni }	2,598 29,613	9 4,592	— 417	2,607 34,622
Totale . . .	32,211	4,601	417	37,229
Totale uomini e donne . . .	76,309	9,812	862	86,983

Le cifre soprascritte sono assai minori del numero attuale di braccianti impiegati al presente; questo è dovuto alla grande estensione del negozio di lana dopo l'anno 1861.

4. Il prezzo medio dei salary guadagnati nelle due divisioni principali dei lifici durante l'anno 1866 era come segue:—

		Uomini	Per settimana di 60 ore			
			s.	s.	d.	
A Huddersfield	Filatori	.	18	a	30	0
	Tessitori	.	18	„	23	6
	Modellisti	.	16	„	30	0
	Disegnatori	.	30	„	50	0
A Dewsbury	Filatori	.	34s.			
	Tessitori	.	20s.			
	Modellisti	.	22s.			
	Disegnatori	.	36s.			

5. I conti del negozio inglese non distinguono gli importi di fili di lana da quelli di stame. L'aumentazione recente nella quantità di stame importata marcata nel rapporto ufficiale come 'lana e stame,' e probabilmente dovuta più alla dimanda di lana. I montanti seguenti di ciascheduna specie di lana e stame furono importati fra gli anni 1861 e 1865:—

	Libbre
1861	1,577,000
1862	2,244,000
1863	4,526,000
1864	4,654,000
1865	4,392,000

Le soprascritte cifre comprendono anche lana di Berlino e stame per oggetti di fantasia, le quali montarono a 211,000 libbre nel 1865.

Il valore di panni di lana importati durante il medesimo tempo era:—

	£
1861	119,654
1862	124,245
1863	147,757
1864	177,922
1865	190,221

6. I rapporti degli esporti delle specie principali di mercanzie incluse in questa classe fanno vedere uno stato favorevole di questa ramificazione del negozio, come la tavola seguente esporrà:—

		Quantità		Valore	
		In 1860	In 1865	In 1860	In 1865
Fili di stame	Libbre non rapportate		Libbre	£ non rapportate	£
			203,929		35,694
Lana: Panni da abiti	Canne	23,968,000	25,616,000	2,996,000	4,024,000
	Flanelle, coltre e bajette	12,641,000	14,769,000	848,000	1,203,000

7. La più gran parte dell'industria di lana è fatta per mezzo di macchine, ma, benchè grandissimo progresso sia stato fatto nella perfezione delle macchine adoperate, l'industria di

lana è, però, assai meno avanzata dell'industria di cotone. Benchè la tessitura a mano si eserciti tuttora in alcuni distretti di Yorkshire, l'uso però dei telaj a mano diminuisce gradualmente. Il montante di forza motrice in uso nelle fabbriche di lana era nel 1861, macchine a vapore della forza di 26,879 cavalli e macchine idrauliche della forza di 9,598 cavalli.

8. Il progresso nel negozio di lana durante gl'ultimi dieci anni è stato molto grande in ogni ramificazione. La provvista aumentata dei materiali greggi, l'introduzione della nuova combinazione di lana con altre materie, la miglioramento del meccanismo, ed i nuovi metodi di tingere devono essere citate come prove di progresso. L'uso più estensivo del telajo a macchina nella tessitura, specialmente riguardando la sua adattamento per la tessitura dei disegni a vari colori, ha contribuito potentemente al miglioramento del negozio di lana. Grandi progressi sono stati fatti anche in quasi ogni specie di macchine impiegate nella fabbricazione. Il principio importante di crescente velocità nel movimento delle macchine non è stato nemmeno perduto di vista.

La produzione di panni di 'shoddy' a buon mercato e paragonata ai panni veri, possedendo le medesime qualità delle lane pure, colla mancanza solamente di finitura e durabilità di colore, ha incontrato il pubblico favore, non solamente col provvedere la classe povera di buoni articoli, ma ancora nel utilizzare una merce che era riguardata come sciupio, e per tal modo offrire impiego a qualche migliaio di braccianti.

La gran domanda per lane di fantasia negli anni recenti ha fornito pieno impiego, non soltanto ai disegnatori di modelli ma anche ai tintori. Leeds, Huddersfield, Stroud e Trowbridge possiedono ciascheduna scuole d'arti, e al di là di otto mila studenti ricevettero istruzione a queste scuole durante l'anno 1865. La scoperta della tinta 'anilina' ha condotta a miglioramenti vasti nel disegno e colori della migliore qualità di lane.

Il rapido sviluppo delle società co-operative per fornire ai braccianti provvisione e vestiario a prezzi di fabbrica verso contante, contribuirà, si spera, a consolidare le abitudini d'economia fra la popolazione operaia nei distretti commerciali di lana.

Classe XXXI.

SETA E FABBRICA DI SETA.

1. L'industria serica del Regno Unito, benchè sia di minor rilievo che quella delle altre fabbriche tessili del paese, è nondimeno di grand'importanza. La sua prosperità era per molti anni ritardata da un sistema di interdetti e di limitazioni sull'importazione di mercanzie di seta forestiera, ed il concorso necessario

in ogni caso a una gran produzione essendogli così negata, rimase per lungo tempo in uno stato assai poco soddisfacente. La protezione contro il concorso forestiero e il monopolio del mercato nostrale limitato, che il negozio aveva per tanto tempo goduto, furono acquistati, però, a un prezzo troppo grande. In Inghilterra la maggioranza dei fabbricanti si contentava di fornire i mercati nostrali vicini, senza fare nessun miglioramento d'importanza nelle loro fabbriche, allo stesso tempo che nei paesi forestieri grandi avanzamenti furono fatti nei differenti processi della manifattura, e per conseguenza, all' inaugurazione del sistema del commercio libero, i fabbricanti inglesi si trovarono in una posizione assai poco vantaggiosa. Dopo l' anno 1851, il negozio inglese di seta ha nondimeno fatto gran progresso a dispetto delle grandi difficoltà che circondavano la sua strada.

Fra gli anni 1850 e 1861, il numero delle fabbriche di seta nel Regno aumentò da 277 nel primo anno a 771 nell' ultimo; il numero dei fusi da 1,225,000 a 1,338,000 e il numero di telaj a macchina da 6,092 a 10,709. La distribuzione di fabbriche di seta nell' anno 1861 era nelle tre divisioni del regno:—

	Numero di Fabbriche	Numero di Fusi	Numero di Telaj a Macchina
Inghilterra e Galles:			
Cheshire . . .	175	409,470	1,509
Derbyshire . . .	42	98,210	449
Essex . . .	9	155,681	591
Lancashire . . .	48	128,109	4,201
Warwickshire . . .	331	6,732	2,065
Yorkshire . . .	27	122,952	8
Altre provincie . . .	129	384,756	1,812
Totale . . .	761	1,305,910	10,635
Scozia . . .	8	31,452	60
Irlanda . . .	2	1,182	14
Totale, Gran Bretagna . . .	771	1,338,544	10,709

Stoffe di seta sono prodotte principalmente a Manchester, nastri a Coventry, e merce di seta di fantasia a Macclesfield.

2. Il materiale greggio usato nella industria di seta è fornito, per la più parte, dall' Italia, la China, l'India, e il Giappone, la più grande quantità essendo contribuita da questi ultimi tre paesi.

La quantità del materiale greggio serbata per la consumazione dal 1860 al 1865 era:—

	Seta cruda Libbre	'Knubs' Guscii e Sciopp Libbre
1860 . . .	6,024,000	1,784,000
1861 . . .	4,613,000	3,225,000
1862 . . .	5,166,000	2,678,000
1863 . . .	5,368,000	3,455,000
1864 . . .	1,733,000	2,691,000
1865 . . .	4,595,000	3,608,000
Prezzo medio . . .	4,583,000	2,907,000

Una piccola quantità di seta torta è anche importata, ma le importazioni hanno diminuito considerabilmente dopo l' anno 1860. Gli importi nel 1865 erano 60,130 libbre.

3. Il numero delle persone di ogni sesso e di ogni età impiegate nella fabbrica di seta in Inghilterra e Galles nell' anno 1861 era:—

Maschi:	No.
Avendo meno di 13 anni . . .	2,120
13 a 18 anni . . .	3,185
Avendo più di 18 anni . . .	9,996
Totale . . .	15,301
Femine:	
Avendo meno di 13 anni . . .	4,673
Avendo più di 13 anni . . .	31,217
Totale . . .	35,890
Totale, maschi e femine . . .	51,191

Non vi sono rapporti del numero dei braccianti impiegati al tempo presente.

4. I salary nel negozio di seta di Manchester aumentarono 10 per cento fra gli anni 1849 e 1859; nell' ultimo anno i prezzi medii pagati agli operaj principali erano:—

	Per settimana di 60 ore
	s. d.
Mulinari e torcitori di seta . . .	17 0
Filatori (giovini e ragazzi) . . .	10 0
Addoppiatrici (donne) . . .	8 9
Orditori (uomini) . . .	24 0
Tessitori . . .	20 0

Fu osservato in un rapporto (fatto da un comitato locale all' Associazione Britannica (British Association) a Birmingham nell' anno 1865, che il numero delle persone impiegate nel negozio di nastro di Coventry era stimato essere 2,000 uomini, e 4,000 donne nel 1864, ancorchè la stima specialmente riguardando le donne era considerata essere al di sotto della verità. Il prezzo medio dei salary pagati nel negozio di nastri per un bracciante perito variava da 25s. a 28s. per settimana. I salary guadagnati dalle donne corrono da 7s. a 10s. per settimana.

5. Il valore delle manifatture di seta importate nel regno è cresciuto immensamente dopo l' anno 1860. Cotesta aumentazione è dovuta alla grande estensione del commercio tra questo paese e la Francia in conseguenza del trattato di commercio. Gli importi principali dalla Francia consistono di seta e raso semplice, stoffe larghe, e nastri.

Il valore totale delle manifatture di seta importate dal 1860 al 1865 era:—

	£
1860 . . .	3,344,000
1861 . . .	5,906,000
1862 . . .	6,618,000
1863 . . .	6,639,000
1864 . . .	7,620,000
1865 . . .	8,496,000

6. Il valore delle manifatture inglesi di seta esportate durante gli anni medesimi era:—

	£
1860	1,587,000
1861	1,395,000
1862	1,264,000
1863	1,421,000
1864	1,460,000
1865	1,404,000

7. Una porzione del commercio di nastri di seta è sempre condotta nelle dimore dei braccianti, ma la tendenza generale è verso il riunimento dei braccianti nelle fabbriche.

A motivo di molte cause, l'industria serica è forse la più fluttuante di tutte le industrie tessute. Il commercio di seta inglese, come quello degli altri paesi, ha sofferto immensamente da parecchi anni, per la malattia nei bachi da seta, e da un cambiamento nella moda che ha fatto una grande impressione sull'articolo nastri. Prendendo questi fatti in considerazione, le statistiche del traffico d'esporto di seta possono essere citate come dimostranti una posizione più soddisfacente dell'industria di seta inglesi, la quale potrebbe ancora migliorare, considerando le circostanze.

Cospicui miglioramenti sono stati introdotti nella finitezza e nei colori dei nastri inglesi, e di più è creduto che le mostre di cotesti e d'altre merci presentate all'attuale Esposizione farà manifesto il positivo progresso fatto nella manifattura inglese di seta generalmente dopo l'ultima Esposizione di Parigi nell'anno 1855.

Classe XXXII.

SCIALLI.

La fabbrica di scialli nella Gran Brettagna ha fatto un grande avanzamento durante i quindici anni passati. I scialli di lana sono fabbricati per lo più in Scozia, e nel Yorkshire. Paisley in Scozia è stata per molti anni rinomata per la qualità eccellente delle mercanzie di questa specie, e Bradford fabbrica ora scialli di stame in grande varietà. Scialli di seta sono fabbricati principalmente a Norwich.

Le specie principali di scialli importati sono quelli di Cashmere, dall'India, velo di crespò di seta dalla China, ecc., è scialli di lana principalmente dalla Francia.

Le cifre seguenti sono le statistiche delle mercanzie inglesi di questa classe di merce, esportate nell'anno 1865.

	Numero	£
Scialli di lana e stame	431,350	145,570
Fazzoletti, sciarpe e scialli di seta pura	129,560	235,825
	Dozzine	
Sudetti di seta con mistione di altre stoffe	15,513	16,461

Grandi migliorazioni nei disegni per i scialli sono state fatte dopo l'anno 1861, specialmente nelle mercanzie scozzesi. Paisley possiede una scuola d'arte, stabilita nel 1848, nella quale 1,063 studenti riceveranno istruzione nell'anno 1865.

Classe XXXIII.

TRINA, RETI, RICAMI, E FABBRICHE DI MERCERIE.

1. Il locale principale di trina fatta a macchina è a Nottingham e suoi dintorni. È anche fabbricata in Derbyshire a Tiverton, Barnstaple, e Chard. Le altre specie di trina sono fabbricate nelle provincie di Buckingham, Bedford, Oxford, e Northampton, e a Honiton e Limerick. Il negozio di mussolina ricamata è condotto in Scozia e in Irlanda.

Le statistiche seguenti del negozio di trina fatta a macchina nei distretti di Nottingham ed altri, nell'anno 1866 sono cavati da un rapporto fatto al Consiglio di Commercio (Board of Trade) dalla Camera di Commercio (Chamber of Commerce) di Nottingham.

	No.
Machina di forma circolare per fare l'imitazione di 'bobbin net' (sorta di trina fatta a mano)	1,797
Machina a lieva per fabbricare trine di fantasia	1,589
Machina a lieva specie	166

Delle 1,797 macchine di forma circolare soprascritte, 700 erano adoperate a Nottingham e la sua vicinanza, 500 in Derbyshire, 200 a Tiverton, 100 a Barnstaple, e 300 a Chard. Tutte le macchine 'a lieva' e quelle 'diverse' lavoravano nel distretto di Nottingham.

2. Le fonti che forniscano le materie greggie usate in questo negozio sono notate nelle osservazioni a Classe 27 e 31.

3. Il numero delle persone impiegate in questa industria a Nottingham e nel suo distretto è circa 38,000 persone, senza contare le ragazze giovanissime che sono impiegate nelle case di 'padrone' (spesso colle loro madri), in diversità di lavoro dai magazzini, ecc.

Secondo il rapporto dei giurì sulla Classe 24a all'Esposizione di Londra nel 1862, la trina fatta a mano da impiego a circa 25,000 donne e bambini, le quali sono impiegate nel lavoro alle loro case; e la manifattura di mussolina ricamata, quando è in pieno movimento, non impiega meno di 200,000 persone in Irlanda e a 25,000 persone in Scozia, le quali lavorano anche a casa loro.

4. Il prezzo medio dei salari pagati alla classe principale dei braccianti nel distretto di Nottingham nel 1866 era:—

	Salari per settimana	Ore di lavoro per giorno
Uomini:		10½
Ragazzi	5s.	
Giovinotti	16s.	} Ogni macchina, di regola, im- piega due uc- mini, che lavo- rono, a scam- bio da 9 a 10 ore ciasche- duno per gior- nata
Uomini	25s.	
Braccianti di prima classe }	35s. a 50s.	

Uomini :	Salarij per settimana	Ore di lavoro per giorno
Direttori delle macchine	35s.	10 $\frac{1}{2}$
Donne :		
Da 7 anni, rammenda- trici e infi- latrici	4s. a 8s.	Ore variabili
Rammenda- trici e pie- gatrici di bianco	9s. a 12s.	Nelle fabbriche 10 $\frac{1}{2}$
Saldatrici	10s.	In magazzini dalle 8 a.m. insino alle 7 p.m.
Soprastanti e magazzi- nieri supe- riori	13s. a 15s.	

Le ragazze dell'età di anni sette impiegate come rammendatrici lavorano principalmente alle loro dimore.

Il lavoro casuale è generalmente pagato di più.

5. La tavola seguente fa vedere il valore di trina e di ricami importati nella Gran Bretagna nell'anno 1865:—

Trina :	£
Di mohair o stame	256
Trina fatta a mano di lino o cotone	78,861
„ „ „ seta	18,855
„ „ „ macchina	69,734

Ricamo a lavoro d'ago :

Tende ricamate sul mussolino o sulla rete	16,115
Di altre sorte	41,970

Trina fatta a mano ed importata per il più dal Belgio, e trina fatta a macchina dalla Francia.

6. L'esportazione degli articoli della produzione Britannica compresi in questa classe durante il medesimo anno era:—

Trina di cotone e rete 'patente'	£ 465,611
„ lino	322
„ seta pura	63,351
„ „ mista d'altre materiali	84,314

Ricamo e lavoro fatto all'ago di ogni specie 174,670

7. Delle divisioni del lavoro condotte a mano ed a macchina abbiamo già parlato.

8. Il Signor Birkin, nel suo rapporto sul progresso della trina fatta a macchina nel 1862, dice che 'lo stile di lavoro ed i disegni generalmente hanno molto migliorato, e che disegni di miglior gusto sono fatti ora che prima. Questo, senza dubbio, è stata avanzata dalla facilità che il telajo "Jacquard" ha dato alle macchine di trina, e dal gusto più esatto diffuso fra i disegnatori di ogni specie, dalle scuole d'arte.' Una scuola d'arte ha esistito dopo l'anno 1843.

Un progresso considerevole è ancora stato fatto nella fabbrica di tende di trina.

Classe XXXIV.

CALZETTERIA, BIANCHERIA, ED ARTICOLI APPARTENENTI A QUESTI RAMI DI COMMERCIO.

1. La fabbrica di calze è condotta principalmente nelle provincie di Nottingham, Leicester, e Derby, e in qualche città nelle altre provincie d'Inghilterra; a Balbriggan in Irlanda; ed a Hawick, Galashiels, ecc., in Scozia. Nottingham fornisce mercanzie di cotone e di seta, Derby principalmente seta, e Leicester articoli di lana.

Le statistiche della manifattura di Nottingham, come erano rapportate dalla Camera di Commercio della sopradetta città al Consiglio di Commercio di Londra per l'anno 1866 erano le seguenti:—

	No.
Telaj a mano piccoli	11,000
„ „ „ grandi	4,250
„ „ „ rotanti	1,000
'Sets,' telaj di forma circolare	1,200
Orditoj	400

Non vi sono rapporti recenti di ciascuna specie di macchina adoperata a Leicester, ma è stimato dalla Camera di Commercio di quella città che i telaj piccoli di vecchia forma sono stati abbandonati per i telaj larghi; ancorchè il numero dei telaj di forma circolare, che sono usati principalmente per merce a buon mercato, cresce velocemente. L'aumento della popolazione totale nel distretto di Leicester, che nell'anno 1861 non ammontava a più di 67,000 persone e nel 1866 raggiunse la cifra di 80,000, indicherà in qualche modo il progresso che si sta facendo nelle fabbriche del distretto.

Gli ultimi rapporti per Derby e la Scozia sono quelli pubblicati nel 1861, nel qual tempo vi erano quattro fabbriche di calzetteria a Derby e quattro nella Scozia.

Le confezioni di guanti e di ombrelle sono tutte due d'importanza considerabile, benché non vi siano rapporti della produzione attuale di questi articoli. Questi sono fabbricati principalmente a Worcester, Leicester, Nottingham, e in Londra. Grandi ramificazioni del negozio di ombrelle sono locate in Lancashire e nella metropoli; e la fabbrica d'ossature di ombrelle è condotta estensivamente in Birmingham.

2. Le fonti dalle quali viene il materiale greggio adoperato nel negozio di calzetteria, si trovano osservati nelle note alla Classe 27, 31.

3. Il numero delle persone impiegate nel negozio di calzetteria nel distretto di Nottingham e sue vicinanze è circa 64,000 persone. Non vi sono rapporti del numero delle persone ora impiegate nella ramificazione di questo negozio a Leicester, ma secondo il censo del 1861, 22,000 braccianti erano impiegati in ciò in quell'epoca.

Il prezzo medio dei salarij pagati ai braccianti

nel negozio di calzetteria a Nottingham e Leicester nell' anno 1866 erano :—

A NOTTINGHAM.

Lavorando a—	Per settimana
Telaj a mano { Uomini, donne, e gio-	
piccoli . . { vinotti . . .	10s. 6d.
Telaj a mano { Uomini . . .	15s.
grandi . . { Donne e ragazzi . .	4s.
Telaj rotanti { Uomini . . .	20s. a 32s.
Donne e ragazze . .	5s.
Telaj di for-	
ma circolare { Uomini . . .	20s. „ 35s.
Giovinotti e donne . .	12s. „ 20s.
Donne e ragazze (rammendatrici)	7s. „ 12s.
Orditoj . . { Uomini . . .	16s. „ 35s.
Giovinotti . .	12s. „ 20s.

I telaj grandi e piccoli erano in movimento di lavoro distribuiti in 4,700 magazzini, per la più parte, tre o quattro per ogni magazzino, i magazzini facendo parte delle dimore dei braccianti. I lavoratori delle altre macchine sono impiegati per il numero usuale delle ore nelle fattorie :—

A LEICESTER.

	Per settimana di 60 ore
Calzetteria semplice e vestiario bianco:	s. s.
Lavorando a telaj piccoli (uomini)	9 a 15
„ „ grandi . . .	20 „ 30
„ „ di forma circolare (donne)	12 „ 20
Calzetteria di fantasia e vestiario bianco:	
Braccianti ordinarij (uomini)	14 „ 28
„ abili „ . . .	20 „ 35

La condizione generale dei braccianti in costeti negozj è stata considerabilmente migliorata durante gli anni passati.

5. Il valore degli articoli principali inclusi in questa classe importati nella Gran Brettagna nel 1866 era :—

Calzetteria di cotone . .	£ 70,502
„ seta . . .	18,480
Fascette . . .	8,890
Ombrelle e parasoli (seta)	4,722
Canne e bastoni . . .	85,200

6. Il valore degli articoli principali di produzione inglese delle medesime specie esportate nel 1865 era :—

Calzetteria, vestiario bianco, guanti, ecc.:	£
Di cotone . . .	453,837
„ lino . . .	20,091
„ seta . . .	26,698
„ lana . . .	307,782
Ombrelle e parasoli . .	160,177

7. Una proporzione considerabile del negozio di calzetteria è fatta a mano, ma le produzioni a macchina crescono annualmente in quantità, qualità, e prezzo basso.

8. L' estensione della domanda indigena per gli articoli compresi in questa classe, in sovrappiù alla domanda delle colonie ha condotto a un gran progresso e migliorazione in coteste ramificazioni d'industria nazionale. Una delle riuscite le più importanti e recenti a Nottingham è stata la produzione di calze perfettamente formate, ed altre specie di vestiario fatte sulle macchine. I colori della calzetteria di fantasia son' stati anche grandemente migliorati.

Classe XXXV.

VESTIARIO PER I DUE SESSI.

Non è necessario d'osservare che il vestiario di ogni specie è prodotto in più o meno quantità in tutte le città e nei villaggi del paese intero. Vi sono, però, tre industrie importanti comprese in questa classe, cioè, la fabbrica di cappelli da uomo, cappelli da donna, e stivali e scarpe, le quale avendo locali speciali di produzione, saranno notate brevemente. Riguardando il vestiario che appartiene a varie professioni e negozj, la diversità di vestito marcando le classi particolari della comunità e, salvo poche eccezioni, sparito in Inghilterra. I costumi nazionali di Galles, Scozia, e l'Irlanda sono in qualche modo portati, ma la tendenza generale del mezzo e basso ceto del popolo è d'imitare lo stile delle loro superiori in materia di vestiario; la differenza principale nel loro costume essendo la moda della forma, e la qualità del materiale dal quale è formata. Non c'è un altro paese nel mondo, eccettuando forse l'America, nel quale la classe dei braccianti si vesta così bene e d'una maniera così costosa come nella Gran Brettagna.

Cappelli d' uomo sono fatti in Londra, a Manchester, e sua vicinanza, e in altre parti di Lancashire, Cheshire, Edimburgo, Glasgow, ecc. Il traffico di trecciar la paglia, e che fornisce il materiale greggio per cappelli o berrette di paglia, è condotto per il più a St. Albans, Dunstable, Tring, e qualch' altri locali in Inghilterra. La fabbricazione di stivali e scarpe è esercitata su vasta scala a Northampton, Norwich e Leicester. Questa ultima città fabbrica specialmente all' ingrosso una grande quantità di stivali inchiodati invece di essere cuciti, e dà impiego a qualche migliajo di braccianti.

Il numero seguente è quello delle persone impiegate in alcune delle ramificazioni principali del commercio in rapporto colla manifattura di vestiario nell' anno 1861 :—

Negozi	In Inghilterra e Galles	In Scozia	In Irlanda
Sarti :			
Uomini . . .	109,004	17,276	22,523
Donne . . .	27,386	473	932
Totale . . .	136,390	17,749	23,455
Modiste :			
Uomini . . .	803	31	—
Donne . . .	286,298	33,066	50,854
Totale . . .	287,101	33,097	50,854
Fabbricanti di cappelli e berrette :			
Uomini . . .	11,502	707	886
Donne . . .	7,911	1,697	719
Totale . . .	19,413	2,404	1,605
Fabbricanti di cappelli tondi e chiusi di paglia :			
Uomini . . .	1,740	313	15
Donne . . .	22,245	1,336	1,543
Totale . . .	23,985	1,649	1,558
Trecciatori di paglia :			
Uomini . . .	2,128	1	6
Donne . . .	27,739	30	162
Totale . . .	29,867	31	168
Fabbricanti di stivali e scarpe :			
Uomini . . .	211,233	26,786	41,207
Donne . . .	39,358	2,093	5,329
Totale . . .	250,591	28,879	46,536

Il numero delle donne impiegate nella fabbrica di stivali e scarpe non include le mogli dei calzolaj, le quali spessamente ajutano i loro mariti in qualche divisione del lavoro. Il numero totale delle mogli dei calzolaj nella Gran Bretagna fu stimato a 90,970.

Il prezzo medio dei salari pagati nel negozio di stivali e scarpe a Leicester nell'anno 1860 era :—

	Per settimana di 60 ore	
	s.	d.
Lavoratrici alle macchine . . .	12	0
Provatori . . .	11	0
Inchiodatori (uomini) . . .	22	0
Finitori . . .	30	0
Tagliatori . . .	23	6

Cinquanta per cento della fabbrica è fatta da donne.

Non vi sono statistiche recenti del negozio di Northampton, ma, secondo il censo del 1861, circa 20,000 persone erano impiegate nel negozio di stivali e scarpe in quell'anno.

Il prezzo medio dei salari pagati nella manifattura di cappelli alle città sottoscritte nel 1866 era :—

Fabbricanti di cappelli di seta	A Bristol	Ad Edimburgo	A Glasgow
	Per settimana	Per settimana	Per settimana
	s. d.	s. d.	s. d.
Fabbricanti diguscj . . .	25 0	33 0	34 0
Finitori di seta . . .	25 0	30 0	36 0
Finitori di tesi . . .	30 0	39 0	40 0
Ore di lavoro per giorno . . .	8	12 a 15	10

Il valore degli importi e degli esporti di cappelli tondi, cappelli chiusi, ecc., e di stivali e scarpe nel 1865 era :—

Importi.

Cappelli tondi e chiusi :	£
„ di paglia . . .	556,065
„ di feltro . . .	35,812
Paglia trecciata . . .	102,886
Treccie di altre specie . . .	30,225
Stivali e scarpe . . .	104,693

Esporti (Produzione Inglese).

Cappelli tondi :	£
„ di feltro . . .	280,851
„ di seta . . .	25,909
„ di paglia . . .	166,599
„ altre specie . . .	10,235
Mercanzie . . .	70,343
Treccie di paglia ed altre . . .	49,996
Stivali e scarpe . . .	1,462,105

La Francia fornisce la più gran parte delle mercanzie importate in Inghilterra, e le colonie di Australia sono i consumatori principali delle mercanzie inglese esportate.

C'è anche un gran negozio d'esportazione in vestiario, e in abiti per marinari ed ingegneri dalla Gran Bretagna, il di cui ammontare nell'anno 1865 fu di :—

	£
Vestiario nuovo e vecchio . . .	1,933,000
Abiti per marinari, ingegneri, e negri . . .	706,000
Totale . . .	2,639,000

Circa la metà di cotesti esporti eran per le colonie di Australia.

Classe XXXVI.

GIOIELLERIA E PIETRE PREZIOSE.

La manifattura di gioje e di gioielleria falsa nella Gran Bretagna è di grande importanza; la fabbrica della prima è principalmente nella metropoli e della seconda a Birmingham. A causa della ricchezza aumentata della popolazione negl'anni recenti, la richiesta nostrale per questa specie di mercanzia è stata grandissima. Non vi sono rapporti della produzione delle qualità superiori di gioje. Il valore dell'oro, del argento e delle pietre preziose usati ogni anno nel commercio di Birmingham è stimato a circa un milione e un quarto di lire sterline. Il numero delle persone impiegate nella ramificazione del commercio a Birmingham

ham è quasi 7,500, e la quantità media della
paga guadagnata dai gioiellieri è 25s. a 50s.
per settimana. Gli smaltatori guadagnano
3l. a 5l. per settimana; ragazzi 4s. a 11s.

Il numero delle persone (eccettuati lavoratori) che sono impiegate nella metropoli nel mestiere di gioie al tempo presente monta a:—

Gioiellieri	484
Gioiellieri e orefici	159
Cesellatori	41
Fabbricanti di cassette per gioie	36

Il valore della gioielleria importata nella Gran Bretagna nel 1865, principalmente dalla Francia e dal Belgio, montò a 87,981*l.*, e di pietre preziose (eccettuati diamanti) 32,000*l.* Il valore della gioielleria di fabbrica inglese esportate nel medesimo anno fu:—

Gioielleria, ecc., d' argento e d' oro	94,313
„ „ d' altre sorta	69,918
	<hr/>
	164,231

C'è stato un forte aumento durante i venti anni passati nel valore di pietre preziose.

Il meccanismo e la forza del vapore è usato in alcune ramificazioni del mestiere di gioielleria, che hanno fornito mezzi al fabbricante di fare una diminuzione vistosa nel prezzo delle sue merci.

Il Sig. J. S. Wright, nel suo rapporto sul mestiere gioielleria di Birmingham, osserva che non sarebbe giusto di non fare menzione della scuola d' arte stabilita in questo paese, la quale ha contribuito molto a sviluppare il talento artistico nei gioiellieri di quel luogo. Molte centinaia di lavoratori sono stati educati in quella scuola. I risultati dell' istruzione che hanno ricevuto saranno anche più notevoli fra qualche tempo.

Classe XXXVII.

ARMI PORTATILI.

1. La manifattura delle armi piccole è esercitata a Enfield (lo stabilimento governativo), a Birmingham e in Londra. Baionette, 'matchets' e spade sono fatte principalmente a Birmingham, le ultime da pezzi d'acciaio chiamati 'matrici di spada,' le quali sono fatte a Sheffield. La più gran parte d'armi da fuoco fatte per esportazione è prodotta a Birmingham. I manifattori di Londra sono rinomati per il lavoro e la finezza di carabine e fucili da caccia di prima classe. L'Associazione per Armi Piccole a Birmingham e la Compagnia d'Armeria di Londra tutte due fanno armi pell'uso del governo.

2. Il legno usato per casse da fucile è il faggio, che cresce principalmente in Gloucestershire e Herefordshire; e noce, la quale è importata dall'Italia e dalla Germania. Il ferro adoperato per fabbricare le canne di fucile domanda una cura straordinaria nel prepararlo, e gli operaj di

Birmingham hanno ottenuto un alto grado di perfezione in questa manifattura.

3. Il numero dei lavoratori impiegati alla fattoria del governo, quando stà in pien lavoro, è circa due mila. La ramificazione di Birmingham è stimata di dare occupazione a più di sette mila operaj. Il negozio di Londra impiegò circa due mila persone nell' anno 1861.

Il numero totale di persone impiegate come armajuoli, o manifattori di fucili, nel 1861, secondo il censo, fu:—

In Inghilterra e Galles	. 11,873
„ Scozia 204
„ Irlanda 256
	<hr/>
Totale	. 12,333

4. Secondo un rapporto fatto dalla Camera di Commercio a Birmingham al Consiglio di Commercio nel 1866, la rata media di salarij nel negozio d' armi fluttuava come segue :—

		Per settimana di 60 ore
		s. s.
Maschi—Uomini	.	12 a 60
„ Giovini	.	3 „ 15
Femine—Donne	.	6 „ 12
„ Ragazze	.	3 „ 4 e mezzo

Il Sig. Goodman, Direttore della Compagnia per Armi Piccole a Birmingham, in un rapporto fatto all' Associazione Britannica nel 1866, diceva che durante i dieci anni passati, c' era poco dubbio che i salarj guadagnati nel negozio d' armi avevano trapassato quelli di qualunque altro negozio, e che i lavoratori in certe ramificazioni che domandano gran perizia, guadagnano, quando sono a pien lavoro, sino a cinque o sei lire sterline per settimana.

5. Il valore di armi a fuoco ed armi bianche di tutta specie importate nella Gran Bretagna nell'anno 1865 montò a 243,699%, del quale 192,000% dal Belgio. L'importazione totale di legno di noce fu tonnellate 5,689, e di casse da fucile non finite 5,204 quintali (cwts.). Più che trentotto milioni capsule a percussione furono anche importati.

6. Qui segue il rapporto ufficiale del numero e del valore di armi piccole nostrali esportate dal Regno durante i cinque anni 1861-1865:—

	No.	Valore in lire sterline
1861	315,000	515,000
1862	702,000	1,573,000
1863	439,000	856,000
1864	254,000	348,000
1865	291,000	424,000

Gli esporti grandi al cominciamento del periodo citato furono cagionati per la chiesta negli Stati Uniti. Il Sig. Goodman crede che questi rapporti danno meno che il valore attuale del negozio d' esporto britannico, a motivo che un gran numero, specialmente di fucili da caccia di ottima qualità, son mandati fuori del paese senza esser registrati alla dogana.

Le specie principali d' armi a fuoco, ecc., esportati nell' anno 1865 furono:—

	No.
Fucili	173,173
Carabine	85,322
Fucili da caccia	15,505
Revolvers	8,601
Pistole, ecc.	8,994
	£
Spade, sciabbole, baionette, ecc.	4,538
	Milioni
Capsule a percossione	284,895

7. Si serve ora di meccanismo nella manifattura di tutte le parti d' armi a fuoco, e pel suo ajuto il fabbricante inglese è posto in grado di competere felicemente co' manifattori nei paesi esteri, i quali, a causa del più vil prezzo del lavoro a loro disposizione, potrebbero vendere a miglior mercato in tutti i mercati del mondo.

8. Le migliorazioni che hanno avuto luogo negli ultimi tempi nella costruzione d' armi piccole son tanto bene conosciute che una allusione su questa materia è appena necessaria. Il più importante dei cambiamenti recenti è l' introduzione generale del caricare per la culatta.

Vi son molte ramificazioni del negozio nelle quali un lavorante artistico può trovare campo libero per i suoi talenti, e nelle quali i manifattori inglesi già mostrano un gusto considerevole. Però i lavoratori inglesi che visiteranno l'Esposizione presente faranno bene d'istruirsi per mezzo degli oggetti esposti dagli armajuoli di Parigi, le loro mercj essendo rinomate per la bellezza artistica delle loro decorazioni.

Classe XXXVIII.

APPARATI DA VIAGGIO ED EQUIPAGGI DA SOLDATI.

La manifattura di bauli, sacchi da viaggio, ed altri articoli compresi in questa classe forma

una industria di massima importanza, ma non vi sono mezzi di conoscere la quantità attuale. Nuove specie di bauli si vedono quasi giornalmente destinate ai diversi bisogni dei gradi numerosi di viaggiatori. Un grande perfezionamento è stato fatto nella fattura dei sacchi da viaggio durante gli ultimi dieci anni. La manifattura di coperte da viaggio e involti da strada ferrata (railway wrappers) è condotta a Dewsbury e Huddersfield, ed è divenuta a quest' ora una ramificazione grande del commercio di lana. L' uso di tende nel Regno Britannico, all' eccezione di quelle destinate all' utilità agricola, è limitato di molto, la manifattura principale essendo pel servizio delle truppe a stazioni estere.

Classe XXXIX.

GIOCARELLI.

Molte specie di giocarelli (sopra tutto bambole di cera) sono fatti estensivamente nel Regno Britannico, ma per ragione delle particolarità del commercio di giocarelli, è impossibile di conoscere il valore della produzione annua di questi articoli.

Il numero dei fabbricanti occupati nel commercio di giocarelli in Londra (ad eccezione dei lavoratori) è:—

Fabbricanti di giocarelli	44
Negozianti „ „	153
Fabbricanti di bambole	19
„ di cavalli tentennanti	8

Gli importi di giocarelli esteri sono aumentati di molto dopo l' anno 1850, essendo cresciuti da 46,130/. a 163,024/. nell' anno 1865.

GRUPPO V.

(CLASSI XL.—XLVI.)

PRODOTTI (GREGGI E LAVORATI) DELL' INDUSTRIA DI
MINIERA, DI SELVA, ECC.

Classe XL.

MINIERE E METALLURGIA.

1. QUESTA classe costituisce la più importante ramificazione delle produzioni indigeni. Ha origine principalmente dall'abbondanza della sua ricchezza minerale, e più specialmente dalla felice combinazione della produzione di carbon di terra e ferro nelle medesime località, circostanza che ha posto l'Inghilterra nell'alta posizione di potenza manifatturiera. Il sviluppo rapido di strade ferrate e di navigazione a vapore devono anche attribuirsi alle medesime circostanze. Gli estratti seguenti della produzione dei minerali e metalli nel Regno Britannico nell'anno 1865, sono presi dai rapporti ufficiali compilati dal Signor Robert Hunt, il custode dei registri delle miniere:—

Dove prodotto	La Quantità prodotta
Durham e Northumberland . . .	25,032,694
Cumberland	143,047
Yorkshire	9,355,100
Derbyshire	4,595,750
Nottinghamshire	1,095,500
Leicestershire	965,500
Warwickshire	859,000
Stafford e Worcestershire . . .	12,200,989
Lancashire	11,962,000
Cheshire	850,000
Shropshire	1,135,000
Gloucestershire, Somerset, e Devon- shire	1,875,000
Monmouthshire	4,125,000
South Wales	7,911,507
North Wales	1,983,000
Scotland	12,650,000
Ireland	123,500
Totale	98,150,587

Diffalcate 9,000,000 di tons esportate, e quasi 20,000,000 adoperate nelle manifatture dei pani e stanghe di ferro, ecc., vi resta circa 60,000,000 di tons, la consumazione nostrale per l'uso domestico ed altri, o il ragguaglio annuale di carbone prodotto negli ultimi dieci anni terminando col 1865 era 84,960,000 tons.

FERRO NON RAFFINATO.—La produzione intera di questo minerale nell'anno 1865 montava a 9,910,000 tons. È stato estratto in venti provincie inglesi, i più grandi redditi

essendo dal North Riding di Yorkshire, Cumberland, e Staffordshire, e pure nella provincia di Galles, in Scozia, ed in Irlanda.

PANI DI FERRO RAFFINATO.—La fattura intera dei pani di ferro nell'anno 1865 era 4,819,000 tons; il catalogo seguente fa vedere i siti principali di manifattura:—

Divisione e Contea	No delle Fabbriere	No. dei Fornari Fabbri- cati	No. dei Fornari soffianti	Tons di Pani di Ferro prodotti
Inghilterra:				
S. Staffordshire . . .	64	172	114	692,627
York: N. Riding . . .	14	65	53	486,421
Durham	19	65	47	476,767
N. Staffordshire . . .	8	35	27	206,268
Lancashire	6	24	16	204,925
Derbyshire	15	41	34	189,364
York: W. Riding . . .	14	38	29	123,293
Shropshire	11	29	23	117,343
Cumberland	4	16	9	107,430
Altre divisioni . . .	21	42	24	134,489
Somma totale	176	527	376	2,738,867
Provincia di Galles:				
Glamorganshire . . .	18	81	64	408,410
Monmouthshire . . .	10	63	45	357,656
Altre divisioni . . .	21	63	31	150,837
Somma totale	49	202	140	916,909
Scozia:				
Lanarkshire	15	101	84	1,163,478
Altre divisioni . . .	17	79	57	
Somma totale	32	180	141	

La lista seguente segna i numeri delle fonderie e mulini nell'anno 1865 che erano occupati nella produzione del ferro compiuto:—

Divisione e Contea	No. delle Fabbri- che	No. di Fornaci	No. dei Lami- toj
Inghilterra:			
S. Staffordshire . . .	118	2,116	224
Durham	16	688	61
Yorkshire	30	922	115
Altre contee	34	903	113
Somma totale	198	4,629	513
Provincia di Galles:			
Scozia	39	1,395	170
	15	383	47
Somma totale	252	6,407	730

Non ci sono redditi della produzione intera del ferro compito nel Regno Britannico. Il Sig. J. Jones, in un rapporto all' Associazione Britannica a Birmingham, nell' anno 1865, stimava la produzione annuale del distretto di Staffordshire a 855,000 *tons*, e la produzione delle fabbriche di ferro in relazione colle miniere di carbone di Northumberland e Durham è stimata a circa 300,000 *tons* per anno.

La manifattura di acciaio si fa di molto in campagna, sopra tutto a Sheffield ed anche in Staffordshire e Northumberland, ma non vi sono statistiche del prodotto totale.

La produzione stimata a Sheffield nell' anno 1862 era 79,000 *tons*, di acciaio 'blistered,' e 52,000 *tons* di acciaio gettato.

PIOMBO.—La quantità del metallo estratto era 90,450 *tons*, e del piombo prodotto 67,181 *tons*. Il piombo è prodotto in ciascuna divisione del regno; la provvista più grande nell' anno 1865 era estratta dalle miniere in Durham e Northumberland.

RAMÈ.—198,298 *tons* di questo metallo furono estratte principalmente nelle contee di Cornwall, Devonshire e Cheshire; e 11,888 *tons* di rame furono prodotti nel Regno Britannico nell' anno 1865.

STAGNO.—Questo minerale si trova in Cornwall e Devonshire, e la quantità del minerale estratto nel 1865 fu 15,686 *tons*. 10,039 *tons* di stagno puro furono prodotti nel medesimo anno.

Zinco, pirite, piccole quantità d' argento ed oro, ed anche diverse specie di minerali terrosi sono prodotti nel Regno Britannico, come pure pietre da fabbricare ed argilla, in gran quantità. Sale è prodotto in Cheshire, in Worcestershire, anche in Irlanda. Le fabbriche di sale a Cheshire sono capaci di produrre 1,000,000 *tons* per l' anno. La produzione delle fabbriche di Worcestershire è di circa 200,000 *tons* d' anno in anno. La produzione del sale in Irlanda è comparativamente di piccolo grado.

Il valore intiero delle produzioni minerali del Regno Britannico nell' anno 1865 è esposto come segue:—

	Libre
Metalli	15,773,000
Carbone	24,538,000
Minerali terrosi . .	1,434,000
Libre sterline . .	41,745,000

Il valore di sale, argilla, e pietre da fabbricare non è compreso nelle cifre di sopra.

Sarebbe impossibile il dare un schizzo dei commercj importanti e numerosi in connessione con questa classe nel breve spazio accordato a queste osservazioni. Si può dire solamente che il negozio di chincaglieria di ferro è centralizzato principalmente a Birmingham, Wolverhampton, Walsall e Sheffield; la manifattura di oggetti in rame e ottone a Birmingham e Bristol; mercanzie argentate per elettricità a Sheffield e Birmingham; aghi e ami a Redditch; e spille a Birmingham; fili

metallici a Birmingham, Sheffield, Manchester, ecc., ed anche arnesi da tagliare a Sheffield.

2. I materiali grezzi adoprati nelle manifatture di metallo nel regno sono tirati principalmente dai prodotti nostrali. Una certa quantità però di minerali e di metalli è importata d' anno in anno. La tavola aggiunta mostra i numeri delle descrizioni principali importate nell' anno 1864:—

Articoli	Quantità	
	Tons	
Rame non raffinato	82,562	
Rame <i>Regulus</i>	39,686	
Rame non lavorato lavorato in parte	21,717	
Ferro non raffinato	76,977	
„ pani	11,380	
„ stanghe	51,464	
Acciajo	6,777	
Piombo non raffinato	5,584	
„ pani e lastre	34,903	
Argento non raffinato	6,587	
Stagno non raffinato	639	
„ puro, stanghe, ecc. . . .	5,698	
Zinco in forme	22,193	
„ laminato	8,492	

Il Chili forniva la più gran parte di rame non raffinato e *regulus*; la Spagna, la Francia, e la Svezia, pani e stanghe di ferro ed acciaio; l'Italia, piombo non raffinato; la Spagna, pani e lastre di piombo; e le colonie olandesi nell' Arcipelago Orientale, dello stagno. Il zinco era importato principalmente dal Belgio, dall' Olanda, d' Amburgo e dalla Prussia.

3. Il numero dei maschi impiegati nelle miniere di carbon fossile del Regno Britannico nell' anno 1865 erano 315,000. La rata di salarj pagati ai minatori, ed anche ai tagliatori di carbon fossile, adulti, a Newcastle nell' anno 1866 era 5s. 9d. al giorno di 7 ore. I salarj degl' adulti nelle altre occupazioni in relazione colle miniere di carbone variano di 3s. a 5s. al giorno; per ragazzi 1s. a 3s. al giorno. I guadagni netti per testa nel negozio di ferro in Staffordshire sono calcolati a circa 28s. a 30s. alla settimana, benchè alcuni lavoratori guadagnano da 2l. sterline a 4l. sterline. In Glasgow i fonditori di ferro, adulti, ottenevano 29s. alla settimana di 60 ore nell' anno 1866; i ragazzi 4s. a 16s.; per le altre occupazioni in fonderie 15s. a 25s. Nel negozio di ottone a Birmingham, fabbri e stagnatori 21s.; fattori di modelli 33s.; e stipettaj nei lavori di macchinista, 30s. alla settimana di 58 ore. I serraglieri di cassetine 40s. Nel negozio di arnesi taglienti a Sheffield nel anno 1866:—fabbri 31s. a 36s.; battitori 21s. a 24s.; arrotini 45s. a 50s.; e indoratori 24s. a 28s. alla settimana di 42 ore. Non vi sono rapporti pubblici dei numeri delle persone impiegate nei mestieri di sopra, e per la ragione della grandiversità delle loro occupazioni, non è quasi possibile di formarsi una idea giusta.

Il numero totale delle persone impiegate in relazione colle manifatture di miniera e di metallo nel Regno Britannico nel anno 1861 era circa 1½ milioni di individui. Lo stato dei

minatori è adesso un soggetto d'una cura molto più grande per parte dei padroni che non era prima, e la maggior parte dei proprietari di miniere e di fattorie di metallo non solamente provano di migliorare la salute e conforto dei loro lavoranti, ma fanno di molto per incoraggiare l'educazione dei loro figli e generalmente di contribuire al ben essere ed alla prosperità delle loro famiglie.

4. Il valore totale delle manifatture di metallo importate nel Regno Britannico nell'anno 1865 era meno d'un mezzo milione. La parte principale delle importazioni consiste di mercanzie di ferro, principalmente dal Belgio e dall'Olanda.

5. La tavola seguente fa vedere la quantità degli articoli principali dei prodotti britannici compresi in questa classe esportati fuori dal Regno Britannico nell'anno 1865:—

Articoli	Quantità
Carbon fossile e coke . . . tons	9,170,000
Rame e mercanzie . . . cwts.	632,000
Ottone "	44,000
Mercanzie di ferro . . . £	3,924,000
Ferro in pani tons	547,000
" in stanghe "	254,000
" da strada ferrata . . . "	434,000
" altre specie e mercanzie . . . }	357,000
Acciajo "	24,000
Piombo "	27,000
Merci in placche . . . £	112,000
Sale tons	579,000
Stagno cwts.	104,000
" in lamine . . . £	1,481,000
Zinco cwts.	89,000

Il valore totale degli articoli di sopra eccedeva più di 28 milioni di sterline

6. Non è possibile di distinguere le divisioni dei commerci come sopra, i quali sono effettuati a mano ed a meccanismo. Lo scopo generale però è di sostituire le macchine in vece del lavoro manuale in qualunque luogo praticabile.

7. Il progresso nell'industria di miniere del Regno Britannico dopo la data dell'ultima Esposizione a Parigi potrebbe esser raccolto dalla produzione aumentata di minerali e metalli nell'anno 1865 a paragone dell'anno 1855. Il prodotto di carbon fossile cresceva 95 per cento in questo tempo; pani di ferro 50 per cento; stagno, 66 per cento; piombo 3 per cento; frattanto il rame cadeva a 44 per cento.

Grandi miglioramenti sono stati fatti nelle mercanzie di ferro della Gran Bretagna dopo l'anno 1851, la più gran parte se non tutto delle quali, si può dire avevano o direttamente o indirettamente la loro origine nell'Esposizione Industriale tenuta a Londra in quest'anno. Il lavoro principiato all'Esposizione fu seguito dal Dipartimento di Scienza ed Arte, e coi mezzi dell'esposizioni locali e dell'istruzione accordata alle Scuole d'Arte, stabilite nei centri dei distretti di manifattura, un avanzamento grandissimo nel disegno e nello stile delle merci inglesi si è manifestato chiaramente.

Il giuri sulle mercanzie di ferro all'Esposi-

zione dell'anno 1862 rapportò essere felice d'aver verificato da una parte e l'altra un miglioramento in quasi tutti gli oggetti esposti. S' incontra gran nettezza e regolarità nelle forme delle mercanzie di poco prezzo. Molto più abbellimento è sviluppato in questi articoli, i quali sono d'utilità ed anche di ornamento, ed un tipo più alto dell'arte è stato ottenuto nel lavoro di metallo più fine adoprato per l'uso domestico e per le decorazioni ecclesiastiche.

Classe XLI.

PRODOTTI DELLA COLTIVAZIONE DELLE SELVE E DEI MESTIERI APPARTENENTI A QUESTA INDUSTRIA.

A paragone delle selve straniere, quelle del Regno Britannico sono di piccola estensione. Il valore annuale della produzione di legname d'opera ed altre specie di legno è stimato a circa due milioni di sterline. La quercia, benchè non sia la più abbondante, è la più importante e preziosa degli alberi britannici, ed è coltivata largamente nelle selve reali.

La produzione nostrale di legname d'opera è molto al di sotto della domanda, e grandi importazioni son fatte annualmente dall'estero. Molt'altre produzioni di selva, che non crescono nel paese, sono anche adoperate in gran quantità. La tavola seguente mostra gli importi principali di tali articoli nell'anno 1865:—

Articoli	Quantità
Ceneri cwts.	144,000
Scorza da conciare o da tingere }	431,000
Sughero "	122,000
Sugheri, già tagliati . . . libbre	2,012,000
Noce di galla cwts.	16,000
Sumach tons	13,000
Terra japonica "	16,000
Valonia "	20,000
Legna e legname d'opera : Non segata o non spaccata, (compreso tece) . . . }	carichi 1,686,000
Asse di abete, tavolette sottili, ecc., segate o spaccate }	" 2,136,000
Quadrelli "	67,000
Legna da fuoco "	180,000
Cerchj "	8,000
Assicelle "	105,000
Legname da tinta . . . tons	14,000
Legno duro "	68,000

Il valore totale degli articoli sopradetti montava a 15,888,000 sterline. Una quantità piccola di legname d'opera dell'estero è esportata di nuovo, ma non è d'una importanza abbastanza grande per esser notata.

Ceneri di ranno furono ottenute principalmente dalle colonie britanniche nell'America Settentrionale; la scorza dal Belgio e dall'Olanda; il sughero dal Portogallo; sugheri già tagliati dalla Francia, dalla Spagna e dal Portogallo; noce di galla dalla China, dall'

India, dalla Turchia; sumach dalla Sicilia; terra japonica dall' India e da Singapore; valonia dalla Turchia; legna e legname d' opera dall' America Britannica, ed dal Mare Baltico; teca dall' India e Singapore; cedro da Cuba; e maogano dall' America Settentrionale e dagli Stati Uniti d' America.

Classe XLII.

PRODOTTI DELLA CACCIA, DELLA PESCA, E DEL RACCOLGIMENTO DEI FRUTTI OTTENUTI SENZA COLTIVAZIONE.

Diversi articoli compresi in questa classe, come pelli di lepre, coniglio, ed altre pelle, penne, corna, ossa, e cera, ecc., sono prodotti nella Gran Bretagna; ma non vi sono mezzi per verificare la quantità della loro produzione. La provvista di olii di pesce e d' ossi di balena e abbassata negl' ultimi anni, a causa principalmente della scoperta di materiali che sono stati trovati più adattati al fine pel quale si usavano gli articoli nominati.

Benchè molti degli articoli più importanti compresi in questa classe non siano produzione di questo paese, sono consumati in grande quantità. Le cifre seguenti mostreranno le quantità dei prodotti principali forestieri di caccia, pesca, ecc., importati dalla Gran Bretagna in 1865:—

Scorza, Quercie tintoria . . .	cwts.	24,954
„ per conciatori di pelli . . .	„	405,856
Ossa per disegni di fabbricazione . . .	tons	8,666
„ setole . . .	lbs.	2,566,000
Sugheri non tagliati . . .	tons	6,113
Penne per letti . . .	cwts.	13,493
„ adornamento . . .	lbs.	54,211
Noce di cacao . . .	No.	2,545,000
„ terra . . .	tons.	1,939
Gomme . . .	cwts.	182,000
Caoutchouc . . .	„	71,392
Gutta percha . . .	„	29,077
Crino di vacca, bove, cavallo, } ecc.	„	74,851
Corna . . .	tons	3,678
Colla di pesce . . .	cwts.	2,764
Olio di pesce . . .	tons	10,005
„ spermaceti . . .	„	2,438
Penne d'oca da scrivere . . .	No.	10,949,000
Resina . . .	cwts.	459,000
Pelle di coniglio . . .	No.	1,059,000
„ cervo . . .	„	92,000
„ capra . . .	„	2,797,000
„ capretto . . .	„	330,000
„ d'agnello . . .	„	708,000
„ di pecora . . .	„	4,300,000
„ di vitello marino . . .	„	529,000
Avorio, denti d' elefante . . .	cwts.	10,268
„ vegetale . . .	„	22,313
Scaglia di tartaruga . . .	lbs.	39,288
Cera . . .	cwts.	10,600

Queste cifre hanno relazione all' importazione totale; in casi, c'è una ri-esportazione considerabile.

Classe XLIII.

PRODOTTI D' AGRICOLTURA CONSERVATI CON FACILITÀ, CHE NON SI USONO PER CIBO.

Gli articoli principali prodotti nella Gran Bretagna che cadono tra il limite di questa classe sono lino grezzo e lana, olii di semenza, e scorza di quercia. La produzione dei due articoli precedenti è stata notata nelle Classi 28 e 30; ma non vi sono mezzi di sapere la quantità di scorza di quercia prodotta in questo paese. In quanto alla produzione d' olii di semenza non esistono rapporti della manifattura per uso domestico e altro. Però è esportato in gran quantità dalla Gran Bretagna. Nell' anno 1865 undici milioni di gallons, stimati al valore di 1,547,000£, furono esportati da questo paese; ma cotesta quantità non fu fatta solamente di semenza inglese, grande quantità di semi per fare olio essendo importata ogni anno. Nell' anno 1865, 1,697,000 *quarters* di seme di lino, di grano di rapa, ed altri semi da olio furono importati. In più della produzione nostrale di scorza, grandi quantità di materie per conciatori furono importate. Nell' anno 1865 le specie principali di tale materie, importate fu:—

	Tons
Scorza per tintori o conciatori . . .	20,292
'Cutch'	2,120
'Gambier'	13,588
Valonia	19,702
Divi Divi	3,711
Shumac	13,054

Le importazioni di semi da olio principalmente dalla Francia, Olanda, e Amburgo, nel medesimo anno montò a 12,811 *tons*, del valore di 595,000£.

Classe XLIV.

PRODOTTI CHIMICI E FARMACEUTICI.

La manifattura di prodotti chimici costituisce una delle industrie le più importanti del paese, e può essere considerata importante, non solamente perchè forma un negozio indipendente e di estensione considerabile, ma anche in relazione coi processi varj di manifattura nei quale i prodotti chimici sono usati in tanta ampiezza. Le fabbriche principali dell' industria sono nei contorni di Newcastle, Liverpool, Glasgow, Bristol, e Birmingham. I preparati chimici sono anche prodotti in altre parti di Lancashire, e delle provincie centrali e meridionali dell' Inghilterra.

La manifattura della più gran parte degli altri articoli compresi in questa classe è

sparsa tanto fra il paese, che è difficile di particularizzare qualunque luogo speciale della loro produzione. In quanto alla manifattura di sapone e di candele, le qualità ordinarie si fanno in quasi tutte le città grandi del Regno. Il sapone è prodotto estensivamente; nell'anno 1852, l'anno precedente dell'abolizione del dazio del consumo sopra il sapone, 203 milioni di libbre di sapone duro e 21 milioni di libbre di sapone mollo furono caricate del dazio in quell'anno nella Gran Bretagna. Da poi l'abolizione del dazio, non c'è rapporto degno di fede della produzione, benché si sa che ha aumentato considerabilmente. Durante il tempo che il dazio sulla produzione del sapone esisteva, pochissimo fu fatto per il miglioramento ed il buon mercato della manifattura, ma il dazio essendo abolito, una concorrenza di scienza chimica fu diretta a quest'oggetto, ed ora si può comprare il sapone per 2*d.* la libbra, che prima sarebbe stato gravato di 3*d.* la libbra pel dazio. Grandi miglioramenti sono stati fatti nella produzione delle specie diverse di saponi profumati, e saponi di fantasia, per la quale c'è ora una gran domanda. I saponi di fantasia si fanno in ampiezza in Londra ed in qualche altre città principali del paese.

In quanto alle candele, il negozio di candele di sevo è condotto in quasi tutte le città del paese, e dà impiego a molte centinaia di lavoratori. La fabbrica di altre specie di candele, come cera, spermaceto, è condotta principalmente nelle città grandi; e quella di stearina, di paraffina, e candele composte, all'eccezione di due fabbriche nella Scozia, e nell'Irlanda, è ristretta intieramente in Londra ed i contorni. Non esistono rapporti del numero delle persone impiegate nella manifattura di candele al presente. Secondo il censo di 1861, il numero seguente fu impiegato in questo negozio in ogni divisione del regno:—

Venditori di Candele di Sevo.

	Uomini	Donne	Totale
In Inghilterra la Gales	4,467	219	4,686
Scozia	298	25	323
Totale	4,765	244	5,009

Dietro l'introduzione di candele di paraffino, la manifattura ha migliorato e aumentato notabilmente. I Signori Field, che sono espositori in questa classe, furono i primi ad introdurre questa specie di candela nell'anno 1857, da quel tempo hanno fatto miglioramenti considerabili nella loro fabbricazione, il più recente dei quali è il metodo di fare le candele che si aggiustano da sè. Il vantaggio principale delle candele di paraffino è la soppressione totale di grasso, la produzione di un lume puro, bello, e splendissimo, nonché il basso prezzo, avuto riguardo alla loro qualità. Le candele di paraffino sono suscettibili d'essere colorate in ogni colore senza detrimento della luce.

La manifattura di gomma elastica, e di gutta-

percha ha aumentato immensamente negli ultimi dieci anni, ed è condotta estensivamente in molte parti del regno. Progresso grande è anche stato fatto nella produzione di tinte e di colori nel medesimo tempo. Allume, che forma un articolo di commercio di qualche importanza, è prodotto in ampiezza a Whitby in Yorkshire. Il fosforo è fatto in quantità grande dai Signori Albright e Wilson a Oldbury. La manifattura d'acque minerali e altre specie è condotta in diverse parti del paese, e diede impiego a 1,501 uomini, e 98 donne nell'anno 1861.

Come non ci sono statistiche ufficiali delle produzioni industriali del paese, è impossibile di fissare il numero totale delle persone impiegate nei diversi mestieri compresi in questa classe. Il numero totale di farmacisti fabbricanti, secondo il censo di 1861, fu nella Gran Bretagna:—

	Uomini	Donne	Totale
Inghilterra e Gales	7,505	243	7,748
Scozia	1,253	50	1,303
Totale	8,758	293	9,051

La manifattura più importante in questa classe è quella del negozio degl'alcali, che comprende le industrie congiunte di carbonato di soda, acido solforico, acido idroclorico ed agenti per imbianchire; e come la manifattura è condotta sotto l'ispezione del governo, i rapporti della quantità di sale scomposto fornisce una misura dell'estensione ed accrescimento commerciale. Al tempo del trattato tra la Francia e l'Inghilterra nel 1860, la quantità di sale usato nella fabbrica d'alcali in questo paese fu stimato dai rappresentanti del mestiere d'essere circa 250,000 *tons* per anno. Il primo rapporto dell'ispettore d'alcali segna la quantità usata nel 1864 a circa 300,000 *tons*, ed il secondo rapporto per 1865, 325,000 *tons*, dimostrando una aumentazione di trenta per cento in cinque anni. Non vi sono rapporti precisi dei prodotti derivati da questa discogliimento, ma però furono fatte diverse stime approssimative.

Anzi il giuri sulla Classe 2 all'Esposizione di 1862 ha pubblicato dei fatti interessanti, forniti dal Signor C. Allhusen, avendo relazione al negozio d'alcali della Gran Bretagna, dai quali appare che anche nel 1852 la produzione di questo mestiere montò a:—

	Tons	Valore
		£
Alcali	71,193	711,930
Soda cristallizzata . . .	61,044	305,220
Bicarbonato di soda . . .	5,762	86,430
Polvere da imbianchire . .	13,100	131,000
	151,099	1,234,580

L'aumentazione del negozio fra 1852 e 1861 è riportato come segue:—

	Secondo al rap- porto del Sig. Allhusen	Secondo al rap- porto del Sig. Gossage
	Tons	Tons
Alcali	71,193	156,000
Cristalli di soda . . .	61,044	104,000
Bicarbonato di soda . .	5,762	13,000
Polvere da imbianchire .	13,100	20,000

Il Signor Gossage stimò il valore totale dei prodotti in 1861 d'essere più di dieci milioni di lire sterline, ed il numero delle persone impiegate in quasi cinquanta stabilimenti a 10,000.

La tavola seguente mostra la produzione dei due principali territorj d'alcali nell'anno 1861:—

	Newcastle-on- Tyne	Lancashire, so- condo al rap- porto del Sgr. Schunk, Smith, e Roscoe
	Tons	Tons
Alcali	35,000	93,600
Cristalli di soda . . .	82,000	8,849
Bicarbonato di soda . .	12,000	11,700
Polvere da imbianchire .	11,400	8,060

Il Signor E. K. Muspratt, segretario onorario della ramificazione di Lancashire dell'Associazione dei Manifattori di Alcali, riferisce che, stando ai rapporti dei fabbricanti in quel distretto, la quantità di sale disciolto ogni anno al tempo presente è circa 170,000 tons o più di 50 per cento del negozio totale del regno.

La quantità dei prodotti sottoscritti fabbricati nel distretto di Lancashire, o il distretto occidentale nell'anno 1866, monto a:—

	Tons
Cenere di soda	81,800
Soda caustica	11,500
Cristalli di soda	23,000
Bicarbonato di soda	6,400
Solfato di soda, venduto come solfato	24,600
Polvere da imbianchire	17,500

Il valore dei prodotti soprascritti a i prezzi correnti fu calcolato d'essere 1,726,200*l.*

Sopra di più degli alcali fabbricati in questo territorio, quantità grandi d'acido solforico (18,000 tons) è d'acido idroclorico (14,000 tons) furono prodotti nel 1866. La quantità di molti altri prodotti non è stata accertata, ma il valore totale delle produzioni chimiche del territorio può essere stimato a due milioni di lire sterline.

I due miglioramenti di più grande importanza nella manifattura d'alcali da qualche anno sono stati la produzione aumentata di soda caustica e di polvere da imbianchire, che sono usati estensivamente dai fabbricanti di carta nella preparazione d'erba d'esparto che è usata invece di stracci.

È all'abolizione dei dazj sopra il sale, il vetro, il sapone, e la carta che il mestiere d'alcali d'Inghilterra deve la sua perfezione e sviluppo.

Non esistono rapporti della produzione d'altre specie di prodotti chimici, ma sono fabbricati estensivamente in altre parti del paese.

In aggiunta alla produzione nostrale dei materiali grezzi usati nella manifattura degli articoli compresi in questa classe, c'è un'importazione considerabile da altri paesi, come si vedrà dalla tavola seguente, che mostra le importazioni nella Gran Bretagna nell'anno 1865:—

Articoli	Quantità
Alcali:	
Potassa d'America	cwts. 143,779
Barilla	15,762
Ammoniaca liquida	lbs. 11,334
Altra specie	cwts. 19,352
Allume	10,890
Annatto tondo e squarciato	3,647
Argol	20,004
Balsamo:	
Copaiva	lbs. 230,508
Peru	17,626
Non numerate	46,240
Scorza:	
Peru	cwts. 15,510
Quecitrone	24,954
Bacci gialli	5,184
Acido Boracico	20,627
Borace	6,209
Solfo	981,106
Canfora:	
Non depurata	10,430
Caoutchouc	71,392
Cocciniglia	24,260
Crema di Tartaro	49,165
Cubebe	lbs. 53,443
Divi-Divi	tons 3,711
'Gambier'	13,588
Gomma:	
Copale	cwts. 8,607
Belzuino	1,883
Arabica	46,032
Tinta di lacca	11,673
Lacca	46,362
Mastice	1,860
Gutta-percha	29,077
Indaco	66,506
Gialappa	lbs. 166,761
Robbia	cwts. 88,033
Alizzari	147,482
'Munjeet'	1,837
'Garacine'	33,571
Miniera di manganese	tons 47,478
Napta	gals. 238,360
Nitro, cubico	cwts. 1,020,383
Olio:	
Animale	tons 10,005
Spermaceto	2,438
Noce di cacao	cwts. 190,228
Palma	798,724
Terebentina	112,129
Petrolio:	
Non depurato	tons 5,662
Depurato	gals. 2,112,831
Roccella	cwts. 34,298
Paraffina	8,556
Potassa:	
'Prussiato' di potassa	lbs. 936,298
Solfato	1,421,102

Articoli	Quantità
Potassa— <i>continuata</i> :	
Bicromato	lbs. 183,352
Muriato	cwts. 49,567
Piriti di ferro, o rame	tons 193,626
Solfato di chinina	ozs. 364,089
Salnitro	cwts. 311,390
Salsapariglia	lbs. 472,968
Senna	" 749,389
Smalto	cwts. 1,300
Stearina	" 9,298
Servo	" 1,361,248
Acido tartarico	lbs. 299,810
Trementina	cwts. 44,428
Ottamarino	" 27,512
Acque minerali	gals. 83,580
Cera d'ape	cwts. 10,678
Vegetale	" 3,079

Bisogna rammentarsi nondimeno che in alcuni casi una proporzione grande di questi articoli è ri-esportata.

La quantità media dei salary pagati agli artigiani in alcune delle ramificazioni principali delle manifatture chimiche del paese, secondo ai rapporti forniti al Consiglio di Commercio nel 1866, dalle Camere di Commercio di Newcastle e Bristol, fu:—

	A Newcastle, per giorno di 10 ore	A Bristol, per giorno di ore 10½
	<i>s. d.</i>	<i>s. d.</i>
Fabbricanti di acido solforico	4 6	3 6
" " solfato di soda	4 8	4 8
" " soda cruda	4 6	4 0*
" " carbonato di soda	4 6	4 8
" " cristalli di soda	3 8	3 0
" " bicarbonato di soda	3 8	—
" " polvere da imbianchire	5 2	4 0*
" " soda caustica	—	4 6
" " cloride di calce	—	3 0
" " sale ammoniac	—	4 0

* Otte ore per giorno.

La quantità media dei salary pagati ogni settimana nel mestiere della fabbricazione di sapone nell'anno 1866 nei tre luoghi seguenti fu:—

	A Bristol	A Edimburgo	A Glasgow
Fabbricanti di sapone	40s.	25s.	36s.
Aiutatori	16s. 6d.	15s. a 19s.	18s.
Uomini da tini	18s. a 20s.	15s.	12s. a 18s.

Ore di lavoro, 60 per settimana.

Nel negozio delle candele di paraffina la quantità media dei salary pagati agli uomini abilitati nel mestiere è circa 30s. a 42s. per settimana. Ore di lavoro dieci e mezzo per giorno.

Gli esporti delle specie principali di prodotti chimici inglesi, sapone, candele, ecc., nell'anno 1865 furono come segue:—

	Quantità	Valore
Alcali:		£
Soda caustica, ceneri di soda e alcali depurato	cwts. 1,799,637	842,170
Cristalli di soda	" 641,442	199,376
Bicarbonato di soda	" 131,715	82,400
Allume	" 75,166	26,885
Anilina, roba da tingere	lbs. 41,165	1,874
Lucido per le scarpe	£ —	20,614
Materiali da imbianchire	cwts. 220,140	117,149
Borace depurato nell'Inghilterra	" 16,897	46,440
Solfo	" 57,795	31,783

Colori da pittori ed altri materiali non numerati altrimenti	" —	473,051
Profumeria	" —	94,351
Sale gemma e sale bianco	tons 579,050	274,631
Salnitro	cwts. 59,938	93,547
Sapone	" 140,241	184,279
Amido	" 16,445	26,261
Olio d'ospirito di terebentina e roba sostituta per trementina	gals. 88,713	25,105

Le esportazioni d'alcali e di soda sono aumentate dimolto negli ultimi dieci anni. Nell'anno 1856 solamente 1,405,000 cwts. furono esportate eq 1865 2,572,000 cwts.

Il progresso nella fabbrica di prodotti chimici negl'anni recenti ha almeno bastato a soddisfare le richieste del mercato, e come è già stato detto in quanto alla classe importante dell'alcali, oltre fornire ai bisogni aumentati dei fabbricanti nostrali, il commercio co' paesi forestieri è stato esteso di molto.

Miglioramenti considerevoli sono stati fatti nei processi adottati nella fabbrica d'acido solforico e molti altri chimici, specialmente nel condensamento di gas acido idroclorico nelle fabbriche d'alcali. Un ristabilimento importante è stato fatto nel mestiere del fosforo; invece d'importare il fosforo come si faceva poch'anni fa, ora i fabbricanti inglesi competono fortunatamente con i fabbricanti

esteri in quasi tutti i mercati continentali. I miglioramenti nella fabbricazione di sapone e candele, cagionati per molte scoperte recenti, sono stati molto grandi, e la scoperta di tinte aniline, ed altre di qualità simili ha dato sfogo a un commercio estensivo in quest' articoli.

L' applicazione di gomma elastica a una infinita d' oggetti domestici e di commercio è stato un mezzo di dare impiego ad una gran quantità d'artigiani. Gli articoli esposti daranno un' idea più chiara dell' importanza delle diverse ramificazioni d' industria in relazione con questi articoli, non consentendo lo spazio limitato, di estenderci nel campo delle osservazioni.

Classe XLV.

MOSTRE DEI PROCESSI CHIMICI PER BIANCHIRE, TINGERE, STAMPARE E SALDARE.

I schiarimenti su alcune importanti migliorazioni nei processi compresi in questa classe saranno trovati nell'introduzione alle classi di fabbriche tessute, tappeti, ecc.

Classe XLVI.

CUOJO E PELLI.

La fabbrica di cuojo è stata stimata la quarta in importanza fra le grandi fabbriche nazionali della Gran Bretagna. È condotta molto estensivamente a Bermondsey, vicino a Londra, e a meno estensione in molte altre parti del paese. A paragone della popolazione, più di cuojo per uso generale è preparato in Inghilterra che in alcun altro paese. Il valore totale annuale della manifattura di cuojo fu detto essere nell' anno 1851 quattordici milioni di lire sterline, ma cotesto è probabilmente assai meno del valore presente, perchè il commercio ha cresciuto costantemente dopo quell' data. Non vi sono

rapporti della quantità di cuoj in carne prodotta nella Gran Bretagna, ma aggiunto alla provvisione nostrale, che certamente deve essere molto estensiva, grandi importazioni di cuojo in carne sono fatte annualmente dall' India, l' America Meridionale, ed altre parti del mondo. Vi sono anche grandi quantità di cuojo preparate, acconciate, e pulite pe' guanti importate. La tavola seguente fa vedere le quantità ed il valore delle pelli e del cuojo importati durante gli anni cinque dal 1861 a 1865:—

Anni	Cuojo in carne	Cuojo conciato	Valore totale
	Quintali	Libbre	£
1861 . .	830,000	5,219,000	2,903,000
1862 . .	943,000	5,512,000	3,204,000
1863 . .	1,023,000	5,202,000	3,230,000
1864 . .	954,000	6,446,000	3,152,009
1865 . .	968,000	7,352,000	3,073,000

Una grande quantità di cuojo in carne forestiera e riesportata. Gli esporti di pelli conciate inglesi, non preparate, durante gli anni cinque dal 1861 a 1865 erano:—

Anni	Quintali	£
1861 . . .	40,000	361,000
1862 . . .	43,000	406,000
1863 . . .	47,000	441,000
1864 . . .	38,000	382,000
1865 . . .	43,000	409,000

Le esportazioni di cuojo si troveranno notate in altre classi, nelle quali sono poste in ordine.

Il prezzo di salarj guadagnati dai conciatori sono circa 25s. per settimana, e dai lustratori e preparatori di cuojo 34s. Diversi materiali grezzi nuovi per conciare le pelli furono esposti all' Esposizione di Londra nel 1862, dei quali molti erano stimati dal giuri esser uguali, se non superiori, alla scorza di quercia ordinaria adoperata usualmente, ma il metodo antico dell' acconciatura è ancora in uso esteso.

La fabbrica di pelli per guanti, di pergamene, di pelli da battiloro e di corde per istrumenti di musica, è anche condotta nella Gran Bretagna, ma non ci sono rapporti dell' estensione delle diverse industrie.

GRUPPO VI.

(CLASSI XLVII.—LXVI.)

APPARATI E PROCESSI USATI NELLE ARTI COMUNI.

Classe XLVII.

APPARATI E PROCESSI SULL' ARTE DI FAR
MINE, E DI METALLURGIA.

TROPPO spazio ci abbisognerebbe per enumerare le specie grandissime d' apparecchj e di macchine che sono adoperate nelle ramificazioni diverse dell' industria comprese in cotesta classe. Lo sviluppo delle risorse metallurgiche e dell' arte di far mine nella Gran Bretagna, è dovuta principalmente all' uso di meccanismo, e di fatti vi sono molte miniere le quali sarebbe impossibile di far lavorare, ed anche molti processi di metallurgia che non potrebbero essere fatti senza l' aiuto della forza del vapore. Non vi sono rapporti della quantità di macchine a vapore, ne del montante della forza motrice adoperata nelle miniere e nelle fabbriche di metallo della Gran Bretagna. Il meccanismo è nondimeno usato grandemente per far scendere minerali nei pozzi, per scolare le miniere, e promuovere la ventilazione, benchè, per la più parte, le miniere di carbone fossile in Inghilterra sono ventilate per mezzo di fornai. Grandissimo miglioramento è stato fatto negli anni recenti nelle macchine da girare, nella migliore adattazione della fornace per ventilazione, ed anche nella costruzione di ventilatori a meccanismo. Il forare, fatto per mezzo di vapore, è una delle invenzioni recenti, le più importanti. Macchine per tagliare il carbon fossile, e un modello perfetto dell' apparecchio e del meccanismo usato nel processo 'Bessemer' per fabbricare l' acciaio sono esposte in cotesta classe.

Notando le gabbie di sicurezza, ossia paracadute, alcuni dei modi inventati al presente hanno incontrato generale soddisfazione, benchè molte specie differenti siano in uso.

Le lanterne di sicurezza adoperate nelle miniere di carbon fossile nella Gran Bretagna sono per lo più le lanterne di moda antica, chiamata 'Davy,' e la lanterna 'Stephenson,' ossia 'Geordie,' tutte due protette d' appertutto di velo di ferro, sebbene le lanterne di 'Mueseler' siano state introdotte con soddisfazione in poche miniere inglesi.

Classe XLVIII.

APPARATI D' AGRICOLTURA, E PROCESSI
ADOPERATI NELLA COLTIVAZIONE DEI
CAMPI E DELLE SELVE.

La costruzione di macchine e di strumenti necessarij all' agricoltura nella Gran Bretagna, è stata menata ad un alto punto di perfezione; e si aggiunga che sono prodotte estensivamente per uso nostrale, macchine d'agricoltura ed utensili che vengono esportati annualmente in grande quantità. L' uso della forza del vapore per molti lavori di coltivazione dei poderi, è, al tempo presente, assai generale. Grande attenzione è stata data negli ultimi anni alla coltivazione dei poderi, e per mezzo di scolamento migliorato, e per l' uso di concimi artificiali ed apparato perfezionato, la fertilità del terreno è stata aumentata grandemente. I carrettoni e i carri adoperati nella Gran Bretagna per i bisogni d'agricoltura sono generalmente assai superiori a quelli usati in altri paesi.

Notando il progresso recente negli oggetti compresi in questa classe, il giurì eletto a riferire sugli utensili d'agricoltura all' Esposizione di Londra nel 1862, chiamò l' attenzione particolare all' uso aumentato della macchina a vapore movente per trebbiare il grano, macchine da falciare, e da mietere, e all' uso di meccanismo per ridurre in polpa il cibo del bestiame.

La fabbrica di strumenti d' agricoltura e di macchine è condotta estensivamente a Lincoln, Peterborough, Grantham, Bedford, Ipswich, Leiston, Stowmarket, e molte altre parti del paese.

Non vi sono statistiche della produzione degli articoli inclusi in questa classe dell' industria nostrale, ma qualche idea della loro importanza può essere tratta dalla quantità d' espositori in questa classe.

Il valore dei strumenti d' agricoltura esportati dalla Gran Bretagna nell' anno 1865 montava a 210,000£; di macchine d'agricoltura (meno quelle a vapore) 282,000£; e di strumenti fatti intieramente di ferro 13,000£. Non esiste un rapporto particolare delle locomot-

tive esportate per uso d'agricoltura, ma qualche centinaio sono annualmente mandate in paesi forestieri.

La lista seguente è degli articoli principali importati nell'anno 1865 per acconciare la terra.

	Quantità	Valore
	Tonnellate	£
Ossa	65,642	362,000
Guanò	237,693	2,676,000
Concime : Non numerati . .	8,025	49,000

Classe XLIX.

APPARATO USATO NELLA CACCIA, UTENSILI DA PESCA, ED APPARECCHIO ADOPERATO NEL COGLIERE FRUTTI OTTENUTI SENZA CULTURA.

La fabbrica di fucili da caccia è condotta principalmente a Birmingham e a Londra. Una osservazione del negozio si troverà nella Classe 37.

Utensili da pesca si fanno in qualche quantità nella campagna. Ami, fiocine, ramponi ed esche, ed utensili, sono fabbricate in grande quantità in Redditch, e una ramificazione estesa del negozio, in canne da pesca, mosche artificiali, lenze, sugheri da galleggiare, rete, ecc., ha luogo in Londra.

Circa 600 persone sono impiegate a Redditch nella fabbrica di ami; e secondo il censo di 1861, 670 persone erano impiegate in Inghilterra e Galles, e 60 persone in Irlanda nella manifattura di canne, e di utensili da pesca. Mosche artificiali ed esche sono fatti a Redditch, per la più parte da donne e ragazze. Il valore dei salari guadagnati a Redditch sono stimate essere circa 8s. a 15s. per settimana per donne, e da 12s. a 40s. per uomini. In Londra il valore è più alto, i braccianti principali guadagnando da 40s. a 80s. per settimana, e lavorando da otto a dodici ore per giornata.

Il valore degli utensili da pesca esportati dalla Gran Bretagna nell'anno 1865 montò a 81,000.

Classe L.

APPARATO E PROCESSI ADOPERATI NEI LAVORI D'AGRICOLTURA, E NEI LAVORI PER LA PREPARAZIONE DEL CIBO.

Si adopra il meccanismo grandissimamente nella Gran Bretagna per la fabbrica di tubi da scolare, per fratturazione d'ossi, per mulinare il grano, per far il pane, e per molti altri processi compresi in questa classe. Non è possibile in questo posto di notare li miglioramenti numerosi che sono stati fatti in diverse parti delle macchine impiegate nelle sopradette ramificazioni del negozio, ma il con-

corso sempre aumentando dei fabbricanti nei mercati nostrali ed esteri è bastante da se stesso per persuadere i produttori di adottare ogni miglioramento che sia scoperto pel motivo di aumentare il valore delle loro produzioni, e per questo mezzo di poter vendere più buon mercato, che i loro rivali, o di fare profitti più grandi.

Non vi sono rapporti del numero o della forza delle macchine a vapore adoperate nei negozj notati in questa classe.

Classe LI.

APPARATO USATO IN CHIMICA, FARMACIA ED IN CONCIA.

La molteplicità di processi in uso nelle diverse ramificazioni dei mestieri in relazione, con questa classe rende difficile nel piccolo spazio accordato a queste osservazioni di alludere anche ai più importanti apparati in uso presentemente. Il progresso rapido della scienza in quest' ultimi anni, però, ha ridotti a perfezionamento molti processi vecchi, e ne ha introdotti varj nuovi relativi alle produzioni chimiche del paese. Alcuni miglioramenti recenti sono esibiti in questa classe.

Classe LII.

FORZA MOTRICE, CALDAJE, E MACCHINE ADATTATE SPECIALMENTE PER I BISOGNI DELL' ESPOSIZIONE.

Siccome gli articoli esposti in questa classe sono stati scelti per un intenzione particolare, resta alla decisione degl' uomini periti il decidere se gli articoli forniti dagl' espositori inglesi sono adatti allo scopo propostosi. Una relazione sul mestiere generale del meccanismo inglese si troverà nella Classe 53.

Classe LIII.

MACCHINE E APPARATI IN GENERALE.

La prosperità del commercio della Gran Bretagna è dovuta in gran parte al possedimento d' una provvista grande delle materie grezze necessarie alla manifattura di meccanismo, e di carbone per lavorarlo; come anche nella perfezione alta alla quale la fabbricazione è stata condotta nella sua applicazione ai processi innumerevoli in relazione colle industrie nazionali del paese.

Le macchine ed il meccanismo sono fabbricati in grande quantità a Manchester, Leeds, Birmingham, Sheffield, Newcastle, e Glasgow, ed in molte altre parti del paese. Le macchine da marina sono fatte principalmente alle fabbriche sulle rive del Thames e del Clyde, benchè se ne costruiscano in meno ampiezza a Newcastle ed in altri parti del regno.

La fabbrica di meccanismo idraulico, tronchi da girelli, macchine da cucire, e meccanismi per fare chiodi, è condotta estensivamente a Birmingham, ed anche quella di tubi per macchine fatti d'ottone e di rame, che sono prodotti anche a Manchester, Liverpool, e Newcastle. Il meccanismo d'agricoltura forma anche una ramificazione importante del negozio di meccanismo; ma come è incluso nella Classe 74, non c'è bisogno di dire di più su questo proposito. Il numero degli uomini impiegati nella fabbrica di meccanismo in ogni divisione del regno, secondo il censo del 1861, fu:—

	£
In Inghilterra e la provincia di Galles .	72,000
Scozia	10,500
Irlanda	900
Totale	83,400

A motivo delle numerose suddivisioni del mestiere meccanico, è difficile di sapere il numero attuale delle persone impiegate. Però si crede che le cifre date di sopra sieno esatte. Non esistono rapporti completi della quantità media dei salary guadagnati nelle diverse ramificazioni della costruzione generale di meccanismo nostrale, però il lavorante d'abilità è ricompensato assai generosamente, e a causa dell'impiego costante che hanno gli artigiani, vivono assai bene.

Gli ultimi rapporti della quantità media dei salary pagati ai meccanici a Manchester furono resi in 1859; nel qual tempo furono come segue. Fabbricanti di modelli, costruttori di mulini, fabbri e fabbricanti di caldaje, 32s.; falegnami di ferro, 28s.; spianatori, 22s.; traforatori, 20s. e battitori, serratori, e foratori e 'slotters', 18s. per settimana di 58 ore. La quantità media dei salary a Glasgow in 1866 fu 25s. per fabbricanti di caldaje, e 24s. pei fabbri: settimana di 60 ore. La quantità media dei salary guadagnati nella manifattura di meccanismo idraulico a Birmingham è riportato essere, per lavoranti periti, circa 55s.; e per quelli di meno abilità 30s. a 40s. per settimana.

Il valore del meccanismo inglese d'ogni specie esportata dalla Gran Bretagna aumentò da 2,243,000 nell'anno 1855 a 5,222,000 nell'anno 1865. La tavola seguente mostra le specie principali esportate nell'ultimo anno.

Meccanismo e lavoro per mulini:—	£
Macchine a vapore o parti di macchine	Locomotivi 945,451
	Altre sorte che locomotivi . 1,013,082
Non essendo macchine a vapore	Agricoltura . 282,019
	Altre specie 2,982,081
Totale	5,222,633

In una classe che include tanta varietà, infinità d'oggetti, e nella quale i miglioramenti sono quasi d'occorrenza giornaliera, è difficile in poche righe di far vedere il progresso totale che è stato fatto negl'anni ultimi. Il giuri sulla Classe 8 all'Esposizione del 1862, pren-

dendo gli articoli presentati all'Esposizione di 1851 come un tipo di comparazione, rapportarono che in quanto alle macchine a vapore, si osserva che mostrano una addattamento più grande di pressione alta, una grande espansione e soprascaldamento, ed un uso aumentato di condensamento superficiale (che è fatto generalmente per mezzo di un gran numero di tubi orizzontali), una tendenza alla semplicità nella struttura e nelle parti principali del movimento, un abbandono generale d'invenzioni che sono piuttosto singolari che utili, ed una perfezione più alta nel lavoro e nella finitezza, i quali miglioramenti continuano a produrre economia più grande nel carbone, nella forza, e nelle riparazioni. 'Le notificazioni generali in quanto al progresso delle macchine a vapore di terra, sono applicabili anche a quelle di mare. I miglioramenti nel lavoro sono anche più notevoli. Un progresso considerabile fu anche osservato nelle gettate gravi o fabbricazioni del ferro grosso, come anche in molte parti delle macchine, e pezzi diversi di meccanismo. In quanto ai miglioramenti importanti dopo l'anno 1862, si vedranno certamente la più gran parte di questi fra gli articoli esposti in questa classe.

Classe LIV.

ARNESI A MACCHINA.

La fabbrica di arnesi a macchina è già stata portata a grande perfezione nella Gran Bretagna, ma c'è anche ora bisogno di miglioramento, tanto nella semplicità di costruzione di diversi ordigni quanto nell'addatazione loro a una più grande varietà d'usi.

Gli arnesi a macchina sono manifatturati su alta scala a Manchester, Sheffield, Leeds, e in molte altre città, ecc., del regno. Dopo l'introduzione del vapore come forza motrice, l'usanza aumentata di arnesi a macchina è stata grandissima, ed ora ci sono pochi processi in relazione alle manifatture del paese che non siano condotte per mezzo di meccanismo ed ordigni a macchina.

I vantaggi principali che si ottengono dall'uso degli arnesi a macchina in comparazione del lavoro a mano, sono la facoltà aumentata di produzione, l'esattezza in qualità, e regolarità nella quantità del lavoro fatto, ed in forza della maggior produzione, il fabbricante di questi arnesi può pagare salary più alti ai lavoranti periti e così migliorare lo stato degl'artigiani.

Non esistono rapporti del numero dei lavoranti impiegati in questa ramificazione dell'industria, nè anche del valore annuale della produzione di questo mestiere. Però oltre la fabbricazione di questi articoli per uso nostrale, v'ha grande manifatture d'esportazione. Nell'anno 1865 le esportazioni di meccanismo, ecc., più o meno in relazione con questa classe, furono:—

Machine a vapore e parti di macchine (altre che locomotivi)	£ 1,013,000
Meccanismo e lavoro di mulini (altri che a vapore)	2,982,000
Ordigni e strumenti per usi industriali (non classati come meccanismo)	87,000

Lo stabilimento di scuole governative di scienza e d' arte nelle diverse città di manifattura, è stato molto utile alla classe d' artigiani impiegati nella manifattura di macchine da meccanismo e di arnesi a macchina che sono abilitati per l' istruzione che ricevono non solamente di divenire migliori lavoratori, ma anche perfezionatori di meccanismo vecchio e inventori di meccanismo nuovo; aumentando in questa maniera il poter nazionale di fabbricazione e nell' istesso tempo elevando la loro posizione nel grado sociale.

Classe LV.

APPARATI E PROCESSI ADOPERATI NELLA FILATURA E NELLA FABBRICA DI FUNE.

La fabbrica di fune, cordame, ecc., è sparsa largamente in tutto il paese, ma i locali principali della industria di cordame sono Liverpool, Newcastle, ed altre parti del fiume Tyne, in Londra, e in alcuni porti scozzesi. Funi per l' uso della marina sono anche fatte agli arsenali reali. La grande estensione dell' uso di corde di filo di ferro per armatura di navi, e ad uso delle miniere di carbone ed altri, ha portati grandi miglioramenti nella fabbrica di cordame. Le due corde submarine che ora esistono fra la Gran Bretagna e l' America marciano bastantemente da loro stesse la alta posizione alla quale il cordame di fili di ferro è arrivata in cotesto paese. Riguardando il meccanismo adoperato nella filatura, sarà trovata una relazione nelle classi rispettive di fabbriche tessute; però, molte macchine sono esposte in questa classe, che dimostrano le migliorazioni le più recente praticate in questo genere di meccanismo. La quantità di persone impiegate nella fabbrica di fune, corde, ecc., secondo il censo di 1861, era:—

	Uomini	Donne	Totale
In Inghilterra e Galles .	11,762	1,724	13,486
„ Scozia . . .	2,313	267	2,580
„ Irlanda . . .	1,132	33	1,165
Totale . . .	15,207	2,024	17,931

I materiali greggi adoperati nella fabbrica di cordame sono importati per lo più dalla Russia, l' Italia, e dall' Indie Orientali. Nell' anno 1865, gli articoli principali importati per questo bisogno erano come segue:—

	Quantità	Valore £
Fili di canapa per fune, ecc. (meno quelle da fibra di noci di cocco)	libbre 11,082,747	163,932
Fili da fibra di noci di cocco	quintali 97,674	177,609
Canapa lavorata, e grezza	„ 1,065,705	1,704,187

Le cifre soprascritte rappresentano la quantità totale della canapa importata, della quale una porzione soltanto è impiegata nella fabbrica di cordame.

Corde di fili di ferro sono fatte per lo più a Gateshead e a Birmingham, benchè il filo di ferro adoperato è allungato principalmente all' ultimo posto.

Le quantità e il valore del cordame e spago inglesi esportate nell' anno 1865 erano:—

	Quantità Quintali	Valore £
Fune e corde:		
Di canapa . . .	130,715	268,677
Di altre specie . . .	14,009	27,692
Spago . . .	23,449	117,844

Corde di fili di ferro non sono particolarizzate nelle esportazioni dalle altre fabbriche di fili di ferro.

Classe LVI.

APPARATI E PROCESSI ADOPERATI NELLA TESSITURA.

I locali principali della fabbrica di macchine per tessere ed anche per la filatura, sono a Manchester, Oldham, Bury, e in molte altre parti di Lancashire, a Leeds, Halifax, Bradford in Yorkshire, e a Glasgow e Dundee in Scozia. Benchè questa specie di meccanismo sia stata portata a un alto grado di perfezione, miglioramenti sono costantemente fatti, in diverse parti delle macchine per renderle più perfette e più capaci d' agire da sè, e per aumentare la facoltà produttiva. Un' ispezione di una serie perfetta di macchine per la preparazione, la filatura, e la tessitura di cotone, lana e stame, presentate dalla Ditta rinomata dei Signori Platt e Compagnia, nella Classe 55, fornirà un' idea più perfetta del carattere di cotesta specie di meccanismo ora in uso nelle fabbriche inglesi che una corta descrizione non potrebbe dare.

Non vi sono statistiche del numero delle persone impiegate in questa ramificazione della fabbrica di macchine del paese. Una quantità considerabile di meccanismo industriale è esportata annualmente, siccome sarà veduto nel osservare le note nella Classe 53.

Classe LVII.

APPARATI E PROCESSI PER CUCIRE E PER FARE GLI ABITI.

Le macchine le più importanti incluse in questa classe, sono quelle da cucire, e quelle da

farestivali. Macchine da cucire furono primariamente introdotte in Inghilterra dall' America nel 1845 o 1846, dopo la quale data grandi miglioramenti sono stati fatti nella loro costruzione, ed ora sono quasi universalmente adoperati per lavoro semplice ed ornamentale. Il giuri all' Esposizione di Londra del 1862, narrò che durante gli anni dieci dopo il 1851 un progresso considerabile fu fatto nella fabbrica di stivali e scarpe per macchina. Un negozio a l' ingrosso grandissimo di stivali e scarpe ribadite, principalmente per donne e bambini, è cresciuto in pochi anni a Leicester. Le macchine per mettere cavicchi nei stivali, e per tagliare cavicchi, fatte dai Signori Greenwood e Batley, erano grandemente approvate dal giuri in 1862, e furono premiate di una medaglia. Siccome la fabbrica di stivali fatte a macchina ha effettuato un gran risparmio nelle spese della produzione quando è comparata con il lavoro a mano, c' è a sperare che questa Esposizione ci farà vedere altre migliorazioni nelle macchine già in uso in cotesta divisione importante d' industria.

Classe LVIII.

APPARATI E PROCESSI USATI NELLA FABBRICA DI MOBIGLIA E DI OGGETTI CASALINGHI.

Diversi degli apparecchi inclusi nel limite di questa classe, come macchine da segare il legno, piallare, e modellare, ecc., si troveranno esposti nella Classe 54 sotto il titolo di ordigni da macchina. Il meccanismo è al presente così generalmente adoperata in tutte le divisione di manifattura nella Gran Bretagna, che una allusione breve alle diverse specie in uso oltrepasserebbe i limiti di queste osservazioni. La tendenza sempre crescente dei negozj verso una concentrazione delle fabbriche principali del paese possedute dalle più cospicue compagnie che impiegano un vistoso capitale, ha creato un aumento di meccanismo per facilitare le loro vaste operazioni e per economizzare la spesa sul lavoro. Una relazione dei locali principali di manifattura sarà trovata in Classe 53.

Classe LIX.

APPARATI E PROCESSI USATI NELLA FABBRICA DI CARTA, TINTURA, E STAMPERIA.

L' importanza del commercio di carta è stata già osservata nelle notizie a Classe 7. Ma benchè la produzione di carta sia cresciuta così vastamente durante gli ultimi anni, pochi miglioramenti sono stati fatti alla macchina per fare la carta continua, la quale fu introdotta circa il cominciamento del secolo presente. Campioni di macchine da carta ora adoperate

si troveranno esposti in questa classe. I miglioramenti principali relativi al progresso dello stampare dopo l' anno 1851, sono, l' introduzione di meccanismo per gettar il tipo, e di macchine per comporre e distribuire il tipo. Molti miglioramenti nelle macchine per stampare sono anche stati fatti durante gli anni dieci ultimi, onde sopperire alla richiesta enormemente aumentata di giornali, libri, e scritti periodici, la quale è cresciuta durante il medesimo tempo. Gli esporti delle diverse specie di macchine incluse in questa classe non sono registrati separatamente, ma sono inseriti nei rapporti generali che saranno trovati notati nella Classe 53. Il valore dei tipi da stampare e suoi materiali fatti in Inghilterra ed esportate dalla Gran Bretagna, nell' anno 1865 montava a 68,9307.

Classe LX.

MACHINE, ISTRUMENTI, E PROCESSI ADOPERATI IN OPERE DIVERSE.

Benchè nessun cambiamento di rilievo sia stato introdotto da qualche anno nel meccanismo adoperato per la fabbrica della più parte degli articoli contemplati in questa classe, molti miglioramenti importanti furono praticati, nell' intenzione di perfezionare le macchine già in uso. La fabbrica di bottoni, spille, penne ed aghi, costituisce una divisione considerabile d' industria nostrale. Il locale principale della fabbrica è a Birmingham e sue vicinanze. Il negozio dei bottoni è stimato impiegare circa 6,000 persone, e il prezzo medio dei salarj pagati agli uomini impiegati in cotesto esercizio è circa 25s., alle donne 7s. a 9s., alle ragazze e i bambini 1s. a 1s. 6d. per settimana. Non vi sono statistiche del numero delle persone impiegate nella fabbricazione di spille al presente, ma secondo il censo del 1861, il numero totale degli uomini in cotesta ramificazione in Inghilterra e Galles era 322, donne 407. Spille sono fatte ora quasi interamente a macchina, una macchina essendo adoperata, la quale colla rivoluzione di una sola ruota fabbrica una spilla perfetta. Gli aghi sono fatti principalmente a Redditch, e la fabbrica impiega circa 8,000 braccianti. Il prezzo medio dei salarj guadagnati è, per gli uomini, 12s. a 40s., per le donne 8s. a 15s., e per i bambini 1s. 6d. a 5s. per settimana. I Signori Bartlett e Woodward, nel loro rapporto della fabbrica di aghi a Redditch, stimano che in condizione sociale, i lavoratori sono generalmente superiori ad altri braccianti in nettezza e buon ordine. Un ago deve passare fra le mani di settanta braccianti, prima che sia considerato essere finito, e in istato d' essere adoperato. La fabbrica di penne di metallo è posta per il più a Birmingham, e fornisce impiego a circa 360 uomini ed a 2,000 donne e bambini. La quantità di penne fabbricata per settimana è 98,000 grossa, il grosso essendo 144. La più

parte del acciaio usato nella fabbrica è prodotta a Sheffield. Le soprascritte cifre sono estratte da un rapporto del Signor Timmins, che anche egli stima la condizione dei braccianti impiegati nel negozio di penne molto soddisfacente. I salari delle ragazze scorrono da 5s. a 12s. per settimana, alcune delle più giovane guadagnando soltanto da 2s. 6d. a 3s. 6d. Poche donne abili hanno da 15s. a 20s.; gli uomini guadagnano da 18s. a 20s.; i ragazzi, secondo la loro abilità da 4s. 6d. a 16s.; e gli uomini capaci da 30s. a 80s. per settimana. Le ore di lavoro sono da 52½ a 57 per settimana. Il processo della fabbrica di penne si troverà illustrato, siccome quella di spille ed aghi, nelle contribuzioni da Birmingham, Studley, e Red-ditch esposte in questa classe.

Classe LXI.

CARROZZE E LAVORO DA CARRADORI.

Il locale principale della fabbrica di carrozze è a Londra, benchè la costruzione sia anche esercitata in Edimburgo, Dublino, Liverpool, Derby, Manchester, Nottingham, Glasgow, Southampton, Newcastle, ed altre città del regno.

Il numero delle persone impiegate in questa ramificazione in ciascuna divisione della Gran Bretagna nell' anno 1861 era :—

	Carrozzeri	Carradori
In Inghilterra e Galles	18,870	30,070
„ Scozia	1,550	1,282
„ Irlanda	3,000	591
Totale	23,420	39,943

Non vi sono rapporti generali della rata dei salari pagati ai braccianti impiegati nella fabbrica di carrozze, ma il prezzo medio pagato in questa ramificazione in Edimburgo nel 1866 era :—

	Per settimana di 57 ore			
	Classe 1ma.		Classe 2da.	
	£	s. d.	£	s. d.
Uomini:				
Fabbri	1	7 0	1	2 0
Fabbricanti dei gusej	1	10 0	1	2 0
„ di carrozze	1	3 0	—	—
Pintori	1	2 0	1	0 0
Decoratori	1	5 0	1	0 0
Carradori	1	2 0	18	0
Fabbricanti di molle	1	6 0	—	—

Fu esposto nel rapporto sulle carrozze all' Esposizione di Londra nel 1862, che la condizione dei braccianti impiegati nella fabbrica di carrozze, era assai migliorata durante gli anni passati; che l' uso del bere smoderatamente è diminuito fra loro, e l' educazione è aumentata. Siccome il successo della fabbrica di carrozze dipende molto dalla conoscenza dei principj sani di meccanica, delle arte di disegno e la combinazione armoniosa dei colori, è necessario

che i braccianti in costeta ramificazione ricevano una buona educazione d' artista.

Il valore delle carrozze importate nella Gran Bretagna nell' anno 1865 montava soltanto a 5,800l. Il valore delle carrozze esportate nell' anno medesimo era 175,000l., e di carri e carrettoni 8,400l. Una grande quantità delle carrozze furono mandata nell' India Britannica.

Fra i miglioramenti che sono stati fatti nella fabbrica di carrozze, l' uso di macchine in alcune divisioni deve essere notata. A causa pure delle condizioni speciali della fabbricazione, c' è a dubitare se il meccanismo sarà mai adoperato per risparmiare nella fabbrica di carrozze particolari, le quali di necessità variano in ogni riguardo grandemente secondo le idee delle persone che le fanno fabbricare. Un gran progresso è stato fatto nel disegno, nel colore, e nella leggerezza di carrozze particolari dopo il 1851, siccome negli strumenti necessari alla loro costruzione.

Un grande aumento nella chiesta per carrettoni, carri, e carrette è stata fatta dall' estensione del sistema di strade ferrate per tutto il paese, e molte altre specie nuove di veicoli sono state introdotte onde trasportare le mercanzie dalle stazioni delle strade ferrate. Miglioramenti considerabili si verificarono dopo il 1851 negli omnibus adoperati nella capitale, come nei carri e wagoni per lo sgombramento di mobiglia.

Carrozze delle strade ferrate sono notate nella Classe 63.

Classe LXII.

FINIMENTI ED OGGETTI DI SELLAJO.

1. Gli oggetti di sellaio e finimenti inglesi sono stati celebri per lungo tempo, per l' eccellenza della sua qualità e lavoro. I locali principali della fabbricazione sono a Walsall, Birmingham, la capitale, e Glasgow, ed in molte altre città del regno. Diversi negozj più piccoli sono in rapporto con questa industria, cioè, la fabbrica di morsi, staffe, catene, ed altri aggiustamenti, ed ornamenti, i quali sono fabbricati per lo più nei medesimi locali.

2. Il cuoio adoperato nel negozio è principalmente di fabbrica nostrale.

3. Secondo il censo del 1861, il numero seguente di persone era impiegato in questa ramificazione :—

In Inghilterra e Galles	18,229
Scozia	1,822
Irlanda	2,968

23,019

Circa 500 a 600 persone sono impiegate come fabbricanti di fusti da selle, e come fabbri da sellaj.

4. I salari nella fabbrica di selle e di finimenti di Walsall sono un poco più delle altre fabbriche. I guadagni dei braccianti variano da 20s. a 40s. per settimana. Le ragazze e le

donne possono guadagnare da 8s. à 13s. per settimana. I salary degl' apprendisti nel primo anno di lavoro è 3s. per settimana; negl' anni seguenti del loro noviziato ricevono da 12s. a 14s. Le ore di lavoro sono da 7 to 8 a.m. insino a 7 p.m.

A Walsall le fabbriche di oggetti da sellajo e finimenti sono in buonissim' ordine e ben costrutte.

È stimato che circa 60 per cento del lavoro a Walsall è condotto da donne, molte delle quali lavorano a casa loro. L' introduzione della macchina da cucire per fare i finimenti ha economizzato grandemente il lavoro in questa ramificazione di commercio.

5. Vi sono appena alcune importazioni di oggetti da sellajo e finimenti nel paese.

6. Il valore di oggetti da sellajo e finimenti esportati dalla Gran Brettagna negl' anni 1861-65 montò a:—

	£
1861	307,700
1862	343,600
1863	341,600
1864	345,900
1865	350,500

La più grande proporzione di cotesti esporti fu mandata alle colonie Britanniche, e specialmente in Australia.

7. Il Signor Franklin, nella sua relazione sui fabbricanti di Walsall nel 1865, dice che ' può essere d'utile osservazione il notare la scarshezza di genio inventivo, nonchè i pochi cambiamenti di forma e d'apparenza incontrati nei finimenti e oggetti da sellajo dopo il 1849; la sola eccezione essendo la sella "Nolan," inventata durante la guerra di Crimea, ed ora generalmente adoperata nel esercito; nondimeno è convenevole solamente per esercizj militari. Un progresso considerevole è allo stesso tempo stato fatto nel adornamento delle selle e dei finimenti, e molti dei sellaj che si applicano con particolare amore a questa ramificazione hanno ricevuto istruzione artistica regolare nelle scuole di disegno.'

Classe LXIII.

APPARATI DI STRADE FERRATE.

Non si può negare che la prosperità del paese si deve in gran parte ai mezzi estensivi di comunicazione che esistono fra tutte le parti del regno, tra i quali le strade ferrate occupano una posizione importante. A quest' epoca, che il tempo rappresenta il denaro, il possedere mezzi rapidi di trasporto è divenuto una necessità assoluta, e l' Inghilterra può a buon titolo attribuirsi l' onore d' avere inaugurato il sistema presente di strade ferrate, il quale, si può quasi dire, ha vinto la distanza ed il tempo.

La manifattura d'apparati di strade ferrate è condotta in diverse parti del paese; raili, tra-

verse, ecc., sono prodotti principalmente nei territori di ferro ed i raili d' acciaio a Sheffield. Locomotive sono fatte in ampiezza a Newcastle, Manchester, Leeds, Glasgow, ed altre città, ed anche alle fabbriche particolari di qualch'una delle compagnie principali di strade ferrate. C' è anche una manifattura estesa di wagoni da passeggeri o da mercanzie, ed altre specie di legni, a Birmingham.

Non vi sono statistiche generali della produzione d' apparati da strade ferrate nella Gran Brettagna, per via che molti sono compresi tra gli altri mestieri di mercanzie di ferro nel paese. In un tomo scritto sui prodotti dei territori di Tyne, Wear, e Tees, pubblicato nel 1864, fu asserito che dal principio della fabbrica di locomotive, circa 2,400 erano uscite dalle fabbriche di Newcastle solamente, delle quali più di 900 furono mandate in paesi forestieri.

Stimando il valore di ciascuna a 2,000£, il valore totale delle locomotive esportate monterebbe a 1,800,000£. A questa somma bisogna aggiungere il valore di quelle fabbricate per uso nella Gran Brettagna e l'Irlanda, a ragione di 1,500£, che fa 2,700,000£, ed un totale di 4,500,000£.
